PREFACE TO THE FIRST EDITION

This work is intended to supply a great and long acknowledged want. A growing demand has arisen in this country and the United States for information on all matters directly and indirectly connected with Music, owing to the great spread of concerts, musical publications, private practice, and interest in the subject, and to the immense improvement in the general position of music which has taken place since the commencement of the present century. Music is now performed, studied, and listened to by a much larger number of persons, and in a more serious spirit, than was the case at any previous period of our history. It is rapidly becoming an essential branch of education; the newest works of continental musicians are eagerly welcomed here very soon after their appearance abroad, and a strong desire is felt by a large, important, and increasing section of the public to know something of the structure and peculiarities of the music which they hear and play, of the nature and history of the instruments on which it is performed, of the biographies and characteristics of its composers—in a word, of all such particulars as may throw light on the rise, progress, and present condition of an Art which is at once so prominent and so eminently progressive.

This desire it is the object of the Dictionary of Music and Musicians to meet. It is designed for the use of Professional musicians and Amateurs alike. It contains definitions of Musical Terms; explanations of the forms in which Musical Works are constructed, and of the methods by which they are elaborated, as well as of the origin, structure, and successive modifications of Instruments; histories and descriptions of Societies and Institutions; notices of the composition, production, and contents of important works; lists of the principal published collections; biographies of representative composers, singers, players, and patrons of music—all the points, in short, immediate and remote, on which those interested in the Art, and alive to its many and far-reaching associations, can desire to be informed.

The limit of the history has been fixed at A.D. 1450, as the most remote date to which the rise of modern music can be carried back. Thus mere archæology has been avoided, while the connection between the mediæval systems and the wonderful modern art to which they gave rise has been insisted on and brought out wherever possible. While the subjects have been treated thoroughly and in a manner not unworthy the attention of the professional musician, the style has been anxiously divested of technicality, and the musical illustrations have been taken, in most cases, from classical works likely to be familiar to the amateur, or within his reach.

The articles are based as far as possible on independent sources, and on the actual research of the writers, and it is hoped that in many cases fresh subjects have been treated, new and interesting information given, and some ancient

mistakes corrected. As instances of the kind of subjects embraced and the general mode of treatment adopted, reference may be made to the larger biographies—especially that of Haydn, which is crowded with new facts; to the articles on Auber, Berlioz, Bodenschatz, Bull, Cristofori, David, Farinelli, Finck, Froberger, Galitzin, Gibbons, Hasse; on Additional Accompaniments, Agrémens, Arpeggio, Arrangement, Fingering, Form, and Harmony; on Académie de Musique, Bachgesellschaft, Breitkopf and Härtel, Bassoon, Carmagnole, Choral Symphony, Conservatoire, Concerts, Concert Spirituel, Copyright, Drum, English Opera, Fidelio, Grand Prix de Rome, Handel and Haydn Society, Handel Festivals and Commemorations, Harpsichord, Harmonica, Hexachord, and many others. The engraved illustrations have been specially prepared for the work, and will speak for themselves.

In an English dictionary it has been thought right to treat English music and musicians with special care, and to give their biographies and achievements with some minuteness of detail. On this point thanks are due to Colonel Joseph Lemuel Chester for much accurate information which it would have been almost impossible to obtain elsewhere, and which he has afforded in every case with the greatest kindness and promptitude.

Every means has been taken to procure an adequate treatment of the various topics, and to bring the information down as near as possible to the day of publication. Notwithstanding the Editor's desire, however, omissions and errors have occurred. These will be rectified in an Appendix on the publication of the final volume.

The limits of the work have necessarily excluded disquisitions on Acoustics, Anatomy, Mechanics, and other branches of science connected with the main subject, which though highly important are not absolutely requisite in a book concerned with practical music. In the case of Acoustics, sufficient references are given to the best works to enable the student to pursue the enquiry for himself, outside the Dictionary. Similarly all investigations into the music of barbarous nations have been avoided, unless they have some direct bearing on European music.

The Editor gladly takes this early opportunity to express his deep obligations to the writers of the various articles. Their names are in themselves a guarantee for the value of their contributions; but the lively interest which they have shown in the work and the care they have taken in the preparation of their articles, often involving much time, and laborious, disinterested research, demand his warm acknowledgment.

29 Bedford Street,
Covent Garden, London,
April 1, 1879.

PREFACE TO THE SECOND EDITION

When Sir George Grove projected the *Dictionary of Music and Musicians*, the first instalment of which appeared in 1878, he intended it, as he explained in his preface, for the general reader as much as for the musician, and it was in a great measure the fulfilment of this purpose which made the success of the book. Owners of the earlier copies of the old edition will remember that on the title-page of the first volume are the words 'in two volumes,' and the first of what eventually became four volumes includes the greater part of the letter I. It stands to reason, therefore, that the earlier letters of the alphabet were treated far more scantily than the later; as the work went on the scheme enlarged itself, as was indeed inevitable, and finally the more serious omissions under the earlier letters had to be supplied in an appendix, published in 1889. In the present edition an attempt has been made to restore the balance as between the earlier and later letters of the alphabet; but it seemed only fitting to stop short of any rectification of balance which might involve tampering with the three great articles which are Sir George Grove's chief work in musical literature, those on Beethoven, Mendelssohn, and Schubert. These monumental articles have not indeed been left intact, but the alterations in them have been made in strict obedience to the writer's own wishes in the matter of additions and corrections. At his death he left a large quantity of material intended for use in a later edition of the Dictionary, in correction or amplification of these great articles, and the work of incorporating them in the text has been done, in the case of the articles on Beethoven and Mendelssohn, by writers to whom he himself entrusted the materials. In these articles, and some others of the longer biographies, dates have been added at the top of the pages, to assist the reader who may wish to use the book as a work of reference. References to sources of information which have appeared since Sir George Grove's death have been inserted, but in square brackets, such as have been used throughout the Dictionary to indicate additions for which the writer of the original article is not responsible. When these additions are unsigned, it is to be understood that the Editor is responsible for them. Some such additions were necessary in almost every article, but where circumstances allowed the writers have been asked to correct, and add to, their own contributions. This was not always feasible, for the list of contributors will show a large proportion of names of deceased writers, while in other cases it has been impossible to trace the authors of the articles.

One of the most valued contributors to the old edition, the late Mr. A. J. Hipkins, F.S.A., was actively engaged in correcting and expanding his articles when death overtook him in June 1903; his articles on the keyed instruments, and some others, in the present volume, were all corrected by himself, and

materials for the correction of those under later letters were left among his papers, and will, it is hoped, be incorporated in the subsequent volumes.

It will be seen that the work of which this is the first volume is not, strictly speaking, a new book: the old arrangement has been kept wherever it was possible, although a great many absolutely new articles appear in the following pages. In the quarter of a century which separates the appearance of the first volume of the old edition from the first volume of the new, not only have many hundreds of names reached an eminence which makes their inclusion necessary, but many new reputations have been made, both among creative and executive musicians. In the department of archæology the standards of research have greatly altered in the years that have passed. At the beginning of the old Dictionary Fétis was considered as altogether trustworthy; later on Mendel's *Lexicon* succeeded to the place formerly occupied by the *Biographie Universelle des Musiciens*, and Fétis's statements were, perhaps undeservedly, discredited. Such authorities as Eitner, Wotquenne, and others, such standards of research as were maintained in the *Dictionary of National Biography*, have put the study of biography and bibliography on a new footing. If the new edition of the Dictionary cannot claim to be based exclusively on original research, it will be found that, in the great majority of cases, the statements made at second-hand are referred to the source from which they were taken.

Upon the first edition a limit of time was imposed, the date 1450 being fixed as the beginning of the music that could be expected to interest modern readers. The study of ancient music, and in particular of that which belongs to ecclesiastical plain-song, has been so widely spread (partly as a result of the scientific articles written by the late W. S. Rockstro in the later part of the Dictionary) that no book on music could now be considered complete which made its starting-point as late as the middle of the 15th century.

The scope of the Dictionary has been greatly enlarged in other ways. There was no article on Acoustics in the first edition, and such composers as Bach, Berlioz, Brahms, and Chopin, were inadequately treated. These five headings, and that of Degrees in Music, may be referred to as indications of the alteration of plan in the new edition. In the case of all composers of real importance, their works have been catalogued systematically under their opus numbers (where such are used); in like manner, such critical remarks have been admitted, even in the case of living men, as are likely to give the reader a general idea of the special characteristics of the musicians dealt with.

In the new edition, as in the old, no attempt has been made to include the name of every musician who might be held to deserve mention. There is the less need for such an exhaustive treatment (in regard to English musicians, at least) since the publication of *British Musical Biography*, and other works of the kind, which claim to mention every one of any kind of eminence. The average country organist who, though unknown beyond his own parish, has succeeded in getting an anthem printed, will not find his name in the new edition of the Dictionary any more than in the old. The process of selection may not in all cases meet with universal approval; but it has not been done without careful weighing of the claims of each name, whether among executants or composers. In regard to the younger musicians, particularly executants, only those have been admitted who have attained to real eminence, and whose fame has spread beyond the limits of their own countries.

As the five volumes of the new edition will be published at much closer intervals than the four of the old, it may be confidently expected that the

necessity for an appendix at the end will not be as great as it was after the eleven years covered by the publication of the first edition. By more frequent cross-references it is hoped that a final index may also be dispensed with. Since the publication of the first edition, corrections, over and above those which were incorporated in the appendix, have naturally been suggested from many quarters. In many cases the same obvious errors of the press have been corrected by ten or twenty correspondents; the Editor finds it impossible to acknowledge each of these separately, but he takes this opportunity of thanking all those who have taken the trouble to send him corrections that they may have noted. Annotated copies of the whole Dictionary have been placed at his disposal by Messrs. F. G. Edwards, W. Barclay Squire, and Herbert Thompson, to whom his especial thanks are due. To Mr. Nicholas Gatty, for help in the routine of editing, and to all the contributors, who have shown the same interest and enthusiasm in the present work as they or their predecessors showed in the production of the old edition, warm acknowledgments are to be made.

St. Martin's Street, W.C.,
October 1, 1904.

PREFACE TO THE THIRD EDITION

The third edition of *Grove's Dictionary of Music and Musicians* makes an attempt to face a problem which has been accumulating for nearly fifty years. The original work was far more than a compendium of knowledge on a large number of subjects; it gained its peculiar position of authority from the fact that each one of its larger articles embodied the considered opinion of its author and was stamped with his individuality both in its critical estimate and its literary expression. Initials at the end of each article placed responsibility on the contributor. Twenty-five years later increased knowledge and the passage of time disproving prophecy made correction of innumerable details necessary in articles by authors no longer able to revise their own work. The Editor of the second edition devised the method of additions in square brackets in the text, thus on the whole preserving the integrity of the original while giving the reader the benefit of later research. To continue that method into a third edition, however, was hardly possible or desirable. Large numbers of such additions must confuse the issue, they do in fact destroy the integrity of the original and are bewildering to the reader who uses the Dictionary for purposes of reference. A more drastic method, therefore, seemed called for and has been adopted. Every article in the Dictionary has been reconsidered and its contents viewed as material to be accepted or rejected as the case may be, but in any case to be remodelled at discretion in accordance with a definite plan of arrangement. This, it must be admitted, has meant doing a certain amount of violence to the prerogative of the individual contributor, but every practicable means of securing justice to his work has been adopted. The use of the word 'revised' (rev.) after the author's initials means that the article has been reshaped and generally shortened but not materially altered as regards the facts related and views expressed therein. The words 'with additions' (with addns.) mean that facts of some importance in themselves but not making untenable the original writer's general thesis have been incorporated. Wherever these facts assume any large place in the revised article the initials of the new contributor have been added to indicate their source. Occasionally the word 'abridged' is placed after the author's initials as an indication that a fuller treatment of the subject by the same writer was contained in earlier editions. These provisions apply to the great mass of articles of moderate length, both biographical and technical.

The articles of the larger kind have been dealt with by other methods. A great many, even some by the most eminent among Sir George Grove's contributors, have been replaced by new articles written by specialists of to-day. Others have been retained, but with substantial additions, in some cases amounting to supplementary articles or sections signed by their authors' initials. Others, again, notably Sir George Grove's own monumental articles on Beethoven, Mendelssohn

and Schubert, have been revised principally by means of footnote annotations. Cross-headings and side-headings have been inserted to guide the eye of the reader in his search for a particular point, and the process of revision has included many other devices, serving to correlate the several parts of the Dictionary, and to avoid duplication of its matter. By these means space has been secured for the inclusion of a very large number of new names and subjects without greatly increasing the size of the work.

The responsibility for the many decisions which the revision has involved must rest with the Editor, but in arriving at them he has had the benefit of an immense fund of helpful advice from many sources. The new contributors include many names everywhere recognised as among the first authorities of the day on the subjects of which they here treat. Many of them have given invaluable help over and above that which can be recognised from their initials in the following pages. This has been particularly the case in regard to certain national groups, the several interests of which have engaged the special thought and care of the following: The Rev. E. H. Fellowes (Early English Schools), Mlle. M. L. Pereyra (France), Mr. J. B. Trend (Spain), Mrs. Rosa Newmarch (Southern Slavs), Mr. R. Mengelberg (Holland), Mr. R. Aldrich (U.S.A.), Mr. F. Bonavia (Italy), Mr. A. H. Fox-Strangways (Indian and other Asiatics).

The illustrations for this edition, by means of 96 plates in colour and in black and white, have been chosen by the Rev. Canon F. W. Galpin and the late Mr. W. Barclay Squire, who have brought to bear on the problem profound knowledge and artistic discernment, the one in regard to instruments and manuscripts, the other in regard to portraits. It was decided to include only the portraits of deceased musicians.

Mr. Barclay Squire's work in this direction was completed some months before his death, which occurred while this edition was passing through the press. It owes so much to his careful scholarship and to the personal advice on innumerable details which was always at the service of the Editor that his loss before the completion of the work is a matter of profound regret. It has not been possible to alter all the many references to manuscripts, portraits, etc., in Mr. Barclay Squire's collection. During the four years of the revision the Dictionary has lost several other valuable contributors whose work for this edition is included therein. One of Mr. H. E. Krehbiel's last acts was to engage in conference with Mr. Richard Aldrich about the revision of the American articles, but he did not live to participate in the work. Mr. Leonard Borwick wrote his article on pianoforte arrangement shortly before his death; Mr. S. H. Pardon and Mr. Frank Kidson revised their former articles and both made many new contributions of value.

The task of remodelling the text of the Dictionary would have been an overwhelming one without the co-operation of two colleagues to whom the Editor owes a debt of peculiar gratitude. Mr. Nicholas Gatty brought to bear on this revision his wide experience gained in the preparation of the second edition, and the Editor's sister, Miss Eileen Colles, has throughout relieved the routine of editing by her watchful care over innumerable details.

Other special obligations are noted in the list of acknowledgments made below, but over and above these it must be said here that new information has been given and old information checked, verified or amended by a host of correspondents, to whom thanks can only be offered collectively.

Acknowledgments.—Four annotated copies of the second edition were kindly placed at the disposal of the Editor by Mr. J. A. Fuller Maitland (Editor of the

second edition), the late Mr. W. Barclay Squire, Dr. Herbert Thompson and Mr. C. J. King. The Rev. A. Ramsbotham most generously gave access to his valuable MS. Catalogue of works by the English (Tudor) composers; the Royal Philharmonic Society, through its Hon. Secretary, Mr. Mewburn Levien, granted a similar privilege with regard to its library; Mr. Arthur Hill (W. E. Hill & Sons), gave much information from his records relating to the art of the *luthier*. The following business firms have kindly supplied information on matters touching their own provinces: Messrs. Augener & Co., Messrs. Boosey & Co., Messrs. John Broadwood & Son, Messrs. J. & J. W. Chester, Messrs. Herrburger, Brooks, Ltd., Messrs. Hutchinson & Co., Messrs. Novello & Co., Messrs. Ricordi & Co., Messrs. Steinway & Sons.

Translations of foreign articles have been kindly undertaken by Mrs. Rosa Newmarch, Mme. Franz Schalk, Mr. A. H. Fox-Strangways, Mr. F. Bonavia, Mrs. H. C. Colles and Lt.-Col. H. P. Garwood.

St. Martin's Street, W.C.,

DICTIONARY

OF

MUSIC AND MUSICIANS

VOL. I

A—C

DICTIONARY

OF

MUSIC AND MUSICIANS

A

A, the name of the 6th degree of the natural scale of C. The reason for its application to the 6th instead of the 1st degree will be found explained in the article NOTATION. It represents the note in English and German which in French and Italian is called *La.*

The further nomenclature is :

English.	French.	German.	Italian.
A flat.	La bémol.	As.	La bemolle
A double flat.	La double bémol.	Asas.	La doppio bemolle.
A sharp.	La dièze.	Ais.	La diesis.
A double sharp.	La double dièze.	Aisis.	La doppio diesis.

A is the note given (usually by the oboe, or by the organ if there be one) for the orchestra to tune to.

The *diapason normal*, A = 435·4 vibrations per second at a temperature of 59° Fahrenheit (15° Centigrade), is now practically adopted throughout England for concert and operatic performances except where an organ tuned otherwise is involved. Thus after many variations the English pitch has been approximated to that of the Continent. The pitch for military music in England, however, is still much higher. A = 452·4 is laid down in King's Regulations as the pitch for military bands. (see PITCH).

In the modal system A is the Final of the 9th and 10th Modes (Æolian and Hypo-æolian), the Dominant of Mode I. (Dorian), of Mode IV. (Hypo-phrygian) and Mode VI. (Hypo-lydian).

C.

AARON, a Scot (*c.* 1042–52), Abbot of St. Martin, Cologne, wrote *De utilitate cantus vocalis et de modo cantandi atque psallendi* (*Q.-L.*).

AARON, PIETRO, spelt ARON in works published after his death (*b.* Florence, latter part of 15th cent. ; *d.* before 1545), a monk of the Order of Jerusalem, and devoted to the study of counterpoint.

His various works on the history and science of music (see *Q.-L.*) were printed at Venice and Milan. By Pope Leo X. he was admitted into the Roman Chapel, and distinguished in various ways. In or about 1516 Aaron founded a school of music at Rome, which obtained much reputation. He became a canon of Rimini about 1523.

C. F. P.

ABACO, EVARISTO FELICE DALL' (*b.* Verona, July 12, 1675 ; *d.* Munich, July 12, 1742), a famous violinist and composer.

After some years' sojourn in Modena, from 1696 to about 1701, he went to Munich, and entered the band of the Elector Max Emanuel as Kammermusiker, in Apr. 1704. After the battle of Blenheim he accompanied the Court to Brussels, and on the restoration of the government in 1715 was appointed Konzertmeister. His published works are as follows :

Op. 1, 12 Sonate da camera, for vln. and v'cl. with accompaniment ; op. 2, 12 Concerti a quattro da chiesa ; op. 3, 12 Sonate da chiesa a tre ; op. 4. 12 Sonate da camera a violino e violoncello ; opp. 5 and 6, Concerti a più istrumenti (*sic*).

A selection of 20 compositions from opp. 1-4, edited by Adolf Sandberger, forms the first volume of *D.D.T.*, second series (Bavarian), 1900. The memoir prefixed to this volume gives a detailed account of Dall' Abaco's career.

M.

ABACO, GIUSEPPE CLEMENS FERDINAND, Baron dall' (*b.* Verona, *c.* 1700), one of the foremost virtuosi of his time on the violoncello and composer of merit for his instrument. In 1729 he was engaged as violoncellist at the Electoral court in Bonn, where he became director of the chamber music in 1738. In 1740 he was in London, where Burney heard him, and mentions him in laudatory terms in his *Hist. of Music*, vol. iv. Pohl mentions him as playing in Vienna, in a concert piece for five violoncelli of his own composition. Thirty of his sonatas for violoncello, mostly autograph, are in the library of the British Museum.

E. v. d. S.

ABAILARD, PIERRE (ABÉLARD, ABAELARDUS) (*b.* Palet, near Nantes, 1079 ; *d.* near Châlon-sur-Saône, Apr. 21, 1142), best known to the present time by the tragic story of his love for Héloïse, the fair niece of the Paris canon, Fulbert.

A 13th-century codex in the Vatican Library at Rome contains six lamentations by Abailard in Latin, with the melodies written in neumes over the words. These plaints, founded on Old Testament stories, cannot be the love-songs which ' by the sweetness of their melody ' caused the praises of Héloïse to resound throughout the country, and of which he wrote both words and melody, as we know from an

extant letter of Héloïse. The songs have not yet been found. Abailard died at the priory of St. Marcel near Châlons-sur-Saône (*Fétis*, art. La Fage, ii. 200). E. v. d. s.

A BATTUTA, see BATTUTA.

ABBÀ-CORNAGLIA, PIETRO (*b.* Alessandria, Piedmont, Mar. 20, 1854; *d.* there, May 2, 1894), composer and historian. His musical education began early under the guidance of his stepfather, Pietro Cornaglia. In 1868 Abbà-Cornaglia entered the Conservatoire at Milan, where he studied piano, organ and composition with Angeleri and A. Mazzucato. On leaving the Conservatoire he won the first prize and medal with a cantata 'Caino e Abele.' After some time he returned to Alessandria, where he founded a school of music, discharging at the same time the duties of organist at the cathedral. Of his many compositions the most notable are a Requiem Mass to the memory of Carlo Alberto (1876) and a one-act opera, 'Una partita a scacchi,' on a libretto of Giacosa. Other operas of his were performed at Milan ('Isabella Spinola,' 1877) and Venice ('Maria di Warden,' 1884). He is also the author of a history and philosophy of music and of an essay on popular songs and education. F. B.

ABBATINI, ANTONIO MARIA (*b.* Tiferno, *c.* 1597/98; *d.* there, 1679), a famous church musician of Rome.

He was successively maestro di cappella at the Lateran, the Church of the Gesù, and San Lorenzo in Damaso, and three times held the like office at Maria Maggiore; he was also, for a time, maestro at the church of Loreto. He was offered by Pope Urban VIII. the task of re-writing the Hymnal, but refused to supersede the music of Palestrina by any of his own. His published works consist of:

4 books of Psalms and 3 books of Masses; 'Il Pianto di Rodomonte,' consisting of 9 songs and a madrigal (Orvieto, 1633); some antifone for 24 voices (Mascardi, Rome, 1630–38, and 1677); and 5 books of Motetti (Grignani, Rome, 1635).

He also wrote two operas, 'Dal male il bene' (Rome, 1654) and 'Ione' (Vienna, 1666). The greater part of his productions remain unprinted. Some academical lectures by him, of much note in their time, mentioned by Padre Martini, do not seem to have been preserved. He assisted KIRCHER in his 'Musurgia.' F. Coradini's *A. M. Abbatini* (Arezzo, 1922) establishes the dates of birth and death given above. E. H. P.

ABBÉ, L', (1)PIERRE PHILIPPE SAINT-SEVIN (*d.* May 15, 1768), was music-master of the church of St. Caprais in Agen early in the 18th century.

His brother (2) PIERRE (*d.* Mar. 1777) occupied a similar post. Both were violoncellists. In consequence of their office, they had to wear the ecclesiastical dress, whence the name of L'Abbé l'aîné, or simply L'Abbé, and L'Abbé le cadet respectively, which remained to them until their deaths. Having given up their connection with the Church, they obtained engagements at the Opéra, the elder in 1727, the younger in 1730. The latter seems to have been one of the cleverest violoncellists of his time, remarkable for his beautiful tone.

(3) L'ABBÉ (LE FILS), JOSEPH BARNABÉ SAINT-SEVIN (*b.* Agen, June 11, 1727; *d.* Paris, Aug. 6, 1802),[1] son and pupil of Pierre Philippe, a musical prodigy. Arriving in Paris, Nov. 21, 1731, he entered the orchestra of the Comédie-Française when only twelve years of age; then studied with J. M. Leclair. Admitted as violinist at the Opéra, May 1, 1742 (La Borde) or 1743, he retired after 20 years' service, and devoted his time to the teaching profession and to composition. The musical gifts of L'Abbé le fils were highly appreciated by contemporary opinion. He played at the Concert Spirituel from 1741–55. Owing to the particularly high standard of his technique, he largely contributed to the development of violin execution in France. An interesting innovation of his was the writing out of cadenzas. His works (9 printed numbers) consist of 2 books of violin sonatas and a bass (1748–*c.* 1764), symphonies for 3 violins and a bass (*c.* 1754), 5 collections of airs arranged for 1 and 2 violins, with variations, etc., and a pedagogic work, *Les Principes du violon* (1761).

BIBL.—L. DE LA LAURENCIE: *L'École française de violon de Lully à Viotti*, Vol. II., Paris, 1923. M. L. P.

ABBELLIMENTI (Ital.), ORNAMENTS (*q.v.*); the word is used, in a special sense, of the florid passages traditionally introduced into the famous Miserere of Allegri (see MISERERE).

ABBEY, JOHN (*b.* Whilton, Northants, Dec. 22, 1785; *d.* Versailles, Feb. 19, 1859), a distinguished organ-builder.

In his youth he was employed in the factory of Davis, and subsequently in that of Russell. In 1826 Abbey went to Paris, on the invitation of Sébastien Erard, the celebrated harp and pianoforte maker, to work upon an organ which Erard had designed, and which he sent to the Exhibition of the Productions of National Industry in 1827, and also to build an organ for the Convent of the Legion of Honour, at St. Denis. He also built an organ from Erard's design for the chapel of the Tuileries, which, however, had only a short existence, being destroyed in the Revolution of 1830. Having established himself as an organ-builder in Paris, Abbey became extensively employed in the construction, renovation and enlargement of organs in France and elsewhere. Amongst others he built choir organs for accompanying voices for the cathedrals of Rheims, Nantes, Versailles and Evreux, and for the churches of St. Eustache, St. Nicholas des Champs, St. Elisabeth, St. Medard, St. Etienne du Mont

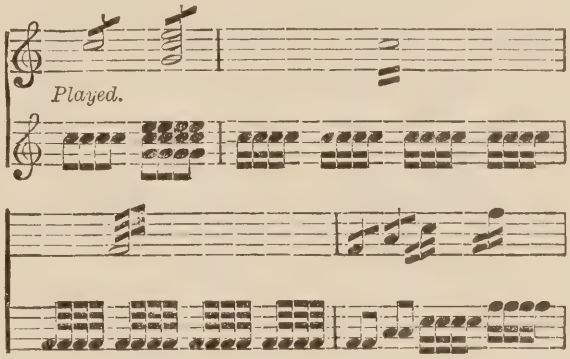
[1] His death is stated by Fétis and Vidal as taking place at Maison, near Charenton, 1787, but this is incorrect.

and St. Thomas Aquinas, in Paris; and large organs for the cathedrals of Rochelle, Rennes, Viviers, Tulle, Châlons-sur-Marne, Bayeux and Amiens, and for churches, convents and chapels at St. Denis, Orleans, Caen, Châlons, Picpus and Versailles. He repaired and enlarged organs in the cathedrals of Mende, Moulins, Rheims, Evreux and Nevers, and in the churches of St. Etienne du Mont, St. Philippe du Roule, The Assumption and St. Louis d'Antin in Paris. He also built many organs for South America. In 1831 Abbey was employed, at the instance of Meyerbeer (who had introduced the instrument into the score of his opera 'Robert le Diable,' then about to be produced), to build an organ for the Opéra at Paris, which instrument continued to be used there until it was destroyed, with the theatre, by fire in 1873. Abbey was the first who introduced into French organs the English mechanism and the bellows invented by Cummins. His example was speedily followed by the French builders, and from that period may be dated the improvements in organ-building which have raised the French builders to their present eminence. He left two sons, E. and J. Abbey, to carry on the business of organ-builders in Versailles. W. H. H.

ABBEY GLEE CLUB, THE, was founded on Jan. 9, 1841, by a few old choir-boys of Westminster Abbey and their friends, the object being to cultivate the practice of glee singing and glee composition.[1] The Club has been one of those which has kept alive in modern times the old English tradition of glee singing.

J. L. Hopkins was the first president until his appointment to Rochester. Meetings were held on the 2nd and 4th Saturdays in the month at Herbert's Hotel, Bridge Street, Westminster.

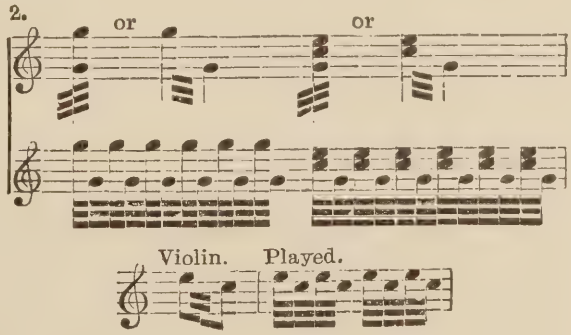
The Adelphi Glee Club, started in 1832, was merged into the Abbey Glee Club about 1845. For many years the meetings were held at the Freemasons' Tavern, but since 1885 at the Caxton Hall, Westminster. Many well-known musicians have been members, the number being limited to 150. The subscription is two guineas with an entrance fee.



Richard E. Webster (afterwards Lord Alverstone) joined in 1867, and was president from 1900 till his death. Edward Ford North succeeded him. The present president (1925) is the Hon. Robert H. Lyttelton, and the secretary and librarian since 1905 is Mr. Henry King, who has supplied the information for this notice. C.

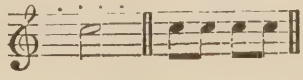
ABBREVIATIONS. The abbreviations employed in music are of two kinds, namely, the abridgment of terms relating to musical expression, and the true musical abbreviations by the help of which certain passages, chords, etc., may be written in a curtailed form, more especially in manuscript, to the greater convenience of both composer and performer.

Abbreviations of the first kind need receive no special consideration here; they consist for the most part of the initial letter or first syllable of the word employed—as for instance, *p.* for piano, *cresc.* for crescendo, and their meaning is everywhere sufficiently obvious. Those of musical passages are indicated by signs, as follows:



The continued repetition of a note or chord is expressed by a stroke or strokes across the stem, or above or below the note if it be a semibreve (Ex. 1), the number of strokes denoting

1. *Written.*



the subdivision of the written notes into quavers, semiquavers, etc., unless the word *tremolo* or *tremolando* is added, in which case the repetition is as rapid as possible, without regard to the exact number of notes played. On bowed instruments the rapid reiteration of a single note is easy, but in pianoforte music an octave or chord becomes necessary to produce a *tremolo*, the manner of writing and performing which is shown in Ex. 2.

2.

The division of a long note into short ones is sometimes indicated by dots.

3. Written. Played.

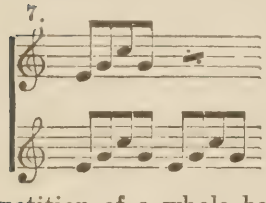
When a long note has to be repeated in the form of triplets or groups of six, the figure 3 or 6 is usually placed over it in addition to the stroke across the stem, and the note is sometimes, though not necessarily, written dotted.

[1] See 'Laws' of the Abbey Glee Club and *Musical World*, 1841.

4.

A group of three, four or more notes is abbreviated by the repetition of the cross strokes without the notes as many times as the group has to be repeated (Ex. 5); or the notes forming the group are written as a chord, with the necessary number of strokes across the stem (Ex. 6).

5.

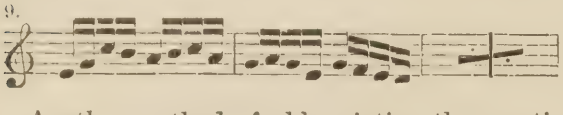


6. *Simili*

In this case the word *simili* or *segue* is added, to show that the order of notes in the first group (which must be written out in full) is to be repeated, and to prevent the possibility of mistaking the effect intended for that indicated in Ex. 1 and 2.

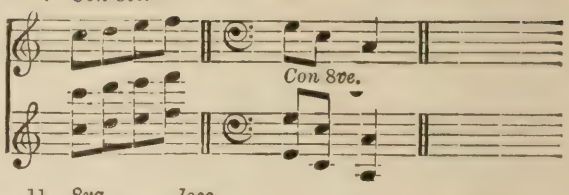
Another sign of abbreviation of a group consists of an oblique line with two dots, one on each side (Ex. 7); this serves to indicate the repetition of a group of any number of notes of any length. The repetition of a whole bar is indicated thus:

7.



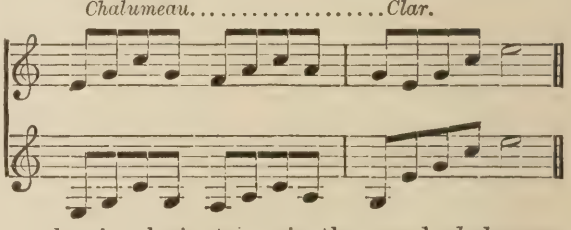
8.

and of a passage of not more than two bars,



9.

Another method of abbreviating the repetition of a passage of the length of the above is to write over it the word *bis* (twice), or in some cases *ter* (three times), or to enclose it between the dots of an ordinary repeat  .



Passages intended to be played in octaves are often written as single notes with the words *con ottave* or *con* 8*ve* placed above or below them, according as the upper or lower octave is to be added (Ex. 10). The word 8*va* (or sometimes 8*va alta* or 8*va bassa*) written above a passage does not add octaves, but merely transposes the passage an octave higher or lower:

10. *Con 8ve.*

11. 8*va*..... *loco*

so also in clarinet music the word *chalumeau* has been used to signify that the passage is to be played an octave lower than written (Ex. 11). All these alterations, which can scarcely be considered abbreviations except that they spare the use of ledger-lines, are counteracted, and the passage restored to its usual position, by the use of the word *loco*, or in clarinet music by *clarinette*.

In orchestral music it often happens that certain of the instruments play in unison; when this is the case the parts are sometimes not all written in the score, but the lines belonging to one or more of the instruments are left blank, and the words *col violini* or *col basso*, etc., are added, to indicate that the instruments in question have to play in unison with the violins or bass, as the case may be, or when two instruments of the same kind, such as first and second violins, have to play in unison, the word *unisono* or *col primo* is placed instead of the notes in the line belonging to the second. Where two parts are written on one staff in a score, *e.g.* 1st and 2nd flutes, the sign '*a* 2' denotes that they play in unison; and '*a* 1,' or *solo*, that the second is resting; '*a* 2,' however, in the viola part indicates the presence of two real parts, taking the place of *divisi* or *div.*, used for a similar effect in the case of the other bowed instruments. Further duplication of string parts is indicated by *a* 3 or *a* 4, *unisono* or *unis*, denoting its cessation.

An abbreviation which is often very troublesome to the conductor occurs in manuscript scores, when a considerable part of the composition is repeated without alteration, and the corresponding number of bars are left vacant, with the remark *come sopra* (as above). This is not met with in printed scores, and as music-printing improves, there is a growing tendency

to print out in full such passages as would formerly have been indicated by abbreviations.

F. T. ; rev. by N. C. G.

Abbreviations of the harp, *glissando*, are much used in modern orchestral scores, in print as well as in manuscript. Only the lowest and the highest notes of the *glissando* are written, the intervening notes having been already indicated by the tuning. The extreme notes are then joined by a straight or waving line or sometimes conventionally as semiquavers, demisemiquavers, etc. The following examples should make the practice clear.

C.

ABD EL KADIR (Abdolkadir), Ben Isa, Arabian writer of the 14th century, author of *The Collector of Melodies, The Aim of Melodies in the Composition of Tones and Measures, The Treasure of Melodies in the Science of Musical Cycles* (Kiesewetter: *Musik der Araber*, 1842, p. 33). E. v. d. s.

ABEILLE (early 18th cent.), a French composer, wrote a Miserere for chorus and orchestra about 1733; 'Les Pseaumes de David en françois,' 2 vols.; some airs in 'Recueil d'airs sérieux et à boire,' 1710 (*Q.-L.*). E. v. d. s.

ABEILLE, Joh. Chr. Ludwig (*b.* Bayreuth, Feb. 20, 1761; *d.* Stuttgart, Mar. 2, 1832), composer, pianist and organist. He studied at Stuttgart, and in 1782 became a member of the private band of the Duke of Würtemberg. On Zumsteeg's death in 1802 he succeeded him as Konzertmeister, and was shortly afterwards made organist in the court chapel and director of the official music. In 1832, having completed a period of 50 years' faithful service, he received the royal gold medal and a pension. Abeille's concertos and trios for the harpsichord were much esteemed, but his vocal compositions were his best works. Amongst them are several collections of songs (*e.g.* 'Acht Lieder,' Breitkopf and Härtel) which are remarkable for simple natural grace and a touching vein of melody. His Ash-Wednesday hymn for 4 voices, and his operettas of 'Amor und Psyche,' 'Peter und Aennchen,' were well known in their day, and were published, in pianoforte score, by Breitkopf and Härtel.

C. F. P.

ABEL, (1) Christian Ferdinand, gambist and violoncellist in the court chapel at Cöthen, where he was still living in retirement in 1736. It was apparently for him that J. S. Bach wrote the suites for the violoncello (Spitta, *Bach*, i. 709). His two sons were:

(2) Karl Friedrich (*b.* Cöthen, 1725; *d.* London, June 20, 1787), one of the most famous viola da gamba players.

He was brought up at the Thomasschule at Leipzig under J. S. Bach. In 1748 he obtained a post under Hasse in the court band at Dresden, where he remained 10 years. In 1759 he visited London, and gave his first concert on Apr. 5 at the 'great room in Dean Street, Soho,' when, besides playing the viola da gamba, he performed 'a concerto upon the harpsichord, and a piece composed on purpose for an instrument newly invented in London, and called the pentachord,' the whole of the pieces in the programme being of his own composition. His facility was remarkable: he is reported to have performed more than once on the horn, as well as on 'new instruments never heard in public before.' From the year 1765, however, he confined himself to the viola da gamba. He was appointed chamber musician to Queen Charlotte, with a salary of £200 a year. On the arrival of John Christian Bach, in the autumn of 1762, Abel joined him; they lived together, and jointly conducted Mrs. Cornelys's subscription concerts. The first of their series took place in Carlisle House, Soho Square, on Jan. 23, 1765, and they were maintained for many years. The Hanover Square Rooms were opened on Feb. 1, 1775, by one of these concerts. Haydn's symphonies were first performed in England at them, and Wilhelm Cramer the violinist, father of J. B. Cramer, made his first appearance there. After J. C. Bach's death on Jan. 1, 1782, the concerts were continued by Abel, but with indifferent success. In 1783 he returned to Germany, taking Paris on the way back, where he appears to have begun that indulgence in drink which eventually caused his death. In 1785 we find him again in London, engaged in the newly established 'Professional Concerts,' and in the 'Subscription Concerts' of Salomon and Mme. Mara at the Pantheon. At this time his compositions were much performed, and he himself still played often in public. His last appearance was at Mrs. Billington's concert on May 21, 1787.

Abel's symphonies, overtures, quartets, concertos and sonatas were greatly esteemed, and many of them were published by Bremner of London and Hummel of Berlin. (For complete

catalogue see *Q.-L.*). The most favourite were 'A 5th set of 6 overtures, op. 14' (Bremner), and 'Six sonatas, op. 18.'

Probably the most interesting among Abel's compositions are those written for the viola da gamba. None of them seems ever to have been published, but specimens exist in the British Museum and other public libraries, and in private collections. They include studies and other pieces marked 'Viola da Gamba senza Basso,' sonatas, 'A Viola da Gamba Solo e Basso,' and 'Duettos' marked 'Per la Viola da Gamba e Violoncello.' They evince a high degree of taste, little musical imagination, and unlimited command over the peculiar resources of the instrument. Some adagios from his quartets were published in score, with pianoforte adaptations, 'as a tribute of respect to his memory by his surviving and grateful pupil, J. B. Cramer' (1820).

Abel's playing was most remarkable in slow movements. 'On the viol da gamba,' says the *European Magazine*, 1784, p. 366, 'he is truly excellent, and no modern has been heard to play an Adagio with greater taste and feeling.' Burney's testimony is to the same effect, and he adds that 'his musical science and taste were so complete that he became the umpire in all musical controversy, and was consulted like an oracle.' Among his pupils both in singing and composition were J. B. Cramer, Graeff and Brigida Giorgi (Signora Banti).

His friend Gainsborough painted a three-quarter-length portrait of Abel playing on the viola da gamba, distinguished by its careful execution, beauty of colouring and deep expression. It was bequeathed by Miss Gainsborough to Briggs, and was sold in London in 1866. Gainsborough also exhibited a whole-length[1] of Abel at the Royal Academy in 1777. A very powerful portrait of him by Robineau is to be found at Hampton Court, and another by a nameless artist is in the Music School at Oxford.

A good idea of Abel's personal appearance is afforded by a caricature representing 'A Solo on the Viola di Gamba, Mr. Abel,' drawn by J. N., 1787, etched by W. V. Gardiner.

Following English traditions, Abel played on a 6-stringed viola da gamba, instead of the 7-stringed one commonly in use on the Continent. The instrument shown in his portraits is evidently by an old German maker, and has a brass 'rose' inserted in the belly under the finger-board. E. J. P., with addns.

(3) Leopold August (*b.* Cöthen, 1717; *d.* Ludwigslust, Aug. 25, 1794) (*Q.-L.*); elder brother of the preceding, violinist, and pupil of Benda. He played in the orchestra of the theatre at Brunswick, and was successively conductor of the court band to the Prince of Schwarzburg-Sondershausen (1758), the Margrave of Schwedt (1766), and the Duke of Schwerin (1770). He composed a 'sinfonia a 8 voci' in 1766, and some violin studies, etc., are in the possession of the Gesellschaft der Musikfreunde at Vienna. M. C. C.

ABEL, Clamor Heinrich (*b.* Westphalia, middle of 17th cent.), chamber musician to the court of Hanover. His work *Erstlinge musikalischer Blumen* appeared first in 3 vols. (Frankfort, 1674, 1676 and 1677), afterwards united under the title *Drei Opera musica* (Brunswick, 1687). M. C. C.

ABELL, John (*b.* London, 1650; *d.* Cambridge, 1724), a celebrated alto singer and performer on the lute.

It is supposed that he was educated in the choir of the Chapel Royal, of which establishment he was sworn a 'gentleman extraordinary' in 1679. He was greatly patronised by royalty, and between the years 1679 and 1688 received 'bounty money' amounting to no less than £740. (See 'Moneys received and paid for secret services of Charles II. and James II.'—*Camd. Soc.*) Charles II. sent him to Italy to study, and after his return Evelyn thus describes meeting him:

'Jan. 27, 1681–82. After supper came in the famous treble, Mr. Abel, newly returned from Italy. I never heard a more excellent voice, and would have sworn it had been a woman's, it was so high and so well and skilfully managed, being accompanied by Signor Francisco on the harpsichord.'

In Dec. or Jan. 1685–86 he married Frances Knollys, sister of the titular Earl of Banbury, who, as soon as he knew of it, 'putt her out of the house.'[2] He remained in the service of the chapel until the Revolution of 1688, when he was dismissed for his supposed leaning to the Roman Church. After this he travelled abroad, visiting France, Germany, Holland and Poland, leading a vagrant sort of life, and depending for his support upon his voice and lute. It is said that when Abell was at Warsaw he refused to sing before the court, but his objections were overcome by the somewhat summary method of suspending him in a chair in the middle of a large hall, while some bears were admitted below him. He was asked whether he preferred singing to the King and the court, who were in a gallery opposite to him, or being lowered to the bears; he not unnaturally chose the former alternative. He was Intendant at Cassel in 1698 and 1699 (*D.N.B.*). About the end of the century, Abell returned to England, and occupied a prominent position on the stage. Congreve, in a letter dated 'Lond. Decem. 10, 1700,' says:

'Abell is here: has a cold at present, and is always whimsical, so that when he will sing or not upon the stage are things very disputable, but he certainly sings beyond all creatures upon earth, and I have heard him very often both abroad and since he came over.'[3]

[1] Reproduced in *The Oldest Music Room in Europe*, by J. H. Mee, p. 26.

[2] Letter from Bridget Noel to the Countess of Rutland. Hist MSS. Com., 12th Report, Appendix, Pt. v.

[3] G. M. Berkeley's *Literary Relics*, 1789, p. 322.

In 1701 Abell published two works, 'A Collection of Songs in Several Languages,' which he dedicated to William III., and 'A Collection of Songs in English.' Before this date he had published (Amsterdam) 'Les Airs d'Abell pour le concert.' In 1702 he set a poem by Nahum Tate on Queen Anne's coronation, and in 1703 he published 'A Choice Collection of Italian Ayres.' He gave a concert in 1716 at Stationers' Hall (Hawkins, *Hist.*, *Cheque-Book Chap. Roy.*, etc.). E. F. R., with addns.

ABENDROTH, HERMANN (*b.* Frankfort-on-Main, Jan. 19, 1883), orchestral conductor, educated in Munich as a pupil of Ludwig Thuille and Anna Langenhan-Hirzel. His experience has been gained in a number of posts; as conductor of the Orchestral Society at Munich (1903–04), Kapellmeister to the Society of the Friends of Music at Lübeck and at the town theatre there (1905–11). He became director of the Conservatorium at Cologne (1915) in succession to Fritz Steinbach (*Riemann*).

ABERT (1), JOHANN JOSEPH (*b.* Kochovice, Bohemia, Sept. 21, 1832; *d.* Stuttgart, Apr. 1, 1915), a composer, who in his fifteenth year ran away to Prague, and through the assistance of an uncle entered the Conservatorium there. In 1852, having attracted the attention of Lindpaintner, then Kapellmeister at Stuttgart, he received the post of contrabassist in the theatre orchestra of that town. He succeeded Eckert as Kapellmeister (1867), retiring in 1888. His compositions include:

Two early symphonies, a symphonic poem 'Columbus' (Crystal Palace, Mar. 4, 1865), 'Frühlingssymphonie' (1894), and 5 operas, 'Anna von Landskron' (1859)" König Enzio' (1862), 'Astorga' (1866), 'Ekkehard' (1878), and 'Die Almohaden' (1890).

(2) HERMANN (*b.* Stuttgart, Mar. 25, 1871), son of the above, has devoted himself to musical research, and held appointments in various German universities as lecturer and professor. He succeeded Hugo Riemann in his professorship at Leipzig (1920). For his numerous publications see *Riemann*. He wrote the life of his father, *Johann Joseph Abert (1832 bis 1915), sein Leben und seine Werke*, Leipzig, 1916. M., with addns.

ABINGDON, HENRY, see ABYNGDON.

ABONDANTE, JULIO (16th cent.), lutenist. Several books of his lute pieces were published in Venice, 1536, 1548, etc. (*Q.-L.*).

ABOS, GERONIMO (*b.* Malta, *c.* 1708; *d.* Naples, *c.* 1786), a composer of the Neapolitan school, and pupil of Leo and Durante.

He was a teacher in the Conservatorio of 'La Pietà' at Naples, and trained many eminent singers, of whom Aprile was the most famous. He visited Rome, Venice, Turin and, in 1756, London, where he held the post of maestro al cembalo at the Opera. His operas are:

'La Pupilla e 'l Tutore,' 'La Serva Padrona' and 'L' Ifigenia in Aulide' (Naples), 'L' Artaserse' (Venice, 1746), 'L' Adriano' (Rome, 1750). 'Tito Manlio' and 'Creso' (London, 1756 and 1758).

His church music (see *Q.-L.*) is preserved in MS. in Naples, Milan, Bologna, Rome, Vienna, Carlsruhe and the Conservatoire in Paris. The style of his composition somewhat resembles that of Jommelli. M. C. C.

ABRAHAM, JOHN, see BRAHAM.

ABRAMS, HARRIET, THEODOSIA and ELIZA, three sisters, vocalists. Harriet (*b.* 1760), the eldest, was a pupil of Dr. Arne, and first appeared in public at Drury Lane Theatre, in her master's musical piece, 'May Day,' on Oct. 28, 1775. She and her sister Theodosia sang at the opening of the Concert of Ancient Music in 1776. Harriet possessed a soprano, and Theodosia a contralto voice of excellent quality. The youngest sister, Eliza, was accustomed to join with her sisters in the pieces which were sung at the Ladies' Catch and Glee Concerts. The elder two sang at the Commemoration of Handel, in Westminster Abbey, in 1784, and at the principal London concerts for several years afterwards, when they retired into private life. They both attained to an advanced age; Theodosia (then Mrs. Garrow) was living in 1834. Harriet composed several songs, two of which, 'The Orphan's Prayer' and 'Crazy Jane,' aided by the expressive singing of her sister Theodosia, became very popular. She published, in 1787, 'A Collection of Songs,' and 'A Collection of Scotch Songs harmonised for three voices,' besides other pieces at later dates. W. H. H.

ÁBRÁNYI, (1) KORNEL (*b.* Hungary, Oct. 15, 1822; *d.* Budapest, Dec. 20, 1903), a pupil of Chopin, was known as a critic and took part in founding (1860) the first Hungarian paper devoted to music, *Zenészeti Lapok*. In 1875 he became professor at the State Academy of Music in Budapest. His works include a musical history (1886) and many translations of opera texts.

His son, (2) EMIL (*b.* Budapest, Sept. 22, 1882), became conductor at the Royal Opera there in 1911, and since 1920 has been director of the National Opera. Several operas have been produced at Budapest, namely, 'A Ködkirály' ('The Cloud King,' 1903), 'Monna Vanna' (text by his father, 1907), 'Paolo and Francesca' (1912), 'Ave Maria' (1 act, 1922). (*Riemann.*)

ABSOLUTE MUSIC is that which does not depend, for its comprehension, on any relationship with the objective facts of life.

Every thinker on art is at once confronted with the fact that you cannot examine art but only the creations of the Fine Arts—Architecture, Sculpture, Painting, Poetry and Music. It is thus essential, before attempting to generalise about art, that some common property in the manifestations should be discovered. If we can find no point of contact whatever between, say, sculpture and poetry, then we can find no general principle in art, since art includes both poetry and sculpture.

Philosophers have agreed, in the main, to make the dependence of a Fine Art on the objective world act as the basis of classification, or *fundamentum divisionis*. On this principle it is easy to place the Fine Arts in a logical order, though the order is not in any sense an order of merit.

Architecture is purely objective, sculpture almost entirely so, painting very largely the same. These three arts are all three-dimensional, the first two obviously, and painting no less obviously when we realise that the object of 'perspective' is to create the illusion of solidity.

Poetry and music, on the other hand, work in time, and not in space. But poetry is to a considerable extent tethered to the objective world, since a poem is bound to use language which creates mental images. Music, however, is purely subjective.

No one can fail to observe that the other arts all strive to approach the subjective freedom enjoyed by music, so far as is possible (and sometimes further) within the limitations of their material. The work of a sculptor like Rodin clearly aims at shaking off the shackles of pure objectivity, and the same purpose is even clearer in much modern painting and poetry.

It is an open question, still largely a matter of opinion, to what extent music abandons this privilege of absolute subjectivity by adopting a programme-basis. (See PROGRAMME MUSIC.) It is sufficient here to say that Absolute Music in its purest form is music which makes no reference to the facts of life, depending for its comprehension, not on imitation or suggestion, but on structure alone. (Compare ÆSTHETICS.) P. C. B.

ABT, FRANZ (*b.* Eilenburg, Prussian Saxony, Dec. 22, 1819; *d.* Wiesbaden, Mar. 31, 1885), a voluminous writer of songs.

His father was a clergyman, and Franz, though destined to the same profession, received a sound musical education, and was allowed to pursue both objects at the Thomasschule and University of Leipzig. On his father's death he relinquished his work and adopted music entirely. He was successively Kapellmeister at Bernburg and Zürich (1841), where he occupied himself more especially with men's voices, both as composer and conductor of several societies. In 1852 he entered the staff of the Hoftheater at Brunswick, where until his retirement in 1882 he filled the post of leading Kapellmeister.

The list of Abt's compositions contains more than 400 works, consisting chiefly of Lieder of the most various kinds for one, two or three solo voices, as well as for chorus, both female and mixed, and, as already mentioned, especially for men's voices. Of the solo Lieder, a collection of the less-known ones has been published by Peters under the title of 'Abt-Album.' In the early part of his life Abt composed much for the pianoforte, chiefly pieces of light *salon* character. These have never had the same popularity as his vocal works, and are now virtually forgotten. A. M.

ABU HASSAN, Singspiel in 1 act; words by Hiemer; music by Weber. Produced June 4, 1811, at Munich; London, in English, Drury Lane, 1835; in Italian, Drury Lane, May 12, 1870, with the dialogue set to recitative by Arditi. G.

ABUNDANTE, M. GIULIO, DETTO DAL PESTRINO, lutenist-composer, published 'Il quinto libro de tabulatura da liuto,' etc. (Venice, 1587). Eitner thinks him a different person (son ?) from the lutenist Julio Abondante, as (apart from the time) the additional surname seems to indicate, although the 'quinto libro' is apparently intended as a continuation of the earlier works. Some of his pieces are signed merely 'Giulio del Pestrino.' E. v. d. S.

ABYNGDON, HENRY (*b. circa* 1418; *d.* Sept. 1497), an English musician remembered as the first master of the children of the Chapel Royal and the first recipient of the degree of B.Mus. at Cambridge (Feb. 22, 1463).

He was a musician in the Chapel of Humphrey, Duke of Gloucester, who (Jan. 7, 1445) granted him a rent of £8 for life, confirmed to him (*Calendar of Patent Rolls*) in the following year. He succeeded John Bernard as succentor of Wells, Nov. 24, 1447, and a further entry in the *Calendar of Patent Rolls* (Mar. 16, 1456) records:

'Grant to the King's servant, Henry Abyngdon, to whom the King committed the instruction and governance of the ten boys of the chapel of the household, of 40 marks yearly from Michaelmas last, the date of his appointment, so that he act by advice and survey of the Dean of the Chapel.'

Subsequent Act of Parliament confirmed this to him on Feb. 14, 1471. Another grant of 40 marks 'from the issues of the County of Wilts' was made to Abyngdon 'for the provision of clothing and other necessary apparel of the boys of the chapel of the King's household,' July 2, 1465. Abyngdon became master of St. Catherine's Hospital, Bristol, in 1478, and at Michaelmas of that year he was succeeded by Gilbert Banaster, as master of the boys of the Chapel Royal. C.

Two Latin epitaphs on Abyngdon by Sir Thomas More have been preserved (Cayley's *Life of More*, i. 317), of which the English epitaph quoted by Rimbault from Stanyhurst is an adaptation. In these he himself is styled 'nobilis,' and his office in London 'cantor,' and he is said to have been pre-eminent both as a singer and an organist:

Millibus in mille cantor fuit optimus ille,
Praeter et haec ista fuit optimus orgaquenista.

More's friendship is evidence of Abyngdon's

ability and goodness, but the acquaintance can only have been slight, as More was in his twentieth year when Abyngdon died. None of his works are known. G.

See Dr. W. H. Grattan Flood's article, *Mus. T.*, June 1911, and *Mus. Ant.* iv. 229, where entries in the *Calendar of Patent Rolls* are printed.

ACADÉMIE DE MUSIQUE. This institution, which, after frequent changes of official title, is now popularly known simply as the 'Opéra,' has already entered its fourth century. A list of its successive titles is given below.

On June 28, 1669, royal letters patent were granted by Louis XIV. to the Abbé Pierre Perrin (1620–75), Robert Cambert, and the Marquis de Sourdéac, for the establishment of an Académie wherein to present in public 'operas and dramas with music, and in French verse,' after the manner of those of Italy, for the space of 12 years. Nearly a century before this, in 1570, similar privileges had been accorded by Charles IX. to a Venetian, C. A. de Baif, in respect to an academy 'de poésie et de musique,' but its scheme does not appear to have included dramatic representation. In any case it failed utterly. The Académie was opened in Mar. 1671 with a Pastoral by CAMBERT (*q.v.*), 'Pomone,' which attained an enormous success; having been repeated, apparently to the exclusion of every other work, for eight months successively. The troupe consisted of 5 male and 4 female principal performers, 15 chorus-singers, and an orchestra numbering 13. The career of the Académie under these its first entrepreneurs was brought to an end by the jealousy of an Italian musician then rising in court favour, J. Baptiste LULLY, who, through his influence with Mme. de Montespan, succeeded in obtaining for himself the privileges which had been accorded to Perrin and Cambert. By this disreputable proceeding Lully, who opened the Académie on Nov. 15, 1672, made himself master of the situation, remaining to the time of his death, in 1687, the autocrat of the French lyric drama. During these 14 years he produced, in concert with the poet QUINAULT (*q.v.*), no fewer than 20 grand operas, besides other works. The status of the theatrical performer at this epoch would seem to have been higher than it has ever been since; seeing that, by a special court order, even nobles were allowed, without prejudice to their rank, to appear as singers and dancers before audiences who paid for admission to their performances. Lully's scale of payment to authors, having regard to the value of money in his time, was liberal. The composer of a new opera received for each of the first ten representations 100 livres (about £4 sterling), and for each of the following twenty representations, 50 livres. After this the work became the property of the Académie. The theatre was opened for operatic performance three times a week throughout the year. On great festivals concerts of sacred music were given. The composers contemporary with Lully could only obtain access to the Académie by conforming to his style and working on his principles. Some few of these, however, whose impatience of the Lullian despotism deprived them of all chance of a hearing within its walls, turned their talents to account in the service of the vagrant troupes of the Foire Saint-Germain; and with such success as to alarm Lully both for his authority and his receipts. He obtained an order (*more suo*) for the suppression of this already dangerous rivalry, which, however, proved itself far too supple for legislative manipulation. The 'vagrants' met each new 'ordonnance' with a new evasion, and that of which they were the first practitioners, and the frequenters of the Foire the first patrons, opened the way to the future Opéra-Comique (see PARIS).

The successors of Lully, COLASSE, CAMPRA, DESTOUCHES, DESMARETS, MARAIS, LACOSTE, MONTÉCLAIR, MOURET (*q.v.*) and others, had not replaced him in the favour of the public, and his glory still filled up the evenings of the Académie. But a condition of an art on the whole so stagnant as this was sure eventually to become insupportable, if not to the public, to the few who at all times, consciously or unconsciously, direct or confirm its inclinations. Their impatience found expression in the Abbé Raguenet's *Parallèle des Italiens et des Français, en ce qui regarde la musique et les opéras* (1704), one of a considerable number of essays which assisted in preparing the way for a new style, should a composer present himself of sufficient genius, culture and courage to introduce it. Such an one at length did present himself in Jean Philippe RAMEAU. His first works were received with unjust and cruel sarcasm; he had to fight against the old partisans of Lully, but his personality was overpowering. Between 1737 and 1760, irrespective of other work, he set to music no less than 24 dramas, the majority of them grand operas. The production of these at the Académie he personally superintended; and some idea of his activity and influence as a director may be gathered from the fact that in 1750, fourteen years before the close of his career, the number of performers engaged at the Académie had risen to 149.

In 1763 the theatre of the Palais Royal, built by Lemercier, for 90 years resonant with the strains of Lully and Rameau, was destroyed by fire. The ten years which connected the death of Rameau with the arrival in Paris of GLUCK were marked by the production of no work of more than secondary rank. On Apr. 19, 1774, 'Iphigénie en Aulide' of this master was heard for the first time. The arrival in Paris, shortly after, of the admirable Piccinni brought the famous war of the Gluckists and Piccinnists.

In 1781 the second Palais Royal theatre, like its predecessor, was burnt to the ground. The Académie, for many weeks without a home, at length took temporary refuge in the Salles des Menus-Plaisirs. Meanwhile the architect Lenoir completed the Salle de la Porte Saint-Martin in the short space of three months. The result of this extravagant speed was that, after the first performance, said to have been attended (*gratis*) by 10,000 persons, the walls were found to have ' settled ' two inches to the right and fifteen lignes to the left. In 1784 an École Royale de Chant et de Déclamation, afterwards developed into the CONSERVATOIRE, was grafted on to the Académie. In 1787 the Académie troupe is said to have consisted of 250 persons—an increase of 100 on that of Rameau. The unfortunate Louis XVI. took great interest in the Académie, and even gave much personal attention to its regulation. He reduced the working expenses by nearly one-half ; not at the cost of the working members, but by the abolition of sinecures and other incumbrances on its income. In 1784 he established prizes for libretti, and in 1787 issued several well-considered ' ordonnances ' for the regulation of the establishment. On Apr. 20, 1791, the royal family attended the Académie for the last time. The opera was the ' Castor et Pollux ' of Rameau. Shortly after this the ' protection,' or exclusive right of performance of grand opera, was withdrawn from the Académie and the *liberté des théâtres* proclaimed. Hitherto the names of the artists concerned in the Académie performances had never been published. This rule was violated for the first time in the *affiche* announcing ' L'Offrande à la Liberté,' an opera-ballet by Gardel and Gossec. The history of the Académie during the next few years is a part of the history of the French Revolution, and could only be made intelligible by details out of all proportion with our space.

In 1794 the Académie was transferred to the Rue de la Loi (Rue de Richelieu), on the site of the present Hôtel Louvois. In its new abode the Académie took a new name—Théâtre des Arts. Here for the first time the pit was provided with seats. The old operas, subjected always to democratic purification, were again heard. In 1799 Gluck's ' Armide ' was revived. During the consulate no new works of importance were brought forward at the Théâtre des Arts, eventually the scene of two conspiracies against the First Consul, which, had they been successful, would have altered seriously the subsequent history of Europe. On the occasion of the first of these the ' Horaces ' of Porta, and on that of the second the ' Creation ' of Haydn were performed, the latter for the first time in Paris. During the ten years which follow 1804 French opera was much developed through the labours both of foreign and of native composers ; among the former, Spontini, Rodolphe Kreutzer and Cherubini ; among the latter Lesueur and Catel. Among the most important of their works were ' Les Bardes ' of Lesueur and ' La Vestale ' of Spontini—the latter an enormous success won despite bitter and long-continued opposition. To Spontini, on account of it, was awarded the prize of 10,000 francs, decreed at Aix-la-Chapelle by Napoleon for the best opera produced at the Académie.

In 1814 the allies occupied Paris, and the Emperor of Russia and the King of Prussia assisted at a performance of ' La Vestale ' on Apr. 1. On May 17 following, ' Œdipe à Colone ' and a Ballet de Circonstance were played before Louis XVIII. On Apr. 18, 1815, Napoleon witnessed another performance of ' La Vestale,' and on July 9 of the same year the same opera was again performed before Louis XVIII., the Emperor of Austria and the King of Prussia. The assassination of the Duc de Berri on the evening of Feb. 13, 1820, interrupted for several months the performances of the Académie.

On May 3, 1821, the Académie troupe resumed its performances in the Salle Favart, with an Opéra de Circonstance, the combined work of Berton, Boieldieu, Kreutzer, Cherubini and Paër, in honour of the infant Duc de Bordeaux. In the next year the Académie was again transferred—this time to the Rue Le Peletier, the salle of which was destined to be for half a century its home, and the scene of even greater glories than any it had yet known. About this time a change of taste in music, mainly attributable to a well-known critic, CASTIL-BLAZE (*q.v.*), showed itself among the opera habitués of Paris. French adaptations of the German and Italian operas of Mozart, Rossini, Meyerbeer, and even Weber, were produced in rapid succession and received with great favour. The ' Freischütz ' of the last great master was performed at the Odéon 387 times in succession. The inevitable result soon followed. The foreign composers who had so effectually served the Académie indirectly were called upon to serve it directly. Rossini and Meyerbeer, though already renowned and experienced, received the consecration of their talents in Paris, thus adopting for their works the mould of French opera. Meanwhile Auber, Hérold and other native musicians had made themselves known by works of more than promise. By a fortunate coincidence, too, there flourished a playwright, Augustin Eugène SCRIBE, who must be regarded as the great furnisher of operatic libretti of that period. The two years immediately preceding, and the eighteen following the revolution of July form the period during which the Académie attained its highest excellence and success. This period includes the composition and production of

'Comte Ory' and 'Guillaume Tell' by Rossini, 'Muette' by Auber, 'Robert le Diable' and 'Huguenots' by Meyerbeer, 'Juive' and 'Charles VI.' by Halévy, 'Favorite' by Donizetti, and 'Benvenuto Cellini' by Berlioz. These works were performed almost exclusively by native artists. The names of Cinti-Damoreau, Falcon, Nourrit, Levasseur and the later Duprez deserve remembrance.

In 1861, when the second empire was at its zenith, the foundations were laid in Paris of a new Académie, designed on a scale, as respects magnitude and luxury, unprecedented in any age or country. Its progress (from the first slow) was altogether stopped by the Franco-German war and the political changes accompanying it. The theatre in the Rue Le Peletier having meanwhile been burnt to the ground (Oct. 28, 1873), and the works of the new one resumed, the Académie, installed in its latest home, once more opened its doors to the public on Jan. 5, 1875. At that time the entrepreneur, subject to the Minister of Fine Art, was Halanzier, who received from the State a yearly allowance (*subvention*) of £32,000, the principal conditions of the enjoyment of which were that he should maintain an efficient staff, open his theatre four times a week, and give favourable consideration to new works by native composers.

The nine directions which have succeeded each other, in the sumptuous building of Charles Garnier since Halanzier, until the present direction of J. Rouché (including that of P. Gailhard), have known how to guard for the Académie de Musique et de Danse that renown which it had previously acquired.

The introductory programme was composed thus (Jan. 5, 1875):

Overture from 'La Muette de Portici.'
'La Juive,' 1st and 2nd acts.
Overture from 'William Tell.'
'Les Huguenots,' scene of the blessing of the swords.
'La Source,' ballet, 1st tableau from Act II.

The first work to be performed in the new building, Jan. 8, 1875, was 'La Juive,' which was given eight times in succession. Fifteen months passed before a new work was produced—'Jeanne d'Arc,' by MERMET—first performed on Wednesday, Apr. 5, 1876. This work scarcely shows signs of that evolution which a little before was so noticeable in the tendencies of the repertory of the Opéra, an evolution which is first to be seen in Delibes's charming ballet 'Sylvia, ou la nymphe de Diane' (Wednesday, June 14, 1876).

As to the singers and dancers, both men and women, who have been and who are the just pride of the first lyric stage of France, their names are too many to be included here.

Amongst the works which have had a conspicuous success at the new Opéra may be mentioned:

'Le Roi de Lahore,' 'Aïda,' 'Namouna,' 'Henry VIII,' 'Sapho,' 'Sigurd,' 'Le Cid,' 'Les Deux Pigeons,' 'Patrie,' 'Roméo et Juliette,' 'Ascanio,' 'Lohengrin,' 'Salammbô,' 'Samson et Dalila,' 'La Valkyrie,' 'Thaïs,' 'Othello,' 'Les Maîtres Chanteurs,' 'La Prise de Troie,' 'Siegfried,' 'Tristan et Iseult,' 'Le Crépuscule des Dieux,' 'L'Or du Rhin,' 'Fervaal,' 'Parsifal,' 'Les Troyens.'

To sum up, since its foundation until to-day, the Académie de Musique et de Danse has given performances in twelve different buildings and under fifty-eight different managements (directions). The actual number of directors who have presided over the destinies of this institution is considerably higher, owing to the number of different groups of administrators charged with looking after the affairs of theatres in the name of the town and of the commune of Paris.

During the same period, that is to say, during 253 years, to the year 1924 the Académie de Musique et de Danse has produced 599 operas, 213 ballets, 20 intermezzi and 70 cantatas and patriotic pieces—a total of 902 works.

The following are the names which the Académie has held at different times:

Mar. 1671, Académie des Opéras; Nov. 1672, Académie royale de Musique.
During the Revolution and under Bonaparte: Théâtre de l'Opéra, Opéra National, Théâtre des Arts, Théâtre de la République et des Arts.
During First and Third Empires: Théâtre Impérial de l'Opéra.
During the several returns of the old dynasty: Académie Royale de Musique; 1848, Théâtre de la Nation; Sept. 1870, Académie Nationale de Musique, Théâtre National de l'Opéra.

ACADEMY OF ANCIENT MUSIC. This association was formed about the year 1710 at the Crown and Anchor Tavern in the Strand, by a body of distinguished instrumentalists, professional and amateur, including the Earl of Abercorn, Henry Needler, Mulso, and other gentlemen, for the study and practice of vocal and instrumental works; and an important feature in the scheme was the formation of a library of printed and MS. music. The Academy met with the utmost success under the direction of Dr. Pepusch, the gentlemen and boys of St. Paul's Cathedral and the Chapel Royal taking part in the performances. In 1728 Dr. Maurice Greene left the Academy and established a rival institution at the Devil Tavern, Temple Bar, but this only existed for a few years, and the old Academy continued its work, with Needler as leader of the orchestra. In 1734 there was a second secession from the Academy, Gates retiring and taking with him the children of the Chapel Royal. After

passing through one season without any treble voices the Academy issued invitations to parents to place their children under the instruction of Dr. Pepusch, one of the conditions being that they should sing at the concerts. A subscription list was also opened to provide the necessary funds, and among those who supported the Academy were Handel and Geminiani, the latter of whom frequently played at its concerts. The death of Dr. Pepusch in 1752 was a serious loss to the institution, but the doctor bequeathed to it the most valuable portion of his library. The Academy closed its career in 1792 under the conduct of Dr. Arnold, who had been appointed its director in the year 1789. C. M.

ACADEMY OF NEW YORK, see NEW YORK.

ACADEMY OF VOCAL MUSIC, THE. This society was started on 'Fryday, Jan. 7, 172⁵, at the Crown Tavern, against St. Clement's Church, in ye Strand,' according to the original minute-book presented to the British Museum by Vincent Novello (Add. MSS. 11,732). The meetings were held fortnightly from 7 to 9 P.M. At the first, the 13 persons who paid a subscription of half a crown each included King, Gates, Wesley, Pepusch, Green and Gaillard. The expenses of that evening included—

	s.	d.
A coach for ye children [the choristers of St. Paul's Cathedral]	2	0
Wine and bread	10	6
For the use of ye room, fire, and candles	5	0
The Drawer	1	0

A fortnight later the names of Flintoft and Dr. Crofts appear—they each paid half a guinea; and among subsequent names of subscribers those of Bononcini, Haym, Geminiani, Senesino and Dieupart. In 1729 the 69 subscribers included Hogarth, Festing, Robinson and Randall. On June 1, 1727, Steffani was elected President. The last entry in the minute-book (from which these particulars are derived) contains various resolutions drawn up on May 26, 1731, one of them being 'By ye composition of the Ancients is meant of such as lived before ye end of the 16th century'; another, 'That Dr. Pepusch be desired to demand of Dr. Green the Six Motetts ye Bishop of Spiga [Steffani] sent the Academy.' The name of Handel is absent from the roll of members. Vincent Novello has endorsed the MS. to the effect that the Academy of Vocal Music afterwards became the King's Concerts of Ancient Music, but this needs confirmation. F. G. E.

ACAEN, see CAEN, Arnold.

A CAPPELLA, or ALLA CAPPELLA (Ital.), 'in the church style,' is used in three senses, (1) as showing that the piece is for voices without accompaniment; (2) where instruments are employed, that these accompany the voices only in unisons or octaves and have no independent parts; or (3) as a time indication, in which case it is equivalent to ALLA BREVE.

A CAPRICCIO (Ital.), 'at the caprice' or pleasure of the performer, both as regards time and expression.

ACCADEMIA, an institution which flourished all over Italy in the 16th and 17th centuries, and, speaking generally, was founded for promoting the progress of science, literature and art. Il Quadrio (*Storia e ragione*, i. 48-112) gives an account of all the Italian academies from the earliest times, and the mere alphabetical list would fill several pages. Even from his voluminous work but little beyond the names and mottoes of these institutions, the dates of their foundation, and their general objects can be ascertained. A detailed history of their endowments and separate objects would require an examination into the archives of each particular city, and it is doubtful whether such an examination would supply full information or repay it when supplied. Nor is it an easy task to separate those institutions which had music for their especial object.

The 'Accademie,' even those especially devoted to music, do not come under the same category as the CONSERVATORI (*q.v.*), founded and endowed for the sole purpose of giving instruction in music. The Academies were either public institutions maintained by the State, or private societies founded by individuals to further the general movement in favour of science, literature and the fine arts. This they did in various ways, either by public instructions and criticisms, facilitating the printing of standard works on music, illustrating them with fresh notes, or by composing new ones; and every week the Academicians would assemble to compare their studies and show proofs of their industry. The study of one science or art would often help to illustrate the other. By the end of the 16th century poetry had become so closely allied to music in the drama that an academy could hardly have one of these arts for its object without including the others also, while many, like the 'Alterati' at Florence, the 'Intrepidi' at Ferrara, the 'Intronati' and the 'Rozzi' at Siena, devoted their energies to promoting the successful combination of the two arts in theatrical representation.

As far as regards science, the study of mathematical proportions was found to throw light upon the theory and the practice of music, when the Greek writers upon music came to be translated and studied in Italy in the 16th and 17th

centuries. Take, for example, the mathematical demonstrations of Galileo in his *Trattato del suon*, the writings of the great Florentine theorist, Giambattista Doni (a member of the literary academy 'Della Crusca'), and Tartini's *Trattato di musica*. From the 15th to the 18th century the passion for academical institutions was so vehement in Italy that there was scarcely a town which could not boast at least one, while the larger cities contained several. At first they went by the name of their founder, as that of 'Pomponio Leto' at Rome, or 'Del Pontano' at Naples. But as they increased and multiplied this did not suffice, and each chose a special name either with reference to its particular object or from mere caprice. Hence arose a number of elaborate designations indicative either of praise or blame, 'Degli infiammati,' 'Dei solleciti,' 'Degl' intrepidi,' etc. Each of these societies had, moreover, a device bearing a metaphorical relation to its name and object. These were looked upon as important, and were as highly esteemed as the crests and coats-of-arms of the old nobility.

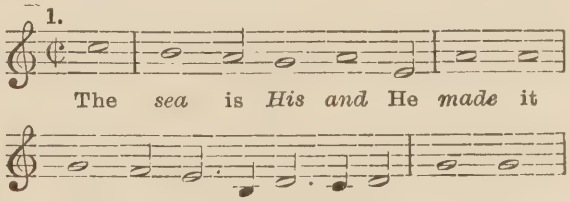
Selecting, as far as possible, the academies which had the cultivation of music for their special object, we find that the earliest in Italy were those of Bologna and Milan, founded, the former in 1482, the latter in 1484. In the 16th and 17th centuries Bologna had four societies for public instruction in music, Cesena and Ferrara one each, Florence five, Padua and Salerno one each, Siena four, entirely for musical dramatic representations, Verona one, founded by Alberto Lavezzola—a combination of two rival institutions which in 1543 became united — Vicenza two, also founded entirely for musical representation.

At this period there appears to have been no particular academy for music either at Milan, Rome, Naples or Venice, though the science was probably included in the general studies of the various academies which flourished in those cities, while it could be specially and closely studied in the famous Neapolitan and Venetian Conservatori or under the great masters of the Pontifical and other Chapels at Rome.

The 'Accademie' were all more or less short-lived, and that of the 'Filarmonici' (at Bologna) is the only one which Burney (*Musical Tour*, 1773) mentions as still extant (see Bologna, Florence, Milan, Naples, Padua, Rome, Venice).

The name 'Accademia' was also given in Italy to a private concert. Burney says in his *Musical Tour*:

'The first I went to was composed entirely of dilettanti. Il Padrone, or the master of the house, played the first violin, and had a very powerful band; there were twelve or fourteen performers, among whom were several good violins; there were likewise two German flutes, a violoncello, and small double bass; they executed, reasonably well, several of our [J. C.] Bach's symphonies, different from those printed in England: all the music here is in MS. . . . Upon the whole, this concert was much upon a level with our own private concerts among gentlemen in England.'



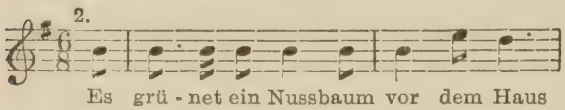
(*Tour*, ii. 94, 95). From Italy the use of the word spread to Germany. 'Besuche er mich nicht mehr,' said Beethoven on a memorable occasion, 'keine Akademie!' C. M. P.

ACCELERANDO (Ital.), a quickening of the time, generally used where the quickening is maintained over a fairly long passage (see Stringendo).

ACCELLI, Cesare (2nd half of 16th cent.), published 'Libro primo de madrigali a cinque' (Venice, 1557). It contains the very beautiful madrigal, 'Donna mia casta e bella.' 'De floridi virtuosi d' Italia il terzo libro' (Venezia, 1586) contains some fine madrigals by this master. E. v. d. S.

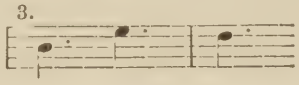
ACCENT. The Greek *προσῳδία* (*πρός*, 'to,' and *ᾠδή*, 'song'), of which the Latin *accentus* (*ad* and *cantus*) is a literal translation, meant (1) the giving of importance to a syllable, and (2) the diacritical mark which showed this importance. Of these marks there were two kinds: quantitative accents, long and short; and tonic accents, acute, grave and circumflex. This distinction is repeated in the two essentially vocal accents of music—the agogic and the tonic.

Agogic Accent.—The longer of two successive notes is said to bear the agogic (or 'attracting') accent. In this phrase from the Venite of Byrd's Great Service, the longer notes coincide with the important words (if we except the two 'ands').



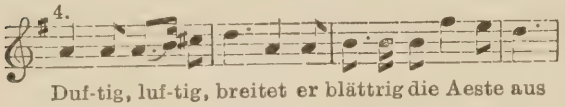
There are only three words which are not drawn into the scheme of this accent, and they are at places where they would have been 'common' (long or short) in poetry; and there is no bar accent to compete with this agogic, for bars were not then invented. The time is thought in feet (see Metre), as a poet thinks his verse. A modern instance of agogic accent is the second beat of the saraband or the mazurka, both of which are easily vulgarised by adding an uncalled-for stress accent at that place.

Tonic, or Pitch, Accent.—*τόνος*, 'tension' (of a string), means primarily pitch. The fact that a note is of higher pitch tends to accentuate it, especially in vocal music; and this ultimately because the higher register of the voice is the stronger. Even in the example just given the long note was, in every case but one, higher than the short note, so that the



tonic there reinforced the agogic accent. But a high pitch also tends to lengthen a note, as in Schumann's 'Nussbaum':

2.

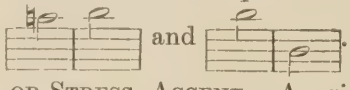


The rise to the E suggests a prolongation,

3.

which, ornamented by an appoggiatura, finds a place in the second strain:

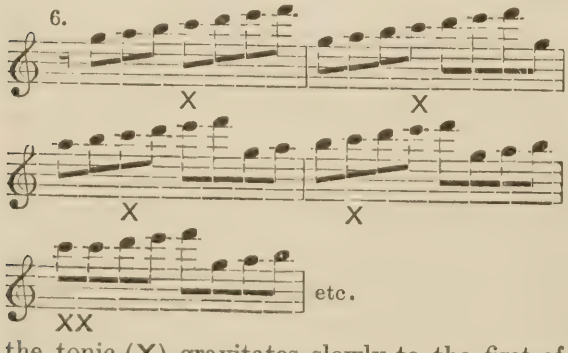
4.



The effect here is to turn one bar into one bar and a half. Beethoven in the fifth symphony makes use of this property of the tonic accent to turn four-bar periods into two-bar,

5.

the three-bar period which mediates between them being a case of an overlap of two two-bar periods,

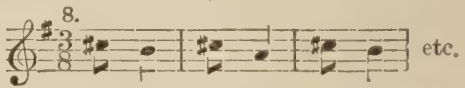


and

.

Dynamic, or Stress, Accent.—Agogic and tonic accent rule the time of a piece of music, but dynamic accent is extraneous to it. Though it does not alter the time, it may alter the shape of a phrase. In the *Presto* of 'Leonora,' No. III.,

6.



the tonic (X) gravitates slowly to the first of the bar and, reinforced there by the dominant chord implied in the preceding bar, hits it with such a thud that we seem to hear the rebound in the second quaver. Since the two quavers give the effect of a crotchet, this induces an agogic accent, and the shape of the phrase is altered. Or in Brahms's second symphony the limping theme of the allegretto

7.

becomes the stamping theme of the second variation:

8.

It is analogous to what happens in poetry—

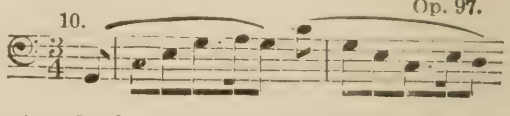
'His honour rooted in díshonour stood,'

—where we slightly falsify the accent of 'dishónour' for the moment, in order to make the sense clear, and thereby alter the metre slightly; whereas in some other context—

'Do what you will; dishónour shall be humour,'

—we make no such alteration.

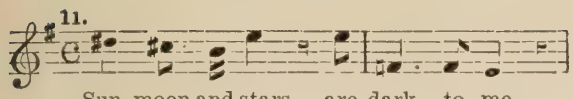
Cumulative Accent.—A special case of the dynamic is the cumulative accent, brought about by the context, mostly in the form of appoggiatura (which delays a note) or dissonance (which delays a chord). An instance from the 'Magic Flute,' where the two are combined, will suffice:



9.

Pathetic, or Expressive, Accent.—It is of the essence of the pathetic accent that it should come as a surprise, and as such it does not as a rule coincide with the normal accent. Schumann uses it to vary the strict metrical accent in the scherzo of the E♭ symphony,

Op. 97.



10.

leaving the first of the bar its official accent, but overriding that by the pathetic accent on its sixth quaver.

But it may also coincide with the normal accent, especially if it is accompanied by change of mood (Schubert's major and minor) or by a modulation, as in 'Total Eclipse' ('Samson'):

11.

or still more emphatically when a modulation is only hinted at, as, on a larger scale, in the successive statements (dominant and subdominant) of the 2nd subject in the finale of the Kreutzer sonata:

12. (*a*)

almost every one feels a little more accent at (*b*) than at (*a*), whether he actually makes one or not.

METRICAL ACCENT.—So far accent, the giving of importance to a note, has been based on variety—in the contrast of long with short, high with low, loud with soft, complex with simple, remote (note, chord or key) with near. There remains one which is based on unity, on regular recurrence. Metrical accent, or the 'first of the bar,' is not any of those, though it may be reinforced by any of them. But this accent is only implicit; to insist upon it is to vulgarise the music. Poetry again throws light upon this. Of the first twenty-six lines of *Paradise Lost* no two are exactly alike in their scansion, and it is not until the last of them that we come upon a true iambic pentameter:

'And justify the ways of God to men.'

Yet from the first two or three lines onward no one who read it for the first time would be in any doubt as to the scansion. That last line comes, in its context, with all the force of a *tutti* of the Haydn-Mozart period, whose *raison d'être* it was to reinstate the time which the competing rhythms of the harmonic texture had obscured. That we do not find it necessary to write such a *tutti* now is an indication of the acquired inherent strength of the metrical accent. A. H. F. S.

ACCENTUATION, sometimes called DECLAMATION (*q.v.*); the term used when it is desired to say that a vocal piece of music has been written with such careful regard to the natural accent of the words that the accented notes of the melody coincide with the accented syllables of the words, and that the musical curve of the song, so to speak, describes the same pattern as that of the poem. In this case the accentuation is said to be good. Probably no composer has ever surpassed or equalled Wagner in this particular; constantly the musical phrase seems to have been suggested by the natural rise and fall of the voice in speaking the words; and all through his later works music and words are so closely united that both seem to have sprung simultaneously from his brain. It is no doubt this same quality which Milton praised so highly in the famous sonnet to Henry Lawes, and which was exhibited by so very few of the English composers between the days of Lawes and those of Parry, a composer who was always remarkable for the excellent accentuation of his phrases.

Correct accentuation, it may be added, is one of the greatest difficulties to be overcome in translation, since it can hardly be obtained without some sacrifice, either by word transposition, or even by the substitution of paraphrase, of the composer's intention, leaving one with the strongest argument in favour of the performance of vocal music in the original language. M., with addns.

ACCIACCATURA (Ital. from *acciaccare*, to crush, to pound; Ger. *Zusammenschlag*). A now nearly obsolete description of ornament, available only on keyed instruments, in which an essential note of a melody is struck at the same moment with the note immediately below it, the latter being instantly released, and the principal note sustained alone. It is generally indicated by a small note with an oblique stroke across the stem (Ex. 1), or when used in chords by a line across the chord itself (Ex. 2).

1. Written. Played.

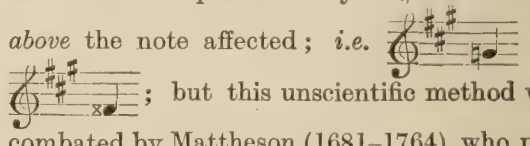
2. Written. Played.

Its use was latterly confined exclusively to the organ, where it was of some service in giving the effect of an accent, or sforzando, to either single notes or chords; but the practice is generally discredited in the present day (see MORDENT). F. T.

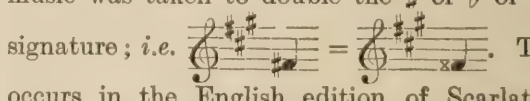
This ornament was unknown in the classical French school, but compare the Coulé (see ORNAMENTS). The term Acciaccatura is now very generally applied to another closely allied form of ornament, the short APPOGGIATURA (*q.v.*). E. B[L].

ACCIDENTALS, the signs of chromatic alteration, employed in music to show that the notes to which they are applied have to be raised or lowered a semitone or a tone. They are five in number, the sharp (♯) (Fr. *dièse*, Ger. *Kreuz*, Ital. *diesis*) and double sharp (×) (Fr. *double-dièse*, Ger. *Doppelkreuz*, Ital. *doppio diesis*), which being placed before a note raise it

respectively a semitone or a tone; the flat (♭) (Fr. *bémol*, Ger. *Be*, Ital. *bemolle*) and double-flat (𝄫) (Fr. *double-bémol*, Ger. *Doppelbe*, Ital. *doppio bemolle*), which cause the note to be lowered to the same extent; and the natural (♮) (Fr. *bécarre*, Ger. *Quadrat*, Ital. *bequadro*), which is applied to an already chromatically altered note in order to restore it to its original position.

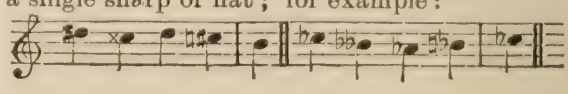


In modern music the signs are placed at the beginning of the composition, immediately after the clef, when they affect every note of the same name throughout the piece; and they are also employed singly in the course of the piece, in which case they only affect the note to which they are applied and any succeeding note on the same line or space within the same bar. Strictly speaking, only those which occur in the course of a composition are accidentals, the sharps or flats placed after the clef being known as the SIGNATURE (*q.v.*).



The invention of accidentals dates from the division of the scale into HEXACHORDS (*q.v.*), an arrangement attributed to Guido D'AREZZO (*q.v.*) (A.D. 1025). The chief characteristic of the hexachord was that the semitone fell between the 3rd and 4th notes; with the hexachords of G and C this was the case naturally, but in singing the hexachord of F it was found necessary to introduce a new B, half a tone lower than the original, in order that the semitone might fall in the right place. This new note, the invention of which laid the foundation of all modern chromatic notation, was called *B molle* (Fr. *bémol*, Ital. *bemolle*, still in use), and the hexachord to which it belonged and the plain-song in which it occurred were termed respectively *hexachordum molle*, and *cantus mollis*, while the hexachord of G, which retained the original B, was known as *hexachordum durum*, and the melody employing it as *cantus durus*. Cf. the German *dur* (major) and *moll* (minor), hexachordal terms arbitrarily adapted into a modern key-system. F. T.; rev. S. T. W.

In the syllabic notation of the hexachordal system the B♭ of the *hexachordum molle* was called Fa, as the B of the *hexachordum durum* was called Mi. But the syllabic nomenclature was imposed upon an earlier alphabetic nomenclature; accordingly, when a new sign was needed to indicate the Fa of the *hexachordum molle*, notationers resorted to the *letter* B. The natural B was written in a square form after the fashion of a Greek letter or Gothic h, from which circumstance it received the name of *B quadradum*; while the altered or flattened B was written in a round form like a Roman b and called *B rotundum*.



This *B rotundum* was at first set before each note it affected, and referred to that note only. While this custom was strictly observed there was no need for the *B quadradum*, since every B not supplied with a flat would be known to be natural. The first function of the ♮ in stave notation was as a safeguard: it was not until in the 15th century, when the ♭ was placed in the signature, that the ♮ could be truly said to have a corrective effect. In this function it was supplanted by the sign for raising a note by a semitone: ♯, the origin of our sharp. This sign is said to have been invented by Josquin de Prés (1450–1521). It was originally written as a *B quadradum* crossed out or cancelled, to show that the note to which it applied was to be raised instead of remaining at its natural pitch, and was called *B cancellatum*.

This sign had the advantage of being immediately distinguishable from the *B rotundum*, which the *B quadradum* was not (the reader should remember that at this date we are dealing with MS. music); and that is probably the reason why the ♯ fulfilled the functions of the ♮ as well as its own. Even in the printed part-books of the 16th century the custom continues of naturalising a flat by a sharp, and a sharp by a flat; and it was not until a full realisation of the chromatic scale was reached that the ♮ was given its due value as the mean term between the ♭ and the ♯. (For a fuller discussion of this point see NOTATION.)

The double sharp and double flat became necessary when equal temperament gave composers command of the complete circle of keys. The double flat, which lowers a note by a tone, first written as a large ♭ or a Greek *β*, was systematised in the form 𝄫: the double sharp was at first represented by a ♮ to the note *above* the note affected; *i.e.*  for ; but this unscientific method was combated by Mattheson (1681–1764), who proposed a St. Andrew's cross (the *β* for a 𝄫 was also Mattheson's suggestion), and by Leopold Mozart, who proposed an upright cross. Other forms canvassed were variants of the *B cancellatum*, ♯, which was still the form of the ♯ at this date, but the × was the simplest to write and read, and has superseded all the others.

For the sake of completeness one other 18th century expedient for indicating the double sharp or double flat should be mentioned. If a note were already affected by the key-signature a ♯ or ♭ set before it in the course of the music was taken to double the ♯ or ♭ of the signature; *i.e.*  . This occurs in the English edition of Scarlatti's harpsichord lessons published by B. Cooke in 1738. S. T. W.

After a double sharp or flat the cancelling signs are ♮♯ and ♮♭, which reduce the note to a single sharp or flat; for example:

When a note which is sharpened in the signature becomes altered in the course of the composition to a flat, or *vice versa*, the alteration is sometimes expressed by the sign ♮♭ or ♮♯, the object of the natural being to cancel the signature, while the following flat or sharp indicates the further alteration, as in Schubert's 'Impromptu,' op. 90, No. 2, bars 4 and 164; this is, however, not usual, nor is it necessary, as a single sharp or flat fully answers the purpose.

F. T.

Accidentals are properly those notes extraneous to the key-signature in a major key, or in a minor key supplementary to it, as is G♯ in the key of A minor. But in music of the 18th century notes are frequently written as accidentals which are proper to the key, because the key-signature itself contains one ♯ or ♭ too few. Stock examples of this custom are Bach's so-called Dorian Toccata and Fugue in D minor with no flat in the signature, and Handel's Suite in E containing 'The Harmonious Blacksmith,' which was written with three sharps only in the signature. The reason for this is a survival of the early custom of keeping the original signature of the mode when the music was composed in the transposed mode a fifth lower; that is, a piece of music in the first mode (D with one flat) composed in the key of G had but one flat in the signature, equalling the F natural of the mode, while the E♭ equalling the B♭ of the mode was written as an accidental. S. T. W.

See SHARP; FLAT; NATURAL.

ACCOMPANIMENT, a term used generally of all that part of a musical composition which does not contain the main features of rhythm and melody but is ancillary to their expression.

Accompaniment is recognised in the earliest recorded systems of music, primarily in the support of a voice by an instrument. Two principles early make their appearance in (*a*) the reduplication of the melody on an instrument; (*b*) the introduction of some feature on the accompanying instrument not contained in the melody, such as the marking of an independent rhythm by a drum or the suggestion of a primitive harmony by means of a drone or sustained note on a wind or stringed instrument. They produce a distinction more or less maintained in modern music, namely, (*a*) *ad libitum* accompaniment, a part giving additional charm or beauty of tone but not essential to the complete rendering of the composition; (*b*) *obbligato*, a part which, though secondary in importance, is essential to the complete rendering.

It is scarcely necessary to say that since the Middle Ages, when harmony became fully recognised as an integral part of design in European music, *obbligato* accompaniment has become the rule and *ad libitum* accompaniment the exception. The latter has survived principally in choral music, where an accompaniment, usually for a keyed instrument (piano or organ), is still sometimes added to double the voices.

The history of *obbligato* accompaniment in harmonic music may be said to have proceeded in two opposed directions successively: first, its development as a secondary feature of design in composition; secondly, its growth from that secondary position to one of such increased importance and intrinsic interest that the *obbligato* practically loses once more its character of accompaniment.

FROM COUNTERPOINT TO ACCOMPANIMENT. —The development of counterpoint by means of extemporised descant obscured for a time the relative positions of the principal melody in song and its accompaniment, either vocal or instrumental. To take an example from the 14th century, Chaucer, in describing the Clerk Nicholas (*Miller's Tale*, l. 27) says:

> 'And al above ther lay a gay sawtrye,
> On which he made a-nightes melodye,
> So swetely, that al the chambur rang;
> And *Angelus ad Virginem* he sang.'

That pictures the singer of a well-known melody accompanying himself, more or less *ad libitum*, on his instrument. But an almost contemporary manuscript (Cambridge University Library, Add. MSS. 710, quoted by Wooldridge, *Oxf. Hist. Mus.* ii. 106) gives a version of 'Angelus ad Virginem' as a song for three voices with descants partly in the *faux bourdon* style above and below the melody. These can hardly be called accompaniments, since the parts mingle on equal terms. A further quotation from Chaucer shows how the contrapuntal style was being applied to solo singing with accompaniment. Soon after the description of Nicholas in the *Miller's Tale* the 'joly Absolon' is introduced. Among his accomplishments is this:

> 'And pleyen songes on a small rubible;
> There to he sang som tyme a lowde quynible;'

that is, he played tunes on his fiddle and sometimes added a vocal descant to the tune, a reversal of Nicholas's more normal method and an application of the ecclesiastical style (learnt by Absolon in the course of his duties as parish clerk) to secular song.

The increasing absorption in contrapuntal addition of parts during the 15th and early 16th centuries left the development of accompaniment in the background, and accompaniments added to polyphonic choral music were mainly of the *ad libitum* type. We know that instruments were often used with the voices in choral music both ecclesiastical and secular, and that music of the Mass and of the secular madrigal which we now regard as composed for unaccompanied voices was in point of fact often so accompanied originally. G. E. P. Arkwright has pointed out that 'a very early instance of the use of CORNETTS (*q.v.*) or

trombones with the organ is found in the account of the performance at the Field of Cloth of Gold. In the *Calendar of State Papers*, Venetian, 1520–26, No. 93, it is noted that

'The Choristers of the two chapels of France and England sang this Mass, the music by Perino, accompanied by an organ with trombones and cornetts.' [1]

The English organ books of the early 17th century bear interesting testimony to the prevalence of *ad libitum* organ accompaniment to polyphonic choral music in English churches. These books are condensed scores of the choral parts, written on staves of eleven lines without much regard to the details of the parts or indications of what we should now call 'part-playing' on the part of the organist. Sometimes the organ books introduce slight ornaments, but those specimens of ornamental accompaniment to church services included by Dr. Hopkins in former editions of this Dictionary are now considered to belong to arrangements of such music for the virginal, and were not probably ever regarded as accompaniments to voices.[2]

Obbligato accompaniment only came into its own with the re-establishment of the solo voice as the prime maker of music and the desire of composers to support the voice on a firm framework of harmony. The Italy of the Renaissance was exploring this question of accompanied melody largely in connexion with the drama, even while Palestrina was placing the coping-stone on the edifice of the contrapuntal style. A century and a quarter passed between the production of Poliziano's 'Orfeo' and Monteverde's, and the songs to his own lute accompaniment which Baccio Ugolino sang in the former were typical of an Italian form of art much in fashion in the 16th century. The FROTTOLE (*q.v.*) or popular four-part songs of Tromboncino and others were arranged for single voice, the other three voices being condensed into a lute part, and the increasing popularity of songs to the lute gave that instrument the privilege of becoming the first in the new music to advance *obbligato* accompaniment to its true position in musical composition.

The movement came to England in the work of John Dowland, whose first book of airs was published in 1597. A comparison of his accompaniments therein with those of William Byrd in the solo numbers of 'Psalms, Songs and Sonnets' (1611), namely, 'Ah, silly soul,' and 'How vain the joys,' shows at once the difference of standpoint. Byrd's voice sings one melody among several, the others being supplied by the consort of viols. Dowland's sings *the* melody, the lute supplying a background of harmony made interesting by occasional suggestions of subsidiary melodic figures, sometimes taken up and imitated from those propounded by the voice. Though Byrd wrote no songs to the lute, it should be noticed that occasionally in writing organ accompaniments to the solo voice, for example in the 'Verses' of the anthem, 'Alack, when I look back,' his style, allowing for the difference of instrumental technique, approaches that of Dowland. Dowland's publication sowed a seed which came to fruition rapidly in the many collections of the ENGLISH SCHOOL OF LUTENIST SONG-WRITERS (*q.v.*). This school flourished in the first quarter of the 17th century and was contemporary with the most prolific period of the unaccompanied madrigal and that polyphonic music of the English Church, which was either unaccompanied or performed with the *ad libitum* accompaniment of the organ. Many composers contributed to all three types.

The date 1600 is generally assigned to the birth of monody in Italy. We have seen that the solo song with harmonic accompaniment existed much earlier. But it was in that year that the dramatic settings by Peri and Caccini of Rinuccini's poem of *Euridice* made their appearances, and the theory of vocal declamation with instrumental accompaniment formulated by the Florentines thus received practical demonstration. (See OPERA.) The 'new music' was practically recitative accompanied by a succession of chords on an instrument. The compositions of Caccini and his fellows in this style served therefore to emphasise the purely chordal nature of accompaniment. They wrote merely a bass part representing the foundation notes of chords which the player on the arch-lute, organ, or harpsichord would complete at discretion. But to their contemporary, Viadana, belongs the credit of having invented the *basso continuo* or THOROUGH-BASS (*q.v.*) which was to become the chief factor in determining the nature of accompaniments during the succeeding century. As the 17th century progressed the *basso continuo* became applied to every kind of music, whether vocal or instrumental, sacred or secular. Accompaniment became more frequently assigned to keyboard instruments, harpsichord or organ, as the lute in its various forms fell into disrepute, and harpsichord players and organists were expected to provide an artistic accompaniment reading from a bass part supplemented with figures and accidentals as indications of harmony.

Here we have then the completion of the first stage in the history of accompaniment. Alike in the sonatas of Corelli, the operas of Scarlatti, and the songs of Purcell, the importance of an harmonic accompaniment as the groundwork of design is fully realised, but the composers considered it to be so secondary a feature that they were content to leave its details entirely in the hands of the executants, more especially the harpsichord player.

[1] See also the preface to the Old English Edition, No. XXII., by G. E. P. Arkwright.

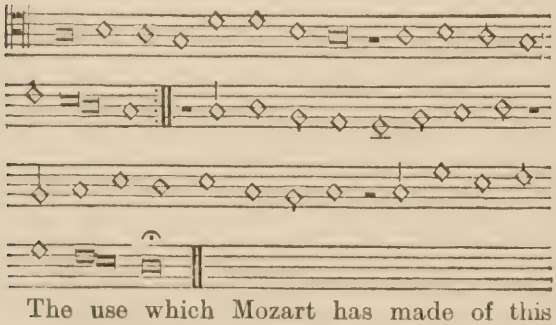
From Accompaniment to Ensemble.— In the Italian opera of the 18th century the singer was accompanied by *basso continuo* only in recitative, but with one or more instruments, playing from fully written out parts, in addition to the *continuo*, in arias. These are generally spoken of as *obbligato* parts and were so in the sense that the composition would be incomplete without them. They were not, however, really more obligatory than the *continuo* which now formed the groundwork of accompaniment. The greater composers elaborated these parts to such an extent that they can hardly be regarded as accompaniment. They become instrumental solos combining in duet fashion with the voice. This was particularly the case when the aria was transferred from the theatre to the concert room by Handel in his oratorios, or to the church by Bach in his cantatas. The 'Laudamus Te' of the latter's Mass in B minor (soprano voice and violin solo) marks the acme of the style. Use was also made of orchestral instruments, chiefly the strings, in the purely subsidiary capacity of accompaniment by these composers, and as the constitution of the orchestra became more settled and the abilities of players more dependable, composers paid closer attention to the texture of accompaniment, until in the operas of Gluck and Mozart we find the whole available orchestra used as a background to the individual voice. What Bach had done with his *obbligato* instruments composers of the 19th century, more especially Wagner, did with the orchestra as a whole; they brought it from the background forward and made it a prime vehicle for the expression of their ideas. Here, however, was a difficulty not felt by Bach when he combined a solo violin with the voice—the inequality of volume. Wagner, and practically every composer since him, has been accused, not without some justice, of 'drowning the singer.'

Another landmark in the history of accompaniment is found in the last quarter of the 18th century, when the pianoforte began to supersede the harpsichord. The latter could never be satisfactory as a means of accompaniment because of its insensitiveness to the player's touch. The piano, with its almost infinite gradations of volume and its comparative power of sustaining soft sounds by means of the pedal, quickly became the chief instrument of accompaniment for purposes of domestic or chamber music. At first composers wrote tentatively for it, employing only obvious figures such as broken chord passages of the Alberti Bass type as a support to the voice. Mozart's delightful little song, 'Das Veilchen' (1785), is a fair specimen of 18th-century piano accompaniment, and Beethoven's accompaniments to Lieder are not technically much more advanced. Schubert, however, made the figures of his piano accompaniments contribute definitely both to the emotional content and to the pictorial suggestions of the poems sung. See, for example, the whirr of the spinning-wheel in 'Gretchen am Spinnrade', and the leaping figure of 'Die Forellen.' While masters of song-writing such as Schumann and Brahms advanced the essential importance of the piano part further, they, in common with their contemporaries or immediate successors in other countries, Franck and Fauré in France, Sterndale Bennett, Parry and Stanford in England, preserved more or less the relationship between voice and piano parts which is characteristic of Schubert. Such a song, however, as Cornelius's 'Ein Ton,' in which the voice maintains a monotone through a fantasia played on the piano, is indicative of a reversal of attitude which has become typical of certain phases of modern song composition. This attitude regards the piano as the chief speaker, the singer as commentator. The later 19th-century songs of what may be called the more sophisticated countries, particularly Germany and France, give countless instances. The songs of Max Reger's opus 75 beginning with 'Merkspruch' afford a sufficient case in point. But the greater song-writers of the last generation, Hugo Wolf, Moussorgsky, Debussy, to take men whom in all other respects are widely contrasted in style, came to regard the song with piano as Wagner had regarded the song with orchestra and Bach the song with *obbligato* instruments, not as a combination of chief-speaker with accompaniment, but as a piece of *ensemble* music.

The upshot of this evolutionary process is that in modern music accompaniment strictly so called cannot be said to belong exclusively to any one part of a composition. The piano or one department of the orchestra or the single voice may be momentarily in a position of accompanying the other parts of the *ensemble*, but will not permanently take up a secondary position. What has come out of the development through the centuries from mediævalism to to-day is the realisation of what may be called 'perspective' in music. Parts in a musical *ensemble* may occupy not only the foreground, the background, or the middle distance, but innumerable gradations in between them.

The art of accompaniment, then, at the present day, whether it is the art of the conductor in directing his orchestra in combination with singers and solo instrumentalists, or of the pianist collaborating with a singer in a recital of Lieder, is the same. The conductor or pianist cannot be content to 'follow' the soloist. His function is really to control the *ensemble*, to preserve the right relation of all the parts which make up the whole, in quality and volume of tone, in rhythm and in *tempo*. C.

ACCORDION (Ger. *Handharmonika*; *Ziehharmonika*), a portable instrument of the free-reed species, invented at Vienna by Damian, in the year 1829. It consists of a small pair of hand-bellows, to one side of which is affixed a keyboard, containing, according to the size of the instrument, from 5 to 50 keys. These keys open valves admitting the wind to metal reeds, the latter being so arranged that each key sounds two notes, the one in expanding, the other in compressing the bellows. The right hand is placed over the keyboard, while the left works the bellows, on the lower side of which are usually to be found two keys which admit wind to other reeds furnishing a simple harmony—mostly the chords of the tonic and dominant. It will be seen that the capabilities of the instrument are extremely limited, as it can only be played in one key, and even in that one imperfectly; it is, in fact, but little more than a toy. It was originally an extension of the 'mouth-harmonica,' also known as the ÆOLINA (*q.v.*). (*PLATE XV.*, No. 3.) E. P.



ACEVO (*b.* Saluzzio, *c.* 1630), a luthier of Piedmont and pupil of Cappa, famous for his viole da gamba. Fétis says that he saw one dated 1693 which had belonged to Marin Marais, and bore his signature on the back.

E. V. d. S.

'ACH GOTT VOM HIMMEL.' This hymn, the words of which are a paraphrase by Martin Luther on Psalm xi. (Vulgate version), made its first appearance in 1524, when it was printed in at least 4 different collections:

(*a*) 'Etlich cristlich lider Lobgesang, vnd Psalm, etc.' printed at Wittenberg (Wackernagel, No. cxxix.); (*b*) the 'Erfurdt Enchiridion' (Wackernagel, No. clvii.); (*c*) the 'Teütsch Kirchen-Ampt mit Lobegesengen,' printed by Wolf Köppel at Strassburg (Wackernagel, No. clxii.); and (*d*) Walther's Wittenberg 'Geystliche gesangk Buchleyn' (Wackernagel, No. clxiii.).

In (*a*) it is directed to be sung to the melody of 'Es ist das Heil'; in (*b*) it appears with the tune in the Hypophrygian mode to which it is usually sung—especially in North Germany; in (*c*) it is set to a tune in the Hypoæolian mode, to which it is sometimes still sung in South Germany; and in (*d*) it appears with a tune in the Dorian mode. In Joseph Klug's Hymnbook (1535), besides the well-known Hypophrygian tune it is set to another tune in the Phrygian mode, which was afterwards adapted to Andreas Knöpken's Psalm 'Hilf Gott, wie geht das immer zu.' The melody in the Erfurdt Enchiridion is as follows:

The use which Mozart has made of this chorale in the Finale to Act II. of the 'Zauberflöte' is very interesting. Jahn (*W. A. Mozart*, iv. 617) surmises that Mozart's attention was drawn to the chorale by Kirnberger's 'Kunst des reinen Satzes,' in which it is twice used as a canto fermo for contrapuntal treatment. A sketch is preserved in the Imperial Library at Vienna of another four-part arrangement of the chorale, which still more closely resembles the passages in Kirnberger's work. The autograph score of the 'Zauberflöte' shows that the beginning of the scene between Tamino and the two men in armour has been carefully sketched. W. B. S.

ACIS AND GALATEA, a 'masque,' or 'serenata,' or 'pastoral opera,' composed by Handel at Cannons, probably in 1720 (date is wanting on autograph); performed there probably in 1721, and produced at the Haymarket Theatre, May 17, 1732. Words by Gay, with additions by Pope, Hughes and Dryden. Rescored by Mozart for Van Swieten, Nov. 1788. Put on the stage at Drury Lane by Macready, Feb. 5, 1842. 'Aci, Galatea, e Polifemo,' an entirely different work, was composed in Italy in 1708–09. (See article by W. Barclay Squire, *Mus. T.*, Oct. 1921.)

ACKTÉ, AÏNO (*b.* Helsingfors, Finland, Apr. 23, 1876), Finnish soprano. Having won fame in Paris and New York, she came to England for the first time in 1907. Assisting in the ill-starred winter season at Covent Garden of which Ernest Van Dyke was director, she played Elsa in 'Lohengrin' and Senta in the 'Flying Dutchman.' She is best remembered in this country, however, as the Salome when Strauss's opera was introduced to London by Beecham at Covent Garden in 1910. Beyond everything a temperamental singer, she made a great success, the part being exactly suited to her gifts, both vocal and dramatic. At the Birmingham Festival in 1912—last of the long series—Madame Ackté sang Salome's death scene and took part with John McCormack and Clarence Whitehall in a vivid performance, under Sir Henry Wood, of Verdi's Requiem Mass. S. H. P.

ACOURT, an early 15th-century composer. In *codex MS. Canonici misc.* 213, Bodl. Lib., fol. 17, is 'Je demande ma bienvenue,' 3 v.; published in score in Stainer's *Dufay*, p. 50.

E. V. d. S.

ACOUSTICS, the science of hearing, commonly includes all that relates to the physical basis of sound on which the art of music rests.

NATURE OF SOUND.—Almost all the sounds with which we are concerned in music have a definite and steady pitch. The side-drum, the castanets, and one or two other instruments, produce mere noises without pitch, as is seen by the fact that no attempt is made to tune them to the rest of the orchestra; but such instruments are of less importance than those which

are capable of giving something more than mere rhythm.

Very little observation is necessary to show that sound is always caused by the vibration of something or other. If a tuning-fork is made to give out a sound it can often be seen to be in a state of vibration by the hazy appearance of the prongs; and even though the vibrations are too small to be visible they may be felt by touching the fork with the finger. If the pressure of the finger is so great as to stop the vibrations the sound also stops. Similar evidence that there is never sound without vibration can be obtained from many musical instruments,—some part of the instruments will be seen or felt to be in vibration so long as sound is being emitted.

Moreover, it will be noticed that the loudness of the sound is connected with the amplitude of the vibrations,—the greater the amplitude the louder the resulting sound for a given pitch.

That the medium by which the sound is carried from the vibrating body to the ear is in most cases the air, is seen by the old experiment of placing an alarum clock or electric bell under the receiver of an air-pump and pumping out the air. The sound grows fainter as the air is removed. It cannot be made to die away altogether, for air is not the only medium that will convey sound. The bell must be supported on something, and the support will carry some of the sound to the air-pump or bell-jar and so to the external air. The result of the experiment is more striking if the bell is supported by some material that conducts vibration badly, such as indiarubber cords or a pad of soft felt.

The pitch of a note is easily proved to be dependent on the rate at which the body vibrates. Hold a card against the teeth of a rotating cog-wheel, and if the wheel is rotating fast enough the taps of the card on the cogs will blend into a note of recognisable pitch. Turn the wheel faster—that is, produce more taps per second—and the pitch rises.

A still simpler experiment is to run the thumb-nail along a piece of ribbed silk ribbon. A note is produced by the taps of the nail on the ribs, and the faster the thumb is drawn over the silk the higher will be the pitch of the note.

Isochronism of Sound Vibrations.—In the case of every musical instrument the vibrations that give rise to the sound are due to the elasticity of some part of the instrument or of the air contained in it. Take the simple case of a harp string. Pull the string aside and it is felt to resist the displacement with a force that is greater the greater the displacement, and whatever the direction of the displacement the force is such as to tend to restore the string to the position in which it is in equilibrium. If the string is drawn aside and let go, it will oscillate about its equilibrium position until the energy that was given to it by the finger is dissipated in the form of sound or wasted by friction.

In the case of every elastic body the force that resists a displacement is proportional to the amount of displacement, provided the displacement does not exceed a certain limit that depends on the shape, size and material of the body. Thus to stretch an elastic cord two-tenths of an inch requires just double the force required to stretch it one-tenth.

This law, when applied to solid bodies, is known as Hooke's Law, and is the fundamental fact in the theory of elasticity.

Hooke's Law leads, by a line of argument that cannot be given here, to the result that if an elastic body vibrates in consequence of its elasticity, the vibrations will be isochronous; that is to say, the time occupied by a single vibration will be the same, whatever the amplitude of the vibration, or the number of vibrations per second will be the same whatever the extent of the vibrations.

The oscillations of a pendulum afford a familiar instance of isochronism. A pendulum of the proper length will beat seconds independently of the extent of the oscillation, provided that extent be not very great. The vibrations are, in this case, not due to elasticity, but the law connecting the restoring force and the displacement is the same.

The application of this law of isochronism of elastic vibrations to music leads to the important result that the pitch of the note given by a musical instrument does not depend on the loudness of the note. Had the laws of elasticity been different, music in its present form would have been impossible, for every variation in the loudness of a note would have been accompanied by a variation in its pitch.

Simple Harmonic Vibrations.—The pendulum vibration is typical of the simplest, but not the only possible form of vibration of an elastic body, and is called a Simple Harmonic Vibration.

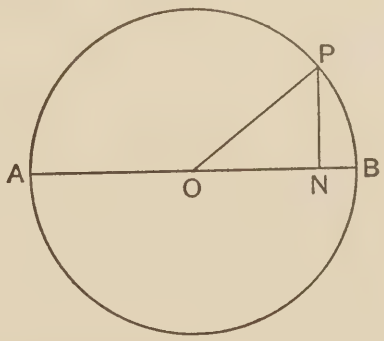


Fig. 1.

In order to obtain an idea of the nature of the motion, imagine a point P moving with uniform velocity in a circle. Drop a

perpendicular from P on any diameter AB and N the foot of the perpendicular will describe Harmonic vibrations along the line AB.

It is obvious that if P moves uniformly, N will be momentarily at rest when it is at A or B, that it will have its greatest velocity as it passes through O, and that, at intermediate points, it will have intermediate velocities.

A graphic representation of harmonic motion is given by the curve (Fig. 2) called the Sine Curve.

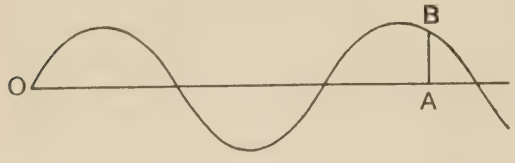

FIG. 2.

By means of this curve the displacement of a vibrating point at any moment is shown. Let distances measured to the right from O represent time—say 1 unit represents 1 second. Then to find the displacement, say 3 seconds after the vibrations started, measure a distance 3 units to the right from O, and at the point A thus reached draw a perpendicular. The distance AB along this perpendicular from the base line to the point where it cuts the curve is the displacement, which is to one side or the other of the equilibrium position according as B is above or below A.

The limits of this article preclude any lengthy account of the mode of propagation of sound through the air, and a brief description must suffice. When the prong of a tuning-fork is moving outwards it condenses the air on its face, and this condensation proceeds to travel outwards from the fork. Before the condensation has travelled far the prong of the fork has passed the outward end of its swing, and is moving inwards. This rarefies the air near it, and the rarefaction travels outwards in the rear of the condensation. This process is continued, and we have a series of waves of condensation and rarefaction travelling away from the fork. The air does not travel along bodily with the waves, but any given particle of air over which the train of waves is passing oscillates backwards and forwards in the direction in which the waves are travelling. The oscillations are due to the elasticity of the air, and are isochronous. A complete wave includes one region of condensation and one region of rarefaction, and during the time taken by the particle to make one complete oscillation one complete wave will pass over it. When the particle is moving in the same direction as the train of waves it is in a region of condensation, and when it is moving in the opposite direction it is in a region of rarefaction. When it is at an end of its swing, and so is momentarily at rest, it is at a place where condensation changes to rarefaction, and so the air has its normal density.

VELOCITY OF SOUND.—As the vibrations are isochronous, and one complete wave passes in the time of one complete oscillation, it follows that waves of the same length will travel with the same velocity whatever their intensity; and as, moreover, the period of oscillation depends only on the elasticity and density of the air, and not on the length of the waves, waves of every length will travel with the same velocity. Since waves of all lengths travel with the same velocity, though different vibrating bodies may be giving them out in very different numbers per second, it follows that the distance travelled by a wave in one second will contain as many waves as the body performs vibrations per second. If n is this number and l is the length of one wave, then nl will be the distance travelled by the waves in one second, which is the measure of the velocity, so that $v=nl$.

Further, it follows that the greater the vibration number, or, in other words, the higher the pitch of the note the shorter will be the waves in air. The notes in common use in music have wave-lengths varying from about 40 feet to 3 inches.

The mathematical investigation of the relation between the velocity of sound in a gas and the density and elasticity of the gas shows that if the ratio of the pressure to the density remains the same the velocity will be constant. Hence a rise of the barometer will not affect the velocity of sound, because the increase of pressure increases the density in the same ratio; but a rise of temperature will increase the velocity, for it will rarefy the gas without altering the pressure.

The earlier measurements of the velocity of sound in air were made by firing a cannon and noticing the time the sound took to travel over a measured distance, making any necessary corrections for wind or for variations of temperature.

The velocity is found to be about 1090 feet per second at a temperature of 32° Fahrenheit, and to increase by about one foot per second per degree rise of temperature at ordinary temperatures.

The velocity in different gases at the same temperature is roughly inversely proportional to the square root of the density. Thus in hydrogen, which has a density rather more than one-sixteenth that of air, the velocity of sound is about four times greater. (This law, however, is by no means accurately followed. For reasons that cannot be given here the ratio of the specific heats of a gas affects its adiabatic elasticity, which is the elasticity concerned in the propagation of sound, and this ratio varies considerably for different gases.)

The velocity of waves of condensation and

rarefaction in solids and liquids is greater than in gases. The greater density of such bodies tends to lower the velocity, but this is more than compensated by the very great forces developed by their compression. The velocity of sound in water is 1435 feet per second, in iron it is 5030, and in glass 5438.

Reflection of Sound.—Sound-waves are capable of reflection in the same way as light-waves, and according to the same laws. Most echoes are due to waves striking a surface normally, and suffering reflection along the line of incidence; though an echo is sometimes produced by several oblique reflections.

Sound-waves diverging from a point may in certain circumstances be reflected from a curved surface in such a way as to come together again at a focus. If a watch is placed at the principal focus A of a large concave spherical mirror—that is, at a point half-way between the centre of the sphere of which the mirror forms a part, and the centre of the

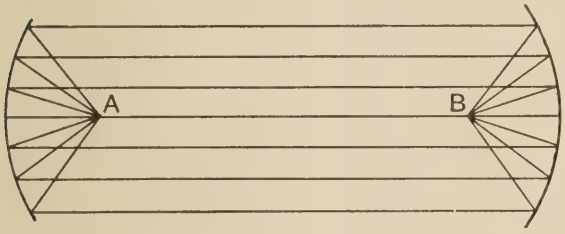

Fig. 3.

surface of the mirror—the sound rays diverging from the watch and striking the mirror will be reflected off in a beam of parallel rays. If this beam is received on a second similar mirror it will be collected together at the principal focus B, so that an ear placed at the focus would hear the ticking of the watch, whilst a little way from the focus the ticking would be quite inaudible. Reflection of this kind sometimes takes place in large buildings. Curved parts of the walls take the place of the spherical mirrors, and a whisper at one focus may be heard distinctly at the other.

Sound Shadows. — Solid obstacles cast sound shadows in the same way as they cast light shadows; but there is a practical difference, resulting from the great difference between the length of sound-waves and of light-waves. An obstacle gives a well-defined shadow only when it is a considerable number of wave-lengths in diameter. Light-waves are about a fifty-thousandth of an inch long, so that very small objects give clear shadows. The waves of sound may be of any length up to about 40 feet, so that except for very high notes a large object is needed to give a well-defined shadow. A house or a haystack is capable of giving a shadow of the scream of birds.

Quality of Musical Notes.—We have seen that the loudness of a musical note depends on the amplitude of the vibrations that give rise to it, and that the pitch of the note is fixed by the number of vibrations that reach the ear per second. A third characteristic of a note, its quality, has not yet been mentioned.

By quality is meant that feature by which the note of one instrument can be distinguished from that of another, though of the same pitch. Fig. 2 is a graphic representation of one form of wave motion in air, the ordinates of the curve showing the displacement of the particles of air at a given instant. The waves may be varied in three ways only. They may be altered in length, which will correspond to an alteration in the pitch of the note. They may be altered in the height of the crests and the depth of the troughs, which will give an alteration in the loudness of the note. Lastly, they may be altered in shape. It is essential that if a musical note is to continue unchanged each wave must be like its fellows in every respect, but with this limitation, the waves may be of any shape. They need not be smooth and symmetrical as in Fig. 2, but may have one side steeper than the other, or may have sharp bends, or may vary in many other ways. It has long been assumed that it is the shape of the wave that determines the quality of the note, but Helmholtz was the first to give a definite theory of the nature of the relation between shape and quality. Before stating his theory some preliminary explanation is needed. Suppose a note and its octave are sounded at the same time, and that each is of the special quality corresponding to a simple harmonic vibration. The higher note will have half the wave-length of the lower, and the displacements due to the two separately are represented by the two sine curves in Fig. 4. Now an air particle cannot have two different displacements at the same moment, and both theory and experiment show that the actual displacements can be shown by a curve passing through the ends of ordinates obtained by taking at any point along the base line the algebraic sum of the ordinates of the two sine curves; that is, adding them if they are on the same side of the

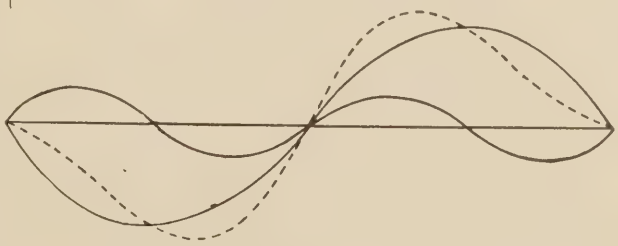

Fig. 4.

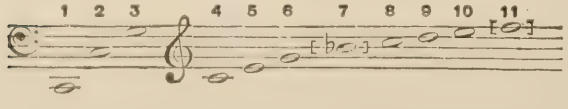

base line, subtracting the smaller from the greater if they are on opposite sides, and drawing the resulting ordinate on the same side of the base, as the greater of the two components.

The curve thus obtained (the dotted line in

the figure) is not symmetrical, and it is evident that a great variety of curves can be obtained by an extension of the method. The octave curve could be changed in amplitude or it could be moved to the right or left by any amount, thus changing what is called the *relative phase* of the two curves. Further, we might compound with the lower note some other note than the octave, or we might superpose in a similar way more than two notes. Fourier's Theorem states that any curve whatever can be built up in this way from sine curves, provided it is periodic, or consists of waves all of the same shape and size, and provided it has not anywhere an ordinate of infinite length—a limitation that does not concern us in acoustics. If the length of one complete wave of the curve to be built up or analysed is represented by 1, the components required will have wave-lengths, $\frac{1}{2}$, $\frac{1}{3}$, $\frac{1}{4}$, $\frac{1}{5}$, and so on. It may be necessary to take a large number of such components—even an infinite number if there are sharp corners in the curve —and some members of the series may be missing, but it will never be necessary to go outside the series, and if the amplitudes and relative phases of the components are properly chosen any periodic curve can be so built up.

Now most of the notes used in music can be recognised by a trained ear as not being simple, but made up of a number of constituents of different pitches and intensities. What then is the particular kind of vibration that results in a pure tone unmixed with any others? Ohm's Law states that a simple harmonic vibration is the only form of vibration that gives the sensation of a pure tone without any admixture of other tones, and thus we are able to draw a very important conclusion from Fourier's Law. The ear analyses a complex note in exactly the same way as Fourier analyses a complex curve.

The Harmonic Series.—Any musical note can, with suitable training and suitable appliances, be shown to be made up of one or more of a series of pure tones, whose vibration numbers are in the ratio of the numbers 1, 2, 3, 4, etc. Tones bearing this relation to each other are called Harmonics.

Helmholtz went a step farther, and stated that the relative phase of the constituent harmonics does not affect the quality of the resultant sound, and that all we are concerned with is the number, amplitude and position in the series of the constituents. If, for instance, the two constituent curves in Fig. 4 are placed in several different positions with reference to each other, keeping always the same base line for both, it will be found that the resultant curves vary much in shape; but according to Helmholtz the corresponding notes will sound alike. The quality of the note will be completely defined by the amplitude of the two constituents, without reference to their phases.

Doubt has been cast on Helmholtz's theory by some distinguished physicists, but it appears to be in the main correct. If difference of phase has any effect it is probably small.

Pure tones are little used in music. They are colourless and uninteresting, and for reasons that will be stated later are unsatisfying in harmonic combinations. Wide stopped organ pipes give nearly pure tones, but reed pipes and all orchestral instruments have strong harmonics. In the case of the smoother toned instruments such as flutes and horns, the lower harmonics are the more prominent, whilst with instruments that give more incisive tones such as violins and hautboys, the prominent harmonics extend higher in the series.

As we shall frequently have occasion to refer to the harmonic series it will be convenient to give it here expressed in musical notation, taking C as the fundamental. The numbers above the notes are in the ratios of the vibration numbers of the notes. The seventh and the eleventh of the series are enclosed in brackets, as they cannot be correctly represented by any notes in the scale. The seventh is flatter than B♭, and the eleventh is about half-way between F and F♯ on the tempered scale. The series extends upwards indefinitely, but the higher members are generally faint.

The construction of scales is treated of elsewhere, and it is sufficient to note here that the vibration ratio of any interval in the true diatonic scale can be obtained from this table. Thus the major second, C to D, is 8 : 9; the minor second, D to E, is 9 : 10; the major third, 4 : 5; and so on. These intervals are of course modified in the system of tuning by equal temperament, where the octave is divided into twelve equal semitones the vibration ratio of each of which is $\sqrt[12]{2} : 1$, or about 89 : 84. Here there is no distinction between major and minor seconds, and all the intervals with the exception of the octave differ more or less from the ratios given in the diagram.

Writers on Acoustics are not always in agreement as to the use of the term *harmonic* and certain related terms. It will conduce to clearness if it is stated in what sense the terms are most commonly used in scientific treatises.

A series of tones whose frequencies are in the ratio 1 : 2 : 3, etc., is called a *harmonic series*, as has been mentioned above. The separate tones of the series are referred to as *harmonics*. The lowest tone of the series is called the *first harmonic*, or the *fundamental* or *prime tone*. The tone an octave above this is called the *second harmonic*, and so on. (It is to be noted that what is here called the second harmonic

is not infrequently called the first harmonic, especially in works on other subjects than Acoustics.)

The term *partial* is also often applied to the terms of the harmonic series, more particularly when we are speaking of the constituents of a complex note. As in the case of harmonics the lowest term of the series is spoken of as the *first partial.*

The term *overtone* is used to signify any one of the separate notes—other than the lowest note possible—that can be produced from an instrument by appropriate variation in the method of production.

In strict scientific language *note* is used only to signify the complex sound consisting of a fundamental with its retinue of harmonics, whilst *tone* signifies the sound arising from a simple harmonic vibration with no accompanying harmonics. In this sense a note consists of tones which fall in the harmonic series. In cases where no ambiguity can arise the distinction between note and tone is not always observed.

Beats.—When two tones of the same pitch are sounded together it may happen at some point that the crests of one train of waves coincide with the hollows of the other train. From what has been said above about the composition of vibrations it is clear that at this point the two trains will neutralise each other if they are of equal amplitude, and there will be silence.

Strike a tuning-fork, hold it to the ear, and turn it round slowly. It will be found that in one revolution there will be four points of maximum intensity, separated by four points of silence. Each of the prongs is giving off its own train of waves. At the points of maximum loudness the crests of the two trains fall together, and the sound from one prong is reinforced by that from the other. At the points of silence the two trains neutralise each other. That this is really so is easily proved by slipping a paper tube over one prong without touching it, when it will be found there are no points of silence.

Suppose, next, that the two tones have nearly but not quite the same pitch. Let one have for instance the vibration number 100, and the other 102. Then in the space that sound travels in one second are comprised 100 waves of one train, and 102 of the other. If the crest of the first wave in one train coincides with the first crest of the other, the waves will reinforce each other at that point. Similarly, the 50th crest of one train will coincide with the 51st of the other, and the 100th of one with the 102nd of the other, so that, at these points each sound will intensify the other.

At the 25th crest of the one train we shall, however, have a hollow of the other train, and similarly, at the 75th crest, so that at these two points the sounds will neutralise one another to an extent depending on the relative amplitudes of the two sets of waves. As the two trains of waves are travelling with the same velocity these maxima and minima of sound will pass a stationary listener, who will consequently hear the sound rise and fall in intensity twice in each second. These alternations of intensity are called *beats*, and it is clear that the number of beats per second is the difference between the vibration numbers of the two tones. As the tones approach each other in pitch the beats become slower, until, with perfect unison, they disappear, which fact affords a ready means of judging of the accuracy of the tuning of two notes to each other.

Stationary Vibrations.—Next consider the case of a train of waves striking a flat surface at right angles. They will be reflected, and the incident and reflected trains will interfere. Let the full curve in Fig. 5 represent the position of the incident train at a given

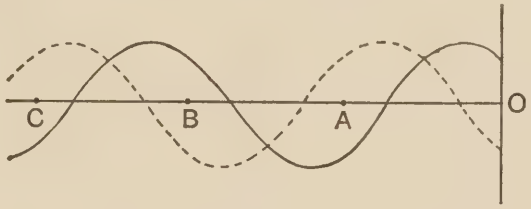

Fig. 5.

moment; then the dotted curve will represent the reflected curve at that moment; for, remembering that the actual displacements of the air-particles are along the line CO, it is clear there can never be any displacement at O, and hence the reflected curve must be in such a position that at O it always compounds with the incident curve so as to give no displacement. It will now be found that there is a series of other points A, B, C, etc., half a wavelength apart, where there is also no displacement at any time; and we have what is known as a stationary wave (Fig. 6).

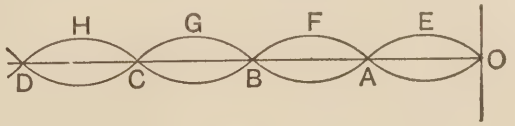

Fig. 6.

At the points O, A, B, etc., there are changes in the pressure of the air but no motion; whilst at the points half-way between there is motion but no change of pressure If one end of an indiarubber tube is placed in the ear, and the other end moved along the line OD which passes through the source of the sound, and is at right angles to the reflecting surface, sound will be heard at the points O, A, B, etc., because at these points the changes of pressure cause waves to run down the tube to the ear; whilst at the points half-way between there will be silence, as at these points the air merely

flows backwards and forwards across the end of the tube. This gives us a means of measuring the wave-length of any given note, as the points of silence are exactly half a wave-length apart, and since we have seen that $v = nl$ where v is the known velocity of sound, we can calculate n the vibration number of the note. The method works well for high notes, but it is better then to use a sensitive flame as a detector instead of a tube leading to the ear. With low notes reflections from walls and surrounding objects cause complications, and it is necessary to confine the sound in a tube.

Resonance.—A special case of stationary vibration is that of a resonator, which consists of a hollow body of any shape communicating with the outer air by a small aperture. It is possible by blowing across the mouth of a resonator to cause the enclosed air to vibrate and give out a definite note. The pitch of the note depends only on the volume of the contained air and the area of the opening, and not on the shape of the body or of the opening, provided neither is very elongated; nor on the position of the opening. The pitch can be raised by increasing the size of the opening or by diminishing the volume of the contained air. A narrow-necked bottle will serve as a resonator. Blow across the neck and a note is given out. Pour in some water so as to diminish the volume and the pitch rises. Cover part of the opening with a card and the pitch falls. Tilt the partly filled bottle in various directions so as to change the shape of the cavity without changing its volume, and the pitch remains unaltered. Instead of raising the pitch by enlarging a single opening we may obtain the same result by making additional openings. The instrument called the ocarina is an instance of a simple resonator. The shape of the instrument has no effect on the pitch of the note, neither has the position of the holes. If the holes be uncovered one at a time it will be found that holes of the same size give the same rise of pitch wherever they are situated, and the scale is obtained merely by increasing the connexion between the internal and external air. The resonator has the property of taking up and intensifying its own proper tone when sounded by some other instrument, and thus serves as a sensitive detector of the existence of that tone in the surrounding air. Helmholtz made use of this property in his investigations on the quality of complex notes. A series of resonators was used, tuned to the harmonics of the note to be investigated, and each had a short narrow neck that could be inserted into the ear. If a given harmonic was present in the complex note the corresponding resonator intensified it whilst excluding all others, thus enabling Helmholtz to carry out experimentally Fourier's analysis of complex vibrations, and to determine what harmonics are present in a given note. The addition of a resonance box to a tuning-fork has the effect of making the note emitted nearly a pure tone. The note of the fork alone is not generally a pure tone, the octave in particular being sometimes so strong as to overshadow the fundamental if the handle of the vibrating fork is merely pressed against the table and the amplitude is great. A resonance box of the proper pitch augments only the fundamental, leaving the higher tones of the fork so weak that the note emitted is practically pure.

Organ Pipes.—Organ pipes bear some resemblance to resonators, but the points of difference make it necessary to treat them separately. Consider first the stationary vibrations in a pipe stopped at one end. The stopped end must of necessity be a node or point of no motion of the air. The open end must be a point of minimum change of pressure and therefore of maximum motion. Hence, since a point of maximum motion in a stationary wave is a quarter of a wave-length from the nearest node a closed pipe is one quarter the length of the waves it emits when giving its fundamental or lowest possible note. This is not quite correct, for the point of maximum motion is not strictly at the end of the pipe, but a little beyond it. In all that follows the pipe must be regarded as lengthened at an open end by an amount that depends on the size and shape of the opening. For a circular pipe with thin walls the correction is about three-fifths of the radius.

The conditions regarding the ends would be equally well satisfied if we were to take the closed end as a node and the open end as being, not the centre of the next vibrating segment, but the centre of the next but one, say O and F, in Fig. 6. In order to secure this, the wave-length must be shortened to one-third of what it was in the former case, and the pipe will then contain $\frac{3}{4}$ of a wave. The vibration number will be three times what it was before, and hence the pitch will be a twelfth higher. The pipe will now contain two nodes, one at the closed end and the other one-third of the way down from the open end. Similarly, it may have 3, 4 or more nodes and corresponding vibration numbers 5, 7, etc. times that of the fundamental. Thus the series of notes that a closed pipe is capable of giving have vibration numbers in the ratios of the numbers 1, 3, 5, 7, etc.

An open pipe must have the centre of a segment at each end. The longest wave that fulfils this condition is that which is double the length of the pipe, so that E and F of Fig. 6 fall at the ends, and the node A at the middle. Since then a stopped pipe, when sounding its fundamental, emits a note of wave-length 4 times its own length, and an open pipe one of

only twice its own length, it follows that if the pipes are of the same length the open one will sound an octave higher than the closed one. For the first overtone of an open pipe we must reduce the length of the stationary waves until the length EG is equal to the pipe length. The pipe now contains two nodes, and the wave-length is half what it was for the fundamental, so that the vibration number is doubled and the note is an octave higher. Similarly, we can show that the pipe can give notes whose vibration numbers are 3, 4, 5, etc. times that of the fundamental. The fact that a correction is needed for the open end of a pipe does not affect the harmonic relations of the overtones to each other, provided the correction is the same for all the notes. This is the case only if the pipe is narrow. An open pipe of wide bore may depart widely from the harmonic series of overtones. The series of overtones that can be produced from a pipe or other musical instrument must not be confounded with the harmonic series spoken of above in connexion with the theories of Fourier and Helmholtz. The overtones of an instrument are not necessarily *harmonics* of the fundamental. Most wind instruments are designed with a view to securing overtones that fall approximately in the harmonic series; but, as has just been said, the wider organ pipes diverge from the series, whilst drums, bells, etc., do not even approximate to it in the relations of their overtones to each other.

The complex note given by such an instrument as a bell will be made up of these inharmonic constituents. Since Fourier's Law is of universal application it must be possible to express the note as the sum of terms selected from the harmonic series, but they will generally be terms very high in the series, and not harmonic overtones of the lowest tone the bell is capable of producing, but of some other tone which may either be altogether absent or too low to be within the range of hearing. It should also be noted that the several overtones of such an instrument as a bell are not separately simple harmonic vibrations.

Other Wind Instruments.—The flute is an open pipe, and hence has the complete series of overtones with vibration numbers in the ratios of the numbers 1, 2, 3, 4, etc. By means of the holes the tube can be shortened, and the pitch altered so as to give the notes intermediate between the natural overtones. If the holes were as great in diameter as the bore of the tube they would reduce the effective length of tube to the length between the mouthpiece and the highest hole left open, and their distances from the mouthpiece would be inversely proportional to the vibration numbers of the notes given out. It is, for several reasons, not practicable nor desirable to make the holes so large, and the flute must be regarded as of the nature of a resonator with several openings. Uncovering a particular hole has in part the effect of shortening the tube, and in part the effect of enlarging the opening of the flute regarded as a resonator. The nearer a hole is to the mouthpiece the higher is the pitch of the corresponding note; and the larger the hole the higher the note, so that if it is desired for any mechanical reason to alter the position of a hole the pitch can be corrected within moderate limits by making a suitable change in its size. An open hole prevents the formation of a node in its neighbourhood, but favours the formation of a vibrating segment. The complicated fingering of some of the highest notes is an application of this fact to the production of certain high harmonics. The holes near the points where nodes are situated in the particular form of vibration required are closed, whilst the holes near the vibrating segments are left open.

The clarinet, like many flutes, has a cylindrical bore, but differs from the flute in giving only the odd overtones, so that the first overtone is a twelfth above the fundamental. The mouthpiece is to be regarded as a closed end, but in other respects what has been said of the flute applies equally to the clarinet.

A *conical* tube closed at the narrow end has the same fundamental as an open cylindrical pipe of the same length, and gives the complete series of harmonic overtones. The hautboy and bassoon have conical tubes, and as the reed end is to be regarded as closed they, like the flute, rise an octave when the pressure of the wind is increased.

All the brass instruments used in the orchestra give the full series of harmonic overtones. The shape of the tube is in most cases neither cylindrical nor conical, but of a shape that has been found by experience to give overtones that are correctly in tune with each other. The shapes of the mouthpiece and of the bell have an effect on the quality of the note emitted. A shallow cup-shaped mouthpiece and a small bell tend to make the tone 'brassy,' as in the trombone and trumpet, whilst a deep conical mouthpiece and a wide-spreading bell give a smooth tone, as in the case of the horn.

A narrow bore favours the production of the higher overtones, and conversely. The instruments of the Saxhorn class have a relatively wide bore, and consequently the fundamental is easily produced and of good quality. The bore of the horn is very narrow, and hence, though it is almost impossible to produce the fundamental, a competent performer can produce the overtones up to the sixteenth or even higher.

If a tube has a constriction at some point the pitch of the note emitted will be lowered when the constriction is near the centre of a vibrating

segment, and raised when it is near a node. Consequently, bruises in the side of a brass instrument will put the notes more or less out of tune with each other, some notes being sharpened, and others flattened, according to the position of the nodes relatively to the bruise. The effect is very slight unless the indentation is deep.

Transverse Vibrations: Strings. — Hitherto we have considered only waves and vibrations in air, where the vibrations of a particle of air are longitudinal, that is, in the direction of the line along which the sound is travelling. In solid bodies, of which stretched strings are the most important for our present purpose, longitudinal vibrations are possible, though little used in music. If a resined finger is rubbed lengthways along the string of a pianoforte, a high screaming note will be emitted, which is due to stationary longitudinal vibrations of the string. In the more usual mode of vibration of strings each piece of the string moves transversely to its length, and there is no longitudinal motion. Progressive waves can travel along strings, as is easily shown by hanging a long indiarubber tube or cord from the ceiling, and giving the lower end a sharp jerk sideways. A wave will be seen to travel up the string, and be reflected from the fixed point at the top. If a tube is used, it may be filled with sand or water which, by increasing the inertia of the tube, will reduce the velocity of the wave, just as we saw that in the case of a gas the greater the density of a gas, and consequently the greater its inertia, the less will be the velocity of waves in that gas. If the cord is stretched more tightly the force required to draw it aside at any point is increased. Consequently the part displaced flies back more rapidly and the wave travels with greater velocity. Progressive waves travelling along a string and reflected from the end give rise to stationary waves with nodes and segments exactly as described above for air-waves reflected from a wall; and the period of a stationary vibration is the time taken by one complete wave to travel over a given point of the string, or the time a wave takes to travel over twice the length of one of the segments. A string as used for producing musical notes is stretched between two fixed pegs, or over two bridges, and vibrates transversely. The laws connecting the period of vibration with the length, tension and mass of the string can be determined experimentally by means of the monochord. This consists of a string stretched over a sounding box. One end of the string is fixed, and the other passes over a pulley and supports a weight that can be varied so as to give any required tension. A movable bridge is placed under the string, so that the length of the vibrating section can be altered. It will be found that if the length is reduced to one-half, the note rises an octave, if to one-third it rises a twelfth, and so on; whence it follows that the vibration number is inversely proportional to the length, or the period of vibration is directly proportional to the length. In order to raise the pitch an octave by altering the tension it will be found that the weight must be made four times greater, and to raise the pitch a twelfth it must be made nine times greater; hence the vibration number is proportional to the square root of the tension. Similarly, by using strings of the same length and tension but of different weights it will be found that the vibration number varies inversely as the square root of the density.

All three methods of altering the pitch of a note are illustrated by the violin. It is desirable, both for mechanical and musical reasons, that the tensions of the strings should not be greatly different from each other; and hence the lower strings are thicker than the higher ones, in order to lower the pitch whilst retaining a sufficient tension. The G string is wrapped with wire so as to get sufficient density without impairing the flexibility. If all three strings were of the same density the ratio of the tensions of the G and E would be 64 to 729, as the vibration numbers are in the ratio 8 to 27, and the lower strings would then be so loosely stretched as to give a very feeble tone of poor quality. The tuning of a string is effected by adjusting its tension, and the production of the notes other than the open note by pressing the string down on the finger-board and so altering its length.

When a string gives out its fundamental alone it vibrates as a whole without nodes between the fixed ends, but it is possible for it to vibrate with one, two, or more nodes, and so to produce a series of overtones. If there is only one node it will be situated at the middle of the string, and the note will be an octave higher than the fundamental. This follows from the statement made above, that the vibration number is inversely proportional to the length; for a node is a point of no motion, and might be fixed without altering the mode of vibration, so that a string with a node in the middle is practically equivalent to two strings of half the length and hence an octave higher in pitch. The sections of string on the opposite sides of a node are always displaced in opposite directions. If, for instance, that on the right is arched upwards that on the left will be bent downwards, and *vice versa*. If the two sections have the same period, this state of affairs once established will persist, and the node will remain at rest; but a moment's consideration will show that a single node cannot be elsewhere than at the middle of the string, for if it were, the two sections would have different periods, and though at one moment they might be in opposite phases of vibration

they could not remain so. A time would come when they would be moving in the same direction, and the point separating them would be compelled to move with them and so could not be a node. Thus it follows that whatever the number of nodes they must be so situated as to divide the string into sections of equal length.

Hence, since any number of nodes is possible, it is easily seen that the notes that can be produced from a string of given length will have vibration numbers in the ratio of the numbers 1, 2, 3, etc., or the harmonic series.

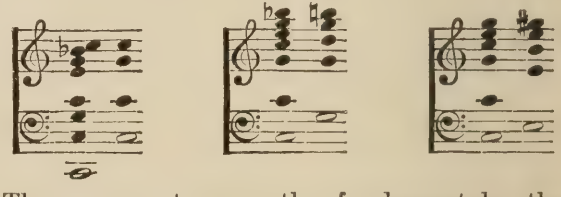
Overtones are sometimes produced on the violin by touching the string gently at an aliquot part of its length from one end, so as to induce the formation of a node at the point touched, instead of pressing the string down on the finger-board.

The note produced by a string is made up of the fundamental together with harmonics which vary according to the method and position of the plucking, bowing, etc. The harder the hammer of a pianoforte and the nearer the point struck to an end of the string the more prominent will be the higher harmonics and the more tinkling will be the tone.

Combination or Resultant Tones.—It has been stated above that within certain limits the force required to produce a given displacement in an elastic body is proportional to the displacement. In such circumstances if the force acting on the body varies according to the harmonic law—that is, is proportional to the sine of an uniformly increasing angle—the displacement will also follow the harmonic law.

A vibrating body A communicates vibrations to an elastic body B in contact with it, by acting on it with a force that varies periodically. If A vibrates harmonically the forces will be harmonic, and if B obeys Hooke's Law, its vibrations will also be harmonic. If B does not obey Hooke's Law its vibrations will not be harmonic though they will be periodic, and will have the same period as the vibrations of A. Now small changes of volume of air are approximately proportional to the changes of pressure that cause them, and hence a harmonically vibrating body will set up approximately harmonic vibrations in the air if the vibrations are small. When, however, the periodic forces acting on air are large this is no longer the case. The condensation is no longer proportional to the increase of pressure above the normal, and therefore a body that is itself vibrating harmonically may cause vibrations in the air that are not harmonic. The vibrations will be periodic, and therefore can be expressed as the sum of a series of harmonic constituents, the overtones being more conspicuous the greater the amplitude of the vibrations. Thus we have the result that when a body that executes nearly simple harmonic vibrations communicates its vibrations to the air, the sound produced may be a complex note when it is very loud, and will gradually alter in quality as it dies away, becoming more and more nearly a pure tone. Harmonics formed in this way are very faint unless the vibrations are amplified by confining the vibrating air in a small cavity. If a strongly vibrating fork is held over the mouth of a bottle, the octave may sometimes be heard.

When two trains of simple harmonic waves of different periods reach such a restricted cavity simultaneously the amplitude of vibration of the two, when combined, may be sufficient to exceed the limits within which force is proportional to displacement. Helmholtz has shown that in such circumstances there are formed Combination Tones, the most important of which is one whose frequency is the difference of the frequencies of the two original tones, and is called the First Difference Tone. There is formed also a Summation Tone whose frequency is the sum of the frequencies of the original tones. The difference and summation tones being real tones can form further difference and summation tones with each other and with the original notes, and hence a large number of such combination tones are theoretically possible. The drum of the ear does not obey Hooke's Law. In the normal state it is stretched inwards a little, and an increase of pressure in the air near it gives a smaller displacement than an equal diminution of pressure gives in the opposite direction. Consequently two trains of harmonic waves that are not of sufficient amplitude to give combination tones in the air may do so when they reach the ear, and it is probable that most of the combination tones heard are thus formed in the ear. If they exist outside the ear they will be strengthened by a resonator; if they are produced by the ear a resonator will have no effect on their loudness. The first difference tone is heard very plainly when two notes are sounded together on a harmonium. Here the tone has a real existence outside the ear, as is proved by its being markedly strengthened by a resonator tuned to it. The tone is probably produced in the wind chest where the air is confined to a limited space, and so vibrates with great amplitude. Two whistles blown together give a very unpleasantly loud difference tone. It is easy to find the pitch of the difference tone produced by two given notes as follows. Write down the series of harmonics for any note, say C, and number them 1, 2, 3, etc., from below upwards. These numbers will be proportional to the frequencies of the various notes. Now pick out two notes of the series that give the interval under consideration;



subtract the number opposite the lower from that opposite the higher, and the difference will be found opposite the first difference tone of the two notes. Suppose, for instance, we want the difference tone of a major sixth. The third and fifth tones of the series, viz. G and E, make this interval with each other. Their difference tone is found opposite 5-3 or 2, and hence is a fifth below the lower of the two notes forming a sixth. It must be remembered that on all musical instruments at the present day the method of tuning by equal temperament is employed, so that the vibration ratio for a sixth is not exactly 5 : 3, and therefore the difference tone is not exactly a fifth below the lower.

The harmonic series can be used in a similar way for finding summation tones or difference tones of higher order than the first. Thus, for instance, the summation tone of notes 2 and 3, a fifth apart, is 5, which is a major sixth above the higher. It will be seen that the first difference tone has a frequency equal to that of the beats produced by the two tones that give rise to it, and it was long thought that it arose simply from the beats being so rapid as to give the sensation of a definite note. This view is inconsistent with Ohm's Law, for two harmonic vibrations when compounded cannot, on analysis by Fourier's Method, yield anything more than was put into the compound vibration, and in particular cannot yield a harmonic vibration of the period of the beats. Consequently, as every constituent of a complex note corresponds with a harmonic vibration, there cannot be in the resultant note any tone with the frequency of the beats, unless the circumstances are altered by some such defect of elasticity as has been mentioned above.

Consonance.—If two pure tones sounded together have nearly the same pitch, their beats will be slow, and will produce a not unpleasing effect. As the beats increase in rapidity by an increase in the interval between the two tones the effect becomes less pleasant, and when they reach about 30 a second they are very harsh. Beyond this point they are too rapid to be recognised as beats, and the unpleasantness diminishes. A difference of frequency of 30 between the two notes corresponds to a different interval at different parts of the scale. Near the middle of the range used in music it is about a semitone. The experimental fact that two tones, differing in frequency by about 30, give the maximum roughness, was taken by Helmholtz as the basis of his physical theory of consonance. It must be remembered in what follows that we are speaking only of the harshness of a chord standing alone, and are not concerned with the art of the musician who can make the roughest of discords beautiful by giving it suitable neighbours. Nor are we considering the mere æsthetic beauty of a chord. According to Helmholtz's theory, the octave is a much better concord than the major third. Every one would agree that the octave is the smoother of the two, though most would regard the major third as more satisfying to the musical ear.

As regards the consonance of two pure tones, it need only be said here that it is least when the difference of frequencies is about 30, and there is no great difference between the smoothness of the different concords (though, as we shall see later, the intervals are more or less defined by the existence of combination tones). Consequently chords of pure tones alone soon become monotonous from the uniformity of their smoothness. The wide-stopped pipes of an organ give an illustration of this. If used alone they very soon become wearisome.

With complex notes the case is different, for even though the fundamentals are too far apart to beat, it may be that some of the harmonics are near enough to cause roughness. In general the harmonics of lower order, that is nearer the fundamental, are the stronger, and Helmholtz estimates the roughness of a chord by the number and order of the pairs of harmonics that are within beating distance. Let us take as illustrations the octave, fifth, and major third.

The open notes are the fundamentals, the black notes are the first few harmonics above the fundamentals.

In the case of the octave the second C adds nothing that did not already exist in the harmonics of the first ; it makes no difference whatever to any roughness that may have existed already in the first C by the clashing of its own harmonics with each other, as the consonance is perfect. The only result of adding the second C is to alter the quality of the first, and not to give the sensation of a chord.

Take next the perfect fifth. Here the third harmonic of G clashes slightly with the fourth and fifth of C ; but the effect of this is not great as the interval is rather too wide for great harshness. Proceeding higher we find B♭ clashing with B♮, but these are so high in the series as to be in most cases very faint, so that there is some roughness in the fifth, but it is not great.

The major third is decidedly worse, for the third harmonic of E is a semitone from the fourth of C, and, a little higher, G clashes with G♯.

These chords afford sufficient illustration of Helmholtz's method. In the same way chords of three or more notes can be investigated, or particular chords relating to instruments whose harmonics are known.

For instance, the clarinet has only the odd harmonics, whilst the hautboy has the whole series. It is easily shown that if a major third is to be played by these two instruments, it is better to give the upper note to the hautboy. The stopped and open pipes of an organ afford illustrations of a similar kind.

The existence of harmonics explains also the reason why the slight mistuning of certain intervals has a less unpleasant effect than is the case with others. In the system of equal temperament no intervals are strictly true except the octaves. If the octaves and fifths were as far from true intonation as are the thirds, the effect would be intolerable. The octave is very sharply limited by the fact that the higher of the two notes coincides with the second harmonic of the lower. If the higher is mistuned it will beat with the second harmonic of the lower, and as this harmonic is generally very strong the beats will be quite too loud to be ignored, and consequently octaves must be tuned accurately. Similarly the fifth is limited by the second harmonic of one note coinciding with the third of the other. The beats caused by mistuning are not in this case so conspicuous as in the case of the octave, as the harmonics concerned are of higher order and therefore weaker, but they are quite perceptible enough to serve as a guide in the accurate tuning of fifths. Referring next to the third of the intervals tabulated above—the major third—it will be seen that the only limitation arises from the coincidence of the fourth harmonic of one note with the fifth of the other. These harmonics are generally so faint that their beating is almost inaudible, and hence the mistuning of thirds does not seriously affect the consonance of the interval.

Even when the notes forming the interval are perfectly pure tones, the presence of combination tones may require that the tuning should be exact. Take the case of the octave, and suppose the vibration numbers of the two notes are 100 and 200. The first difference tone will have a frequency 100. Now sharpen the higher note by two vibrations per second, and the difference tone will become 102, which will beat twice a second with the lower note. Two pure tones, a fifth apart, are limited in a similar way, but here the beats are caused by a combination tone of the second order and so are faint. Let the interval be so mistuned that the frequencies are 200 and 301, then the first difference tone will be 101, and this with the lower note gives a second difference tone 99, so that the two difference tones will beat twice a second.

TEXT-BOOKS ON ACOUSTICS

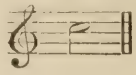
A. Wood: *The Physical Basis of Music* (Cambridge University Press). Quite elementary.
P. C. Buck: *Acoustics for Musicians.* Elementary.
E. Catchpool: *A Text-Book of Sound* (W. B. Clive). Fairly comprehensive. Treated without mathematics.
T. F. Harris: *Handbook of Acoustics* (J. Curwen & Sons). A simple treatise on the applications of acoustics to music. Uses the tonic sol-fa notation in the musical illustrations.
J. W. Capstick: *Sound* (Cambridge University Press). Somewhat more advanced than the preceding books. Not mathematical. Contains a chapter on the theory of orchestral instruments.
E. H. Barton: *Text-Book of Sound* (Macmillan). An advanced theoretical and experimental treatise. Uses mathematics freely.
Lord Rayleigh: *Theory of Sound* (Macmillan). An advanced mathematical book.
Helmholtz: *Sensations of Tone*, translated by A. J. Ellis (Longman). A full account of Helmholtz's researches on the nature of quality, consonance, etc.
Wallace C. Sabine: *Collected Papers on Acoustics* (Harvard University Press). Specially concerned with the acoustic properties of buildings.

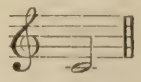
J. W. C.

ACT, a section of a drama having a completeness and often a climax of its own. Though the word Act has no representative in Greek, the division indicated by it was not unknown to the ancient theatre, where the intervention of the chorus stopped the action as completely as the fall of the curtain in the modern. The *Plutus* of Aristophanes, the earliest Greek play from which the chorus was extruded, has come down to us without breaks or divisions of any kind; practically, therefore, it is 'in one act.' Whether the earlier essays of Roman dramatists were divided into acts by themselves is uncertain. The canon of Horace, that a drama should consist of neither more nor less than five acts (*Epist. ad Pisones*, 189), was doubtless drawn from previous experience and practice.

The number of acts into which the modern drama is divided, though of course largely dependent on the subject, is governed by many considerations unknown to the ancients, in which 'the unities' of place as well as of time and action were strictly observed. With us the locality generally changes with each act, frequently with each scene. For this change the convenience of the mechanist and even of the scene-shifter has to be consulted. In the musical drama other considerations beside these add to the difficulties of laying out the action; such as variety and contrast of musical effect, and the physical capabilities of the performers, whose vocal exertions must not be continued too long without interruption. It is not surprising therefore that operas, even of the same class, present examples of every kind of division. French *grand opéra* consists still generally, as in the days when Quinault and Lully worked together, of 5 acts; French *opéra-comique* of 3, and often one only. The Italians and Germans have adopted every number of acts, perhaps most often three.

Wagner laid it down as a principle that three was the best number of acts for opera, and all his own dramas obey this rule; many modern operas, of all schools, contain four.





Handel applies the word to oratorios, and it is used by J. S. Bach in a manner probably unique. He heads his cantata 'Gottes Zeit ist

die allerbeste Zeit' with the words 'Actus Tragicus.' It is what would be called among ourselves a funeral anthem. The word 'Act' was also used in connexion with miscellaneous concerts, instead of our modern 'Part I.' and 'Part II.' J. H.

ACTION (Fr. *mécanique*; Ger. *Mechanismus, Mechanik*; Ital. *meccanica*), the mechanical contrivance by means of which the impulse of the player's finger is transmitted to the strings of a pianoforte, to the metal tongue (free reed) of a harmonium, or by the finger or foot to the column of air in an organ-pipe. In the harp the action, governed by the player's foot upon the pedals, effects a change of key of a semitone or whole tone at will. In the pianoforte the action assumes special importance from the capability this instrument has to express gradations of tone; and as the player's performance can never be quite consciously controlled—more or less of it being automatic—we are, through the faithful correspondence of the action with the touch, placed in direct relation with the very individuality of the player. It is this blending of conscious and unconscious expression of which the pianoforte action is the medium that produces upon us the artistic impression. There have been important variations in the construction of pianoforte actions that have had even geographical definition, as the English, the German action, or have been named from structural difference, as the grasshopper, the check, the repetition action. For history and description of the different actions see CLAVICHORD, HARMONIUM, HARP, HARPSICHORD, ORGAN and PIANOFORTE. A. J. H.

ACT-TUNE (Fr. *entr'acte, divertissement*; Ger. *Zwischenspiel*), sometimes also called CURTAIN TUNE, a piece of instrumental music performed while the curtain or act-drop is down between the acts of a play. In the latter half of the 17th century and first quarter of the 18th century act-tunes were composed specially for every play. The compositions so called comprised, besides the act-tunes proper, the 'first and second music,' tunes played at intervals to beguile the tedium of waiting for the beginning of the play—for it must be remembered that the doors of the theatre were then opened an hour and a half, or two hours before the play began—and the overture. The act-tunes and previous music were principally in dance measures. Examples may be seen in Matthew Locke's 'Instrumental Musick used in The Tempest,' appended to his 'Psyche,' 1675; in Henry Purcell's 'Dioclesian,' 1691; and his 'Collection of Ayres composed for the Theatre,' 1697; and in two collections of 'Theatre Music,' published early in the 18th century. (See INCIDENTAL MUSIC.) W. H. H.

ACUTENESS. A musical sound is said to be more *acute* as the vibrations which produce it are more rapid. It is said to be more *grave* as the vibrations are slower. Thus of the two notes

 and 

the former of which is produced by 512 vibrations per second, and the latter by 256, the former is called the more acute, the latter the more grave. The application of these terms is as difficult to account for as the words 'high' and 'low,' to denote greater and less rapidity of vibration. The ancients appear to have imagined that the acute sounds of the voice were produced from the higher parts of the throat, and the grave ones from lower parts.[1] And this has been supposed by some writers to have been the origin of the terms; but the idea is incorrect and far-fetched, and can hardly be considered a justification.

As soon as anything approaching the form of musical notation by the position of marks or points came into use, the terms high and low were naturally seized upon to guide such positions. Thus our musical notation has come into being, and thus the connexion between high notes and quick vibrations has become so firmly implanted in our minds, that it is exceedingly difficult to bring ourselves to the appreciation of the truth that the connexion is only imaginary, and has no foundation in the natural fitness of things. W. P.

ADAGIETTO (Ital.), diminutive of ADAGIO. (1) A short adagio. (2) As a time indication, somewhat less slow than adagio.

ADAGIO (Ital. *ad agio*, 'at ease,' 'leisurely'). (1) A time-indication. It is unfortunate that great differences of opinion prevail among musicians as to the comparative speed of the terms used to denote slow time. According to the older authorities adagio was the slowest of all time, then came grave, and then largo. This is the order given by Clementi. In some more modern works, however, largo is the slowest, grave being second and adagio third; while others again give the order thus—grave, adagio, largo. It is therefore impossible to give any absolute rule on the subject; it will be sufficient to define adagio in general terms as 'very slow.'

(2) The word is used as the name of a piece of music, either an independent piece (as in the case of Mozart's Adagio in B minor for piano, or Schubert's posthumous Adagio in E), or as one of the movements of a symphony, quartet, sonata, etc. When thus employed, the word not only shows that the music is in very slow time, but also indicates its general character. This is mostly of a soft, tender, elegiac tone, as distinguished from the largo, in which (as the name implies) there is more breadth and dignity. The classical adagio also is generally

[1] See passage from Aristides Quintilianus quoted in Smith's *Harmonics*, p. 2.

of a more florid character, and contains more embellishments and figurated passages than the largo. For Chopin's use of the word, see Niecks's *Biography*, vol. i. p. 203.

(3) It was formerly used as a general term for a slow movement. Thus in the autograph of Haydn's symphony in D (Salmon, No. 6), at the end of the first movement, we find 'Segue Adagio,' though the next movement is an Andante. E. P.

ADALBERT, Saint (real name Swienty Wozciech), Bishop of Prague (*b.* Bohemia, *c.* 939; *d.* Fischhausen, 997), author of the hymn 'Boga-Rodziça,' published in Gerbert's *De cantu*, iv. 348; also *Revue Music.* vol. iv. p. 202, and in A. Sowinski's *Les Musiciens polonais et slaves*, p. 64, who gives a fuller account. See also Gerbert, i. 5, 25, 35, 373, who attributes to him also a litany in the Slavonic language, whereof he gives a Latin translation. Adalbert was murdered by the pagans at Fischhausen. His body, recovered by the Duke Boleslav of Poland, was buried at Gnesen, which in 996 had become his archbishopric.

E. V. d. S.

ADAM, (1) Jean Louis (Johann Ludwig), (*b.* Müttersholz, Alsace, Dec. 3, 1758; *d.* Paris, Apr. 8, 1848), a pianist of the first rank, appeared in Paris when only 17 as the composer of two symphonies-concertantes for the harp, piano and violin, the first of their kind, which were performed at the Concert Spirituel.

He gained the friendship of Gluck and arranged the latter's operas for harpsichord and piano. Having acquired a reputation for teaching, in 1797 he was appointed professor at the Conservatoire, a post he retained till 1843, training many eminent pupils, of whom the most celebrated were Kalkbrenner, Hérold, father and son, Chaulieu, Henri Lemoine, and Mme. Renaud d'Allen; but there is no evidence that he taught his own more famous son, Adolphe Charles.

His *Méthode ou principe général du doigté* (Paris, 1798), *Méthode nouvelle pour le piano* (1802), and *Méthode de piano du Conservatoire* (1804), were important in the development of pianoforte technique, and passed through many editions. His sonatas (harpsichord and violin, and pianoforte) are noteworthy.

M. C. C.; addns. M. L. P.

(2) Adolphe Charles (*b.* Paris, July 24, 1803; *d.* there, May 3, 1856), a famous French composer of *opéra-comique*, the son of Louis. Although thus intimately connected with the art of music the father strenuously resisted the early and strong desire of his son to follow the same calling.

Adolphe was sent to an ordinary day-school and was refused all musical instruction, which he himself tried to supply by private studies, carried on in secret and without guidance or encouragement. At last the quiet persistence of the young man overcame the prejudices of paternal obstinacy. In 1817 he was allowed to enter the Conservatoire, but only as an amateur, and on condition of his promising solemnly never to write for the stage, an engagement naturally disregarded by him at a later period. His first master was Benoist, and his instrument the organ, on which he began to thrum little tunes of his own, soon abandoning it for the harmonium. Adam's first success indeed was due to his clever improvisations on that instrument in fashionable drawing-rooms. The only master to whom Adam owed not only an advance of his musical knowledge but to some extent the insight into his own talent, was Boieldieu. The intimacy which soon sprang up between the teacher and the taught has been pleasantly described by Adam in his posthumous little volume *Derniers Souvenirs d'un musicien.* It was owing to this friendship that Adam was able to connect his name with a work vastly superior to his own powers, Boieldieu's 'Dame blanche,' of which he composed or rather combined the overture. By Boieldieu's advice and example also Adam's talent was led to its most congenial sphere of action, the comic opera. His first independent attempt at dramatic composition was the 1-act operetta of 'Pierre et Catherine,' brought out at the Opéra-Comique in 1829. It was followed the next year by the 3-act opera 'Danilowa.' Both were favourably received, and, encouraged by his success, Adam began to compose a number of operatic works with a rapidity and ease of productiveness frequently fatal to his higher aspirations.

In 1847 he started, at his own expense and responsibility, a new operatic theatre called Théâtre National, and destined to bring the works of young aspiring composers before the public. These laudable efforts were interrupted by the outbreak of the Revolution in the February of the ensuing year. The theatre had to close, Adam having sunk in the enterprise all his earnings, and having moreover incurred a considerable debt, to discharge which he henceforth, like Sir Walter Scott, considered the chief task of his life. This task he accomplished in the course of five years, during which time, besides producing several operas, he occupied himself in writing criticisms and *feuilletons* for the newspapers. His contributions to the *Constitutionel*, *Assemblée Nationale*, and *Gazette Musicale*, were much appreciated by the public. Although a critic he succeeded in making no enemies. Some of his sketches, since collected, are amusing and well though not brilliantly written. In 1844 he was elected Member of the Institute; in 1849 professor of composition at the Conservatoire. He died suddenly. His reputation during his lifetime was not limited to his own

country. He wrote operas and ballads for London, Berlin and St. Petersburg, which capitals he also visited personally.

Adam attempted three kinds of dramatic composition, viz. (1) the grand opera, in which he utterly failed, (2) the ballet, in which he produced some charming melodies, and (3) the comic opera, the one and only real domain of his talent. As the most successful of his works in these respective branches of art we mention (1) 'Richard en Palestine,' (2) 'Giselle,' and (3) 'Le Postillon de Longjumeau.' Subjoined is a list of the more important of Adam's stage works, with the dates of their first performances :

Le Châlet, 1834 ; 'Le Postillon de Longjumeau,' 1836 (Adam's best and most successful work) ; 'Le Brasseur de Preston,' 1838 ; 'Le Roi d'Yvetot,' 1842 ; 'Cagliostro,' 1844 ; 'Richard en Palestine,' same year ; also the ballets of 'Faust,' 1832 (written for London) ; 'La Jolie Fille de Gand,' 1839 ; and Giselle,' 1841.

A memoir by Arthur Pougin was published in 1876. F. H., rev.

ADAM, Johann (*b.* Dresden, 1725), became a viola-player in the Electoral Chapel, which position he held until 1772. He left in MS. symphonies, ballets, and oboe concertos, which prove him a composer of no mean talent. Burney speaks of him as one of the last of Hasse's famous orchestra. E. v. d. s.

ADAMBERGER, Valentin (*b.* Munich, July 6, 1743 ; *d.* Vienna, Aug. 24, 1804), was remarkable for his splendid tenor voice and admirable method.

He was taught singing by Valesi, at whose instance he went to Italy, where he met with great success under the Italianised name of Adamonti. He was recalled to Vienna by the Emperor Joseph and made his first appearance at the German opera at the Hof-und-National-Theater there, Aug. 21, 1780. In the interim, however, he had visited London, where he sang in Sacchini's 'Creso' at the King's Theatre in 1777. In 1789 he entered the Imperial Chapel. Later in life he became renowned as a teacher of singing. It was for him that Mozart composed the part of Belmonte in the 'Seraglio,' as well as the fine airs 'Per pietà,' 'Aura che intorno,' and 'A te, fra tanti affanni' (Davidde Penitente). He also appeared in the 'Schauspiel-Director' of the same master. In 1782 he married Maria Anna (*d.* 1804), daughter of Jacquet the actor, herself a noted actress. Fétis and others give Adamberger's name as Joseph, and his death as on June 7, 1803—both incorrect. Mozart's letters contain frequent references to him, and always of an affectionate and intimate character. Through all the difficulties and vicissitudes of theatrical life, nothing occurred to interrupt their intercourse, though evidence is not wanting that Adamberger's temper was none of the best. Mozart took his advice on musical matters, and on one occasion names him as a man 'of whom Germany may well be proud.' C. F. P.

ADAM DE FULDA, see Fulda.

ADAM DE LA BASSÉE, see Bassée.

ADAM DE LA HALE, see Hale.

ADAMI DA BOLSENA, Andrea (*b.* Bolsena, Oct. 1663 ; *d.* Rome, July 22, 1742) was, on the recommendation of Cardinal Ottoboni (Corelli's patron), appointed master of the Pope's Chapel, and acting professor of music. While in this post Adami wrote *Osservazioni per ben regolare il Coro dei Cantori della Cappella Pontificia*, etc. (Rome, 1711), which is in reality a history of the Papal Chapel, with 12 portraits and memoirs of the principal singers. (See Sistine Choir.) C. F. P.

ADAM LE ROY, see Adenez.

ADAMONTI, see Adamberger, Valentin.

ADAMS, Abraham, wrote *The Psalmist's New Companion*, containing an Introduction to the Grounds of Musick . . . 41 psalm tunes, 21 anthems, 1 funeral hymn. About 1760 he lived at Shoreham, Kent, as stated on the title-page of the 6th edition of the above work, published by Thompson & Son. A twelfth edition appeared about 1790, published by 'Messrs. Thompson.' Both Brown and Stratton (*Brit. Mus. Biog*)., as well as *Q.-L.*, state that he was organist at the parish church of St. Marylebone. E. v. d. s.

ADAMS, Charles (*b.* 1834 ; *d.* Charlestown, Mass., July 3, 1900), tenor singer, one of the first American singers—Clara Louise Kellogg was another—who earned distinction on the operatic stage in Europe.

From 1867–76, with an interval of one year, he was a leading tenor in Vienna. He returned to America in 1877 and appeared in German opera in 1877–78, singing the title part in the first American production of 'Rienzi.' In his later years he was a successful teacher in Boston. He came to England in 1865 and in October of that year sang 'Vasco di Gama' at Covent Garden in the English version—denounced by Chorley as very bad—of 'L'Africaine.' Louisa Pyne was the Selika. Earlier in the same season he sang in 'Masaniello.' On the testimony of one English musician who can recall his appearances in London, Adams had a peculiarly bright and resonant voice. Among his favourite parts were Lohengrin and Tannhäuser. (See *Amer. Supp.*) S. H. P.

ADAMS, James B., musician and composer of the latter part of the 18th and beginning of the 19th centuries. He contributed with Smart to a musical play 'The Paphian Doves' in 1773, and wrote a large number of songs ; also three sonatas for the pianoforte or harpsichord and flute or violin, op. 4 (1790). E. v. d. s.

ADAMS, John (*b.* Paisley, Jan. 15, 1876), tenor, was taught first by the late James Patterson, at one time organist of Paisley Abbey, and sang for some time in Scotland. Coming to London in 1910 to study with Victor

Beigel he was under that master for nearly three years. The success in store for him as a Bach tenor was foreshadowed early in his career, as he had not been long in London before singing for Sir Walter Parratt in a performance of the St. John 'Passion' at St. George's Chapel, Windsor. The work was done in German, and Adams, knowing at that time scarcely a word of the language, had to get up his part in ten days. His first big engagement in London was with the Bach Choir for César Franck's 'Beatitudes.' Since then he has been engaged by the Bach Choir very frequently, singing in both 'Passions' and the 'Mass in B Minor.' He was at the Leeds Festival in 1922—the resumption after the war—and has sung for the Royal Choral Society, the Liverpool Philharmonic, the Glasgow Choral Union, etc. S. H. P.

ADAMS, Suzanne (*b.* Cambridge, Mass., U.S.A., Nov. 28, 1872), operatic soprano; studied under Bouhy in Paris; married in 1898 the late Leo Stern, the well-known violoncellist, and subsequently J. L. McKay. After a successful début at the Paris Opéra in 1894, as Juliette, she was re-engaged for three seasons; then appeared for the first time at Covent Garden (1898) in the same character, winning decided favour. She studied both Juliette and Marguerite with Gounod, who greatly admired her brilliant yet flexible tone and admirable vocal method. Maurice Grau, then impresario both in London and New York, secured her for the Metropolitan Opera House, where her début took place, Jan. 4, 1899. Until 1906 she sang on both sides of the Atlantic with invariable success, shining less perhaps as an actress than as a singer. Her Euridice in Gluck's 'Orfeo' was a charming performance, and she created the part of Hero in Stanford's 'Much Ado About Nothing' when produced at Covent Garden. Her Donna Elvira was another impersonation of exceptional merit. As an oratorio singer she earned distinction both in England and America, her rendering of the soprano music in the 'Messiah' at Carnegie Hall in 1904 being described as the finest heard in New York since Tietjens sang it there. She has lived in London since her retirement. H. K.

ADAMS, (1) Thomas (*b.* London, Sept. 5, 1785; *d.* there, Sept. 15, 1858), a successful organist, remembered for his performances on the Apollonicon (*q.v.*).

He began to study music, under Dr. Busby, at eleven years of age, and held appointments in succession at Carlisle Chapel, Lambeth (1802), St. Paul's, Deptford (1814), St. George, Camberwell (1824). In 1833 he was appointed organist of the then newly rebuilt church of St. Dunstan-in-the-West, Fleet Street, which post he held, conjointly with that of Camberwell, until his death. From their beginning, Adams for many years superintended the annual evening performances on the Apollonicon. For a period of upwards of a quarter of a century Adams occupied a very prominent position as a performer, and was commonly called 'the Thalberg of the organ.' Excelling in both the strict and free styles, he possessed a remarkable faculty for extemporising. Even in so small a field as the interludes then customary between the verses of a psalm tune, he would exhibit this talent to an extraordinary degree. Adams was a composer for, as well as a performer on, his instrument. He published many organ pieces, fugues and voluntaries, besides 90 interludes, and several variations on popular themes. He also published numerous variations for the pianoforte, and many vocal pieces, consisting of short anthems, hymns and sacred songs. The *Mus. T.* of Sept. 1899 contains an account of his organ recitals, and a set of harmonies to the 'Old Hundredth,' an amusing burlesque of the tortuous style of treatment then coming into fashion. Some of Adams's organ pieces have been edited recently for modern use by John E. West, and published by Novello.

His youngest son, (2) Edgar (*d.* May 2, 1890), followed the profession of his father and held for many years the appointment of organist of the church of St. Lawrence, Jewry. W. H. H., rev. with addns.

ADAMS, Thomas Julian (*b.* London, Jan. 28, 1824; *d.* Eastbourne, May 7, 1887), composer and conductor.

He studied under Moscheles; also at Paris. In 1851 he brought together an orchestra with which he gave a series of weekly concerts at Edinburgh, Glasgow and Greenock. After giving concerts in Paris in 1853 he formed another touring orchestra in 1855, giving high-class concerts in the principal English towns. After residing for some time as conductor at Scarborough, Tynemouth and Buxton, he settled in 1877 at Eastbourne as conductor of the Devonshire Park concerts. He introduced Debain's harmonium into England, for which he published a Method in 1855.

According to Brown and Stratton, he wrote compositions for the pianoforte and also for orchestra. E. v. d. S.

ADAMUS DORENSIS (Adam of Dore, Door or Dowr), from the British *Dûr*, the site of a Cistercian abbey in Herefordshire, of which Adam was abbot *c.* 1200, under King John. He was skilled in music as well as in arts and sciences, and wrote a *Treatise on the Elements of Music* (Hawkins, ii. p. 183). Mendel and Reissmann say: 'He was born at Dover at the beginning of the 12th century.' E. v. d. S.

ADAPTATION, see Arrangement.

ADDISON, John (*b.* London, *c.* 1766; *d.* there, Jan. 30, 1844), a player on the double bass and composer of light dramatic works; in conjunction with his wife, a noted singer, took considerable part in the musical life of his time.

He was the son of a village mechanic, at an early age displayed a taste for music, and learned to play upon several instruments. Having, about 1793, married Miss Willems, a niece of Reinhold, the bass singer, a lady possessed of a fine voice and considerable taste, he conceived the idea of pursuing music as a profession. Soon after her marriage Mrs. Addison made a successful appearance at Vauxhall Gardens. Addison then went with his wife to Liverpool, where he entered on his professional career as a performer on the violoncello (which he played at VAUXHALL GARDENS), and subsequently on the double bass, an instrument to which, as an orchestral player, he afterwards confined himself. From Liverpool they went to Dublin, where Addison soon became director of the amateur orchestra of the private theatre, and, from having to arrange the music, improved himself in composition. After fulfilling other engagements in Liverpool and Dublin, Mr. and Mrs. Addison came to London, where, on Sept. 17, 1796, the latter appeared at Covent Garden Theatre as Rosetta in 'Love in a Village,' and afterwards performed other characters. In 1797 they went to Bath, where Mrs. Addison studied under Rauzzini. After a three years' engagement in Dublin, they proceeded to Manchester, where Addison was induced to abandon the musical profession and embark in cotton manufacture. In this, however, he was unsuccessful, and soon resumed his profession. After a brief sojourn in the provinces he returned to London, and engaged with Michael Kelly as manager of his music business. He was also engaged at the Italian Opera and the Ancient and Vocal Concerts as a double-bass player. In 1805 he made himself known as a composer, by the music to Skeffington's 'Sleeping Beauty.' He afterwards composed several pieces for the Lyceum and Covent Garden Theatres. On Mar. 3, 1815, a short sacred musical drama entitled 'Elijah raising the Widow's Son,' adapted by Addison to music by Winter, was produced at Drury Lane Theatre in the series of Lenten oratorios, under the direction of Sir George Smart. His principal dramatic compositions are :

'The Sleeping Beauty,' 1805; 'The Russian Impostor,' 1809; Music for the Burlesque Operatic Tragedy, 1812 (July); 'My Aunt,' 1813; 'Two Words,' 1816; 'Free and Easy,' 1816; 'My Uncle,' 1817; 'Bobinet the Bandit,' 'Rose d'Amour,' an adaptation of Boieldieu's opera of that name, 1818.

He was one of the six composers who contributed the music to Charles Dibdin the younger's opera, 'The Farmer's Wife,' in 1814. He published, in 1772, 'Six Sonatas or Duets for two violins or two German flutes—Opera prima.'

W. H. H., with addns.

ADDITIONAL ACCOMPANIMENTS. The term refers to a practice very prevalent in the last century, of revising the scores of 17th and 18th century composers, so as to make their instrumentation more consonant with the fashion of a later time. Strictly speaking, the term implies no alteration of what the composer wrote but only the addition of extra instrumental parts to increase the fullness of the harmony or to extend the variety of tone. In practice, however, the writer of additional accompaniments has frequently succumbed to the temptation to alter as well as to add.

Two pleas in justification have been advanced :

(1) That these composers did not complete their scores.

(2) That conditions of performance are now so unlike those for which the works were originally written that a different treatment of details is essential if anything like the effect intended by the composers is to be produced on modern ears.

Modern criticism, however, for the most part considers the first of these pleas inadmissible. It is generally realised now that when Bach or Handel wrote the accompaniment to a song by means of a figured bass with or without *obbligato* instruments (see ACCOMPANIMENT and THOROUGH-BASS) they did so to secure a particular type of effect, and that to their executants, trained in the method, the score represented their intentions as practically as the scores of to-day represent a composer's intentions to the eye of a conductor.

The second plea, however, may be accepted as sufficient justification in itself for minor additions and even occasional alterations. Differences in the size of the buildings in which the works are given and in the numbers of the choral singers employed compel the use of larger orchestras. Modern instruments have sometimes to be substituted for obsolete ones ; an organ may or may not be obtainable, a harpsichord usually is not. The wind instruments differ in tone and construction from those of the 18th century ; oboes and bassoons have been refined in quality, the trumpet no longer has its old high compass. Innumerable considerations, therefore, may combine to make a conductor modify the score to suit the needs of a given performance and a given audience. (See ORCHESTRATION.)

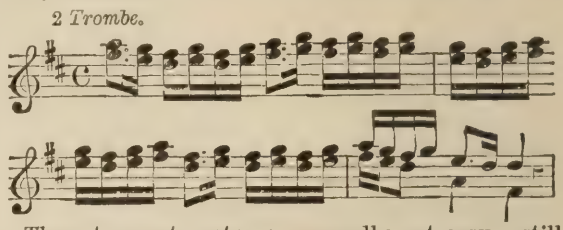
But the term 'additional accompaniments' has been associated not so much with editorial emendations made for a particular occasion as with the definite practice of rescoring oratorios and cantatas by Handel and Bach and publishing the revised scores and parts (often without clear indication of what is the composer's and what the arranger's work), a practice advanced by such eminent musicians as Mozart, Mendelssohn and Robert Franz.

In the earlier editions of this Dictionary the late Professor Ebenezer Prout made a detailed analysis of the methods adopted in some of these scores and drew deductions from them as to the limits of legitimacy in the procedure. It

may be mentioned here that when Professor Prout produced an edition of Handel's 'Saul' with additional accompaniments by himself, he was careful to distinguish them from those of the composer by the use of initials P. and H. against the parts in the full score, and a similar method was adopted by Franz, but not consistently. Professor Prout's article was written for the first edition of this Dictionary (1879), and the following is his summary of the material before him :

'Among the earliest examples of this mode of treatment are Mozart's additional accompaniments to Handel's "Messiah," "Alexander's Feast," "Acis and Galatea," and "Ode for St. Cecilia's Day." These works were arranged for Baron van Swieten, for the purpose of performances where no organ was available. Many other musicians have followed Mozart's example with more or less success, among the chief being Ignaz Franz Mosel, who published editions of "Samson," "Jephtha," "Belshazzar," etc., in which not only additional instrumentation was introduced, but utterly unjustifiable alterations were made in the works themselves, a movement from one oratorio being sometimes transferred to another; Mendelssohn, who (in early life) rescored the "Dettingen Te Deum," and "Acis and Galatea"; Dr. Ferdinand Hiller, Sir G. A. Macfarren, Sir Michael Costa, Sir Arthur Sullivan, and last (and probably best of all) Robert Franz. This eminent musician has devoted special attention to this branch of his art; and for a complete exposition of the system on which he works we refer our readers to his *Offener Brief an Eduard Hanslick*, etc. (Leipzig, Leuckart, 1871). Franz has written additional accompaniments to Bach's "Passion according to St. Matthew," "Magnificat," and several "Kirchencantaten," and to Handel's "L'Allegro" and "Jubilate."'

It will not be necessary to extend the examination far beyond this material. Though a few works by other composers, notably Astorga's Stabat Mater, have been given additional accompaniments, Handel and Bach are the only two composers whose work has been subjected to this treatment on any large scale. Moreover, though certain musicians in Germany since Robert Franz have added to the stock of additional accompaniments to certain of Bach's works, for example Felix Mottl, who scored for modern full orchestra the church cantata, 'Bleib bei uns,' and the secular cantata, 'Der Streit zwischen Phöbus und Pan,' the method which has been regarded as essential to Handel has never become generally accepted with regard to Bach. The general trend of feeling is now against any additions to his scores not absolutely required by local circumstances.



The history of the additions made to Handel's oratorios, however, is a long and complicated one; it requires some outline. In the latter part of the 18th century the artistic conscience with regard to details of performance was exceedingly lax. The composition of the orchestra for the Commemoration of Handel held in Westminster Abbey in 1784 (see Burney, *Commemoration of Handel*) shows that musicians of the period had no idea but that the use of as many instruments and voices as possible must enhance the effect of the music. The composer's intentions did not come into consideration at all. When, therefore, a score of 'Messiah' was published in Germany and described as 'nach W. A. Mozarts Bearbeitung' it was readily accepted in this country as an improvement on the original of Handel. This score, Professor Prout has pointed out (preface to the full score of 'Messiah,' 1902), contained, besides Mozart's additional accompaniments, certain additions by John Adam Hiller (*q.v.*), and was based on an imperfect edition of Handel's text. Meantime, Mozart's manuscript of 'Messiah' was lost, though those of the other three of Handel's works arranged by him ('Acis and Galatea,' 'Ode for St. Cecilia's Day,' and 'Alexander's Feast') were preserved and passed to the Royal Library at Berlin. From this point, therefore, the instrumentation of 'Messiah' went forward from one confusion to another. Many editions were made in manuscript and some were published. The most important in the 19th century were those of Costa, Franz, Macfarren and Prout. Each accepted some material from Mozart and added and altered more or less at will. Other of Handel's oratorios were provided with additional accompaniments by Costa, Macfarren, Sullivan and others. But in the majority of these cases the arrangers were working on the original scores, whereas in the case of 'Messiah' each was an arrangement of an arrangement, not excluding Professor Prout's score, which may be taken as the most generally used one at the present day. Prout's edition, however, is the work of a scholar who realised the confusion and collated the scores of other arrangers with the original text of Handel. In his preface he declared his desire to retain Mozart's additions only where, in his judgment, they did not conflict with Handel's intentions. He restored Handel's wood wind parts (oboe and bassoon) in the choruses 'He trusted in God' and 'Let us break their bonds'; he advocated the use of the piano, representing the harpsichord, to accompany the recitative, a reform which has not generally been adopted; but he himself wrote new additional parts wherever he considered that Mozart had not sufficiently filled up the harmony, and he left out all Handel's figuring. His object was to produce a practical score for modern performance, and this he undoubtedly did. Meantime, Sir Frederick Bridge had made an attempt to return to Handel's own score in the performances of 'Messiah' by the Royal Choral Society (1897), and throughout his tenure of office as conductor till his retirement in 1922 only Handel's parts were used at the Albert Hall, the organ supplying the harmonies of the figured-bass. Sir Frederick Bridge did not, however, reintroduce the harpsichord or its modern successor the piano, in the accompaniment

ADDITIONAL ACCOMPANIMENTS

of arias and recitatives, and a certain heaviness of effect, inevitable where a large choir has to be supported by large numbers of instruments with a background of the organ, made the result not wholly satisfactory. The method was not generally accepted, and outside the Albert Hall one or other of the editions founded on Mozart is still generally used. At the Albert Hall the Mozart accompaniments (Novello Edition) were readopted when Eugene Goossens conducted the Royal Choral Society in a performance of 'Messiah' on Good Friday, 1923.

The artistic conscience of the present generation has asserted itself strongly in favour of performing Bach's works as nearly as possible with the composer's own instrumentation. All Robert Franz's work in writing additional accompaniments to the 'St. Matthew Passion,' the Magnificat, and various church cantatas, has been definitely rejected and his followers have gained little or no foothold.[1] Franz's idea was to do with Bach, of definite artistic purpose, what chance had done with Handel. His several writings on the subject, including prefaces to his various editions of Bach and Handel, have been collected and published in pamphlet form since his death.[2] Though musicians agree that the right course in performing Bach is to go straight to Bach's scores and allow only such modifications in them as may be needful for the conditions of a particular performance, Handel, in England at any rate, remains a popular institution, and the accretions of a century and a half have gained sanction by a popular verdict which overrides the arguments of scholars.[3] From the musician's point of view it will be admitted that Handel should be treated with the same conscientiousness which is shown towards Bach, and it has often been urged that a revival of interest in Handel's music would be stimulated if performances of the oratorios, the Chandos anthems, and other choral works were given with a moderate-sized chorus, an orchestra approximating more or less to that of Handel's day, and using only his instrumentation with the figured basses intelligently played on a keyboard instrument. But as Handel's music lives by its popular appeal and its performance in places of the size of the Crystal Palace and the Albert Hall by choirs of upwards of 800 voices, it is impossible to apply any purist principles. The most we can hope for is that the lines of his melody should not be obscured by alteration of his part-writing or by wanton additions to the orchestral polyphony. Professor Prout in his article contributed to this Dictionary quoted an instance of such error which may be retained here as a warning. He said:

'Mendelssohn, in his score of the "Dettingen Te Deum," has altered (and we venture to think entirely spoilt) several of the very characteristic trumpet parts which form so prominent a feature of the work. As one example out of several that might be quoted, we give the opening symphony of the chorus "To thee, Cherubin." Handel writes:

These trumpet parts are assuredly not easy; still they are practicable. Mendelssohn, however, alters the whole passage thus:

and still worse, when the symphony is repeated in the original by oboes and bassoons, the arranger gives it to the full wind band with trumpets and drums, entirely disregarding the ideas of the composer. The chief objection to be urged against such a method of procedure as the above—so unlike Mendelssohn's usual reverence and modesty[4]—is not that the

[1] Perhaps the only notable exception to this in England is in the case of 'Phœbus and Pan,' produced as an operatic work by the Beecham Opera Company where Mottl's orchestral version was accepted. But in that case the whole production was an adaptation for stage purposes.

[2] *Gesammelte Schriften über die Wiederbelebung Bach'scher und Händel'scher Werke*, Leuckart, 1910.

[3] For the Handel Festival (Crystal Palace), 1926, Sir Henry Wood rescored 'Messiah,' 'Israel in Egypt' and other works of Handel for a large orchestra more or less proportioned to the chorus of over 3000 voices.

[4] The Te Deum and 'Acis' were instrumented by Mendelssohn as an exercise for Zelter. The date on the MS. of 'Acis' is January 1829. He mentions them in a letter to Devrient in 1833, speaking of his additions to the Te Deum as 'interpolations of a very arbitrary kind, mistakes as I now consider them, which I am anxious to correct.' It is a thousand pities that the work should have been published.

instrumentation is changed or added to, but that the form and character of the passage itself are altered.'

Conductors about to produce a work by Handel should at least do what conductors of Bach may be generally relied on to do, and that is examine Handel's own score as reproduced in the German Handel Society's Edition, before having recourse to an arrangement with additional accompaniments. If this is done there will be an increasing tendency gradually to purify the tradition of performance by expunging the worst errors of the arrangements.

The following list compiled from the catalogue of Messrs. Novello & Co. is added to give information as to the most accessible material available for those who require additional accompaniments to Handel's works:

	Add. Acc. by	Full Score.
Acis and Galatea	Mozart	Pubd.
,, ,,	Mendelssohn	MS.
Alexander's Feast	Mozart	
Chandos Anthems	Silas & Battison Hayes	
Coronation Anthems	,, ,,	
Deborah	Costa	MS.
Dettingen Te Deum	Mendelssohn	
Israel in Egypt	Macfarren	MS.

Solomon	Costa	,,
Theodora	Ferdinand Hiller	,,
Triumph of Time and Truth	Perry	,,

N.B.—Costa's accompaniments, generally superseded now, are only mentioned where no other edition is available. C.

ADELBOLDUS (*b.* near Liége, 10th cent.), became bishop of Utrecht, and chancellor of the Emperor Henry II. (*d.* Utrecht, Nov. 27, 1027). He wrote his *Ars musica* between 990 and 1003, reproduced in Gerbert, i. 303. The Liceo at Bologna has a copy: 'Musica Adelborti, ad Silvestrum Papam' from a codex at Tegernsee. E. v. d. S.

ADELBURG, August Ritter von (*b.* Constantinople, 1833), eminent violin virtuoso. After receiving a good general education, he studied the violin under Mayseder at Vienna from 1850–54 and composition under various masters. He played at Vienna, toured in Europe with great success as violinist, and soon acquired also a name as composer of chamber music, especially by his string quartets, op. 16 to 19, and by his grand Hungarian national opera 'Zrinyi,' which was first produced and received with enthusiasm at Budapest in 1866, and was a favourite for many years.

E. v. d. S.

ADELPHI GLEE CLUB, see Abbey Glee Club.

ADENEZ, troubadour and minstrel, known as 'Adam le Roy,' lived at the court of Henry III., Duke of Brabant (*d. circa* 1260), who had charged himself with his musical education. In a miniature in one of his romances in the Bibl. Nat., Paris (*Supplém. du fond du roi*, No. 428) he is represented as a viol-player (*Fétis*).

ADHÉMAR, Guillaume (13th cent.), troubadour and jongleur. The Arsenal Library at Paris has 18 chansons of his with the melodies (*Fétis*).

ADIMARI, Luigi (*b.* Naples, Sept. 3, 1644; *d.* Florence, June 22, 1708), lyric and dramatic poet and composer; wrote, among other musical compositions, an opera, 'Roberto,' which achieved great popularity in Italy.

E. v. d. S.

ADLER, Guido (*b.* Eibenschütz in Moravia, Nov. 1, 1855), a distinguished writer on music, was educated at the academical Gymnasium, Vienna, and at the Conservatorium, where he was pupil of Bruckner and Dessoff. In 1874 he went to the university, and took part with Mottl and K. Wolf in the foundation of an 'Academische Wagnerverein'; he was appointed as a university teacher of musical science in 1881, and in 1882 was a representative of Austria at the international liturgical congress held at Arezzo. In 1884 he founded, in association with Chrysander and Spitta, the useful publication called *Vierteljahrsschrift für Musikwissenschaft*, in 1885 was appointed professor of musical science at Prague, and in 1898 succeeded Hanslick in a similar professorship at Vienna. He edited (1892–93) the compositions of Ferdinand III., Leopold I. and Joseph I., and since 1894 has been editor-in-chief of the series of *Denkmäler der Tonkunst in Österreich*. For the volumes in this edition which he edited personally see Denkmäler.

In 1924 Adler's *Handbuch der Musikgeschichte* appeared under his general editorship and contained contributions on the several periods of history by a number of learned authors. It is one of the most important publications of the day.

His publications include:

'Die musikalischen Autographen und revidierten Abschriften Beethovens im Besitze von A. Artaria.' (1890.)
'Richard Wagner.' (1904.) Trs. into French by L. Laloy.
'Josef Haydn.' (Festival book, 1909.)
'Der Stil in der Musik.' (1912.)
'Gustav Mahler.' (1916.)
Methode der Musikgeschichte. (1919.)

ADLGASSER, Anton Cajetan (*b.* Inzell, Bavaria, Apr. 3, 1728; *d.* Salzburg, Dec. 21, 1777), organist and contrapuntist.

After being a pupil of Eberlin he was sent to Italy by the Archbishop of Salzburg, and recalled thence to the post of organist to the cathedral and cembalist to the court at Salzburg, where he died from an apoplectic stroke while at the organ. His works remain mostly in MS. (For list see *Q.-L.*) C. F. P.

AD LIBITUM (Lat.), at the pleasure of the performer, as regards time and expression. In the case of arrangements—'with violin or flute ad libitum'—it signifies that the solo instrument may be left out or exchanged at pleasure.

ADLUNG, Jacob (*b.* Bindersleben, Erfurt,

Jan. 14, 1699; *d.* there, July 5, 1762), theologian, scholar and musician.

The clavier, organ and theory, he learned from Christian Reichardt the organist. After the death of Buttstedt in 1727 Adlung received his post as organist of the Lutheran Church, where he was soon known for his masterly playing, and in 1741 became professor at the Rathsgymnasium of Erfurt. In 1736 his house and all his possessions were burnt. He taught both music and language, wrote largely and well on music, and even constructed instruments with his own hands; and thus made a successful resistance to adverse fortune till his death. Three of his works are of lasting value in musical literature: (1) *Anleitung zur musikalischen Gelahrtheit*, with a preface by Joh. Ernst Bach (Erfurt, 1758); a 2nd edition, issued after his death, by J. A. Hiller (Leipzig, 1783). (2) *Musica mechanica Organœdi*, etc. (Berlin, 1768), a treatise in two volumes on the structure, use and maintenance of the organ and clavicymbalum. This contains additions by J. F. Agricola and J. L. Albrecht, a translation by the former of a treatise on the organ by Bédos de Celles, and an autobiography of Adlung. (3) *Musikalisches Siebengestirn* (Berlin, 1768). (See Hiller's *Lebensb. ber. Musikgelehrten.*) C. F. P.

ADOLFATI, Andrea (*b.* Venice, 1711), a composer of operas, and a pupil of Galuppi. He was conductor of the music in the church of Santa Maria della Salute in Venice, and in that of the Annunziata at Genoa, the latter from about 1750 till his death. His principal operas are 'L'Artaserse,' 'L'Arianna,' 'Adriano in Siria,' and 'La Gloria ed il piacere,' the first produced in Rome in 1742, the three last in Genoa in 1750–52. Another 'La Clemenza di Tito,' dated 1753, is preserved in the Hofbibliothek, Vienna. After that date Adolfati was appointed maestro di cappella to the Princess of Modena. He left also sacred compositions, chiefly psalms. 'Arianna' is said to contain an air in quintuple time. M. C. C.

ADRASTOS (*b.* Philippi, Macedonia, middle of 4th cent. B.C.), peripatetic philosopher, a pupil of Aristotle, wrote Ἁρμονικῶν βιβλία τρία, an important work on musical science often quoted by ancient writers, which was believed to have been entirely lost until a MS. copy, beautifully written on parchment with clearly drawn geometrical figures, was discovered in the library of the King of Naples in 1788. In this work Adrastos deals with the phenomenon of sympathetic vibrations. E. v. d. S.

ADRIAENSEN (Hadrianus), Emmanuel (*b.* Antwerp, 16th cent.), lutenist, published 'Pratum musicum' (Antwerp, 1584) with a new edition in 1600, and 'Novum pratum musicum' (Antwerp, 1592), containing pieces for lutes (*Eitner*).

ADRIANA LECOUVREUR, opera in three acts, libretto by Colautti, music by Francesco Cilèa. Produced Teatro Lirico, Milan, Nov. 6, 1902; Covent Garden, Nov. 8, 1904.

ADRIANI (Adrianus), Francesco (*b.* Santo Severino, Ancona,[1] *c.* 1539; *d.* Aug. 16, 1575), maestro di cappella of St. John Lateran, Rome, *c.* 1573. Eitner gives as his compositions three books of madrigals, one 5-part canzona, and one 5-part song, published in 1568 and 1570. Some of Adrian Willaert's compositions have been at times erroneously attributed to F. Adriani (*Q.-L.*). E. v. d. S.

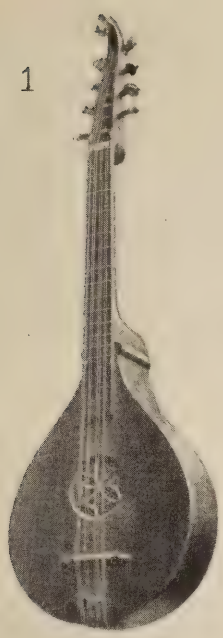
ADRIANO DI BOLOGNA, see Bianchieri.

ADRIEN, Martin Joseph, see Andrien.

ADSON, John, member of the King's music under Charles I. (1625). In 1634 and 1640 he received £46 per annum, and on Jan. 7, 1634, was appointed teacher of music with 20d. a day for life. He wrote 'Courtly Masquing Ayres comp. to 5 and 6 parts for Violins, Consorts, and Cornets,' London, 1611; another ed. 1621. E. v. d. S.

A DUE (Ital.), 'in two parts,' or *a* 2. (See Abbreviations.)

ÆGIDIUS (Egidio) was priest, composer and instrumentalist at the ducal chapel at Milan before 1595 (E. v. d. Straeten, 6, 55).



ÆGIDIUS, Johannes (2nd half of 13th cent.), a very learned Spanish monk of Zamora, who wrote *Ars musica*, the last chapter of which deals with musical instruments; but, as Fétis says, in an incomplete and incorrect manner. (Reprint in Gerbert, ii. 369.) E. v. d. S.

ÆGIDIUS DE MORINO (Murino) (14/15th cent.), author of a treatise, *Cantus mensurabilis*, in Coussemaker 3, 124 (Fétis, *Égide*). A copy of this work is contained in B.M. Add. MSS. 4909, among tracts of various authors, copied by Dr. Pepusch from a MS. which perished in a fire at the Cotton Library. The author's name in this copy is given as 'Egidius de Muris vel de Morino,' but he must not be confounded, as has been the case, with Joh. de Muris. E. v. d. S.

ÆLIANUS, Claudius (*c.* A.D. 223), a Roman sophist and historian. His work, *Variae historiae libri XIV.*, deals in a detailed manner with the earlier Greek musicians, musical instruments, and other matters. As a work of great importance to students, it has been translated into English by T. Stanley (London, 1665), and into German by Meinecke. E. v. d. S.

ÆLRED, Saint (Ailred, Ethelred) (*b.* Hexham, 1109; *d.* Rievaulx, Yorks, Jan. 12, 1166), English theologian and historian; at the court of Scotland as attendant of Henry, son of David I. In 1146 he became abbot of the Cistercians at Rievaulx, Yorks. As a pupil of St. Bernard he was a great purist,

especially with regard to the liturgy of the Church, where many innovations had taken place through the introduction of rhythmical divisions, beating of time, and the use of instruments, even of little bells. Against such sensuous attractions he wrote *De abusu musices*, published in the *Bibliotheca Concinatoria*, Paris, 1665, i. p. 610, viii. p. 799 ; also Gerbert, i.

E. V. d. S.

AELSTERS, Georges Jacques (*b.* Ghent, 1770 ; *d.* there, Ap. 11, 1849), carillonneur of Ghent from 1788 to 1839. He belonged to a musical family, was for fifty years director of the music at the church of St. Martin, and composed much church music still performed in Flanders. especially a Miserere.

AEMINGUS, Siegfried Coesus von (*b.* Mölln, Meklenburgh, Dec. 3, 1710 ; *d.* May 25, 1768), professor of the University of Greifswald, a profound student of musical archæology, and author of some excellent treatises on ancient Hebrew music. E. V. d. S.

AENGSTLICH (Ger.), 'fearfully,' a word which calls for notice here only on account of its use by Beethoven at the head of the recitative in his Missa Solennis, 'Agnus Dei, qui tollis peccata mundi, miserere nobis.'

ÆOLIAN COMPANY, Ltd., The (Registered Office, 135 New Bond St., W.1) carries on a business in the manufacture of musical instruments and accessories, of a comprehensive character. Amongst its chief productions are organs, pianofortes, that highly developed form of the mechanical piano-player known as the pianola, gramophones and gramophone records, and music rolls for mechanical instruments. The chief factory is at Hayes, Middlesex, and is a model from the point of comfort, convenience and equipment. During the war (1914–18) this equipment, under the organising skill and experience of the directorate of the Company, was devoted to the manufacture of aeroplanes, a national service for which it was eminently fitted.

The manufacture of the pianola, both in its original form as an instrument external to the pianoforte, and in the later form in the pianola-piano in which the playing mechanism is incorporated in the body of the pianoforte, is the principal form of musical industry with which the name of the Æolian Company is associated. This ingenious instrument was the invention of an American engineer, E. S. Votey, who took out a patent for a pneumatic piano-playing device in 1897. Two years later a small shop was opened in Regent Street for the sale of the pianola, and the subsequent growth and development of the business led to its transfer to the present premises in 1903. On the site acquired in New Bond Street were built not only offices and show-rooms, but a fine concert hall, known as the Æolian Hall (*q.v.*)

The firm's latest development of the pianola, known as the 'Duo-art' piano, is an instrument which reproduces individual performances of pianists. By an ingenious and complicated apparatus the performance of a pianist is automatically recorded, with accurate indication of those variations of time and tone which give such a performance its individual value and interest. The 'Duo-art' pianoforte is controlled so that these original times and dynamic variations are incorporated in the music sheet, and are reproduced in the performance.

ÆOLIAN HALL. This hall in Bond Street was formally opened on Jan. 19, 1904, with a recital given by the Orchestrelle Company, who, on taking over the premises in 1903, had remodelled the Grosvenor Gallery to make it suitable for musical purposes. An organ was built, and eventually a small gallery added at the back of the hall. The seating accommodation is just over 500, and the hall, with its central situation and good acoustic properties, has been in continual request for recital and chamber music and chamber orchestra concerts.

ÆOLIAN HARP (Fr. *harpe éolienne* ; Ger. *Äolsharfe, Windharfe* ; Ital. *arpa d'Eolo*). The name is from Aeolus, the god of the wind. The instrument, of which the inventor is unknown, would appear to owe its origin to the monochord, a string stretched upon two bridges over a sound-board. The string happening to be at a low tension and exposed to a current of air would divide into various aliquot parts according to the varying strength of the current, and thus give the harmonics or overtones we hear in the music of this instrument. (See Acoustics.) Once recognised on a monochord, it would be a simple process to increase the number of strings, which, tuned in unison, would be differently affected in relation to the current of air by position, and thus give different vibrating segments, forming consonant or dissonant chords as the pressure of wind might determine. That musical sounds could be produced by unaided wind has been long known in the East. According to tradition King David's harp (*kinnor*) sounded at midnight when suspended over his couch in the north wind ; and in an old Hindu poem, quoted by Sir William Jones, the *vina*, or lute of the country, is said to have produced tones, proceeding by musical intervals, by the impulse of the breeze. In the present day the Chinese have kites with vibrating strings, and the Malays have a curious Æolian instrument, a rough bamboo cane of considerable height, perforated with holes and stuck in the ground. This is entirely a wind contrivance, but they have another of split bamboo for strings.[1] St. Dunstan of Canterbury is said to have hung his harp so that the wind might pass through

[1] C. Engel, *Musical Instruments*, 1874, p. 200.

the strings, causing them to sound, and to have been accused of sorcery in consequence. This was in the 10th century.

It was not until the 17th that we meet with the Æolian harp itself. Kircher (1602–80) first wrote about it. He speaks of it in his *Musurgia universalis* as being a new instrument and easy to construct, and as being the admiration of every one. He describes the sounds as not resembling those of a stringed or of a wind instrument, but partaking of the qualities of both. This is quite true, and applies to any stretched string the sound of which is made continuous by any other agency than that of a bow, and not dying away as we usually hear the tones of pianofortes, harps and guitars. Matthew Young, Bishop of Clonfert, in his *Enquiry into the Principal Phenomena of Sounds and Musical Strings* (1784), gives full particulars of the Æolian harp, and offers a theory of its generation of sound. It also gained attention in Germany about the same time, through a description of it in the *Göttingen Pocket Calendar* for 1792. The poet, Robert Blomfield, made Æolian harps and wrote a pamphlet on them, called *Nature's Music* (1808). H. C. Koch, a German, appears to have bestowed the most attention upon the effects obtainable by varying the construction and stringing of the Æolian harp; but it is of little importance whether the tone be a little louder or a little softer, the impression to be derived from the instrument is as attainable from one of simple build as from double harps, or from one with weighted (spun) strings added.

An Æolian harp is usually about three feet long, five inches broad, and three inches deep; of pine wood, with beech ends for insertion of the tuning- and hitch-pins, and with two narrow bridges of hard wood over which a dozen catgut strings are stretched. These are tuned in the most exact unison possible, or the beats caused by their difference would be disagreeable. The direction sometimes attached to tune by intervals of fourths and fifths is only misleading. The tension should be low; in other words, the strings be rather slack, the fundamental note not being noticeable when the instrument sounds. There are usually two sound-holes in the sound-board. The ends are raised above the strings about an inch, and support another pine board, between which and the sound-board the draught of air is directed. (See *PLATE I.*, No. 4.) A. J. H.

ÆOLIAN MODE, see MODES, ECCLESIASTICAL.

ÆOLINA (mouth-harmonica or mouth-organ), a small and simple 'free reed' instrument, invented about 1829 by Messrs. Wheatstone. It consisted of a few free reeds, which were fixed into a metal plate and blown by the mouth. As each reed was furnished with a separate aperture for supplying the wind, a simple melody could of course be played by moving the instrument backwards and forwards before the mouth. Its value for artistic purposes was *nil*; its only interest is a historical one, as being one of the earliest attempts to make practical use of the discovery of the free reed. The æolina may be regarded as the first germ of the ACCORDION and CONCERTINA (*q.v.*)

E. P.

ÆOLODION (ÆOLODICON) (also called in Germany *Windharmonika*), a keyed wind instrument resembling the harmonium, the tone of which was produced from steel springs. It had a compass of six octaves, and its tone was similar to that of the harmonium. There is some controversy as to its original inventor; most authorities attribute it to J. T. Eschenbach of Hamburg, who is said to have first made it in 1800. Various improvements were subsequently made by other mechanicians, among whom may be named Schmidt of Presburg, Voit of Schweinfurt, Sebastian Müller (1826), and F. Sturm of Suhl (1833). The instrument is now entirely superseded by the harmonium.

A modification of the æolodion was the Æolsklavier, invented about 1825 by Schortmann of Buttelstädt, in which the reeds or springs which produced the sound were made of wood instead of metal, by which the quality of tone was made softer and sweeter. The instrument appears to have been soon forgotten. A further modification was the Æolomelodicon or Choraleon, constructed by Brunner at Warsaw, about the year 1825, from the design of Professor Hoffmann in that city. It differed from the æolodion in the fact that brass tubes were affixed to the reeds, much as in the reed-stops of an organ. The instrument was of great power, and was probably intended as a substitute for the organ in small churches, especially in the accompaniment of chorals, whence its second name choraleon. It has taken no permanent place in musical history. In the Æolopantalon, invented about the year 1830, by Dlugosz of Warsaw, the æolomelodicon was combined with a pianoforte, so arranged that the player could make use of either instrument separately or both together. A somewhat similar plan has been occasionally tried with the piano and harmonium, but without great success. E. P.

ÆOLOMELODICON, see ÆOLODION.

ÆOLOPANTALON, see ÆOLODION.

ÆOLSKLAVIER, see ÆOLODION.

AERTS, EGIDIUS (*b.* Boom near Antwerp, Mar. 1, 1822; *d.* Brussels, June 9, 1853), an eminent flautist and composer, studied under Lahon in the Conservatoire at Brussels. From 1837–40 he travelled professionally through France and Italy, and on his return to Brussels studied composition under Fétis. In 1847 he was appointed professor of the flute at the

Conservatoire, and first flute at the Theatre. He composed symphonies and overtures, as well as concertos and other music for the flute.

M. C. C.

AERTSENS (Aertssens), Hendrik, of Antwerp, published, in 1631, *Den Boek der gheestelijcke Sangen . . . Door eenen religieus van d'Order van Sente François. . . .* E. v. d. S.

ÆSTHETICS. This word came into use about the year 1750, to denote the science which investigates the Beautiful.

It has now come to mean two different things to two different groups of thinkers. To the pure metaphysician it still stands for the investigation of Beauty as a thing in itself—a speculation which attracted even the earliest Egyptian and Greek thinkers—and to him Beauty is an absolute, outside of us, independent of its effect on mind and of human reaction to it. To the psychologist, however, Æsthetics has, by common consent, been narrowed down to the consideration of the Fine Arts: *i.e.* the arts concerned with sight and hearing (Architecture, Sculpture, Poetry, Painting and Music).

The single metaphysical problem 'What is Beauty?' thus resolves itself into a number of practical questions which may be stated in some such form as this: 'How and why do we as human beings become affected by, and pass judgment on the quality of, works of art?'

It would serve no purpose to attempt to summarise here even the chief theories of the metaphysicians. From Socrates, Plato and Aristotle to Plotinus and the Neoplatonists in Greece; from Leibnitz to Lessing, Baumgarten, Kant, Hegel and Schopenhauer in Germany; from Descartes and Diderot to modern times in France; from Bacon to Bosanquet in England, we are met by an endless stream of conflicting dogmatism. Few people pretend to understand (and most people doubt the ability of any one to understand) what the majority of the above writers really want to say, and to those to whom metaphysics is not an end in itself the whole output of human thought in this field seems to be distressingly dreary and sterile. For the metaphysicians write—and possibly it is proper that metaphysicians should write—as if they had never once allowed themselves to be thrilled by any manifestation of Beauty. It is therefore permissible to say that no student of music will love his art one whit the less for giving a wide berth to all that the metaphysicians have written.[1]

The psychologist approaches the subject from an entirely different standpoint. He deals with experience, and an experience is always two-sided, being a reaction to a stimulus. To imagine that Beauty, as the metaphysician claims, is a property of the stimulus which can be isolated and analysed seems to the psychologist to be illogical and illusory. To him the problem, however baffling it may be in its later stages, is a simple one to state. When we say, he argues, that certain things are sweet, or sour, or noisy, or blue, we are consciously using a conversational short-cut; for we know that these qualities are in truth the names we give to our own reactions. The sweetness is in us and not in the stimulus, and has no existence until the stimulus meets a reacting agent; the vibrations leave the dove's throat or the cannon's mouth and travel in perfect silence until they meet an apparatus which can turn them into sound. Exactly the same, to the psychologist, is the case with Beauty. We say, loosely, that a thing is beautiful, knowing we *should* say that the thing produces an effect on us which we call the impression of Beauty. The sweetness, the sound, the beauty do not leave the stimulus and enter us, but are the result of the action of the stimulus on us; and when we call the sugar sweet, the explosion noisy, or the poem beautiful, we are illogically calling a cause an effect. The metaphysician, living in an abstract world, asserts that a thing is called beautiful because it contains something which he calls Beauty; and he hunts this will-o'-the-wisp through the centuries. The only factor of Beauty, according to the psychologist, that anything can possess is potential; it has the power of creating an impression in us.

Art, then, works on this feeling-in-us, and is only possible because we are so constituted that we react to it; and when we say that art aims at being beautiful we mean, quite simply, that it aims at arousing this responsiveness in ourselves. The problems of æsthetics then group themselves into two divisions:

(1) What can we postulate about the stimulus (*i.e.* any work of art)?

(2) In what way do we react?

(1) It is commonly said that Beauty is relative. This apothegm at first sight does not appear illuminating, but in reality is the statement of an obvious fact. When we receive an impression of Beauty (or Ugliness) it is because of the arrangement and proportion of the constituent parts of the stimulus. If, for example, a clarinet plays a single note, and we say 'What a beautiful sound,' it is because of the arrangement of partial tones in the compound vibration which reaches our ears. Any alteration of relationship of the partials will modify both the sound and our reaction to it, and we might find ourselves, after comparatively small alteration, calling it ugly. Similarly, if the clarinet plays a succession of notes we may say, 'What a beautiful melody'; but minute alterations in

[1] Those who think otherwise will find an excellent epitome in *The Philosophy of the Beautiful*, by Professor W. Knight (John Murray, 1891).

pitch or accent—*i.e.* in the relationship of the notes—would change our verdict. Harmony, again, is clearly the combination of sounds, and the effect depends on the relationship. Change means alteration of relation in the constituents and nothing else; hence the effect, for good or bad, depends on relationship, and Beauty is relative.

The student who is 'hot for certainties' will hope that at this point the psychologist will provide him with Laws of Relationship which will act as acid-tests of Beauty for all time. Fortunately there are none. The history of art is the history of successful empiricism. To say that Beauty is relative is to say that it depends on context. The great poets and composers do not depend for their effects on the use of 'beautiful' words and chords, but on using words and chords (frequently, taken by themselves, ugly ones) in the right places. Almost every great composer has shown the world how to use, for purposes of Beauty, material which had previously been shunned as ugly. For Beauty and Ugliness are not different in kind, being the two extremes of a straight line with a zero-point in the middle; and every great man will shift the zero-point a little in the direction of Ugliness, making fertile for us land which had hitherto been regarded as barren.

(2) The inquiry into our own reaction begins with the axiom that Beauty appeals to our feelings. However sure we may be that a work of art fulfils all the necessary conditions, we do not say 'that is beautiful' until our feelings have been stirred. But we have to realise a distinction at this point. Our feelings may be reached directly or indirectly. We may, for instance, be confronted by something (*e.g.* an exceptional sunset) which makes an immediate appeal to our feelings, raw and direct. The sense-impression creates an emotional experience without the trace of any intellectual intervention. In such cases we are not concerned with art in any sense, and to call a sunset artistic would be to commit an obvious solecism. Art is presentation of idea through a medium; the artist feels, objectifies his feeling—*i.e.* presents it to us in the form of colour, sound or words—and his function is fulfilled. But before the function of Art is fulfilled, as apart from that of the artist, the work of art must make contact with us and arouse responsive feelings in us. The great work of art will arouse feelings akin to those which, in the artist, originated it; and the psychologist calls this feeling in us 'substituted emotion.' This point is not difficult to grasp, if a specific normal instance is analysed. A man of artistic temperament and technical equipment sees an impressive sunset; he is deeply moved, and embodies his emotion in a sonnet, a nocturne or a picture: we see his work and experience, as the last link in the chain, the emotion which, in the artist, was the first link. The crucial point, the ignoring of which causes the barrenness of so much discussion on art, lies in the fact that this appeal to us is not direct to the feelings, like the appeal of the sunset to the artist, but indirectly to the feelings through the intellect. Given the emotion in the artist his task is thenceforward with his medium; he must arrange, contrast and generally manipulate sounds, words and colours which are not in themselves artistic but which will, cunningly combined, absorb his emotion and generate it in others. But it is the *arrangement* that creates our emotion, and the process of apprehension and discrimination that takes place in us, when confronted by any arrangement of material, is an intellectual process. To sum up, Beauty is the result of an appeal, direct or indirect, to our feelings. If a thing appeals directly to our feelings it is not a work of art but a phenomenon, though in the course of a work of art our feelings *may* be touched that way, as when we are stirred by a chord on trombones or thrilled by the timbre of muted strings. The creative artist kneads his material, and the calibre of his technique appears in the skill with which he masters it in such matters as structure and balance—qualities which we can only apprehend by intellect. Consequently, to the psychologist it is an axiom that art is an appeal to the feelings, through the intellect.

A further question must be considered arising naturally from this axiom: What is the nature of the emotional experience caused by what we call beautiful things? In all ordinary experience we realise that any feeling which continually grows in intensity ultimately reaches a point where it acquires an overmastering quality. We no longer control it, for it has become the mainspring of our actions and controls us. Displeasure mounts into angry passion, sorrow cumulates into prostrate grief. So it is with the feeling aroused by works of art. A book interests us more and more until we are so deeply moved by it that we may conceivably change the whole purpose of our lives in consequence; or we find that we get pleasure from a piece of music, then a more and more intense pleasure, until we reach a moment where we are touched and chastened in an indescribable way. Such a climax was called by the Greeks 'Catharsis,' and the word has been retained as a convenient term for an experience that is universal.

In every genuine musical composition the catharsis of the creator is the origin, that of the listener the fulfilment. Nor need the connotation of the word be confined to those more solemn experiences to which the Greeks

themselves would possibly have restricted it. The perfect craftsmanship of a light opera or a fine comedy may bring us to the point where we resign ourselves into the hands of the artist, and that point is the beginning of catharsis. Thus genuine art results from the feeling of compulsion in the author, who has felt 'moved' to create: that is, to register his feeling in a form capable of communicating his catharsis to others. And 'technique' is the name we give to his deftness in communication.

Criticism, which is the application of whatever æsthetic principles we hold, and not the statement of personal likes and dislikes, must always allow for the fact that individual taste may always be a bar to the sympathetic understanding which alone justifies us in criticising. But, although *de gustibus non disputandum* is a truism as far as it goes, it does not, as the thoughtless sometimes assume, close the door to criticism. If one man likes rubies and another prefers sapphires the matter is, clearly, one of personal taste. The misfortune is that if they argue, their argument almost invariably takes the form of asseveration, on each side, that his choice is the more beautiful, with a final shrug of the shoulders and quotation of the above Latin tag. Both fail to see the one field in which æsthetical judgment is possible, and in which they would readily admit it to be desirable if they really loved gems: what is the difference between good and bad rubies and between good and bad sapphires?

It must be confessed that much of the artistic criticism of the world is still of this kind. There is no relative value between rubies and sapphires, except such as can be expressed in pounds sterling; and even this value is non-existent when we compare symphonies with tone-poems, chamber music with orchestral, German music with French, Classical with Romantic. Yet everybody wishes to know how to discriminate between 'good' and 'bad' in works of art, if only so as to be sure that, in the words of Sir Henry Hadow, they are not 'worshipping at the wrong shrine.' And it is clear that a piece of music must be judged, like a precious stone, in comparison with work like it in kind. For technical judgment the critic must possess trained discrimination in technical aspects: executive, interpretative, grammatical, constructive, and the rest. But over and above all, the one final and inevitable question to be asked of all art will for ever be the same: 'Is it genuine; that is to say, was it born because the catharsis of its author compelled him to create?' And the answer to that question is an æsthetical judgment the value of which must depend on the earnestness and sincerity with which the speaker, knowingly or unwittingly, has mentally wrestled with the problems of Æsthetics. P. C. B.

AEVIA (ÆUIA), a technical word formed from the vowels of *Alleluia*, and used, in Mediæval Office Books, as an abbreviation, in the same manner as EVOVÆ (*q.v.*).

In Venetian and other Italian Office Books of the 16th century, we sometimes find Hal'a, or Hal'ah, substituted for Aevia. W. S. R.

AFFETTUOSO (Ital.), (1) equivalent to Con Affetto, 'with feeling,' is most commonly found in such combinations as 'andante affettuoso' or 'allegro affettuoso,' though it is occasionally placed alone at the beginning of a movement, in which case a somewhat slow time is intended. It is frequently placed (like 'espressivo,' 'cantabile,' etc.) over a single passage, when it refers merely to that particular phrase and not to the entire movement. The German expressions 'Innig,' 'Mit innigem Ausdruck,' are equivalent to 'Affettuoso.'

E. P.

(2) A pseudonym adopted by some members of Italian musical academies, *e.g.* Giov. Giac. Arrigoni (*Fétis*), Mariano Tantucci (Em. Vogel, *Bibl. d. gedruckten weltl. Vokalmusik Italiens*). In Gastoldi's 'Tricinia,' 11 songs are marked *dell' affetuoso*; in Tommaso Pecci's Canzonette, 3 v., 1599–1603, 15 are marked with *affetuoso*, which Vogel attributes to Tantucci; in Book II. of the latter work 10 songs are marked with *affetuoso*. The British Museum has 'Canzonette a 3 voci dell' affetuoso lib. 5°' from the Borghese Library, engr. by Camillo Ghini in Siena *c.* 1605. E. v. d. S.

AFFILARD, MICHEL L', professor of music and tenor singer, appointed to the 'Sainte Chapelle' (Mar. 24, 1679) and the 'Chapelle du Roi' (Mar. 11, 1696); remained there till 1708. His work on singing at sight, *Principes très faciles, pour bien apprendre la musique* (Paris, 1691; Amsterdam, 1717), in which the time of the airs is regulated by a pendulum—precursor of the metronome—passed through seven editions. Airs by him are in the collections printed by Ballard and in MS. 1040 of the Versailles Library.

BIBL.—M. BRENET, *Les Musiciens de la Sainte Chapelle du Palais*, 1910. M. L. P.

AFFRETTANDO (Ital.), hastening the time.

AFRANIO (beginning of 16th cent.), a canon of Ferrara, and reputed inventor of the bassoon, on the ground of a wind instrument of his called Phagotus, which is mentioned, and figured in two woodcuts, at p. 179 of the *Introductio in Chaldaicam linguam* of Teseo Albonese (Pavia, 1539), a work dedicated by the author to his uncle Afranio. (See *PLATE LVIII.*)

The claim has been widely admitted, but there is no real similarity between the two instruments (see PHAGOTUS). The bassoon is conical in bore, the phagotus cylindrical; in the one case the air column is set in vibration by means of a double reed, in the other by

metal tongues. However, one characteristic of the bassoon family is present, viz. the tube doubled back on itself, as each part of the phagotus has two tubes bored side by side in a single block of wood. The similarity of the names (phagotus, fagotto) is curious, but can hardly be said to be of value as evidence of connexion between the two instruments.

J. R. M.

AFRICAINE, L', grand opera in 5 acts; words by Scribe, music by Meyerbeer. Produced Académie, Paris, Apr. 28, 1865; in Italian, Covent Garden, July 22, 1865; in English (translation by Kenney), Covent Garden, Oct. 21, 1865; New York, Academy of Music, Dec. 1, 1865.

AFZELIUS, Arvid August (*b.* Enköping, Sweden, May 6, 1785; *d.* Sept. 25, 1871), pastor and archæologist; edited conjointly with Geijer a collection of Swedish national melodies 'Svenska Folkvisor,' 3 vols. (Stockholm, 1814–1816, continued by Arwidsson), and wrote the historical notes to another collection, 'Afsked af Svenska Folksharpan' (Stockholm, 1848).

AGATEA, P. Mario (*b.* Baini, 17th cent.), an Augustinian monk, musical director at the Cathedral of Modena in the 17th century. Four cantate for soprano solo and 29 ariette, *c.* 1688, all in MS., are in the Bibl. Estense, Modena. An early instance of the use of the violoncello is made in the 10th Arietta. Motets by Agatea are contained in sundry collections (*Eitner*).

AGAZZARI, Agostino (*b.* Siena, Dec. 2, 1578; *d.* there, Apr. 10, 1640), composer of church music.

A cadet of a noble family of Siena, he is said (see *Q.-L.*) to have passed the first years of his professional life in the service of the Emperor Matthias, who wished to retain him. He preferred to return to Italy, bringing with him a musical instrument, called the Pandora, little known so far, which he played very sweetly (Azzolini, *Le Pompe Sanesi*, 1649). After election to membership of the Accademia degl' Intronati, he came to Rome, where he was chosen maestro di cappella at the German College (after Anerio's retirement in 1609), at the church of S. Apollinaris,[1] and subsequently at the Seminario Romano. An intimacy grew up between him and Viadana (*q.v.*), and he was one of the earliest adopters of the figured bass. In the preface to the fourth book of his 'Sacræ Cantiones' (Zanetti, Rome, 1606), he gives some instructions for its employment. In 1630 he returned to Siena, and became maestro of its cathedral, a post which he retained till his death.

His publications are numerous, and consist of masses, madrigals (1596, 1600, 1602, 1607, 1608), motets, psalms, Magnificats, litanies, etc., republished in numerous editions at Rome, Milan, Venice, Antwerp, Frankfort and elsewhere (see *Q.-L.*). His one substantive contribution to the scientific literature of music is a little work of only 16 quarto pages, entitled:

'La Musica Ecclesiastica, dove si contiene la vera diffinizione della Musica come Scienza non più veduta e sua nobiltà (Siena, 1638)';

the object of which is to determine how church music should best conform itself to the Resolution of the Council of Trent. On the authority of Pitoni, a pastoral drama, entitled 'Eumelio,' has been ascribed to Agazzari. It was undoubtedly performed at Rome in 1606 and printed by Amadino at Venice in that year; but no author's name is affixed either to music or libretto.

A short motet by Agazzari is given by Proske in the 'Musica divina' (Ann. I. Lib. Motettorum, No. lxv.). E. H. P.

AGAZZI, Gaëtano, appears to have been a virtuoso on the violoncello in the second half of the 18th century. His 'Six Sonates à violoncelle et basse,' op. 1, Amsterdam, *c.* 1780, make considerable demands upon the technical ability of the executant. Ten sonatas for the same instruments in MS. are in the library of the Milan Conservatoire. E. v. d. S.

AGGERE, Antonius, Magister at St. Martin, Ghent, finished his treatise, *Formule octo tonorum secundum eundem Guidonem*, Nov. 8, 1503. Another treatise, *Ars intonandi*, in the same MS. volume (Ghent, MS. 421), is probably also by him. E. v. d. S.

AGGHÁZY, Carolus (*b.* Budapest, Oct. 30, 1855), pianist, pupil of Bruckner, Volkmann and Liszt, gave concerts 1882–88, settled as a teacher in Budapest, and composed piano and chamber music having an Hungarian colouring, as well as an opera, 'Maritta,' and a cantata, 'Rakoczy.' (*Riemann.*)

AGINCOURT, D' (Dagincour). There were apparently two (if Fétis is correct). (1) Jacques André d'Agincourt (*b.* Rouen, 1684; *d.* there, *c.* 1757), who became organist at the Abbey of St. Ouen, went to Paris in 1718, where he gave clavecin lessons, and a few years later obtained the place of organist at St. Merry. He retired in 1745, and returned to Rouen, where he died. His gentle nature gained him many friends, who ranked him with Calvière, Daquin and Couperin, to whom in reality he was vastly inferior.

(2) François d'Agincourt (*d.* Paris, June 18, 1758), who, on Jan. 13, 1714, was appointed organist to the French court for the fourth quarter. The library of the Paris Conservatoire possesses 'Pièces de clavecin, dédiées à la Reine, composées par M. D'Agincour. . . . Paris, le S. Boivin; Rouen, 1733, chez l'auteur. . . .' Fétis claims this work for Jacques André d'Agincourt, but describes them as feeble compositions. E. v. d. S.

[1] Baini alone mentions this appointment; but he is probably right.

AGITATO (Ital.), also Con Agitazione, 'agitated,' 'restless.' This adjective is mostly combined with 'allegro' or 'presto' to describe the character of a movement. In the somewhat rare cases in which it occurs without any other time-indication a rather rapid time is indicated.

AGNELLI, Salvatore (*b.* Palermo, 1817; *d.* Paris (?), 1874), studied under Donizetti and Zingarelli at Naples Conservatoire. After the performance of several of his operas at Palermo and Naples he went to Marseilles in 1846, where he produced several operas and ballets. He also wrote some church music and a cantata, apotheosis of Napoleon I., performed by three orchestras at the Tuileries in 1856. He left three operas in MS. E. V. D. S.

AGNESI, Luigi (Louis Ferdinand Leopold Agniez) (*b.* Erhent, Namur, July 17, 1833; *d.* London, Feb. 2, 1875), a well-known bass singer.

From 1853–55 he studied composition at the Brussels Conservatoire, but later became a singer, after lessons from Duprez, and was a member of Merelli's Italian Opera Company in Germany and Holland. On Feb. 10, 1864, he made his début at the Italiens, Paris, as Assur ('Semiramide'), and was engaged there for several seasons. On May 22, 1865, he made his début in England at Her Majesty's as the Prefect ('Linda'), and during the season as Assur and Figaro ('Le Nozze'), and with fair success. From 1871–74 he gained a great reputation, not only at Drury Lane, but as an oratorio festival and concert singer throughout the kingdom. He was an accomplished actor and musician, devoted to his art. Special mention may be made of his singing of Rossini, which was in the true Italian style. A. C.

AGNESI, Maria Theresa (*b.* Milan, 1724; *d. circa* 1780), sister of the renowned scholar Maria Gaetana Agnesi. She was a celebrated pianist of her time, composed five operas, 'Sofonisbe,' 'Ciro in Armenia,' 'Nitocri,' 'Il Re Pastore,' and 'Insubria consolata' (1771), several cantatas, two pianoforte concertos, and sonatas, well known in Germany. M. C. C.

AGNUS DEI, a part of the Mass which occurs in the Latin Canon during the ritual acts of the priest after consecration and before his communion. It is sung by the choir and has consequently, in common with other choral portions of the Liturgy, afforded a text set by musical composers of all ages.

The Agnus Dei was, like the Benedictus (*q.v.*), retained in the first English Prayer Book (1549), and omitted from the second (1552). Merbecke's 'Booke of Common Praier noted' (1550) therefore contains an adaptation from the plain-song to the English words, and his Agnus is amongst the most beautiful melodies in his setting of the English Mass. It is now by common usage restored to its original position in the English service. C.

AGOGE, AGOGIC, see Accent, subsection Agogic.

AGOSTINI, Ludovico (*b.* Ferrara, 1534; *d.* there, Sept. 20, 1590), in holy orders, was both poet and composer. He became maestro de capilla to Alfonso II., Duke of Este. Collections of madrigals and other vocal works were published at Milan, Venice and Ferrara between 1567 and 1586.

AGOSTINI, Paolo (*b.* Valerano, 1593; *d.* Rome, Sept. 1629), an Italian composer.

He was a pupil, at Rome, of Bernardino Nanini, whose daughter he married. After being organist of S. Trinità de' Pellegrini, S. Maria in Trastevere, and S. Lorenzo in Damaso, he succeeded Ugolini as maestro at the Vatican Chapel, in 1627.

The extant published works of Agostini consist of:

2 volumes of Psalms for 4 and 8 voices (printed by Soldi, Rome, 1619); 2 volumes of Magnificats for 1, 2 and 3 voices (*ib.* 1620); and 5 volumes of masses for 4, 5, 8 and 12 voices, published (Robletti, Rome) in 1624, 1625, 1626, 1627 and 1628, respectively.

He employed large numbers of voices in several choirs. Ingenuity and elegance are his prevailing characteristics; but that he could and did rise beyond these is proved by an Agnus Dei for 8 voices in canon, which was published by P. Martini in his 'Saggio di contrappunto fugato,' and which is allowed to be a masterpiece. He contributed a dialogue to G. Giamberti's 'Poesie diverse' (1623). The fame, however, of Agostini rests upon his unpublished pieces, which form the great bulk of his productions. They are preserved partly in the Corsini Library, and partly in the Collection of the Vatican. A motet by Agostini is given in Proske's 'Musica divina' (Ann. I. Liber Motettorum, No. lxx.). E. H. P.

AGOSTINI, Pietro Simone (*b.* Rome, *c.* 1650), was maestro di cappella to the Duke of Parma. Two oratorios, several motets, and cantatas, as well as two operas (one, 'Il Ratto delle Sabine,' performed at Venice 1680) are mentioned in *Q.-L.*

AGOSTINO, Corona, known only by his 5-part Psalm, 'Beati omnes,' in G. M. Asola's 'Psalmodia,' 1592 (*Eitner*).

AGRELL, Johann Joachim (*b.* Löth, Sweden, Feb. 1, 1701; *d.* Nuremberg, Jan. 19, 1763), studied at Linköping and Upsala. He was appointed court musician at Cassel in 1723, and in 1746 conductor at Nuremberg. He left 9 published works (Nuremberg), concertos, sonatas, etc., and many more in manuscript.

AGRÉMENTS, see Ornaments.

AGRICOLA, Alexander (*d.* Valladolid, *c.* 1506), a composer of great celebrity. Cretin's lament on the death of Okeghem mentions Agricola as a fellow-pupil in the school of that master; and the dates of his published works, together with an interesting epitaph printed in a collection of motets published at Wittenberg in 1538, furnish us with materials for briefly

sketching his life. The words of the epitaph, which bears the title 'Epitaphium Alex. Agricolæ Symphoniastæ regis Castiliæ Philippi,' are as follows :

Musica quid defles ? Periit mea cura decusque.
Estne Alexander ? Is meus Agricola.
Dic age qualis erat ? Clarus vocum manuumque.
Quis locus hunc rapuit ? Valdoletanus ager.
Quis Belgam huc traxit ? Magnus rex ipse Philippus.
Quo morbo interiit ? Febre furente obiit.
Ætas quæ fuerat ? Jam sexagesimus annus.
Sol ubi tunc stabat ? Virginio in capite.

The question 'Who brought the Belgian hither?' is decisive as to his nationality. He was certainly educated in the Netherlands, and passed great part of his life there. At an early age he was distinguished both as a singer and performer. A letter of Charles VIII. of France, in Julian Marshall's collection, proves that he was in that king's service, and left it, without leave, for that of Lorenzo de' Medici ; he was at Milan till June 1474, and after some years in the service of the Duke of Mantua, entered (*c.* 1491) that of Philip, Duke of Austria and sovereign of the Netherlands, and followed him to Castile in 1505. There Agricola remained until his death, at the age of 60, of acute fever, in the territory of Valladolid. Amongst Agricola's known works the most important are :

A motet for 3 voices in the collection called 'Harmonice musices' (1501), 2 motets for 3 voices in that entitled Motetti XXXIII. (Venice, Petrucci, 1502) ; 8 four-part songs from the collection 'Canti cento cinquanta' (Venice, Petrucci, 1503) ; and a volume of 5 masses 'Misse Alex. Agricolæ' (Venice, Petrucci, 1504).

Other MS. masses are mentioned in *Q.-L.* For recent investigations concerning Agricola, see van der Straeten's *Musique aux Pays-Bas*, vols. vi. and vii. J. R. S.-B.

AGRICOLA, Benedetta Emilia, *née* Molteni (*b.* Modena, 1722 ; *d. circa* 1780), studied under Porpora, Hasse and Salimbeni ; one of the most remarkable singers of her time, with a compass from *a* to *d'''* (see Burney) and a shake of rare perfection. She excelled not only in opera, but also in oratorio, and in the great soprano aria in Graun's 'The Death of Jesus,' which she sang at the first performance in 1755. From 1742–74 she was engaged at the Berlin opera and had to suffer much from the despotism of Frederic II., who was so enraged at her marriage to Johann Friedrich Agricola (*q.v.*) in 1751, that he reduced their joint salary to 1000 thalers, as against Molteni's former salary of 1500 thalers. On the death of Agricola in 1774, the King dismissed her, although she was still in full possession of her vocal powers, and in spite of the intercession of the Princess Amalia. She died in oblivion. E. v. d. s.

AGRICOLA, Christian Johannes (1594), discanto singer at the court chapel at Weimar, afterwards cantor at the school of Erfurt. In 1601 he calls himself 'Schulkollege' of the 'Gymnasium Augustiana' at Erfurt. On the title-pages of his printed works he calls himself 'J. Agricola Noricum,' which refers to a large tract of southern Germany forming part of ancient Illyria. Some of his biographers have mistaken Noricum for Nuremberg, where his 'Motettæ novæ' were published in 1601. Three sacred songs and an echo in 8 parts are also enumerated in *Q.-L.* E. v. d. s.

AGRICOLA, Georg Ludwig (*b.* Grossen-Furra, Thuringia, Oct. 25, 1643 ; *d.* Gotha, Feb. 20, 1676), a composer of chamber music, etc.

His father was a clergyman ; he was brought up at Eisenach and Gotha and the universities of Wittenberg and Leipzig, and became Kapellmeister at Gotha in 1670. He composed 'Musikalische Nebenstunden' for 2 violins, 2 violas and bass ; religious hymns and madrigals ; sonatas and preludes, 'auf französische Art,' etc. He died full of promise, but without accomplishing a style for himself. F. G.

AGRICOLA, Johann (*b.* Nuremberg, *c.* 1570), professor of music in the Gymnasium at Erfurt in 1611, and composer of 3 collections of motets (Nuremberg, 1601–11).

AGRICOLA, Johann Friedrich (*b.* Dobitz, near Altenburg, Saxony, Jan. 4, 1720 ; *d.* Berlin, Dec. 1, 1774), organist and composer of church music and of operas.

His father was a judge, and his mother, Maria Magdalen Manke, a friend of Handel. He began to learn music in his fifth year under a certain Martini. In 1738 he entered the University of Leipzig when Gottsched was Professor of Rhetoric. But though he went through the regular course of 'humanities' he also studied music under J. S. Bach, with whom he worked hard for three years. After this he resided at Dresden and Berlin, at the latter from 1741 onwards, and studied the dramatic style under Graun and Hasse. In 1749 he published two pamphlets on French and Italian taste in music under the pseudonym of Flavio Anicio Olibrio. In the following year a cantata of his, 'Il Filosofo convinto in amore,' was performed before Frederick the Great, who conferred on Agricola the post of Hofkomponist (1751). He had an equal success with a second cantata, 'La Ricamatrice.' Agricola then married Signora Molteni, prima donna of the Berlin opera, and composed various operas for Dresden and Berlin, as well as much music for the Church and many arrangements of the King's melodies. After the death of Graun (Aug. 8, 1759) he was made director of the Royal Chapel, but without the title of Roy. Hofkapellmeister, which the King withheld on account of his disapproval of Agricola's marriage. (See Agricola, Benedetta Emilia.) There he remained till his death (obituary in *Vossische Zeitung*). Agricola's compositions had no permanent success, nor were any printed excepting two psalms and some chorales. He had the reputation of being the best organ-player in Berlin, and a good teacher of singing. He translated with much skill Tosi's *Opinioni de' cantori*, and made

some additions of value to Adlung's *Musica mechanica organœdi.* F. G.

AGRICOLA, Martin (*b.* Sorau, lower Silesia, *c.* 1500; *d.* Magdeburg, June 10, 1556), a writer on musical theory, whose German name, as he himself tells us, was Sohr, or Sore.

In 1524 we find him teacher and cantor in the first Protestant school at Magdeburg, and he remained there till his death. The assertion of his biographer Caspar that Agricola reached the age of seventy has misled all following writers as to the date of his birth. In his *Musica instrumentalis deudsch*, which, notwithstanding its polyglot title is written in German, he states that he had no 'activum præceptorem' for music, but learned the art by himself while constantly occupied as a schoolmaster. That work is remarkable not only for its musical ability but for its German style, which has all the force and flavour of the writings of his contemporary, Luther himself. It was reprinted at Leipzig, 1896. Agricola's chief protector and friend was Rhaw, the senator of Wittenberg, renowned in his own day as a printer of music. This excellent man printed many of Agricola's works, of which the following may be named amongst others:

Duo libri musices, 1561; *Ein kurtz deudsche Musica*, 1528; *Musica instrumentalis deudsch*, 1529, '30, '32, '42, '45; *Musica figuralis deudsch*, 1532; *Von den Proportionibus*, *c.* 1532; *Rudimenta musices*, 1539.

The list of the rest will be found in Draudius' *Bibliotheca Classica*, p. 1650; Walther's *Lexikon*; Marpurg's *Beiträge*, vol. v.; Forkel's *Literature*; Gerber's *Dictionary*; and *Q.-L.* Mattheson in his *Ephorus* (p. 124) praises him for having been the first to abolish the 'ancient tablature,' and adopt the system of notation which we still employ. But this is inaccurate. All that Agricola proposed was a new 'tablature' for the lute, better than the old one. On the conflict between the old and new notation Agricola's writings are full of interest, and they must be studied by every one who wishes to have an accurate view of that revolution. F. G.

AGRICOLA, Paul, a 17th-century composer. The State Library, Berlin (No. 450) has the following in score: 'No. 27. Accede ô anima, contralto solo, con 2 strom. e Basso; No. 28. Laudate pueri, Canto solo, con 2 v., 2 viole et C.; No. 29. Miserere Deus, 4 v. c. 4 in str. e Org.'

AGRICOLA, Rudolph (real name, Huessmann) (*b.* Baffeln, near Gröningen, 1442; *d.* Heidelberg, Oct. 25, 1485), studied at Louvain and Paris; also under Thomas à Kempis and the Italian philosopher, Theodor de Gaza. He was one of the moving spirits of the renaissance in science, letters and art, being deeply versed in all. Returning from Italy in 1477, he was sent by the town of Groningen to the court of the German Emperor as its representative. In 1479 he co-operated in the construction of the famous organ of that town, which to this day is looked upon as one of the greatest masterpieces of its kind. In 1482 he became professor at the University of Heidelberg, where he died. He was a famous lutenist and composer of Netherlandish partsongs. His complete works, containing also some notes on Boethius, were published at Cologne in 1539 by Alard Amstelredam, who prefaced them with a biography. E. v. d. S.

AGRICOLA, Wolfgang Christoph (about middle of 17th cent.), composed a 'Fasciculus musicalis' for two voices (Würzburg, 1637), a book of masses (*ib.* 1647), and 'Fasciculus variarum cantionum,' of motets (*ib.* 1648).

AGTHE, (1) Carl Christian (*b.* Hettsstädt, June 6, 1762; *d.* Ballenstedt, Nov. 27, 1797), organist, composer of 6 operas, 3 pianoforte sonatas (Leipzig, 1790), and a collection of Lieder (Dessau, 1782). His son, (2) Wilhelm Johann Albrecht (*b.* Ballenstedt, Apr. 14, 1790; *d.* Berlin, Oct. 8, 1873), settled in 1810 at Leipzig; in 1823 at Dresden as teacher of Logier's system, under the approval of C. M. von Weber; and in 1826 founded a similar establishment at Posen. From 1832–45 he directed a musical institution of his own at Berlin. Kullak was his best-known pupil. M. C. C.

AGUADO, Dionisio (*b.* Madrid, Apr. 8, 1784; *d.* there, Dec. 20, 1849), a remarkable performer on the guitar; received his chief instruction from Garcia, the great singer. In 1825 he went to Paris, where he associated with the most eminent artists of the day, till 1838, when he returned to Madrid, where he died. His method for the guitar, an excellent work of its kind, passed through three editions in Spain (Madrid, 1825–43) and one in Paris (1827). He also published 'Colleccion de los etudios para la guitarra' (Madrid, 1820), 'Colleccion de andantes,' etc., and other works for his instrument. M. C. C.

AGUIAR, Alexandre de (*b.* Oporto; *d.* near Talavera, Dec. 12, 1605), a Portuguese lutenist and poet, who formed part of the suite of Sebastian during his visit to Philip II. at Guadalupe (Christmas, 1576). A contemporary account of the visit, printed in Vieira's 'Diccionario biographico de musicos portuguezes' (i. 5-7), gives interesting details of the music performed and the names of the performers. Aguiar was afterwards attached to the court of Philip II. of Spain. He was killed in an accident, his coach falling into a torrent. Lamentations composed by him were formerly sung every year at Lisbon during Holy Week. J. B. T.

AGUILERA DE HEREDIA, Sebastian (*b.* Huesca, Aragon, 1570 ?), was appointed organist of the old cathedral (La Seo) at Saragossa in 1603, and remained there for many years. His printed works include:

1. Canticum beatissimæ Virginis Deiparæ Mariæ 8 modis seu tonis compositum (4, 5, 6, 8 v.). Cæsaraugustæ (Saragossa).

Published, Cabarte, 1618. (Cathedral archives, Saragossa, Seville, Malaga; Bibl. de la Diputació, Barcelona; MS. copy at Seville.)

2. Psalmos (4 v.), . . . Saragossa, 1662. (Barcelona, Bibl. Diputació).

3. A De profundis (4 v.) and Pange lingua (4 v., with organ) exist in MS. at Barcelona; while 14 compositions for the organ are preserved in the musical archives of the Escurial. Some of the latter have been published by Pedrell ('Antología de organistas españoles'), and by Villalba ('Antología de organistas clásicos,' 1914).

Aguilera is justly celebrated for his Magnificats. They are composed *more Hispano, i.e.* on the plain-song tunes formerly in use in Spain, and are notable for breadth of style and loftiness of inspiration. J. B. T.

AGUJARI, Lucrezia (*b.* Ferrara, 1743; *d.* Parma, May 18, 1783), a singer celebrated by Mozart's testimony to her powers.

Being a natural child of a noble, she was always announced in the playbills and newspapers as *La Bastardina* or *Bastardella.* She was instructed in a convent by the Abbé Lambertini, and made her début at Florence in 1764. Her triumph was brilliant, and she was eagerly engaged for all the principal towns, where she was enthusiastically received. She did not excel in expression, but in execution she surpassed all rivals. The extent of her register was beyond all comparison. Sacchini said he had heard her sing as high as B♭ *in altissimo*, and she had two good octaves below: but Mozart himself heard her at Parma in 1770, and says of her [1] that she had 'a lovely voice, a flexible throat, and an incredibly high range. She sang the following notes and passages in my presence':

Ten years later, in speaking of Mara, he says:

'She has not the good fortune to please me. She does too little to be compared to a Bastardella—though that is her peculiar style—and too much to touch the heart like an Aloysia Weber.' [2]

Leopold Mozart says of her:

'She is not handsome nor yet ugly, but has at times a wild look in the eyes, like people who are subject to convulsions, and she is lame in one foot. Her conduct nevertheless has been good; she has, consequently, a good name and reputation.'

Agujari made a great sensation in the carnival of 1774 at Milan in the serious opera of 'Il Tolomeo,' by Colla (*q.v.*), and still more in a cantata by the same composer. In 1780 she married Colla, who composed for her most of the music she sang. She sang at the Pantheon Concerts for some years, from 1775, receiving a salary at one time of £100 a night for singing two songs, a price which was then enormous. There is an amusing account of her in Mme. D'Arblay's *Memoirs of Dr. Burney.* J. M.

AGUS. The only musician of that name mentioned by Constant Pierre in his work, *Le Conservatoire national de musique et de déclamation: Documents historiques et administratifs* (Paris, 1900), as having been professor of solfeggio at the Conservatoire (Nov. 22, 1795) is Joseph Agus (*b.* 1749; *d.* May, 1798). These biographical references are applied by Fétis and Eitner to one Henri Agus. This may be the same man, in which case Joseph (Giuseppe) may be regarded as the composer of trios for strings, duets, glees, catches, etc., published in London (see Catalogue B.M.); and of the 6 duos 'concertants' for 2 violins, published by Barbieri (Paris) as the op. 37 of Boccherini. He was one of the contributors to the *Solfèges du Conservatoire*, with Catel, Cherubini, Gossec, etc., but his surname only appears on the printed title. M. L. P.

AHLE, (1) Johann Rodolph (*b.* Mühlhausen, Thuringia, Dec. 24, 1625; *d.* July 8, 1673), composer and organist, educated at Göttingen and Erfurt.

In 1646 he became organist at Erfurt, and in 1654 held the same post in the Blasiuskirche at his native place, where in 1656 he was appointed member of the senate and in 1661 burgomaster. His published compositions include:

Compendium pro tonellis (1648), a treatise on singing (3 editions); 'Geistlichen Dialogen' (1648), 'Sinphonien, Paduanen, Balletten'; 'Thuringische Lustgarten,' a series of church compositions (1657, 1658, 1663, 1665); 400 'Geistliche Arien,' 'Geistliche Concerte,' and 'Andachten' on all the Sundays and Festivals, etc.

He cultivated the simple style of the choral, avoiding polyphonic counterpoint. His tunes were for long very popular, and are still sung in the Protestant churches of Thuringia—amongst others that known as 'Liebster Jesu, wir sind hier.' A selection of his vocal works, edited by J. Wolf, is in vol. 5 of *D.D.T.*, in the preface to which is a complete list of Ahle's compositions. See also *Sammelbände* of the Inter. Mus. Gesellschaft, ii. 393.

[1] Letter of Mar. 24, 1770.

[2] Letter of Nov. 13, 1780.

His son, (2) JOHANN GEORG (*b.* 1650; *d.* Dec. 2, 1706), succeeded to his father's musical honours, and was made poet laureate by the Emperor Leopold I. His hymn tunes were once popular, but are not now in use. F. G.

AHLSTROEM, OLOF (*b.* Aug. 14, 1756; *d.* Aug. 11, 1838), Swedish composer, organist at the church of St. Jakob, Stockholm, and court accompanist; composed sonatas for pianoforte (Stockholm, 1783 and 1786), cantatas and songs, and edited with Boman *Walda svenska Folkdansar och Folkledar*, a collection of Swedish popular airs. He was also editor for two years of a Swedish musical periodical, *Musikalisk Tidsfördrift.* M. C. C.

AHNA, HEINRICH KARL HERMANN DE (*b.* Vienna, June 22, 1835; *d.* Berlin, Nov. 1, 1892), was trained as a violinist at Vienna by Mayseder.

He also received instruction from Mildner in Prague, and was already at the age of twelve making public appearances in Vienna, London, etc. Two years later he received the appointment of Chamber Virtuoso to the Duke of Coburg-Gotha, but in 1851 he joined the Austrian army as a cadet, and remained a soldier until the close of the disastrous Italian campaign in 1859, when he returned to his musical studies. In due time he became a soloist of repute, and violinist in the much-frequented Trio Concerts given by him in conjunction with Barth the pianist and Hausmann the violoncellist; but he is chiefly known to fame as second violin in the JOACHIM QUARTET (*q.v.*), a position for which he was not only fitted by refinement of style, and musical knowledge, but also by his quite remarkable faculty of playing up to the leader. Amongst the posts held by him at Berlin were that of leader of the Royal orchestra and professor at the Hochschule under Joachim. His sister, ELEANORA (*b.* Vienna, Jan. 8, 1838; *d.* Berlin, May 10, 1865), was a dramatic singer of great promise, fulfilling mezzo-soprano rôles at the court opera. W. W. C.

AIBLINGER, JOHANN CASPAR (*b.* Wasserburg, Bavaria, Feb. 23, 1779; *d.* May 6, 1867), a composer whose works were performed in the Catholic churches of South Germany.

In 1803 he went to Italy, and studied eight years at Vicenza, after which he settled at Venice, where in conjunction with the Abate Gregorio Trentino he founded the 'Odeon' Institution for the practice of classical works. In 1819 he was recalled to his native country by the King, wrote two ballets, and was appointed Kapellmeister of the Italian Opera at Munich, until 1823, when he conducted the court music. In 1833, however, he returned to Italy, and resided at Bergamo, occupying himself in the collection of ancient classical music, which is now in the Staatsbibliothek at Munich. His whole efforts to the end of his life were directed to the performance of classical vocal music in the Allerheiligenkapelle at Munich, erected in 1826. His single attempt at dramatic composition was an opera, 'Rodrigo e Chimene,' 1821, which was not successful. In church music, however, he was more successful; his compositions in this department consist of masses, requiems, graduals, litanies and psalms, with accompaniments for orchestra and organ, published at Munich, Augsburg and Paris (Schott). C. F. P.

AICH, ARNST VON, book- and music-printer at Cologne, published *c.* 1519 the well-known book of 75 songs in 4 parts. A complete copy is in the Basle Library.

AICH, GOTTFRIED, canon and subprior of the monastery at Weissenau, published 'Fructus ecclesiastici, *a* 3, 4, 5 voc. 2 vel 3 instr. cum 2 choro,' Augsburg, 1663; also 5 motets and 3 masses.

AICHINGER, GREGOR (*b. circa* 1565; *d.* Jan. 21, 1628), took holy orders, and in 1584 entered the service of Freiherr Jacob Fugger at Augsburg as organist. In 1599 he paid a visit of two years to Rome to perfect himself in music. In the preface to his 'Sacræ Cantiones' (Venice, 1590), he praises the music of Gabrieli; and his works, both in this collection and in that of 1603, also betray the influence of the Venetian school. They are among the best German music of that time, bearing marks of real genius; and are superior to those of his contemporary, the learned Gallus, or Handl. Amongst the most remarkable are:

'Ubi est frater,' and 'Assumpta est Maria,' both for 3 voices, 'Adoramus' for 4; and 'Intonuit de cœlo' for 6 voices, the last printed in the *Florilegium Portense.* A Litany, a Stabat Mater, and various motets of his are printed in Proske's 'Musica divina'; and a motet for 6 voices in Commer's 'Musica sacra.'

A complete list is in *Q.-L.* F. G.

AÏDA, grand opera in 4 acts; libretto by Antonio Ghislanzoni, music by Verdi. Produced, Cairo, Dec. 24, 1871; Milan, Feb. 8, 1872; New York, Academy of Music, Nov. 26, 1873; Covent Garden, June 22, 1876. M.

AIGUINO, FRATER ILLUMINATO BRESCIANO (*b.* near Brescia, *c.* 1520), a pupil of Pietro Aaron. He was born at the Castle degli Orzi Vecchi, near Brescia, and joined the religious Order of Seraphico d'Osservanza. On a portrait engraving of 1581 he is described as *Capitano*, so that he must have been a soldier at one time. He wrote 'La illuminata de tutti i tuoni di canto fermo,' etc., Venice 1562. A second edition appeared in 1581 in somewhat modified form. Mattheson in his *Organistenprobe*, p. 70, speaks of both works as 'illuminated jabber.' E. v. d. S.

AIMON, PAMPHILE LÉOPOLD FRANÇOIS (*b.* L'Isle, near Avignon, Oct. 4, 1779; *d.* Paris, Feb. 2, 1866), violoncellist and composer. He conducted the orchestra of the theatre in Marseilles when only seventeen, that of the Gymnase Dramatique in Paris, 1821, and of the

Théâtre Français, on the retirement of Baudron, 1822. Of his seven operas only two were performed, the 'Jeux Floraux' (1818), and 'Michel et Christine' (1821), the last with great success. A third, 'Les Sybarites de Florence,' was published in 1831. He also composed numerous string quartets, trios and duos (Paris and Lyons), and was the author of *Connaissances préliminaires de l'harmonie* and other treatises. M. C. C.

AINARDUS . . . (EINHART ?) (11th cent.), German composer, first Abbot of S. Petri ad Divam in Neustria until 1077 (Gerbert, v, 36).

AINSWORTH, HENRY (*d.* Amsterdam, 1622), a theologian who lived in Holland *c.* 1593. He published a collection of psalms at Amsterdam in 1612, which appeared in an American edition as 'The Book of Psalms.'

AIOLLE, FRANCESCO DELL', see LAYOLLE.

AIR (Fr. *air*; Ger. *Arie*; Ital. *aria*), a term popularly used as synonymous with TUNE (*q.v.*). It bears, however, a more technical sense in reference to musical form or style of composition. This sense is sufficiently defined by the practice of the Elizabethan composers who adopted the word 'air' (frequently spelt ayre) for those of their compositions which consisted of a melody accompanied either by other voices or an instrument. Thus John Dowland published in 1597 'The first Book of Songs or Airs of Four Parts,' the principal vocal melody having an alternative accompaniment for either three additional voices or the lute. It is noteworthy that in the same year Thomas Morley published 'Canzonets or little short Airs to five or six voices,' which are not less polyphonic in style than his Madrigals. Nevertheless, Dowland's use of the word as a description of homophonic style quickly prevailed, and the rapid publication in succeeding years both of his own and other composers' 'Books of Airs' stamped the term as belonging to the type.

From being a vocal form the air passed into instrumental music, and throughout the 17th century airs for various instruments, the lute, the viola da gamba, etc., are frequent in English publications. Airs are found amongst Purcell's harpsichord music though they are not included in his suites for that instrument. The air or aria, however, frequently found a place in the harpsichord suites of continental composers at the beginning of the 18th century (see SUITE). Here it bore evident traces of its vocal origin being contrasted in style with the dance movements of the suite. Sometimes it assumed a highly ornamental character as in Handel's Suite No. 3 in D minor. Here and elsewhere, notably in Suite No. 5 (the air popularly known as 'The Harmonious Blacksmith'), it becomes a theme for variations. An exceptional instance of an air without any suggestion of the song, and having the vigour of a vivacious dance, is found in Handel's Suite No. 14 in G major.

Whether in its instrumental or vocal use, the term Air becomes distinguished from its Italian counterpart, Aria, for practical purposes. The distinction is made immediately apparent by placing the airs of the suites of Bach and Handel beside the arias of their cantatas, oratorios or operas. The Italian ARIA (*q.v.*) by that date had become a highly developed and conventionalised form. Not so the air (or aria) of the suites. In later times the English and French words have been frequently used to distinguish a simple song, or songlike piece, from the elaborated Italian form. C.

AIRD, JAMES (*d.* 1795), a Glasgow music-publisher, whose chief claim to remembrance lies in the fact that, so far as at present is ascertained, he was the first to print the air 'Yankee Doodle.'

Aird was established in the Candleriggs in 1778, and had sundry changes of address, as at New Wynd and New Street. He published sheet-music and books of reels, etc., but his chief work is 'A Selection of Scotch, English, Irish and Foreign Airs.' This reached to six books, and it is of the highest interest in the study of our national melodies. The book is in small oblong, and Aird died shortly after the fourth was published, M'Fadyen continuing the work. The first book, which contains 'Yanky Doodle,' was probably published as early as 1778, for it is advertised on the title-page of Joshua Campbell's Reels, issued by Aird in that year. The second was published in 1782, the third 1788, the fourth 1794, the fifth 1799, and the sixth at a later date. The whole was reprinted by M'Fadyen, and again by Geo. Goulding of London. A complete set of volumes is seldom met with. F. K.

A'KEMPIS, JEAN FLORENT, was organist of a church in Brussels from about 1657; he was the author of a book of 'Cantiones' published at Antwerp in 1657, and possibly wrote the 'Missæ et motetta' and a Requiem, the former of which, published at Antwerp in 1650, has been also ascribed to the following.

A'KEMPIS, NICHOLAS, organist of Ste. Gudule, Brussels, *c.* 1628; composed three books of symphonies (Antwerp, 1644, 1647 and 1649). (Cf. the above.)

AKEROYDE, SAMUEL, a native of Yorkshire, a very popular and prolific composer of songs in the latter part of the 17th century. He was Musician in Ordinary to James II. in 1687; also to King William. Many of his compositions are contained in the following collections of the period:

D'Urfey's 'Third Collection of Songs,' 1685; 'The Theatre of Musick,' 1685–87; 'Vinculum Societatis,' 1687; 'Comes Amoris,' 1687 94; 'The Banquet of Musick,' 1688; 'Thesaurus Musicus,' 1693–96; and in *The Gentleman's Journal*, 1692–94. He was also a contributor to the Third Part of D'Urfey's 'Don Quixote,' 1696.

W. H. H.

AKIMENKO, Feodor Stepanovitch (*b.* Kharkov, Feb. 8, 1876), composer, a pupil of Balakirev from 1886–95 in the court choir at St. Petersburg, and of Rimsky-Korsakov at the St. Petersburg Conservatoire. For a time he was a teacher in the court choir, but from 1903–06 he lived in France. He is now (1924) living in Moscow. Akimenko is distinguished as a composer. The following is a list of his principal works :

Lyric Poem and Overture for Orchestra.
Chamber music: String trio in C (op. 7); violoncello sonata; violin sonata.
Pianoforte: Sonate fantastique (op. 44).
Songs and Choruses.
An Opera: 'The Queen of the Alps' (MS.).

He has produced more than 60 works in all.

ALA, Giovanni Battista (*b.* Monza, about the end of 16th cent.; *d.* aged thirty-two); organist of the Church dei Servitori, in Milan, and composer of canzonets, madrigals and operas (Milan, 1617, 1625), 'Concerti ecclesiastici' (Milan, 1618, 1621, 1628), and several motets in the 'Pratum musicum' (Antwerp, 1634), and in the 'Luscinia Sacra' (Antwerp, 1633).

ALABIEV, Alexander Nicholaevich (*b.* Moscow, Aug. 30, 1802; *d.* there, 1852), a talented amateur of the pseudo-national school which preceded Glinka.

He entered the army, but being led by his fiery temper into some breach of discipline, was exiled to Tobolsk. On his return, he settled in Moscow. In collaboration with Verstovsky and others, he produced several vaudevilles which were popular in their day. Encouraged by the success of Catterino Cavos, he attempted a Russian fairy-opera : 'A Moonlight Night, or the Domovoi' (House Spirit). Probably the task was beyond his amateur resources, for the work proved a failure. Alabiev composed about a hundred songs, pleasing melodies in the popular style, but exceedingly elementary as regards form and accompaniment. One of these, 'The Nightingale,' became widely known from having been introduced into the 'Singing-lesson' in 'Il Barbiere' by Viardot, Patti and Sembrich. R. N.

ALAIN, see Groote, Alianus de.

ALAIN (Alani), Johannes (*c.* 1450), composer. In Codex No. 37 of the Liceo, Bologna, is his 'Sub Arturo plebs vallata plaudat melos, 3 voc.'

ALALÁ, one of the typical forms of folk-song of Galicia and the N.W. corner of Spain, and that which preserves the traditional air and manner of execution in the most pure state. It consists of a short melody adapted to four 8-syllable lines of verse, the melodic formula being nearly always repeated in the second half, and the last note held indefinitely. Being in free rhythm, it easily lends itself to ornate passages, but it is always diatonic. Many *alalás* seem to be recollections of plain-song melodies, and follow the liturgical formula note for note, the differences being rhythmical, not melodic. (See Song : Spain (4).) J. B. T.

ALALEONA, Domenico (*b.* Montegiorgio, Piceno, Nov. 16, 1881), historian and composer. He showed early remarkable aptitude, and at the age of ten was already employed as organist in the church of his native town. After receiving first instruction from local teachers he went to Rome to study at the Liceo di S. Cecilia under De Sanctis (theory), Bustini (pianoforte), and R. Renzi (organ). He concluded his studies in 1906, since when he has conducted choral and orchestral societies at Leghorn and Rome. His compositions include melodies for voice and piano and orchestra; a Requiem for 4 voices; a string quartet; two symphonic works; and an opera, 'Mirra,' performed in Rome (1920). Of his many critical and historical essays, the most important is a collection of studies on the history of Oratorio in Italy (published by Bocca, Turin). At present (1926) Alaleona is professor of musical æsthetic at the Liceo S. Cecilia in Rome. F. B.

ALAMIRE, Petrus (early 16th cent.), composer. His 'Tandernack, 4 voc.' MS. 18810, is in the Hofburg, Vienna.

ALARD, Delphin (*b.* Bayonne, Mar. 8, 1815; *d.* Feb. 22, 1888), an eminent violinist.

He was educated at the Paris Conservatoire under Habeneck where he won prizes for violin-playing, and from 1831 began to make a great reputation as a performer. In 1843 he succeeded Baillot as professor at the Conservatoire, which post he held until his death. Alard was the foremost representative of the French school of violin-playing current then at Paris. He belonged to the class of remarkable teachers (Lambert, Massart, Dancla were his contemporaries) who perpetuated among the younger generation the traditions of their art. He published a number of concertos and operatic fantasias in a brilliant style, also études, duos, etc., specially adapted to his instrument. His *École de violon*, translated into several languages, is a standard work in pedagogic literature. He also edited a selection of violin compositions of the most eminent masters of the 18th century, 'Les Maîtres classiques du violon,' etc. (Schott), in 40 parts. P. D ; addns. M. L. P.

ALARDUS, Lampertus (*b.* Crempe, Holstein, Jan. 27, 1602; *d.* Meldorf, May 29, 1672), wrote a book on the music of the ancients containing the best Latin version of the treatise of Psellus (*Fétis*).

ALBANESI, Carlo (*b.* Naples, Oct. 22, 1858; *d.* London, Sept. 21, 1926), pianist and composer, studied the pianoforte with his father, Luigi Albanesi, harmony and composition with Pinto and Sabino Falconi. He toured in Italy and France until 1878, settling down permanently in England in

1882. The appointment to a professorship at the R.A.M. in London, in succession to Thomas Wing, followed in 1893, and in the same year he married the novelist, Mme. E. Maria Albanesi.

Carlo Albanesi held the title of Cavaliere Ufficiale of the Crown of Italy; he was an honorary member of the R.A.M. and examiner of the pianoforte class of the R.A.M. and R.C.M. Associated Board, as well as of the Royal Academy of Music in Dublin; and a member and for many years director of the Royal Philharmonic Society. Albanesi trained a number of distinguished artists in his successful career as a teacher of the piano.

His principal compositions are 6 piano sonatas, five of which are published, a string quartet, a piano trio, and some MS. orchestral works. He also wrote a number of songs and piano pieces. E. B.

ALBANEZE (Albanese) (*b.* Albano, Apulia, *c.* 1729; *d.* Paris, *c.* 1800), a castrato with a fine soprano voice, who came from Naples to Paris in 1747. He was engaged for the Royal Chapel, and sang at the Concert Spirituel from 1752–63. He published many collections of songs; also some original compositions.

ALBANI, Marie Louise Cécilie Emma *née* Lajeunesse (*b.* Chambly near Montreal, Nov. 1, 1852), distinguished opera and concert singer, the daughter of a French Canadian, a professor of the harp. She was educated at the Couvent du Sacré Cœur at Montreal. In 1864 the family removed to Albany, New York, where she sang in the choir of the Roman Catholic cathedral there with such effect that Lajeunesse was advised by the bishop and others that his daughter should adopt a musical career. The father and daughter went to Paris where the latter received vocal instruction from Duprez. Later, she studied with Lamperti at Milan. In 1870 she made her début at Milan as Amina ('Sonnambula'), adopting, as suggested by Lamperti, the name of Albani. She sang next at Florence, always with success. On Apr. 2, 1872, she made her début in London at Covent Garden as Amina. The beautiful qualities of her voice and the charm of her appearance were at once appreciated. She sang nearly every season there until 1896, in a great variety of parts, whereof the most noteworthy were Elsa (1875) and Elizabeth (1876) on the production of 'Lohengrin' and 'Tannhäuser'; later as Eva ('Meistersinger'), Desdemona ('Othello'), etc. 'The last and greatest triumph of her career' was June 26, 1896, as Isolde to the Tristan of Jean De Reszke, in German. On Aug. 6, 1878, she married Ernest Gye, lessee of Covent Garden on his father's death.

Madame Albani was for many years a very great favourite at the Handel and provincial festivals and sang in many new works, notably in those of Gounod, Sullivan, Mackenzie, Cowen, Dvořák, etc.; and in 1886 in 'St. Elizabeth' on the occasion of Liszt's farewell visit. She also sang in opera and concerts in Paris, Brussels, Germany, United States and Canada, and later in tours in India, Australia and South Africa. Her voice was a rich soprano of remarkably sympathetic quality. The higher registers were of exceptional beauty, and she possessed in perfection the art of singing *mezzo voce*.

On Oct. 14, 1911, she gave a farewell concert at the Albert Hall. Since then she has devoted herself to teaching the Lamperti method of singing. She has had considerable success, and several of her pupils are now before the public, doing very well. In 1911 she published her Memoirs, *Forty Years of Song*. In June 1925 the honour of D.B.E. was bestowed upon her. A. C.

ALBANI, (1) Mathias (*b.* Botzen, 1621; *d.* there, 1673), a renowned violin-maker, was one of Stainer's best pupils. The tone of his violins, which are generally very high in the table, and have a dark red, almost brown, varnish, is more remarkable for power than for quality. His son, also named (2) Mathias, was at first a pupil of his father, afterwards of the Amatis at Cremona, and finally settled at Rome. His best violins, which by some connoisseurs are considered hardly inferior to those of the Amatis, are dated at the end of the 17th and beginning of the 18th century. (3) A third Albani, whose Christian name is not known, and who lived during the 17th century at Palermo, also made good violins, which resemble those of the old German makers. P. D.

ALBANO, Marcello (17th cent.), a Neapolitan composer. His 'Madrigali a 5 voci' and 'Il 1° libro di canzoni e madrigaletti a 3 ed a 4 voci' were both published at Naples, 1616.

ALBÉNIZ, Isaac (*b.* Camprodón, Catalonia, May 29, 1860; *d.* Cambó les Bains, Pyrenees, June 16, 1909), made his first appearance as an infant prodigy at the Teatro Romea, Barcelona, and afterwards performed in Paris as a youthful pupil of Marmontel. At the age of seven he composed a 'Pasodoble' which was played by military bands in Barcelona. He began to study music seriously at the Conservatoire at Madrid, and received a pension from the King to enable him to pursue his studies at Brussels. He worked at composition with Gevaert and at the pianoforte with Brassin, and subsequently removed to Leipzig to complete his technical equipment with Liszt, Jadassohn and Reinecke. After accompanying Rubinstein on a tour in Europe and America, and appearing himself with great success as a pianist, about 1880, he settled down to teach, first at Barcelona and then at Madrid.

Teaching, however, was not congenial to him, and he soon left Madrid, passing the rest of his life mainly in London and Paris. To his London period belong the comic opera 'The Magic Opal' (libretto by Money-Coutts), produced in 1893, and the more ambitious 'Enrico Clifford' and 'Pepita Jiménez.' The latter is founded on the admirable novel by Juan Valera; it has been performed at Barcelona (1895), Dresden, Leipzig and Prague, and (newly orchestrated) in Paris and Brussels. It has not, however, held the stage. Other operas by Albéniz include 'Poor Jonathan,' 'The Magic Ring,' produced in London; 'San Antonio de la Florida,' and the *zarzuelas* 'Cuanto más viejo,' 'Los catalanes en Grecia,' written for Madrid. He wrote another light opera, 'L'Hermitage fleuri,' and left unfinished a trilogy on the subject of King Arthur.

Albéniz was always a prolific writer for the pianoforte, but he attached little importance to his earlier works. He is said to have sold the copyright of his popular 'Pavana' for 15 pesetas (12s. 6d.), the price of a ticket for an important bull-fight. In later life he came under the influence of Debussy and was numbered with the advanced school of French composers. His two sets of pianoforte pieces, 'Iberia' and the less known 'Catalonia,' 'La Vega,' 'Navarra,' and 'Azulejos' (finished by Granados), are filled with the rhythm and colour of the South. 'Iberia' consists of 12 'scenes' from different corners of Spain, inspired by the rhythms, harmonies, and turns of phrase for Spanish popular music; particularly the songs and dances of Andalucía. As a Catalan by birth, Albéniz could look on Andaluz music with something of the detachment of a foreigner; and if he did not penetrate to the true essence of it (as Falla has done), he realised that its determining features were the combination of strong, conflicting rhythms; the harmonic effects naturally obtained from instruments tuned in fourths; and the wavering, profusely ornamented melodies of the native CANTE HONDO (*q.v.*). At the back of his mind there is generally a guitar-player who ends with the 'Phrygian cadence,' a dancer whose castanets are always syncopating against each other, and sometimes (as in 'Triana') the shake and bang of a tambourine. Albéniz did not try to reproduce these things in his music; he endeavoured to suggest them on the pianoforte. The whole of his later work is a brilliantly pianistic *evocación* of Spanish popular music, constructed on the principle of the pianoforte piece of that name, in which the 'Jota' of Navarre is contrasted with a melody from Andalucía. J. B. T.

ALBÉNIZ, PEDRO (*b.* Biscay, *c.* 1755: *d. circa* 1821), a Spanish monk, conductor of the music at the Cathedral of St. Sebastian, and (1795) at that of Logrono; composed masses, vespers, motets and other church music, never published, and a book of solfeggi (St. Sebastian, 1800).

ALBÉNIZ, PEDRO (*b.* Logroño, Apr. 14, 1795; *d.* Madrid, Apr. 12, 1855), son of a musician, Mateo Albéniz (*v.* Nin, *18 Sonatas antiquas de autores españoles*); organist from the age of thirteen at various towns in Spain, including Logroño and San Sebastian. In 1830 he became professor of the pianoforte in the Conservatoire at Madrid, and four years later was appointed first organist of the Capilla Real.

He introduced the modern style of pianoforte-playing into Spain, and all the eminent pianists of Spain and South America may be said to have been his pupils. He held various high posts at the court, and in 1841 was appointed teacher of the pianoforte to Queen Isabella II. and the Infanta María Luisa. His works comprise a Method for the pianoforte (Madrid, 1840), adopted by the Conservatoire of Madrid, 70 compositions for the pianoforte (mainly variations, fantasies, and rondos on operatic melodies and national tunes), and songs.

M. C. C.; addns. J. B. T.

ALBERGATI, COUNT PIRRO CAPACELLI (*b. circa* 1663; *d. circa* 1735), of an ancient family in Bologna, an amateur, and a distinguished composer. From 1687 he was in the service of the Emperor Leopold I. His works include:

The operas, 'Gli Amici' (1699), 'Il Principe selvaggio' (1712); the oratorios 'Giobbe' (Bologna, 1688), 'L'Innocenza di Santa Eufemia' (1700), and 'Il Convito di Baldassare' (1702); sacred cantatas, masses, motets, etc., and compositions for various instruments.

ALBERICI, GIACOMO (*b.* Sarnico, near Bergamo; *d.* Rome, 1650), an Augustinian monk who died as Vicar-General. He wrote a *Catalogo breve degl' illustri scrittori venetiani* (Bologna, 1605), in which he gives important particulars about thirteen Venetian musicians of the 16th century. E. V. d. S.

ALBERT (ALBERTI ?), an Italian violist (Mendel calls him a 'violinist,' which of course is an error as there were no violins before 1550), was taken to Paris by Francis I. *c.* 1530, as 'ménestrier' of the Royal Chapel. He was considered the greatest virtuoso on his instrument, and Guido d' Arezzo called him 'The light of art.' E. V. d. S.

ALBERT, MARGRAVE OF MALASPINA (*c.* 1300), a noble troubadour who wrote a love-song and a *tenzone* addressed to the famous troubadour, Rambaut de Vaquéiras, whose lady-love he had won for himself, in which he boasts of his raids and robberies in the fights between the Lombardian Republics.

ALBERT, (1) CHARLES LOUIS NAPOLÉON D' (*b.* Menstetten, near Altona, Hamburg, Feb. 25, 1809; *d.* London, May 26, 1886). His father, François Benoit d'Albert, was a captain of cavalry in the French army On his death in 1816 the mother and son emigrated to England. She was a good musician, and her son's first

musical education—in Mozart and Beethoven —was due to her. He then had lessons in the piano from Kalkbrenner, and in composition from Dr. Wesley, and afterwards learnt dancing at the King's Theatre, London, and the Conservatoire, Paris. On his return to England he became ballet-master at the King's Theatre, and at Covent Garden. He soon relinquished these posts, and devoted himself to teaching dancing and composing dance music, in which he was very successful. He ultimately settled at Newcastle-on-Tyne, and married there in 1863. He published 'Ballroom Etiquette,' Newcastle, 1835; and a large number of dances, beginning with the 'Bridal Polka,' 1845; all of these were very great favourites, especially the 'Sweetheart's Waltz,' 'Sultan's Polka,' and 'Edinburgh Quadrille.' In the latter years of his life he removed to London, where he died.

His son, (2) EUGÈNE FRANCIS CHARLES (*b.* Glasgow, Apr. 10, 1864), one of the most famous pianists of his time, is also the composer of various important works, more especially German operas. His genius for music showed itself from a very early age, and he was carefully taught by his father. In 1876 he was elected Newcastle scholar in the National Training School, London, where he learnt the piano from Pauer, and harmony and composition from Stainer, Prout and Sullivan. Here his progress in piano-playing, counterpoint and composition was rapid and brilliant, and he also occupied himself much in the study of languages. An overture of his was performed at a students' concert at St. James's Hall on June 23, 1879. His piano-playing was at that early age so remarkable that he was engaged and appeared three times at the Popular Concerts, Nov. 22, 1880, and Jan. 3 and 8, 1881. On Feb. 5 of the latter year he played Schumann's concerto at the Crystal Palace, and appeared at the Philharmonic on Mar. 10. He played a concerto of his own in A at the Richter Concert of Oct. 24, 1881, and in the following November, having in the meantime won the Mendelssohn Scholarship, entitling him to a year abroad, he went to Vienna at the instance of Richter, who had been very much impressed by his great promise in London. Very shortly after his arrival in Vienna he played the first movement of his own concerto at the Philharmonic Concert there. He then became a pupil of Liszt, who called him the 'young Tausig,' in allusion to his extraordinary technical ability. Thus D'Albert's musical life became associated with Germany, and as a pianist it is more particularly his interpretation of the German classics which has made him famous. His critical editions of works of Bach and Beethoven, and his cadenzas to the concertos of Beethoven are the outcome of this experience. His early operas were all written for and produced in Germany, though the most widely successful of them all, 'Tiefland,' had its first production at Prague. In 1907 he succeeded Joachim as director of the Hochschule at Berlin, where his influence as a teacher has been of the utmost importance. From 1892–95 D'Albert was the husband of Madame THERESA CARREÑO (*q.v.*). He has been three times married since.

D'Albert has been one of the most assiduous of modern composers of opera. After 'Tiefland,' the two works which have created the greatest impression are 'Flauto Solo' and 'Die toten Augen.' His purely instrumental music, though small in amount, is important. The early symphony was regarded as a work of exceptional beauty when it first appeared. The violoncello concerto proved peculiarly acceptable since it enriched the literature of a solo instrument which is none too well provided with effective works for performance with the orchestra.

The following is a list of his principal compositions:

OPERAS

'Der Rubin,' Carlsruhe, 1893.
'Ghismonda,' Dresden, 1895.
'Gernot,' Mannheim, 1897.
'Die Abreise,' Frankfort, 1898.
'Kain,' Berlin, 1900.
'Der Improvisator,' Berlin, 1900.
'Tiefland,' Prague, 1903.
Flauto Solo, Prague, 1905.
'Tragaldabas' (Der geborgte Ehemann), Hamburg, 1907.
'Izeyl,' Hamburg, 1909.
'Die verschenkte Frau,' Vienna, 1912.
'Liebesketten,' Dresden, 1912.
'Die toten Augen,' Dresden, 1916.
'Der Stier von Olivera,' Leipzig, 1919.
'Revolutionshochzeit,' Leipzig, 1919.
'Scirocco,' Darmstadt, 1921.

ORCHESTRA

PF. Concerto, B minor, op. 2.
PF. Concerto, E major, op. 12.
V'cl. Concerto, C major, op. 20.
Overtures: 'Esther' and 'Hyperion.'
Symphony in F, op. 4 (produced by Richter, London, 1886).

CHAMBER MUSIC

2 String Quartets, A minor, op. 8; E flat, op. 11.
PF. Sonata, F sharp minor, op. 10.
PF. Suite, op. 1.

CHORAL WORK

'Der Mensch und das Leben' (6 v.), op. 14.

A. J. H., with addns.

ALBERT, HEINRICH (*b.* Lobenstein, Voigtland, Saxony, June 28, 1604; *d.* Oct. 6, 1651), poet, organist and composer, was a nephew and pupil of the famous composer, Heinrich Schütz.

He studied music in Dresden, but was compelled by his parents to give it up for a legal education at Leipzig. In 1626 he started for Königsberg, where Stobäus was at that time Kapellmeister, but was taken prisoner by the Swedes and did not reach his destination till 1628. In 1631 he became organist to the old church in that city, and in 1638 married Elizabeth Starke.

As poet he is one of the representatives of the Königsberg school, with the heads of which he was closely associated.

His church music is confined, according to Winterfeld, to a Te Deum for three voices,

published Sept. 12, 1647. He, however, composed both words and music to many hymns, which are still in private use, *e.g.* 'Gott des Himmels und der Erden.' These, as well as his secular songs, are found in the eight collections printed for him by Paschen, Mense and Reusner, under the patronage of the Emperor of Germany, the King of Poland and the Elector of Brandenburg. These collections sold so rapidly that of some of them several editions were published by the author. Others were surreptitiously issued at Königsberg and Dantzig under the title of 'Poetisch-musikalisches Lustwäldlein,' which Albert energetically resisted. These latter editions, though very numerous, are now exceedingly rare. Their original title is :

'Erster [Zweiter, etc.] Theil der Arien oder Melodeyen etlicher theils geistlicher theils weltlicher, zu gutten Sitten und Lust dienender Lieder.'

Then followed the dedication, a different one to each part. The second is dedicated to his 'most revered uncle, Heinrich Schütz,' the only existing reference to the relationship between them. Albert's original editions were in folio, but after his death an octavo edition was published in 1657 by A. Profe of Leipzig. In his prefaces Albert lays down the chief principles of the musical art, a circumstance which gives these documents great value, as they belong to a time in which by means of the 'basso continuo' a reform in music was effected, of which we are still feeling the influence. Mattheson, in his 'Ehrenpforte,' rightly assumes that Albert was the author of the 'Tractatus de modo conficiendi contrapunctam,' which was then in manuscript in the possession of Valentin Hausmann. In the preface to the sixth section of his 'Arien' Albert speaks of the centenary of the Königsberg University, Aug. 28, 1644, and mentions that he had written a 'Comödien-Musik' for that occasion, which was afterwards repeated in the palace of the Kurfürst. Albert was thus, next after H. Schütz, the founder of German opera.

Albert's 'Arien' give a lively picture of the time, and of the then influence of music. While the object of the opera as established in Italy was to provide music as a support to the spoken dialogue, so the sacred 'concert' came into existence at the same time in Italy and Germany as a rival to the old motets, in which the words were thrown too much into the background. But the sacred 'concert' again, being sung only by a small number of voices, necessitated some support for the music, and this was provided by the 'basso continuo' (see VIADANA and THOROUGH-BASS). Albert, who, on his arrival at Königsberg, had undergone a second course of instruction under Stobäus, attained in his music a peculiar character which may be described as the quintessence of all that was in the best taste in Italy and Germany. The 'Arien' have been republished in *D.D.T.*, vol. xiii. F. G.

ALBERT, PRINCE (*b.* Rosenau, Coburg, Aug. 26, 1819 ; *d.* Windsor, Dec. 14, 1861). FRANCIS CHARLES AUGUSTUS ALBERT EMMANUEL, Prince Consort of Queen Victoria, second son of Ernest, Duke of Saxe-Coburg-Saalfeld, took an active part in the musical life of his generation.

Music formed a systematic part of the Prince's education (see his own 'Programme of Studies' at thirteen years of age in *The Early Years*, etc., p. 107). At eighteen he was 'passionately fond' of it, 'had already shown considerable talent as a composer,' and was looked up to by his companions for his practical knowledge of the art (*ib.* pp. 143, 173). His organ-playing and singing he kept up after his arrival in England (Martin's *Life*, pp. 85, 86 ; Mendelssohn's letter of July 19, 1842), but his true interest in music was shown by his public action in reference to it, and the influence which from the time of his marriage to his death he steadily exerted in favour of the recognition and adoption of the best compositions.

This was shown in many ways. First, by his immediate transformation of the Queen's private band from a mere wind-band (see *Mus. T.*, 1902, p. 463, for its constitution) into a full orchestra (dating from Dec. 24, 1840), and by an immense increase and improvement in its repertory. Secondly, by acting in his turn as director of the Ancient Concerts, and choosing, as far as the rules of the society permitted, new music in the programmes ; by his choice of pieces for the annual 'command nights' at the Philharmonic, where his programmes were always of the highest class, and included first performances of Mendelssohn's 'Athalie,' Schubert's overture to 'Fierrabras,' and Schumann's 'Paradise and the Peri.' Thirdly, by the support which he gave to good music when not officially connected with it, and fourthly by the interest he took in the Royal Library at Buckingham Palace. Prince Albert's printed works include 'L' invocazione all' Armonia,' for soli and chorus ; a Morning Service in C and A ; anthem, 'Out of the deep' ; five collections of 'Lieder und Romanzen,' 29 in all ; three canzonets, etc. G., abridged.

ALBERT DE SISTERON (*b.* Gapençois, late 12th cent. ; *d.* Sisteron, early 13th cent.), a famous French troubadour. Some twenty of his songs are still in existence. One is remarkable as a *sirventes* against women, while in a *tenzone* (musical disputation) with a monk, he defends the Catalans (south French) against the north French on account of their greater *galanterie* towards the fair sex.

ALBERT HALL, see ROYAL ALBERT HALL.

ALBERTI, DOMENICO (*b.* Venice, *c.* 1710 ; *d.* Formio, Rome, 1740), a Venetian composer,

whose name survives chiefly in the term ALBERTI BASS.

He was a pupil of Lotti. He won fame both as a singer and as a player on the harpsichord, and wrote some operas and a considerable number of sonatas, some of which were very popular with musical amateurs. It is not very probable that he actually invented the 'Alberti Bass,' but he certainly brought it into undue prominence in his sonatas, and therefore did his best to deserve a notoriety which is not altogether enviable. A set of eight sonatas of his, which was published by Walsh in London, affords good illustrations of his love of it. He uses it plentifully in every sonata of the set, sometimes in both movements, and occasionally almost throughout a whole movement. For instance, in the first movement of the second sonata it persists through 37 bars out of a total of 46; and in the first movement of the sixth sonata it continues through 36 whole bars and 4 half bars out of a total of 44. The following quotation from the beginning of the sixth sonata illustrates his style, and his manner of using the formula.

C. H. H. P.

ALBERTI, GIUSEPPE MATTEO (*b.* Bologna, 1685 ?), an eminent violinist and distinguished composer, who studied the violin under Manzolini and Minelli and counterpoint under F. Arresti. He wrote violin sonatas, concertos and concerti grossi, as well as some canzoni for voice. E. v. d. s.

ALBERTI, INNOCENZO (*b.* Treviso, late 16th cent.), a musician in the service of Alfonso, Duke of Ferrara, in the late 16th and early 17th centuries. He wrote 'Salmi penitentiali . . . a 6 voc. Lib. I.' (Ferrara, 1594); also secular songs, and several books of madrigals, including one containing 46 madrigals, 5 v., written for and dedicated to Henry, Earl of Arundel, in 1568. E. v. d. s.

ALBERTI, KARL EDMUND ROBERT (*b.* Danzig, July 12, 1801; *d.* Berlin, 1874), theologian and musician, studied musical theory under Zelter at Berlin. He was chiefly known by his books on music: *Die Musik in Kirche und Schule* (1843), in which he points out the importance of music in education, gaining the approval both of Mendelssohn and of the King; *Andeutungen zur Geschichte der Oper* (1845); *Richard Wagner*, etc. (1856); *Raphael u. Mozart* (1856); *L. v. Beethoven als dramatischer Tondichter* (1859). After his retirement in 1866 he contributed to the *Neue Berliner Musikzeitung*. E. v. d. s.

ALBERTI, LEONE BATTISTA (*b.* Florence, 1398; *d.* there, 1472), famous in almost all branches of science and art, was one of the finest organists of his time.

ALBERTI, PIETRO, violinist in the service of the Prince de Carignan with whom he went to Paris in 1697, and played before Louis XVI. His 'Sonate a tre,' op. 1, were published by Roger, Amsterdam, in 1700.

ALBERTI BASS, a familiar formula of accompaniment which first came prominently into fashion early in the 18th century. It consists of breaking the notes of a chord so that they lie conveniently under the left hand playing on a keyboard instrument, but its use is by no means confined to music for keyboard instruments. The name is derived from the composer, Domenico ALBERTI (*q.v.*).

ALBERTINI, GIOVACCHINO (*d.* Warsaw, 1811), was Kapellmeister at the Polish Court, and a popular opera composer of his time. His first opera, 'Don Giovanni,' was followed by 'Le Maître de chapelle polonais' in the Polish language. His best-known works are: 'Circe' (Hamburg, 1785); 'Virginia' (Rome, 1786, also in London); 'Scipio Africano' (Rome, 1786). During the Polish revolution he went to Rome, but returned in 1804 to Warsaw. E. v. d. s.

ALBERTO DA RIPA, see RIPA.

ALBERTUS MAGNUS (*d.* Cologne, 1280), the great Dominican, scientist and philosopher, who wrote a treatise on music, published in a complete edition of his works by Pierre Jammi (Lyons, 1651). E. v. d. s.

ALBICASTRO, HENRICO (HAINZ WEISSENBURG) DEL BISWANG, describes himself as an amateur on some of his title-pages. He was a Swiss who served as a captain of horse in the Spanish succession wars. He had the reputation of an excellent violinist and composer, and is probably identical with Heinrich Weysenbergh who, on Apr. 12, 1686, appears in the registers of Leyden University as 'Musicus Academiae,' as well as 'Rittmeister Henricus Albicastro.' He was of German origin, and was living in the Netherlands about 1700. Eight works of solo and trio sonatas, and one, op. 7, of twelve concerti *a* 4, enjoyed a European reputation (*Eitner*).

ALBINI, FILIPPO, a Sardinian of Moucalieri, was chamber musician at the court of Turin, and published two books of 'Musicali concenti,' viz.: Op. 2, *a* 1, 2 and 4 v. (Milan, 1623), and 'Op. 4 . . . da cantarsi nel cembalo, tiorba, ò arpa doppia a 1 e 2 v.' (Rome, 1626).

ALBINONI, TOMASSO (*b.* Venice, latter half of 17th cent.), a voluminous composer and an

excellent violinist. The particulars of his life are entirely unknown, though *Riemann* gives his dates as 1674–1745.

He wrote 42 operas (the first of which appeared in 1694), which are said to have been successful from the novelty of their style, though a modern French critic describes the ideas as trivial and the music as dry and unsuited to the words. Greater talent is to be seen in his instrumental works, concertos, sonatas and songs. J. S. Bach selected themes from his works, as he did from those of Corelli and Legrenzi. 'Bach,' says Spitta (Engl. tr., i. 425), 'must have had an especial liking for Albinoni's compositions. Even in his later years he was accustomed to use bass parts of his for practice in thorough-bass'; and Gerber relates that he had heard his father (a pupil of Bach) vary these same basses in his master's style with astonishing beauty and skill. Two harpsichord fugues by Bach are known to be founded on themes of Albinoni—both from his 'Opera prima.' They are in A and B minor, and are to be found in the B.-G. edition, vol. xxxvi. pp. 173 and 178. For further particulars see Spitta, Engl. tr. i. 425-428. E. H. D.

ALBIOSO, Mario (*b.* Nasi, Sicily; *d.* Palermo, 1686), canon of the Order of the Holy Ghost. He published 'Selva di canzoni siciliani' (Palermo, 1681) (*Fétis*).

ALBONESI, Teseo Ambrogio, Professor of Syriac at Bologna University, gives a description and illustration of the Phagotus (*q.v.*), invented by his uncle, in his *Introductio in Chaldaicam linguam*. . . . E. v. d. s.

ALBONI, Marietta (*b.* Cesena, Romagna, Mar. 10, 1823; *d.* Ville d'Avray, June 23, 1894), a celebrated contralto singer.

She was taught by Mme. Bertolotti, at Bologna, who taught many other distinguished singers. There she met Rossini, who, charmed with her voice and facility, taught her the principal contralto parts in his operas, with the true traditions. With this great advantage Alboni easily procured an engagement for several years from Merelli, an impresario for several theatres in Italy and Germany. She made her first appearance at La Scala, Milan, 1843, in the part of Maffio Orsini. In the same year she sang at Bologna, Brescia, and again at Milan; soon afterwards with equal success at Vienna. In consequence of some misunderstanding about salary she now broke her engagement with Merelli, and suddenly took flight to St. Petersburg. She remained there, however, but a short time; and we find her in 1845 singing at concerts in Hamburg, Leipzig, Dresden, as well as in Bohemia and Hungary. At the carnival of 1847 she sang at Rome in Pacini's 'Saffo,' introducing an air from Rossini's 'Semiramide,' which was enthusiastically applauded, but could not save the opera. In the spring of the same year she came to London, and appeared at Covent Garden, in the height of the 'Jenny Lind fever.' She was indeed a trump card for that establishment against the strong hand of the rival house. The day after her début the manager spontaneously raised her salary for the season from £500 to £2000, and her reputation was established.

She sang again in London in 1848 at Covent Garden, and in 1849, 1851, 1856, 1857 and 1858 at Her Majesty's Theatre. She appeared at Brussels in 1848, with no less success than in London and Paris. In 1849 she returned to Paris; in the next year she visited Geneva, and made a tour of France, singing in French at Bordeaux in the operas 'Charles VI.,' 'La Favorite,' 'La Reine de Chypre,' and 'La Fille du régiment.' On her return to Paris she surpassed the boldness of this experiment by attempting the part of Fidés in the 'Prophète' at the Opéra, and with the most brilliant success. She next made a tour in Spain, and in 1853 a triumphal progress through America. After her marriage with Count A. Pepoli, a gentleman of old Bolognese family, she lived in Paris. She sang Rossini's 'Quis est homo' with Mme. Patti at that master's funeral in 1868, and in his 'Petite Messe Solennelle,' in London in 1871.

Her voice, a rich, deep, true contralto of fully two octaves, from *g* to *g″*, was perfectly even throughout its range. Her style gave an idea, a recollection, of what the great old school of Italian singing had been, so perfect was her command of her powers. The only reproach to which it was open was a certain shade of indolence and *insouciance*, and a want of fire at times when more energy would have carried her hearers completely away. Some singers have had the talent and knowledge to enable them to vary their *fioriture*; Alboni never did this. When you had heard a song once from her, perfect as it was, you never heard it again but with the selfsame ornaments and *cadenze*. J. M.

ALBORADA (Span.), 'dawn-song' (Fr. *aubade*), a form of popular instrumental music heard in Galicia and the N.W. provinces of Spain, and usually played on the bagpipes to the accompaniment of a side drum. The melodies have a tendency towards free rhythm, or rather to unequal groups of measures; the drum accompaniment is uniform, except when the drummer (who always follows the piper) indicates by a roll that a new section, or variation, is about to begin. The influence of modern uniform rhythms, combined with that of collectors and transcribers of folk-songs, is gradually but decisively making itself felt. J. B. T.

ALBRECHT, (1) Johann Lorenz (*b.* Görmar, near Mühlhausen in Thuringia, Jan. 8, 1732; *d.* there, *c.* 1773). In 1758 he became a teacher at the grammar school as well as cantor and director of music at the principal

church of that town and eventually an imperial poet laureate and M.A. He wrote several books on musical subjects and edited Adlung's works and Steffani's 'Quanta certezza.' His compositions consist of a Passion, cantatas, piano pieces for beginners, etc. (*Fétis*; *Eitner*). (2) Joh. Matthäus [1] (*b.* Osterbehringen, near Gotha, May 1, 1701; *d.* Frankfort a./M., 1793), was organist at St. Catharine's, Frankfort-on-M., in 1724, and successor of Gerber at the Carmelite church in 1728, where he presided at the famous organ with great honour up to the time of his death. (3) Eugen Maria (*b.* St. Petersburg, June 16, 1842; *d.* Feb. 9, 1894), son of Karl Albrecht, Kapellmeister of the Imperial Opera at St. Petersburg. Eugen studied at the Leipzig Conservatoire under David, 1857–60, and was leader at the Italian Opera, St. Petersburg, 1860–77; director of instruction in music and singing at the military schools, 1867–72; inspector of the imperial theatres at St. Petersburg from 1877, and founder and director of the Chamber Music Union, 1872. He was an eminent violinist and teacher of several imperial princes. E. v. d. S.

ALBRECHTSBERGER, Johann Georg (*b.* Klosterneuburg, near Vienna, Feb. 3, 1736; *d.* Vienna, Mar. 7, 1809), contrapuntist and teacher of sacred music, composer and organist.

Seyfried has appended his biography to the complete edition of his works (Vienna, 1826, 1837). Albrechtsberger began life as a chorister at his native town and at Melk. At the latter place he was taken notice of by the Emperor Joseph, then Crown Prince; and on a later occasion, the Emperor passing through Melk renewed the acquaintance, and invited him to apply for the post of court organist on the first vacancy. Meantime Albrechtsberger studied hard under the direction of Emmerling. After being organist for twelve years at Melk, he obtained a similar post at Raab in Hungary, and then at Mariataferl. Here he remained instructor in the family of a Silesian count till he left for Vienna as *Regens Chori* to the Carmelites. In 1772 he was appointed court organist, and twenty years later director of music at St. Stephen's, where he at once began his career as a teacher. The number of his pupils was very large. Amongst the most celebrated are Beethoven, Hummel, Weigl, Seyfried, Eybler and Mosel. Nottebohm (*Beethovens Studien*, 1873) speaks in the highest terms of the instruction which he gave Beethoven. His compositions are computed by Seyfried as 261, of which only 27 are printed. A very great number of them are in the library of the Gesellschaft der Musikfreunde at Vienna (see *Q.-L.*). The finest is a Te Deum, which was not performed till after his death. His great theoretical work (not without defects) is entitled *Gründliche Anweisung zur Composition* (Leipzig, 1790; 2nd ed. 1818). An English edition, translated by Sabilla Novello, is published by Novello. F. G.

[1] Eitner calls him Joh. Matthias.

ALBRICI, two brothers, (1) Bartolomeo, organist 'Hofkirche,' Dresden, resigned 1663; appointed, together with his brother Vincenzo, composer of the English Chapel Royal from 1664 till after 1667. Two of his cantatas are in the Dresden Museum. (2) Vincenzo (*b.* Rome, June 26, 1631; *d.* Prague, 1690). Queen Christina brought him to Stralsund in 1650. In 1654 he became a member of the private music of the Crown Prince of Saxony; in 1662, Kapellmeister at the Dresden Court; from 1663–67 composer to the Chapel Royal, together with his brother. In 1671 he returned to the Court at Dresden as 'Hofkapellmeister.' In 1680 he became organist at the church of St. Thomas, Leipzig, and in 1682 was director of music at St. Augustine's, Prague. His MS. compositions comprise a Te Deum for 2 choruses and orch., another for 5 v. and orch., and a third for 8 v. and orch.; masses, cantatas, etc., and instrumental compositions. Many of his works are said to have been destroyed through the bombardment of Dresden in 1760. Godbid and Playford's 'Scelta di canzonette' (1679) contains two songs, 'Di Cupido' and 'Ninfe vezzose' (*Eitner*).

ALBUZZI-TODESCHINI, Teresa (*b.* Milan, Dec. 26, 1723; *d.* Prague, June 30, 1760), one of the greatest contralto singers of the 18th century. After appearing with great success at some of the principal operas in Italy, she went to Dresden, where her well-trained voice, wedded to great histrionic powers, met with enthusiastic reception. Deprived of her engagement through the Seven Years' War, she decided to go to Warsaw, but was attacked on the way by pleurisy and died at Prague. E. v. d. S.

ALCESTE, tragic opera in three acts by Gluck, libretto by Calzabigi. Produced Vienna, Dec. 16, 1767, and Paris (adapted by du Rollet), Apr. 3, 1776; in London by R.C.M. students, His Majesty's Theatre, Dec. 1904. Much of the music, however, was used by Bishop for a revival of the drama, St. James's Theatre, Jan. 5. 1855.

ALCESTIS, opera, described as a Choral Music-Drama, by Rutland Boughton, the libretto compressed from Gilbert Murray's English translation of the *Alcestis* of Euripides; produced by the Glastonbury Festival Players at Glastonbury, Aug. 26, 1922; Covent Garden, by the British National Opera Company, Jan. 11, 1924.

ALCHYMIST, DER, opera; libretto by Pfeiffer on a Spanish tale by Washington Irving; music by Spohr. Produced Cassel, July 28, 1830.

It was given at Essen, May 28, 1925 (information from Elkin & Co).

ALCOCK, (1) JOHN, Mus. D. (*b.* London, Apr. 11, 1715; *d.* Lichfield, Feb. 1806), an organist and composer of some distinction.

His career began at seven years of age as a chorister of St. Paul's Cathedral under Charles King. At fourteen he became a pupil of Stanley, the blind organist. Alcock became in turn organist of St. Andrew's Church, Plymouth (1737), of St. Lawrence's Church, Reading (1742), and organist, master of the choristers and lay-vicar of Lichfield Cathedral (1750). On June 6, 1755, he took the degree of Bachelor of Music at Oxford, and in 1761 proceeded to that of Doctor. In 1760 he resigned the appointments of organist and master of the choristers of Lichfield, retaining only that of lay-vicar. He was organist of Sutton Coldfield Church (1761–86), and of St. Editha's, Tamworth (1766–90). During his residence at Plymouth, Alcock published 'Six Suites of Lessons for the Harpsichord' and 'Twelve Songs,' and whilst at Reading he published 'Six Concertos,' and a collection of 'Psalms, Hymns and Anthems.' In 1753 he published a 'Morning and Evening Service in E minor.' He likewise issued (in 1771) a volume containing 'Twenty-six Anthems,' a 'Burial Service,' etc. His generous action in handing over to Dr. GREENE (*q.v.*) the materials which he had collected for an edition of 'Cathedral Music' deserves record. He was the composer of a number of glees, a collection of which, under the title of 'Harmonia Festi,' he published about 1790. Glees of his composition won the Catch Club prizes in 1770, 1771 and 1772. Alcock edited a collection of Psalm Tunes by various authors, arranged for four voices, under the title of 'The Harmony of Sion,' 1752. His son, (2) JOHN, Mus.B. (*b. circa* 1740; *d.* Mar. 30, 1791), was organist of St. Mary Magdalen's, Newark-on-Trent, from 1758–68, and of the parish church of Walsall, from 1773 till his death. He published songs, anthems, etc. W. H. H.

ALCOCK, WALTER GALPIN, Mus. D. (*b.* Edenbridge, Dec. 29, 1861), a distinguished organist who has composed some excellent church music.

Alcock studied under Sullivan and Stainer at the National Training School of Music, 1876–1881, and afterwards held church organistships at Twickenham and London. He soon became assistant to Bridge at Westminster Abbey, and in that capacity took an increasingly important share in the music of the Abbey until 1916, when he accepted the organistship of Salisbury Cathedral, a post he still (1926) holds. Thus he played the organ at the Coronations of both King Edward VII. and King George V. After the latter he received the decoration M.V.O. Meantime he also held independent posts of considerable importance, Holy Trinity, Sloane St. (1895), the Chapel Royal (1902). In 1893 he joined the staff of the R.C.M. as teacher of the organ, where he has worked unremittingly, and has done much to reinforce the ideals of organ-playing promulgated by PARRATT (*q.v.*). Alcock's own performance—his finished technique, cleanness of phrasing and impeccable taste—places him in the first rank of English solo organists. He has done much recital work, though the greater part of his life has been spent in church music where his influence has been consistently exerted to the maintenance of a high tradition.

His compositions for the Church include a Morning and Evening Service in B♭, a worthy member of the type represented by Stanford's Service in the same key, and several large anthems, 'Give the King thy Judgements' (Coronation, 1902), 'When the Lord turned again' (Festival of the Sons of the Clergy), 'And I heard a great Voice,' composed for the 700th anniversary (1920) of the foundation of Salisbury Cathedral. This last, based on the plain-song tune 'Urbs beata,' is a fine work more in the nature of a church cantata than an anthem. A Sanctus sung at the Coronation of King George should also be named. C.

ALCUIN (*b.* Yorkshire, *c.* 735; *d.* Tours, May 19, 804), a pupil of the Venerable Bede, and of Egbert, Archbishop of York. He received several abbeys from Charlemagne, who made him his Grand Almoner. In 804 he retired to the Abbey of St. Martin, at Tours, where he died. His treatise, *De musica,* is published in Froben's edition of his works (Ratisbon, 1777) (*D.N.B.*).

ALDAY, a family of musicians in France. The father (*b.* Perpignan, 1737) was a mandoline-player, and the two sons violinists.

The elder of the two, (1) ALDAY L'AÎNÉ (*b.* 1763), appeared at the Concert Spirituel, first as mandoline-player when a child, and afterwards as violinist. He settled in Lyons and established a music business there about 1795. His works are numerous, and include a 'Méthode de violon,' which reached several editions. A descendant of his was member of the Opéra-Comique orchestra in 1860.

(2) PAUL ALDAY, LE JEUNE (*b.* 1764; *d.* 1835), a pupil of Viotti, was a finer player than his brother, and achieved a great reputation. He played often at the Concert Spirituel up to 1791, when he came to England, and in 1806 was conductor and teacher of music in Edinburgh. He published 3 concertos for violin, 3 sets of duos, airs variés and trios. He went to Dublin in 1809, purchased a music business in Rhames Street in 1811, opened a musical academy in 1812, and was established as a professor of the violin in 1820.

M. C. C., with addns.

ALDOMAR (*c.* 1500), a Spanish composer, whose life is unknown, but whose secular

compositions (*villancicos*), for 3 and 4 voices, are found in several collections of the 16th century. The 'Cancionero,' printed by BARBIERI (*q.v.*), contains three, two of which are also included in the so-called 'Cancionero de Uppsala' (*Villancicos de diversos autores . . .* a 2, 3, 4 and 5 v. . . . Venice, 1556). 'Ha Pelayo, que desmayo' (Barbieri, No. 348; Uppsala, No. 34) refers to the capture of Granada by Ferdinand and Isabella in 1492. Another *villancico* exists in MS. in the Biblioteca de la Diputació, Barcelona. J. B. T.

ALDRICH, HENRY (*b.* Westminster, 1647; *d.* Oxford, Dec. 14, 1710), was son of Henry Aldrich (or Aldridge) of the city of Westminster, Gent. The spelling of the name varies in Wood's *Life and Times*, but Aldrich's own signatures in the Disbursement Books at Christ Church are always in the well-known form.

Aldrich was educated at Westminster School under Dr. Busby. In 1662, at the age of fifteen, he was elected to a studentship at Christ Church, Oxford, that is, to one of the places on the foundation of the House which Queen Elizabeth had annexed to the scholars of Westminster School. He proceeded to the degree of B.A., 1666, and M.A., 1669. In 1681 he became Canon of Christ Church, and in 1689 he was appointed Dean, in succession to Massey, the Roman Catholic Dean appointed by James II. Before he became Canon he held the office of Tutor, in which he showed himself kindly and assiduous. From 1692–95 he was Vice-Chancellor of the University, and in 1710 he died. His grave is in the Cathedral.

Aldrich was a man of extraordinarily varied gifts, and though he was known to his contemporaries for his skill and interest in music, it is probable that he was most famous in his day for achievements of another kind. He was a theologian and a prominent member of the Lower House of the Canterbury Convocation. For a short time in 1702 he held the office of prolocutor. He wrote for the benefit of his pupils an *Epitome of Heraldry*, and a handbook of logic which was in use in Oxford within living memory. He was skilled in architecture, and besides writing a treatise on this subject, he himself designed Peckwater Quadrangle and the Church of All Saints in High Street, Oxford. He was one of the first members of the Philosophical Society, out of which the Royal Society developed. He encouraged the young men of the House to edit classical works, which he had bound, and then distributed to the members of the House by way of a New Year's gift. An ill-starred effort of this kind was Charles Boyle's edition of the *Letters of Phalaris*—a work which brought the editor into disastrous conflict with Bentley, the great Cambridge scholar. Besides all these excellences there is his music. He must have had a considerable reputation as a musician, but this aspect of him is greatly in the background in the two contemporary writers, Wood and Hearne. Wood tells us that he composed the music for the Act[1] in several years.

On the Saturday before the Encænia there was a music-lecture or music-speech and a composition was performed. Hearne tells us that Playford dedicated the Second Part of his 'Harmonia Sacra' to Aldrich—a work 'authoriz'd to be printed by our sneaking Vice-Chanc. Wm. Lancester' (*Coll.* vol. iii. p. 34). He also mentions dining with the Dean, when

> 'that Great Man was pleased to make very honourable mention of Dr. Olearius, and to give a great Character of his late Edition of Philostratus . . . amongst other things he observ'd that the Publisher had shewed in some of [the notes] good Skill in ancient Musick, of wch no man is a better Judge than this Excellent Dean, as may partly appear from the Excellent Remarks of his in the *Marmora Oxoniensia* published by Dr. Prideaux'

(*Coll.* vol. ii. p. 361). In his note upon the Dean's death he speaks of his energy and zeal, his excellent scholarship, and his charming character. 'He was a severe student himself yet always free, open, and facetious . . . humble and modest even to a Fault'—yet he does not mention the Dean's music in the catalogue of admirable qualities.

When we turn to the works actually remaining, it becomes, perhaps, easy to understand this. In the music library at Christ Church among the books under his own name there is a large bundle of notes for a treatise on harmony, as well as a collection of compositions mainly for church use. This treatise was conceived on a large scale: it would have contained a history of music, an account of the physical side of it, and probably also a discussion of the more usual kind upon harmony. He discusses ancient music of various kinds and cites recondite authors. He deals with the length of strings and such subjects, and gives an account of a number of instruments. His devotion to the art came under the range of his scholarly interests, and it looks as if this part of the work would have reduced the technical part of the discussion to somewhat narrow limits. Among the compositions the well-known Catches on Tobacco and the Christ Church bells bear out Hearne's comment on his 'free, open, and facetious' manner. A large number of the anthems are arrangements and adaptations of the works of earlier composers. His Services (of which that in G is still constantly heard in cathedrals), his Anthems, and his Act-Songs are, it must be confessed, not strikingly original. They are in the style of the period, but they show considerable musical feeling; if they

[1] The performance of the final exercises for the degree of M.A. and the doctorates of the several faculties.

cannot be said to be great works, they are certainly a very remarkable achievement for a man whose interests were so versatile, and who reached so high a level in so many ways.

BIBL.—WOOD, *Athenae Oxonienses*; *Life and Times*, vols. ii. and iii. HEARNE, *Collections*, vol. i., ii. and iii. Both these are in the Oxford Historical Society's Series. H. L. THOMPSON, *History of Christ Church*. Catalogues of the MSS. and Printed Music in Christ Church Library. T. B. S.

ALDRICH, RICHARD (*b.* Providence, Rhode Island, July 31, 1863), a distinguished American critic. He was educated at Providence High School and Harvard University, where he graduated in 1885. He studied music under J. K. Paine. According to the more usual American plan, he began his career as a general journalist. He was music critic to the *Providence Journal*, 1885–89; he was private secretary to U.S. Senator Dixon, 1889–91, and at the same time he held the post of music critic to the *Evening Star*, Washington. In 1891 he joined the staff of the *New York Tribune*, on which paper he held various editorial positions, particularly that of assistant critic to H. E. KREHBIEL (*q.v.*), until 1902, when he became music editor of *The New York Times*. This position he held until Dec. 1923 when he retired from the active musical editorship, remaining, however, on the editorial staff of the paper in an advisory capacity.

Throughout his career Richard Aldrich has been notable for the breadth of his musical knowledge, the soundness of his judgment and the excellence of his literary style. He is a member of the National Institute of Arts and Letters. He translated Lilli Lehmann's *How to Sing* (1902; 2nd ed. 1914); and is the author of *A Guide to Parsifal* (1904); and of a *Guide to the Ring of the Nibelung* (1905). He was a contributor to the 2nd and 3rd editions of this Dictionary. C.

ALDROVANDINI (wrongly called Aldovrandini), GIUSEPPE ANTONIO VINCENZO (*b.* Bologna, *c.* 1673; *d.* Feb. 8, 1707), was a member of the Philharmonic Academy at Bologna (1695), and honorary maestro di cappella of the Duke of Mantua's band; he studied under Jacopo Perti. He composed 11 operas (1696–1711)—of which 'Amor torna in cinque et cinquanta,' in the Bologna dialect, was perhaps the most famous—also 'Armonia sacra' (Bologna, 1701), a collection of motets, 5 oratorios, and other music, sacred and instrumental. M. C. C.

ALEMBERT, JEAN LE ROND D' (*b.* Paris, Nov. 16, 1717; *d.* there, Oct. 29, 1783), an eminent writer, philosopher and mathematician. He wrote various treatises on acoustics, published in the memoirs of the Paris and Berlin Academies, *e.g. Recherches sur la courbe que forme une corde tendue mise en vibration* (1747); *Recherches sur la vitesse du son*; *Recherches sur les cordes sonores* (1761). His works on music are numerous: *Fragments sur l'opéra* 1752); *Éléments de musique théorique et pratique suivant les principes de M. Rameau* (1752), translated into German by Marpurg (1757); *De la liberté de la musique* (1765). One of the principal contributors to the *Encyclopédie ou Dictionnaire raisonné des sciences, des arts et métiers* (1751–72), he wrote the articles *Fondamental* and *Gamme*. He took a leading part in all the musical controversies of his time and was a fervent promoter of Gluck's reform of dramatic music. M. L. P.

ALEOTTI, VITTORIA (RAFFAELA ALEOTTA) (*b.* Ferrara, 1570), second daughter of Giovanni Battistini Aleotti, the famous architect. Showing very early signs of musical talent she became a pupil of Herculo Pasquino, who, after two years, recommended her to be sent to the convent of San Vitti, famous for its musical education. Vittoria remained in the convent and became a nun. A collection of madrigals of her composition was published at Venice in 1593 (Giac. Vincenti) at the instance of her father. E. V. D. S.

ALESSANDRA, CATERINA (of Pavia), 1 book of motets, op. 2, published in Milan, 1609.

ALESSANDRI, FELICE (*b.* Rome, Nov. 24, 1747[1]; *d.* Casalbino, Aug. 15, 1798), opera composer and conductor.

He studied music at Naples, and then went to Turin, where he stayed two years as clavecinist and composer. He was in Paris for four years, but returned to Italy, and had his first opera produced at Verona in 1767. After this he travelled about and his operas were performed in all the principal cities of Europe: he came to London in 1768, where two comic operas appeared ('La moglie fedele' and 'Il re va alla caccia'). He collaborated with Sacchini in the composition of 'La Contadina in Corte,' which was brought out in Rome in 1766. An inveterate wanderer, in 1786 he went to Russia in the hope of getting a post as court composer. Unsuccessful in this, he returned to Italy two years later, and in 1789 received an appointment as second conductor at the Berlin Opera. Many more of his operas were produced in various German cities until, in 1792, he was driven from his post by his enemies. His operas, of which 24 are mentioned by Fétis, seem only to have had an ephemeral success, and his detractors held that the only good parts in them were pillaged from other operas. He also wrote an oratorio, 9 symphonies (6 for a combination of only 8 instruments), a concerto for clavier and orchestra, as well as sonatas for violin and harpsichord. (For full list and further details see *Q.-L.*, *Fétis* and Valdrighi's *Musurgiana*, Modena, 1896.) J. MK.

ALESSANDRI, GENNARO D' (*b.* Naples, 1717), composed a number of operas, among which 'Ottone,' performed at Venice, 1740, appears to have met with success (*Q.-L.*).

[1] *Fétis* gives 1742.

ALESSANDRI, Giulio d' (of Ferrara), (2nd half of 17th cent.). On a libretto, dated 1686, he calls himself 'canon of S. Nazaro in broglio, Milan.' His two oratorios, 'La Bersabea' (libretto printed 1689) and 'Santa Francesca Romana' (MS. copies in Berlin, Vienna and Dresden), as well as a Te Deum *a* 8 v. and a duet for soprano and bass, remained in MS.

ALESSANDRINO (Alexandrino), Venetiano, a 16th-century madrigal composer (*Eitner*).

ALESSANDRO DELLA VIOLA, see Merlo.

ALESSANDRO MANTOVANO (15th/16th cent.), composed 8 frottole *a* 4 v., published by Antigo, 1517 (*Eitner*).

ALESSANDRO PADOANO (16th cent.), composed five motets in a collection published in 1563 (*Eitner*).

ALESSANDRO ROMANO, see Merlo.

ALESSANDRO ROMANO, a composer of the end of the 17th and beginning of the 18th centuries, appears to have been a violinist of some distinction of whom the Brussels Conservatoire Library possesses two books of sonatas for violin and bass, one published at Stockholm, the other by Roger, at Amsterdam.

E. v. d. S.

ALEXANDER (Alexandre), called 'der Wilde,' a troubadour, contemporary of the Marggrave of Burgau in Bavarian Suabia, who ruled together with his brother, 1234–82. Six of his songs, words and melodies, have been republished in Hagen's 'Minnesänger,' vol. iv. p. 665. E. v. d. S.

ALEXANDER, Johann (or, according to Fétis, Joseph) (*b. circa* 1770; *d.* 1822), violoncellist at Duisburg. He was distinguished more for the beauty of his tone and the excellence of his style than for any great command over technical difficulties. He wrote a good instruction book for his instrument, *Anweisung für das Violoncell* (Breitkopf & Härtel, 1801); also variations, potpourris, etc. T. P. H.

ALEXANDER, (1) Joseph (*b.* Duisburg, *c.* 1770; *d.* 1822), a violoncellist who excelled more by beauty of tone than by virtuosity. He passed the greater part of his life as a renowned teacher at his native town, and left a number of compositions for his instrument, including a Tutor. His son or nephew (2) Leopold (*d.* after 1905), was principal violin under Schumann and Mendelssohn at Düsseldorf. E. v. d. S.

ALEXANDER BALUS, oratorio; words by Dr. Morell; music by Handel. Produced Covent Garden, Mar. 9, 1748.

Dates on autograph: begun June 1, 1747; end of second part, fully scored, June 24, do.; end of third part, fully scored, July 4, do.

ALEXANDER'S FEAST, Dryden's ode arranged and added to by Newburgh Hamilton; music by Handel. Produced Covent Garden, Feb. 19, 1736. Rescored by Mozart for Van Swieten, July 1790.

Dates on autograph: end of first part, Jan. 5, 1736; end of second part, Jan. 12, do.; end of Hamilton's additions, Jan. 17, do.

ALEXANDRE, Jacob (*b.* 1804; *d.* Paris, June 11, 1876), inventor of the harmonium. (See American Organ.)

ALEXANDRE ORGAN, see American Organ.

ALFANO, Franco (*b.* Posilipo, near Naples, Mar. 1877), an Italian composer.

His earliest studies were pursued at the Naples Conservatoire under De Nardis and Serrao, and later he made a prolonged sojourn in Germany, studying under Jadassohn at Leipzig. Some piano pieces of his were published in Germany during the last decade of the 19th century. In 1896 Alfano wrote his first opera, 'Miranda,' based on a subject from Fogazzaro. To this succeeded two others, 'La Fonte Euschir' (1898), on a libretto by L. Illica, and 'Resurrezione,' founded on Tolstoy. In 1900 came a ballet, 'Napoli,' and the following year another, 'Lorenza.' A fourth opera, 'Il Principe Zilah,' belongs approximately to the same period. Alfano's principal orchestral works are a 'Suite romantica,' introducing Neapolitan popular melodies, and a symphony in E, finished in 1909, published in 1910, and first performed in 1912 by Ettore Panizza at San Remo. A string quartet and a setting of three poems by Tagore may be mentioned next as standing probably between the symphony and the next opera, 'L'ombra di Don Giovanni,' produced at La Scala in Milan on Mar. 3, 1914, and later revised by the composer. Alfano's latest operatic work is 'Sacùntala.' In 1919 Alfano was appointed director of the Liceo Musicale Rossini at Bologna. In 1920 appeared three songs on poems by Luppis, and in 1922 a similar set, 'Dormiveglia,' to words by Lipparini.

Alfano is essentially an operatic composer; he infuses dramatic feeling and human passion even into abstract musical forms, such as those of the symphony and the string quartet. But although he is at his best on the stage, he is by no means dependent, like the adherents of *verismo*, on sensationally theatrical situations. He grips the hearer by the quality of his music itself, which is distinguished by an impassioned and restless chromaticism, good construction and finely knit texture, dazzling orchestration, and a continuous symphonic development which compels sustained attention. His vocal writing leans towards expressive *bel canto* rather than realistic declamation. E. B.

ALFERAKY, Achilles Nikolaievitch (*b.* Kharkov, June 21, 1846), composer of pianoforte music and songs. A 'Sérénade levantine' from op. 25 is mentioned as noteworthy. His numerous songs show the character of the Ukrainian folk element.

ALFIERI, The Abbate Pietro (*b.* Rome, June 29, 1801; *d.* there, June 12, 1863), was admitted in early life to holy orders; became a Camaldolese monk; and, for many years, held the appointment of professor of Gregorian music at the English College in Rome. He was an earnest student both of plain-song and polyphonic music, and published some useful treatises on these subjects, and some valuable collections of the works of the great polyphonic composers. (See Allegri; Improperia). He died insane.

The following is a list of his works:

1. Numerous articles on subjects connected with Ecclesiastical Music in the *Gazzetta musicale di Milano*, and other periodicals.
2. Excerpta ex celebrioribus de musica viris, J. P. A. Praenestino, T. L. Vittoria et Gregorio Allegri Romano. (Roma, 1840.)
3. Inno e ritmo Stabat Mater; e motetto Fratres ego, di G. P. L. da Palestrina. (Roma, 1840, fol.)
4. An edition of the Sistine Miserere, published under the pseudonym of Alessandro Geminiani. (Lugano, 1840, fol.)
5. Italian translation of Catel's *Traité d'harmonie*. (Roma, 1840.)
6. Accompagnamento coll' organo, etc. (a treatise on accompanying plain-song), Roma, 1840.
7. Raccolta di motetti di G. P. L. da Palestrina, di L. da Vittoria, di Avia e di Felice Anerio Romano. (Roma, 1841, fol.)
8. Ristabilmento del canto e della musica ecclesiastica. (Roma, 1843, 8vo.)
9. Notizie biografiche di Nicolo Jommelli. (Roma, 1845, 8vo.)
10. Saggio storico teoretico-pratico del canto Gregoriano. (Roma, 1855.)
11. Prodromo sulla restaurazione de' libri di canto ecclesiastico detto Gregoriano. (Roma, 1857.)
12. Raccolta di musica sacra, etc, containing in 7 volumes a large selection from works of Palestrina. A full list of the contents was printed in earlier editions of this Dictionary.

W. S. R.

AL FINE (Ital.), 'to the end.' This term indicates the repetition of the first part of a movement either from the beginning (*da capo*) or from a sign 𝄋 (*dal segno*) to the place where the word *fine* stands.

ALFONSO DELLA VIOLA, see Viola.

ALFONSO EL SABIO (Alphonso X.) (*b.* Toledo, Nov. 23, 1221; *d.* Seville, Apr. 4, 1284), King of Castille and León, married Doña Violante of Aragon, daughter of James the Conqueror, and ascended the throne on the death of his father, St. Ferdinand, in 1252. His sister Eleanor married Edward I. of England.

Alfonso the Sage belongs to the history of music through his collection of 'Cantigas'—some four hundred poems in the Galician-Portuguese dialect, preserved, with musical notation, in two exquisitely illuminated MSS. in the library of the Escurial. An earlier and incomplete MS., formerly at Toledo, is now in the National Library at Madrid; while a third (at Florence) has a 5-line stave ruled for the music, although the notes were never filled in. The *cantigas* are popular religious songs—accounts of miracles and carols in praise of Our Lady—set or fitted to modal melodies of the time. They describe incidentally merchants of Paris and Flanders buying wool in England, German pilgrims on the road to St. James of Compostela; and include several well-known legends of the Blessed Virgin: how she took the place of a nun who ran away from her convent, or of a monk so enraptured by hearing a bird sing that he stayed listening to it for three hundred years, and how the finger of a statue closed on the ring which the unwise bridegroom had placed upon it (cf. the stories by Mérimée and Eichendorf).

The *cantigas* have been more studied in their literary and linguistic aspects than from the standpoint of the music which accompanies them. The Chilean philologist Hanssen, however, pointed out that neither the metre of the verse nor the rhythm of the words was intelligible without the music. The method of counting syllables often fails to determine the metre, as is the case with much popular Spanish poetry; the number of syllables in a line often varies. The combinations of metrical feet are subtle, but are capable of a musical explanation, *e.g.* a $\frac{6}{8}$ rhythm may take the place of a $\frac{3}{4}$ rhythm in the same verse, while many of the poems show, on analysis, that the musical rhythm came first and the metre afterwards. Pierre Aubry, by applying the principles of the 'rhythmic modes' employed in deciphering other mensural music of the period, was able to give satisfactory interpretations of a number of the *cantigas*; but there remain many in which the musical rhythm has no apparent connexion with that of the words. The script, though clear as to the position of the notes, is often doubtful as to their duration (as is the case in the French *chansonniers* of the 13th century). It sometimes happens that when a melodic phrase is repeated in the course of the strophe, the value of the notes is altered; a breve becomes a long, or one ligature is replaced by another. The tonality of the *cantigas* belongs to an age of transition from the melodies of the troubadours. There is a certain feeling for firmness of tonality, and a tendency to employ only two modes: the Dorian (final D) and the Mixolydian (final G; sometimes written with a B flat). Examples of the ordinary major mode are also to be met with.

The composers of the *cantigas* collected by Alfonso X. were greatly influenced by the later French troubadours, and Guirault Riquier (1224–92) is known to have spent some time at his court. Yet they preserve a certain indigenous character, especially noticeable in the construction of the musical strophe and the use of the refrain (*estribillo*); while the script, which differs slightly in the two MSS., indicates that the copyists were men of Spanish training. Collet and Villalba sought for parallels between the melodic formulæ of the *cantigas* and those found in Spanish popular song, in Gregorian and Mozarabic chant, and in contemporary French melody. It is probable that many different poets and composers are represented in the collection, both for linguistic reasons and from the musical and poetical form which differs slightly in every *cantiga*.

King Alfonso was not so much a poet and composer as an editor and a Mæcenas. Poets

and musicians flocked to his court from all parts; it is very likely that some of these were Arabs. The theory that the peculiarities of the *cantigas* are due to Moorish influence has been revived by D. Julián Ribera. It was first suggested in the 18th century by P. Juan Andrés, an exiled Spanish Jesuit, who considered that Alfonso el Sabio had taken his system of musical notation from Arab music. This statement, though probably untrue, seeing that the Arabs never used a practical notation, may be true of the form of the poems, the instruments used (if any were used) to accompany the voice, and the musicians who played them; indeed, there are miniatures in the MSS. showing musicians in Arab dress playing on instruments known to have been of Arab origin. Altogether, the *cantigas* of Alfonso el Sabio form one of the greatest monuments of mediæval music.

For the text, see the edition published by the Royal Spanish Academy (1889), with facsimile reproduction of some of the music, and the selection in *Alfonso X. El Sabio: Antología de sus obras*, vol. i. (Madrid, 1922); also the study by Aubrey F. G. Bell, *Mod. Language Review*, x. (1915), pp. 338-348. The best accounts of the music are those of Pierre Aubry, *Iter Hispanicum*, iii., and Henri Collet and P. Villalba, *Bulletin hispanique* (1911), pp. 270-290, with legible photographic reproductions of many of the *cantigas*. Ribera's sumptuous volume may also be consulted, though the transcriptions are of doubtful validity. See also J. B. Trend, *Alfonso the Sage*. London, 1926). J. B. T.

ALFONSO UND ESTRELLA, opera in three acts; libretto by F. von Schober; music by Schubert. Produced Weimar, June 24, 1854. The whole work published in the complete edition of Breitkopt & Härtel, ser. xv. vol. 5.

Dates on autograph (Musikverein, Vienna): end of first act, Sept. 20, 1821; end of second act, Oct. 20, 1821; end of third act, Feb. 27, 1822; overture (MS. with Spina), Dec. 1823.

ALFORD, John, a lutenist in London in the 16th century. He published there, in 1568, a translation of the work of Adrien Le Roy (*q.v.*) on the lute under the title of *A Briefe and Easye Instruction to learne the tableture, to conduct and dispose the hande unto the Lute. Englished by J. A.* with a woodcut of the lute. W. H. H.

ALFVÉN, Hugo (*b.* Stockholm, May 1, 1872), composer, studied at the Stockholm Conservatoire under Lindgren. He began his career as a violinist in the court orchestra, and subsequently devoted himself to composition. In 1910 he became musical director at the University of Upsala, with the Students' Choir of which institution he has undertaken several concert tours.

Alfvén's works include:

3 Symphonies (F minor, D major and E major), 2 Symphonic Poems, and the Swedish rhapsody, Midsommarvaka (Midsummer Vigil), for orchestra; Sten Sture, for chorus and orchestra; The Bells, for solo voice and orchestra; a Centenary March, a Triumphal March, a Cantata, a Romance for violin, and a number of songs and piano pieces. E. B.

ALGAROTTI, Conte Francesco (*b.* Venice, Dec. 11, 1712; *d.* Pisa, May 3, 1764), a man of varied accomplishments and learning, who studied at the Nazarene College in Rome, and the universities of Bologna and Venice. He travelled to Paris and London, and was for some years in high favour at the court of Berlin; ill-health compelled him to return to Italy about 1749. His place in the history of music is due to an important treatise, *Saggio sopra l' opera in musica*, first published in 1755, and subsequently translated into French, English and German; he points out the many serious defects in the contemporary presentation of operas, and foresees an ideal theatre for operatic music, the description of which reads like a prophecy of Bayreuth. M.

ALGAROTTI, Giovanni Francesco, a 16th-century composer. Two books of his madrigals were published at Venice in 1567 and 1569 (*Eitner*).

ALGHISI, Paris Francesco (*b.* Brescia, June 19, 1666; *d.* Mar. 30, 1733), studied music under Orazio Polarolo and was for some time engaged at the Polish court; but returned to Brescia and entered the Order of the Minorites. His operas, 'Amor di Curzio per la patria' and 'Il trionfo della continenza,' were performed at Venice in 1699. Valentini mentions three more which were performed at Bologna between 1703 and 1708. Valentini and Peroni mention also 2 oratorios, 1 cantata, 1 sonata da camera, but without further particulars (*Eitner*; *Fétis*).

ALGREEN, Sven, a Swedish savant of the 18th century, published in vol. 19 of the *Memoirs of the Swedish Academy* his *Description du clavecin à tangentes du Dr. Brelin, décédé, et des additions qu'y a faites M. Scheffer* (*Fétis*).

ALI BABA, ou les quarante voleurs, opera by Cherubini. Produced Opéra, Paris, July 22, 1833.

ALIÓ, Francisco (*b.* 1862; *d.* 1908), a Spanish composer, one of the forerunners of the Spanish national school. He composed a large number of songs and pianoforte pieces, which show the 'national idiom' derived from the conventionalised expression of the popular music of various parts of Spain. He was followed by Granados, Albéniz, to a certain extent by Turina, and most Spanish composers down to Falla, who was the first to break away from the convention, and yet to write music which is profoundly Spanish in feeling. J. B. T.

ALIPRANDI. The *Kreisarchiv* of Munich enumerates several 18th-century violoncellists of that name, but without giving their Christian names, which makes it difficult to distinguish them. The best known were: (1) Bernardo (*b.* Milan, 18th cent.), appointed violoncellist in the court chapel at Munich, Jan. 19, 1732; chamber composer, 1737; Konzertmeister, 1750; also Kapellmeister. He wrote 3 operas, a masque, and a Stabat Mater for soprano and contralto with

orchestra. He was pensioned *c.* 1778, and was still receiving 500 guilders a year in 1780. (2) BERNARDO, son of the former, was violoncellist at the court, and wrote pieces for the viola da gamba in 1782. (3) GERHARD, violoncellist in the court chapel, received an increase of salary in 1785. (4) VINCENT (*b.* Bologna ; *d.* there, Feb. 28, 1828), a distinguished operatic tenor, is mentioned by Fétis as having appeared with success at the principal theatres in Italy. E. V. d. S.

ALISON, see ALLISON.

ALKAN, (1) CHARLES HENRI VALENTIN MORHANGE, called Alkan (*b.* Paris, Nov. 30, 1813 ; *d.* there, Mar. 29, 1888), pianist and composer, chiefly of études and caprices for his instrument.

Alkan was admitted to the Conservatoire of Paris in his sixth year (1819) and remained there until 1830, during which term he was successful in several competitions, and left the institution with the first prize in 1826, and honourable mention at the Concours of the Institut in 1831. After a short visit to London in 1833 he settled as a master of the pianoforte at Paris. His published compositions mount up to opus 72, and include two concertos, several sonatas and duos, a trio, a large number of *pièces caractéristiques*, and transcriptions and songs. Amongst these his works for the pianoforte with pedals, known in France as the ' Pedalier grand,' op. 64, 66, 69 and 72, take rank with his études. His astounding op. 35 (12 études), op. 39 (12 études), and Trois grandes Études, (*a*) ' Fantaisie pour la main gauche seule,' (*b*) ' Introduction et finale pour la main droite seule,' (*c*) ' Étude à mouvement semblable et perpétuel pour les deux mains,' belong to the then most modern development of the *technique* of the instrument. Though they cannot stand comparison in point of beauty and absolute musical value with the études of Chopin and Liszt, yet, like those of Anton Rubinstein, which are in some respects akin to them, they have a valid claim to be studied ; for they present technical specialities nowhere else to be found in the music of their date. E. D.

(2) His brother, NAPOLÉON MORHANGE (*b.* Paris, Feb. 2, 1826; *d.* Mar. 1888), was a good pianist and composer of piano pieces.

ALLA BREVE (Ital.). The expression *alla breve*, placed at the beginning of a composition, has been variously interpreted. Some have understood it to mean a rhythm of one breve to a bar, while others, translating the words ' alla breve ' literally into ' in short fashion,' understand by it a rhythm of either two or four beats in a bar, but at a double rate of movement, semibreves being taken at about the speed of ordinary minims, and so on. In favour of this latter view is the fact that the signature of alla breve time is always the semicircle crossed by a vertical stroke, ¢, which is the ' diminutio simplex in tempus imperfectum' of early measured music, where the stroke through the signature was used to indicate that each note was to be halved in time-value, *i.e.* the rate of the movement doubled. Both views agree in the most important particular, namely, that compositions marked ' alla breve,' or, even when not so marked, if provided with the distinctive time-signature, must be performed twice as fast as if simply marked with the sign of common time, C or 4-4. And with regard to the opinion which holds that compositions alla breve ought to be written in bars of the value of a breve, it may be urged that in spite of the undoubted fact that most of such compositions have but one semibreve in the bar, it is possible that this method of writing may have been intended to represent merely the division of the original alla breve bar into two halves, for convenience of reading. Moreover, it is certain that the expression alla breve has never been applied to movements in triple time, although if it had had reference merely to the rate of movement this would have been perfectly possible. F. T. ; addns. S. T. W.

ALLA CAPPELLA, see A CAPPELLA.

ALLACCI, LEONE (*b.* island of Chios, 1586 ; *d.* Jan. 19, 1669), of Greek parentage. He went to Rome at nine years of age, and in 1661 became ' custode ' of the Vatican Library. His name is worth preserving for his *Drammaturgia* (Rome, 1666) a catalogue of Italian musical dramas produced up to that year, indispensable for the history of Italian opera. A new edition, carried down to 1755, appeared at Venice in that year. Freher mentions also *De melodis Graecorum* as a work of his (*Q.-L.*). F. G.

ALL' ANTICO (Ital.), ' in the ancient style.'

ALLARGANDO (Ital.), ' becoming broader,' a term indicating an increased dignity of style, with maintained or increased power, as well as a decided slackening of the pace, which, by itself, would be marked ' rallentando.'

ALLEGRANTI, MADDALENA, a singer of the 18th century, who after considerable early success appears to have outlived her vogue.

She was a pupil of Holtzbauer of Mannheim, and appeared for the first time at Venice in 1771. After singing at other theatres in Italy, she went in 1774 to Germany, where she continued to perform at Mannheim and Ratisbon till the year 1779, when she returned to Venice. She sang there at the theatre of San Samuele during the Carnival, and eventually came to England in 1781. Here she was enthusiastically admired in her first opera, the ' Viaggiatori felici ' of Anfossi. At the end of her second season she went to Dresden, where the Elector engaged her at a salary of a thousand ducats. She came a second time to London, many years later, and reappeared in Cimarosa's

'Matrimonio segreto,' but was a complete failure. She performed in oratorio in 1799. A pretty portrait of Allegranti is engraved by Bartolozzi, after Cosway. J. M.

ALLEGRETTO (Ital.), a diminutive of allegro, and as a time-indication somewhat slower than the latter, and also faster than andante. Like allegro it is frequently combined with other words, *e.g.* allegretto moderato, allegretto vivace, allegretto ma non troppo, allegretto scherzando, etc., either modifying the pace or describing the character of the music. The word is also used as the name of a movement, and in this sense is especially to be often found in the works of Beethoven. F. P.

ALLEGRI, Domenico (*b.* Rome, 2nd half of 16th cent.), maestro di cappella at Sta. Maria Maggiore, Rome, from Apr. 3, 1610, to 1629. According to Fétis he published a book of motetti *a* 2-5 v. at Rome in 1638. His work, 'De modis quos expositis in choris' (Rome, 1617), is one of the first in which the accompanying instruments are written on separate staves. It contains a solo each for soprano and bass and a duet for two tenors, all accompanied by violins, which, in the case of the soli, are muted—a very early example of the use of mutes. E. v. d. S.

ALLEGRI, Filippo (*b.* July 18, 1786), pupil of the learned musician, Father Braccini, teacher at the seminary and maestro di cappella at the church of St. Michael, Florence. He wrote a Requiem *a* 4 v. with orchestra, and other church music highly praised by Fétis.

ALLEGRI, Giovanni Battista, according to the title-page of his 'Motetti a voce sola con 2 vv. e vcl. col B. per l' organo,' op. 1 (Venice, 1700), was at that time maestro and organist at Arzignano, near Vicenza. Eitner mentions several other works, chiefly church music.

ALLEGRI, Gregorio (*b.* Rome, 1582; *d.* there, Feb. 17, 1652), a famous composer of Latin church music. He was a beneficed priest attached to the cathedral of Fermo, a member of the same family which produced Correggio the painter, and important as a composer of the Roman School of church music.

He was a pupil of the two brothers Nanini (*q.v.*), inasmuch as he was a chorister under G. Bernardino at the church of S. Luigi dei Francesi (1591–96) and also belonged to the school founded by G. Maria.

As a tenor he sang in festivals at S. Luigi (1601–4) (*Riemann*). During his residence at Fermo he acted as chorister and composer to the cathedral. Certain Motetti and Concerti which he published at this time attracted the notice of Pope Urban VIII., who appointed him, on Dec. 6, 1629, to a vacancy among the *Cantori* of his chapel. This post he held until his death.

His name is most commonly associated with a Miserere for nine voices in two choirs, sung annually in the Pontifical Chapel during Holy Week, and held to be one of the most beautiful compositions which have ever been dedicated to the service of the Church. There was a time when it was so much treasured that to copy it was a crime punishable with excommunication. Not that its possession was even thus confined to the Sistine Chapel. Three authorised copies are recorded before 1770, one for the Emperor Leopold I., one for the King of Portugal and a third for Padre Martini. Burney got a copy and printed it.[1] Mozart (1770) took down the notes while the choir were singing it, and Choron managed to insert it in his 'Collection' of pieces used in Rome during Holy Week. Leopold I.[2] sent to the Pope a formal request for a copy of it, which was granted to him. The Emperor had the work performed with much ceremony by the choir of the Imperial Chapel at Vienna. The effect, however, was so disappointing that he conceived himself the victim of a trick upon the part of the copyist, and complained to the Pope that some inferior composition had been palmed off upon him. The fact was that the value of this very delicate work depends almost entirely upon its execution, and upon certain traditional *abbellimenti* (ornaments) which give a peculiarly pathetic quality to many passages. Without them it is simple almost to the point of apparent insipidity, and it only assumes its true character when sung by the one choir which received and has retained as traditions the original directions of its author. In the Sistine Chapel it has ever commanded the enthusiasm of musicians for a certain indescribable profundity of sadness, and a rhythmical adaptation to the words about which it is woven but which, in spite of its apparent simplicity, are so difficult to produce that no fraud was necessary to account for the imperial failure at Vienna. The effects of Allegri's Miserere are like the aroma of certain delicate vintages which always perishes in transit: although in Rome, to turn to a metaphor of Baini's, they have never shown a wrinkle of old age.[3] (See *Mus. T.*, 1885, p. 455). An edition including these *abbellimenti* was published by Alfieri (*q.v.*) in 1840. The example[4] on next page, in which the embellished cadences are printed in small type sufficiently shows their nature.

As the man's music so was the man. Adami of Bolsena says that he was of a singular gentleness and sweetness of soul and habit. He died at a ripe old age, and was laid in S. Maria in Vallicella, in the burial-place belonging to the Papal Choir.

[1] Burney probably got his copy from Santarelli the singer, but compared it with that of Martini before publishing it in *La musica della Settimana Santa* (1790). From that work (now scarce) it was reproduced in Novello's *Music of Holy Week*.

[2] Santarelli related this story.

[3] 'Senza aver contratto ruga di vecchiezza.'

[4] Quoted by Rockstro under Miserere in previous editions of this Dictionary.

His published works consist chiefly of two volumes of 'Concertini' (1618 and 1619) and two of 'Motetti' (1621), all printed by Soldi of Rome. Some stray Motetti of his were, however, inserted by Fabio Constantini in a collection entitled, 'Scelta di motetti di diversi eccellentissimi autori, a due, tre, quattro, e cinque voci.' But the Archives of S. Maria in Vallicella are rich in his manuscripts, as are also the Library of the Collegio Romano and the Collection of the Papal Choir. The library of the Abbé Santini contained the scores of various pieces by him, including Magnificats, 'Improperia,' 'Lamentazioni' and 'Motetti.' Kircher too in his 'Musurgia' has transcribed an extract from his instrumental works. A 'Veni Sancte Spiritus' by him for four voices is included in the 'Musica Divina' of Proske (Liber Motettorum, No. lx.).

E. H. P., with addns.

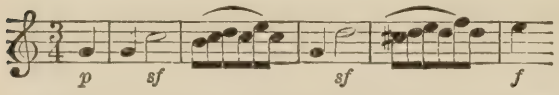
ALLEGRI, Lorenzo, a composer who lived at Florence in 1618, according to the dedication to the Grand Duke of Toscana of a book of instrumental and vocal music published at Venice. Ant. Brunelli's Scherzi (1614) contain a song by Lorenzo Allegri, and his song, 'Como ch' in biondo' (1618), was republished in the *Leipziger Zeitung*, 1869, 221.

E. v. d. s.

ALLEGRO (Ital.). The literal meaning of this word is 'cheerful,' and it is in this sense that it is employed as the title of Milton's well-known poem. In music, however, it has the signification of 'lively' primarily in the sense of quick, and is often combined with other words which would make nonsense with it in its original meaning—*e.g.* allegro agitato e con disperazione (Clementi, 'Didone abbandonato'). When unaccompanied by any qualifying word allegro indicates a rate of speed nearly intermediate between andante and presto. There is, however, no other time indication which is so frequently modified by the addition of other words. (See Tempo: Italian terms.) The word allegro is also used as the name of a piece of music, either a separate piece (*e.g.* Chopin's 'Allegro de Concert,' op. 46), or as the first movement of a large instrumental composition. (See Symphony and Sonata.) E. P.

ALLEMANDE (Fr.) (Eng. forms, Almand, Almain). (1) One of the movements of the Suite (*q.v.*) and, as its name implies, of German origin. Thoinot Arbeau in his *Orchésographie* has left a description of the Allemande as a slow dance already antiquated, familiar to the Germans; Mersenne mentions it as obsolete in his time and Bronsard (*Dictionary of Music*) describes it as a grave symphony generally in 2 or 4 time. The Allemande of the Suite does not appear to be founded on the dance form. It is a piece of moderate rapidity in common time, and beginning usually with one short note, generally a quaver or semiquaver, at the end of the bar.

J. S. Bach, Suites Anglaises, No. 3.



Sometimes instead of one there are three short notes at the beginning: as in Handel's Suites, Book i., No. 5.

The music frequently consists of a highly figurate melody, with a comparatively simple accompaniment. Suites are occasionally met with which have no allemande (*e.g.* Bach's Partita in B minor), but where it is introduced it is always, unless preceded by a prelude, the first movement of a suite. The allemande always consists of two parts, each of which is repeated; the second is frequently longer than the first; Bach, however, mostly makes them of the same length. (See Teutsch.)

(2) The word is also used as equivalent to the

[1] The accidentals in brackets seem due to the taste of individual, probably late, singers.

Deutscher Tanz—a dance in triple time, closely resembling the waltz. Specimens of this species of allemande are to be seen in Beethoven's '12 Deutsche Tänze, für Orchester,' the first of which begins thus :

It has no relation whatever to the allemande spoken of above, being of Swabian origin.

(3) The name is also applied to a German national dance of a lively character in 2-4 time, similar to the CONTREDANSE.

E. P. ; addns. M. L. P.

ALLEN, HENRY ROBINSON (*b.* Cork, 1809 ; *d.* Shepherd's Bush, Nov. 27, 1876), a baritone singer, who made a reputation on the English stage.

He was educated at the R.A.M. and first attracted public attention by his performance on Feb. 5, 1842, of Damon on the production of 'Acis and Galatea' under Macready at Drury Lane. In the early part of 1846 he was engaged at Drury Lane, where he played, Feb. 3, Basilius on production of Macfarren's 'Don Quixote.' Apropos of this part, Chorley, in the *Athenæum*, considered him, both as singer and actor, as the most complete artist on the English operatic stage.

Allen retired early from public life, and devoted himself to teaching and the composition of ballads, two of which became popular, viz. 'The Maid of Athens' and 'When we two parted.' (See Rev. J. E. Cox, *Musical Recollections.*) A. C.

ALLEN, SIR HUGH PERCY, Mus.D. (*b.* Reading, Dec. 23, 1869), professor of music in the University of Oxford and director of the R.C.M., occupies a more prominent position in English musical life than is accounted for by his holding of these two important offices. His is a position of authority attained largely by the exercise of personal qualities which lie outside purely musical abilities, qualities most readily summed up as driving-force.

Allen was born and brought up at Reading, and his education in music was from the first in the school of experience. At eleven years of age (1880) he became organist of St. Saviour's Church, Reading, and between then and 1892, when he was elected organ scholar of Christ's College, Cambridge, his appointments included the organistships of Tilehurst Church (1884) and Eversley Church (1886), an assistant music mastership at Wellington College (1887) and the assistant organistship of Chichester Cathedral in the same year. A wider life began for him when he reached Cambridge. He was beyond the average age of freshmen at the University ; he had come there to work, but in his own way. He gave an undertaking to his tutor that he would present himself for his schools at the proper periods, but bargained that he should not be required to attend lectures. The bargain was kept with satisfactory results. He had already taken his B.Mus. degree at Oxford when he went up to Cambridge. He graduated B.A. there and D.Mus. at Oxford in 1889. From the first at Cambridge his stimulating influence was felt, both within and beyond his college. He gave performances of Bach cantatas in his college chapel and laid the foundation of his justly earned reputation as a conductor of Bach. Subsequently he held appointments as organist of St. Asaph's Cathedral (1897) and Ely Cathedral (1898), and although at each of them only a short time he put new life into the Cathedral traditions by giving performances of such important works as Brahms's 'Requiem' and Bach's 'St. Matthew Passion.' In 1901 he was appointed organist of New College, Oxford, and here he settled down to seventeen years of untiring effort for the development of music in the University. He maintained the choir of New College Chapel at a high level and gave innumerable special performances of music, ranging from the *Passions* of Schütz (of whose work he made a specially close study) and the masses of Palestrina to works by contemporary composers. He conducted the choral societies of both town and University, and amalgamated them to such good purpose that Oxford was provided with a constant succession of choral concerts of the highest class. He founded an amateur orchestra which attained a correspondingly high level, and he even succeeded in producing a series of stage performances of Beethoven's 'Fidelio' given almost entirely by members of the University.

Allen was made a Fellow of New College in 1908 and Choragus to the University in 1909. The implied condition of the first of these appointments was that he should undertake some definite musical research, but such work is not in Allen's line, and he presently resigned the emoluments of the Fellowship rather than give himself to scholastic work. The latter, however, enabled him to achieve a revolution in the conduct of musical examinations at Oxford, and to produce a scheme for the practical training of music students within the University which has already had far-reaching results. His work as conductor in Oxford reached its climax before the war in the four days' Bach Festival given there in 1914. Meantime, however, he had become known in London as conductor of the London Bach Choir (1907), and in 1913 he was invited to conduct the Mass in B minor and other works at the famous Leeds Festival. He had achieved more than a local reputation, yet it was probably a surprise to many when on the death of Sir Hubert Parry (1918) Allen succeeded him as director of the Royal College of

Music in London. None who knew the man, however, doubted the wisdom of the appointment. Allen was exactly suited to give the sort of leadership needed at that moment in that place. Like every other educational institution in the country, the Royal College of Music was being flooded with new students after a period of inevitable stagnation during the war. Allen had to remodel the training and enlarge and re-form his staff to meet the requirements of a new age. Fortunately his long friendship with Parry had taught him what it was essential to preserve in the traditions of the place, and he has directed its destinies in a wise spirit of enterprising conservatism. While he can be drastic where reform is needed he has never succumbed to iconoclasm. The year 1918 began an entirely new period of Allen's career. Naturally he resigned the organistship of New College on his appointment at the Royal College of Music. But he had succeeded Sir Walter Parratt (retired) as professor of music at Oxford. He realised that the two posts would claim all his available energy. He conducted the London Bach Choir in a four days' festival of Bach's music (Apr. 1920), and then resigned the conductorship which he had held for 13 years. He consented to conduct at the Leeds Festival of 1922 only in order that he might give a commemorative performance of some of Parry's works, and he has done more than any man to keep Parry's work before a public not too readily responsive to its beauties. He conducted part of the Leeds Festival (including Bach's B minor Mass) again in 1925, but for the rest, the R.C.M. and the music of the University have become his life. In the former his power of stimulating the energies of others has had full scope ; in the latter he has converted the professorship into a practical directorate. He does not merely lecture and examine ; he makes music with his students. The Oxford Festival of 1922 contained every type of music from folk-song and dance to symphonic concerts, and from *a cappella* singing to ballets written for and danced by members of the University. He organised a similar festival in Oxford in 1926 to commemorate the tercentenary of the Heyther foundation. Allen was knighted in 1920. Since he settled in London he has been much in request for administrative work of various kinds. As member of the Committee of Management of the Royal Choral Society, a director of the Royal Philharmonic Society and chairman of the British Music Society, he has exerted an important influence on the musical life of London. An admirable character study of Allen by Edward J. Dent was published in *The Music Bulletin*, Jan. 1923.

See Bach Choir ; Oxford ; Royal College of Music ; Professor. C.

ALLGEMEINE MUSIKALISCHE ZEITUNG. See Leipzig and Periodicals, Musical.

ALLIN, Norman (*b.* Ashton-under-Lyne, Nov. 19, 1885), a bass singer of unusual distinction.

On winning, at the age of 20, the Lancashire County Council scholarship (£60 a year for 3 years), at the Manchester Royal College of Music, he studied singing there first with John Acton and afterwards with Francis Harford. He made his first appearance at a Brand Lane-Wagner concert, at Manchester, and his first appearance on the stage at the Aldwich Theatre, London, in 1916 under Sir Thomas Beecham. Beginning with minor parts—the aged Hebrew in ' Samson and Delilah,' followed by the Ragman in ' Louise '—he soon had more important work. He sang Chaliapin's part in ' Khovachina ' when that work was first done in English at Drury Lane. He achieved a wider fame when he sang Gurnemanz in Beecham's production of ' Parsifal ' in English at Covent Garden on Nov. 17, 1919. Since then Allin has been one of the busiest of singers, both in the concert-room and the opera-house. He is a director of the British National Opera Company. His Gurnemanz—heard again at Covent Garden in 1922 and Feb. 1924—is one of the outstanding achievements of our native singers since the war. S. H. P.

ALLISON (Alison), (1) Richard, one of the minor composers of madrigals, etc., of the Elizabethan and Jacobean eras.

His name first occurs as a contributor to T. East's ' Whole Booke of Psalms,' 1592. A few years later he published on his own account ' The Psalmes of David in Meter,' 1599, a collection of old church tunes harmonised by himself in four parts, with an accompaniment for the ' lute, orpharyon, citterne, or base violl,' and important as being one of the earliest to give the melody in the cantus or soprano part—the usual practice being to give it to the tenor. Allison advertises it ' to be solde at his house in the Duke's-place near Alde-gate,' and dedicates it to the Countess of Warwick. It is ushered forth by some complimentary verses by John Dowland, the celebrated performer on the lute, and others. He appears to have been patronised by Sir John Scudamore, to whom he dedicated his collection of partsongs entitled, ' An Howres Recreation in Musicke, apt for Instrumentes and Voyces,' 1606. This publication contains ' a prayer ' set to music ' for the long preservation of the king and his posteritie,' and ' a thanksgiving for the deliverance of the whole estate from the late conspiracie '—the Gunpowder Plot.

The book consists of 24 songs, 10 for 4 voices, the remainder for 5. Not all are separate songs ; for example, numbers 3 to 7 represent 5 verses of the same poem. Fellowes (*English Madrigal Composers*) says that ' they do not

approach the standard of the great composers of the School.' Original editions of Allison's work are to be found in the British Museum, the Bodleian and R.C.M. Libraries. Some MS. lute compositions are in the British Museum (Add. MSS. 31, 392), in the Cambridge University Library (Dd. iii. 18, and Dd. xiii. 11), and in the Oxford Music School collection.

(2) ROBERT, probably a relative of RICHARD, was a gentleman of the Chapel Royal. After serving in the royal establishment for 20 years he sold his place, Feb. 8, 1609–10, to Humphry Bache (*Allison's publications*; Camd. Soc. *Cheque-Bk. of Chap. Royal*).

E. F. R., with addns.

ALLITSEN, FRANCES (*b.* 1849; *d.* Oct. 2, 1912), had considerable talent as a composer of songs, some of which were very popular in England. She was educated at the G.S.M. and appeared as a singer in 1882. Her patriotic song, 'There's a land,' was widely sung about the time of the South African War (1899). 'A song of Thanksgiving' was for a time equally famous. C.

ALLON, HENRY ERSKINE (*b.* Canonbury, 1864; *d.* Apr. 3, 1897), a composer chiefly of choral works.

He was the son of an eminent nonconformist preacher, the Rev. Henry Allon, D.D., and was educated at Reading and Trinity College, Cambridge. He studied composition with Corder, and produced a good deal of chamber music, pianoforte solos, etc. Several books of his songs were published. His cantatas and choral ballads were:

'May Margaret,' 1889; 'Annie of Lochroyan,' 1890, produced at the Philharmonic, 1893; 'The Childe of Elle,' 1891; 'The Maid of Colonsay,' 1894; 'Sir Nicholas,' 1895; and 'The Oak of Geismar,' 1895.

This last was given by the Highbury Philharmonic Society only a short time before the composer's death. M.

ALL' OTTAVA (Ital.), 'in the octave.' (1) In pianoforte music a passage marked *all' 8va.* (or merely *8va.*) is to be played an octave higher than written, if the sign is placed above the notes, an octave lower if placed below them. In the latter case the more accurate indication *8va. bassa* is frequently employed. The duration of the transposition is shown by a dotted line, and when the notes are again to be played as written, the word *loco* (Lat.), 'in its place,' is put over (or under) the music. (2) In orchestral scores, especially manuscripts, *all' 8va.* signifies that one instrument plays in octaves with another, either above or below. (3) In playing from a figured bass the term shows that no harmonies are to be employed, and that the upper parts merely double the bass in octaves. In this case it is equivalent to TASTO SOLO.

E. P.

ALL' UNISONO (Ital., abbreviated *Unis.*), 'in unison.' In orchestral scores this term is used to show that two or more instruments, the parts of which are written upon the same stave, are to play in unison. In modern scores the words *a due, a tre*, etc., are more frequently employed. (See ABBREVIATIONS.)

ALMAHIDE, opera by an anonymous author and composer, performed at the Queen's Theatre, Haymarket, Jan. 1710, the year of Handel's arrival in England. Burney (*Hist.* iv. 211) considers that the style of the music resembles Bononcini, and remarks that it was the first opera performed in England wholly in Italian and by Italian singers, who were Nicolini, Valentini, Cassani, Margarita de l'Epine and Isabelle Girardeau. There were intermezzi in English between the acts, but the opera itself was entirely in Italian. (Cf. MANCINI, Francesco.) M.

ALMAINE & CO., D', see GOULDING & CO.

ALMEIDA, FR. FERNANDO DE (*b.* Lisbon, 1618?; *d.* Thomar, Mar. 21, 1660), Portuguese composer, and pupil of Duarte LOBO (*q.v.*). He became a monk, and was admitted to the monastery of Thomar in 1638. His compositions, including a Mass for 12 v., Lamentations, Responsoria, and Miserere, were in the library of John IV. at Lisbon, but were burnt in the earthquake of 1755. J. B. T.

ALMEIDA, FRANCISCO ANTONIO DE (1st half of 18th century), one of the first Portuguese composers to write Italian opera. The fashion was set in 1708, when King John V. married a daughter of the Emperor Leopold of Austria. Portuguese musicians were sent to study in Italy, among whom was Antonio Texeira (a contemporary of Francisco d'Almeida) who went to Rome in 1717; and it is conjectured that d'Almeida followed him.

The following operas are known:

1. La Spinalba ovvero il Vecchio Matto. Dramma comico da rappresentarsi nel Real Palazzo di Lisbona per il Carnovale di quest' anno 1739. Posto in Musica per Francisco Antonio d' Almeyda.
(Bibl. da Ajuda, autograph. Opera in 3 acts, scored for 2 ob., 2 horns, str. and *continuo*.)
2. La Pazienza di Socrate. Atto terzo. Di Francisco Antonio d' Almeida.
(Bibl. da Ajuda. 3rd act only. The printed libretto states that it was performed in the Royal Palace at Carnival time, 1733. The 3rd act ends in a concerted finale.)

Printed *libretti* exist of the following:

La Finta Pazza, dramma per musica. (1735.)
Le Virtù trionfanti: Serenata. (1738.)
L 'Ippolito: Serenata a sei voci (1752). Written for the birthday of Doña Barbara de Braganza, the pupil of Domenico Scarlatti, who had become Queen of Spain in 1746.

A number of sacred works by this composer are preserved in the archives of Lisbon Cathedral. J. B. T.

ALMEIDA, P IGNACIO ANTONIO DE (*b.* Guimarães, Feb. 18, 1760; *d.* S. Pedro de Penedono, Oct. 25, 1825), a Portuguese composer and ecclesiastic, mestre de capella in the Cathedral of Braga, who wrote a quantity of church music and achieved the dignity of abbot. His works, including a Requiem and Stabat Mater, are said to be preserved in MS. in the National Library at Lisbon and in the library of the Archbishop of Braga. J. B. T.

ALMENRÄDER, Karl (*b.* near Dusseldorf, Oct. 3, 1786; *d.* Biebrich, Sept. 14, 1843), a bassoon-player who improved the instrument in various ways, wrote a pamphlet on it and composed concertos, etc, with string accompaniment.

He became professor in the Cologne music school in 1810, and in 1812 was engaged in the theatre orchestra at Frankfort-on-Main. After fulfilling various military appointments in the campaign of 1815–16, he started a manufactory of wind instruments in Cologne, but gave it up after two years and entered the band of the Duke of Nassau at Biebrich. (*Riemann.*)

ALMÉRIE (anagram of Lemaire), a kind of lute invented by Jean Lemaire (M. de Marolles, *Mémoires*, 1755, iii. 206).

ALMEYDA, Carlos Francisco de (*b.* Burgos, 2nd half of 18th cent.), Spanish violinist and composer, in the service of the King. Six quartets by him were published by Pleyel in 1798; while a 'Sinfonia' for 2 violas, 'Violetta,' 2 oboes, 2 corni di caccia, and bass, exists in MS. at Dresden. J. B. T.

ALMOROX, Juan (*c.* 1500), a Spanish composer of both secular and sacred music. Three *villancicos* by him (for 4 v.) are printed in the 'Cancionero musical de los siglos XV. y XVI.,' published by Barbieri from the MS. in the Royal Library at Madrid. One of these (No. 340, 'Gaeta nos es subjeta') refers to the capture of Gaeta, which surrendered to the Spaniards in 1504. Religious compositions by Almorox exist in MS. in the Cathedral of Tarazona. J. B. T.

ALNAES, Eyvind (*b.* Frederikstown, Norway), pupil of Ivar Holter, at Christiania, and of Carl Reinecke, Leipzig, 1892–95, organist at Christiania, composer of orchestral and choral works, chamber music and songs.

ALOISI (Alovisio, Alovisius, Aloysius), Giovanni Battista (*b.* Bologna, *c.* 1565), a Minorite friar, bachelor of theology and director of music. He composed motets, sacred concertos, 4-8-part litanies, etc.

ALOYSON, M. Anglus, an English 16th/17th-century composer. Fuhrmann published in his lute-book, 1615, a pavane of his.

ALPENHORN (Alphorn), an instrument with a cupped mouthpiece, of wood and bark, used by the mountaineers in Switzerland and many other countries to convey signals and to produce simple melodies. It is nearly straight, and three or more feet in length. Those in the Museum at South Kensington measure 7 ft. 5 in. and 7 ft. 11 in. long. (See *PLATE LXXXIII.* No. 9.)

There is a Swedish instrument of this kind called *Lur*; another, of kindred nature used in the Himalayas; and another by the Indians of South America.

The notes produced are evidently only the open harmonics of the tube, somewhat modified by the material of which it is made, and by the smallness of the bore in relation to its length. W. H. S.

ALPHABET. The musical alphabet, which serves as the designation of all musical sounds, consists of the seven letters A, B, C, D, E, F and G, and, in German, H in addition. In the natural scale (*i.e.* the scale without sharps or flats) the order of these letters is as follows: C, D, E, F, G, A, B (or, in German, H), C. For the cause of this apparently arbitrary arrangement see Notation.

ALPHORN, see Alpenhorn.

ALQUEN, (1) Peter Cornelius Johann d' (*b.* Arnsberg, Westphalia, 1795), studied medicine at Berlin, and music under Bernhardt, Klein and Zelter. He settled as doctor at Mülheim on the Rhine, but gave up his practice to devote himself entirely to composition. His songs became very popular. (2) Frederic A. E., his younger brother (*b.* 1810; *d.* London, June 18, 1887), studied music under Ferdinand Ries. He went to Brussels in 1827 as teacher of music, but settled in London on the outbreak of the Revolution in 1830, where he published several compositions both for the violin and the pianoforte. E. v. d. S.

ALSAGER, Thomas Massa (*b.* 1779; *d.* Nov. 15, 1846), one of the family of Alsager, of Alsager, Cheshire. He was for many years a proprietor and one of the leading men in the management of *The Times*, being especially concerned in all that related to music and the collection of mercantile and foreign news. The professionally trained musical critic, added at his suggestion to the staff of *The Times*, was the first employed on any daily paper.

He was the intimate friend of Lamb, the Burneys, Wordsworth, Talfourd, Leigh Hunt, Mendelssohn, Moscheles, and many other celebrities. But what entitles him to mention here was his intense devotion to music, to which he gave all the leisure he could spare from a busy life. His practical ability in music was very great, and it is a fact that he could perform on all the instruments in the orchestra. The frequent private concerts given by the Queen Square Select Society at his residence in London were long remembered by his many musical friends, and were the means of introducing to this country many works and foreign musicians. The great Mass in D of Beethoven was given there, for the first time in England, Dec. 24, 1832, under the direction of Moscheles (*Mus. T.*, 1902, p. 236). There, on Mar. 28, 1834, took place the first performance in England of Cherubini's Requiem, principal soprano Mrs. H. R. Bishop (see Bishop); first violin Spagnoletti. In 1843 the society held a special musical festival in honour of Spohr, who himself led three pieces. One object of the society was to establish a taste for Beethoven's chamber music, by performing

it in the most perfect manner attainable. It was divided into two classes, one called the pianoforte and the other the violin class, and separate evenings were devoted to each kind of composition, special attention being bestowed on those least known to the public. Sivori attempted quartet-playing for the first time at these private concerts, which ultimately resulted in the series of chamber concerts given publicly in Harley Street in 1845 and 1846, and called the Beethoven Quartet Society, the whole being due to the enthusiasm, knowledge and munificence of Alsager.

ALSCHER, Joseph, famous contrabass player who was considered a rival of Dragonetti, Müller of Darmstadt and Bottesini. He appeared with great success as a virtuoso on his instrument in Italy between 1830 and 1837: afterwards he toured in Germany, appearing among other places at Leipzig and Prague, where he appears to have finally settled (*Fétis*). Mendel speaks of him as still living in 1870. He employed the compass of his instrument up to the higher registers of the violoncello. E. v. d. s.

ALSHALABI, Mohammed (surnamed Hispalensis), early 15th-century Arabian musician. The library of the Escurial contains a MS. of his dated 1415: *Opus de licito musicorum instrumentorum usu, musices censura et apologia inscriptum, eorum scilicet in primis, quae per ea tempora apud Arabos Hispanos obtinuere quaeque ad triginta et unum ibidem enumerat auctor diligentissimus*, etc. Unfortunately this historically very important work has not yet been published. E. v. d. s.

ALSLEBEN, Julius (*b.* Berlin, Mar. 24, 1832; *d.* there, Dec. 8, 1894), studied *orientalia* at Berlin, took a degree at Kiel, then devoted himself entirely to music, studying under Leuchtenberg, Zech and S. Dehn. He was pianoforte teacher at Berlin; in 1865 president of the Berliner Tonkünstler-Verein; and in 1879 co-founder and president of the Musiklehrer-Verein. In 1872 he received the title of Professor. He was editor of the *Harmonie* for several years from 1874, and published 12 lectures on musical history (1862); *Kleines Tonkünstler-Lexicon* (1864); *Ueber die Entwicklung des Klavierspiels* (1870); *Licht- und Wendepunkte in der Musik* (1880). E. v. d. s.

ALSTEDT (Alstedius), Johann Heinrich (*b.* Bellersbach, near Herborn, Nassau; *d.* Weissenburg, Transylvania). He became professor of theology and philology at Bellersbach. In his *Enzyklopädie der gesammten Wissenschaften* (1610) he deals largely with music, and the *Elementale musicum*, which forms part of his *Elementale mathematicum* (1611), was in 1664 translated into English by John Birchensha. The eighth part of his *Methodus admirandorum mathematicorum* (1613) treats also to a great extent of music. E. v. d. s.

ALT. The notes in the octave above the treble stave, beginning with the G, are said to be *in alt*, and those in the next octave *in altissimo*. (See Staveless Notation.)

ALTE MEISTER, a collection of forty pieces of the 17th and 18th centuries, edited for the PF. by E. Pauer, published by Breitkopf & Härtel. References to this collection will be found among the writings of the older contributors to this Dictionary. It has now (1926) been superseded by more exhaustive collections. C.

ALTENBURG, the name of two famous trumpet-players, father and son, of the 18th century.

(1) Johann Caspar (*d.* 1761) was in action at Malplaquet. After leaving the army he travelled in Europe and was so successful as a player that he refused an offer from Frederick Augustus of Poland to enter his service with a salary of 600 thalers. His son,

(2) Johann Ernst (*b.* Weissenfels, 1736; *d.* Bitterfeld, May 14, 1801) was more celebrated than his father. He too adopted the military career, and was a field trumpeter in the army during the Seven Years' War. After the peace of Hubertsburg he became organist at Bitterfeld. He was the author of a book entitled *Versuch einer Anleitung zur heroisch-musikalischen Trompeter- und Pauken-Kunst* (Halle, 1795), which, though poor in style, is so complete in its treatment of the subject, as to be of the greatest interest in relation to trumpet music. F. G.

ALTENBURG, Michael (*b.* Alach, near Erfurt, May 27, 1584; *d.* Erfurt, Feb. 12, 1640), an eminent church musician.

The son of a blacksmith, he studied theology at Halle in 1601, and was pastor at several places, finally at Erfurt. Of his chorale tunes, 'Macht auf die Thor der G'rechtigkeit' and 'Herr Gott nun schleuss den Himmel auf' are still used. But more important are the collections published by him, and his larger sacred works:

'Christliche liebliche und andächtige neue Kirchen und Hausgesänge,' for 6 to 9 voices, Erfurt, 1620–21, in 3 vols.; '16 Intraden' in 6 parts for violins, lutes, organs, etc., Erfurt, 1620; also psalms, motets, cantiones, etc., for 4, 6, 8 or 9 voices.

His writings combine simplicity with religious grandeur; and the congregational and choral singing of his various churches was renowned and regarded as a model.

ALTERNATIVO, a term of frequent occurrence in suites and other compositions of the 17th and 18th centuries, having precisely the same meaning as the more modern word Trio, when that is used of the middle movement of a minuet or scherzo. M.

ALTERS, Georges-Jacques (*b.* Ghent, *c.* 1770; *d.* April 11, 1849), organist, carillonneur and choirmaster at St. Martin's, Ghent. His sacred compositions were very popular in their time.

ALTÈS, (1) Ernest Eugène (*b.* Paris, Mar. 28, 1830; *d.* Saint-Dyé-sur-Loire, July 2, 1899), violinist and conductor of the Opéra and of concerts in Paris. In 1843 he entered Habeneck's violin class. From 1846 onwards he played in the Opéra band, and in 1847 was admitted to the orchestra of the Société des Concerts du Conservatoire. A conductor of the average type, he became deputy conductor to the above-named society (1870), afterwards second conductor, as well as at the Opéra in 1877. There he was raised to the post of musical director (first conductor), 1880–87, and was decorated with the Légion d'Honneur in 1881. He composed chamber music, a symphony, a divertissement on ballet airs by Auber (Centenary 1882), operatic fantasias, etc.

(2) Joseph Henri (1826–95), elder brother of the above, was a well-known flute-player.

A. J. and M. L. P.

ALTFLÖTE, BASS FLUTE, see Flute (6).

ALTHORN. The name used somewhat indiscriminately for varieties of Flügel-horn, Tenor-horn and Saxhorn.

ALTMANN, Wilhelm, D.Phil. (*b.* Adelnau, Apr. 4, 1862), became librarian of the Royal Library in Berlin in 1900, and director of the music department in the same library (1914). Altmann has done much work as a critic and editor. He took part in editing the correspondence of both Wagner and Brahms. He has also brought out editions of various classical works (*Riemann*), and produced valuable catalogues, including a *Kammermusik-Literatur-Verzeichnis* (1910, 1918) and an *Orchester-Literatur-Katalog* (1919). He holds a prominent place among modern German research students. C.

ALTNIKOL, Johann Christoph (*b.* Berna, near Seidenberg; *d.* July 25, 1759), was a pupil of J. S. Bach in Leipzig from 1744.

A letter from Altnikol, Jan. 1744 (pub. *Bach-Jahrbuch*, 1912, p. 147), states that he had been for four years 'choralis' in the church of St. Maria Magdalena, at Breslau, was anxious to return to his fatherland, 'und zwar nach Leipzig.' He craves a 'milden Viaticum' to help him. On Jan. 23, 1744, he was awarded four thalers. These facts would place his arrival in Leipzig in 1744, not 1745 as Spitta has it. He was assistant bass singer at St. Thomas's and St. Nicholas's Churches in Leipzig from Michaelmas 1745 to May 19, 1747. (*Spitta*, Ger. ed. ii. 500, n.) He was recommended by W. F. Bach, but without success, as his successor in the organistship of the Sophien-Kirche, Dresden (Apr. 16, 1746), and is then described as studying the clavier and composition with J. S. Bach (Martin Falck, *W. F. Bach*, 1919.) On Bach's recommendation, he was appointed organist at Niederwiesa near Greifenberg in 1747, and of S. Wenceslaus, Naumburg, in 1748. With regard to this latter appointment it appears that Bach's recommendation was preferred to that of Count Brühl, whose candidate was Joh. Friedrich Gräbner of Dresden. Altnikol when appointed was described as organist and 'Kollege' at Greifenberg. On his death Gräbner succeeded him in the organistship of S. Wenceslaus (*B.-J.*, 1906, p. 131). He married Bach's daughter, Elisabeth Juliane Friderike, on Jan. 20, 1749. Altnikol was a candidate together with W. F. Bach for the vacant organ in the Johannes-Kirche, Zittau, in 1753. The Berlin Staatsbibl. contains two clavier sonatas in autograph, and a church cantata; the Singakademie of the same city possesses a 5-part motet; and in the Fitzwilliam Museum at Cambridge is a 4-part Ricercare. His compositions further include a Magnificat and Hallelujah, but none of his works was printed, and his completion of J. S. Bach's last MS. is his chief claim to fame. M.; addns. C. S. T.

ALTO (1) (Lat. *altus*, high), the term used to denote certain voices of men (also called counter-tenor) and women (see Contralto). The male alto has to obtain the requisite compass from about *f′* to *c″* by the use of the Falsetto (*q.v.*), his natural voice being either tenor or bass. The voice is used principally in English cathedral choirs. In the performance of certain glees and partsongs for men's voices it takes the highest part.

(2) The Italian and French term for the Tenor violin, called alto, or alto di viola, as distinguished from basso di viola, because, before the invention, or at least before the general adoption of the violin, it used to take the highest part in compositions for string instruments, corresponding with the soprano part in vocal music. For further particulars see Viola. P. D.

ALTO CLARINET, see Clarinet (3).

ALTO FLUTE, see Flute (5).

ALTPOSAUNE, ALTO TROMBONE, see Trombone, subsection Positions and Compass.

ALTRA VOLTA (Ital.), 'another turn,' a term in use during the early part of the 18th century for Encore (*q.v.*).

ALVARENGA, Francisco Xavier de Mattos Pereira (*b.* Feb. 11, 1844; *d.* Mar. 8, 1883), a Portuguese composer of comic operas, in the manner of Offenbach. His works, though of no particular merit, enjoyed considerable success at Lisbon and Oporto. J. B. T.

ALVAREZ, Albert Raymond (*b.* Bordeaux, 1861), operatic tenor. Studied in Paris; made his début at Ghent, and sang some years in Belgium and the French provinces before appearing at the Paris Opéra as Faust in 1892. His robust voice and physique and unusual histrionic ability won him success in some sixty romantic parts; among others he created

Nicias in Massenet's 'Thaïs' on its Paris production in 1894, and Walther in 'Les Maîtres Chanteurs' when first given there in French. Meanwhile, in 1893, he had made a successful début at Covent Garden as Leicester in the first performance of de Lara's opera, 'Amy Robsart,' and subsequently sang there for several seasons. In 1894 he was associated with Emma Calvé in another new opera by Massenet, 'La Navarraise,' written especially for Covent Garden. In the following year he took up the parts temporarily relinquished by Jean de Reszke, appearing with Melba in 'Faust,' 'Roméo' and 'Carmen' (Calvé as the heroine and Melba as Micaela); and in 1896 with Lola Beeth in 'Die Walküre,' when it was sung here in French. He created the tenor rôles in Baron d'Erlanger's 'Inez Mendo' and de Lara's 'Messaline'; and appeared at Covent Garden in Feb. 1900, with Mme. Adelina Patti, in an act from 'Roméo,' at a performance given for a (Boer) war charity. H. K.

ALVAREZ, Fermin Maria (*b.* Saragossa; *d.* Barcelona, 1898), a popular Spanish song composer who published over 100 opus numbers of songs; also compositions for pianoforte.

ALVAREZ, Madame D', contralto singer, was heard first in London during Hammerstein's opening season at the London Opera House in 1911, singing with marked success as the Queen in Massenet's 'Hérodiade' and the Mother in 'Louise.' Her rich voice—of full operatic range—impressed all listeners. She had come here unheralded. Following the abandonment of Hammerstein's enterprise she has enjoyed great success in the concert-room—Queen's Hall and elsewhere—but she fell into certain exaggerations of style and used more gesture than, to English taste at any rate, was necessary on the platform. S. H. P.

ALVARO, a 15th-century Portuguese composer. He wrote 'Vesperae, matitutinum et laudes cum antiphonis et figuris musicis de inclyta ac miraculosa victoria in Africa parte ad Arzillam' (1472). Autograph MS. in the library of the Infante D. Pedro (Vasconcelles). E. v. d. S.

ALVARY, Max (*b.* Düsseldorf, May 3, 1856; *d.* Gross-Tabarz in Thuringia, Nov. 7, 1898), a tenor singer, son of the painter Andreas Achenbach. His possession of a beautiful natural tenor voice combined with histrionic talent decided him to train for the opera in spite of his father's opposition, which caused him, however, to adopt the stage name Alvary. He studied under Stockhausen at Frankfort and Lamperti at Milan, and was engaged successively at Weimar, Munich, London and New York. He sang the part of Tristan at Bayreuth in 1891, and appeared at Covent Garden, June 8, 1892, as Siegfried, his best part. E. v. d. S.

ALVESLEBEN, see Otto, Melitta.

ALVIMARE (Dalvimare), Martin Pierre d' (*b.* Dreux, Eure-et-Loire, Sept. 18, 1772; *d.* Paris, June 13, 1839). In 1800 he was harpist at the Opéra, Paris; and in 1807 harp-teacher of the Empress Josephine. He retired to Dreux, Mar. 12, 1812. He composed 'Le Mariage par imprudence,' a 1-act opera; sonatas and solos for harp; and songs. E. v. d. S.

ALWOOD, Richard (middle of 16th cent.), priest and composer. A 6-part Mass by him, entitled 'Praise Him praiseworthy,' is in the Forrest-Heyther partbooks at Oxford, and there are 7 pieces of his for the organ in B.M. Add. MSS. 30,485 and 30,513. One of these, a 'Voluntarye,' is printed in the Appendix to Hawkins's *History of Music.* J. F. R. S.

ALYPIOS (*c.* 360 B.C.), a sophist of Alexandria, who wrote a treatise, *De Musica*, in which he deals with the Greek scales. We are indebted to this treatise chiefly for a complete acquaintance with Greek notation. It has been republished by Meursius, Ath. Kircher Meibom, and, in a critically revised edition, by K. v. Jans (*Scriptores*, 1895). E. v. d. S.

AMADÉ, (1) Ladislav, Baron von (*b.* Kaschau, Hungary, Mar. 12, 1703; *d.* Feldbar, Dec. 22, 1764), poet and composer of widely popular national songs, collected and published in 1836 by (2) Count Thaddäus (*b.* Pressburg; *bapt.* Jan. 11, 1782; *d.* Vienna, May 17, 1845), an excellent pianist, who could compete with J. N. Hummel in improvisation. It was he who discovered and was chiefly responsible for the education of F. Liszt. In 1831 he was appointed 'Hofmusikgraf' at the Viennese court. E. v. d. S.

AMADEI, Filippo (*b.* Reggio, *c.* 1683). His first opera, 'Teodosio il giovane,' was given at Rome in 1711. He was also part author of the opera 'Arsaces' by Orlandini, which (in Mattheson's translation), was produced at Hamburg in 1722. A song of his in MS. is in the Fitzwilliam Library, Cambridge. E. v. d. S.

AMADEI, Michaele Angelo, composed 2 books of motets published at Venice, 1614–15. Mich. Praetorius (*Syntagma mus.* iii. 7) counts him among the most famous composers of his time.

AMADINO, Ricciardo, a famous music publisher in Venice. He was in partnership with Giac. Vincenti, 1583–86; after that on his own account until 1615.

AMADORI, Giuseppe, pupil of Bernacchi and famous singing-master. His oratorio, 'Il Martirio di S. Adriano,' was successfully performed in Rome, 1702, where he was maestro di cappella. The score of a Mass of his was dated 1730, but this and many of his compositions appear to have been lost, except a few sacred songs in the libraries of Berlin, Sondershausen and Milan (Conservatoire) (*Eitner*; *Fétis*).

AMANI, Nicholas (*b.* 1875; *d.* 1904), a Russian composer; wrote a string trio, op. 1, suite, variations, etc., for pianoforte; and songs.

AMAT, Juan Carles (*b.* Monistrol, near Barcelona, mid. 16th cent.), a Catalan apothecary and author of the earliest known treatise on the Spanish guitar: *Guitarra española, y vandola en dos maneras de guitarra, castellana y cathalana, de cinco ordenes . . .* (Gerona, 1639) (Brit. Mus.). The work, the text of which is in two languages, Castilian (Spanish) and Catalan, ran into numerous editions, the latest being dated Valencia, 1758. A plagiarised version, by Andres de Soto, appeared in 1764. There is evidence for thinking that the book was published originally at Barcelona in 1586. Amat was also the author of various scientific works, *e.g. Fructus medicinae* (Lyons, 1623). J. B. T.

AMATEUR ORCHESTRA OF LONDON. This Society was formed in Ap. 1922 as a protest against the common practice of employing professional wind players and leaders to strengthen amateur orchestras, and was able to start regular rehearsals with a full complement of wood wind and brass in the following September. It numbers about 80 players, the only professional musician actively associated with it being the conductor, H. Wynn Reeves.

Its two concerts given during the early part of the year 1923, one in the Central Hall, Westminster, the other in the Kingsway Hall, were so successful as to place the orchestra on a safe financial basis, although the programmes were chosen with regard to worthy artistic standards rather than to popular attraction. Among its secondary aims is that of performing neglected native works. The orchestra has a strong backing of well-known conductors, instrumentalists and vocalists, whose names appear as vice-presidents. H. A.

AMATI, the surname of a family of violin-makers who lived at Cremona in Italy and worked at this special craft for over a hundred years in the 16th and 17th century. The family was of patrician rank.

(1) Andrea (*b. circa* 1520; *d. circa* 1575–80) was the first member of this family, as far as is known, to devote himself to the craft of the *luthier*. The exact date of his birth is not known, but from the date of his daughter's marriage it may be placed at least as early as 1520. He died shortly before the year 1580. That he was already dead in that year is proved by a document in the Cremona archives dated Jan. 11, 1580, which refers to the brothers Antonio and Girolamo as sons and heirs of the late Andrea Amati. There is an entry in the register at Cremona dated 1611 recording the burial of the second wife of Andrea Amati who was then alive; this Andrea cannot have been the subject of the present notice for the reason just stated; the record most probably concerns Andrea, son of Girolamo and grandson of Andrea the violin-maker. Andrea Amati, or Amadi (he styled himself Amadus on his labels), was the contemporary of Gasparo da Salo and Maggini, the Brescian instrument-makers; he could not therefore have been a pupil of either of these. It is likely that he began his career as a maker of lutes and viols, but it has been pointed out that many fine wood-carvers were at this time in the employ of the Church, and the skill and taste which they developed in this craft may have induced some of them to turn their attention to making musical instruments. In former editions of this Dictionary it was argued that the brothers Amati were mathematicians as well as craftsmen, and that they consciously strove to unite freedom and harmony of outline with tone-producing qualities and facility of handling. There is no need to labour such a point; the early makers would seem much more probably to have developed the fine outline and beautiful form of their instruments, as well as their vastly improved qualities as compared with the flat-backed viols, by that natural instinct which a craftsman of true genius possesses inherently. And it must be remembered that the Italian craftsman of the 16th century was surrounded on all sides by things of beauty —beautiful buildings, beautiful decoration, beautiful colour; and inspired by these influences he could, and did, evolve beautiful curves and exquisitely proportioned designs and forms without the need of any abstruse mathematical knowledge. Be that as it may, Andrea Amati, more than any other violin-maker, deserves the credit for the design of the modern violin; and this fact is all the more remarkable when it is remembered that in one span he bridged the entire gulf between the viol and the violin, and that except for the small improvements in detail which Antonio Stradivari introduced rather more than a century later, the violin of Andrea Amati is virtually the violin of to-day.

The earliest known violins of Andrea Amati are dated about the year 1564. One extremely fine instrument, belonging formerly to Miss Bowles of Harrow, and bearing an authentic label dated 1564, was lent to the exhibition of musical instruments at the Fishmongers' Hall in 1904. Another fine specimen bears the same date on its original label and is at present in the hands of Messrs. W. E. Hill & Sons. This latter instrument belonged formerly to the set of Amati's which are sometimes said to have been made expressly for Charles IX. of France; no evidence has been found to prove that Amati received such an order, but it is certain that these instruments belonged to the royal collection, because the violin just mentioned bears decorations which denote the ownership. The tradition that this set of instruments was dispersed at the time of the French Revolution is disproved by the fact that this same instrument

belonged to William CORBETT (*q.v.*) and bears his initials; it was one of those bequeathed by Corbett to Gresham College, though the bequest was not accepted.

This instrument is typical of Andrea Amati's work, and differs little in form and design from that of all the Amati family. Indeed, except for the *f* holes, which are broadened in the middle and are more archaic in appearance, it is very similar to the violins of Nicolo, Andrea's famous grandson. The table and back are far from being high-modelled, the scroll is beautifully chiselled, the general outline is, like the work of all the family, extremely graceful, and the workmanship admirable. It has not been sufficiently well understood that all the traditions established by Andrea were followed consistently by his sons and descendants, and that, although each of these did display the charm of originality in regard to small details of their work, all the Amatis, from Andrea to his great-grandson Girolamo, adhered to the same pattern and design. This is even the case as regards measurement; thus all the Amatis worked in two sizes of violins, and it was not reserved for Nicolo to experiment with the 'grand Amati' pattern as has been so commonly stated. Andrea and all the family, down to Nicolo's son Girolamo, made both small and large violins, and it must be supposed that in these early days in the history of the violin some players preferred the one and some the other pattern. The amber-coloured varnish is also characteristic of all the Amatis. There are a few violas and violoncellos known to be by Andrea Amati.

(2) ANTONIO (*b.* 1550; *d.* 1638); and (3) GEROLAMO (or Gironimo) (*b.* 1551; *d.* 1635) were sons of Andrea. They carried on the high traditions of craftsmanship established by their father and occupied during their lifetime the highest position among violin-makers, working at Cremona and adding much to the fame of their native town. They have been generally known as 'the brothers Amati,' and were life-long partners in their business, nevertheless their instruments are distinguishable by certain small details on which their particular individuality is impressed, even though the main features and design were, as already stated, common to the work of the whole family. They made a large number of violins as well as violas and violoncellos.

(4) NICOLO (*b.* Sept. 3, 1596; *d.* Aug. 12, 1684) was son of Girolamo the younger of the two brothers. He described himself habitually on his labels as 'Antonii nepos et Hieronymi filius.' From the brothers he inherited the business, maintaining the very high level of craftmanship and adhering to the same designs. Nicolo is generally reputed the greatest of the Amatis; this is due to several causes: by his time the reputation of the Amati violins was widespread, and Nicolo profited from the fact that he inherited an already great name; moreover, during a long life he made a very large number of instruments of the highest class, certainly in no way inferior to those of his predecessors. Then again, he was in his own time supreme and without a rival in his special craft. One further fact has helped his reputation since his lifetime, namely, that Antonio STRADIVARI was his pupil.

(5) GIROLAMO (*b.* 1649; *d.* 1740) was a son of Nicolo. For one further generation he carried on the high family tradition of violin-making, working on the same lines. But he was inevitably overshadowed by his more highly gifted fellow-pupil, Antonio Stradivari, and, as a result, he has not perhaps enjoyed the reputation he deserved, for his instruments are scarcely, if at all, inferior to those of the earlier Amatis. It was the more masculine qualities developed by Stradivari that made for a new standard in violin-making during his time. Nicolo, a younger brother of Andrea, is mentioned in former editions of this Dictionary; recent research yields no evidence that such a person ever existed. Other authorities have mentioned a Giuseppe Amati, but no instruments by such a maker are known.

E. H. F., with information furnished by Mr. Alfred Ebsworth Hill.

AMATI (AMATUS), VINCENZO, DD. (*b.* Sicily, Jan. 6, 1629; *d.* Palermo, July 29, 1670), an eminent church composer and maestro di cappella. He published 2 collections of masses, psalms (Palermo, 1656), concerti sacri 2-5 parts, and an opera, 'L' Isauro' (Aquila, 1664) (Gerber 2).

AMATO, PASQUALE (*b.* Naples, 1878), Italian baritone. As a young singer with his reputation to make he came to England in 1904, appearing in the autumn season and playing, among other parts, Escamillo in 'Carmen.' Though he revealed a very agreeable voice he was for the time being quite overshadowed by Mario Sammaco—heard in London for the first time during that season. Amato won his fame later at the Metropolitan in New York, sharing in many successes with Caruso. The two singers made together some exceptionally good and widely sold gramophone records. Amato was in a big position in America when illness checked his career. He was in England on a brief visit during the war and sang at a charity concert at Queen's Hall, his selections being the inevitable 'Prologue' and 'Largo al factotum.' S. H. P.

AMBER WITCH, THE, romantic opera in 4 acts, libretto by H. F. Chorley, music by Wallace; produced, Her Majesty's Theatre, Feb. 28, 1861.

AMBIELA, MIGUEL (*b.* Aragon, 1665; *d.* Toledo, Mar. 23, 1733), a secular priest and composer of church music. From 1700 until 1707 he was musical director of the new

cathedral (El Pilar) at Saragossa, and from 1710 until his death maestro de capilla at Toledo. His MS. works in the Chapter Library there include :

Eight Masses, a 'Liber secundus epigrammatum seu motetorum in honorem Beatae Mariae Virginis,' and a Stabat Mater for four voices.

Other MSS. are preserved in the cathedral at Oviedo. Eitner mentions two partsongs with Spanish words (see *M. f. M.* 15, 33, Nos. 9 and 10). J. B. T.

AMBLEVILLE, Charles d', Jesuit of the Maison Clermont at Paris, wrote 'Octonarium, seu canticum B.V., etc. (Paris, 1634) ; 'Harmonia sacra' (Paris, 1636).

AMBREVILLE, L. d', see Borosini.

AMBROGETTI, Giuseppe (*b.* 1780), an excellent *buffo*, who appeared in 1807, and at Paris in 1815 in 'Don Giovanni' ; at the opera in London in 1817, where he was very successful ; and in Dublin in 1819. His voice was a bass of no great power, but he was an excellent actor, with a natural vein of humour, though often put into characters unsuited to him as a singer ; yet he acted extremely well, and in a manner too horribly true to nature, the part of the mad father in Paër's opera, 'Agnese,' while that of the daughter was sung by Camporese. He remained until the end of the season of 1822. He married Teresa Strinasacchi the singer. He joined the Reformed Cistercians (Trappists) at Mount Melleray Abbey, Ireland, in 1833.

J. M. ; addns. W. H. G. F.

AMBROS, August Wilhelm (*b.* Vysoké Myto, Bohemia, Nov. 17, 1816 ; *d.* Vienna, June 28, 1876). Czech by birth, yet by virtue of his *Geschichte der Musik* (Breslau, Leuckart, the 4th vol. of which, reaching to Monteverde and Frescobaldi, appeared July 1878) he must be considered the greatest German authority on all questions concerning the history of European music from ancient Greece to comparatively modern times.

In spite of being at the same time a hard-worked employé in the Austrian Civil Service and an enthusiastic musician and littérateur, pianist, composer, critic and historian—his indomitable pluck and perseverance enabled him to put forward a formidable array of writings on the history and æsthetics of music, all of which bear the stamp of a rich, highly cultured and very versatile mind. They are as remarkable for their many-sided learning and accuracy as for their lucid arrangement and brilliant diction.

Ambros's father, postmaster and gentleman farmer, was a good linguist and excellent mathematician ; his mother, a sister of Kiesewetter (*q.v.*), was a good pianist of the old school and an accomplished singer. They gave him every chance to acquire the elements of modern culture at the gymnasium and subsequently at the university of Prague ; drawing, painting, poetry were not forgotten ; music only, which fascinated him above all things, and for instruction in which he passionately longed, was strictly prohibited. Nevertheless he learnt to play the piano on the sly, and worked hard by himself at books of Counterpoint and Composition. In 1840, after a brilliant career and with the title of *doctor juris*, he left the university and entered the office of the Attorney-General, where he steadily advanced. Soon after 1850, when he married, his reputation as a writer on musical matters spread beyond the walls of Prague. He answered Hanslick's pamphlet, *Vom musikalisch Schönen*, in a little volume, *Die Grenzen der Poesie und der Musik*, 1856, which brought down upon him, especially in Vienna, a shower of journalistic abuse, but which procured for him on the other hand the friendship and admiration of many of the foremost German musicians. It was followed by a series of essays : *Culturhistorische Bilder aus dem Musikleben der Gegenwart*, 1860, which were widely read and appeared in a second edition (Leipzig, Mathes) in 1865. Thereupon the firm of Leuckart engaged him to begin his *Geschichte der Musik*, his life's work. From 1860–64 he was making researches towards it in the Court Library at Vienna, at Venice, Bologna, Florence and Rome. In 1867 he ransacked the Royal Library at Munich, one of the richest in Europe, and in 1868, 1869 and 1873 went again to Italy extending his quest as far as Naples. The third volume, reaching to Palestrina, was published in 1868. The fourth volume (above mentioned) was edited from his notes by C. F. Becker and G. Nottebohm ; a fifth, issued in 1882, was edited by Otto Kade, and a sequel by Langhans brings the work down to the 19th century. In 1872 and 1874 he published two series of *Bunte Blätter*, being essays on isolated musical and artistic subjects, written in a sparkling non-technical manner, but full of interesting matter. He was professor of the history of music at the University of Prague from 1869. In 1872 he was appointed to a position in the Ministry of Justice at Vienna, and made a professor in the Conservatorium. He appeared in public repeatedly as a pianist ; his compositions, a national Bohemian opera 'Bretislav and Jitka,' Overtures to 'Othello,' and Calderon's 'Magico Prodigioso' ; a number of pianoforte pieces, 'Wanderstücke,' 'Kinderstücke,' 'Landschaftsbilder' ; numerous songs ; a Stabat Mater, two Masses in B flat and A minor, etc., are strongly influenced by Schumann. A revised and enlarged edition of the *Geschichte* edited by Hugo Leichentritt (*q.v.*) appeared in 1909. E. D., with addns.

AMBROSE, SAINT (*b.* Treves, 340 ; *d.* Milan, Apr. 4, 397), was Bishop of Milan from 374. His influence on ecclesiastical music is discussed under Ambrosian Music (*q.v.*).

AMBROSIAN MUSIC. It is beyond all question that St. Ambrose had an important place among those who developed ecclesiastical music. He was apparently responsible for the introduction, at any rate into the West, of two new forms to be employed in public worship, viz. Hymnody and Antiphonal Psalmody (see HYMN, ANTIPHON). But beyond this his personal action can hardly be traced. The term 'Ambrosian' has been applied to the usages liturgical and musical of the great Church of Milan, which, defending itself behind the shelter of his great name, has succeeded in retaining its own customs, and in resisting, at any rate to a certain extent, the tendency to assimilation with Rome. Hence Ambrosian music, like the Ambrosian rite, is of the greatest interest for the purposes of comparison with its Roman correlative (see GREGORIAN MUSIC and PSALMODY). A facsimile and transcript of an Ambrosian Choir-book is to be found in *Paléogr. musicale*, vols. v. and vi. The traditional statement that Ambrosian music knows only the Authentic and not the Plagal modes is not tenable. A fuller study of it is needed in order to establish how far it rests upon the same modal theory as the Gregorian music (see MODES, ECCLESIASTICAL). The name 'Ambrosian' is in early days applied to any Latin hymn sung at the Hours. The genuine hymns of St. Ambrose are few (see HYMN). The term is also applied to the Te Deum owing to the legend that it was originally sung by St. Ambrose and St. Augustine at the baptism of the latter.

W. H. F.

AMBROSIO, ALFREDO D' (*b.* Naples, June 13, 1871; *d.* Paris, Dec. 31, 1914), violinist and composer, studied at the Conservatoire of Naples with Pinto, Bossi and Camillo de Nardis. He lived for a time in Paris (where he also completed his musical education), then went to Nice, returning to Paris, 1898. His less ambitious compositions—interpreted by such players as Sarasate, Kubelik and Kocian—won undoubted popularity, their chief assets being a facile melodic vein not devoid of a certain easy grace. F. B.

AMBROŽ (AMBROSH), (1) JOSEPH KARL (*b.* Krumau, Bohemia, May 6, 1750; *d.* Berlin (?), Sept. 8, 1822), studied singing and musical theory under Kozeluh at Prague. He became one of the greatest tenors and singing-masters of his time. In 1784 he was engaged at the court of Bayreuth; thence he went to Hamburg, Hanover and Vienna; and in 1791 he became first tenor at the National Theatre, Berlin. He composed a number of songs which attained to great popularity. Among his many pupils was his daughter, (2) WILHELMINE (*b.* Berlin, 1791), who made her début as a pianist-prodigy in 1803. In 1809 she appeared at the Breslau Opera as a high soprano. Her voice, which went up to *a'''*, was of great brilliance and purity, while her perfect technique, and especially her shake, placed her among the leading *prime donne*. After a passing visit to Berlin she went to Hamburg and Copenhagen. She married Becker, a merchant, and seems then to have retired into private life. E. V. D. S.

AMENDOLA, GIUSEPPE (*b.* Palermo ?). His opera, 'Il Beglierbei da Caramania,' 1776, acquired great popularity all over Europe. A MS. score of this, and the MS. of a rondo for soprano and PF. are in Dresden Museum.

AMENER, the name given by Biber and others to a kind of courante or galliard; possibly a later name for the BASSE-DANSE (*q.v.*).

AMERICAN GUILD OF ORGANISTS, see NEW YORK.

AMERICAN MUSIC GUILD, see NEW YORK.

AMERICAN NATIONAL ORCHESTRA, see NEW YORK.

AMERICAN ORGAN, a free-reed instrument similar in its general construction to the HARMONIUM (*q.v.*), but with some important differences. In the first place the reeds in the American organ are considerably smaller and more curved and twisted than in the harmonium, and there is a wider space left at the side of the reed for it to vibrate, the result being that the tone is more uniform in power, and that the expression stop when used produces much less effect. The curvature of the reeds also makes the tone softer. In the American organ, moreover, the wind-channel or cavity under which the vibrators are fixed is always the exact length of the reed, whereas in the harmonium it is varied according to the quality of tone required, being shorter for a more reedy tone and longer for a more fluty one. Another point of difference in the two instruments is that in the harmonium the wind is forced outward through the reeds, whereas in the American organ, by reversing the action of the bellows, it is drawn inwards. The advantages of the American organ as compared with the harmonium are that the blowing is easier, the expression stop not being generally used, and that the tone is of a more organ-like quality, and therefore peculiarly adapted for sacred music; on the other hand, it is inferior in having much less variety of tone, and not nearly so much power of expression. These instruments are sometimes made with two manuals; in the most complete specimens the upper manual is usually furnished with one set of reeds of 8 feet and one of 4 feet pitch, and the lower manual with one of 8 and one of 16 feet, those on the upper manual being also voiced more softly for the purposes of accompaniment. A mechanical coupling action is also provided by which the whole power of the instrument can be obtained from the lower row of keys. Pedals, similar to

organ pedals, are also occasionally added and provided with reeds of 16- and 8-feet pitch. The names given to the stops vary with different makers, the plan most usually adopted being to call them by the names of the organ stops which they are intended to imitate, *e.g.* diapason, principal, hautboy, gamba, flute, etc. Two recent improvements in the American organ should be mentioned—the automatic swell, and the vox humana. The former consists of a pneumatic lever which gradually opens shutters placed above the reeds, the lever being set in motion by the pressure of wind from the bellows. The greater the pressure, the wider the shutters open, and when the pressure is decreased they close again by their own weight. In this way an effect is produced somewhat similar, though far inferior, to that of the expression stop on the harmonium. The vox humana is another mechanical contrivance. In this a fan is placed just behind the sound-board of the instrument, and being made to revolve rapidly by means of the pressure of wind, its revolutions meet the waves of sound coming from the reeds, and impart to them a slightly tremulous, or vibrating quality.

The principle of the American organ was first discovered about 1835 by a workman in the factory of Alexandre, the most celebrated harmonium-maker of Paris. Alexandre constructed a few instruments on this plan, but being dissatisfied with them because of their want of expressive power, he soon ceased to make them. The workman subsequently went to America, carrying his invention with him. The instruments first made in America were known as 'Melodeons,' or 'Melodiums,' and the American organ under its present name, and with various improvements suggested by experience, was first introduced by Messrs. Mason & Hamlin of Boston, about the year 1860. Since that time it has obtained considerable popularity both in America and in this country.

A variety of the American organ was introduced in 1874 by Messrs. Alexandre under the name of the 'Alexandre Organ.' In this instrument, instead of the single channel placed above the reeds there are two, one opening out of the other. The effect of this alteration is to give a quality of tone more nearly resembling that of the flue-stops of an organ. The reeds are also broader and thicker, giving a fuller tone, and being less liable to get out of order (cf. VOCALION). E. P.

AMES, JOHN CARLOVITZ (*b.* Westbury-on-Trym, near Bristol, Jan. 8, 1860; *d.* Torquay, July 21, 1924), pianist and composer, was educated at Charterhouse, Edinburgh University and Stuttgart Conservatorium. He also studied music at Dresden under Franz Wüllner. He was a prominent member of the I.S.M. and other musical societies in London. His incidental music to 'Richard II.' was produced by Tree at His Majesty's Theatre, and that to 'Bonnie Dundee' (Laurence Irving) at the Adelphi Theatre. He composed a four-act opera, 'The Last Inca,' 2 piano concertos, a violin concerto (played in London by Sauret, 1910), choral works and chamber music. C.

AMEYDEN, CHRISTIAN (*b.* Oirschot, Brabant, *c.* 1534; *d.* Rome, Nov. 20, 1605), studied under his uncle, a singer at Antwerp Cathedral. On Mar. 1, 1564, he was a tenor in the Papal Chapel at Rome, but was dismissed with 13 others on Aug. 31, 1565. On Mar. 10, 1569, he was appointed as singer, canon and prebendary at the Paulinian Chapel, but returned to the Papal Chapel where he became an 'Abbate' in 1572, and in 1573 'Punctator' of the Papal Chorus. In 1588 he celebrated his 'Jubilaeum sanctissimum' and received dispensation from daily service. In 1593 and 1594 he was chosen as maestro di cappella of the Vocal College, and 1596 he was pensioned. A 5-part Mass is in the library of the Sistine Chapel, and a Magnificat *a* 4 v. In Orlando Lassus' 3rd book of Madrigals (1563, p. 30) is a number 'Quel dolce suon' (van der Straeten, vi., Haberl, *Jahrb.* 1891, 85). E. v. d. S.

AMICIS, ANNA LUCIA DE (*b.* Naples, *c.* 1740), a very celebrated singer, said to have been a pupil of the famous Vittoria Tesi (Gerber). She was at first successful only in opera buffa, in which she sang in London in 1763, appearing in 'La Cascina,' a pasticcio, given by John Christian Bach, and other similar pieces. Bach, however, thought so highly of her that he wrote for her in serious opera, in which she continued afterwards to perform until she left the stage. Burney says she was the first singer who sang rapid ascending scales staccato, mounting with ease as high as E *in alt.* Her voice and manner of singing were exquisitely polished and sweet; and 'she had not a movement that did not charm the eye, nor a tone but what delighted the ear.' In 1771 she retired, and married a secretary of the King of Naples, named Buonsollazzi. In 1773 she sang in Mozart's early opera, 'Lucio Silla,' at Milan, the principal part of Giunia. On this occasion she exerted herself much in behalf of the young composer, who took great pains to please her, and embellished her principal air with new and peculiar passages of extraordinary difficulty. The incidents of the first night of the opera are described in a letter of Leopold Mozart. In 1789 she still sang well, though nearly fifty years old. J. M.

AMICO FRITZ, L', opera in 3 acts; text by Suaratoni after the Erckmann-Chatrian story; music by Mascagni. Produced Rome, Teatro Costanzi, Oct. 31, 1891; Covent Garden, May 23, 1892; Philadelphia, June 8, 1892.

AMILIE, OR THE LOVE TEST, romantic opera in 3 acts; words by J. T. Haines; music

by W. M. Rooke; produced Covent Garden, Dec. 2, 1837.

AMIOT (*b.* Toulon, 1718), a Jesuit priest who went as missionary to China, and in vol. vi. of his *Mémoires*, published 1776–91, has an important and valuable treatise on Chinese music and instruments. E. v. d. s.

AMMON, Blasius (*d.* Vienna, June 1590), a Tyrolese musician of the 16th century, was a boy-chorister in the service of the Archduke Ferdinand of Austria, at whose expense he went to Venice to further his musical studies. He ended his days in the Franciscan monastery at Vienna. His published works are as follows (the list is taken from *Q.-L.*):

1. 'Liber sacratissimarum (quas vulgo introitus appellant) cantionum,' 5 vocum, Vienna, 1582; 2. 'Missae,' 4 vocum, Vienna, 1588 (containing five masses); 3. 'Sacrae cantiones quas vulgo moteta vocant,' 4, 5 and 6 vocum, Munich, 1590; 4. 'Breves et selectae quaedam Motetae,' 4, 5 and 6 vocum, Munich, 1593; 5. 'Introitus dominicales per totum annum,' 4 vocum, Vienna, 1601. Motets, etc., in MS. are preserved in the libraries of Breslau, Munich, Leipzig, etc., and 9 motets are reprinted by Commer, 'Musica Sacra,' vol. xxi.

Bibl.—Caecilianus Huigens, *Fr. Blasius Amon* (etwa 1560–90). *Ein Beitrag zur Geschichte der Kirchenmusik in Österreich.* (Vienna Dissertation, 1914.) M.

AMNER, John (*d.* 1641), organist and master of the choristers of Ely Cathedral. He succeeded George Barcroft in 1610, and held the appointments till his death. He took his degree as Bachelor in Music at Oxford in May 1613; he also graduated as Mus.B. Cantab. in 1640. It has been suggested that certain partbooks in the library at Peterhouse, Cambridge, and in that at Ely Cathedral, were copied out by him, but this has since been discredited by the late Canon Crosby. In 1615 he printed his 'Sacred Hymns of 3, 4, 5, and 6 parts, for Voices and Vyols,' dedicated to his 'singular good lord and maister,' the Earl of Bath. This is a collection of the following 26 anthems:

'Love we in one consenting.'
'Let false surmises perish.'
'Away with weak complainings.'
'O Come, thou spirit divinest.'
'O Love beseeming well.'
'Distressed soule.'
'O yee little flocke.'
'Feare not.' And they crie.'
'Loe, how from Heaven like starres.'
'I bring you tidings.'
'A stranger heere.'
'My Lord is hence removed and laid.'
'An elegy in memorie of Master Thomas Hynson.'
'Sweet are the thoughts.'
'Come let's rejoice.'
'Saint Mary, now.'
'At length to Christ.'
'I will singe unto the Lord.'
'Woe is me.'
'Remember not, Lord, our offences.'
'An alleluia.'
'But hee, the God of Love.'
'The heavens stood all amaz'd.'
'How doth the Citie remain solitarie.'
'Hee that descended man to be.'

The majority of these are set to homely metrical texts, although occasionally a verse taken straight from the Bible is used. They are remarkable for the ingenuous manner (particularly in the matter of accentuation) in which the words are set, and it is only very seldom that any word has more than a single note to it. He gives himself an opportunity for more elaborate contrapuntal writing in the Alleluias, which in the greater number of cases are to be found at the end of the anthems. Strongly rhythmical, and, in the main, consistently cheerful, they might well be described as a collection of sacred madrigals. Many exist in manuscript in various cathedral libraries about the country. The following compositions (in MS.) may also be found:

SERVICES, Etc.

First Service (of 4 parts) including T.D., B., K., C., M. and N.D. PH., Yk.
Third Service (including V., T.D., J., K., C., M. and N.D.), and described in the MSS. at PH. as 'dedicated to Deane Cesar.' PH., Yk., Durh. O.B. A 1/253.
Preces and Venite. PH.
Preces and Psalm lxxxix. for Christmas Day Eve. PH.
Gloria. PH.
Sursum Corda (without name, but probably by Amner). PH.

ANTHEMS

Anthem for Good Friday. Tenb. O.B. /f 371.
'Consider, all ye passers by.' Ch. Ch. 56-60 (Bass part wanting).
'Hear, O Lord.' PH.
'I am for peace' (*a* 5). Ch. Ch. 56-60 (Bass part wanting).
'Lift up your heads.' PH. (incomp.).
'Lord, I am not highminded.' PH. (incomp.).
'Lord, in thy wrath' (Verse Anthem) Tenb. O.B. /f 70b. Ch. Ch. 6 (organ score).
'Lord, in thy wrath' (2nd version) Tenb. O.B. /f 372.
'My shepherd is the living Lord' (*a* 6). Ch. Ch. 6 (organ score).
'O come hither' (*a* 5). PH., Yk.
'O magnify the Lord' (*a* 6). Ch. Ch. 6 (organ score).
'O sing unto the Lord' (*a* 7). PH. (incomp.).
'Out of the deep.' PH. (incomp.).
'The king shall rejoyce' (*a* 6). Ch. Ch. 6 (organ score).

E. F. R. and J. M^{K}.

AMNER, Ralph (*d.* Windsor, Mar. 3, 1663–1664), a relation of John Amner, before mentioned. It appears from the Registers of Ely that he was elected a lay-clerk there in 1604, and was succeeded in 1609 by Michael East, On the death of John Amery, gentleman of the Chapel Royal, July 18, 1623, 'Ralphe Amner, a basse from Winsore, was sworn in his place.' In Hilton's 'Catch that Catch Can,' 1667, is 'a Catch in stead of an Epitaph upon Mr. Ralph Amner of Windsor, commonly called the Bull Speaker, who dyed 1664; the music composed by Dr. William Child' (*Reg. of Ely*; *Cheque-Book of Chap. Roy.*, Camd. Soc.). E. F. R.

AMODEI, Cataldo (*b.* Sciacca, Sicily; *d.* Naples, *c.* 1695). He lived at Naples for some time as maestro di cappella, and published there his 'Cantate a voce sola.' Lib. 1, op. 2 (1685).

AMOENITATUM MUSICALIUM, Hortulus plantulis amoenissimis, etc., a collection of dances and a few songs of various nations, published 'Anno 1622.' The composers' names include: H. L. Hassler, Schein, Gottfr. and Joh. Scholz.

AMON, Johann Andreas (*b.* Bamberg, 1763; *d.* Wallerstein, Bavaria, Mar. 29, 1825), composer and conductor.

After lessons on the violin he took up the horn under Punto, with whom he journeyed through France and Germany, giving concerts at various places. During these tours he made the acquaintance of Haydn and Mozart, and in 1781 had instruction in composition from Sacchini at Paris. Chest troubles forced him to abandon the horn, and he then worked at the violin and piano with considerable success. In 1789 he was musical director at Heilbronn, until, in 1817, he accepted the post of Kapellmeister to the Prince of Ottingen-Wallerstein, in whose service he died. His many compositions include 2 operas, symphonies, 2 masses (one a Requiem Mass to be performed at his

death), as well as pianoforte sonatas and much chamber music for strings. (For further details and list of compositions, see *Q.-L.* and *Fétis.*) J. M^K.

AMORE DEI TRE RE, L', opera in 3 acts; text by Sem Benelli; music by Italo Montemezzi; produced La Scala, Milan, Apr. 10, 1913; New York, Metropolitan Opera House, Jan. 2, 1914. Théâtre des Champs-Élysées, Apr. 25, 1914; Covent Garden, May 27, 1914.

AMOREVOLI, Angelo (*b.* Venice, Sept. 16, 1716; *d.* Dresden, Nov. 15, 1798), a singer who, after appearing at the principal opera-houses in Italy with brilliant success, where he was admired for his fine voice and vocalisation, and the perfection of his shake, was engaged for the Court Theatre at Dresden. He sang for the Earl of Middlesex at the opera in London in 1741. J. M.

AMOROSIUS, Simon, musician in the chapel of Sigismund III., King of Poland and Sweden. He wrote an 8-part motet, 'Cantabant sancti canticum' in 'Melodiae sacrae' (Cracow, 1604).

AMOROSO, or CON AMORE (Ital.), 'in a loving style,' a direction implying a certain emotional quality, and excusing some degree of sentimentality in the performer.

AMOS, G. B., English composer of the late 18th and early 19th centuries. No. 1 of a set of sonatas in a pleasing familiar style was published *c.* 1800 (B.M.).

AMSTERDAM—the 'Concertgebouw' (Concert building)—is the most notable musical institution in Holland. It has its own concert orchestra of a hundred performers.

The Concertgebouw-Gesellschaft Society was founded in 1883, the dedication of the concert hall taking place in 1888. The undertaking was at first supported entirely by private funds, but it now receives a subsidy from the State, town and province. The first director was Willem Kes, followed in 1895 by Willem Mengelberg, under whose guidance the institution developed greatly (see Mengelberg). The 'Concertgebouw' gives yearly 80 to 90 concerts in Amsterdam, besides regular subscription concerts in other Dutch towns (The Hague, Rotterdam, Utrecht, Arnhem, Nymegen, Haarlem). Various musical festivals have taken place in the Concertgebouw; the Netherlands Music Festival (1902 and 1912); Mahler Festival (1920), at which for the first time the complete works of Gustav Mahler were performed in nine evenings; French Music Festival (1922); Strauss Festival (1924). The 'Wagner-Vereeniging' ('Wagner Association'), founded by Henry Viotta, 1883, for the study of Wagner's music dramas, was united with the Concertgebouw, 1922; as was the choir of Maatschappij tot bevordering der Toonkunst (Society for the furtherance of tonal art), 1923 (*q.v.*). (See Felix Meritis.) R. M^G.

ANACARA, a small kettledrum, used by the ancient Greeks in their war music. Women, even, held it in one hand, beating it with the other. The military drummer using it was called *anacarista.* The anacara was of Oriental origin. See Drum (1) and Nakers.

ANACKER, August Ferdinand (*b.* Freiberg, Oct. 17, 1790; *d.* there, Aug. 21, 1854), son of a very poor shoemaker. As a scholar at the Gymnasium his musical faculty soon discovered itself, but his poverty kept him down, and it was not till a prize of 1300 thalers in a lottery fell to his share that he was able to procure a piano and music. The first piece he heard performed was Beethoven's Polonaise in C, and Beethoven became his worship through life. In 1813, after the battle of Leipzig, he went to that university, and acquired the friendship of Schicht, F. Schneider and others of the best musicians. In 1822 he was made cantor of his native place, and principal music-teacher in the normal school. From that time onwards for thirty years his course was one of ceaseless activity. No one ever worked harder or more successfully to make his office a reality. In 1823 he founded the Singakademie of Freiberg, and in 1830 started a permanent series of first-class subscription concerts; in 1827 he formed a musical association among the miners of the Berg district, for whom he wrote numerous part-songs; and in short was the life and soul of the music of the place. At the same time he composed much music, such as the cantatas 'Bergmannsgruss,' and 'Lebens Blume und Lebens Unbestand,' and many partsongs. But his music is nothing remarkable: it is the energy and devotion of the man that will make him remembered. G.

ANACRÉON, OU L'AMOUR FUGITIF, opera-ballet in 2 acts; libretto by Mendouze; music by Cherubini; produced Paris, Oct. 4, 1803.

ANACREONTIC SOCIETY. The meetings of this aristocratic society (founded 1766) established by several noblemen and other wealthy amateurs, were held at the Crown and Anchor Tavern in the Strand towards the close of the 18th century. The concerts, in which the leading members of the musical profession took part as honorary members, were given fortnightly during the season, and were followed by a supper, after which the president or his deputy sang the constitutional song 'To Anacreon in Heaven.' This was succeeded by songs in every style, and by catches and glees sung by the most eminent vocalists of the day. The privilege of membership was greatly valued, and names were frequently placed on the list for a long period in advance. Haydn was present at one of the meetings (*Mus. T.*, 1902, p. 642). The society was dissolved in 1794, when Sir Richard Hankey was president,

owing, as Parke states in his *Musical Memoirs*, to the annoyance of the members at a restraint having been placed upon the performance of some comic songs which were considered unfit for the ears of the Duchess of Devonshire, the leader of the *haut-ton* of the day, who was present privately in a box specially fitted up under the orchestra. The members resigned one after another, and shortly afterwards the society was dissolved at a general meeting.

ANAKROUSIS, see RHYTHM; UPBEAT.

ANALYTICAL NOTES. The practice now prevalent of accompanying the titles and words of the music performed at concerts by an analysis of the music is one of comparatively recent date.

The identity of the pieces in English programmes at the end of the 18th and the beginning of the 19th century is rarely certain. 'New Grand Overture, Haydn,' or 'Grand Overture, MS., Haydn,' is the usual designation of Haydn's symphonies as they were produced at Salomon's concerts in 1791 and 1792. The earliest programmes of the Philharmonic Society were almost equally vague—'Symphony, Mozart,' 'Symphony, Beethoven,' 'Symphony, never performed, Beethoven,' was with rare exceptions the style in which the *pièces de résistance* at the Society's concerts were announced. It was not until the fifth season (1817) that the number or the key indicated which works the audience might expect to hear. The next step was to print on the fly-leaf of the programme the words of the vocal pieces, with, in the case of Spohr's 'Weihe der Töne' (Feb. 23, 1835), a translation of Pfeiffer's 'Ode,' or of the 'Pastoral Symphony' (May 11, 1835), some verses from Thomson's 'Seasons,' or at the first performance of the overture to 'Leonora,' No. 1 (May 13, 1844) (due to Mendelssohn), a short account of the origin and dates of the four overtures.

The first suggestion in England [1] as to the desirability of explaining the structure of compositions to the audience was in a letter written to the *Musical World* of Dec. 2, 1836, by the late C. H. Purday. The first practical attempt to assist amateurs to follow the construction of classical music during its performance which the writer has met with is that of Thomson, the first Reid Professor of Music in the University of Edinburgh, who in the year 1841, and even earlier, added analytical and historical notices of the pieces in the programmes of the concerts of the Professional Society of Edinburgh. His analyses entered thoroughly into the construction of the overtures and symphonies performed, but did not contain quotations from the music. The next step appears to have been made by John ELLA (*q.v.*) when he started the matinées of the Musical Union in 1845. His 'synoptical analysis,' with quotations, set a pattern which has endured to the present time. The same thing was done, but at greater length, by Wylde in the programme-books of the New Philharmonic Society, which began its concerts in 1852. Some of these analyses were accompanied by extracts, and in many cases are of permanent value, such as those of Beethoven's 'Pastoral Symphony,' Mozart's E flat ditto, and the overture to the 'Zauberflöte' (1858). An analysis of the 'Messiah' was issued by the Sacred Harmonic Society in 1853, and was followed by similar dissections of the 'Creation,' Beethoven's Mass in D, 'Israel in Egypt,' the 'Lobgesang,' Mozart's Requiem and, some years later, 'Naaman.'

As early as 1847 John HULLAH (*q.v.*) had given biographical notices of composers in the book of words of his historical concerts at Exeter Hall. The books of words of the Handel Festivals (1857, etc.) contain historical accounts of the works performed. In connexion with the early Handel Festivals the late H. F. Chorley published two pamphlets called 'Handel Studies,' containing analyses of the 'Messiah,' the Dettingen Te Deum and 'Israel in Egypt.'

In 1859 the Monday Popular Concerts were established, and the programmes contained notices of the pieces. On the occasion of Hallé's Beethoven-recitals, two years later, full and able analyses by J. W. Davison of the whole of the sonatas were published, accompanied by copious extracts. These were subsequently incorporated in the Popular Concert books, with similar analyses of other pieces, including the 48 preludes and fugues of Bach. Shortly after the foundation of the Saturday Concerts at the Crystal Palace, short remarks were attached to some of the more prominent pieces. These have gradually become more systematic and more analytical, but they are of a very mixed character when compared with those last mentioned. The remarks which adorned the programmes of Pauer's recitals in 1862, '63, '67, were half biographical and half critical, but made no attempt to analyse each piece.

In 1869 the Philharmonic Society adopted analytical programmes prepared by Macfarren, and the practice has been maintained since, Joseph Bennett having been responsible for them for many years. Macfarren also prepared similar notices for the British Orchestral Society.

G.

The above summary traces the history of analytical programme notes in England, to the time at which they became the rule rather than the exception. Sir George Grove's deprecatory reference to the notes which he himself wrote

[1] An attempt at analytical programmes had been made by Reichardt, of Berlin, as early as 1783.

for the Saturday concerts at the Crystal Palace has been retained here because it is characteristic of his modesty. They, however, more than any others, established the practice in the English concert-room. They were unique in combining technical information with a lucid and readable style calculated to make the subject attractive to the ordinary amateur. Grove had the rare art of imparting his own glowing enthusiasm without any suggestion of gush, and many hundreds of confessedly ignorant people were first brought into close touch with the music of the classical masters by means of his introductions. It is, no doubt, the fact that during the last half-century large numbers of English people who have had little or no technical education in music have been discovering for themselves the delights of orchestral and chamber music, that has caused the prevalence of programme notes in England. In 1879 Grove could still remark that 'analytical programmes do not appear to have been yet introduced into the concert-rooms abroad,' and though that is not true to-day 'the elaborate analyses of single works published as pamphlets quite independently of any special performance' (*Führer*) remain more characteristic of continental countries where education outside the concert-room is more systematic than in England. (See KRETZSCHMAR.)

It is impossible to enumerate even the chief of the English writers who have supplied useful analytical notes since Grove's day. The majority of newspaper critics in London and the provinces have contributed their quota, and in the more important cases mention of their work will be found under their own names. Mrs. Rosa Newmarch's notes to the Queen's Hall Symphony and Promenade Concerts, those of Percy Pitt and Alfred Kalisch to the Royal Philharmonic Society, are outstanding.

In America, analytical notes to orchestral programmes are now of greater importance than in England, since the great American orchestras are continually forming new audiences. The work of H. E. KREHBIEL (*q.v.*) for the New York Philharmonic may be compared with that of Grove at the Crystal Palace. Krehbiel produced masterly analyses of the latest works of Brahms, Dvořák and Tchaikovsky, when these were given their first performances in New York. Philip Hale's long series of notes for the Boston Symphony Orchestra make the programme books of that orchestra valuable historic documents. Felix Borowski writes for the Chicago Orchestra, and Lawrence Gilman succeeded Krehbiel as programme analyst to the New York Philharmonic, and also writes for the Philadelphia Orchestra. C.

ANAPÆST, see METRE.

ANCHIETA, JUAN DE (*b.* Azpeitia, near San Sebastian, mid. 14th cent.; *d.* there, July 30, 1523), a Spanish composer of the time of Ferdinand and Isabella. He was of noble descent, related to St. Ignatius Loyola, and a house adorned with his armorial bearings is still in possession of the family at Urrestilla, near his birthplace. In 1489 he was appointed chaplain and cantor to the Catholic kings; he was also music-master to the ill-fated Prince Don Juan, whose custom was to send for Anchieta and four or five of his best singers and sing with them during the hours of the siesta on hot summer afternoons. One of his compositions, a romance for 4 voices, printed by Barbieri ('Cancionero Musical,' No. 328), relates to the capture of Baza from the Moors (1489); while he wrote a Mass on the song commemorating the expulsion of the Jews from Spain in 1492, the melody of which is preserved by Salinas ('De musica libri septem,' p. 312, Salamanca, 1577), and quoted by Dr. Burney in his *General History of Music*. In 1499 he was made a canon of Granada and in the same year the Bishop of Salamanca invested him with the office of Prestamero of Villarino, in his diocese. From 1504 he was rector of the parish church at Azpeitia, though his emoluments as a court musician were continued and increased, and restored to him again in 1519, after a temporary suspension on the death of Ferdinand in 1516. A codicil to his will dated 1523 gives the information that he had been in Flanders where he had lent to a Spanish subject the sum of two gold doubloons which had not been repaid. His funeral led to a contention between the new rector and the Franciscan friars; the rector eventually buried him, but the lawsuit which followed lasted for 12 years and was only settled through the mediation of St. Ignatius.

Anchieta's church music is to be found in MS. in the cathedral at Tarazona, in the Library of the Diputació at Barcelona, and in the Biblioteca Columbina at Seville (in a MS. entitled 'Varios' containing a Salve and 4 motets by Anchieta, and stated to have been bought by Ferdinand, nephew of Christopher Columbus, in 1533). Examples of his secular music (with Spanish words) are given in the 'Cancionero Musical' printed by Barbieri (Madrid, 1890). The *villancico* 'Dos ánades, madre' is of especial interest as being referred to in one of the *Exemplary Novels* of Cervantes (*La ilustre fregona*), and also by Quevedo (in the dedication to the *Cuento de Cuentos*) The sprightliness of the tune led to the saying that when a wayfarer walked gaily without feeling his fatigue, he marched to the tune of 'Dos ánades, madre.' J. B. T.

ANCIENT CONCERTS (1776–1848). The 'Concert of Antient Music' was established in 1776 by a committee consisting of the Earls of Sandwich and Exeter, Viscount Dudley and Ward, the Bishop of Durham, Sir Watkin W.

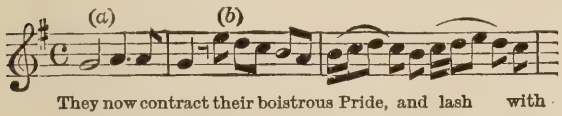
Wynn, Bart., Sir R. Jebb, Bart., and Messrs. Morrice and Pelham, who were afterwards joined by Viscount Fitzwilliam and Lord Paget (afterwards Earl of Uxbridge). The performances were also known as 'The King's Concerts.' Joah Bates was appointed conductor, the band was led by Hay, and the principal singers were Miss Harrop (afterwards Mrs. Bates), the Misses Abrams, Master Harrison (subsequently a famous tenor), Clarke, Minor Canon of St. Paul's (tenor), Dyne (countertenor), and Champness (bass).

The chief rules of the concerts were that no music composed within the previous 20 years should be performed, and that the directors in rotation should select the programme. Bates retained the conductorship till 1793, and directed the concert personally, except for two years, when Arnold and Knyvett acted for him. He was succeeded by Greatorex, who remaned in office until his death in 1831, when Knyvett, who had been the principal alto singer for many years, was chosen to succeed him. The resolution of the directors in 1839 to change the conductor at the choice of the director for each night led to the resignation of Knyvett, and the post was then offered to Dr. Crotch, who ultimately declined it. Sir George Smart was invited to conduct the first two concerts of 1840, and was succeeded by Bishop, Lucas and Turle. It was found, however, that this system did not work well, and in 1843 Sir Henry Bishop was appointed sole conductor. Until 1841 it was the custom for the conductor to preside at the organ, but in that year the directors appointed Charles Lucas as their organist. The band at the time of the establishment of the concerts consisted of 16 violins, 5 violas, 4 v'celli, 4 oboes, 4 bassoons, 2 double basses, 2 trumpets, 4 horns, 1 trombone, and drum. At the close of the concerts in 1848, it numbered 17 violins, 5 violas, 5 v'celli, 5 double basses, 3 flutes, 2 oboes, 2 clarinets, 2 bassoons, 4 horns, 3 trumpets, 3 trombones, 2 drums, 1 harp, 2 cymbals, and triangle. The canto chorus at first consisted entirely of boys selected chiefly from the boys of the Chapel Royal and Westminster Abbey, but they afterwards gave place to ladies. The earlier programmes included an overture (usually by Handel), two or three concertos by Handel, Martini, Corelli, Avison or Geminiani, several choruses and solos from Handel's oratorios, and an anthem, glee or madrigal; but occasionally an entire work, such as the Dettingen Te Deum, was given as the first part of the concert. For many years the programmes were almost exclusively Handelian, varied by songs from Gluck, Bach, Purcell, Hasse and others. After the year 1826 there was greater variety in the schemes, and Mozart's Jupiter symphony, his symphonies in D and E flat, the overture to the 'Zauberflöte,' and a selection from his Requiem were included in the programmes for 1826. From that date an orchestral work by Mozart was performed at nearly every concert, although Handel still maintained his supremacy. In 1834 we find Haydn's 'Surprise' symphony, and in 1835 a selection from the 'Creation' and the 'Seasons' in the programmes. In the latter year Beethoven was represented by his 'Prometheus' overture, and during the last 10 years of the concerts his symphony in D, overtures to 'Fidelio' and 'Egmont,' a chorus from 'King Stephen,' and other works were given. In 1847, at a concert directed by Prince Albert (*q.v.*), Mendelssohn was solo organist, and played Bach's Prelude and Fugue on the name of 'Bach.' In 1785 the Royal Family began to attend the concerts regularly, and then it was that they were styled 'The King's Concerts.' As a mark of his interest in the performances King George III. personally wrote out the programmes. Up to 1795 the concerts were held in the new rooms, Tottenham Street, afterwards known as the Queen's or West London Theatre, but in that year they were removed to the concert-room in the Opera House, and in 1804 to the Hanover Square Rooms. In addition to the twelve concerts given every year, a thirteenth was added, when the 'Messiah' was performed in aid of the 'Fund for the support of Decayed Musicians and their Families.' The last concert took place on June 7, 1848, and the library of old masters belonging to the society was afterwards removed to Buckingham Palace, and was subsequently presented to the Royal College of Music. (See *Mus. Ass. Proc.*, 1906–07, p. 55, paper by J. E. Matthews.) C. M.

ANCINA, P. Giovenale (*b.* Fossano, Piemont, Oct. 19, 1545; *d.* Saluzzo (?), 1604), studied medicine, then theology; entered Filippo Neri's Congregatio dell' oratorio, where he studied composition and wrote his famous 'Tempio armonico della beata Vergine' (Rome, 1599), a collection of songs including some of his own composition. He also wrote a number of essays on music and musical instruments. In 1602 he became bishop of Saluzzo. He was poisoned by a monk.

ANCONA, Mario (*b.* Florence, 1870), operatic baritone, was educated for the law and started on a diplomatic career, but quickly took up singing and made his début in 1891 at Trieste as Scindia in Massenet's 'Roi de Lahore.' He was heard there by Signor Lago, who brought him to London and introduced him, in 1892, during a brief season at the Olympic Theatre, whereof his fine impersonation of Alfonso in 'La Favorita' was one of the few redeeming features. He had a voice of peculiar charm, sang like an artist, and was a good actor, qualities which secured him an engagement at Covent Garden in the following year and for many seasons afterwards. He made his début

as Tonio in the first London performance of 'Pagliacci,' and his delivery of the famous prologue has seldom been excelled. Later in the same season he sustained the title-rôle in Stanford's opera 'The Veiled Prophet,' when given for the first and only time here. His welcome assured, Augustus Harris engaged him for a term of years, in course of which he accumulated an extensive repertory and made consistent improvement. He even sang Telramund and Hans Sachs (in Italian), and was excellent in both; while further proof of his versatility was afforded by the exceptional merit of his Figaro, his Wolfram, his De Nevers, his Nelusko and his Amonasro. After 1900 he appeared at Covent Garden no longer, but sang for several seasons at the Metropolitan Opera House, New York, where he became a favourite; also with the Chicago Company, at Buenos Ayres, in Spain, Portugal and elsewhere. Eventually, at the close of a busy career of over twenty years, he returned to Italy and settled down as a teacher. He was a Commendatore of the Crown of Italy, and possessed some Portuguese orders.



BIBL.—*International Who's Who in Music.*

H. K.

ANDACHT, MIT (Ger.), 'with devotion'; a direction found at the beginning of Beethoven's Mass in D, and in a few other passages. M.

ANDAMENTO (Italian verbal substantive, from *andare*, 'to go,' 'to move'), a form of fugal subject, more highly developed, and of greater length, than the ordinary Soggetto, and generally, though not by any means invariably, consisting of two distinct members, more or less strongly contrasted with each other, and consequently calculated to add materially to the interest of a long and exhaustively developed fugue.

A fine instance of an Andamento consisting of two distinct sections will be found in the second portion of the chorus, 'When his loud voice,' in Handel's 'Jephthah,' at the words 'They now contract.'

Nearly all the fugues in Bach's 'Wohltemperirtes Clavier' are formed upon Soggetti; while nearly all his finest organ fugues, with pedal obbligato, are developed from long and well-sustained Andamenti. A curious instance, in two sections, will be found in the fugue in E major from the third toccata (*B.-G.* vol. xv. p. 278).

Andamenti may be found both in real and tonal fugue; the examples are, however, much more frequent in the former than in the latter.

It should be mentioned that some German authorities use the term as equivalent to what we call episodes. (See ATTACCO and SOGGETTO.) W. S. R.

ANDANTE (Ital., participle of the verb *andare*, 'to go'); going, moving along at a moderate pace. This word is chiefly used to designate a rather slow rate of movement; formerly, however, it was used more generally in its literal sense. Thus in Handel's music we frequently find the indication 'andante allegro,' a contradiction in terms in the later sense of the words, but meaning nothing more than 'moving briskly.' Andante is a quicker rate of movement than larghetto, but on the other hand is slower than allegretto. As with most other time-indications it is frequently modified in meaning by the addition of other words, *e.g.* 'andante sostenuto' would be a little slower, and 'andante un poco allegretto' or 'andante con moto' a trifle faster, than 'andante' alone. Like adagio, largo, etc., this word is also used as the name of a piece of music (*e.g.* Beethoven's 'Andante in F') or as the name of a slow movement of a symphony, sonata, etc. E. P.

ANDANTINO (Ital.), the diminutive of ANDANTE (*q.v.*). As 'andante' means literally 'going,' its diminutive must mean 'rather going,' *i.e.* not going quite so fast; and properly 'andantino' designates a somewhat slower time than andante. The majority of modern composers, however, forgetting the original meaning of the word, and thinking of andante as equivalent to 'slow,' use andantino for 'rather slow,' *i.e.* somewhat quicker. In which sense the word is intended can only be determined by the character of the music itself.

The uncertainty which prevails in the use of these time-indications is illustrated by the fact that three movements in Mendelssohn's 'Elijah,' the first of which, 'If with all your hearts,' is marked 'andante con moto,' the second, 'The Lord hath exalted thee,' merely 'andante,' and the third, 'O rest in the Lord,' 'andantino,' are all in exactly the same time, the metronome indication being in each case ♩=72. See Beethoven's opinion as to the meaning of the term, in *Thayer*, iii. 241. E. P.

ANDER, ALOYS (*b.* Liebititz, Bohemia, Oct. 13, 1817; *d.* Wartenberg, Dec. 11, 1864), a famous tenor singer. He went to Vienna in the hope that his talents would be recognised there, but it required all the energy and influence of Wild the singer, at that time Ober-Regisseur to the court opera-house, before he was allowed to make the experiment of appearing there for the first time (Oct. 22, 1845) as Stradella. His success was complete, but was still more remarkable in the 'Prophète,' which was given in Vienna for the first time on Feb. 28, 1850. Meyerbeer interested himself in the rapid progress of Ander, and from that date he became the established favourite of the Vienna

public. His last great part was that of Lohengrin. As an actor he was greatly gifted, and had the advantage of a very attractive appearance. His voice, not strong and somewhat veiled in tone, was in harmony with all his other qualities; his conceptions were full of artistic earnestness, and animated by a noble vein of poetry. His last appearance was as Arnold in 'William Tell,' on Sept. 19, 1864; he was then failing, and shortly afterwards totally collapsed. He was taken to the Bath of Wartenberg in Bohemia, where he died, but was buried in Vienna. C. F. P.

ANDERS, Erich (*b.* Teutschental, near Halle, Aug. 29, 1883), composer, was first intended for a business career, but took up music on Max Reger's advice. He entered the Leipzig Conservatorium, studying under Reger, Krehl, Pembaur, Nikisch and others, at the same time attending the University. After filling the posts of conductor at the Barmen and Heidelberg City Theatres, he settled in Berlin, and in addition to teaching and reviewing, devoted himself chiefly to composition. In 1920, after short sojourns at Munich and Cologne, he was appointed lecturer on music at the Bonn University. His numerous compositions include piano pieces, chamber music, orchestral and choral works, and a large number of Lieder and children's songs. H. B.

ANDERSEN, Karl Joachim (*b.* Copenhagen, Apr. 29, 1847; *d.* there, May 7, 1909), the most distinguished member of a family of eminent Danish flute-players. He was a member of the royal band at Copenhagen (1869–77); in 1881 he went to Berlin, where he was one of the founders of the Philharmonic Orchestra, filling the place of first flute for ten years and occasionally conducting. A complaint of the tongue forced him to abandon the flute in 1892. In 1894 he became conductor of the palace orchestra at Copenhagen and founded an orchestral school. He made important contributions to the literature of the flute, including a set of 48 studies, Concertstücke with orchestral accompaniment (*Riemann*). M.

ANDERSON, Mrs. Lucy (*b.* Bath, Dec. 1790; *d.* London, Dec. 24, 1878), distinguished as the first female pianist to play at the concerts of the Philharmonic Society in London, was the daughter of John Philpot, a professor of music and music-seller at Bath. She came to London about 1818 where she soon became eminent in her profession. In July 1820, Miss Philpot was married to George Frederick Anderson (*d.* Dec. 14, 1876), a violinist engaged in all the best orchestras, and subsequently, from 1848–70, master of the Queen's Musick. In 1829 she played at the Birmingham Festival, and retired in 1862. She taught the piano to Queen Victoria and her children. W. H. H.

ANDERTON, H. Orsmond (*b.* Clapton, Apr. 1861), composer, poet and essayist. He studied at the R.A.M. under Macfarren and Prout, and began his career as a teacher in London and Folkestone. In 1908 he accepted an appointment at the Midland Institute School of Music, Birmingham. He is well known as a choral conductor and adjudicator.

Anderton's works include:

Music to his own lyric drama, 'Baldur,' and to several Greek tragedies; 3 Piano Quintets and other chamber music; an orchestral fantasia, 'Virgil'; an English Sinfonietta and a Spring Idyll, for orchestra; A Song of Life, for mixed choir and orchestra; 'The Song of the Morning Star,' for female choir and orchestra; and a number of smaller choral works, partsongs and songs.

Among Anderton's literary works the most important is *The Song of Alfred* (an epic); those concerning music are his monograph on Granville Bantock and a book on *Early English Music*. E. B.

ANDRÉ, the name of an extensive musical family, who founded a publishing house important for its connexion with Mozart.

(1) Johann (*b.* Offenbach a/M., Mar. 28, 1741; *d.* there, June 18, 1799) was the head of the family. His father was proprietor of a silk factory, and the boy was intended to carry on the business. But the love of music was too strong in him. His first comic opera, 'Der Töpfer' (1760), was so successful as to induce Goethe to confide to him his operetta of 'Erwin und Elmire' (1764), which had equal success, as had also some songs produced at the same time. In 1777 André became director of the music at the Döbblin Theatre in Berlin, where he settled with his family, after handing over the factory (to which since 1774 he had added a music printing office) to his younger brother. Here he enjoyed the instruction of Marpurg, and composed a quantity of songs, dramas and other pieces for the theatre. He returned to Offenbach in 1784, and resided there in the pursuit of his business and his music till his death. Before that date his establishment had issued the large number of 1200 works, and he himself had composed, in addition to many instrumental pieces, some 30 operas and dramas, and a vast number of melodious songs and vocal pieces, many of which became popular, amongst them the still favourite Volkslied 'Bekränzt mit Laub.' Among his operas was one by Bretzner in 4 acts, 'Belmonte und Constanza, oder die Entführung aus dem Serail,' produced in Berlin on May 26, 1781, and often repeated. On July 16, 1782, appeared Mozart's setting of the same opera, with alterations and additions to the text by Stephanie. A paper war followed between the two librettists, during which André took occasion to speak nobly on the side of Stephanie, notwithstanding his having assisted Mozart in the preparation of an opera which had far surpassed his own.

(2) Johann Anton (*b.* Offenbach, Oct. 6, 1775; *d.* Apr. 6, 1842), third son of the above, was the most remarkable member of the

family. He was an excellent player both on the violin and piano, and a practised composer before entering at the University of Jena, where he went through the complete course of study. He was thus fully competent on the death of his father to assume the control of the business, and indeed to impart to it fresh impulse by allying himself with Senefelder the inventor of lithography, a process which he largely applied to the production of music.

In the year of his father's death he visited Vienna, and acquired from Mozart's widow the entire musical remains of the great composer. André published the thematic catalogue which Mozart himself had kept of his works from Feb. 9, 1784, to Nov. 15, 1791, as well as a further thematic catalogue of the whole of the autographs of the master which had come into his possession. André was equally versed in the theory and the practice of music; he attempted every branch of composition. Amongst other things he was the author of 'Proverbs,' for four voices (op. 32), an elaborate joke which was subsequently the object of much dispute, owing to its having been published in 1869 by Aibl of Munich as a work of Haydn. His introduction to the violin and his treatise on harmony and counterpoint were both highly esteemed. So also were the first two volumes of his unfinished work on composition (*Lehrbuch der Tonsetzkunst*, 1832–43). André was dignified with the title of Hofrath, and by the accumulation of musical treasures he converted his house into a perfect pantheon of music. An idea of the respect in which he was held may be gained from various mentions of him in Mendelssohn's letters, especially that of July 14, 1836, and a very characteristic account of a visit to him in Hiller's *Mendelssohn*, chap. i.

The following were all sons of Johann Anton André: (3) Johann August (*b.* Mar. 2, 1817; *d.* Oct. 29, 1887), published the *Universal-Lexikon der Tonkunst* of Schladebach and Bernsdorf. (4) Johann Baptist (*b.* Mar. 7, 1823; *d.* Dec. 9, 1882), pupil of Aloys Schmitt and Kessler, and afterwards of Taubert and Dehn, a resident in Berlin, was for some years Kapellmeister to the Duke of Bernburg. (5) Julius (*b.* June 4, 1808; *d.* Apr. 17, 1880), devoted himself to the organ, and was the author of a *Practical Organ School*, which passed through several editions, and of various pieces for that instrument, as well as of four hand arrangements of Mozart's works. (6) Karl August (*b.* June 15, 1806; *d.* Feb. 15, 1887) undertook, in 1835, the management of the branch establishment opened at Frankfort by his father in 1828, adding to it a manufactory of pianos, and a general musical instrument business. He named his house 'Mozarthaus,' and the pianos manufactured there 'Mozart-flügel,' each instrument being ornamented with a portrait of the master from the original painting by Tischbein in his possession. In 1855, on the occasion of the Munich Industrial Exhibition, he published a volume entitled *Pianoforte-making: its history, musical and technical importance* (*Der Klavierbau*, etc.).

C. F. P.

ANDREA CHÉNIER, opera in 4 acts; libretto by Luigi Illica; music by Umberto Giordano. Produced La Scala, Milan, Mar. 23, 1896; New York, Academy of Music, Nov. 13, 1896; in English, Carl Rosa Co., Camden Theatre, Apr. 16, 1903; at Covent Garden, Nov. 11, 1904.

ANDREAE, Volkmar (*b.* Berne, July 5, 1879), a Swiss composer and conductor. His musical studies began under Karl Munzinger at the school of music of his native city. From 1897–1900 they were continued at the Cologne Conservatoire under Wüllner, Franke, Kleffel and Staub. In 1900 Andreae went to the Munich Court Opera as sub-conductor. Returning to Switzerland in 1902, he succeeded Attenhofer as conductor of the Mixed Choir in Zürich, and in 1906 he took the place of Hegar as conductor of the Male Choir there. During part of the same period (1902–4) he also conducted the Stadtsängerverein at Winterthur. Before long Andreae was entrusted with the direction of the Symphony Concerts at the 'Tonhalle' in Zürich. In 1914 he was nominated musical director and professor by the Zürich University, and about the same time he became Principal of the Conservatoire.

The chief works by Volkmar Andreae are:

A Symphony; incidental music to Heine's *Ratcliff*; Piano Trios, opp. 1 and 14; Violin Sonata, op. 4; String Quartet, op. 9; String Trio, op. 29; Kleine Suite for orchestra, op. 27; Der Göttliche, op. 2, and 'Charons Nachen,' op. 3, for chorus and orchestra; Symphonic Fantasy for tenor solo, chorus, orchestra and organ, op. 7; Male Voice Choruses, op. 5, 8, 11, 13, 17, 21; Songs, opp. 6, 10, 12, 15, 16, 18; and Piano pieces, opp. 20.

E. B.

ANDREAS OF CRETE (650–720), oldest poet of canons of the Greek Church. The melodies given in the oldest versions now extant, and belonging to the 9th or 10th centuries, which are apparently his own, approach the ancient Greek hymns very closely, except for a few richer *Melismata*.

E. v. d. S.

ANDRÉE, Elfrida (*b.* Wisby, Feb. 19, 1841), pupil of W. Söhrling, L. Norman and Gade, was organist at Stockholm, 1861, and at Gothenburg Cathedral, 1867. She wrote a pianoforte-quintet in E minor, 1865; 'Snöfrid,' chorus and orchestra, and a pianoforte trio, 1884. An organ symphony No. 2 received a prize at Brussels in 1894, and a Swedish Mass was performed with great success at Stockholm. She wrote also a symphony for orchestra, a string quartet, an organ symphony No. 1 (London); also solo pieces for violin, pianoforte, songs, etc. E. v. d. S.

ANDREOLI, a musical family of Northern Italy. (1) Evangelista (*b.* 1810; *d.* June 16,

1875) was organist and teacher at Mirandola in Modena and father of (2) and (3). (2) Guglielmo (*b.* Mirandola, Apr. 22, 1835; *d.* Nice, Mar. 13, 1860) was pupil at the Conservatorio of Milan, 1847–53, and a pianist of great distinction, remarkable for his soft and delicate touch, pure taste, and power of expression, as well as for great execution. He was well known in London, where he appeared at the Crystal Palace (Dec. 13, 1856), the Musical Union (Apr. 27, 1858), the New Philharmonic (May 9, 1859), and elsewhere. His compositions were unimportant. (3) Carlo (*b.* Mirandola, Jan. 8, 1840) was also brought up at the Conservatorio of Milan, where he became professor of the piano about 1875. He too was favourably known in London. G.

ANDREOLI, Giuseppe (*b.* Milan, July 7, 1757; *d.* Dec. 20, 1832), a celebrated double-bass player, a member of the orchestra of La Scala and professor of his instrument at the Conservatorio of Milan; he also played the harp with success. T. P. H.

ANDREOZZI, Gaetano, surnamed Jomellino (*b.* Naples, 1763; *d.* Paris, Dec. 21, 1826), a relative and pupil of Jomelli, wrote 45 operas, 3 oratorios, chamber music and songs which were very popular until the arrival of Rossini. Fétis describes him as lacking in genius and science, but gifted with a natural flow of melody (*Fétis*; *Mendel*).

ANDREVI, Francisco (*b.* near Lérida in Catalonia, Nov. 16, 1786; *d.* Barcelona. Nov. 23, 1853), of Italian parentage, was successively the director of music in the cathedral of Segorbe, the church of Santa María del Mar at Barcelona, the cathedrals of Valencia, Seville and Bordeaux (1832–42), where he fled during the civil war. He lived in Paris from 1845 to 1849, and finally retired to Barcelona. His sacred compositions were good and numerous: a Nunc Dimittis and a Salve Regina, printed in Eslava's collection of Spanish church music, *Lira Sacro-Hispana*, are his only published works. His treatise on Harmony and Counterpoint was translated into French (Paris, 1848). He wrote two oratorios, 'Juicio Universal: drama sacro' (Valencia, 1822 and 1827) and 'La Dulzura de la virtud' (Barcelona, before 1819), preserved in the Library of the Diputació at Barcelona; a Requiem (1834) and a Stabat Mater (Bordeaux), as well as music for the dance of the *Seises* in the Cathedral at Seville. M. C. C.; addns. J. B. T.

ANDRIEN (Adrien), Martin Joseph (called 'La Neuville'; also Adrien l'Aîné) (*b.* Liége, May 26, 1767; *d.* Paris, Nov. 19, 1822), appeared as bass singer in the Stabat Mater of both Pergolese and Haydn at the Concert Spirituel (1781) with Chéron; then taking alternate parts with him at the Opéra from 1785–1804; afterwards director of the singing there, until he succeeded Laîné as professor of lyric declamation at the École Royale de Musique (Mar. 1822). He died a victim to the exaggerated system of declamation then in vogue. His voice was harsh, his method of singing bad, but he had merit as an actor. He composed 'Invocation à l'Être suprême,' 'Hymne à la victoire' (on the evacuation of French territory), 'Aux martyrs de la liberté' (1794). (See Constant Pierre's *Hymnes et chansons de la Révolution Française.*

His two brothers were J. Adrien (*b.* Liége, *c.* 1768; *d. circa* 1824), choirmaster of the Théâtre Feydeau (1794); Ferdinand Adrien (*b. circa* 1770; *d. circa* 1830) taught singing and became singing-master at the Opéra (1798–1800). Both were composers of songs. They might possibly be identified (owing to similarity, and perhaps confusion of names) with Jacques François Ferdinand Adrien (*b.* May 22, 1760), musician of the National Guard, 1793, professor of solfeggio at the Conservatoire, 1795–1800; and Arnold Adrien (aîné) (*d.* Dec. 2, 1825 ?), singing professor at the Conservatoire, 1795–1802. (See Constant Pierre, *Le Conservatoire National de Musique et de Déclamation*, Paris 1900.) M. L. P.

ANDRIES, Jean (*b.* Ghent, Apr. 25, 1798; *d.* there, Jan. 21, 1872), professor of violin and ensemble classes at Ghent Conservatoire. He was director in 1851, and hon. director in 1856 of the Conservatoire; also solo violinist. He wrote: *Aperçu historique de tous les instruments de musique actuellement en usage*; *Précis de l'histoire de la musique depuis les temps les plus reculés* (1862); *Instruments à vent: La flûte* (1866); *Remarques sur les cloches et carillons* (1868). E. v. d. S.

ANDROT, Albert Auguste (*b.* Paris, 1781; *d.* Aug. 19, 1804), a church composer, was admitted into the Conservatoire in his fifteenth year. In 1799 he obtained a prize for his exercises in harmony, and four years afterwards, having gained the Prix de Rome for his 'Alcyone,' he was sent to that city to study under Guglielmi. During the first year of his residence in Rome he made such progress that his master commissioned him to write a Requiem and another sacred composition. The latter, performed during Passion Week, excited so much admiration, that he was engaged to compose an opera for the autumn. He had scarcely completed the last scene when he died. In the following October a De Profundis of his composition was performed in his memory at the church of San Lorenzo in Lucinia.

A short notice of this composer is to be found in the *Dict. of Musicians* (1827). C. H. P.

ANERIO, the name of two brothers, eminent as composers of church music in Rome.

(1) Felice (*b. circa* 1560; *d.* Rome, Sept. 27, 1614 [1]), after being in the Papal Choir as a boy

[1] *Riemann.*

soprano from 1575–79, and completing his studies under G. M. Nanini, was made maestro at the English College. He afterwards took service with Cardinal Aldobrandini, and upon the death of Palestrina was named 'compositore' to the Papal Chapel, Apr. 3, 1594, a post which he retained till 1602. His printed compositions include the following :

3 books of 'Sacred Madrigals' for 5 v. (Gardano, Rome 1585); 3 books of 'Madrigals' for 5, 6 and 3 v. (1587, 1590, 1598); two books of Hymns, Canticles and Motetti (1596 and 1602); 'Responsoria' for Holy Week (1606); Litanies, Canzonetti for 4 v. (1586), and Motetti.

His unpublished works are preserved in the collections of S. Maria in Vallicella, the Vatican Basilica and the Pontifical Chapel, as well as in the Hofbibliothek, Vienna, the State Library, Berlin, and elsewhere. In the library of the Abbé Santini, also, there was a considerable number of Anerio's masses, with psalms and other pieces. A Mass and 12 motets (one for 8 voices) by him are given in Proske's *Musica divina.*

(2) Giovanni Francesco (*b.* Rome, *c.* 1567 ; *d. circa* 1620) was maestro di cappella to Sigismund III., King of Poland, about 1609. He served in the same capacity in the cathedral of Verona in 1611, but soon after that went to Rome to fill the post of musical instructor at the Seminario Romano, and was, from 1613–20, maestro di cappella at the church of the Madonna de' Monti. He was ordained priest in 1616. He was one of the first Italians who made use of the quaver and its subdivisions. His printed works form a catalogue too long for insertion here (see *Q.-L.* ; Vogel's *Bibl. weltl. Vocalmus. Italiens*) ; suffice it to say that they consist of all the usual forms of sacred music, and that they were published (as his brother's were) by Soldi, Gardano, Robletti, etc. Giovanni Anerio had a fancy for decking the frontispieces of his volumes with fantastic titles, such as *Ghirlanda di sacre rose* (1619), *Teatro armonico spirituale* (1619), *Selva armonica, Diporti musicali* (1617), and the like. He was one of the adapters of Palestrina's Mass 'Papae Marcelli,' for 4 voices. (See Palestrina.) There were scores of several of his masses in the collection of the Abbé Santini. A Te Deum in Proske's *Musica divina*, ascribed to the elder brother, is really by Giovanni Francesco Anerio. A Requiem of his for 4 voices was published by Pustet of Regensburg. E. H. P., rev.

ANET, (1) Jean-Baptiste (*b. circa* 1661 ; *d.* Lunéville, Lorraine, Aug. 14, 1755), was considered in France as the first violinist of his time ; his renown was great at the beginning of the 18th century. Not much is known of his childhood and youth, except that he travelled in Germany ; and in Italy, where he studied three or four years with Corelli at Rome. He belonged afterwards to the band of the Duke of Orleans and to the Chapel Royal. His débuts at the Concert Spirituel in 1725 were striking, his manner of playing unaccompanied preludes attracting much attention. Foreigners, like Quantz and Marpurg, speak of him with praise. Although very successful in Paris, he left about 1736 and retired to the court of the ex-King of Poland, Stanislas Leczinski, at Lunéville, Lorraine. His works, principally 'Premier Livre de sonates à violon seul et la basse continue' (1724), 'Sonates à violon seul et basse continue' (1729), bear the influence of Corelli ; his 2 Suites de pièces à deux musettes, op. 2, and his 2nd and 3rd Œuvre de musettes (1726, 1730, 1734), with their picturesque titles, are characteristic of the French pastoral taste in vogue towards 1730.

(2) Another violinist of the same Christian and surname (*b. circa* 1651 ; *d.* Apr. 26, 1710), violin teacher at Paris in 1692, died leaving no works. Their relationship remains obscure.

Bibl.—Lionel de La Laurencie, *L'École française de violon de Lully à Viotti*, vol. i., Paris, 1922. M. L. P.

ANFOSSI, Pasquale (*b.* Taggia, near Naples, Apr. 25, 1727[1]; *d.* Rome, Feb. 1797), an operatic composer. He first studied the violin, but deserted that instrument for composition, and took lessons in harmony from Piccinni, who was then in the zenith of his fame. His first opera was 'La donna fedele' (Naples, 1758), his next, 'Caio Mario,' given in Venice in 1769, and 'I visionari,' Rome, 1771, were failures ; but his third, 'L' incognita perseguitata,' 1773, made his fortune. Its success was partly owing to the ill-feeling of a musical clique in Rome towards Piccinni, whom they hoped to depreciate by the exaltation of a rival. Anfossi lent himself to their intrigues, and treated his old master and benefactor with great ingratitude. In his own turn he experienced the fickleness of the Roman public of that day, and quitting, first the capital, and afterwards Italy, brought out a long string of operas in Paris, London, Prague and Berlin, with varying success. He returned to Italy in 1784, and to Rome itself in 1787. Tiring of the stage, he sought for and obtained the post of maestro at the Lateran, and held it from 1792 till his death.

He composed no less than 46 operas and 7 oratorios, besides 4 masses and certain pieces of church music, some of which are in the collection of the Lateran while others were in that of the Abbé Santini. Mozart composed airs for insertion in Anfossi's operas 'Il curioso indiscreto' and 'Le gelosie fortunate.'

E. H. P.

ANGECOURT, Perrin d', a troubadour of the 13th century at the court of Charles of Anjou, brother of St. Louis. He accompanied Charles on his journey to Provence, where the latter married the daughter of Berengar. Fifty-three of his chansons, words and music, are still in existence (*Eitner* ; *Fétis*).

ANGÉ DE LASSUS, Lucien (*b.* Paris, Jan.

1 *Baker.*

24, 1846; *d.* there, Dec. 19, 1914) librettist to Saint-Saëns; also a musical writer; wrote the librettos of 'Phryné,' 'L'Ancêtre,' 'La Gloire.'

ANGELI, Andrea d' (*b.* Padua, Nov. 9, 1868), studied at the local conservatoire and university and took his Ph.D. degree by an essay on Greek music. Apart from his activity as a teacher of Italian literature at the college at Calegari, he is a writer on musical subjects, and has composed a successful opera, 'L' Innocente,' masses, a Stabat Mater, chamber music, etc. E. v. d. s.

ANGIOLINI, Gasparo (*b.* Milan, *c.* 1740 ?), a famous choreograph who not only invented the plots of his ballet-dramas, but also composed the music for them, which was of considerable merit. He was a highly cultured artist as is shown by his *Lettere al signor Noverre sugli pantomimi* and *Riflessioni sopra l' uso de programmi ne' balli pantomimi*, as well as by his intimate friendly relations with Rousseau, Voltaire and Metastasio. He was ballet-master at Vienna and St. Petersburg (1760), whence he returned to Milan and Rome, for which towns he wrote and composed a number of ballets.

ANGLEBERT, Jean Henri d' (*b.* 1635), was a pupil of Chambonnières. He became organist to the Duke of Orleans in 1661, and in 1664, chamber musician to Louis XIV. as harpsichordist and spinet-player. His 'Pièces de clavessin avec la manière de les jouer; diverses chaconnes, ouvertures et autres airs de M. de Lully, mis sur cet instrument . . .' (1689), in which a tendency to enlarge the form of the suite is noticeable, are a testimony to the importance of dramatic music in contemporary taste. Besides original compositions, there are in this book overtures, favourite dances, etc., taken out of Lully's operas, popular melodies, 'vaudevilles,' arranged for the harpsichord; also organ fugues. One of the pieces, 'Les Folies d'Espagne,' with 22 variations, was treated afterwards by Corelli (op. 5). The book is also valuable as containing a good table of the *agréments* used at the time. It is reprinted in vol. xix. of the 'Trésor des pianistes.'

M. L. P.

A set of 5 fugues on variants of a common subject has been reprinted by Guilmant in No. 25 of his 'École classique de l'orgue.' The book contains also a 'Quatuor sur la Kyrie à trois sujets tirés du plainchant,' the chief interest of which lies in the fact that each of the 4 parts is played on a separate keyboard (3 manuals and pedals), thus showing that the device known as 'thumbing' was practised at a very early date in France, though it appears to have been unknown in any contemporary school of organ music. H. G.

Bibl.—A. Pirro, *Les Clavecinistes*, 1924; Victor Capoul; *Fétis.*

ANGLIA, (1) Gervasius de (*c.* 1450), an English musician. Four songs of his are in Codex 37 of the Liceo, Bologna; a fifth, in the same Codex, 'Patrem omnipotentem' *a* 3 v., is signed 'Anglicanum patrem,' but it is doubtful whether this refers to the same person. One song of his is in Codex 92 of the Trient Cathedral Archives (now in the Hofburg, Vienna ?). In the Trient Codices there are also some songs signed 'Anglicus' which Haberl (*Jahrb.* 1897, 25) tries to identify with Lionel (Power). Eitner, however, thinks it more likely that it refers to Gervasius as Power is never designated as Anglicus. (2) Robert, a singer in the Papal Chapel, 1492.

E. v. d. s.

ANGLO-FRENCH Music Publishing Company, Ltd., The (Registered Office, 95 Wimpole St., W.1), was founded in 1916 for the purpose of supplying the British music teacher with educational works, both classical and modern, to replace those German publications the supply of which had been cut off by the war (1914). In pursuance of this object it has published a large number of carefully selected and well-edited original works by British composers, which are eminently adapted to the requirements of modern educational methods. Control of this company was acquired by the Oxford University Press in 1925.

ANGRISANI, Carlo (*b.* Reggio, *c.* 1760), a bass singer. After singing at several theatres in Italy, he appeared at Vienna, where, in 1798 and 1799, he published two collections of 'Notturni' for 3 voices. In 1817 he sang at the King's Theatre, London, with Fodor, Pasta, Camporese, Begrez, Naldi and Ambrogetti.

J. M.

ANIMATO, or CON ANIMA (Ital.), 'with spirit,' a direction for performance seldom found in the works of the older masters, who usually employed 'Con spirito' or 'Spiritoso.' The use of the expression does not necessarily imply a quickening of the time, though modern composers frequently use it in that sense.

ANIMUCCIA, the name of two Italian church composers reputed to have been brothers. Pitoni doubted the relationship, but the contemporary evidence of Poccianti, who speaks of Paolo as 'Animuccia, laudatissimi Joannis frater,' may be accepted.

(1) Giovanni (*b.* Florence, *c.* 1500; *d.* Rome, Mar. 1571) was the more eminent of the two. He studied music under Claude Goudimel, and in 1555 was made maestro at the Vatican, retaining that post until his death. The date of his death has been questioned, but it is proved by two entries in the Vatican Archives, one of his death in Mar. 1571, and the other of the election of Palestrina in his place in April following. More than one passage in the dedications of his published pieces shows that he was touched by the same religious spirit of responsibility which filled the soul of Palestrina; and the friendship of Saint Filippo Neri,

which they both shared, is alone an indication of that similarity. The saint's admiration of Animuccia may be gauged by his ecstatic declaration that he had seen the soul of his friend fly upwards towards heaven.

Animuccia composed the famous 'Laudi,' which were sung at the Oratorio of S. Filippo after the conclusion of the regular office, and out of the dramatic tone and tendency of which the 'Oratorio' is said to have been developed.

Some of the 'Laudi' were published in 1563 (Dorico), 1570 (Blado); a first book of masses appeared in 1567, a Magnificat in 1568, and madrigals in 1547, 1551, 1554 and 1565. Martini inserted two of his Agnus in his 'Esemplare'—also reprinted by Choron, *Principes*, vol. v. Two movements from the 4-part Mass, 'Conditor alme siderum,' part of a Magnificat, and a madrigal in 5 parts, are in the first volume of Torchi's 'L' arte musicale in Italia.' But the bulk of his compositions is probably in MS.; many are in the library of the Sistine Chapel.

Of the rapidity with which he wrote some proof is afforded by an extract quoted both by Baini and Fétis from the Vatican Archives. It is an order to the paymaster of the Chapter to pay Animuccia 25 scudi for 14 hymns, 4 motetti, and 3 masses, all of which are shown in the order itself to have been composed in less than five months.

(2) Paolo (*d.* Rome, 1563[1]) was made maestro at the Lateran on the removal of Rubino to the Vatican in 1550, and held the post till 1552, when he was succeeded by Lupacchini. Pitoni insists that he remained at the Lateran from 1550–55; but the 'Libri Censuali' are against him. Baini, however, hints that it is possible that he may have occupied the post a second time temporarily in 1555, just before the election of Palestrina, and that this may have misled Pitoni. He left but little printed music behind him. Madrigals of his appear in many of the miscellaneous collections published between 1551 and 1611. (See Dr. Emil Vogel's *Bibl. weltl. Vocalmus. Italiens.*) There is a motet of his in a Collection of Motetti published at Venice in 1568; and Barrè of Milan published 3 of his madrigals in a miscellaneous volume in 1558. E. H. P.

ANJOS, Fr. Diniz dos (*b.* Lisbon; *d.* Belem, Jan. 19, 1709), a Portuguese harpist and player on the viola da gamba, who entered the monastery of Belem in 1656. His compositions, including psalms, responsoria, masses and motets, are said to be preserved at Belem. J. B. T.

ANNA, Francis (end of 15th and early 16th cent.). In the 2nd, 3rd, 4th and 8th book of *Frottole* (Petrucci, 1504–8), he calls himself 'Franciscus Venetus organista,' and on the title-page of another book of songs for voice and lute, containing also 26 *Ricercari* ('Tenori et contrabassi intabulati') (Petrucci, 1509), he appears as 'Franciscus Bossinensis,' which Eitner translates as 'from Bosnia.' A lamentatio *a* 4 v. appears in Petrucci's book, 'Lamentationum Jeremiae prophete liber primus.' Fétis maintains that the real name of this interesting composer is Anna, but gives no authority. E. v. d. S.

ANNA BOLENA, opera by Donizetti; libretto by Romani; produced Milan, Dec. 26, 1830, Paris, July 8, 1831, and in London.

ANNIBALE, called Annibale Padovano (*b.* Padua, *c.* 1527; *d. circa* 1600), a famous contrapuntist of the 16th century. From 1552–66 he was organist of St. Mark's, Venice, and after the latter year he became Kapellmeister to the Austrian Archduke Carl at Gratz. He was still in that position in 1573. A book of vocal 'ricercari' (4 parts) was published in Venice, 1556, a volume of madrigals (5 parts) in 1564 by Gardano, a book of motets (5 and 6 parts) in 1567, a volume of masses in 5 parts in 1573, and 'Toccate e ricercari' for organ in 1604. Madrigals by him appear in many of the miscellaneous collections (see Vogel, *Bibl. weltl. Vocalmus. Italiens*), and motets by him in MS. collections are mentioned in *Q.-L.*

ANNIBALI, Domenico (*b. circa* 1705; *d.* 1779), an Italian sopranist who studied at Rome, sang at Venice, 1726, and went to Dresden, 1729. He remained at the court of Saxony until 1764, was engaged by Handel for his opera in London in the autumn of 1736, and made his début in 'Arminio.' He appeared next in 'Poro,' introducing three songs, not by Handel, which probably he had brought with him from Italy to display his particular powers—an example frequently followed since his day. He performed in the cantata 'Cecilia, volgi,' and sang the additional song, 'Sei del ciel,' interpolated by Handel between the first and second acts of 'Alexander's Feast.' In 1737 he performed the part of Justin in the same master's opera of that name, and that of Demetrio in his 'Berenice.' J. M.

ANNUNCIAÇÃO, Fr. Gabriel da (*b.* Ovar, 1681; *d.* Lisbon, 1747), a Portuguese composer and member of the Franciscan order, which he entered in 1706. He held the post of Vigario do Côro in monasteries at Coimbra, Oporto and Lisbon. His compositions, all of which were for the Church, were destroyed in the Lisbon earthquake of 1755: a manual of plain-song, 'Arte de cantochão,' was printed at Lisbon in 1735. J. B. T.

ANNUNCIAÇÃO, Philippo de, a Portuguese organist and monk in the monastery of Santa Cruz, Coimbra. In 1754 he published a set of 'Acompanhamentos para orgão de Hymnos, Missas. . . .' J. B. T.

ANNUNZIO, Gabriele d' (*b.* Pescara, 1864), famous Italian poet. D'Annunzio claims

[1] According to Poccianti

mention here as general editor of the *Raccolta delle musiche italiane*, a collection of ancient and modern musical works published in Milan by the Istituto Editoriale Italiano. Interest in old and forgotten masterpieces was stimulated in Italy by the description of Benedetto Marcello's 'Arianna' in D'Annunzio's 'Il Fuoco,' and probably the impulse which brought about the publication of the *Raccolta delle musiche* came from the glowing prose of the novel. Acting as co-editors with D'Annunzio are G. F. Malipiero, Carlo Perinello, Ildebrando Pizzetti, F. Balilla Pratella, and others, who deal with the technical aspects of the work.

It should also be mentioned that during the poet's occupation of Fiume he drew up a constitution (Aug. 27, 1920), in which music was defined as 'a Religious and Social Institution of the Regency of Carnaro,' and provision was made for the establishment of choral and instrumental bodies subsidised by the State in all the communes of the Regency. It was D'Annunzio's intention to build in Fiume an arena capable of holding at least ten thousand spectators, with a wide pit for orchestra and chorus. There were to be held 'choral and orchestral celebrations' to which the people would be admitted without payment. F. B.

ANSANI, Giovanni (*b.* Rome about middle of 18th cent.), was one of the best tenors of Italy. In 1770 he was singing at Copenhagen. About 1780 he came to London, where he at once took the first place; but, being of a quarrelsome temper, he threw up his engagement on account of squabbles with Roncaglia. He returned the next year with his wife, Maccherini, who did not succeed. He sang at Florence in 1784, at Rome the autumn of the same year, and elsewhere in Italy; and finally retired to Naples at the age of 50, where he devoted himself to teaching singing. He was still alive in 1815. He was a spirited actor, and had a full, finely toned and commanding voice. Dr. Burney says it was one of the sweetest yet most powerful tenors he ever heard; to which, according to Gervasoni, he added a very rare truth of intonation, great power of expression, and the most perfect method, both of producing the voice and of vocalisation.

Ansani was known also as a composer of duets and trios for soprano and bass, with a basso continuo. Gerber reports that an opera of his composition, called 'La Vendetta di Minos,' was performed at Florence in 1791.

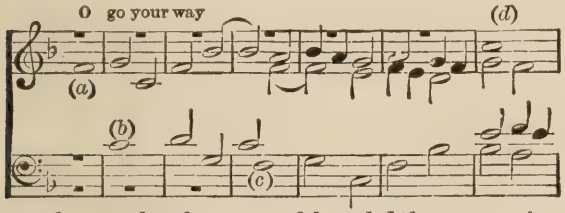
J. M.

ANSELMI, Giuseppe (*b.* Catania, Sicily, Nov. 16, 1876), operatic tenor and composer. His early studies included the violin and composition, and when a boy of 14 he appeared in public as a violinist in Tunis and at a court concert in Athens. At the age of 18 he began cultivating his voice, and in 1896 made a successful début in opera at Athens as Turiddu in 'Cavalleria Rusticana.' Engagements followed at Cairo, Alexandria, Genoa, and eventually the San Carlo, Naples. In May 1901 he appeared at Covent Garden for the first time in 'Rigoletto,' displaying a voice of pleasing quality and considerable power, besides an intelligent dramatic style. He again sang here at the seasons of 1904 and 1909, making a very successful appearance during the latter as Mario Cavaradossi in 'La Tosca.' As a composer of some merit he gained notice by writing a 'Poema Sinfonico' for orchestra, and several piano pieces and songs.

Bibl.—Northcott, *Covent Garden and the Royal Opera.*

H. K.

ANSERMET, Ernest (*b.* Vevey, Nov. 11, 1883), orchestral conductor, studied at Lausanne University and was for some years professor of mathematics at the college there.



Musically he studied first with Dénéréaz at Lausanne, and later counterpoint with Otto Barblan and composition with Ernest Bloch at Geneva. Having chosen the career of a conductor, he worked with Francesco de Lacerda, of the Schola Cantorum, and afterwards had the advice of Nikisch and Weingartner. In 1914 he took charge of the Casino concerts at Montreux, which Lacerda had directed before him, and in 1915 he succeeded Stavenhagen at Geneva. He founded in 1918 the Orchestre de la Suisse romande, which has given several series of concerts at Geneva, Lausanne, Neuchâtel, etc., remarkable for the enterprising character of the programmes. From 1915 onwards Ansermet was intermittently engaged with the Diaghilev Ballet which he has accompanied to North and South America, Spain, Italy and England, directing the first performances of many of its most important productions in Paris and London. His name is closely associated with the works of Stravinsky, of which he has given noteworthy performances, both with and without the ballet, and to which he devoted a special concert in London, 1920, which was the first introduction to the composer's later manner. In recent years he has conducted concerts of the Royal Philharmonic Society in London, and also at Liverpool. His tastes are catholic and his repertory unusually varied, but circumstances have given special prominence to the scrupulous clarity of his readings of the most complicated modern scores. E. E.

ANSORGE, Konrad (*b.* Buchwald, near Liebau, Silesia, Oct. 15, 1862), studied at Leipzig Conservatoire, 1880–82, and under Liszt, 1885–86. After touring in America he returned to Weimar in 1893. In 1895 he went to Berlin and taught the piano at the Klindworth-Scharwenka Conservatoire from 1898 to 1903. He takes a high rank among modern pianists. He composed a Requiem for male

chorus and orchestra, several orchestral pieces, string sextet, 2 string quartets, 3 sonatas and solos for PF., and songs.

ANSSEAU, Fernand (*b.* Roussu-Bois, near Mons, 1890), Belgian tenor. Ansseau, who since the war has taken a high place among stage tenors, was a pupil of Professor Demest at the Brussels Conservatoire. His success at the Théâtre de la Monnaie led to his engagement at Covent Garden in 1919. In London he made his mark at once: indeed few tenors of the French type have won such warm praise from London critics. At the Opéra-Comique in Paris Ansseau was associated with a very interesting experiment, singing 'Orfeo' as originally laid out by Gluck for the tenor voice. In the winter of 1923–24 he was one of the chief tenors at the Chicago Opera House. S. H. P.

ANSWER. An answer in music is, in strict counterpoint, the repetition by one part or instrument of a theme proposed by another. In the following chorus from Handel's 'Utrecht Jubilate'

a and *c* are the theme, and *b* and *d* the successive answers. (See Fugue.)

The word is used in looser parlance to denote such replies of one portion of a phrase to another, or one instrument to another, as occur in the second subject of the first movement of Beethoven's 'Sinfonia eroica':

G.

ANTEGNATI of Brescia. This family was amongst the earliest famous organ-builders in Italy in the 15th and 16th centuries. At the latter period they had already built more than 400 instruments.

One of the family, Costanzo (*b.* Brescia, 1557; *d.* there, 1620), composed two books of masses, psalms and madrigals; three 'ricercari' for organ are contained in vol. iii. of 'L'arte musicale in Italia.' V. de P., with addns.

ANTHEM, derived from old English *antefn*, early Romanic *antéfena* and the Greek *antiphona* (see Antiphon), is the term applied in modern usage to a piece of concerted vocal music sung in the Offices of the Anglican and kindred Churches to words which do not belong to the prescribed Liturgy. The position of the anthem is similar to that of the Motet (*q.v.*) in the Latin Church; authorised though not liturgical. The term, in slightly differing forms, was in common use in England long before the Reformation. The *New English Dictionary* cites an example of its use by Bede in the year 1000, and further instances are given of *antefnes* or *antempnes* in 1230, and a passage is quoted from *Myrr. Our Lady*, 'After the Hympne cometh Antempnes and Psalmes.' In all these cases the term seems to refer to the Antiphon. Chaucer, however, in the *Prioress*, used the term in the more modern sense, 'bad me for to sing this antym,' and Holinshed wrote in 1577, 'In the meanetime did the quier sing y^e^ antheme beginning *Unxerunt reges.*' Here the term is synonymous with motet. In more recent times the word has been used loosely by poets as denoting song; thus in Keats's *Nightingale*, 'Thy plaintive anthem fades past the near meadows over the near streams'; and a national 'anthem' means no more than a national 'song.'

As a musical form the anthem of to-day is exclusively English, and it is this feature more than anything else which marks the special character of the English Cathedral Services. It had its origin in the motet, but ever since the Reformation it has been developed on entirely independent lines, nor is it to be found in any of the Reformed Churches on the Continent. The anthem with English words came into use in the early stages of the Reformation movement, and before the appearance of the Prayer Books of Edward VI. (1549 and 1552), although in neither of these nor in that of Elizabeth (1559) was definite provision made for it. But the injunctions of Elizabeth provided for the singing of 'a hymn or such like song in churches,' thus regularising existing practice. The place of the anthem was at the conclusion of morning and evening prayer. In 1662, when the State prayers were added to the Prayer Book the rubric 'In quires and places where they sing, here followeth the anthem' was inserted. Writing in 1663, Clifford (*q.v.*) says that it was customary to sing four anthems on a Sunday in fully appointed choirs, that is two in the morning and two in the evening, the second in each case being after the sermon. Pepys notes: 'The sermon done, a good anthem followed.'

One of the most cogent claims of the early reformers was that a 'tongue understanded of the people' should replace the Latin of the old Liturgy. Evidence of the popularity of this movement in connexion with the music is provided by a set of manuscript partbooks in the Bodleian Library dating at least as early as 1550; in these books there are about a hundred anthems set to English words taken from the first Prayer Book and from the earlier Primers; this remarkable set of partbooks also contains several complete settings of the Mass in English, and a number of English settings of the canticles for morning and evening prayer. As

regards these anthems a few were adapted from Latin motets, but a large proportion were newly composed. The activity of the composers in providing music for the new English services as soon as they were established is thus made evident. And throughout the second half of the 16th century the output of church music written to English words was immense, as the surviving partbooks recently examined and tabulated by the music committee of the Carnegie edition of 'Tudor Church Music' clearly prove. Many of these composers, notably Byrd, also continued throughout the century to write motets and masses for the Latin Liturgy, and in certain instances alternative English and Latin words are found to the same musical setting ; most of these are known to have been produced in both versions in the lifetime of the composers, and they would seem to have had the sanction of the composers, even supposing that the task of adapting the alternative words was not always their own.

The English anthem, as already stated, was developed from the motet, and for some time it differed from it only in the language of the words. But in the latter part of the 16th century, when the English composers were so freely exploiting new forms and methods in secular as well as sacred music, the first marked differences between the Latin motet and the English anthem were beginning to declare themselves. Byrd was undoubtedly one of the first composers to introduce short passages for solo voice with an independent organ accompaniment, *e.g.* in his 'O Lord, rebuke me not,' and the psalm, 'Teach me, O Lord.' His second Service is the earliest-known example of similar writing in that particular branch of church music. In Byrd's 'Have mercy upon me,' in his 1611 set, he used viols to accompany the solo passages. The introduction of the solo into the anthem had its counterpart in the development of the art-song, of which Byrd, too, was one of the earlier pioneers. A notable advance in the use of the solo voice with organ accompaniment is to be seen in the work of Orlando Gibbons, who although he died but two years after Byrd, yet represents a new generation as regards musical form and style. Gibbons's 'This is the record of John,' shows a very marked advance upon the same lines, and many of his anthems contain solo passages with accompaniment either for organ or for strings. This type of anthem came to be known as the 'verse anthem.' But Gibbons also worked upon the old motet form or 'full anthem,' as, for instance, in his 'Lift up your heads,' 'Hosanna,' and 'O clap your hands,' each of which is in the highest rank of this class.

The next stage in development of the English anthem was reached in the Restoration period ; two great names stand out prominently in reference to it, namely, Blow and Purcell. The more important anthems of these composers were of much greater length than those of earlier days, consisting of several movements on the lines of short cantatas, interspersing with choral numbers important arias, duets and quartets for solo voices. A special feature of the anthems of Purcell, in particular, are the interludes for string orchestra. Most of these were written expressly for the Chapel Royal, where a band was available for performance. These same anthems were performed in the cathedrals and collegiate churches but the orchestral passages were usually curtailed as being unsuitable to the organ, which took the place of the strings ; and many fine anthems of Purcell have been entirely neglected since his time for the same reason. This particular characteristic of the Restoration anthems is directly traceable to the influence of Lully and the French school of his day. Anthems written by Jeremiah Clark and Croft for special occasions of thanksgiving for naval and military victories have orchestral accompaniment, but since then the church composers have confined themselves almost entirely to the use of the organ, and instrumental interludes of any importance are very rarely to be found in cathedral anthems after the middle of the 18th century. Except in this detail the general design of the anthem has changed but little since Purcell's day. A notable convention which characterises a large proportion of the Restoration anthems was the short Hallelujah chorus with which many of them conclude ; this feature but rarely adds interest to the works as a whole. The organ accompaniments to the solos both in Purcell's day and throughout a large part of the 18th century were commonly indicated by no more than a thorough-bass very irregularly figured. Handel's anthems, both those written for the Duke of Chandos and for the coronation of George II. (see HANDEL), may be regarded as a development of the Purcell model, but one which carried the form outside the limits of utility for the daily cathedral service.

The anthems of Greene and Boyce in the 18th century follow the model of Purcell in a general way except for the omission of instrumental interludes. The custom of concluding with a chorus in fugal form was beginning to come into vogue in their day ; this device was no doubt borrowed from oratorio, where it was a stereotyped convention. It continued to be popular with many church musicians, such as Goss and Elvey, until nearly the close of the 19th century.

The outstanding figure among English church musicians in the 19th century was S. S. Wesley. He inherited his gifts from his father, whose anthems were mostly framed on the model of the motet. But the younger Wesley put fresh life into the English anthem at a time when it

had become very mechanical and conventional. The use of recitative, as in 'Ascribe unto the Lord,' and 'Blessed be the God and Father,' is a characteristic feature of many of Wesley's anthems. And it was Wesley who first began to write independent organ accompaniments for his choruses, whereas before his time these had been almost exclusively a duplication of the voice parts. It was left to his pupils and successors to work out this idea, and in this connexion Garrett holds a somewhat important position in the history of the anthem even though his work is not of first-rate merit.

In the 20th century church music is naturally being influenced by that spirit of novelty which is so pronounced in the realm of secular music. The time has not yet arrived in which it is possible to discuss the merits of the anthems that are being written to-day; yet mention may be made of the work of Stanford and Harwood, for these two, each in his own way, added something to the anthem as it left Wesley's hands and recovered for it a dignity which was in danger of being lost under the sentimental and emotional influence of Spohr and Gounod in the hands of their English imitators. Each of them approached their task from his own standpoint, Stanford with an orchestral outlook and Harwood as an organist; but both did much to weld together the component parts of an anthem, not only as regards its separate sections or movements, which in the work of Purcell, Boyce, and S. S. Wesley alike are apt to be somewhat disjointed, but also in the matter of workmanship, recognising that the organ as well as the voices have something positive to contribute to the work as a whole. Stanford's 'The Lord is my shepherd,' and Harwood's 'O how glorious is the kingdom,' will serve to illustrate these points.

The conditions of the daily cathedral services have called for a continuous supply of short anthems as well as more elaborate ones; and in modern times the needs of parish churches, in which the anthem has come largely into use as one of the results of the Oxford movement, have much increased the demand for short anthems; so that to-day, as well as throughout the history of the English anthem, numbers of such works are being produced which differ in design little, if at all, from the simpler models of the Elizabethans.

The custom which came into vogue in the 19th century of introducing into the service excerpts from oratorios, cantatas, masses, etc., in place of the anthem proper has tended to destroy the conception of the anthem as a distinct musical form.

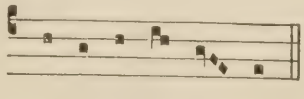
The earliest printed collection of anthems was that of Barnard in 1641; this was followed more than a century later by Boyce's cathedral music (see BOYCE). Notable publications of the collected anthems of individual composers in the 17th and 18th centuries were Tomkins's *Musica Deo sacra* in 1668, Croft's *Musica sacra* in 1724, Greene's Anthems in 1743, and Boyce's Anthems in 1780 and 1790. E. H. F.

ANTICIPATION is said to occur when one part moves to a note of the coming harmony before the accent on which the new harmony arrives. It is a device prevalent in the vocal cadences of 18th-century music. For an example see the air, 'He shall feed His flock' in Handel's 'Messiah.' (See HARMONY.)

ANTIENT CONCERTS SOCIETY, see DUBLIN.

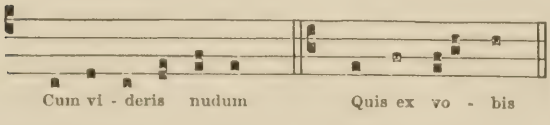
ANTIGONE of Sophocles. Mendelssohn in Sept. 1841 composed music—Introduction and seven numbers (op. 55)—to Donner's version, forming the first part of a trilogy, the others being 'Oedipus at Colonos' and 'Oedipus tyrannus' (see OEDIPUS). 'Antigone' was produced at New Palace, Potsdam, Oct. 28, 1841; Berlin Opera, Nov. 6; and Covent Garden, Jan. 2, 1845.

ANTINORI, LUIGI (*b.* Bologna, *c.* 1697), was a tenor singer gifted with a voice of pure and penetrating quality, and having acquired an excellent method of using it. He came to London in 1725 and sang in 'Elisa,' an anonymous opera; and in 'Elpidia,' by Vinci and others, a pasticcio given by Handel, in which Antinori took the place of Borosini, who sang in it at first. In the season of 1726 he appeared in Handel's 'Scipio' and 'Alessandro.' J. M.



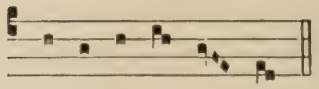
ANTIPHON. The earliest kind of Psalmody was that called 'responsorial,' in which the psalm was sung by a solo voice with a congregational refrain at intervals (see RESPONSORIAL PSALMODY). But there grew up alongside with it in the East at an early date the rival system of 'antiphonal' psalmody, in which the singing was done by two alternating choirs, and the refrain, instead of being a mere brief tag, was a definite melody. This method is said to have been begun in Antioch in the 2nd century by St. Ignatius after seeing a vision of angels engaged in antiphonal singing (Socrates, *H.E.* vi. 8), but it is more probable that it began in the middle of the 4th century there, and spread very rapidly through both East and West (Theodoret, *H.E.* ii. 19). To the latter it came under the influence of the great St. Ambrose, Bishop of Milan. The word 'antiphon' had already before this come to be used for a refrain in psalmody, and now these two usages coalesced: thus the antiphonal psalmody came to denote the singing of psalms by two choirs alternately, and properly speaking, by male voices alternating with women's or boys' voices, in such a way that an antiphon melody introduced the psalm and was also repeated as a refrain after each verse.

In the course of time changes were made: for the sake of brevity either the repetition of

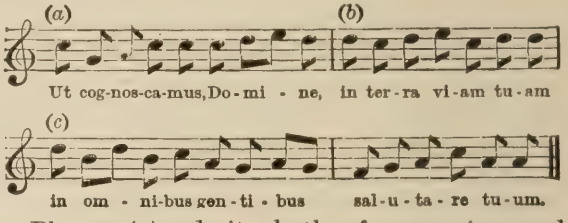


the refrain was cut down, or the psalm itself was shortened. In the Liturgy the psalm of the Introit-antiphon was ultimately reduced to one verse, while at the Communion the psalm disappeared altogether, leaving only the antiphon. In the Divine Service the psalms as a rule remained intact, being of the essence of the Service and not incidental, as at Mass ; but the antiphon came to be sung only at the beginning and at the end of the psalm, and beyond this too, the singing of it at the opening was in most cases restricted to the first two or three words. Thus in the later mediæval and in modern Service-books the antiphonal psalmody is found in use at various stages of decay, and it is, as a rule, only in processions or where psalms are sung during the performance of a somewhat protracted ceremony, such as the distribution of candles or ashes, that it survives in its full form.

The use of the term antiphon has gone out in connection with the regular music of the Mass, though the Introit and the Communion, and in a sense the Offertory too, are antiphons. It is now specially connected with the psalmody of the Breviary offices, which, as the responsorial psalmody which was formerly there was cut down into mere brief RESPONDS (*q.v.*), became almost entirely antiphonal.

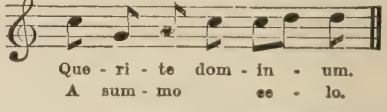


There is an intimate and necessary connection between the antiphon and the psalm-tone ; naturally they must belong to the same mode, and therefore the mode of the antiphon-melody determines the tone to which the psalm is to be sung ; moreover, since the antiphon is a refrain, it is essential that there should be a correspondence between its opening and the ending of the tone ; it was the work of the Tonals, which were first drawn up at the time of the great musical reforms of the 8th and 9th centuries, to lay down methodical rules to secure this correspondence ; to group the antiphons by their modes, then to group the antiphons of each mode according to their openings, and then to secure that they should be allied with the right tone and with a suitable ending. One instance may be quoted to show the way in which the tone ending was made to correspond with the opening of the antiphon. In the fourth mode the normal ending of the tone is thus :

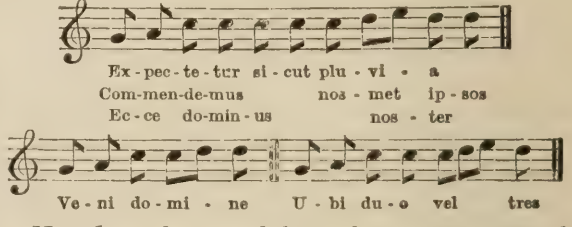


but in the case of antiphons which begin on the low C such as

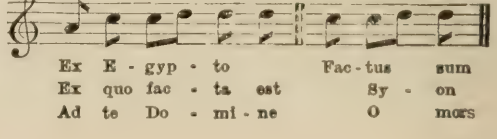
the ending is modified so as to lead down to the low note of the antiphon thus :



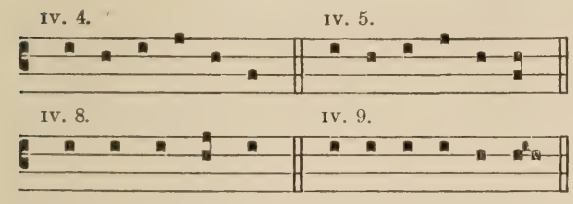
The antiphons are, as may have been already gathered, not all independent melodies, but in many cases a whole group was formed upon the same melody, which was modified, in the palmy days, with consummate skill, so as to be exactly suited to each text with which it was allied. The following instances will show one of the commonest of these themes, a transposed melody of the fourth mode, and some of the modifications which it undergoes in the course of being adapted to various texts.



Phrase (*a*) admits both of expansion and compression ; the type given above is, however, a very full form, and the phrase is not often expanded much beyond those limits, though it is permissible to repeat the note C in the middle of the phrase oftener if necessary, *e.g.* for the words ' Crastina die delebitur.'

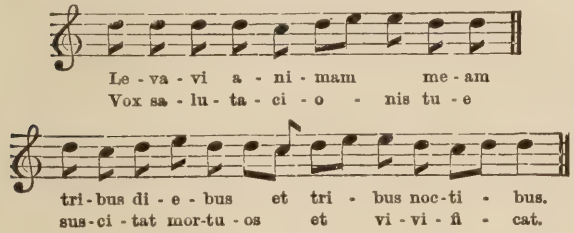


The shortening of the phrase is done in various ways ; perhaps the commonest full form of phrase (*a*) is this :



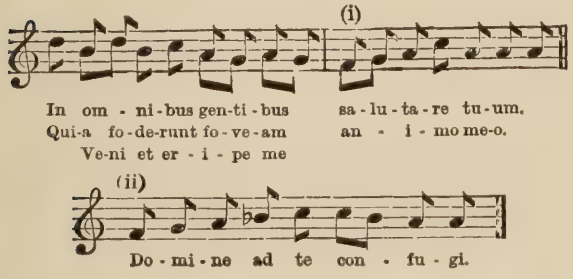
If further compression is needed, the opening notes are left out ; and this is also done for the sake of accent, since it is essential that the C in the middle of the phrase should begin with an accented syllable. Consequently a number of forms begin with the G, because the first strong accent is on the third syllable of the words, thus :

Nor does the possibility of compression end here, for others begin, in rarer cases, on the A, or even on the C itself ; in these cases naturally the compression is dictated to a considerable extent by the requirements of the words for the second phrase :

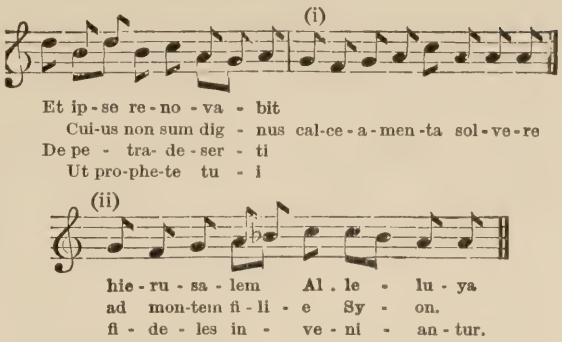


These openings are connected with the endings of the tone. So that the antiphons which begin with the C have the fourth ending ; those which begin with G the fifth, those which begin with A the ninth ; and those which begin on the second C the eighth.

The second phrase offers much difficulty. The melody is treated with great freedom, the accents are freely altered, and the notes grouped together ; if necessary a passing note is inserted.

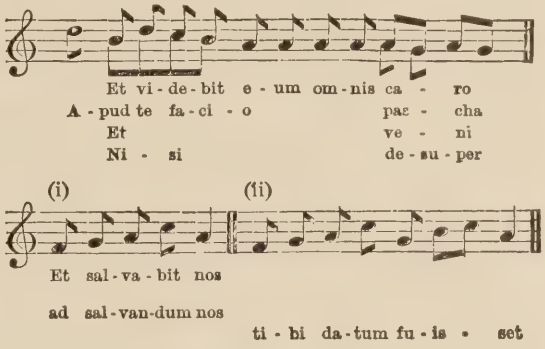


These show the normal modifications ; others are rarer, such as the following :

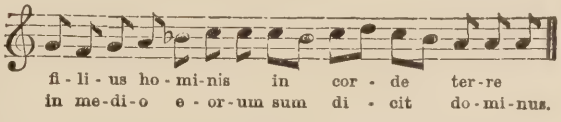


In the third phrase there are two main cases to be considered : (i.) when the cæsura comes between G and F ; and (ii.) when it comes a note earlier, *i.e.* between A and G. Also in the second half there are two alternative endings.

This is the first case :



This is the second case :



Facsimiles of mediæval antiphonals will be found in the publications of Solesmes and of the Plain-song and Mediæval Music Society (*q.v.*).

There are a considerable number of cases where the opening notes of this phrase are a descending scale, caused by putting the C before the B, thus :

The last instance gives an unusual ending, but one which is worth notice. The following also is noticeable as a useful expansion of the ending :

An analysis such as this throws much light on the nature of antiphons and the principles of those who made them. See further on the classification of antiphons, Gevaert, *Melopée antique*, and the Introduction to the *Sarum Antiphonal* (facsimiles of the Plain-song and Mediæval Music Society).

To a certain extent antiphons continued to have an existence independent of psalmody : thus the old Roman *cantilena* comprised a number of long processional antiphons, such as the well-known ' Deprecamur te,' which was sung by St. Augustine and his companions at their first coming to England : at a much later date a new set of independent antiphons arose, such as the ' Salve Regina ' and the ' Alma redemptoris,' written in honour of the Blessed Virgin, These occasionally came to be inserted into the psalmody of the Hours, but their proper place was an independent one : arising in the 12th

century, they soon became treated as an appendage to the Hours, and it became customary to sing one of these antiphons of Our Lady at the close of Compline. In this position they lent themselves readily to harmonisation and were constantly sung 'in pricksong.' Thus the Latin *antiphona* (or, as it was called in English, the 'anthem') passed into the English Prayer Book, not in connexion with the psalmody—for all such use of antiphons was ruthlessly cut away—but in the form of an independent musical composition in parts (see ANTHEM). W. H. F.

ANTIPHONAL (ANTIPHONER). This name has in course of time been applied to two of the Latin Service-books. Antiphons were in use both at Mass and at the Hour services, and therefore it was suitable as a name for the book containing the music for both or either of these two. Originally it most often denoted the first, and the 'Antiphonale missarum' was the regular name in the earlier days at Rome for the book containing the antiphons, and the other music as well, which was sung at Mass. When, however, the two chief antiphons of the collection ceased to be popularly called antiphons, and were known simply as the Introit (or Office) and the Communion, the name became an unsuitable one; it was then transferred to the great collection of antiphons required for the Breviary services, and corresponded to the *Responsoriale*, which contained the responds: the book of Mass music then was commonly called the 'Cantatorium.' The Franks, however, called this *Graduale*, and the whole Music of the Hours *Antiphonale*, and their custom conquered, so that all through the later Middle Ages 'Antiphonal' is the name for the collection of antiphons, responds, etc., sung at the Hours, and 'Gradual or Grayle' the term for the book of Mass music. W. H. F.

ANTIQUIS, GIOVANNI D' (2nd half of 16th cent.), director of music in the church of St. Nicholas at Bari in the kingdom of Naples, and editor of two collections—'Villanelle alla Napolitana, a tre voci, di diversi musici di Bari' (two books, Venice, 1574). His own contribution consists of 7 madrigals in the first book and 6 in the second (see Vogel, *Bibl. der weltl. Vocalmus. Italiens*). Fétis mentions a similar collection—'Il primo libro di canzonette a due voci, da diversi autori di Bari' (Venice, 1584)—of the works of local composers, 17 in all, few if any of whom are known elsewhere, but no copy is known to exist. The first of the two collections is in the Munich Library. M. C. C.

ANTOINE, FERDINAND D' (*b.* Bonn, middle of 18th cent.), was a captain in the army of the Elector of Cologne *c.* 1770. A good violinist, he studied composition under Marpurg, Kirnberger and Riepel. He composed 5 'Singspiele' between 1782 and 1794; choruses to the tragedy *Lanassa*, symphonies and string quartets. His Singspiele bore some resemblance to Benda's style, and the instrumental music to that of Haydn. E. v. d. s.

ANTONELLI (ANTINELLO), ABONDIO DI FABRICA (*b.* ? latter part of 16th cent.; *d.* after 1647). From 1608–9 he was maestro di cappella of St. John Lateran, Rome; from *c.* 1614–15 he filled the same position at the cathedral of Benevent; and after that at St. Lorenzo and St. Damaso at Rome, where he is mentioned by Florido in 1647. He wrote masses, motets and various church music, as well as madrigals. E. v. d. s.

ANTONI, ANTONIO D' (*b.* Palermo, June 25, 1801; *d.* after 1870). Both his father and his grandfather were conductors and composers, and under their tuition Antonio made such progress that at the age of twelve he conducted a Mass of his own composition for St. Cecilia's Day. In 1817 he became director of the Palermo Theatre, where he produced a ballet and his first opera. After travelling about in Italy, France and England, he met Meyerbeer at Trieste, from whom he received great encouragement and under whose supervision he wrote 'Arminia ossia l' orfanella di Ginevra,' which met with such success that it was believed to be Meyerbeer's. This was followed by several other equally successful operas in which the famous singers Giuditta Grisi, Pisaroni and others appeared. He settled in Trieste, where on Apr. 23, 1851, he founded the Academia Filarmonica and did much to further the musical progress of Trieste. E. v. d. s.

ANTONIJ, PIETRO DEGLI (*b.* Bologna, *c.* 1645; *d. circa* 1720), maestro di cappella at various churches of Bologna, president of the Accademie of the Filaschisi (1676), and Filarmonici (1718). He wrote 2 books of masses for two sopranos with basso continuo, 1 book of motets, 1 book of chamber cantatas, 3 oratorios, 3 operas, organ pieces, church sonatas for violin with basso continuo, op. 5, and 2 books of gighe, correnti, etc. E. v. d. s.

ANTONIOTTO, GIORGIO (*b.* Milan, *c.* 1692; *d.* there, *c.* 1776). He appears to have been in London between 1760 and 1770, where his *L' arte armonica*, or a treatise on the composition of music in 3 books, translated by Johnson, appeared in 1760. He composed also 12 sonatas, the first 5 for violoncello and bass.

ANTONIUS DE CIVITATE, composer of the early 15th century. Several church compositions in the Liceo Museum and the University Library of Bologna date from 1423. A MS. in the Bodl. Lib., which contains secular songs, describes him as an Austrian and a Dominican friar (*ordinis predicatorum*).

ANVIL. Small steel bars struck with a hard wooden or metal beater to represent the sounds of a blacksmith's forge have been employed by Verdi ('Il Trovatore'), Berlioz ('Benvenute

Cellini'), Gounod ('Philémon et Baucis'), Goldmark (' Queen of Sheba ') and Wagner (' Das Rheingold ').

APELL, Johann David von (*b.* Cassel, Feb. 23, 1754; *d.* 1833), composer and member of the musical academies at Stockholm (Royal), Bologna (Philharmonic), and Rome (Arcadian). At one time in the service of the Prince of Hesse, he devoted himself chiefly to composition and, in 1780, set several canzonets of Metastasio. His many works (for list see *Q.-L.* and *Fétis*), include 4 operas, many ballets and cantatas, 3 symphonies, 3 string quartets, 12 nocturnes for wind instruments, and some church music, including a Mass specially composed in 1800 for Pope Pius VII. and for which he received the Order of the Golden Spur.

In 1806 he published an account of the musicians of Cassel from the 16th century up to that date, under the title *Galerie der vorzüglichsten Tonkünstler und merkwürdigen Musik-Dilettanten in Cassel von Anfang des XVI. Jahrhunderts bis auf gegenwärtige Zeiten.*

J. M^K.

A PIACERE (Ital.), ' at pleasure,' an indication to the performer to use his discretion as to time.

APOLLO CLUB, see Boston.

APOLLO CLUB, BROOKLYN, see New York.

APOLLO LYRE, see Lyre-Guitar.

APOLLONICON, the name given to a large chamber organ of peculiar construction, comprising both keyboards and barrels, erected by Flight and Robson, organ-builders, and for many years publicly exhibited by them at their rooms in St. Martin's Lane. Before building the Apollonicon, Flight and Robson had constructed, under the inspection of Purkis, the organist, a similar but smaller instrument for Viscount Kirkwall. This instrument, being exhibited at the builders' factory and attracting great attention, induced its fabricators to form the idea of constructing a larger instrument upon the same plan for public exhibition. They accordingly, in 1812, began the building of the Apollonicon. They were engaged nearly five years in its construction, and expended £10,000 in perfecting it.

The instrument contained about 1900 pipes, the lowest (24 feet in length and 23 inches in aperture) sounding GGG, and the highest sounding *a'''*. There were 45 stops, several of which gave excellent imitations of the tones of the wind instruments of a complete orchestra, viz. flute, oboe, clarinet, bassoon, trumpet, horn and trombone. A pair of kettledrums were enclosed within the case, and struck by machinery. The manuals were five in number, and were detached from the body of the organ, so that the players sat with their faces to the audience and their backs to the instrument. The barrels, three in number, in their revolution, not only admitted the wind to the pipes, but regulated and worked the stops, forming by instantaneous mechanical action all the necessary combinations for producing the various gradations of power. To secure the means of performing pieces of greater length than were usually executed by barrels, spiral barrels were introduced, in which the pins, instead of being arranged in circles, were disposed in spiral lines. The mechanical action of the Apollonicon was first exhibited in June 1817, when the barrels performed the overtures to Mozart's ' Clemenza di Tito ' and Cherubini's ' Anacreon.' The instrument was exhibited for nearly a quarter of a century. (See Adams, Thomas.)

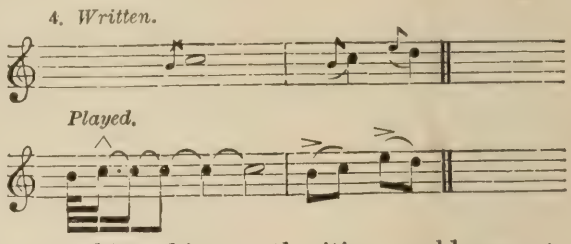
The performance of the overture to ' Oberon ' in particular has been recorded as a perfect triumph of mechanical skill and ingenuity, every note of the score being rendered as accurately as though executed by a fine orchestra. About the year 1840, the exhibition of the instrument having become unremunerative, the Apollonicon was taken down and its component parts employed in the construction of other organs. A lengthened technical description, illustrated by engraved figures, of the instrument made for Lord Kirkwall will be found embodied in the article ' Organ ' in Rees's *Cyclopedia.* W. H. H.

APPASSIONATA (Ital.), ' impassioned,' best known by its use in ' Sonata appassionata ' as a title for Beethoven's op. 57. The title was not his, but was added by Cranz the publisher, or some one else. He himself only uses the term twice—in Sonatas op. 106 and 111.

APPENZELLER (Appenzelders), Benedictus (*b.* Oudenaarde, early 16th cent.), pupil of Josquin des Prés, on whose death he wrote the 4-part ' Nenia,' ' Musa Jovis ter maximi,' contained in a Cambrai MS. dated 1542, with 15 other compositions, signed Benedictus. These were apparently all by Appenzeller, as has been proved in the case of six, by comparison with 23 songs by Benedictus, 'maître de la chapelle de Madame la Regente Douagiere de Honguerie,' printed at Antwerp in 1542, the date also of the Cambrai MS. (see W. Barclay Squire, *Who was Benedictus? Quarterly Magazine* of the International Music Society, vol. xiii. p. 264 *et seq.*). A number of songs in other collections, hitherto attributed to ' Benedictus Ducis ' (Hertzog), have by the same authority also been found to be by Appenzeller. The latter, it appears, accompanied Mary of Hungary to Spain in 1551, and in the MS. at Lille, referring to the journey, he is called ' Benedictus maistre des enffans de cheur,' while another entry speaks of ' maîtres successifs des enfants de la chapelle de la reine Marie . . . M^e Benedictus Appezelders,' which places his identity beyond doubt. E. v. d. S.

APPLEBY, Thomas (*b.* beginning of 16th cent.; *d. circa* 1562), organist and church

composer. In 1536 he became acting organist at Lincoln Cathedral, took over full responsibility on the death of his predecessor in 1537, and the year afterwards was confirmed in his appointment as organist and master of the choristers. In 1539 he was organist at Magdalen College, Oxford, but returned to Lincoln in 1541. The Chapter records show that Appleby was still there as late as 1560, and as Byrd was appointed his successor in 1563, it may be assumed that he died some time between these two dates. There is a Mass ('for a mene') by him (B.M. Add. MSS. 17,802-5) as well as another Mass and a Magnificat (with the tenor part missing) in the library at Peterhouse, Cambridge. (See article by Dr. Grattan Flood, *Mus. T.*, Feb. 1922.) J. MK.

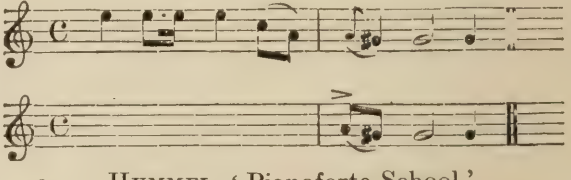


APPLICATIO and APPLICATUR are respectively the ancient and modern German terms for Fingering (see Spitta's *Bach*, i. 600; English translation, ii. 39 and iii. 385).

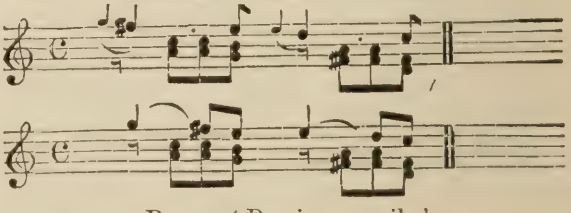
APPOGGIATURA (Ital.), from *appoggiare*, 'to lean upon' (Ger. *Vorschlag*, *Vorhalt*), one of the most important of melodic ornaments, much used in both vocal and instrumental compositions. It was not used in the French School, though certain kinds of 'coulé' (slide) and 'port de voix' (*portamento*) (see ORNAMENTS) bear resemblance to it. It consists in suspending or delaying a note of a melody by means of a note introduced before it; the time required for its performance, whether long or short, being always taken from the value of the principal note. It is usually written in the form of a small quaver, semiquaver, or demisemiquaver, either with or without a stroke across the stem (Ex. 1).

The appoggiatura may belong to the same harmony as the principal note (Ex. 2), or it may be one degree above or below it. In the latter case it is a so-called 'auxiliary note' (sometimes called 'transient' or 'changing' note—Ger. *Wechselnote*), and follows the known rule of such notes, that the lower auxiliary note should be only one semitone distant from the principal note, the upper being either a tone or a semitone according to the scale (Ex. 3).

With regard to its length, the appoggiatura is of two kinds, long and short; the long appoggiatura bears a fixed relation to the length of the principal note, as will be seen presently, but the short one is performed so quickly that the abbreviation of the following note is scarcely perceptible. There is also a difference between the two kinds in the matter of accent; the long appoggiatura is always made stronger than the principal note, while in the case of the short one the accent falls on the principal note itself (Ex. 4).



On this subject authorities would seem to differ, Leopold Mozart, Hummel and others holding the view advanced above, while Emanuel Bach, Marpurg and Agricola give the rule that *all* appoggiaturas should be accented. It is, however, evident that a note which passes away so quickly as a short appoggiatura can scarcely receive any effective accent, and besides this it is doubtful whether the above-named writers may not have intended the rule to refer exclusively to the long appoggiatura (*Vorhalt*), as they often used the word *Vorschlag* for both kinds indiscriminately. Since then there is no accent on the short appoggiatura, the term itself, which means a note *dwelt upon*, seems inappropriate, and accordingly the word ACCIACCATURA (*q.v.*) has been very generally substituted for it, though properly belonging to another similar kind of ornament.



The rules relating to the length of the long appoggiatura are three, and are thus given by Türk in his 'Clavierschule':

'Whenever it is possible to divide the principal note into two equal parts, the appoggiatura receives one half' (Ex. 5). 'When the principal note is dotted the appoggiatura receives two-thirds and the principal note one' (Ex. 6). 'If the principal note is tied to another shorter note, the appoggiatura receives the whole value of the principal note' (Ex. 7).

5. MOZART, Sonata in A minor.

6. HUMMEL, 'Pianoforte School.'

7. BACH, 'Passionsmusik.'

The third rule is commonly though not invariably followed when the principal note is followed by a rest (Ex. 8).

8. BEETHOVEN, 'Adelaide.'

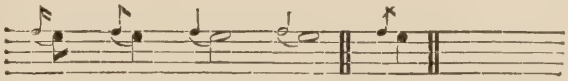
Exceptions to the above rules are met with as follows: to the first and second rules in Bach and Mozart, who frequently employed an appoggiatura (called by Marpurg 'der kürzeste Vorhalt') which was worth one-third or less of the principal note, but which differed from the short appoggiatura in being accented (Ex. 9). An exception to the second rule occurs whenever its strict observance would occasion a fault in the harmonic progression (Ex. 10), or when it would interfere with the rhythmic regularity of the passage. Exceptions to the third rule are of still more frequent occurrence. The passage quoted as Ex. 7, for instance, is frequently played giving the value of a quaver only to the appoggiatura. Further examples of such usages are:

9. MOZART, Fantasia in C minor.

10. BACH, 'Suites françaises.'

The appoggiatura, whether long or short, is always included in the value of the principal note; if therefore it is applied to a chord it delays only the note to which it belongs, the other notes of the chord being played with it (Ex. 11).

11. BEETHOVEN, Andante in F.



The manner of writing the appoggiatura bears no very definite relation to its performance, and its appearance is unfortunately no sure guide as to its length. In music of the 17th century, at which period the short appoggiatura appears to have first come into use, it was customary to make use of certain signs (Ex. 12), but as after a time the long appoggiatura was introduced, these were given up in favour of the small note still used. This small note ought always to be written of the exact value which it is to bear, if a long appoggiatura (Ex. 13); or if a short one it should be written as a quaver or semiquaver with a short stroke across the stem in the opposite direction to the hook (Ex. 14).

12. *Written.* *Played.*

13. 14.

But the earlier writers often wrote the short appoggiatura as a semiquaver or demisemiquaver without the stroke, and in many new editions of old compositions we find the small note printed with the stroke even where it should be played long, while in more modern music the semiquaver without the stroke is often met with where the short appoggiatura is obviously intended. In this uncertainty the surest guide is the study of the treatment of the appoggiatura by the great masters in the numerous cases in which they have written it out in notes of the ordinary size (see Beethoven, Bagatelles, op. 119, No. 4, Bar 2; Mozart, Sonata in C, Hallé's edition, No. 6, Bar 37, etc.), as by analogy we may hope to arrive at some understanding of their intentions respecting it when we find it merely indicated by the small note. F. T.

APPOGGIATURA, DOUBLE (Fr. *port de voix double*; Ger. *Doppelvorschlag*; Ital. *appoggiatura doppia*), an ornament (not found in the classical French School) composed of two short notes preceding a principal note, the one being placed above and the other below it. They are usually written as small semiquavers.

The first of the two may be at any distance from the principal note, but the second is only one degree removed from it. They have no fixed duration, but are generally slower when applied to a long note (Ex. 1) than when the principal note is short (Ex. 2); moreover, the double appoggiatura, in which the first note lies at a distance from the principal note, should always be somewhat slower than that in which both notes are close to it (Ex. 3). In all cases the time required for both notes is subtracted from the value of the principal note.

The double appoggiatura is sometimes, though rarely, met with in an inverted form (Ex. 4), and Emanuel Bach mentions another exceptional kind, in which the first of the two small notes is dotted, and receives the whole accent, while the principal note becomes as short as the second of the two small notes (Ex. 5).

The dotted double appoggiatura, written as above, is of very rare occurrence. F. T.

APRILE, Giuseppe (*b.* Bisceglia, Apulia, Oct. 29, 1738; *d.* 1814), an eminent contralto singer; was educated at the Conservatorio of 'La Pietà' at Naples, and from 1763 sang in all the principal theatres of Italy and Germany. Dr. Burney heard him at Naples in 1770 and says that he had a weak and unequal voice, but was perfectly in tune, had an excellent shake, and great taste and expression. He was an excellent teacher of singing, and was one of Cimarosa's masters. He composed songs, but his best work was a system of solfeggi (London and Paris), which passed through many editions. It is included in Peters' edition. M. C. C.

APTHORP, William Foster (*b.* Boston, Mass., U.S.A., Oct. 24, 1848; *d.* Vevey, Switzerland, Feb. 19, 1913), an American critic and writer on music. He graduated from Harvard College in 1869, where he studied musical theory under J. K. Paine. After brief service on the staffs of other newspapers he became musical critic of the *Boston Transcript*, in which capacity he exercised a large influence. He retained this post till 1903, when he retired and went to Switzerland. From 1892–1901 he edited the programme books of the Boston Symphony Orchestra, giving them a value and individual character that have since been maintained by Philip Hale. He published *Musicians and Music Lovers* (1894); *By the Way about Music and Musicians* (1898); *The Opera, Past and Present* (1901); and several translations. He was editor, with John Denison Champlin, of Scribner's *Cyclopædia of Music and Musicians*, 3 volumes (1888–90). R. A.

A PUNTA D' ARCO (Ital.), 'with the point of the bow,' used in violin music.

AQUILA, Marco da l', a 15th/16th-century lutenist, probably from Aquila in the kingdom of Naples. He settled in Venice, where in 1505 he was granted a privilege for printing lute pieces, which he seems never to have exercised. In Francesco Milano's *Intabolatura* (Vinegia, 1536) he is mentioned as an eminent lutenist. The Munich Library has in a MS. lute-book of 1568 (MS. 266) 25 lute pieces, signed simply 'Maestro Marco.' Three dances signed 'Marx von Aquila' are in *Gerle* 1552b, and one movement is in Casteliono's *Intabolatura*, 1536, and also in Phalèse's *Hortus musicus*, 1552. E. v. d. s.

AQUIN, Louis Claude and Philippe Louis, see Daquin.

ARABESQUE, originally an architectura term applied to ornamentation in the Arabic style, whence its name. (1) The title was given, for what reason is not very clear, by Schumann to one of his pianoforte pieces (op. 18), which is written in a form bearing some analogy to that of the rondo, and it has been since used with increasing frequency by other writers for the piano as a description of style. (2) The word is sometimes used by writers on music to express the ornamentation of a theme. E. D.

ARABIA, see Muhammedan Music.

ARAJA, Francesco (*b.* Naples, *c.* 1700; *d.* there, *c.* 1770), a figure of some importance in the history of Russian opera. He was maestro di cappella at St. Petersburg from about 1734–1759, and visited Russia again in 1761. Fétis and Clément enumerate 11 operas, all but two produced in Russia. One of them was the first opera ever performed in the Russian language. This was a setting of the favourite subject, 'La clemenza di Tito,' provided with a Russian text by F. G. Volkov and produced in 1751. 'Cephalus and Procris' followed in 1755, and it is recorded that for this work the company engaged consisted entirely of Russian singers. *Riemann* mentions an earlier work, 'Berenice,' given in Florence in 1730. A Christmas oratorio was written for Bologna, and Araja contributed to a pasticcio on the subject of Orpheus, with Vinci and Porpora, the songs from which were published by Walsh. Separate songs and harpsichord pieces in MS. are mentioned in *Q.-L.* A detailed account of Araja at the Russian court is contained in *The Russian Opera* by Rosa Newmarch. M., with addns.

ARANAZ, Pedro (*b.* Tudela, 1742; *d.* Cuenca, 1821), a Spanish priest and composer who was first a choir-boy in the cathedral of El Pilar at Saragossa, and afterwards maestro de capilla there (1766), Zamora (1768) and at Cuenca (1769), where he remained for the rest of his life. Though capable of writing in a

severe polyphonic style, he was too much a man of his age not to prefer church music with an orchestral accompaniment. MSS. of his works are to be found at Cuenca, in the Escurial, Saragossa, Toledo, and in various churches of Spain; secular TONADILLAS (*q.v.*) by him are preserved in the Biblioteca Municipal at Madrid. Eslava has published in his 'Lira sacro-Hispana' an 'Offertorium' for 5 voices and a 'Laudate Dominum' *a* 6, with strings, horns and organ, while offertories for Lent for 4 voices, and two VILLANCICOS (*q.v.*) for Christmas were reprinted in 'Biblioteca sacro-musical' (Bilbao), vol. i., 1911. M. C. C.; rev. J. B. T.

ARANDA, LUIS DE (*b.* Seville; *d.* Narbonne, before 1660), a Spanish organist, greatly esteemed by Louis XIII. (see Riemann-Festschrift, *Remarques de quelques voyageurs sur la musique en Allemagne et dans les pays du nord de* 1634 *à* 1700, A. Pirro). J. B. T.

ARANDA, MATHEO DE (*d.* Coimbra, 1548), a Spanish church musician established in Portugal, and choirmaster at Coimbra. His works include a 'Tractado de canto llano y contrapunto' (Lisbon, 1533) and 'Tractado de canto mensurabile y contrapunto' (Lisbon, 1535). J. B. T.

ARANIES, JUAN (*b.* Alcalá de Henares ?; *d.* after 1624), Spanish composer of secular music, who was chaplain and maestro de capilla to the Spanish ambassador in Rome. His

'Libro segundo de tonos y villancicos a una, dos, tres y cuatro voces, con la zifra de la guitarra española a la usanza romana'

was published at Rome in 1624. It contains 23 compositions to Spanish words, printed in score with tablature for the guitar. J. B. T.

ARANYI, (1) ADELA D' (*b.* Feb. 1888), violinist, and a favourite pupil of her great uncle, Joachim, whose classical proclivities she inherits. She plays upon a Strad violin, 1715, formerly belonging to Joachim, with whom she frequently played duets in public. She married Alexander Fachiri and has adopted her married name for professional purposes.

(2) JELLY D' (*b.* Buda Pest, May 3, 1895), sister of the above, started as a pianist, but as early as 1903 began the study of the violin under Jeno Hubay at the Royal Academy of Buda Pest, where the curriculum included some ensemble playing under Popper. At the age of 14 she left the school, developing afterwards individual characteristics to which a measure of general culture contributed more than is always the case among musicians. Her first appearance was in Vienna, 1909, and in the same year she made a European tour, which included a visit to London where she settled (1923).

She touches the whole literature of the violin, but owing to her fiery, temperamental style is sought after as an interpreter of music of the romantic school. She is associated with the introduction of several modern works to English audiences, including the two sonatas for pianoforte and violin, written for her by her compatriot, Béla Bartók, and the duo sonata for violin and violoncello by Ravel. W. W. C.

ARBEAU, THOINOT (*b.* Dijon, 1519; *d.* Langres, 1595), priest of Langres. His real name was Jehan Tabourot, of which the above is an anagram. He was the author of a remarkable book, entitled *Orchésographie et traité en forme de dialogue par lequel toutes personnes peuvent facilement apprendre et pratiquer l'honnête exercise des danses* (Langres: Jehan des Preys, 1589). The Privilegium is dated Nov. 22, 1588, and the work was reprinted at Langres in 1596 with a somewhat different title. A translation into German by A. Czerwinski was published at Dantzig in a limited edition, 1878, and a new edition, with a preface by Laure Fonta, appeared at Paris in 1888. The author, of whom nothing further is known except that he was the uncle of the poet Étienne Tabourot (1549–90), Seigneur des Accords (sometimes called 'the Burgundian Rabelais'), and that besides the *Orchésographie* he wrote an equally rare *Shepherd's Calendar* in dialogue.[1]

The *Orchésographie* is a particularly valuable work, as it is the earliest treatise on dancing extant which contains the notation of the different dance tunes. There are nearly 50 French dance tunes, but in only one case are words fitted to a melody. Written in the form of a dialogue between Thoinot Arbeau and Capriol (a lawyer who finds that the art of dancing is a necessary accomplishment in his profession), the work contains a review of dancing as practised by the ancients, directions for playing drums, fifes, oboes, etc., as well as minute descriptions of the manner of dancing Basse Dances. The book is illustrated with curious woodcuts, representing the different steps to be executed in the dances, and contains music for fifes and drums, as well as for the following dances, several of which may be found in the present work (see BRANLE, CANARIE, GALLIARD, GAVOTTE, MATASSINS, MORRIS DANCE, PAVAN, TOURDION, TRIHORIS, VOLTE):

Pavanes.
Tourdions.
Gaillardes—'La traditore my fa morire'; 'Anthoinette'; 'Baisons nous belle'; 'Si j'ayme ou non'; 'La fatigue'; 'La Milannoise'; 'J'aymerois mieulx dormir seulette'; 'L'ennuy qui me tourmente.'
La Volte.
La Courante.

[1] The information given above is taken from the Abbé Papillon's *Bibliothèque des auteurs de Bourgogne*. Czerwinski (*Geschichte der Tanzkunst*), without naming his authorities, gives the following additional particulars. He says that Jehan Tabourot was the son of Étienne Tabourot, a lawyer of Dijon, and from his childhood showed a great inclination for dancing, which he had learned at Poitiers. It was originally intended that he should follow his father's profession, but being attacked by a severe illness, his mother vowed that if he recovered he should become a priest. He was accordingly ordained in 1530, and was made canon of Langres in 1574.

L'Allemande.
Branles—Double, Simple, Gay, de Bourgogne, du Hault Barrois.
Branles couppés — 'Cassandre'; 'Pinagay'; 'Charlotte'; de la Guerre; 'Ariadn.'
Branles de Poictou; d'Escosse; de Bretagne (Triory); de Malte; des Lavandieres; des Pois; des Hermites; du Chandelier; de la Torche; des Sabots; des Chevaulx; de la Montarde; de la Haye; de l'Official.
Gavotte.
Morisque.
Canaries.
Pavane d'Espagne.
Bouffons, or Mattachins.

W. B. S., with addns.

ARBÓS, E. Fernandez (*b.* Madrid, Dec. 25, 1863), violinist and conductor of repute.

He comes of a family of military bandmasters. Brought up in Galicia, he was entered at the Conservatoire of Madrid at an early age, under Monasterio, the eminent violinist. Through his master he gained the patronage of the Spanish Royal family; he was at the Brussels Conservatoire for 4 years, studying the violin with Vieuxtemps, and composition with Gevaert. He became Joachim's pupil for 3 more years and for some time he was leader of the Berlin Philharmonic Society. On the completion of his studies, Arbós played in all the principal towns of Germany, and after a tour through France, Holland, Belgium, Portugal and Poland, he accepted the position of professor of the violin at the Hamburg Conservatorium, but only held it for a short time, returning to Madrid at the request of the Queen of Spain, to fill the post of principal professor of his instrument in the Conservatoire where his education had begun. In 1890 he visited London (he had previously led the Glasgow Orchestra, under Manns, for a whole winter), and appeared in Jan. 1891 at four concerts given by Señor Albeniz, and subsequently at the Popular Concert of Mar. 9, where he played a duet and Bach's double concerto with Joachim. In all his work as a violinist he has shown the highest and most artistic aims, but his work as a teacher has been even more important. His wide experience of continental schools of music served him in good stead on his appointment as professor of the violin at the R.C.M., a post which he held with distinction from 1894 until 1916. During his London period Arbós's career as an orchestral conductor developed considerably. In 1904 he became conductor to the Symphony Orchestra of Madrid, and his numerous concerts there are held to have had important effect in stimulating Spanish taste for symphonic music. He visited America and conducted the Boston Symphony Orchestra with success. He also toured widely in Europe conducting concerts in Paris, Rome and Petrograd. Since his retirement from London, Madrid has been his headquarters. In his own compositions he excels in work of a lighter vein; his violin pieces, with orchestral accompaniment, are excessively difficult, but most effective, and in these, as well as in his comic opera, 'El centro de la tierra' (produced at Madrid, Dec. 22, 1895), the characteristics of national Spanish music are employed with the happiest effect. He has also written 3 trios for piano and strings, as well as songs. An orchestral suite is still in MS., as well as brilliant transcriptions for orchestra of some numbers from Albeniz's suite, 'Iberia.'

M., with addns.

ARCADELT, Jacob (*b. circa* 1514; *d. circa* 1575), one of the most prominent among the distinguished band of Netherland musicians who taught in Italy in the 16th century, and saw the fruit of their labours in the foundation of the great Italian school. (See Madrigal.)

Born in the Netherlands, he was a singer at the court of Florence before 1539, in which year he was singing-master to the boys at St. Peter's, Rome, and was admitted to the college of papal singers in 1540, remaining there till 1549. Many masses and motets of Arcadelt are among the manuscripts of the Papal Chapel, but those of his works which were published during his life in Rome were entirely secular, and consisted chiefly of the famous madrigals which placed him at the head of the so-called 'Venetian school' of madrigal writing. Five books of 4-part madrigals, each containing 40 or 50 separate numbers, were printed in Venice, the three first originally before 1539, when the earliest existing editions appeared with words implying that the contents had appeared before. In that year the fourth book seems to have appeared for the first time, and the fifth in 1544. Many editions of these were published with great rapidity. An excellent copy of the first four books is in the library of the British Museum, and in the same library may be found a few of the many collections of madrigals which contain compositions by Arcadelt. The first book of the 3-part madrigals was printed in Venice, 1542, together with 12 French chansons and 6 motets. The chansons, with the addition of several others, were reprinted in Paris by Ballard in 1573. In the year 1555 he entered the service of Cardinal Charles of Lorraine, Duke of Guise, and went with him to Paris, where he probably ended his life. The results of the latest researches will be found in the *M.f.M.*, xv. 142, and xix. 121; also in the *Vierteljahrsschrift*, iii. 234, etc. In Paris 3 books of his masses were published in 1557, and other sacred works appear in collections printed after he left Italy. It seems probable, therefore, that he devoted this second or Parisian period of his life to church composition, but it is as a madrigal writer that his name is most celebrated. Burney gives one, 'Il bianco et dolce cigno' in his *General History*, iii. 303; and two to Michel Angelo's words 'Deh dimm' Amor,' and 'Io dico che fra voi,' will be found in Gotti's 'Vita di M.' (1875). An Ave Maria,

edited by Sir Henry Bishop, printed in *Mus. T.* (No. 183) and transcribed by Liszt, is spurious. A Pater Noster for 8 voices is given by Commer, 'Collectio,' vii. 21. J. R. S.-B.; with addns., M.

ARCA MUSARITHMICA, a mechanical device for composing music, described and illustrated by Athanasius Kircher in his *Musurgia universalis*, Rome, 1660 (vol. ii. p. 185). The box (*arca*) contains wooden slides (*virgae*) on which are written numbers corresponding with the tones of the musical scale together with musical signs of time and rhythm. By various combinations of the slides vocal music in 4 parts can be composed in all the classic metres and modes, and so infinite are the permutations that, according to the author, if an angel had begun to combine the numbers at the beginning of the world, he would not have finished to-day. Knowing the difficulties Samuel Pepys experienced in 'setting his base' it is interesting to find that he possessed such a 'composition box' and it is preserved in the Pepys Library at Magdalene College, Cambridge. F. W. G.

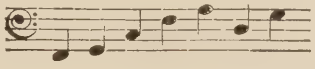
ARCHAMBEAU, Iwan d' (*b.* Hervé, Belgium, 1879), violoncellist in the Flonzaley Quartet (*q.v.*), which he joined in 1903. He studied at the Conservatoires of Verviers and Brussels, and in Frankfort, Germany.

W. W. C.

ARCHED-VIOL, a sostinente keyboard instrument seen by Samuel Pepys at a music meeting at the Post Office, London, on Oct. 5, 1664. According to his description in the *Diary* it was strung with gut strings which were pressed by the keys on a moving strip of parchment. He stayed three hours for the instrument to be fixed in tune, but without any result. 'It is intended,' he writes, 'to resemble several vyalles played on with one bow, but so basely and harshly that it will never do.' (See Sostinente Pianoforte.) F. W. G.

ARCHER, Frederick (*b.* Oxford, June 16, 1838; *d.* Pittsburg, U.S.A., Oct. 22, 1901), made a reputation in England and America as an organist and conductor.

In early life he was chorister at All Saints', Margaret Street, London. He became organist of Merton College, Oxford, and in 1873 was appointed to the Alexandra Palace. On the resignation of Weist-Hill he became conductor of that establishment, which post he held until 1880. He was also conductor (1878–80) of the Glasgow Select Choir, and director of a provincial opera company. In 1881 he became organist at the Rev. Henry Ward Beecher's church at Brooklyn, U.S.A., and later of the Church of the Incarnation, New York. He founded and edited the *Keynote* in 1885; in 1887 became conductor of the Boston Oratorio Society, and conducted the Pittsburg Orchestra, 1895–98. His connexion with Pittsburg began with the opening of the Carnegie Library and Music Hall on Nov. 7, 1895, when he gave the first free organ recital. These recitals on Saturday evenings and Sunday afternoons were continued until his death. He was also organist of the Church of the Ascension and musical examiner to the University of Toronto. Archer composed many works for the organ, pianoforte pieces, songs, etc., besides a cantata, 'King Witlaf's Drinking-Horn'; and wrote two works, *The Organ*, a theoretical and practical treatise (Novello & Co.), and *The College Organist* (Weekes & Co.).



A. C.; addns. from *Amer. Supp.*

ARCHIVES DES MAÎTRES DE L'ORGUE (15 years, 10 vols.), a valuable collection of music, chiefly devoted to the French organ school of the 17th and 18th centuries, edited by Alexander Guilmant, with biographical introductions by A. Pirro.

Vol. 1. J. Titelouze, 'Œuvres complètes.'
Vol. 2. A. Raison, 'Livre d'orgue.'
Vol. 3. T. Roberday, 'Fugues et caprices'; L. Marchand, 'Pièces choisies'; L. N. Clérambault, Du Mage: 'Livres d'orgue'; L. C. d'Aquin (Daquin), 'Livre de noëls.'
Vol. 4. N. Gigault, 'Livre de musique.'
Vol. 5. N. de Grigny, 'Livre d'orgue'; F. Couperin (de Crouilly), L. Marchand, 'Pièces d'orgue.'
Vol. 6. J. Boyvin, 'Œuvres complètes.'
Vol. 7. F. Dandrieu, 'Livre d'orgue'; Guilain, 'Pièces d'orgue pour le Magnificat.'
Vol. 8. Seb. Anton Scherer, 'Œuvres.'
Vol. 9. N. Le Bègue, 'Œuvres.
Vol. 10. 'Liber fratrum Cruciferorum Leodiensium' (pieces by A. Gabrieli, Pietro Philippi, J. P. Sweelinck, Cl. Merulo, unknown masters, Fr. G. Scronx, W. Brouno, P. Cornet, F. Fontana, G. M. Casini).

M. L. P.

ARCHLUTE (Fr. *archiluth*; Ital. *arciliuto*), a large theorbo or double-neck lute, large especially in the dimensions of the body, and more than 4 ft. high (see *PLATE XLV.* No. 5) The double neck contains two sets of tuning-pegs. The lower pegbox is for catgut, or sometimes wire, strings in pairs stretched over the fretted fingerboard, and tuned, according to Prætorius (*Syntagma musicum*, 1618),

The upper pegbox is for single strings, open notes, or diapasons (read an octave lower),

Prætorius gives eight notes for the diapasons, ending at the low D, which leaves eight double or single strings upon the fingerboard. This notation is for his Cammerton, which he says was usual; for his Chorton, rather lower than the modern French pitch, the notation must be transposed a whole tone higher. He calls this variety of bass lute, the Paduan Theorbo, the longer chitarrone being identical with the Roman. There are references to the Archlute in Mersenne (*Harmonie universelle*, 1636) and Kircher (*Musurgia*, 1650), but not being named in *Luscinius* (1536) it may be assumed to be of later introduction than that date. It was used in the 17th century in common with the chitarrone and violone (bass viol) for the lowest part

in instrumental music and accompaniments, particularly in combination with the clavicembalo for the support of the recitative. Early editions of Corelli's Sonatas had for the bass the violone or arciliuto, and Handel also employed the archlute in 'Giulio Cesare,' 1723. The sound-board, pierced with from one to three ornamental sound-holes, was of spruce, and the vaulted back was built up of strips of spruce or cedar glued together. The frets adjusted along the neck to fix the intervals were of wire or catgut, examples differing. A wealth of ornament was bestowed upon the necks and backs of these beautiful instruments, in common with other varieties of the lute and cither. The chitarrone had a smaller body and much longer neck, and differs so much as to require separate description. In the photographs published by the Liceo Comunale di Musica of Bologna, the application of the names archlute and chitarrone is reversed (see CHITARRONE; LUTE; THEORBO). Mahillon (*Catalogue Musée Instrumentale*, Brussels Conservatoire, 1880, p. 248) finds the definitions of Archlute and Theorbo so contradictory that he concludes them to be one and the same instrument.

A. J. H.

ARCO (Ital.), 'bow.' As a musical term 'arco' or 'col arco' is employed whenever after a pizzicato passage the bow is to be used again. P. D.

ARDANAZ, PEDRO (*d.* Toledo, Dec. 11, 1706), a Spanish composer of church music, who was musical director at Toledo Cathedral from 1674 until 1706. Works by him are preserved in MS. in the Chapter Library at Toledo and in the musical archives of other Spanish cathedrals. J. B. T.

ARDEMANIO, GIULIO CESARE (*d.* Milan, 1650), a famous 17th-century church composer and organist, maestro di cappella at the church della Scala and S. Fedele, Milan. A book of motets was published in 1616, 'Falsobordoni' (1618), 'musica a più voci' (Milan, 1628), and in various collective volumes (*Eitner*; *Mendel*).

ARDITI, LUIGI (*b.* Crescentino, Piedmont, July 16, 1822; *d.* Hove, Brighton, May 1, 1903), composer and conductor. In the latter capacity he attained a considerable reputation in England and America.

He was educated at the Conservatorio at Milan, and began his career as a violin-player. In 1840 he produced an overture, and in the Carnival of 1841 an opera 'I Briganti,' at the Conservatorio. In 1842 he followed these by a second overture and a 'Sovvenir di Donizetti.' He made his début as director of the opera at Vercelli in 1843, and was made honorary member of the Accademia Filarmonica there. In 1846 he left Italy with Bottesini for the Havannah, where he composed and produced an opera 'Il Corsaro.' He made frequent visits to New York, Boston and Philadelphia, and amongst other things conducted the opera at the opening of the Academy of Music in New York, and produced a new opera of his own, 'La Spia' (1856). The same year he left America for Constantinople, and finally settled in London in 1858 as conductor to Her Majesty's Theatre, under the successive managements of Lumley, E. T. Smith and Mapleson. Arditi took an Italian company (Piccolomini, Giuglini, etc.) on an artistic tour to Hamburg, Berlin, Dresden, etc., and thus became known and liked by the German public. In the winters of 1871 and 1873 he conducted the Italian Opera at St. Petersburg, and from 1870 he performed the same office each spring at Vienna. From 1874–77 he conducted the promenade concerts at Covent Garden, dividing his time between London and Vienna. In 1878 he conducted a two-months' season at Madrid. He returned to Her Majesty's Theatre for the season of 1880, the year of the production of 'Mefistofele.' He was connected about the same time with various operatic tours in America organised by Mapleson. In 1885 he was at Covent Garden, and after conducting several provincial tours under Harris, was engaged for the season of 1889. In 1891 he conducted the season of opera at the Shaftesbury Theatre, during which Lago produced 'Cavalleria Rusticana.' In 1892, under the same management at the Olympic Theatre, Arditi was principal conductor, and after a tour with the Carl Rosa Company in 1894, he was engaged for the run of 'Hänsel und Gretel' at Daly's Theatre. His compositions, besides those mentioned above, comprise a 'Commemoration Ode,' performed at the Crystal Palace, June 10, 1873. His vocal waltz 'Il Bacio' was a universal favourite. His *My Reminiscences* was edited and compiled with an introduction by the Baroness von Zedlitz (New York, 1896). G.

AREDESI (ARDASI, ARTHESI), (1) CARLO, of Cremona, chamber musician at the Bohemian court at Prague *c.* 1582–1612. His '1° lib. de madrigali' *a* 4 v. was published by Vincenti at Venice in 1597, and contains also 4 madrigals by (2) GIOV. PAOLO. Another chamber musician, (3) ALBERTO (*d.* May 30, 1580), also of Cremona, was at the Viennese court from Nov. 1, 1566, to the time of his death.

E. v. d. S.

ARENSKY, ANTONY STEPANOVICH (*b.* Novgorod, July 31, 1861; *d.* Finland, Mar. 11, 1906), an eminent Russian composer.

He inherited musical talent from both parents; his father, a doctor, played the violoncello, and his mother was an excellent pianist. He studied harmony and composition first with Zikke, and afterwards (1879–82) with Rimsky-Korsakov at the St. Petersburg Conservatorium. Having finished his course with honours, he was appointed professor of harmony and counterpoint at the Moscow Con-

servatorium in 1882. From 1889–93 Arensky was a member of the Council of the Synodal School of Church Music at Moscow, and for seven years conductor of the concerts of the Russian Choral Society. In 1894 he was recommended by Balakirev for the directorship of the Imperial Chapel at St. Petersburg. In this post he was succeeded by Smolensky in 1901. Arensky's first opera, 'A Dream on the Volga,' was given at Moscow in 1890, with great success. The subject, taken from a play by Ostrovsky, is identical with Tchaikovsky's 'Voyevoda.' In this work Arensky makes considerable use of folk-tunes, which he harmonises and develops most effectively. His operatic style is a compromise between the declamatory and the melodic. A second opera, in one act, 'Raphael,' was composed for the first Congress of Russian Artists held at St. Petersburg, Apr. 1894. A third opera, 'Nal and Damayanti,' was completed in 1899. Both in style and temperament Arensky shows considerable affinity to Tchaikovsky. He is best known in England by his songs and piano pieces, but more especially by his pianoforte trio in D minor (op. 32), a work full of sincere, elegiac feeling, dedicated to the memory of the great violoncellist, Charles Davidov. As a composer of sacred music Arensky inclines to a florid and cosmopolitan rather than to the strictly ecclesiastical style. Subjoined is a list of his principal works :

OPERAS, CANTATAS, VOCAL MUSIC

1. A Dream on the Volga. Moscow 1892 (op. 16).
2. Raphael. Opera in one act. St. Petersburg, 1894 (op. 37).
3. Nal and Damayanti. Opera in one act, 1899.
4. Cantata for solo, chorus, and orchestra. Composed for the tenth anniversary of the Coronation (op. 25).
5. The Fountain of Bakhchisarai (poem by Poushkin). Cantata for solo, chorus, and orchestra (op. 46).
6. The Wolves, for bass voice and orchestra (op. 59).
7. The Diver, for solo, chorus, and orchestra (op. 61).
8. Songs (op. 6, 10, 17, 21, 27, 38, 44, 49).
9. Chorus for mixed voices, a cappella, 'Anchar' (op. 14).
10. Vocal duets (op. 29, 45).

A considerable quantity of church music.

INSTRUMENTAL MUSIC

1. Pianoforte Concerto (op. 2).
2. Symphony, B minor (op. 4).
3. Symphony, A minor (op. 22).
4. Two string Quartets, G major and A minor (op. 11 and 35).
5. Intermezzo for string orchestra (op. 13).
6. Pianoforte Trio, D minor (op. 32).
7. Fantasia on Russian folk-songs, for Pf. and orchestra (op. 48).
8. Ballet 'Egyptian Night' (op. 50).
9. Pianoforte Quintet, D major (op. 51).
10. Concerto for violin and orchestra in A minor (op. 54).
11. About 100 pieces for piano, including three suites for two pianos, and six pieces for four hands.

THEORETICAL

1. *Guide to the Practical Study of Harmony* (German ed. 1900).
2. *Guide to the Study of Form, in Vocal and Instrumental Music.*

R. N.

ARESTI (Arresti), Floriano (*b.* Bologna, late 17th cent. ; *d.* there, *c.* 1719), organist at S. Petronio, and member of the Philharmonic Academy. Fétis mentions 5 of his operas written between 1710 and 1716 for Ferrara, Bologna and Venice. Of 2 organ sonatas in a book published in 1700 it is uncertain whether they are by Floriano, or Giulio Cesare. Some canons *a* 3 v. and songs of Floriano are preserved in MS. (*Eitner*).

ARESTI DI BOLOGNA, see Arresti, G. C.

ARETINO, Guido, see Guido d' Arezzo.

AREZZO, Guido d', see Guido d' Arezzo.

ARGHOOL, a wind instrument still used in Egypt, the primitive type of the Chalumeau (*q.v.*), and therefore of the modern Clarinet (*q.v.*). (See *PLATE LXXV.* No. 2.)

ARGIES, Gauthier d', of the house of Argies in Picardy, a 13th-century troubadour of whom 21 chansons with their melodies are in the Paris National Library. E. V. d. S.

ARGYLL ROOMS. At the beginning of the 19th century there stood in Argyll Street, Oxford Street, a mansion fitted up by Col. Greville for the meetings of a fashionable association termed the Pic-Nics, who had burlettas, vaudevilles and ballets on a small scale performed there. But the fashionable folk soon deserted the place, and Greville was compelled to seek refuge on the continent, having made over 'The Argyll Rooms' (as he had named them) to one of his creditors, one Slade, who conducted the business of the rooms for several years, letting them for concerts and other entertainments. During his management one of the events of interest which occurred there was a reading by Mrs. Siddons, on Feb. 10, 1813, of Shakespeare's *Macbeth*, for the benefit of the widow of Andrew Cherry, dramatist and actor. In the same year the rooms acquired greater celebrity by being selected by the then newly formed Philharmonic Society as their place of performance. In 1818 the western end of the concert-room falling within the line required for the formation of Regent Street, Slade was awarded by a jury £23,000 as compensation (a sum considered at the time as far beyond the real value of the property), and the whole of the old building was removed and new rooms erected on the east side of Regent Street at the north-west corner of Little Argyll Street, now 246 Regent Street. The new building was designed by John Nash, and had all the defects of his manner. On the side next Regent Street was a balcony supported by eight heavy and clumsily designed caryatides. The persons by whom the new rooms were erected were 21 of the principal professors of music in London, who had formed themselves into an association for the purpose of printing the best music in the best manner, and selling it at a moderate profit. This association, called The Royal Harmonic Institution, occupied the south-western angle of the new building (at the corner of Regent Street and Argyll Place), a circular-fronted erection with a domed roof. The great expense incurred in the erection of the building, joined to other untoward events, soon led to the withdrawal of most of the original speculators, at a loss of about £1800 to each, and the place eventually fell into the hands of two of their body, Welsh and Hawes. After some differences between these two, the concern remained in the hands of Welsh alone.

During the Philharmonic Society's tenure of the rooms (old and new), a period of about 17 years, many events of great interest to musicians occurred there. There, on Mar. 6 and Apr. 10, 1820, Spohr appeared, first as violinist and last as conductor (*Selbstbiog.* ii. 86), when a baton was used for perhaps the first time at an English concert. There, on June 11, 1821, Moscheles, and, on June 21, 1824, Liszt made their first appearances in England. On Mar. 21, 1825, Beethoven's 'Choral Symphony' was given for the first time in England. There, too, Weber, on Apr. 3, 1826, two months before his death, conducted one of the Philharmonic Society's concerts, and Mendelssohn first presented himself before an English audience. On May 25, 1829, the latter conducted, at one of the concerts of the Philharmonic Society, his symphony in C minor, and a month later, at the benefit concert of Drouet, the flautist, on midsummer night, June 24, produced for the first time in England his overture to *A Midsummer Night's Dream.*

Besides concerts, the rooms were let for miscellaneous performances and exhibitions. One of the most attractive of the latter was a French exhibition of dramas performed by puppets, called 'The French Théâtre du Petit Lazary,' which was given in 1828 and 1829. In 1829–30 the rooms were tenanted by a M. Chabert, calling himself 'The Fire King,' during whose tenure of the place, at 10 o'clock in the evening of Feb. 6, 1830, a fire broke out, which in a short time completely destroyed the building. It was rebuilt soon afterwards, but never regained its former reputation. The Philharmonic concerts were removed after the fire to the concert-room of the KING'S THEATRE, and thence to the HANOVER SQUARE ROOMS, and although a few concerts and other entertainments were occasionally given in the Argyll Rooms, the place became by degrees deserted by caterers for public amusement and was, in the course of a few years, converted into shops.

W. H. H.

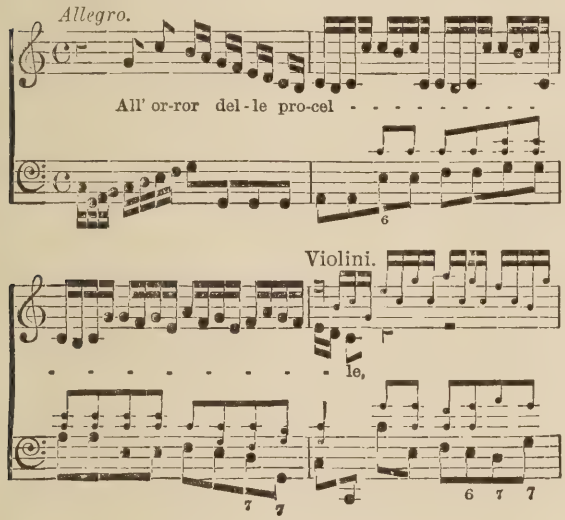
ARIA (Ital.), 'air.' The word is generally used of the more ambitious musical forms employed in the older operas, so that the English translation is not exactly synonymous with it (see AIR). The arias of the time of Handel, when opera was at its moment of extreme conventionality, were divided into several classes, and it was a rule that no two arias of the same class were to follow one another.

(1) The *Aria cantabile* was a quiet slow movement, characterised, in the works of the best masters, by a certain tender pathos, and so contrived as to afford frequent opportunities for the introduction of extempore ornamentation at the discretion of the singer. Its accompaniment, always very simple, was limited in most cases to a plain thorough-bass, the chords of which were filled in on the harpsichord.

(2) The *Aria di portamento* was also a slow movement, and generally a very telling one. Its rhythm was more strongly marked than that of the *Aria cantabile*, its style more measured, and its melody of a more decidedly symmetrical character, freely interspersed with sustained and swelling notes, but affording few opportunities for the introduction of extempore embellishments. Flowing and graceful in design, its expression was rather sedate and dignified than passionate; and its accompaniment rarely extended beyond a well-phrased thorough-bass, with one or two violins, used chiefly in the symphonies.

(3) The *Aria di mezzo carattere* was open to great variety of treatment. As a general rule, it was less pathetic than the *Aria cantabile*, and less dignified than the *Aria di portamento*, but capable of expressing greater depths of passion than either. Its pace was generally, though not necessarily, andante; the second part being sung a little faster than the first, with a return to the original time at the *Da capo.* Its accompaniment was rich and varied, including at least the full stringed band, with the frequent introduction of oboes and other wind instruments.

(4) The *Aria parlante* was of a more declamatory character, and therefore better adapted for the expression of deep passion, or violent emotion of any kind. Its accompaniments were sometimes very elaborate, and exhibited great variety of instrumentation, which the best masters carefully accommodated to the sense of the verses they desired to illustrate. Different forms of the air were sometimes distinguished by special names: for instance, quiet melodies, in which one note was accorded to each several syllable, were called *Arie di nota e parola*; while the terms *Aria agitata*, *Aria di strepito*, and even *Aria infuriata* were applied to movements exhibiting a greater or less amount of dramatic power.



(5) The *Aria di bravura*, or *d'agilità*, was generally an allegro, filled with brilliant 'divisions' or passages of rapid *fioritura* calculated to display the utmost powers of the singer for whom the movement was intended. Some of the passages written for Elizabetta Pilotti Schiavonetti, Cuzzoni, Faustina, Nicolini, Farinelli, and other great singers of the period were amazingly difficult. Among such *volate* we may class that sung in Handel's 'Ricardo Primo,' by the celebrated sopranist, Senesino (see next page).

Though we sometimes meet with operatic airs of the 18th century which seem, at first sight, inconsistent with this rigid system of classification, a little careful scrutiny will generally enable us to refer them, with tolerable certainty, to one or other of the universally recognised orders.

The *Cavatina*, for instance, distinguished

from all other types by the absence of a second part and its attendant *Da capo*, is, in reality, nothing more than an abbreviated form, either of the *Aria cantabile*, the *Aria di portamento*, or the *Aria di mezzo carattere*, as the case may be. The second act of Handel's 'Teseo' opens with an example which establishes this fact very clearly, needing only the addition of a subordinate strain in order to convert it into a regular *Aria cantabile*.

The *Aria d'imitazione* was written in too many varieties of style to admit the possibility of its restriction to any single class. Warlike airs with trumpet obbligato, hunting-songs with horn accompaniment, echo-songs—such as 'Dite che fà,' in 'Tolomeo'—airs with obbligato flute passages or vocal trills suggestive of the warblings of birds, and descriptive pieces of a hundred other kinds, all fell within this cate-

gory, and generally exhibited the prominent characteristics of the *Aria di mezzo carattere*, unless, as was sometimes the case, they were simple enough to be classed as *Arie cantabili*, or even *Arie parlanti*, with a more or less elaborate obbligato accompaniment, or contained *volate* of sufficient brilliancy to enable them to rank as *Arie d'agilità*.

The *Aria all' unisono* is of comparatively rare occurrence, though Handel's operas afford examples. The original form of 'The people that walked in darkness' ('Messiah') is a fine specimen of the class. 'Bel piacer,' sung by Isabella Girardeau, in 'Rinaldo,' and generally regarded as the typical example of the style, is a pure *Aria cantabile*, written for an expressive soprano, supported only by a single violin part, playing in unison with the voice throughout. In the symphonies, a violoncello part is added; but it is never heard simultaneously with the singer. Similar airs will be found in 'Il Pastor Fido' and 'Ariadne'; but we meet with them so seldom that it is doubtful whether they were ever held in any great degree of favour, either by singers or the public. The fine song, 'Il tricerbero umiliato,' in 'Rinaldo,' represents a less rare form, wherein the basses and other instruments all supported the voice in unisons or octaves.

The *Aria concertata* was simply an *Aria di mezzo carattere*, or an *Aria parlante*, with a more than usually elaborate or original accompaniment. Among the finest known examples of this class we may mention 'Priva son,' in 'Giulio Cesare,' with flute obbligato; 'Hor la tromba,' in 'Rinaldo,' with four trumpets and drums obbligati; an air in 'Il Pastor Fido,' with accompaniments for violins and violoncellos in octaves pizzicato, with a harpsichord part, arpeggiando, throughout; 'Ma quai notte,' in 'Partenope,' accompanied by 2 flutes, 2 violins, viola and theorbo, with violoncelli and bassi pizzicato; 'Se la mia vita,' in 'Ezio,' for 1 violin, viola, violoncello, 2 flutes and 2 horns; 'Alle sfere della gloria,' in 'Sosarme,' for the full stringed band, enriched by 2 oboes and 2 horns; and a highly characteristic scena, in 'Semele'—'Somnus, awake!'—for 2 violins, viola, violoncello, 2 bassoons and organ.

Finally, the *Aria senza accompagnamento*, that is without accompaniment of any kind, must be mentioned. An example is to be found in Keiser's 'Inganno fedele.'

W. S. R.; addns. M.

ARIADNE AUF NAXOS, opera in one act by Richard Strauss; libretto by Hugo von Hofmannsthal, designed to follow Molière's comedy 'Le Bourgeois Gentilhomme,' for which Strauss composed eleven incidental musical numbers; produced Stuttgart, Oct. 24, 1912; London (His Majesty's), May 27, 1913. A revised version with an introductory first act to take the place of Molière's comedy, produced Vienna, 1916, was first given in London, May 27, 1924.

ARIANE ET BARBE-BLEUE, opera in 3 acts; words by Maeterlinck; music by Dukas. Produced Opéra-Comique, May 10, 1907; New York, Mar. 3, 1911.

ARIBO (*b.* Orleans ?), a scholastic of the mid-eleventh century who lived at St. Emmeran, Ratisbon. He was headmaster of Freising school and wrote *Musica*, an important commentary on Guido of Arezzo (republished in *Gerbert*, ii. 197), which seems to show that we do not possess Guido's works in their entirety (*Fétis*). The preface to *Musica* appeared separately (*Eitner*; *Fétis*).

ARIENZO, Nicola de (*b.* Naples, Dec. 23, 1842; *d.* Naples, Apr. 24, 1915), Italian composer. His father was unwilling to allow him to devote himself to music and for long insisted on his studying the law. The son, however, prepared for a musical career unknown to his father and studied at first with Pietro Labriola (piano) and V. Fioravanti (composition). After a meeting with Enrico Petrella, who visited Naples to supervise the production of 'Precauzioni,' the father was persuaded to allow the musical studies to be pursued on Petrella's recommendation. Profiting by the advice of

Mercadante, d' Arienzo made rapid progress and in 1860 produced at the Teatro Nuovo an opera in Neapolitan dialect, 'Monzu Gnazio,' which was well received. This was followed six years later by 'I due mariti,' also in dialect; by 'Le rose' (Naples, 1868); 'Il cacciatore delle Alpi' (Naples, 1870); 'Il cuoco' (Naples, 1873); 'I viaggi' (Milan, 1875); 'La figlia del Diavolo' (Naples, 1879); 'I tre coscritti' (Naples, 1880); 'La fiera' (Naples, 1887); and other unpublished works. D' Arienzo also composed an oratorio 'Il Cristo sulla Croce'; he is the author of a treatise *L' invenzione del sistema tetracordo e la moderna musica*, published in 1879. F. B.

ARIETTA (Ital.), diminutive of ARIA, the name of a short air, usually possessing no second part, and of more or less simple kind. M.

ARIETTO, (1) SIMONE (*b.* Vercelli, beginning of 17th cent.), violinist for a time at the court of Mantua; then at Vercelli; and in 1630 at the court of Savoy. Fétis considers him the first violinist to be mentioned as virtuoso on his instrument. His sons (2) FRANCESCO and (3) SIMONE were also excellent violinists but did not equal their father.

ARIGONI, GIOV. GIAC., see ARRIGONI.

ARIOSO (Ital.), literally 'airy.' Used substantively, it would seem to mean that kind of air which, partaking both of the character of air and recitative, requires rather to be said than sung. J. H.

ARIOSTI, ATTILIO (*b. circa* 1660 [1]), a Dominican friar and an operatic composer whose fame rests chiefly on his association with Handel in England. He was also a notable performer on the viola d' amore.

Under a papal dispensation he gave up his ecclesiastical profession for that of music, of which he had from his youth been a regular student. His first opera was 'Dafne,' written to the words of Apostolo Zeno. It was brought out at Venice in 1686. Its success was sufficient to determine the direction of his talent, for thenceforth, with the exception of one oratorio and some cantatas to be hereafter mentioned, he wrote only for the stage. In 1690 he became either private composer or maestro di cappella to the Electress of Brandenburg, and from 1698 to 1705 was conductor and composer at the court theatre of Berlin; he remained a member of the Electress's household until 1715, when, at the invitation of the managers of the Italian opera in London, he came to England. This interval, however, he does not seem to have spent altogether at Berlin. Apparently he had paid one visit at least to Italy, and one to Austria, bringing out his 'Nabucodonosor' at Vienna, 1706, his 'La più gloriosa fatica d' Ercole' at Bologna, and his 'Amor tra nemici' at Venice. His Passion Oratorio was given in 1709 at Vienna, and an earlier treatment of the same subject is dated Modena, 1693. 'La madre dei Maccabei' was written for Venice in 1704, and 'La profezia d' Eliseo' in 1705 for Vienna. His first appearance in London was at the representation of Handel's 'Amadis,' at which he played a solo on the viola d' amore. Between this date and his second visit to England it seems probable that Ariosti held some position at the French court. Van der Straeten has discovered an opera by him, 'La Fede ne tradimenti,' which seems to have been produced at the Théâtre de Luxembourg 'by order of Her Majesty.' On the title-page Ariosti is described as master of Her Majesty's Music (maestro di Mus. S. Mstà). In 1720 the Royal Academy of Music began its career in London with Handel, Bononcini and Ariosti as its three musical directors. Ariosti, a man of mild character and apparently of comparatively small ambition, took less part than the other two either in the operatic triumphs or the controversies which belonged to the institution. But he remained in its service until the final catastrophe of its bankruptcy and produced a number of operas.

The oft-repeated story that he wrote the first act of a composite opera, 'Muzio Scevola,' with which the three composers opened the house, may be finally dismissed as false. That opera did not open the house but was produced on Apr. 15, 1721, and it was not Ariosti but Mattei ('Pipo') who contributed an act with Handel and Bononcini.[2] Ariosti quitted England in 1728, and passed the rest of his life in an obscurity which no biographer has been able to pierce. Fétis says that on the eve of his departure from England he published his volume of cantatas by subscription, and that they realised £1000. It may be hoped that this is a fact, and that the destitution hinted at by other writers was not the absolute condition of his old age.

Ariosti's operas, as far as they have been identified, are as follows:

Dafne, 1686; Eriphyle, 1697; La festa d' Imenei, 1700; Atys, 1700; Nabucodonosor, 1706; La più gloriosa fatica d' Ercole, 1706; Amor tra nemici, 1708; La Fede ne tradimenti, 1716–20; Ciro, 1721; Coriolanus, 1723; Vespasian, 1724; Artaserse, 1724; Dario, 1725; Lucius Verus, 1727; Teuzone, 1727.

To these must be added 6 cantatas dedicated to King George; some lessons for the viola d' amore, 1728. (See VIOL: subsection VIOLA D' AMORE); and another oratorio 'Radegonda Regina di Francia,' 1693.

BIBL.—ALFRED EBERT, *Attilio Ariosti in Berlin* (1697-1703) (Giesecker Devrient, Leipzig, 1905); Inaugural dissertation for the doctorate of Philosophy, Bonn, July 1905.

E. H. P., with corr. and addns. (see *Mus. T.*, 1910, p. 367).

ARISTIDES QUINTILIANUS (*c.* A.D. 150), a Greek writer who wrote Περὶ μουσικῆς, three books on music which give the clearest and

[1] Some works at Upsala bearing his name and dated 1663-65 have suggested that he was born considerably earlier. But since he was alive in 1728 it seems improbable that these are of his composition.

[2] See Streatfeild's *Handel*, p. 90.

most satisfactory account of Greek music extant. A new edition by Albert Jahn appeared, 1882.

ARISTOTE, a 13th-century composer of whom Coussemaker republished four 3- and 4-part pieces (*Eitner*).

ARISTOTELES, (1) the Greek philosopher and pupil of Plato (384–322 B.C.), wrote very little about music, but that little is of importance. The references scattered about his works have been collected by Karl von Jans in *Musici scriptores Graeci* (1895, pp. 3-35). The *Problemata* (Sect. XIX.) are, according to latest researches, of Alexandrian origin and date from the 1st or 2nd century A.D. They are in form of queries and answers, and offer most valuable information. Several new editions and translations of this latter work have appeared (see *Riemann*). (2) Pseudonym of the author of a 12th-century work on *Mensural Music*, mentioned by John de Muris as inventor of the mensural notes, together with Franco of Cologne. The treatise has been erroneously attributed to the Venerable Bede (*Eitner*). Coussemaker republished it together with 7 motets, but the authorship of the latter cannot be proved. E. V. d. S.

ARISTOXENUS OF TARENTUM (4th cent. B.C.), peripatetic philosopher and a pupil of Aristotle, was the most important of Greek writers on music. Of his numerous works only two are preserved, *The Elements of Harmony*, and fragments of *The Elements of Rhythm*. He is the first who has laid a scientific foundation of music. The most important modern editions are: P. Marquard (1868, with German translation); H. S. Macran (Oxford, 1902); L. Laloy, *Aristoxène de Tarent* (1904); C. F. Abdy Williams, *The Aristoxenian Theory* (Cambridge, 1911); (*Fétis*; *Encycl. Brit.*; *Eitner*).

ARIZO (ARIZU), MIGUEL DE (beginning of 17th cent.), a Spanish singer and composer of secular vocal music. Originally a choir-boy in the Chapel Royal at Madrid, in 1614 he appears as an alto; while he was still in the choir in 1629 and 1633. Two compositions by him are found in the 'Cancionero de Sablonara' at Munich, printed in 1918 by D. Jesus Aroca as 'Cancionero musical y poético del siglo XVII' (Madrid). J. B. T.

ARKWRIGHT, GODFREY EDWARD PELLEW (*b.* Apr. 10, 1864), studied at Eton and Oxford, and was editor of the OLD ENGLISH EDITION (*q.v.*), an important collection of the works of old English masters (25 vols., 1889–1902); also Purcell's church music, etc., for the PURCELL SOCIETY (*q.v.*). From 1909–13 he was editor of *The Musical Antiquary* (Oxford). His catalogue of music in the library of Christ Church, Oxford, is valuable. E. V. d. S.

ARKWRIGHT, MARIAN URSULA (*b.* Norwich, Jan. 25, 1863; *d.* Highclere, Mar. 23, 1922), composer, took the degrees of Mus.B. in 1895 and Mus.D. in 1913 at Durham. Her symphonic suite 'Winds of the World' won a prize offered by *The Gentlewoman* for an orchestral work by a woman. A suite for strings was written for the Australian Exhibition of Women's Work, Melbourne, 1907. Her published works include a Requiem Mass (1915); a ballad for 3 treble voices, 'The Dragon of Wantley'; and some songs, partsongs and chamber music. Several larger choral, orchestral and chamber works and an operetta, 'The Water Babies,' are unpublished. (See *B. M. S. Ann.*, 1920.) E. B.

ARMES, PHILIP (*b.* Norwich, Aug. 15, 1836; *d.* Durham, Feb. 10, 1908), organist, and professor of music in the University of Durham.

The son of a schoolmaster and bass singer who held a lay-clerkship at Rochester, Armes obtained his musical education as a chorister first at Norwich (1846) and later at Rochester (1848). At the end of his choristership the Dean and Chapter of the latter cathedral presented him with a grand pianoforte as a special mark of their appreciation of his services as solo boy. In 1850 he was articled to Dr. J. L. Hopkins, organist of the cathedral. He became organist of St. Andrew's, Wells Street, London (1857), Chichester Cathedral (1861), and Durham Cathedral (1862), a post which he held till his retirement in 1907.

Examinations for musical degrees in the University of Durham were instituted by Dr. Armes in Oct. 1890, when 81 candidates presented themselves for examination. In 1897 the charter of the University was altered, whereby Dr. Armes was made professor of music. His compositions, chiefly oratorios and works for the Church, were numerous but unimportant. F. G. E.; rev. C.

ARMIDE, a favourite subject for operatic composition in the 17th and 18th centuries. The most famous 'Armide' is that of Gluck, produced Sept. 23, 1777, at the Académie Royale in Paris. The libretto is by Quinault, the same which was set by Lully in 1686. Produced Covent Garden, July 6, 1906; New York, Metropolitan Opera House, Nov. 14, 1910.

ARMINGAUD, JULES (*b.* Bayonne, May 3, 1820; *d.* Feb. 27, 1900), a violinist in the orchestra of the Paris Opéra. In 1855, with Édouard Lalo, Mas and Léon Jacquard, he established a string quartet which enjoyed a great reputation, and was subsequently transformed, by the addition of wind instruments, into the 'Société Classique.' He published some works for violin. G. F.

ARMOURER OF NANTES, THE, opera in three acts, founded on Victor Hugo's *Mary Tudor*; words by J. V. Bridgman; music by Balfe; produced Covent Garden (Pyne and Harrison management), Feb. 12, 1863.

ARMSHEIMER, Ivan Ivanovitch (*b.* St. Petersburg, Mar. 19, 1860), studied at St. Petersburg Conservatoire under Czerny, Johannsen and Rimsky-Korsakov. He composed 2 cantatas, and orchestral and choral works; about 150 songs; a suite for flute and pf.; pieces for violin and for violoncello; 3 operas, 'Sous la feuillée,' 'Jaegerliv' (Danish words) and 'Der Oberförster'; and 3 ballets; also a book on instrumentation in 10 parts. E. v. d. S.

ARNE, a 17th-century English composer, four airs by whom are to be found, according to Eitner, in a collective volume of 1676 (*Eitner*).

ARNE, (1) Thomas Augustine, Mus.D. (*b.* London, Mar. 12, 1710; *d.* there, Mar. 5, 1778), was the most eminent English composer of his generation, and one whose work is of special importance in the somewhat attenuated history of English opera.

He was the son of an upholsterer in King Street, Covent Garden, where he was born. He was educated at Eton, and being intended by his father for the profession of the law, was on leaving college placed in a solicitor's office for three years. But his love for music predominated; he privately conveyed a spinet to his bedroom, and by muffling the strings with a handkerchief contrived to practice during the night undetected. He took lessons on the violin from Festing, and would occasionally borrow a livery in order to gain admission to the servants' gallery at the opera. He made such progress on the violin as to be able to lead a chamber band at the house of an amateur who gave private concerts. There he was one evening accidentally discovered by his father in the act of playing the first violin. After some fruitless efforts to induce his son to devote himself to the profession for which he had designed him, the father gave up the attempt as hopeless, and permitted the youth to follow the bent of his inclination. Being free to practise openly, Arne soon, by his skill on the violin, charmed the whole family, and finding that his sister Susanna Maria (who afterwards as Mrs. Cibber became famous as a tragic actress) had an agreeable voice, he gave her such instructions as enabled her to appear in 1732 in Lampe's opera 'Amelia.' Her success was such as to induce her brother to reset Addison's opera 'Rosamond' (see Clayton), and his composition was produced at Lincoln's Inn Fields Theatre, Mar. 7, 1733, Miss Arne performing the heroine, and her younger brother the page.

Soon afterwards Arne got Fielding's 'Tragedy of Tragedies' altered into the 'Opera of Operas,' and, setting it to music 'after the Italian manner,' brought it out at the Haymarket Theatre, his young brother representing the hero, Tom Thumb. On Dec. 19, 1733, he produced at the same theatre a masque called 'Dido and Æneas,' which was performed (as then customary) with a harlequinade intermixed. In 1736 he composed some music for Aaron Hill's tragedy of 'Zara,' in which his sister made 'her first attempt as an actress.' In 1736 Arne married Cecilia, daughter of Anthony Young, organist of St. Catherine-Cree, near the Tower [1] (see Young).

In 1738 Arne was engaged to compose the music for Dr. Dalton's adaptation of Milton's 'Comus,' which was brought out at Drury Lane Theatre. This work fully established his reputation, its graceful and flowing melodies making an immediate and lasting impression. In 1740 he reset Congreve's masque 'The Judgment of Paris,' which was performed at Drury Lane. On Aug. 1 in the same year, to celebrate the anniversary of the accession of the House of Hanover, Thomson and Mallet's masque of 'Alfred,' with music by Arne, was performed, for the first time, in a temporary theatre in the garden of Cliveden (or Cliefden), Bucks, then the residence of Frederick, Prince of Wales. The work contains some fine songs, but is more especially distinguished by its finale, the famous patriotic song 'Rule Britannia' (*q.v.*). On Dec. 20, in the same year, Shakespeare's 'As You Like It' being performed at Drury Lane Theatre, after having been laid aside for forty years, Arne gave to the world those beautiful settings of the songs 'Under the greenwood tree,' 'Blow, blow, thou winter wind' and 'When daisies pied,' which seem to have become indissolubly allied to the poetry.

After producing some minor pieces, Arne went in June 1742 with his wife to Dublin, where they remained until 1744. Later visits to Dublin followed, 1755–56 and 1758–59.[2] During his stay there he produced, besides his former pieces, his important oratorio 'Abel,' [3] his operas 'Alfred' and 'Eliza' (Nov. 29, 1755), and his 'Comus,' and also gave concerts with great success.

He was again engaged as composer at Drury Lane, where he produced 'The Temple of Dullness,' a comic opera in 2 acts (1745), and on the death of Gordon he succeeded him as leader of the band there. In 1745 Arne was engaged as composer to Vauxhall Gardens, and wrote for Mrs. Arne and Lowe the pastoral dialogue 'Colin and Phœbe,' which proved so successful that it was performed throughout the entire season. He held that engagement for many years, during which he composed for the Gardens, as well as for Ranelagh and Marylebone Gardens, an immense number of songs. On the revival of Shakespeare's 'Tempest' in 1746 (at Drury Lane), Arne supplied new music for the masque and the song 'Where the Bee sucks,' a composition of

THOMAS AUGUSTINE ARNE

From a mezzotint by W. Humphrey after R. Dunkarton

THOMAS ATTWOOD

From a painting at the Royal College of Music

perennial beauty. On Mar. 12, 1775, he revived his 'Abel,' in which the simple and beautiful melody known as the 'Hymn of Eve' became exceedingly popular.

On July 6, 1759, the University of Oxford created Arne Doctor of Music. In 1760, apparently in consequence of a difference with Garrick, Arne transferred his services to Covent Garden Theatre, where on Nov. 28 his 'Thomas and Sally' was given; it had been produced first in Dublin in Dec. 1759. On Feb. 2, 1762, he ventured on the bold experiment of placing before an English audience an opera composed after the Italian manner, with recitative instead of spoken dialogue. For this purpose he selected the 'Artaserse' of Metastasio, which he himself translated into English. Departing to a great extent from his former style he crowded many of the airs with florid divisions, particularly those in the part of Mandane, which he composed for his pupil, Charlotte Brent (*q.v.*). The other singers were Tenducci, Peretti, Beard, Mattocks and Miss Thomas. The success of the work was decided, and the part of Mandane was long considered the touchstone of the powers of a soprano singer. Three songs remained famous long after the opera as a whole had passed into oblivion. They were 'The soldier tired of war's alarms,' 'In infancy our hopes and fears' and 'Water parted from the sea.' The last named appeared as a hymn tune in Harrison's Sacred Harmony (1784). Arne himself published 'Artaxerxes' in a folio full score, and John Johnson (opposite Bow Church) the voice and harpsichord edition in oblong folio. Later (*c.* 1769), 'Artaxerxes' was given in Edinburgh, with Tenducci taking his original part. Here three songs written by Robert Ferguson and adapted to Scottish airs were interpolated. In the first quarter of the 19th century an edition of 'Artaxerxes,' edited by J. Addison, with additional numbers by Bishop and Braham, was published by Goulding and D'Almaine.

The popular ballad-opera, 'Love in a Village,' also came out in 1762. On Feb. 29, 1764, Dr. Arne produced his second oratorio, 'Judith' (originally performed at Drury Lane, Feb. 27, 1761), at the Chapel of the Lock Hospital, in Grosvenor Place, Pimlico, for the benefit of the charity. In 1764 he set Metastasio's opera, 'Olimpiade,' in the original language, and had it performed at the King's Theatre in the Haymarket. It was represented, however, but twice, owing, it has been supposed, to some petty jealousy of an Englishman composing for an Italian theatre. In 1769 Dr. Arne set such portions of the ode written by Garrick for the Shakespeare jubilee at Stratford-on-Avon, as were intended to be sung, and some other incidental music for the same occasion. In 1770 he presented a garbled version of Purcell's 'King Arthur.' One of his last dramatic compositions was the music for Mason's 'Caractacus,' published with an interesting preface, in 1775 (see Mason, Rev. William).

Dr. Arne produced numerous glees, catches and canons, seven of which obtained prizes at the Catch Club, and instrumental music of various kinds. He parodied 'Alexander's Feast' in a publication called 'Whittington's Feast' (see *Concordia*, Jan. 22, 1876). He died a week before his 68th birthday, and was buried at St. Paul's, Covent Garden. His will,[1] dated Dec. 6, 1777, was proved by Mrs. Arne, Mar. 16, 1778, and by Michael Arne, Mar. 21, 1778. Mrs. Arne died at the house of Barthélemon[2] (*q.v.*), the violinist, and her nephew by marriage, Oct. 6, 1789.

It must not be forgotten that Dr. Arne was the first introducer of female voices into oratorio choruses; which he did at Covent Garden Theatre on Feb. 26, 1773, in a performance of his own 'Judith.' Dr. Arne was author as well as composer of 'The Guardian outwitted,' 'The Rose,' 'The Contest of Beauty and Virtue,' and 'Phœbe at Court,' and the reputed author of 'Don Saverio' and 'The Cooper.'

The following is a list of his principal compositions:

Oratorios: Abel, 1744. Judith, 1764.

Operas and other stage pieces: Rosamond, 1733. The Opera of Operas, or Tom Thumb the Great, 1733. Dido and Æneas, 1733. Love and Glory, 1734. The Fall of Phaeton, 1736. Music in Zara, 1736. Comus, 1738. An Hospital for Fools, 1739. The Judgment of Paris, 1740. Alfred, 1740. Songs in As You Like It, 1740. Songs in Twelfth Night, 1741. The Blind Beggar of Bethnal Green, 1741, Songs in The Merchant of Venice, 1742. Britannia, 1743. Eliza. 1743. The Temple of Dullness, 1745. King Pepin's Campaign, 1745. Music in The Tempest, 1746. Neptune and Amphitrite, 1746. Harlequin Incendiary or Colombine, 1746. The Triumph of Peace, 1748. Don Saverio, 1749. Dirge in Romeo and Juliet, 1750. The Prophetess, 1759. The Sultan, 1759. Thomas and Sally, 1760 (?) Artaxerxes, 1762. Love in a Village (chiefly compiled), 1762. The Birth of Hercules (not acted), 1763. The Guardian outwitted, 1764. Olimpiade (Italian opera), 1764. The Ladies' Frolic, 1770. Additions to Purcell's King Arthur, 1770. The Portrait, 1770. The Fairy Prince, 1771. The Cooper, 1772. The Trip to Portsmouth, 1772. Reffley Spring, 1772. Choruses in Mason's Elfrida, 1772. Squire Badger (Haymarket), 1772, afterwards called 'The Set.' The Rose, 1773. The Contest of Beauty and Virtue, 1773. Achilles in Petticoats, 1773. May Day, 1775. Phœbe at Court, 1776. Music in Mason's Caractacus, 1775. Phillis, 1776.

Besides these Arne composed many incidental songs, etc., for other plays, as The Tender Husband, The Rehearsal, The Rival Queens, etc. Collections of songs under the following titles: Lyric Harmony, The Agreeable Musical Choice, Summer Amusement, The Winter's Amusement, The Syren, Vocal Melody, 1733. The Vocal Grove, 1774, and nearly twenty books of songs sung at Vauxhall, Ranelagh, and Marylebone Gardens. Glees, Catches, and Canons: thirteen glees, ten catches and six canons are printed in Warren's collections, Ode on Chearfulness, 1750. Ode on Shakespeare, 1769. Sonatas or lessons for the harpsichord. Masses. Organ Concertos. Overtures, etc. for the orchestra.

W. H. H.; with corr. and addns. by F. G. E., F. K. and others.

(2) Michael (*b.* 1740 or 1741; *d.* Lambeth, Jan. 14, 1786), the son (Burney says the natural son) of Dr. Arne. He was brought on the stage at an early age by his aunt, Mrs. Cibber, who took great pains in teaching him the part of the page in Otway's tragedy *The Orphan*; and his father was equally assiduous in qualifying him as a singer. He sang at Marylebone Gardens in 1751, after a début made at Galli's concert in the Little Theatre, Haymarket, Apr. 2, 1750. But neither acting nor singing was his vocation. In 'The Flow'ret, a

[1] The will is reprinted in full in *Mus. Antiquary*, ii. 119.
[2] *Mus. Antiquary*, i. 256.

new Collection of English Songs, by Master Arne,' is a song called 'The Highland Laddie,' which attained great popularity, and was in 1775 adapted by Linley to the words, 'Ah, sure a pair were never seen,' in Sheridan's opera, 'The Duenna.' In 1763 Arne appeared as a dramatic composer with 'The Fairy Tale.' In 1764 he composed, in conjunction with Battishill, the music for the opera of 'Almena,' which was withdrawn after a few nights, not from want of merit in the music, but owing to the dullness of the dialogue. On Nov. 5, 1766, Arne married Miss Elizabeth Wright, a vocalist of some repute. In 1767 he wrote the music for Garrick's dramatic romance, 'Cymon,' which was highly successful, and is his best work. Soon afterwards he gave up his profession and devoted himself to the study of chemistry, and built a laboratory at Chelsea, where he attempted the discovery of the philosopher's stone. Foiled in his object, and ruined by the expenses, he returned to the pursuit of music, and wrote the music for several dramatic pieces—amongst them O'Keeffe's 'Positive Man,' in which is the well-known song, 'Sweet Poll of Plymouth'—and numerous songs for Vauxhall and the other public gardens. In 1771 and 1772 he travelled in Germany with a pupil, Miss Venables, conducting Handel's 'Alexander's Feast' at Hamburg, Nov. 23. 1771, and the 'Messiah' for the first time in Germany, Apr. 15, 1772 (*Q.-L.*). At Christmas, 1776, Thomas Ryder engaged Arne to produce 'Cymon' at the Smock Alley Theatre in Dublin. Michael Kelly tells us that Mr. and Mrs. Arne attracted great houses. The composer's love for alchemy reasserted itself, and he took a house near Clontarf for the purpose of pursuing his search for gold. In the summer of 1777 he got into debt and was thrown into a Dublin sponging-house, where he composed 'The Fathers,' and other music. Kelly's father sent him a pianoforte, in return for which Arne gave daily lessons to young Kelly. Ryder made a fresh engagement with Arne in June 1779. In 1784 and subsequent years he had the direction of some of the Lenten Oratorios at the London theatres. Michael Arne's dramatic compositions were :

The Fairy Tale, 1763. Hymen, 1763. Almena, 1764. Cymon, 1767. The Fathers, 1778. The Belle's Stratagem, 1780. The Choice of Harlequin, 1781. The Positive Man, 1782. Tristram Shandy, 1783.

A fine portrait of him by Zoffany is in the possession of Alfred H. Littleton.

W. H. H. and W. H. G. F.

ARNOLD, Johann Gottfried (*b.* Würtemberg, Feb. 15, 1773; *d.* Frankfort, July 26, 1806), violoncellist and composer. After making concert tours in Switzerland and Germany, he spent some time at Ratisbon in order to take advantage of the instruction of the able violoncellist Willmann. He visited Berlin and Hamburg, at which latter town he studied the methods of Bernard Romberg. In 1798 he became attached to the theatre at Frankfort as first violoncellist. Besides compositions and 'transcriptions' for his own particular instrument, he wrote original pieces for the flute and piano, and made quartet arrangements of various operas, etc. Fétis gives a list of his compositions, including 5 concertos for the violoncello; a symphonie concertante for 2 flutes and orchestra; airs with variations, op. 9 (Bonn); easy pieces for the guitar, etc.

T. P. H.

ARNOLD, John (*b.* Essex, 1720; *d.* 1792), published 'The Psalmodist,' containing a large number of psalm tunes, chants, hymns, etc.; also 'The Essex Harmony,' being a choice collection of the most celebrated songs and catches for 2, 3, 4 and 5 v. from the works of the most eminent masters. Both works appeared in various editions (*Eitner*; *Brown*).

ARNOLD, Samuel, Mus.D. (*b.* London, Aug. 10, 1740; *d.* there, Oct. 22, 1802), an English operatic composer, organist, and editor of 'Cathedral Music,' and of the works of Handel.

Arnold was educated in the Chapel Royal under Bernard Gates and Dr. Nares. Beard engaged him as composer to Covent Garden Theatre, where in 1765 he brought out the opera of 'The Maid of the Mill.' Many of the songs were selected from the works of J. C. Bach, Galuppi, Jommelli and other Italian writers. This opera was one of the first, since the time of Purcell, in which concerted music was employed to carry on the business of the stage, and it was used by Arnold with great cleverness. The success of the work decided the composer's future connexion with the stage, and from 1765–1802 he produced no less than 43 operas, musical afterpieces and pantomimes. His attention was early directed to sacred music, and his first production of this kind was an oratorio called 'The Cure of Saul,' performed in 1767. This was followed by 'Abimelech,' 1768, 'The Resurrection,' 1773, and 'The Prodigal Son,' 1777, which were performed under his own direction.

In 1769 Arnold took a lease of Marylebone Gardens, then a place of fashionable resort, which he rendered more attractive by composing and producing several burlettas, performed by the principal singers of the time. Ultimately, however, he retired from the speculation with considerable loss, owing to the dishonesty of a subordinate (see Marylebone Gardens). In 1773 Arnold's oratorio of 'The Prodigal Son' was performed at the installation of Lord North as Chancellor of the University of Oxford. On this occasion Arnold was offered the honorary degree of Doctor in Music, but he preferred taking it in the prescribed mode. It is said that Dr. Hayes, the Professor, returned the candidate's exercise unopened, remarking, 'Sir, it is quite unnecessary to scrutinise an exercise

written by the composer of "The Prodigal Son."'

Dr. Arnold succeeded Dr. Nares in 1783 as organist and composer to the Chapel Royal, for which establishment he wrote several services and anthems. Shortly afterwards (1790) he published a continuation of Boyce's 'Cathedral Music,' in 4 volumes. In 1790 he founded a society of musicians under the title of 'The Graduates' Meeting.' In 1791, in conjunction with Dr. Callcott, he published a work entitled, 'The Psalms of David,' etc. He also published 'An Ode for the Anniversary of the London Hospital.'

In 1786 Dr. Arnold issued proposals for a uniform edition of Handel's works, and the list was headed by George III. as a subscriber for 25 copies. He met with sufficient encouragement to carry it on to 168 numbers, or about 40 volumes, but not enough to enable him to complete his plan, and the edition is far from perfect in many ways. In 1787, in conjunction with his friend Callcott, he established the GLEE CLUB; and on the death of Stanley he joined Linley as conductor of the oratorios at Drury Lane, for some time a profitable speculation, but at length opposed by Ashley at Covent Garden, who by converting the so-called oratorio into a medley of light compositions, stimulated the public appetite for novelty, and the more classical performance at the rival theatre was deserted. His last oratorio, 'Elisha,' was produced in 1795, but it met with little success, and was not repeated.

In 1789 Dr. Arnold was appointed conductor of the ACADEMY OF ANCIENT MUSIC (*q.v.*). In 1793 he succeeded Dr. Cooke as organist of Westminster Abbey, and 4 years later, on the death of Dr. P. Hayes, was requested to conduct the yearly performance at St. Paul's for the benefit of the SONS OF THE CLERGY. About 2 years afterwards a fall from the steps of his library occasioned internal injuries and hastened his death. He was buried near to Purcell, Blow and Croft, in Westminster Abbey.

The following is a list of his dramatic compositions:

Maid of the Mill, 1765. Rosamond, 1767. Portrait, 1770. Mother Shipton, 1770. Son-in-Law, 1779. Summer Amusement, 1779. Fire and Water, 1780. Wedding Night, 1780. Silver Tankard, 1780. Dead Alive, 1781. The Agreeable Surprise, 1781. Castle of Andalusia, 1782. Harlequin Teague, 1782. Gretna Green, 1783. Hunt the Slipper, 1784. Peeping Tom of Coventry, 1784. Two to One, 1784. Here, There, and Everywhere, 1784. Turk and No Turk, 1785. Siege of Cuzzola, 1785. Inkle and Yarico, 1787. Enraged Musician, 1788. The Prince of Arcadia, 1788. Battle of Hexham, 1789. New Spain, 1790. Basket Maker, 1790. Surrender of Calais, 1791. Enchanted Wood, 1792. Harlequin Dr. Faustus, 1793. Children in the Wood, 1793. Auld Robin Gray, 1794. Zorinski, 1795. Mountaineers, 1795. Who Pays the Reckoning? 1795. Love and Money, 1795. Bannian Day, 1796. Shipwreck, 1796. Italian Monk, 1797. False and True, 1798. Throw Physic to the Dogs, 1798. The Gipsies, 1798. Cambro-Britons, 1798. Obi, or Three-fingered Jack, 1800. Review, 1801. Corsair, 1801. Veteran Tar, 1801. The Widow of Shunam (oratorio), 1801. Sixty-Third Letter, 1802. Fairies' Revels, 1802.

Many harpsichord compositions, and a set of 6 overtures in 8 parts, are extant. Arnold's work survived him only through his edition of Handel and his 'Cathedral Music.' The inaccuracies in the text of the former have been responsible for many current misreadings of Handel, for Arnold's text was widely accepted until the publication of the German Handel Society's edition (see CHRYSANDER), and has been followed in some later reprints. The 'Cathedral Music' was published as

'A collection in score of the most valuable and useful compositions for that service by the several English masters of the last 200 years,'

but while it contained a few works by masters, such as Tallis and Purcell, by far the greater part of its contents was by inferior composers, more or less Arnold's contemporaries. The Preface is dated 480 Strand, Nov. 1, 1790. The contents is as follows:

VOL. I.

PATRICK. M. and E. Serv. G minor.
CHILD. M. and E. Serv. E minor.
Do. Full Anth. If the Lord.
Do. F. A. O pray.
CLARK. Sanctus.
KENT. F. A. Hearken unto.
CROFT. Verse Anth. I will give.
KING. F. A. Hear, O Lord.
Do. F. A. Rejoice in the Lord.
Do. M. and E. Serv. B flat.
CROFT. M. Serv. B minor.
ALDRICH. M. and E. Serv. in A.
Do. 2 Chants.
PURCELL. Verse A. Blessed are they.
TALLIS. F. A. All people.
GOLDWIN. M. and E. Serv. in F.
WELDON. Solo A. O God, Thou hast.
ALDRICH. F. A. We have heard.
GOLDWIN. F. A. Behold my servant.
ALDRICH. F. A. Not unto us.
Do. F. A. O praise.

VOL. II.

GREENE. M. and E. Serv. in C.
Do. Solo A. Praise the Lord.
Do. V. A. Like as the hart.
CROFT. V. A. Be merciful.
KING. M. and E. Serv. in F.
Do. F. A. O pray.
GREENE. V. A. O Lord, I will.
Do. V. A. I will magnify.
KING. M. and E. Serv. in A.
TUDWAY. V. A. Thou, O Lord.
WELDON. F. A. Who can tell.
GREENE. V. A. O praise.
BRYAN. M. and E. Serv. in G.
TRAVERS. M. Serv. in F.

VOL. III.

BOYCE. M. Serv. in A.
Do. Solo A. Lord, what is.
Do. F. A. Save me, O God.
Chants by Savage, Travers, Nares, Kent.
BOYCE. Solo A. Lord, teach us.
TALLIS. F. A. Hear the voice.
ALDRICH. V. A. I am well pleased.
TRAVERS. S. A. Ponder my words.
NARES. M. and E. Serv. in F.
Do. F. A. Blessed is he.
Do. F. A. O Lord, grant.
Do. F. A. Try me.
Do. Chant.
TRAVERS. Te Deum in D.
KING. M. and E. Serv. in C.
Do. V. A. Wherewithal.
GREENE. V. A. Hear my prayer.
BOYCE. S. A. Turn Thee.
Do. F. A. Blessing and glory.
KING. M. Serv. in A.
HALL and HINE. Te Deum and Jubilate.
GREENE. V.A. O God, Thou hast.
AYRTON. Chant.
TRAVERS. V. A. Ascribe.
ALDRICH. E. Serv. in F.
DUPUIS. Chant.
BOYCE. S. A. Ponder my words.
GREENE. S. A. O Lord God.

VOL. IV.

The Organ part to the foregoing.

A reprint was issued by Rimbault in 1847.

ARNOLD, YOURIJ VON (*b.* St. Petersburg, Nov. 13, 1811; *d.* Karakasch, Crimea, July 20, 1898). After studying at Dorpat he entered the army in 1831 and served as officer in the Polish campaign. In 1838 he retired from the army. He wrote an opera, 'The Last Days of Pompeii,' an operetta, 2 overtures and a cantata which was awarded a prize by the Philharmonic Society. From 1863–70 he lived at Leipzig as a regular contributor to the *Neue Zeitschrift für Musik*, and edited in 1867–1868 a *Neue allgemeine Zeitschrift für Theater und Musik*. From 1870–94 he had a school of music of his own at Moscow, and travelled a great deal in Russia to collect material for his important works on Russian church music. He wrote a considerable number of books on music; also his *Memoirs* (3 vols., Moscow, 1892) (*Riemann*; *Mendel*).

ARNOLDSON, SIGRID (*b.* Stockholm, Mar. 20, 1865), operatic soprano, daughter of a well-known Swedish tenor, Oscar Arnoldson. This

captivating singer was fortunate alike in her early musical environment and her teachers. After her voice, which was of singularly sweet, pleasing quality and extensive compass, had been carefully placed, she studied with Maurice Strakosch several of the lighter rôles which he had taught his sister-in-law, Adelina Patti. Subsequently she worked for some time in Berlin with the famous singer and teacher, Mme. PADILLA-ARTÔT, and made her début at Moscow in 1886 as Rosina, in 'Il Barbiere di Siviglia,' winning an immediate and pronounced success. In the following year she was engaged by Sir Augustus Harris for his memorable tentative season at Drury Lane, where she appeared on June 20 in Rossini's comic masterpiece, and was hailed as another 'Swedish Nightingale.' One critic wrote: 'Mlle. Arnoldson fascinated by something more than her facile warbling of Rossini's melodies. Her prepossessing looks, her graceful carriage, her vivacious and intelligent acting, her coquettish humour—all helped to complete the conquest of a critical audience.' Her bewitching Zerlina ('Don Giovanni') was much admired, both in this and the following season, when she sang at Covent Garden. Meanwhile her continental reputation grew rapidly, and she achieved marked successes at most of the principal opera-houses, including Paris (Opéra-Comique), Amsterdam, Budapest, and her native city, where she was elected in 1910 a member of the Stockholm Academy. At Covent Garden in 1893 she attempted Carmen, but the part did not suit her, and in America (1894) she wisely exchanged it for that of Micaela—sung to the Carmen of Mme. Calvé. She was also successful, both there and in London, as one of the sisters (Sophie) in Massenet's 'Werther,' Jean de Reszke being the hero. Her rôles, in addition to the above, included Dinorah, Cherubino, Mignon, Amina and Violetta; but in none of these did she appear at Covent Garden, where she last sang in 1895, some time prior to her retirement from the stage. She married in 1889 Maurice Fischof, an operatic impresario. H. K.

ARNOLDUS FLANDRUS (16th/17th cent.), a Netherlandish composer who, in the dedication of his 'Sacrae Cantiones' (Venice 1595), describes himself as 'Eremita organista Tulmetini' (according to Fétis, Calmaldolense monk and organist at Tolmezza, Friuli) in Venetian territory. About the beginning of the 17th century he appears to have been in Nassau-Dillingen, as his important 'Missa Solenne' (7 v.), entitled 'Si fortuna favet,' and a book of madrigals were published at Dillingen, 1608. A 'Cantate Duo' (8 v.) and Jubilate (8 v.) in MS. are in the Berlin Library (*Fétis*; *Eitner*).

ARNOULD, MADELEINE SOPHIE (*b.* Paris, Feb. 13, 1740; *d.* there, Oct. 22, 1802), a famous actress and singer.

She was born in the Rue Louis le Grand, according to the birth register, and not 'in the same room in the Rue de Bethisy in which Admiral Coligny was murdered, Aug. 24, 1572,' as she herself stated. In this last house she lived later on. The Princess of Modena hearing the child sing in the church of Val de Grâce was so charmed that she recommended her to the royal Intendant of Music. Against the will of her mother, Sophie became a member of the Chapelle Royale, and was taught comedy by Mlle. Hippolyte Clairon, and singing by Mlle. Tel. Mme. de Pompadour hearing her on one occasion was so much struck by the young artist that she characteristically said, 'With such talents you may become a princess.' She made her début on Dec. 15, 1757, and remained on the stage till 1778, the most admired artist of the Paris Opéra. She was the original Iphigénie (en Aulide) and Eurydice (Orphée) in Gluck's operas (1774). In 1778 she left the boards and retired into private life. Mlle. Arnould was not less renowned for her wit and power of conversation than for her ability as a singer and actress. The *Arnouldiana* (1813) contain a host of her caustic and witty speeches. Her life was written by C. and J. de Goncourt and Robert Douglass. There is a portrait of her by Greuze in Lord Normanton's collection at Somerby.

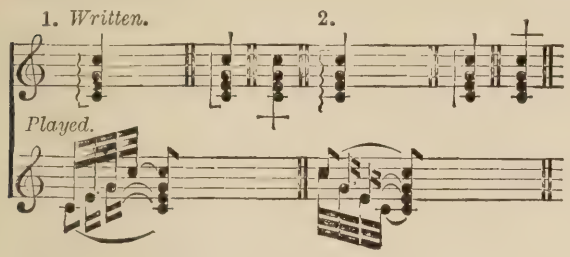
F. G.; addns. and corr. M. L. P.

ARON, PIETRO, see AARON.



ARPA, see HARP.

ARPEGGIO (Ital.), from *arpa*, 'the harp'; *arpeggiare*, 'to play upon the harp.' The employment in vocal or instrumental music of the notes of a chord in succession instead of simultaneously; also, in pianoforte music, the breaking or spreading of a chord, either upwards or downwards.

The introduction of the arpeggio as an accompaniment to a melody marks an important epoch in the history of pianoforte music. Its early use is particularly associated with ALBERTI (*q.v.*). The simple kind of arpeggio employed by him, known as the ALBERTI BASS (*q.v.*), has since become fully developed, not alone as accompaniment, but also as an essential part of the most brilliant instrumental passages of modern music.

Arpeggio passages such as those alluded to are almost invariably written out in full, but the simple spreading of the notes of a chord (in contradistinction to *concento*, the sounding of all the notes together) is usually indicated by certain signs. According to Türk ('Clavierschule') the signs for the arpeggio, beginning with the lowest note, were, as in Ex. 2, those for the descending arpeggio as in Ex. 3. The latter is, however, only met with in old music; the downward arpeggio, which is but rarely

employed in modern music, being now always written in full.

The arpeggio in modern music is usually indicated as in Ex. 3, and occasionally (as for instance in some of Hummel's compositions) by a stroke across the chord (Ex. 4). This is, however, incorrect, as it may easily be mistaken for the combination of arpeggio with ACCIACCATURA (*q.v.*), which, according to Emanuel Bach, is to be written and played as in Ex. 5. Similar notations are found in the French School (see *Harpègement* in the table of French Agréments under ORNAMENTS).

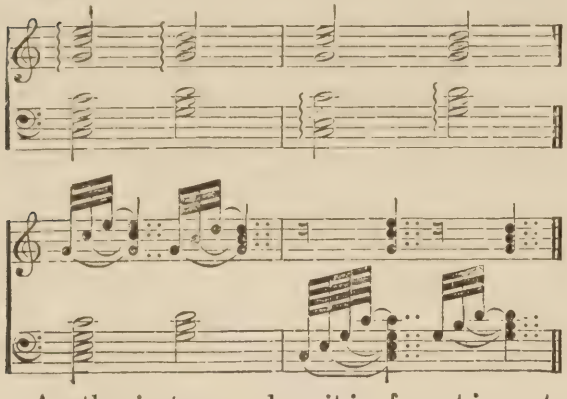
In the arpeggio as above, the notes when once sounded are all sustained to the full value of the chord, with the exception only of the foreign note (the acciaccatura) in Ex. 5. Sometimes, however, certain notes are required to be held while the others are released; in this case the chord is written as in Ex. 6.

The arpeggio should, according to the best authorities, begin at the moment due to the chord, whether it is indicated by the sign or by small notes, and there can be no doubt that the effect of a chord is weakened and often spoilt by being begun before its time, as is the bad habit of many inexperienced players. Thus the beginning of Mozart's Sonata in C (Ex. 7) should be played as in Ex. 8, and not as in Ex. 9. Nevertheless, it appears to

the writer that there are cases in modern music in which it is advisable to break the rule and allow the last note of the arpeggio to fall upon the beat, as for instance in Mendelssohn's 'Lieder ohne Worte,' Book v. No. 1.

In music of the time of Bach a sequence of chords is sometimes met with bearing the word 'arpeggio'; in this case the order of breaking the chord, and even the number of times the same chord may be broken, is left to the taste of the performer, as in Bach's sonata for pianoforte and violin, No. 2 (Ex. 10), which is usually played as in Ex. 11.

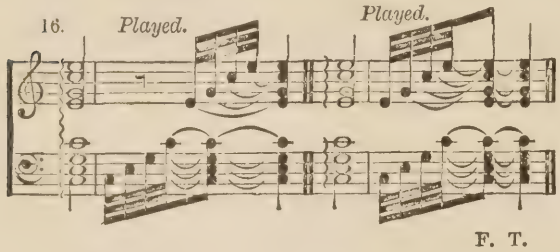
Sometimes the arpeggio of the first chord of a sequence is written out in full, as an indication to the player of the rate of movement to be applied to the whole passage. This is the case in Bach's 'Fantasia Cromatica' (Ex. 12). which is intended to be played as in Ex. 13, Such indications, however, need not always be strictly followed. A passage in Mendelssohn's letters (*Briefe*, ii. 241) describes his personal practice with regard to this passage.



When an appoggiatura is applied to an arpeggio chord, it takes its place as one of the notes of the arpeggio, and occasions a delay of the particular note to which it belongs equal to the time required for its performance, whether it be long or short (Ex. 14).

Chords are occasionally met with (especially in Haydn's pianoforte sonatas) which are partly arpeggio, one hand having to spread the chord while the other plays the notes all together;

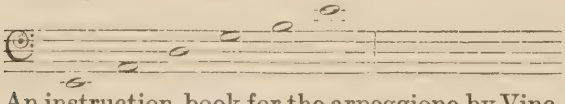
the correct rendering of such chords is as follows (Ex. 15) :



15.

Another instance, where it is of great importance to observe the difference between the arpeggio and the plain chord, is in Brahms's intermezzo in E, op. 116, No. 4.

A distinction is, or ought to be, made between the long arpeggio mark joining both staves, and a separate arpeggio mark for each stave :



16. *Played.* *Played.*

F. T.

ARPEGGIONE, or GUITAR VIOLONCELLO, a stringed instrument, played with a bow, which was invented by G. Staufer, of Vienna, in 1823, but appears never to have come much into use, and whose very name would probably now be unknown, if it were not for an interesting sonata (in A) for pianoforte and arpeggione by Franz Schubert, written in 1824, published in series 8 of the complete edition. (See *PLATE LXXXVIII.* No. 3.)

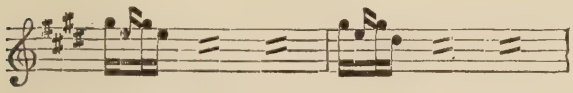
The arpeggione appears to have been of the size of the viola da gamba, or a small violoncello; the shape of the body something like that of the guitar. The finger-board had frets, and the 6 strings were tuned thus :

An instruction-book for the arpeggione by Vinc. Schuster, the player for whom Schubert wrote his sonata, has been published by A. Diabelli of Vienna. (See VIOLIN FAMILY, 13.) P. D.

ARPICORDO, see HARPSICHORD.

ARQUIMBAU, DOMINGO (*d.* Seville, 1829), a Spanish church musician, musical director of Seville Cathedral from 1795 until 1829. He is said to have been in England and to have received the degree of Mus. D. His works, which were sung down to recent times, include a 'Gran Misa' with orchestra; a number of motets and sparkling *villancicos* (with Spanish words) for Christmas and the Feast of the Conception.

J. B. T.



ARRANGEMENT, or ADAPTATION, is the musical counterpart of literary translation. Voices or instruments are as languages by which the thoughts or emotions of composers are made known to the world ; and the object of arrangement is to make that which was written in one musical language intelligible in another.

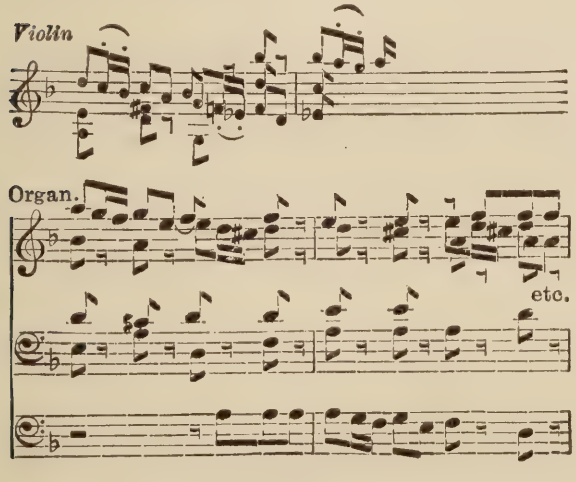
The functions of the arranger and translator are similar ; for instruments, like languages, are characterised by peculiar idioms and special aptitudes and deficiencies which call for critical ability and knowledge of corresponding modes of expression in dealing with them. But more than all, the most indispensable quality to both is a capacity to understand the work they have to deal with. For it is not enough to put note for note or word for word or even to find corresponding idioms. The meanings and values of words and notes are variable with their relative positions, and the choice of them demands appreciation of the work generally, as well as of the details of the materials of which it is composed. It demands, in fact, a certain correspondence of feeling with the original author in the mind of the arranger or translator. Authors have often been fortunate in having other great authors for their translators, but few have written their own works in more languages than one. Music has had the advantage of not only having arrangements by the greatest masters, but arrangements by them of their own works. Such cases ought to be the highest order of their kind, and if there are any things worth noting in the comparison between arrangements and originals they ought to be found there.

COMPOSERS' METHODS.—The first arrangements which have any great artistic value are Bach's. At the time when his attention was first strongly attracted to Italian instrumental music by the principles of form which their composers had originated, and worked with great skill, he arranged 16 violin concertos of Vivaldi's for the clavier solo, and three of the same and a first movement for the organ. Bach's concerto for 4 harpsichords in A minor is an adaptation of a work of Vivaldi's for 4 violins in B minor, given in the appendix to B.-G. vol. xliii. Vivaldi's concertos are excellent in form, but his ideas are frequently crude and unsatisfactory, and their treatment is often thin and weak. Bach's object being to have good illustrations of beauty of form rather than of substance, he did not hesitate to alter the details of figures, rhythms and melodies, and even successions of keys, to amplify cadences, and add inner parts, till the whole is transformed into a Bach-commentary on the form-principles of the Italians rather than an arrangement in the ordinary meaning of the term. It is not, however, an instance to justify arrangers in like

freedom, as it is obviously exceptional, and is, moreover, in marked opposition to Bach's arrangements of his own works.

Some of these are of a nature to induce the expectation that the changes would be considerable ; as for instance the arrangement of the prelude to the solo violin sonata in E, as the introduction in D to the cantata 'Wir danken dir, Gott' [1] for obbligato organ with accompaniment of strings, oboes and trumpets. The original movement consists almost throughout of continually moving semiquavers embracing many thorough violin passages, and certainly does not seem to afford much material to support its changed condition. But a comparison shows that there is no change of material importance in the whole, unless an accompaniment of masterly simplicity can be called a change. There are immaterial alterations of notes here and there for the convenience of the player, and the figure

in the violin sonata, is changed into



in the organ arrangement—and so on, for effect, and that is all.

Another instance of a like nature is the arrangement of the fugue from the solo violin sonata in G minor (No. 1) for organ in D minor (B.-G. vol. xv. p. 148). Here the changes are more important though still remarkably slight considering the difference between the violin and the two manuals and pedals of an organ.

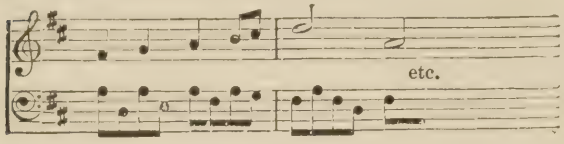
The most important changes are the following :

The last half of bar 5 and the first of bar 6 are amplified into a bar and two halves to enable the pedals to come in with the subject in the orthodox manner.

[1] B.-G. vol. v. No. 9.

In the same manner two half-bars are inserted in the middle of bar 28, where the pedal comes in a second time with a quotation of the subject not in the original. In bar 16 there is a similar point not in the original, which, however, makes no change in the harmony.

The further alterations amount to the filling up and wider distribution of the original harmonies, the addition of passing notes and grace notes, and the remodelling of violin passages ; of the nature of all which changes the following bar is an admirable instance—



Two other arrangements of Bach's, namely that of the first violin concerto in A minor, and of the second in E major (B.-G. xxi. pp. 3 and 21) as concertos for the clavier in G minor and D major respectively (B.-G. xvii. pp. 199 and 81), are not only interesting in themselves, but become doubly so when compared with Beethoven's arrangement of his violin concerto in D as a pianoforte concerto.[2]

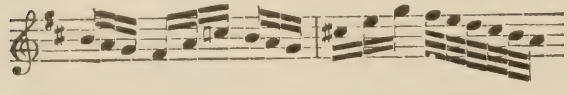
The first essential in these cases was to add a sufficiently important part for the left hand, and the methods adopted afford interesting illustrations of the characteristics of the two great masters themselves, as well as of the instruments they wrote for. A portion of this requirement Bach supplies from the string accompaniment, frequently without alteration ; but a great deal appears to be new till it is analysed ; as, for instance, the independent part given to the left hand in the first movement of the concerto in G minor from the twenty-fifth bar almost to the end, which is as superbly fresh and pointed as it is smooth and natural throughout. On examination this passage—which deserves quotation if it were not too long—proves to be a long variation on the original bass of the accompaniment, and perfectly faithful to its source.

Bach's principle in this and in other cases of like nature is contrapuntal ; Beethoven's is the exact contrary almost throughout. He supplies his left hand mainly with unisons and unisons disguised by various devices (which is

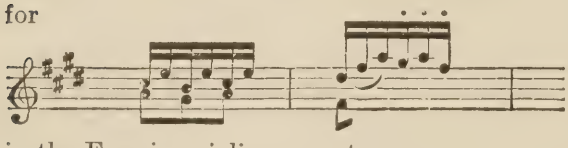
[2] Breitkopf's edition of Beethoven, No. 73.

in conformity with his practice in his two great concertos in G and E flat, in which the use of unisons and disguised unisons for the two hands is very extensive); and where a new accompaniment is inserted it is of the very simplest kind possible, such as

after the cadenza in the first movement; or else it is in simple chords, forming unobtrusive answers to figures and rhythms in the orchestral accompaniment.



Both masters alter the original violin figures here and there for convenience or effect. Thus Bach, in the last movement of the G minor clavier concerto, puts



for the violin figure

and in the last movement of the D major puts

for

in the E major violin concerto.

The nature of Beethoven's alterations may be judged of from the following quotation from the last movement, after the cadenza:

Another typical alteration is after the coda in the first movement, where, in the 13th bar from the end, in order to give the left hand something to do, Beethoven anticipates the figure of smoothly flowing semiquavers with which the part of the violin closes, making the two hands alternate till they join in playing the last passage in octaves. In both masters' works there are instances of holding notes being changed into shakes in the arrangements, as in the 7th and 8th bars of the slow movement of the D concerto of Bach, and the 2nd and 5th bars after the first tutti in the last movement of Beethoven's concerto. In both there are instances of simple devices to avoid rapid repetition of notes, which is an easy process on the violin, but an effort on the pianoforte, and consequently produces a different effect. They both amplify arpeggio passages within moderate bounds, both are alike careful to find a precedent for the form of a change when one becomes necessary, and in both the care taken to be faithful to the originals is conspicuous.

The same care is observable in another arrangement of Beethoven's, viz. the pianoforte trio [1] made from his second symphony.

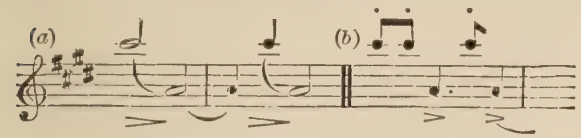
The comparison between these is very interesting owing to the unflagging variety of the distribution of the orchestral parts to the three instruments. The pianoforte naturally takes the substance of the work, but not in such a manner as to throw the others into subordination. The strings are used mostly to mark special orchestral points and contrasts, and to take such things as the pianoforte is unfitted for. Their distribution is so free that the violin will sometimes take notes that are in the parts of three or more instruments in a single bar. In other respects the strings are used to reinforce the accompaniment, so that in point of fact the violin in the trio plays more of the second violin part than of the first, and the violoncello of any other instrument from basso to oboe than the part given to it in the symphony.

The changes made are few and only such as are necessitated by technical differences, and are of the same simple kind with those in the concerto, and originating in similar circumstances. Everything in the distribution of the instruments subserves some purpose, and the re-sorting of the details always indicates some definite principle not at variance with the style of the original.

An illustration of the highest order is found in the exquisitely artistic arrangement of the *Midsummer Night's Dream* music for four hands on one pianoforte by Mendelssohn himself.

The step from Beethoven to Mendelssohn embraces a considerable development of the knowledge of the technical and tonal qualities of the pianoforte, as well as of its mechanical improvement as an instrument. This becomes apparent in the different characteristics of Mendelssohn's work, which in matter of detail is much more free than Beethoven's, though quite as faithful in general effect.

At the very beginning of the overture is an instance in point, where that which appears in the score as



[1] Breitkopf's edition of Beethoven, No. 90.

is in the pianoforte arrangement given (in notes of half the original value) as

the object evidently being to avoid the repetition and the rapid thirds which would mar the lightness and crispness and delicacy of the passage.

In one instance a similar effect is produced by a diametrically contrary process, where Bottom's bray, which in the original is given to strings and clarinets (*a*), is given in the pianoforte arrangement as at (*b*):

It is to be remarked that the arrangement of the overture is written in notes of half the value of those of the orchestral score, with twice the amount in each bar; except the four characteristic wind-chords—tonic, dominant, sub-dominant and tonic—which are semibreves, as in the original, whenever they occur; in all the rest semiquavers stand for quavers, quavers for crotchets, crotchets for minims, etc., as may be seen by referring to the above examples.

The pianoforte arrangement of the scherzo of the *Midsummer Night's Dream* abounds with happy devices for avoiding rapid repetitions, and for expressing contrasts of wind and strings and imitating the effect of many orchestral parts which it would be impossible to put into the arrangement in their entirety. One of the happiest passages in the whole work is the arrangement of the passage on the tonic pedal at the end of this movement.

(*G pedal, pizzicati bassi, and Corni and Trombe on first beat of each bar.*)

Mendelssohn often takes the freedom of slightly altering the details of a quick passage in order to give it greater interest as a pianoforte figure; which seems to be a legitimate development of the theory of the relative idiomatic modes of expression of different instruments, and its adaptation to details.

A still further development in this direction is found in the arrangement by Brahms of his pianoforte quintet in F minor (op. 34) as a sonata for two pianofortes. In this the main object seems to have been to balance the work of the two pianofortes. Sometimes the first pianoforte, and sometimes the second has the original pianoforte part for pages together, and sometimes for a few bars at a time, but whenever the nature of the passages admits of it the materials are distributed evenly between the two instruments. There are some changes —such as the addition of a bar in two places in the first movement, and the change of an accidental in the last—which must be referred to critical considerations, and have nothing to do with arrangement. The technical changes in the arrangement are the occasional development of a free inner part out of the materials of the original without further change in the harmonies, the filling up of rhythm-marking chords of the strings, frequent reinforcement of the bass by doubling, and, which is especially noticeable, frequent doubling of both melodies and parts of important figures. It is this latter peculiarity which especially marks the adaptation of certain tendencies of modern pianoforte-playing to arrangement—the tendency, namely, to double all the parts possible, to fill up chords to the utmost, and to distribute the notes over a wider space, with greater regard to their tonal relations than formerly, and by every means to enlarge the scope and effective power of the instrument, at the same time breaking down all the obstructions and restrictions which the old dogmas of style in playing placed in the way of its development. Another admirable instance of this kind is the arrangement by Brahms of a gavotte of Gluck's in A; which, however, in its new form is as much marked by the personality of the arranger as that of the composer—a dangerous precedent for ordinary arrangers.

The tendency of high-class modern arrangements is towards freedom of interpretation; and the comparison of classical arrangements with their originals shows that this is legitimate up to the point of imitating the idioms of one instrument by the idioms of another, the effects of one by the effects of another. Beyond that lies the danger of marring the balance of the original works by undue enlargement of the scale of particular parts, of obscuring the personality of the original composer, and of caricature—that pitfall of ill-regulated admiration. For however unlimited may be the rights of composers to alter their own works, the rights of others are limited to redistribution and variation of detail; and even in detail the alterations

can only be legitimate to the degree which is rendered indispensable by radical differences in the instruments, and must be such as are warranted by the quality, proportions and style of the context. C. H. H. P.

THE FUNCTION OF PIANOFORTE ARRANGEMENT.—In considering the subject of Arrangement we must not overlook the important part played by the pianoforte score in widening our musical range and in providing the means at once for the enlargement and gratification of our taste.

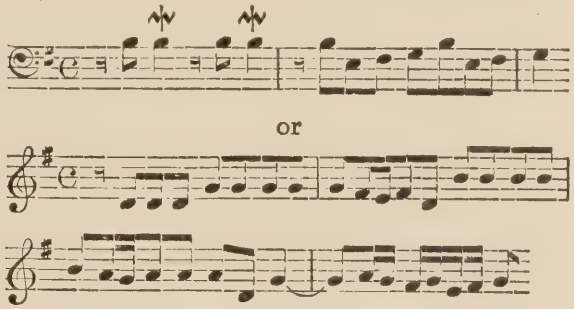
The pianoforte score enables us to study at close hand various types of composition that in their original form would be beyond the comprehension of all save trained experts. Works for the stage or concert platform that are often enshrined in scores of great complexity may reach us in this simplified form with relatively small musical loss ; and in the guise of a more or less easy pianoforte piece the music of all styles and periods becomes available for study and assimilation in every home that can muster an upright piano. In this sense the pianoforte score may be compared to the photograph, one of whose uses in another sphere is the reproduction and distribution of the great masterpieces of plastic and pictorial art. Each performs service of which we can now hardly imagine ourselves dispossessed. The fulfilment of our need is indeed in either case so complete as almost to rob us of our sense of its value. Among those who owe perhaps entirely to the pianoforte score their deeper understanding and appreciation of symphony, oratorio or music drama, few probably realise the full extent of their liberation and indebtedness.

The pianoforte score is simply taken for granted—as a thing that comes into being of itself. In reality, it is work calling for fine qualities of judgment and a particular technical skill. To present the matter of an intricate score in compact, playable form, with judicious modification, where necessary, of figure or figuration to meet the requirements of a keyboard technique—this is not within the gift of every musician, however score-versed or score-learned he be. For that instinctive right handling of the material by which it is subdued to pianoforte uses we must look to the pianist born and bred, with his practised sense and mastery of the keyboard. It is no difficult matter to present to oneself the broad outlines and contents of a score. The art lies in the selection, and still more in the disposition of the material to the new medium. The conversion into a pianoforte style is not complete until all dead-weight is removed and combinations are found so favourable to the two hands that the mere manipulation is for delight and the whole thing tends, in the common phrase, to ' play itself.'

Where this ease and smoothness of delivery is secured on a basis of harmony that is faithful to the original, it matters little what detail is shed by the way. Much of the ornament and rhetorical figure will be shorn away ; intricacies of part-writing will have to be smoothed out ; even some rhythmical movement may have to give way to the need for a strongly established harmonic structure and melodic outline. On the other hand, if wooed in the right spirit, a piano will do wonders in the way of conveying the character and distinctive quality of instruments as much unlike itself as are the wind instruments of the orchestra, both brass and wood ; while a harp flourish, pizzicato, or the tremolo of drums or strings, are among the more plausible and easily executed effects. It should, in fact, be possible for an auditor conversant with orchestral timbres to conjure up for himself a rough pattern of the score from hearing a good piano version performed with right intelligence and perception.

An example of admirable workmanship is Hans von Bülow's version of the ' Meistersinger ' overture. A rich and satisfying sonority is obtained with the utmost economy of means, and without recourse to any of the awkward technical shifts to which the inexpert or inexperienced pianist finds himself reduced. The effects aimed at lie conveniently to the two hands ; and when the time comes for theme to be piled on theme, this happens, as in the score, without congestion or seeming effort, as in the well-known passage

Liszt's arrangements of the Beethoven symphonies are contrived with much ingenuity to give the maximum of orchestral effect. The conceptions, however, are those of the lordly



executant whose only measure of difficulty is the extent of his own powers. The player of mere average capacity would soon find his progress checked by the octave flights, the rapid chord successions, the difficult articulations in both hands, and all manner of stirring incident that meets him by the way. On the other hand, as a basis of study for those to whom the scores are inaccessible, they have great value ; while, as representing the considered craftsmanship of the greatest exponent in this line who ever lived, they are worth the attention of every student.

It is not, however, with work of this restraint and decorum that the name of Liszt is most commonly associated. More characteristic of him are the operatic 'Fantasias,' the innumerable transcriptions, paraphrases, rhapsodies, etc., in which he could indulge his rhetoric unbridled and give full fling to the virtuoso element in his composition.

Such things are not without their counterpart in our own time ; for, now as then, the pianist's fancy lightly turns to thoughts of display. But speaking generally, a severer taste rules to-day even in the more fanciful spheres of arrangement. The modern grand pianoforte is being discovered as a medium for interpretation of the most subtle kind, and some beautiful paraphrases are being made, irrespective of whether or not they serve the ends of display, in the vulgar sense of the word. Some workers indeed choose their ground with such strong poetic bias that the very absence of the bravura element becomes a particular grace of style. In his setting of one of César Franck's organ pieces —the 'Prelude, Variation and Fugue '—Harold Bauer maintains this unity and poise which the least tendency to an inflation of the pianoforte style would go far to destroy. Sgambati, again, saw with what exquisite effect the flute air from 'Orfeo' might be transferred to the piano—and with a sensitive touch here and there (to mould the accompaniment to the piano idiom) the thing is done.

That Bach's Choral Preludes now receive so much attention from our pianist-transcribers is a significant sign of the times, for the motive to arrangement here can scarcely be other than a purely musical one. The other organ works of Bach have been fairly ransacked from Liszt's day to our own, without yielding, it must be said, any more monumental example of the possibilities of piano combination and paraphrase than Tausig's transformation—wrought nearly two generations ago—of the Toccata and Fugue in D minor. The harvest that awaits the gleaner in the fields of Bach's choral writings is as yet almost untouched. But the pitfalls here are many, and some few examples of transcription exist to tell us that when it comes to dealing with music of this depth of meaning and worshipful beauty no scholarship or ingenuity avails without some kinship in the spirit, some insight and fervour of the imagination.

To those who are impatient of arrangements in general and who object in particular to transcriptions of Bach's organ works, the pianist has his answer in readiness. His aim (he would primarily say) is not to add another show-piece to his repertory, but to reproduce in his own mother-speech, as it were, and to communicate to others some image of the revelation of beauty that has come to him from outside the domain of the pianoforte. He might justify himself further by claiming that, so far as organ works are concerned, the piano mechanism gains for their performance all the finer values to be derived from rhythmic inflection and phrasing, which are as the breath of life to such subjects as :

The conclusion of the whole matter may be indeed just this : an arrangement is justified as it is creative and serves in some way to interpret and illumine the original. L. B.

ARRESTI, GIULIO CESARE (*b.* Bologna, *c.* 1630 ; *d.* there, *c.* 1695), pupil, and successor as organist of S. Petronio, of Ottavio Vernizzi ; maestro di cappella at that church *c.* 1685. He was three times president of the Filarmonici, and wrote some pamphlets in a theoretical controversy with M. Cazzati. He composed (opp. 1 and 2) masses, motets, 12 trio sonatas, op. 4 (2 violins, violoncello, basso continuo) ; 'Partitura di modulationi' (op. 7) ; organ sonatas and pieces. E. V. D. S.

ARRIAGA Y BALZOLA, JUAN CRISOSTOMO JACOBO ANTONIO (*b.* Bilbao, Jan. 27, 1806 ; *d.* Marseilles, Feb. 1825), a violinist and composer of great promise. When a mere child, without having learnt even the elements of harmony, he wrote a Spanish opera, and in 1821 was sent to the Conservatoire at Paris to study the violin under Baillot and harmony under Fétis. In two years he became a learned contrapuntist, and wrote an ' Et vitam venturi ' in 8 parts, which Cherubini is said to have pronounced a masterpiece. (*Fétis.*) On his premature death, of decline, this gifted artist left 3 string quartets (Paris, 1824)—compositions containing his best work—an overture, a symphony, and many other unpublished works.

A short study of his quartets, by Cecilio de Roda, is to be found in the *Revista Musical de Bilbao*, i. (1909), p. 28.

M. C. C.; addns. J. B. T.

ARRIGONI, Carlo (*b.* Florence, beginning of 18th cent.), a lutenist whose only claim to notice is his possible antagonism to Handel. He is said by Fétis and Schoelcher to have been engaged, with Porpora, as composer to the theatre at Lincoln's Inn, which was started as an opposition to Handel in 1734, and to have produced there in that year an opera called 'Fernando' without success; but it is impossible to discover on what this is grounded. That Arrigoni was in London at or about that date is possible, and even probable, since a volume of his 'Cantate da Camera' was published there in 1732; and in Arbuthnot's satire, *Harmony in an Uproar*, the 'King of Arragon' is mentioned amongst Handel's opponents, a name which Burney (*Commemoration*) explains to mean Arrigoni. But, on the other hand, the impression he made must have been very small, and his opera becomes more than doubtful, for the names neither of Arrigoni nor Fernando are found in the histories of Burney or Hawkins, in the MS. Register of Colman, in the newspapers of the period, nor in any other sources to which the writer has had access. It is in accordance with this that Arrigoni is mentioned by Chrysander in connexion with Arbuthnot's satire only (*Händel*, ii. 343).

In 1738, taking a leaf out of his great antagonist's book, he produced an oratorio called 'Esther,' at Vienna, in the title of which he is styled 'compositore di camera del granduca di Toscana.' G.

Arrigoni's death has generally been ascribed to about 1743. Dr. Grattan Flood claims, however, to have identified him as conducting a series of concerts in Dublin, 1760–62, and Italian Opera in Edinburgh, 1763.

ARRIGONI (Arigoni), Giov. Giacomo, organist at the Viennese court under Ferdinand II. and III., and is mentioned by Köchel in that capacity in 1637. According to Fétis, he was a member of the Accademia Fileatrea under the name of L' Affetuoso. He was one of the first, if not the first, to compose vocal chamber concertos. 'Concerti di camera a 2-9 voc.' (Venice, 1635) contains also 4 sonatas. Some madrigals by him appeared in 1624, and a book of psalms and a Magnificat *a* 5 v. with 2 violins and bass (op. 9) in 1663. (See *Eitner.*)

E. v. d. S.

ARSIS and THESIS (see Metre). A fugue 'per arsin et thesin' is the same thing as a fugue 'by inversion,' that is to say, it is a fugue in which the answer to the subject is made by contrary motion. (See Fugue, Canon, Inversion and Subject.)

F. A. G. O., rev.

ARTARIA, a well-known music-publishing firm in Vienna, the founders of which were Cesare, Domenico and Giovanni Artaria, three brothers from Blevio on the Lake of Como, who settled in Vienna about the end of the year 1750. In 1769 the privilege of the Empress was granted to Carlo, the son of Cesare, and his cousins, Francesco, Ignazio and Pasquale, to establish an art business in Vienna. To the sale of engravings, maps and foreign music, was added in 1776 a music printing press, the first in Vienna, from which, two years later, issued the first publications of the firm of Artaria & Co. At the same time appeared the first of their catalogues of music, since continued from time to time. From the year 1780 a succession of works by Haydn, Mozart, Beethoven and other composers were published by the firm. A branch house was founded at Mayence in 1793 by the brothers of Pasquale Artaria, Domenico and Giovanni Maria; this was afterwards extended to Mannheim, in conjunction with the bookselling house of Fontaine, under the name of Domenico Artaria. In 1793 the Vienna firm united with Giovanni Cappi and Tranquillo Mollo, who, however, shortly afterwards dissolved the association, and started houses of their own, Cappi again subsequently joining with Tobias Haslinger, and Mollo with Diabelli. In 1802 the business came into the hands of Domenico, a son-in-law of Carlo. Under his management the business reached its climax, and the house was the resort of all the artists of the city. His valuable collection of autographs by Mozart, Haydn, Beethoven and other famous composers was known far and wide, though in course of time in great measure dispersed. Domenico died on July 5, 1842, and the business was carried on under the old name by his son August, who died Dec. 14, 1893. His two sons, C. August (*d.* 1919) and Dominik, inherited the business in partnership. Haydn was for many years in most intimate relations with Artaria & Co. What they published for Beethoven may be seen in the fullest detail in Nottebohm's catalogue of the great composer's works. (See Franz Artaria and Hugo Botstiber, *Joseph Haydn und das Verlagshaus Artaria*, Vienna, 1909.) C. F. P.

ARTAXERXES, opera in 3 acts composed by Dr. Arne, the words translated from Metastasio's 'Artaserse' by Arne himself. Produced Covent Garden, Feb. 2, 1762; in Edinburgh, 1769, with the interpolation of three songs by Robert Ferguson, adapted to Scottish airs; in Dublin, 1877.

ARTEAGA, Stefano (*b.* Madrid, *c.* 1750; *d.* Oct. 30, 1799), a learned Jesuit. On the suppression of the order he went to Italy and became a member of the Academy of Padua. He afterwards resided at Bologna, and there made the acquaintance of Padre Martini, at whose instance he investigated the rise and progress of the Italian stage. His work, entitled

Rivoluzioni del teatro musicale Italiano, dalla sua origine fino al presente (3 vols. 1783–88) is of importance in the history of music. It was translated into German by N. Forkel (2 vols. Leipzig, 1789), and into French by Baron de Ronvron. He also left behind him a MS. treatise on the rhythm of the ancients, of which, however, all traces have disappeared. F. G.

ARTE MUSICALE IN ITALIA, L', a series of finely printed volumes published by Ricordi & Co., edited by Signor Luigi Torchi, and including compositions, both sacred and profane, from the 14th to the 18th centuries. Seven volumes have appeared. The 1st contains sacred and secular works for several voices, of the 14th, 15th and 16th centuries; the 2nd is confined to similar works of the 16th century. The 3rd volume contains compositions for the organ or harpsichord, dating from the 16th, 17th and 18th centuries; the 4th and 5th, vocal works of the 17th century. The 6th volume is devoted to opera of the 17th century (Peri and Monteverdi) and the 7th to instrumental music of the same date, more especially violin sonatas. M. and C.

ART OF FUGUE, THE (*Die Kunst der Fuge*), a work of J. S. Bach in which the art of fugue and counterpoint is taught, not by rules but in examples. It was written in 1749, the last year of his life, and is therefore the last legacy of his immense genius and experience. The work consists of 14 fugues—or in Bach's language 'counterpoints'—4 canons, and 2 fugues for 2 claviers, all on one theme

in every variety of treatment; and closes with a fugue on three new subjects, in the same key as before, the third being the name of BACH (according to the German notation):

This fugue leaves off on a chord of A, and is otherwise obviously unfinished, interrupted, according to Forkel, by the failure of Bach's eyes, and never resumed. On the other hand the writing of the autograph (Preuss. Staatsbibliothek), though small and cramped, is very clear, and not like the writing of a half-blind man. We learn on the same authority that it was the master's intention to wind up his work with a fugue on 4 subjects, to be reversed in all the 4 parts; of this, however, no trace exists. The *Art of Fugue* was partly engraved (on copper) before Bach's death in 1750, and was published by Marpurg in 1752, first at five then at four thalers, with the addition at the end of a Choral, 'Wenn wir in höchsten Nöthen sein,' called by Bach 'Vor deinen Thron tret' ich hiemit,' in 4 parts in florid counterpoint, which he dictated to his son-in-law Altnikol, very shortly before his departure, and is thus his Nunc Dimittis. This Choral has no connexion with the rest of the work. It is omitted from the B.-G. edition of *Die Kunst der Fuge*. It is, in fact, an elaboration of the movement on the melody in the 'Orgelbüchlein,' with the addition of interludes, and is the last of the 'Achtzehn Choräle' (*B.-G.* xxv. (2) p. 145).

Thirty copies only of the work were printed by Marpurg, and the plates, 60 in number, came into the hands of Emanuel Bach, who, on Sept. 14, 1756, in a highly characteristic advertisement, offered them for sale at any reasonable price. What became of them is not known. Nägeli of Zürich published, at the instigation of C. M. von Weber (1802), an edition 'in Partitur- und im Klavier-auszuge'; Czerny edited the work for Peters (E.P. 218) in 1839; and W. Rust for the B.-G. (see above) in 1878. None of these has the Choral; but the second contains the 'Thema regium' and the 'Ricercar' from the 'Musikalisches Opfer.' An excellent analysis of the work is M. Hauptmann's *Erläuterungen*, etc., originally prefixed to Czerny's edition, but to be had separately (Peters, 1881).

BIBL.—SPITTA, *Bach*, Engl. tr. iii. 197-204, and a paper by JAMES HIGGS in the *Mus. Ass. Proc.*, Feb. 5, 1877; ERNST KURTH, *Grundlagen des linearen Kontrapunkts: Einführung in Stil und Technik von Bachs melodischen Polyphonie* (Bern, 1917); S. JADASSOHN, *Erläuterungen zu J. S. Bachs Kunst der Fuge* (Leipzig, 1899); HUGO RIEMANN, *Katechismus der Fugen Komposition (Analyse von J. S. Bachs Wohltemperirtem Klavier und der Kunst der Fuge)* (Leipzig, 2 parts, 1906–7). G.; addns. C. S. T.

ARTÔT, ALEXANDRE JOSEPH MONTAGNEY (*b.* Brussels, Jan. 25, 1815; *d.* Ville d'Avray, near Paris, July 20, 1845), a violinist of distinction.

He was the son of Maurice Artôt [1] (1772–1829), first horn-player at the Brussels theatre, by his wife Theresa Eva, daughter of Adam and cousin of Ferdinand Ries. He received instruction in music and on the violin from the former, and at the age of seven played at the theatre a concerto of Viotti. He received further instruction from Snel, principal first violin at the theatre, and afterwards at the Paris Conservatoire from Rodolphe and August Kreutzer, and in 1827 and 1828 he obtained the second and first violin prizes respectively. According to Fétis, Artôt then played in concerts in Brussels and London with the greatest success, and became for a time player in the various Parisian orchestras. He became famous as a soloist, and made tours through Belgium, Holland, Italy, Germany, etc. On June 3, 1839, on the same occasion that Mario first appeared in England, Artôt played at the Philharmonic a fantasia of his own for violin and orchestra, and was well received, rather on account of the delicacy and feeling of his playing and his

[1] His real surname was Montagney, but he adopted professionally the name of Artôt instead, which name was retained by all his family.

remarkable execution, than from his tone, which was very small.[1] We do not find that he played at any other public concert, and this is borne out by a letter of Aug. 6 of the same year from Berlioz [2] to Liszt. In 1843 he went to America, Cuba, etc., on a concert tour with Mme. Cinti-Damoreau, and while there he showed the first symptoms of the lung disease from which he died.

Artôt's compositions for the violin include a concerto in A minor, various fantasias and airs with variations with piano or orchestral accompaniment, and in MS. string quartets, and a quintet for piano and strings. 'He was, perhaps, the most finished and the most elegant of all the Rubini school of players; one of the handsomest men in our recollection; and much beloved, we are told, among his comrades for his gentleness and amiability' (*Athenæum*, Aug. 2, 1845). A. C.

ARTÔT, Marguérite Joséphine Désirée Montagney (*b.* Paris, July 21, 1835; *d.* Berlin, Apr. 3, 1907), an eminent soprano singer of Italian opera.

She was daughter of Jean Désiré Montagney Artôt, horn professor at the Brussels Conservatoire, niece both of the above and of Baugniet the Belgian portrait-painter. She was taught singing by Mme. Viardot-Garcia, and first appeared in concerts in Belgium, Holland and England, in the last named at a state concert, June 19, 1857. In 1858 she was engaged through Meyerbeer at the Paris Opéra where, on Feb. 5, she made her début with great success as Fidès, and subsequently played the heroine in a condensed version of Gounod's 'Sapho.' In spite of praise lavished on her by many critics, among others by Berlioz in the *Débats*, Feb. 17, she abandoned the French in favour of the Italian stage. In 1859 she sang in opera in Italy, and at the end of the year at Berlin, on the opening of the Victoria Theatre, as a member of Lorini's Italian company. In that city she made a furore in the 'Barbiere' and 'Cenerentola,' in 'Trovatore,' and even in the small part of Maddalena in 'Rigoletto,' from which time the greater part of her career was passed in Germany both in Italian and German opera, she having in the meantime abandoned the mezzo for soprano parts. In 1859–60 she sang with great applause at the Philharmonic and at other concerts. In 1863 she sang at Her Majesty's as Maria ('La Figlia') in which she made her début, May 19, as La Traviata, and as Adalgisa to the Norma of Tietjens. In 1864 and 1866 she sang at the Royal Italian Opera in the first two parts, in 'Faust,' 'Figaro,' and the 'Barbiere,' but in spite of the great impression she invariably made, being an admirable and very complete artist, she never reappeared in England. She visited Russia in 1868 when Tchaikovsky (*q.v.*) fell in love with her and proposed marriage; but on Sept. 15, 1869, she married at Sèvres the Spanish baritone Padilla-y-Ramos (*q.v.*). She sang with her husband in Italian opera in Germany, Austria, Russia and elsewhere, until her retirement. On Mar. 22, 1887, she appeared with her husband in a scene from 'Don Juan,' performed for the Emperor's birthday at the Schloss at Berlin, in which city she settled as a teacher of singing until 1889, when she went to live in Paris. A. C.

[1] *Athenæum*, June 8, 1839.
[2] Berlioz, *Correspondance inédite* (1879), p. 124.

ARTSIBOUSHEV, Nikolaï Vassilievich (*b.* Tsarskoe Selo, 1858), composer, studied theory under Rimsky-Korsakov. He settled in St. Petersburg as an attorney, became president of the St. Petersburg branch of the Russian Musical Society (1908), and followed Rimsky-Korsakov as president of the committee of the society for the encouragement of Russian musicians, founded by M. P. Belaiev. He migrated to Paris in 1920, where he is now director of the Belaiev publishing firm (Belaiev Musical Edition). His works include:

Songs; slight compositions for pianoforte—mazurkas, valses, etc.; Valse-fantasia for orchestra; Serenade for string quartet, and some orchestral arrangements of works by Moussorgsky, Borodin and Rimsky-Korsakov. R. N.

ARTUSI, Giovanni Maria (*b.* Bologna, second half of 16th cent.; *d.* Aug. 18, 1613), a canon of San Salvatore, Venice, a learned musician, and a conservative of the staunchest order, whose life was devoted to combating the innovations of the then 'music of the future.'

His *Arte del contrapunto ridotta in tavole* was published in 1586 and 1589 (translated into German by Trost), but his principal works are controversial: *Delle imperfezioni della musica moderna*, 1600 and 1603, directed against Monteverde's use of unprepared sevenths and ninths; *Difesa ragionata della sentenze date di Ghisilino Dankerts*; Impresa del Zarlino, 1604; *Considerazioni musicali*, 1607. Artusi was active also as a composer; he published 'Canzonette' for 4 voices, 1598, and a 'Cantate Domino' of his will be found in the Vincenti collection dedicated to Schieti. F. G.

ASANTCHEVSKY, Michel von (*b.* Moscow, 1838; *d.* there, Jan. 24, 1881), completed his education in counterpoint and composition under Hauptmann and Richter at Leipzig between the years 1861 and 1864, and lived during some years subsequently, alternately at Paris and at St. Petersburg, being director of the Conservatorium in the latter city from 1870–1876. He acquired a reputation among book-collectors as the possessor of one of the finest private libraries of works upon music in Europe. Among his printed compositions the following should be noted:

Op. 2, Sonata in B min. for PF. and v'cl.; op. 10, Trio in F sharp min. for PF. and strings; op. 12, Fest-Polonaise for 2 pianofortes; Passatempo for PF. *à quatre mains*. E. D.

ASCHENBRENNER, Christian Heinrich (*b.* Altstettin, Dec. 29, 1654; *d.* Jena, Dec. 13, 1732), violinist, son of the ducal Kapellmeister at Wolfenbüttel. Amongst his teachers were Schütz, Theile, and finally Schmelzer of Vienna. Although he held at intervals some good appointments, and played on one occasion (in 1690) before the Emperor of Austria, to whom he dedicated 6 violin sonatas, his existence was, throughout, a very struggling one, and he died poor. His most important appointments were in the ducal chapels of Zeitz and Merseburg (first violin in the former, 1677–81, and musical director 1695–1713; first violin at Merseburg 1683–90 and Kapellmeister 1713–19), Duke Wilhelm of Merseburg eventually allowing him a very small pension. His best-known work has the following title, 'Gast und Hochzeitfreude, bestehend in Sonaten, Präludien, Allemanden, Couranten, Balletten, Arien, Sarabanden, mit drei, vier und fünf Stimmen, nebst dem basso continuo,' 1673. It is uncertain, according to Fétis, if the above-mentioned 6 violin sonatas were ever published.

W. W. C.

ASCHERBERG, HOPWOOD & CREW, Ltd. This well-known firm is a combination of E. Ascherberg & Co., Hopwood & Crew, Duncan Davison & Co., John Blockley, Osborne & Tuckwood, and Howard & Co. The amalgamation was effected by E. Ascherberg in 1906. With a catalogue of upwards of 20,000 copyrights the publications of the house embrace music and educational works of every description.

Among early successes are the 'Waldteufel Waltzes,' 'La Poupée,' 'The Geisha,' 'Belle of New York,' and 'The Chinese Honeymoon.' The two famous grand operas 'Cavalleria Rusticana' and 'Pagliacci' are the copyright of this firm in the United Kingdom. Waltzes are well to the front in the catalogue; besides Emile Waldteufel, already mentioned, may be included Archibald Joyce and Chas. Ancliffe. Musical comedy successes of later date comprise 'The Maid of the Mountains,' 'A Southern Maid,' 'The Lady of the Rose,' and 'The Last Waltz.' The instrumental catalogue includes works by Edward Elgar, Max Reger and S. Coleridge Taylor. The Repertoire Series is a set of piano compositions by modern British composers, and the International Series a set of pieces for the same instrument by famous continental composers.

Mr. William Allen is chairman and managing director of Ascherberg, Hopwood & Crew, Ltd. (1924).

ASHDOWN & PARRY, see Wessel.

ASHE, Andrew (*b.* Lisburn, Ireland, *c.* 1757; *d.* Dublin, 1838), a flute-player who took part in the concerts of Salomon at which Haydn's symphonies were produced. After being in the service in turn of Count Bentinck, Lord Torrington and Lord Dillon, Ashe obtained in 1778 the post of principal flute at the opera-house of Brussels. About 1784 he returned to Ireland, where he was engaged at the concerts given at the Rotunda, Dublin. In 1791 Salomon engaged him for the concerts given by him in Hanover Square, at which Haydn was to produce his symphonies, and he made his appearance at the second concert, on Feb. 24, 1792, when he played a concerto of his own composition with decided success. In 1799 he married Miss Comer, a pupil of Rauzzini, who, as Mrs. Ashe, was for many years the principal singer at the Bath concerts, the direction of which, after the death of Rauzzini in 1810, was confided to Ashe.

W. H. H., rev.

ASHLEY, the name of an English family of musicians of whom two brothers and the sons of one of them deserve record.

(1) Jane (*b.* 1740; *d.* Apr. 5, 1809), probably the 'Mr. Ashly (*sic*) of the Guards' who played the double bassoon at the Commemoration of Handel in Westminster Abbey. Burney says that that instrument was never introduced into any band in England, till now (1784), by his 'ingenuity and perseverance.'

(2) John (*d.* Mar. 2, 1805), brother of the above, a bassoon-player who was assistant conductor, under Joah Bates, at the Commemoration of Handel in Westminster Abbey. In 1795 he undertook the direction of the Lent 'oratorios' at Covent Garden. These performances, which took place on the Wednesdays and Fridays in Lent, were originated by Handel, under whose direction, and afterwards that of Smith and Arnold, they were correctly designated—that is, they consisted of an entire oratorio or musical drama. Under Ashley's management this character was lost, and the performances (with few exceptions) were made up of selections, including every class of music, sacred and secular, 'in most admired disorder.' The first performance in England of Mozart's Requiem and Haydn's 'Creation' took place at these concerts, and it was here that Braham obtained celebrity by his fine rendering of sacred music. For many years Ashley and his four sons visited different parts of England, giving what they called 'Grand Musical Festivals.' The father and sons performed themselves, and with some popular singer, and a little provincial help, they contrived to interest the public, and to fill their own pockets. On the death of Dr. Boyce, Ashley bought the plates of his 'Cathedral Music,' and the second edition (1788) bears his name as the publisher.

(3) General Charles (*b. circa* 1770; *d.* Aug. 21, 1818), eldest son of John (2), was a pupil of Giardini and Barthélemon, and a fair performer on the violin, of which instrument he was considered an excellent judge. He was

scarcely known out of his father's orchestra. He took part with two of his brothers in the Handel Commemoration, and there got into trouble by nailing the coat of some Italian violinist to his seat, and filling his violin with halfpence. (*D.N.B.*)

(4) Charles Jane (*b.* 1773; *d.* Aug. 29, 1843), another son of John (2), was a performer of considerable excellence on the violoncello. In conjunction with his brother, 'the General' (as he was always called), he carried on the oratorios after his father's death. He had great reputation as an accompanist, and was considered second only to Lindley. He was one of the founders of the Glee Club in 1793, an original member of the Philharmonic Society, and for some years Secretary to the Royal Society of Musicians. Nearly 20 years of his life were passed in the rules of the King's Bench Prison. In the latter part of his career (when nearly 70), he became the proprietor of the Tivoli Gardens, Margate, the anxieties of which undertaking hastened his death.

(5) John James (*b.* 1772; *d.* Jan. 5, 1815), another son of John (2), was a pupil of Johann Schroeter, and a good organ and pianoforte player. He was for some time organist at Covent Garden Theatre. He is remembered as an excellent singing-master, numbering among his pupils Mrs. Vaughan, Mrs. Salmon, Master Elliot (afterwards the glee composer), Charles Smith, etc. E. F. R.

ASHLEY, John or Josiah (*d.* Bath, 1830), known as 'Ashley of Bath,' was, for upwards of half a century, a performer on the bassoon, and a vocalist in his native city. He is chiefly remembered as the writer and composer of a large number of songs and ballads (between the years 1780 and 1830), many of which acquired considerable popularity. He is also deserving of notice as the author of two ingenious pamphlets in answer to Richard Clark's work on the origin of our National Anthem: *Reminiscences and Observations respecting the Origin of God save the King*, 1827; *A Letter to the Rev. W. L. Bowles, supplementary to the Observations, etc.*, 1828, both published at Bath. E. F. R.

ASHLEY, Richard (*b.* 1775; *d.* 1836), a viola-player connected with the principal orchestras of London and the provinces. E. F. R.

ASHTON, Algernon Bennet Langton (*b.* Durham, Dec. 9, 1859), a very voluminous composer, better known, however, by his favourite hobby of seeking out and keeping in repair the graves of distinguished persons, a hobby pursued at one time by means of frequent letters to the English newspapers.

His father, Charles Ashton, was a lay-clerk of Durham Cathedral, but the family went to reside at Leipzig, where the boy's talent enlisted the interest of Moscheles. He entered the Conservatorium at the age of 15 and studied under Karl Reinecke, E. F. Richter, Jadassohn, Papperitz and Coccius. On leaving the institution (in 1879) he obtained the Helbig prize for composition. After a visit to England he studied under Raff at Frankfort (1880–81). He subsequently settled in London, and in 1885 was appointed pianoforte teacher at the R.C.M., a post which he retained till 1910. His compositions include symphonies, overtures, a suite, concertos (violin, pianoforte), sextet for strings, quintet for wind instruments, quartets, trios, sonatas, and other music for the pianoforte, organ music, many songs, etc. Most of the orchestral works remain in MS., but his published works of various kinds exceed 160 in number. Some chamber music and sonatas were published by Hofbauer at Leipzig, where at one time his music had a certain vogue, which, with the exception of a set of English Dances for piano duet, it has never attained in his own country. Certain of the chamber works have fine qualities which should rescue them from oblivion. (See *B. M. S. Ann.*, 1920.)

F. G. E.; rev. with addns.

ASHTON, Hugh, see Aston, Hugh.

ASHWELL, Thomas (late 15th and early 16th centuries), English composer, master of the choristers at Lincoln Cathedral (1508–18). (See article by Dr. Grattan Flood, *Mus. T.*, June, 1921.) Morley names him in his *Plain and Easy Introduction*, 1597, among the practitioners in his list of authors. One song by him, 'She may be called,' was printed in Wynkyn de Worde's Song-Book, 1530. The following compositions exist in MS.:

MASSES

Ave Maria (*a* 6). Bodl. Mus. Sch.
God save King Herry. University and St. John's College Libraries, Cambridge (Bass and Contra-Tenor parts only).
Jhesu Christe (*a* 6). Bodl. Mus. Sch.
Sancte Cuthberte. Add MSS. 30520–3 (2nd Tenor and Bass parts of Gloria and Credo only).

MOTETS, Etc.

Sancta Maria. Add. MSS. 34191/31b (Bass part only).
Stabat Mater. Harl. 1709/7–9 (Medius part only).
Te Matrem Dei. Harl. 1709/39b (Medius part only).

G. E. P. A.; addns. J. M^{K}.

ASIOLI, Bonifacio (*b.* Correggio, Aug. 30, 1769; *d.* there, May 18, 1832), theorist and composer.

At the age of ten he went to study at Parma under Morigi. After a journey to Venice, where he enjoyed his first public success, he was made maestro di cappella at his native town. By eighteen he had composed 5 masses, 24 pieces for the church and the theatre, and a number of instrumental pieces. In 1787 he changed his residence to Turin, where he remained 9 years, composing 5 cantatas and instrumental music. In 1796 he accompanied the Duchess Gherardini to Venice, and remained there till 1799, when he removed to Milan, where in 1808 he was appointed censor to the newly established Conservatorio. He came to London, 1800, and spent a year there. In 1810 he went to Paris in the service of the

Empress Marie Louise, returning to Correggio on the fall of the empire.

Besides his compositions (for list of which see *Q.-L.*) he published a book of *Principi elementari di musica* (1809, etc.) which went through seven editions, and was translated into French, English, German and Dutch; a *Trattato d' armonia* (1813); a book of dialogues on the same (1814); *Osservazioni sul temperamento*, etc. (1816); and *Disinganno* on the same. His principal work is *Il Maestro di composizione* (posth. 1832). All these works are written with accuracy and a clear and brilliant style. Asioli's biography was written by Goli, a priest of Correggio, under the title of *Vita di B. Asioli*, etc. (Milan, Ricordi, 1834). F. G.

ASIOLI, Luigi (*b.* Correggio, 1767 (?); *d.* London (?), Nov. 17, 1815), said to have been a brother of Bonifazio. He lived at Naples as a tenor singer in the service of the Minister, Count di Micheroux; went thence to Palermo, and accompanied Lady Beverley to London in 1804. He wrote a number of vocal quartets, duets and airs which, with few exceptions, appeared in London between 1805 and 1825.

ASOLA (Asula), Giovanni Matteo (*b.* Verona, latter half of 16th cent.; *d.* Venice, Oct. 1, 1609), priest and composer of church music and madrigals. He was one of the first to use figured basses. He was maestro di cappella at Treviso in 1578 and at Vicenza in 1581. A list of his very numerous compositions is in *Q.-L.* In 1592 he joined other composers in dedicating a collection of Psalms to Palestrina.

ASPIRATION, the name of one of the French *agréments*; called also *chute*, or *accent* (see Ornaments) E. B[L].

ASPLMAYR, Franz (*b. circa* 1721; *d.* Vienna, July 29, 1786), court musician and ballet composer for the Viennese Italian Opera. He wrote 'Singspiele' and Ballet-Divertissements, and recomposed Rousseau's 'Pygmaléon.' He was more important as chamber-music composer, being one of the first Viennese composers to follow the lines of the Mannheim school. Six trio serenades (op. 1) were published in Paris *c.* 1765; 6 quatuors concertants (violins, viola and violoncello) (op. 2); 6 trios (2 violins, violoncello and basso continuo op. 5); 6 quatuors (strings, op. 6); also symphonies, violin sonatas, 9 MS. trios for 2 violins and bass and 2 violas and bass. One trio and one quartet have been republished in Riemann's *Collegium musicum* (*Riemann*; *Q.-L.*).

ASPULL, George (*b.* Manchester, June 1813; *d.* Leamington, Aug. 19, 1832), an English pianist who, in a short but successful career, is credited with having given the first performance in this country of Weber's Concertstück.

George had at least 4 brothers, of whom one, William, was organist of St. Mary's Church' Nottingham (1830–35). After a visit to Paris in Apr. 1825 he undertook a number of concert tours throughout Great Britain and Ireland. Aspull left several manuscript compositions for the pianoforte, which were subsequently published, with his portrait prefixed, under the title of 'George Aspull's posthumous Works for the Pianoforte.' See *Mus. World*, Feb. 14, 1839; *Harmonicon*, 1832, p. 212; *D.N.B. s.v.*; *Q. Mus. Rev.* vol. vi. pp. 240, 241; *M.L.*, 1922, p. 200, *The Most Extraordinary Creature in Europe.*

ASSAI (Ital.), 'very'; *e.g.* 'allegro assai,' very fast.

ASSMAYER, Ignaz (*b.* Salzburg, Feb. 11, 1790; *d.* Vienna, Aug. 31, 1862), was in 1808 organist of St. Peter's, Salzburg, where he wrote his oratorio 'Die Sündfluth' (The Deluge), and his cantata 'Worte der Weihe.' In 1815 he removed to Vienna; in 1824 became organist to the Scotch church; in 1825 Imperial organist; in 1838 vice, and in 1846 second Kapellmeister to the court. His principal oratorios—'Das Gelübde' (The Vow), 'Saul und David' and 'Sauls Tod'—were frequently performed by the Tonkünstler-Societät, of which Assmayer was conductor for 15 years. Besides these larger works he composed 15 masses, 2 Requiems, a Te Deum, and various smaller church pieces, as well as nearly 60 secular compositions. These last are all published. His music is correct and fluent, but wanting in invention and force. C. F. P.

ASSOCIATED BOARD OF THE R.A.M. AND R.C.M. In 1889 these two institutions combined to hold local examinations throughout the kingdom instead of conducting them separately. The result was uniformity and an improved standard. The scheme, which consists of examinations of schools as well as those held in the various centres, was eventually extended to the Dominions, and as showing the extent of the Board's activities it may be added that over 50,000 candidates have entered for the examinations in a single year. The Board offers exhibitions for competition providing free tuition at the R.A.M. or R.C.M. Another of its activities is a music-publishing department, which issues the music required for the various examinations. The central office is at 14 and 15 Bedford Square, W.C.1.

ASSOCIATION ARTISTIQUE D'ANGERS, an institution founded 1875 by Michel, Jules Bordier and Comte Louis de Romain for the cultivation of orchestral music. In spite of many difficulties, which almost compelled the Association to cease its work, it rose again as the Société des Concerts Populaires (1898), its present name. It has won an honoured place and has made known a great many modern French works, as well as compositions of other schools. On Mar. 23, 1902, the Society gave

its 500th concert. On that occasion, Comte de Romain (1845–1912) received the cross of the Légion d'Honneur. Sole president since the deaths of Michel and Jules Bordier (1846–96), his followers in that function were Max and Charles d'Ollone, Olivier de Rougé, Dr. Boquel. The conductors of the Society up to the present time are: Lelong (1880–91), Frémaux (1891–1893), Brahy (1899–1907), Max d'Ollone (1907–1909), Rhené Baton (1910–12), Jean Gay (1912–14), (1919–). G. F.; rev. M. L. P.

ASTARITA (Asterita), Gennaro (*b.* Naples, *c.* 1749), maestro di cappella at Naples, 1770, was highly esteemed as a composer of comic operas, of which he wrote 36 between 1765 and 1793. In 1780 he wrote 3 operas for Pressburg, and appears to have been at St. Petersburg, for which he also wrote operas (*Riemann*; *Q.-L.*).

ASTON (Ashton, Aystoun, Austen), Hugh (early 16th cent.), an English composer, whose work, both sacred and secular, has to a certain extent been preserved. He has been identified by Davey (*Hist. Eng. Mus.*) with a certain Hugh Aston 'who was born in Lancashire, graduated M.A. at Cambridge in 1505, was incorporated at Oxford in 1507, became Comptroller to Lady Margaret, Countess of Richmond, and finally Archdeacon of York.' This Aston died in 1522, and his monument is still to be seen at St. John's College, Cambridge (see *D.N.B.*). The theory is somewhat strengthened by the fact that a 'Te Matrem' of Aston's composition is in the library of St. John's College (see below), but their actual identity cannot be considered as in any way established. (For a further discussion of this, see an article by Dr. Grattan Flood, *Mus. T.*, Feb. 1920, where Davey's assumption is discredited, and the details of Aston's life are given as follows: *b.* 1480, M.A. (Oxford), 1505, Canon of St. Stephen's, Westminster, 1509, *d.* 1522.) His position in English music is one of considerable importance, for he has been claimed as the inventor of instrumental (as opposed to purely 'vocal') composition. There is a Hornpipe for Virginals by him (B.M. Royal MSS. App. 58), which is quite unique as an example of the keyboard technique of the time. It is chiefly in long scale passages, and is an early anticipation of the virginal style later affected by John Bull. This, together with two anonymous pieces which also appear in Roy. App. 58, 'Lady Carey's Dompe' and 'The short measure of my Lady Wynkfylds round,' was reprinted by J. Stafford Smith in his 'Musica antiqua' (1812). If (as Davey assumes) the 'Dompe' can also be taken as Aston's work, he will stand as the inventor of the variation form, which was not finally established in England until possibly a hundred years later—(by Byrd in such virginal pieces as 'Jhon come kisse me now' and 'The Carman's Whistle'). That Aston was a man of fair reputation in his time is shown by the fact that 'Hugh Aston's Grownde' was used by later composers as a theme for variations (notably by Byrd in a composition in Lady Neville's Virginal Book). In some partbooks in the library at Christ Church College, Oxford, there is also a long piece for four instruments, which appears under the title of 'Hugh Aston's Maske.' This is apparently based upon the same ground, and would seem to be arranged by Whitbroke (*q.v.*), as this name is to be found at the end of the medius part. Besides these, there also exist in MS. the following sacred compositions by Aston:

MASSES

Videte manus tuas (*a* 6). Bodl. Mus. Sch.
Te Deum (*a* 5). Bodl. Mus. Sch., PH. (incomp.).

MOTETS

Ave Maria ancilla. PH. (incomp.).
Ave Divae matris Annae. PH.
Ave Domine. Harl. 7578/86 *b* (Treble part only).
Gaude Mater. Bodl. Mus. MSS.
Gaude virgo mater Christi. PH. (incomp.).
O Baptista. PH. (incomp.).
Te matrem. St. J. (Tenor part only).

J. M^{K}.

ASTOR & CO., a firm of musical instrument makers. George (*b.* Waldorf, near Heidelberg) came as a young man to England about 1778, and getting employment with a flute-maker, asked his younger brother, John Jacob (*b.* 1763; *d.* 1848), to join him in London. Together they started business as flute-makers. In 1783 John Jacob went to America with a small consignment of flutes, visiting another brother who was settled at Baltimore. The value of his stock of flutes is said to have been only about £5, but upon advice given to him by a fellow-voyager he invested the proceeds of his sale in furs, and by selling these in England made a handsome profit. He again crossed to America, and quickly gained profit by fur trading, and by the sale of musical instruments sent to him from England. He appears to have been settled permanently in New York before 1795. In 1809 he established a fur-trading company, and by this and the purchase of land in 'The Bowery' laid the foundation of the Astor wealth.

Meanwhile his elder brother, George, was occupying a small shop in Wych Street, Drury Lane, making flutes and other musical instruments. About 1798 he removed to 79 Cornhill, and had besides premises at 27 Tottenham Street near Fitzroy Square.

Before 1800 George Astor was making pianofortes and publishing sheet music and minor books, such as flute instructors. In 1801 he was in partnership, and the firm styled itself 'organ builders.'

In 1815 the firm was 'Astor and Horwood' at 79 Cornhill and 76 Bishopsgate Street. They made some very dainty pianofortes of satinwood, and before 1824 Christopher Gerock

became senior partner. This latter person had been a manufacturer of pianofortes at 76 Bishopsgate Street Within, before 1805. In 1831 the Astor firm seems to have been merged into that of Gerock and Wolf, at the old Cornhill address. George Astor and his successors published, yearly, books of country dances, those for 1805 and 1818 being in the British Museum Library. F. K.

ASTORGA, Emanuele Gioacchino Cesare Rincón, Baron d' (*b.* Augusta, Sicily, Mar. 20, 1680; *d.* Lisbon or Madrid, 1755–57), a celebrated composer of chamber cantatas and the well-known Stabat Mater. He was of Spanish descent; his family, that of Rincón d'Astorga, came to Augusta in the Spanish service at the beginning of the 17th century; their title was derived from the estate of Ogliastro, which came into the family in the time of the composer's grandfather. His father was Baron Francesco Rincón d'Astorga (*d.* Palermo, 1712). Emanuele received the education of a Sicilian nobleman at Palermo and various cities of Italy; from early years he had a passion for the study and performance of music. In 1708, during an insurrection against the Spanish-Sicilian government, he served as an officer in the Civil Guard. In 1709 he was probably at Genoa, for the performance (Ap. 21) of his pastoral opera 'Dafni'; the opera was also staged at Barcelona in June and July of the same year for the marriage of the pretender Don Carlos. Astorga seems not to have been present; in this year, however, he is known to have been in Mantua, and probably also in Venice, from which he passed to Vienna. In 1712 he was in receipt of an imperial pension of 2000 gulden. He was a friend of the Dutch ambassador, Bruyninx, and on May 9, 1712, stood godfather in his place to the daughter of Antonio Caldara (*q.v.*). In the spring of 1713 he spent some time near Znaim, in Moravia, and subsequently borrowed considerable sums of money from Bruyninx and his other friends. In 1714 he disappeared suddenly from Vienna, and is next heard of in London, where he remained until 1715. On returning to Palermo, he was elected Senator, an office which he held from May 1717 until June 3, 1718. From that time onwards he lived in Portugal or in Spain. In 1723 he was in Lisbon, where in 1726 he published a volume of chamber cantatas with Italian and Spanish words—the only one of his works to be printed during his lifetime. His latest known composition is dated 1731. In 1744 he sold his Sicilian estates, and died at a ripe age.

Astorga was celebrated by his contemporaries for his learning in many branches of science and the arts. He was praised as a singer and a performer on the harpsichord, and was accounted a composer of distinction. Yet, as an amateur of noble birth he forebore to give public exhibition of his talents. His opera 'Dafni' was revived at Breslau in 1726 and then disappeared from the stage. The Stabat Mater was composed in 1707 or 1708 in Rome or at Naples; its first known public performance took place at Oxford in 1752 or 1753. The chamber cantatas exist in numerous MS. copies, besides the 'Cantate da Camera' (Cantatas humanas) printed at Lisbon. It was on these that his fame chiefly depended. (See Hans Volkmann, *Emanuele d' Astorga*, 2 vols., Leipzig, 1911 and 1919.) J. B. T.

ASTORGA, Jean Oliver y (2nd half of 18th cent.), a Spanish composer whose works were published in London. He has apparently no connexion with Emanuele, Baron d'Astorga; the signature to the dedication of his op. 1 shows that he came of Spanish parents. He lodged 'at the Trunk Maker's in Cockspur Street' and was under the protection of the fourth Earl of Abingdon (1740–99). His published works (B.M.) are as follows:

1. Six sonates à Violon et Basse . . . op. 1. (1767?)
2. Twelve Italian songs and duets for voice and harpsichord, with an accompaniment for a guitar . . . op. 2. (1768?)
3. Six sonatas for two German flutes or two violins and a bass. (1769.)

The instrumental style of Oliver y Astorga is that of Haydn's youth; his writing suggests that he was a flautist rather than a violinist (see Volkmann, *Emanuele d' Astorga*, ii. 207 ff., Leipzig, 1919). J. B. T.

A TEMPO (Ital.), 'in time.' When the time of a piece has been changed, either temporarily by an *ad libitum*, *a piacere*, etc., or for a longer period by a *più lento*, *più allegro*, or some similar term, the indication *a tempo* shows that the rate of speed is again to be that of the beginning of the movement.

ATFIELD, John, an 18th-century English song composer. His songs, published in London between 1735 and 1750, were: 'Arise, brave Britons all,' words by Webb; 'Comus' Court,' words by Howard; 'Cupid's power restor'd'; 'Gin e'er I'se in Love,' a Scotch song; ''Tis true, my Celia, thou art fair.'

E. v. d. S.

ATHALIA, oratorio; words by Humphreys; music by Handel. Produced Oxford, July 10, 1733; revived by the Sacred Harmonic Society, June 20, 1845. The score was completed June 7, 1733.

ATKINS, Sir Ivor Algernon, Mus.D., F.S.A. (*b.* Cardiff, Nov. 29, 1869), organist of Worcester Cathedral and conductor of the Three Choirs Festival held triennially at Worcester.

His father, Frederick Atkins, was organist of St. John's Church, Cardiff, so that the boy was brought up in musical surroundings. Later, as a pupil of G. R. Sinclair, he served as assistant organist in the cathedrals of Truro (1885) and Hereford (1890), and subsequently became organist of Ludlow parish church (1893). In

1897 Atkins was appointed organist and master of the choristers of Worcester Cathedral, an appointment of greater importance than many English cathedral organistships because it carries with it the duty of conducting the Three Choirs Festival. Atkins's experience as a parish church organist had given him few opportunities of handling an orchestra and of conducting on a large scale, and his performance in this capacity at his first Worcester Festival (1899) was adversely criticised. It is, however, as conductor of this festival that he has since done his most distinguished work. At the festival of 1902 he made a point of including important orchestral works in the programme, introducing, among other things, Strauss's 'Tod und Verklärung,' then comparatively little known in England. In this and the subsequent festivals up to 1911 he gave many important works (see THREE CHOIRS FESTIVAL), both choral and orchestral, with a success which fully established his reputation as conductor and organiser. After the war he was responsible for the revival of the festivals (1920), a public service which earned him the honour of knighthood.

The most important of his compositions is a 'Hymn of Faith,' for soli, chorus and orchestra (words arranged by Sir Edward Elgar), produced at Worcester 1905 and repeated there in 1920. Slighter festival works, church music and songs (some of the last are frequently performed) are all of excellent quality if not strikingly original. His edition (with Sir Edward Elgar) of Bach's 'St. Matthew Passion' (Novello, 1911) has become a standard one. A pamphlet on *Organists of Worcester Cathedral* (Mitchell, Hughes & Clarke) is the product of careful research in the archives of the cathedral. C.

ATONALITY, see TONALITY; HARMONY.

ATTACCA (Ital.), 'begin,' when placed at the end of a movement—as the Scherzo of Beethoven's C minor symphony, signifies that no pause is to be made, but that the next movement is to be joined immediately to the preceding.

ATTACCO, verbal substantive, from (Ital.) *attacare*, 'to unite,' 'to bind together,' a short phrase, treated as a point of imitation; and employed, either as the subject of a fugue, as a subordinate element introduced for the purpose of increasing the interest of its development, as a leading feature in a motet, madrigal, full anthem, or other choral composition, or as a means of relieving the monotony of an otherwise too homogeneous partsong.

A striking instance of its employment as the subject of a fugue will be found in book ii. No. 3, *Das wohltemperirte Clavier*. (See ANDAMENTO and SOGGETTO.) W. S. R.

ATTACK, a technical expression for decision and spirit in beginning a phrase or passage. An orchestra or performer is said to be 'wanting in attack' when there is no firmness and precision in their style of taking up the points of the music. This applies especially to quick *tempo*. It is equivalent to the *coup d'archet*, once so much exaggerated in the Paris orchestras, and of which Mozart makes such game (Letter, June 12, 1778).

The *chef d'attaque* in France is a name for the leader of the first violins, or what we in England call the leader of the orchestra. (See LEADER.)

ATTAINGNANT (ATAIGNANT, ATIGNANT, ATTAIGNANT, ATTEIGNANT, ATTINGENO (Lat.)), PIERRE, a music printer of Paris in the 2nd quarter of the 16th century, 'demourant en la rue de la Harpe devant le bout de la rue Mathurins près de l'église de Sainct Cosme.' He hired the printing material of Jean de la Roche. He married one of the daughters of the printer, Philippe Pigonchet, and succeeded his father-in-law. He is said to have been the first in Paris to print music from movable types, using the newly devised type of Pierre Hautin, in which fragments of the stave were for the first time combined with the note. His first printed book was a *Breviarium Noviomense* (1525). In an Avignon catalogue of 1778 a 'Chansons nouvelles de musique à quatre parties' of 1527 is cited as a publication of Attaingnant, but the earliest dated book now extant bearing his imprint is 'Trente et quatre chansons musicales à quatre parties,' of which there is a copy in the National Library at Paris, dated Jan. 23, 1528, from which year he began his musical series.

A list of Attaingnant's publications is given in *Q.-L.* They are very numerous and include, besides detached collections of songs, motets and masses, An Introduction to the Lute, (1529), 18 basse-dances in tablature for the lute (1529), 9 basse-dances, 2 branles, 25 pavans and 15 galliards (1530), a splendid folio volume containing 7 books of masses (1532), 13 books of motets (1534–35) and 35 books of songs (1539–49). This last series contains no fewer than 927 songs in four parts by French and Flemish composers. There is a complete set in the Munich Library, from which Eitner has published 60 selected specimens. One of the earlier collections, 'Trente et une chansons musicales à quatre parties' (1529), has been reprinted by Henry Expert in the series entitled 'Les Maîtres Musiciens de la Renaissance Française.' Of the collections printed (1530–31), 4 books have been issued by E. Bernoulli as 'Chansons und Tänze' (facsimile), Munich, 1914. Two books containing organ music appeared in one volume (1925), with a study in French by Mme. Y. Rihouët. All the leading composers of the Franco-Flemish period, Arcadelt, Certon, Clemens non papa, Consilium, Courtois, Fevin,

Gombert, Jacotin, Jannequin, Josquin, Le Jeune, Mouton, Richafort, Sandrin, Sermisy, Willart and many others, are represented in Attaingnant's collections, attesting the influence of that school on contemporary production. The latest date appearing on his title-pages is Dec. 3, 1549, and on the 20th of the following January Nicholas du Chemin issued the first of his series of 'Chansons à quatre parties.' There is, however, no certain evidence of Attaingnant's death before 1553, in which year his widow's name appears on the title-page of a collection of songs.

J. F. R. S.; addns. M. L. P.

ATTAQUE DU MOULIN, L', opera in 3 acts; libretto by Louis Gallet, founded on a story in Zola's *Soirées de Meudon*; music by Bruneau. Produced Opéra-Comique, Paris, Nov. 23, 1893 (the action of the piece being transferred from the period of the war with Germany to the Napoleonic period); at Covent Garden (with the action restored to the proper date), July 4, 1894; in English, Carl Rosa Co., Theatre Royal, Glasgow, Mar. 1915.

ATTERBURY, LUFFMAN (*d.* Marshem St., Westminster, June 11, 1796), originally a carpenter, became one of the musicians-in-ordinary to George III., and composed numerous catches and glees. Between 1778 and 1780 he obtained from the Catch Club prizes for 3 glees and 2 catches. He also composed an oratorio called 'Goliah,' which was performed for the first time at the Haymarket Theatre on May 5, 1773, being announced as 'for that night only.' It was again performed in West Wycombe church on Aug. 13, 1775, on the occasion of the singular ceremony of depositing the heart of Paul Whitehead, the politician and versifier, enclosed in a marble urn, as directed by his will, in the mausoleum there of his patron, Lord Le Despencer.

Atterbury sang in the Handel Commemoration of 1784, and about 1790 he published 'A Collection of Twelve Glees, Rounds,' etc. Eleven glees and 19 catches by him are included in Warren's collections. His glee, 'Come, let us all a-Maying go,' still retains its popularity. He died during one of a series of concerts given in aid of his reduced finances. W. H. H.

ATTEY, JOHN (*d.* Ross, *c.* 1640), was the last of the English school of lutenist song-writers, and the work by which he is remembered appeared ten years later than others of its kind by his contemporaries. This was his 'First Booke of Ayres of Foure Parts, with Tableture for the Lute' (1622). On the title-page of this work he calls himself 'Gentleman and Practitioner of Musicke,' and the dedication is to the Earl and Countess of Bridgewater. It contains 14 songs in four parts, which may be sung either as solos by a single voice, accompanied by the lute, or the lute and bass-viol; or as partsongs for four voices. It is noteworthy that in adopting this alternative arrangement Attey was reverting to the method of Dowland's 'First Book of Ayres,' published in 1697. The intervening composers of the school had for the most part dropped the partsong arrangement, and published their songs for solo voice with instrumental accompaniment.

Attey published no second collection.

E. F. R., with addns.

AT THE BOAR'S HEAD, a musical interlude in one act; libretto taken from Shakespeare's 'Henry IV.', music by Gustav Holst. Produced by B.N.O.C., Opera House, Manchester, Apr. 3, 1925. See 'Falstaff' and 'Merry Wives of Windsor' for other operas dealing with the character of Falstaff.

ATTWOOD, THOMAS (*b.* London, Nov. 23, 1765; *d.* Chelsea, Mar. 24, 1838), organist of St. Paul's Cathedral, and composer of church music as well as of more or less ephemeral music for the stage, was the son of a trumpeter, viola-player, and coal-merchant.

At nine years of age he became a chorister in the Chapel Royal, where he had for his masters successively Dr. Nares and Dr. Ayrton. In his sixteenth year, performing in a concert at Buckingham House, he attracted the attention of the Prince of Wales (afterwards George IV.), who sent him to Italy to study. In 1783 he went to Naples, where he remained for two years under the tuition of Filippo Cinque and Gaetano Latilla. From Naples he went to Vienna, and studied under Mozart—who expressed a highly favourable opinion of his talent (Kelly's *Reminiscences*, i. 228)—until Feb. 1787, when he accompanied the Storaces to England. He became organist (or more probably deputy to F. C. Reinhold, organist) of St. George the Martyr, Queen Square, and a member of the Prince of Wales's chamber band. He was appointed musical instructor to the Duchess of York in 1791, and to the Princess of Wales in 1795. In 1796, on the decease of John Jones, organist of St. Paul's Cathedral, Attwood became his successor; and in June 1796, on the death of Dr. Dupuis, he was appointed composer to the Chapel Royal. In 1821 he was nominated organist of George IV.'s private chapel at Brighton. Attwood was one of the original members of the Philharmonic Society on its establishment in 1813, was treasurer in 1820, and for some years occasionally conducted its concerts. On the foundation of the R.A.M. in 1823, he was one of the professors. In 1836, on the decease of John Stafford Smith, he succeeded him as organist of the Chapel Royal. Attwood died at his residence in Cheyne Walk, Chelsea, and was buried in St. Paul's Cathedral, under the organ.

In the early part of his life Attwood was

much engaged in dramatic composition, in which he was very successful.

The pieces set by him were :

The Prisoner, 1792; The Mariners, 1793; Caernarvon Castle, 1793; The Adopted Child, 1795; The Poor Sailor, 1795; The Smugglers, 1796; The Mouth of the Nile, 1798; The Devil of a Lover, 1798; A Day at Rome, 1799; The Castle of Sorrento, 1799; The Red Cross Knights, 1799; The Old Clothesman, 1799; The Magic Oak, 1799; True Friends, 1800; Harlequin's Tour, 1800; The Domination of Fancy, 1800; The Escapes, or the Water Carrier (partly selected from Cherubini's 'Les Deux Journées,' and partly original), 1801; St. David's Day, 1801; Il Bondocani, 1802; Adrian and Orilla, 1806, and The Curfew, 1807; Elphin Boy, 1817. He also contributed two songs to 'Guy Mannering,' 1816.

Later in life Attwood devoted his attention more to cathedral music. A volume of his church compositions, containing 4 services, 8 anthems, and 9 chants, was published about 15 years after his death, under the editorship of his godson, Dr. Thomas Attwood Walmisley. Besides these compositions Attwood produced a fifth service in B flat (unpublished), two anthems with orchestral accompaniments; one, 'I was glad' (a remarkably fine composition), for the coronation of George IV., and the other, 'O Lord, grant the King a long life,' for that of William IV.; and he had begun a third, intended for the coronation of Queen Victoria, when his career was closed by death. Nine other anthems are mentioned in the long and valuable article in *Mus. T.*, 1900, p. 788, etc. His setting of the hymn 'Come, Holy Ghost' still holds a worthy place in the music of the English Church.

Attwood produced many sonatas and lessons for the pianoforte, and numerous songs and glees. Of his songs, 'The Soldier's Dream' long maintained its popularity; and of his glees, 'In peace Love tunes the shepherd's reed,' and 'To all that breathe the air of Heaven,' were long popular among admirers of that species of music. Attwood's compositions are distinguished by purity and taste as well as by force and expression.

It is interesting to notice that Attwood, a favourite pupil of Mozart, was one of the first among English musicians to recognise the genius of the young Mendelssohn. A friendship sprang up between the two composers which was only broken by the death of the elder. Several of Mendelssohn's published letters were written from Attwood's villa at Norwood, his three Preludes and Fugues for the organ are dedicated to him, and the autograph of a Kyrie in A minor is inscribed 'For Mr. Attwood; Berlin, March 24, 1833.' W. H. H., with addns.

AUBADE, a French term (from *aube*, 'the dawn'), the counterpart of nocturne or serenade. It was originally applied to music performed in the morning, and apparently to concerted music (Littré); this condition is fulfilled in Lalo's charming work in G minor for 5 wind instruments and 5 strings. Stephen Heller and Schulhoff have written pianoforte pieces bearing this title.

AUBER, Daniel François Esprit (*b.* Caen, Jan. 29, 1782; *d.* Paris, May 12, 1871), a famous operatic composer. At the age of eleven Auber wrote a number of ballads and 'Romances,' one of which, 'Bonjour,' is said to have been very popular at the time. A few years later we find him in London, nominally as commercial clerk, but in reality more than ever devoted to his art. Here also his vocal compositions are said to have met with great success in fashionable drawing-rooms; his personal timidity, however—a feature of his character which remained to him during his whole life—prevented the young artist from reaping the full benefit of his precocious gifts. In consequence of the breach of the Treaty of Amiens (1804) Auber had to leave England, and on his return to Paris we hear nothing more of his commercial pursuits. Music had now engrossed all his thoughts and faculties. His début as an instrumental composer was accompanied by somewhat peculiar circumstances. Auber had become acquainted with Lamarre, a violoncello-player of considerable reputation; and to suit the peculiar style of his friend, our composer wrote 4 concertos for his instrument, which originally appeared under Lamarre's name, but the real authorship of which soon transpired. The reputation thus acquired Auber increased by a violin concerto written for and first played by Mazas at the Conservatoire with signal success; it was introduced to London by Sainton. His first attempt at dramatic composition was of a very modest kind. It consisted in the resetting of an old libretto of Monvel, already put to music by Deyède, 'L'Erreur d'un moment,' as a comic opera in one act (1805). As his next works, we mention an opera 'Couvin' (1812), a Mass written for the private chapel of the Prince de Chimay, from which the beautiful *a cappella* prayer in 'Masaniello' is taken. His first opera publicly performed was 'Le Séjour militaire,' 1813, at the Théâtre Feydeau. Its reception was anything but favourable, and for six years he refrained from repeating the attempt. His second opera, 'Le Testament, ou les Billets-doux,' brought out at the Opéra-Comique in 1819, proved again unsuccessful, but Auber was now too certain of his vocation to be silenced by a momentary disappointment. He immediately set to work again, and his next opera, 'La Bergère châtelaine,' first performed in 1820, to a great extent realised his bold expectations of ultimate success. The climax and duration of this success were founded on Auber's friendship and artistic alliance with Scribe, one of the most skilful librettists of modern times. To this union, which lasted unbroken till Scribe's death, a great number of both comic and serious operas owe their existence, not all equal in value and beauty, but all evincing in various degrees the inexhaustible productive power of their joint authors. The list of his operas and opéras-

comiques, as given by Charles Malherbe, is as follows :

'L'Erreur d'un moment' (1805). Score not printed.
'Couvin' (1812). Score not printed.
'Le Séjour militaire' (1813).
'Le Testament' (1819).
'La Bergère châtelaine' (1820).
'Emma' (1821).
'Leicester' (1823).
'La Neige' (1823).
'Vendôme Espagne' (1823), with Hérold.
'Les Trois Genres' (1824), with Boieldieu.
'Le Concert à la Cour' (1824).
'Léocadie' (1824).
'Fiorella' (1826).
'La Muette de Portici' (1828).
'La Fiancée' (1829).
'Fra Diavolo' (1830).
'Le Dieu et la Bayadère' (1830).
'Le Philtre' (1831).
'La Marquise de Brinvilliers' (1831), with 8 other composers.
'Le Serment' (1832).
'Gustave III' (1833).
'Lestocq' (1834).
'Le Cheval de bronze' (1835).
'Actéon' (1836).
'Les Chaperons blancs' (1836).
'L'Ambassadrice' (1836).
'Le Domino noir' (1837).
'Le Lac des fées' (1839).
'Zanetta' (1840).
'Les Diamants de la couronne' (1841).
'Le Duc d'Olonne' (1842).
'La Part du Diable' (1843). given in Germany either under the title of 'Carlo Broschi' or as 'Teufel's Antheil.'
'La Sirène' (1844).
'La Barcarolle' (1845).
'Haydée' (1847).
'L'Enfant prodigue' (1850).
'Zerline' (1851).
'Marco Spada' (1852).
'Jenny Bell' (1855).
'Manon Lescaut' (1856).
'Marco Spada' (ballet) (1857).
'Le Cheval de bronze' (opera) (1857).
'La Circassienne' (1861).
'La Fiancée du Roi de Garbe' (1864).
'Le Premier Jour de bonheur' (1868).
'Rêve d'amour' (1869).

In 1857 'Le Cheval de bronze' was expanded into a grand opera and 'Marco Spada' into a ballet.

About Auber's life little remains to be added. He succeeded Gossec as member of the Académie in 1829; and he received marks of highest distinction from his own and foreign sovereigns. Louis Philippe made him director of the Conservatoire in 1842, a post which he held till his death, and Napoleon III. added the dignity of imperial maître de chapelle in 1857. His 'Magenta,' a victory song, was performed at the opera in 1859. He, however, never acted as conductor, perhaps owing to the timidity already alluded to. Indeed he never was present at the performance of his own works. When questioned about this extraordinary circumstance, he is said to have returned the characteristic answer, 'Si j'assistais à un de mes ouvrages, je n'écrirais de ma vie une note de musique.' His habits were gentle and benevolent, slightly tinged with epicureanism. He was a thorough Parisian, and the bon-mots related of him are legion. A useful memoir by Ad. Kohut appeared in 1895.

Auber's position in the history of his art may be defined as that of the last great representative of opéra-comique. In such works as 'Le Maçon' or 'Les Diamants de la Couronne,' Auber has rendered the chivalrous grace, the verve, and amorous sweetness of French feeling in a manner both charming and essentially national. It is here that he proves himself to be the legitimate follower of Boieldieu and the more than equal of Hérold and Adam. With these masters Auber shares the charm of melody founded on the simple grace of the popular chanson, the piquancy of rhythm and the care bestowed upon the distinct enunciation of the words characteristic of the French School. We have purposely cited the 'Diamants de la Couronne' as evincing the charm of French feeling, although the scene of that opera is laid in Portugal. Like George Brown and the 'tribu d'Avenel' in Boieldieu's 'Dame Blanche,' Auber's Portuguese are in reality Frenchmen in disguise. In comparing Auber's individual merits with those of other masters of his school, of Boieldieu, for instance, we should say that he surpasses them all in brilliancy of orchestral effects. He is, on the other hand, decidedly inferior to the last-mentioned composer as regards the structure of his concerted pieces. His ensembles are frequently slight in construction; his style indeed may be designated as essentially homophonous; but he is (perhaps for the same reason) a master in the art of delineating a character by touches of subtlest refinement.

Amongst his serious operas one work more than any other contributed to its author's European reputation; it differs so entirely from Auber's usual style that without the most indubitable proofs one would hardly believe it to be written by the graceful and melodious but anything but passionately grand composer of 'Le Dieu et la Bayadère' or 'Le Cheval de bronze.' We are speaking of 'La Muette de Portici,' in England commonly called, after its chief hero, 'Masaniello.' Auber's style in 'Masaniello' is indeed as different as can be imagined from his usual elegant but somewhat frigid mode of utterance, founded on Boieldieu with a strong admixture of Rossini. Wagner acknowledged in this opera 'the bold effects in the instrumentation, particularly in the treatment of the strings, the drastic grouping of the choral masses which here, for the first time, take an important part in the action, no less than original harmonies and happy strokes of dramatic characterisation.' Various conjectures have been propounded to account for this singular and unique flight of inspiration. It has been said, for instance, that the most stirring melodies of the opera are of popular Neapolitan origin, but this was contradicted emphatically by the composer himself. The solution of the enigma seems to us to lie in the thoroughly revolutionised feeling of the time (1828), which two years afterwards was to explode the established governments of France and other countries. This opera was indeed destined to become historically connected with the popular movement of that eventful period. It is well known that the riots in Brussels began after a performance of 'La Muette de Portici' (Aug. 25, 1830), which drove the Dutch out of the country, and thus in a manner acted the part of 'Lilliburlero.' There is a sad significance in the fact that the death of the author of this revolutionary inspiration was surrounded and indeed partly caused by the terrors of the Paris Commune.

F. H.; addns. M. L. P.

AUBERT, (1) JACQUES ('le vieux') (*b. circa*

1683; *d.* Belleville near Paris, May 17 or 18,[1] 1753), eminent violinist and a composer, a pupil of the violinist J. B. Senallié, was, from 1719, leader of the band and intendant of the Duke of Bourbon's private music. One of the King's 24 violins (1727), he entered the orchestra of the Opéra the following year as first violin, retiring in 1752. His name appeared on the programmes of the Concert Spirituel from 1729 to 1740. A very prolific composer, his astonishing facility led him to compose a considerable number of instrumental works (33 printed numbers); 5 books of violin sonatas with a bass, 12 'Suites de concerts de symphonie,' various pieces for musette, flute, oboe, viols, etc., 'Jolis Airs' for 2 violins, 'La Reine des Péris' (1725) played at the Opéra, ballets. His 10 concertos for 4 violins and a bass (1735, 1739), though influenced by Italian models, were the first ones written by a Frenchman.

His eldest son and pupil, (2) Louis (*b.* Paris, May 15, 1720; *d. circa* 1800), belonged to the Opéra orchestra as violinist and as second conductor from 1731–74. He was also violin-teacher. His violin sonatas with a bass (1750), and 'Simphonies à quatre' for 3 violins and a bass (1752) show Italian influences specially in the treatment of themes.

Bibl.—Lionel de La Laurencie, *L'École française de violon de Lully à Viotti*, vols. i. and ii., Paris, 1922–23. M. L. P.

AUBERT, Louis François Marie (*b.* Paramé, Ille-et-Vilaine, Feb. 19, 1877), composer, was sent to the Paris Conservatoire before the age of ten. There he won successive prizes for elementary theory, piano, harmony; sight-reading and transposition. He studied the piano under Diémer, harmony under Lavignac, and composition under Gabriel Fauré. Until his voice broke, he sang at the services of the Madeleine, and possessing a beautiful soprano voice and exceptional musical gifts, he was induced to fulfil, at the same time, a similar engagement at another church, the Trinité. For a short time he studied the organ with Widor, but evincing no great liking for that instrument, he soon abandoned it.

The earliest work that can be dated is a song 'Sous bois,' written in 1892. This was followed by a number of other smaller works, chiefly piano pieces and songs full of conflicting influences, such as those of Franck, Schumann, Chausson and Fauré, but already showing traces of a certain elegance and finish. Among them is a 'Vieille Chanson espagnole' (1894), which foreshadows his later happy treatment of Spanish subjects. In 1896 he wrote the song cycle 'Rimes tendres,' which has been published, a distinction that was not shared by the cantata 'Les Noces d'Apollon et d'Uranie,' of 1897. Two small pieces of church music, 'O Salutaris' and 'Pie Jesu,' belong to 1898.

[1] Burial, May 19.

Among the first works which drew the attention of the French public and press to the talent of Aubert was the 'Fantaisie' for piano and orchestra, composed in 1899, and produced at the Colonne Concerts in 1901, with Diémer at the piano. But already in 1900, the 'Suite brève' for two pianos (orchestrated and revised in 1913) attracted some notice at the Paris Exhibition. The same year saw the completion of the well-known song, 'La Lettre,' and of the 'Trois Esquisses' for piano, originally intended as sight-reading tests for Diémer's class.

From the opening of the 20th century onward, Aubert devoted himself more and more exclusively to composition, almost completely neglecting a pianist's career which had hitherto brought him frequently on the concert platform, both as soloist and chamber-music player. In 1902 he essayed a more ambitious work than he had so far produced, 'La Légende du Sang,' a curious series of historical scenes, for recitation, chorus and orchestra, which, with the exception of one scene, has remained unpublished. This proved an unsuccessful experiment; but four works of more or less ambitious dimensions were more fortunate during the next two years: 'Les Cloches,' for mezzo-soprano and chorus; incidental music for a play by Jean Bertheroy, entitled 'La Moisson'; and two ballets, 'La Momie' (produced in Paris in 1903) and 'Chrysothémis' (staged at Vichy in 1904).

The next six years (1904–10) were mainly occupied by the composition of the opera, 'La Forêt bleue,' the libretto of which, by Jacques Chenevière, is based on some familiar fairy-tales whose characters and incidents are charmingly and adroitly blended into a harmonious whole. The work has a certain delicacy and restrained grace which precludes it from any sensational success, and its undoubtedly great poetical qualities are a little pale and devoid of pronounced individuality. The composer did not succeed in having the opera staged in his own country, but it was eventually produced at Boston, U.S.A., on Mar. 8, 1913, and very favourably received. During the composition of the opera only one work of some importance, the song cycle 'Crépuscules d'automne' (1908), appeared.

The Spanish phase in Aubert found a more mature expression in a song with orchestral accompaniment, 'Nuit mauresque,' written in 1911, which in its turn proved almost in the nature of a sketch in comparison with the symphonic poem 'Habanera,' produced at the Pasdeloup Concert of Mar. 23, 1919. This work was acclaimed by the French press as the most complete expression of Aubert's personality up to that time, with the exception, perhaps, of the 'Six Poèmes arabes' for voice

and orchestra (or piano) to poems by F. Toussaint.

Two important later works by Aubert are the three brilliant and picturesque piano pieces entitled 'Sillages' (1913), and a piece of church music, 'Tu es Petrus,' for chorus and organ, written in 1917, when the composer, unable to be of service in the war, yet anxious to be useful, voluntarily acted as organist and choirmaster at the church of Saint-Hippolyte. Other works include a number of piano pieces and songs, three vocal duets, a madrigal for flute and piano, and some shorter choral works. Many of the song accompaniments have been orchestrated.

Aubert has been active, not only as composer and pianist, but also as critic and teacher. He has written a *Treatise on Harmony.* E. B.

AUBERT, Pierre François Olivier (*b.* Amiens, *c.* 1763; *d. circa* 1830), violoncellist, for 25 years member of the orchestra of the Opéra-Comique at Paris. He published two good instruction books for the violoncello at a time when a work of that kind was much needed. He wrote also études, duets and sonatas for violoncello, and a pamphlet entitled *Histoire abrégée de la musique ancienne et moderne*, 1827. M. L. P.

AUBÉRY DU BOULLEY, Prudent Louis (*b.* Verneuil, Eure, Dec. 9, 1796; *d.* there, Feb. 1870), pupil of Monsigny, Méhul and Cherubini, was at the Paris Conservatoire till 1815. He composed one opera, a serenade for orchestra, chamber music, PF. pieces, songs, a guitar-tutor, a *Grammaire musicale* (1830), *Des Associations musicales en France* (1839), *La Société Philharmonique de l'Eure* (1859).

Bibl.—J. de l'Avre, *A. du Boulley*, 1896.

AUBRY, see Jean-Aubry.

AUBRY, Pierre (*b.* Paris, Feb. 14, 1874; *d.* Dieppe, Aug. 31, 1910), a distinguished musical paleographer in the domain of mediæval music, orientalist, and lecturer on musical history at the École des Hautes Études Sociales at Paris. He wrote *Huit Chants héroïques de l'ancienne France* (1896), *Mélanges de musicologie critique*, *Essais de musicologie comparée*, and many more important works. Many mediæval systems of melody notation were first made known by Aubry. (See Trouvère.)

AUDRAN, Edmond (*b.* Lyons, Apr. 11, 1842; *d.* Tierceville, Aug. 17, 1901), a composer of light opera, son of Marius Audran (1816–57), composer and tenor singer.

Educated at the École Niedermeyer, Paris, he obtained in 1859 the prize for composition. In 1861 he became organist of the church of St. Joseph, Marseilles. His compositions include a Funeral March on the death of Meyerbeer, played at the Grand Theatre, Marseilles; a Mass produced in 1873 at the above church, and later at St. Eustache, Paris; a motet, 'Adoro te,' Paris (1882); 'Cour d'Amour,' song in Provençal dialect, and other songs. He made his name, however, principally as an 'opéra bouffe' composer, and among such works some had very wide popularity, especially 'La Mascotte,' played 1700 times in Paris alone up to 1897.

The following is a summary of Audran's operas:

'L'Ours et le pacha,' Marseilles (1862), his first work, founded on Scribe's well-known vaudeville of that name; 'La Chercheuse d'esprit,' Marseilles (1864), revived at the Bouffes, 1882, a new setting of an opera of Favart (1741); 'Le Grand Mogol,' Marseilles (1876), at Gaité, Paris (Sept. 19); in English, at the Comedy Theatre, London (Nov. 17, 1884); 'Les Noces d'Olivette,' Bouffes (Nov. 13, 1879); in English at the Strand as 'Olivette' (Sept. 18, 1880); 'La Mascotte,' Bouffes (Dec. 29, 1880); in English (Sept. 19) at Brighton and (Oct. 15, 1881) at the Comedy Theatre; 'Gillette de Narbonne,' Bouffes (Nov. 11, 1882), plot founded on Boccaccio; and 'La Cigale et le fourmi,' Gaité (Oct. 30, 1886); in English, Lyric Theatre (Oct. 9, 1890); 'Miss Helyett' (1890); in English as 'Miss Decima,' Criterion (July 23, 1891); 'L'Œuf rouge' (1890); 'L'Oncle Célestin' (1891); 'Article de Paris' (1892); 'Sainte Freya' (1892); 'Madame Suzette' (1893); 'Mon Prince' (1893); 'L'Enlèvement de la Toledad' (1894); 'La Duchesse de Ferarre' (1895, not very successful); 'Photis' (Geneva, 1896); 'La Poupée' (1896); in English at Prince of Wales's Theatre (Feb. 24, 1897); 'Monsieur Lohengrin' (1896); 'Les Petites Femmes' (1897); 'Le Curé Vincent' (1901) posthumous and unsuccessful. A. C.

AUER, Leopold (*b.* Veszprém, Hungary, June 7, 1845), an eminent violinist and still more eminent teacher, pupil of Ridley Kohne at Budapest, of Dont at the Vienna Conservatorium, 1857–58, and afterwards of Joachim at Hanover. He was orchestral leader at Düsseldorf, 1863–65, and at Hamburg, 1866–67. In 1868 he accepted the post of violin professor at the Imperial Conservatorium, St. Petersburg, in succession to Wieniawski, and remained there until 1917. During this period he was an occasional conductor, 1885–90, of the Symphony Concerts given by the Imperial Musical Association, and soloist at the court of three Tsars, Alexander II., Alexander III. and the unfortunate Nicholas II., by whom he was knighted in 1894. One of his functions as court violinist was the regular performance of a violin solo in the Ballet at the Imperial Opera House, for which special work he received from the Tsar an annual stipend equivalent to about £300 of our money. It was traditional at St. Petersburg to engage a famous violinist for this purpose, Auer's predecessors being Vieuxtemps and Wieniawski, and as a consequence Tchaikovsky and other composers of ballet music wrote some fine numbers for violin solo.

As soloist he gave notable interpretations of all the classical concertos, as well as that by Tchaikovsky, which was composed for him, and was no less successful as a chamber-music player, appearing in London several years in succession at Ella's Musical Union Concerts in the seventies. In St. Petersburg he founded a quartet of which Charles Davidov was the violoncellist until his (Davidov's) death in 1889, and since then has concentrated upon teaching the violin. In London he had a studio during the summer 1906–11, and in Dresden (Loschwitz) 1912–14. He left Petrograd after the first revolution, May 1917, toured in Scandinavia till Feb. 1918, when he sailed for New York, in which city he has since been

active and unprecedentedly successful as a teacher. Among his pupils are to be found the names of Mischa Elman, Jascha Heifetz, Efrem Zimbalist, Toscha Seidel, Kathleen Parlow and Isolde Menges.

Like Joachim, he plays a great deal to his pupils during lessons, but is careful not to stifle individuality; hence the variety of style to be noticed in the playing of the artists he has launched into the world.

His works and arrangements, though not of major importance, are full of charm. He has also published *Violin Playing as I teach it* (New York, 1921) and *My Long Life in Music* (New York, 1923). W. W. C.

AUFFSCHNAIDTER (AUFSCHNAITER), BENEDIKT ANTON,' Kapellmeister at the cathedral of Passau from *c.* 1695-1730, published 'Cymbalum Davidis,' vesper-psalms *a* 4 v. with strings, 1729; 'Aquila clangens,' 4-part offertories with strings, 1719; 'Concorsa discordia,' Sonatas *a* 2 violins, 2 violas, violoncello (Noribg., 1695); masses and other church music; 6 overtures, etc. (*Eitner.*)

AUFLÖSUNGSZEICHEN, the German name of the sign for the natural, the sharp and the flat, when these are used to restore the original notes after their temporary alteration by means of ACCIDENTALS (*q.v.*) M.

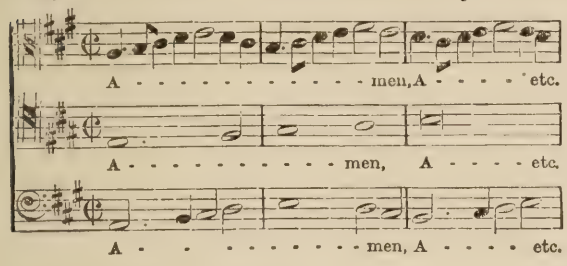
AUFTAKT (Ger.). See UP-BEAT; RHYTHM.

AUGARTEN, the well-known public garden on the Au, or meadow, between the Danube and the Donau-Canal, in the Leopoldstadt suburb of Vienna, interesting to the musician from its having been, like our own Vauxhall and Ranelagh, the place of performance—often first performance—of many a masterpiece. It was dedicated to the public by the Emperor Joseph II., and was opened Apr. 30, 1775. At first it appears to have been merely a wood; then a garden—'the Tuileries garden of Vienna'—but after a time a concert-room was built, and in 1782 summer morning concerts were started by Martin, a well-known entrepreneur of the day, in association with Mozart, then at the height of his genius. Mozart mentions the project in a letter (May 18, 1782) to his father, and the first series of the concerts opened on May 26, under brilliant patronage, attracted alike by the novelty of music so nearly in the open air, by the beauty of the spot, and by the excellence of the music announced. The enterprise changed hands repeatedly, until, about the year 1799, the concerts were directed by Schuppanzigh, the violin-player, of Beethoven notoriety. They did not, however, maintain their high character or their popularity, but had to suffer the inevitable fate of all similar institutions which aim over the heads of those whom they wish to attract. In 1813 they were in the hands of the 'Hof-Traiteur' and Wranitzky the musician. By 1830 performers of eminence had ceased to appear. But the musical glories of the Augarten cannot be forgotten. Here Mozart was to be seen and heard in at least one series of concerts, at each of which some great symphony or concerto was doubtless heard for the first time; and here Beethoven produced one (if not more) of his masterpieces —the Kreutzer sonata, which was played there (May1803) by Bridgetower and himself, the two first movements being read from autograph and copy dashed down only just before the beginning of the concert. Besides this, his first 5 symphonies, his overtures, and 3 first pianoforte concertos were stock pieces in the programmes of the Augarten. The concerts took place on Thursday mornings, at the curiously early hour of half-past seven, and even seven. Mayseder, Czerny, Stein, Clement, Linke, Moscheles, and many other great artists were heard there. (The above information is obtained from Hanslick's *Concertwesen in Wien*, and Ries's *Notizen.*) G.

AUGENER LTD., Music Publishers, proprietors of *Augener's Edition* and of *The Monthly Musical Record* (see PERIODICALS, MUSICAL), 18 Great Marlborough Street, 63 Conduit Street, and 57 High Street, Marylebone, London, W.1.

This business was founded at 86 Newgate Street as Augener & Co., in 1853, by George Augener, who retired from the business in 1910, and died Aug. 25, 1915, in his eighty-sixth year. In 1896 the trade name and goodwill of Robert COCKS & Co. (*q.v.*), founded 1823, was acquired. The business was incorporated as a company, Oct. 11, 1904.

Since 1873 the company and its predecessor have held the sole agency for *Peters' Edition.* The company is assignee of all works in this edition which enjoy copyright protection in Great Britain.



In 1878 the firm began printing its own publications at 6 Lexington Street, W.1; the premises were added to from time to time until 1911, when a modern printing works was built at 287 Acton Lane, W.4. Between 1873 and 1905 nineteen medals and certificates for excellence were secured at various exhibitions in all parts of the world.

For the last 40 years the firm has been particularly identified with the publication of educational music, and especially with pianoforte music, and in the last 30 years many volumes of music for various examining bodies have been published.

The catalogue of *Augener's Edition* embraces a very large collection of the classics, as well as a considerable number of works by modern composers; there is also an extensive catalogue of sheet music.

AUGMENTATION. This term is used to express the appearance of a musical theme in notes of double the original value, *e.g.* crotchets for quavers, minims for crotchets, etc., and is

thus the opposite of DIMINUTION. It is frequently used in fugal imitation, or canon. Dr. Benjamin Cooke's celebrated canon by double

augmentation (engraved on his tombstone) begins as above, and is a salient instance.

F. A. G. O.

AUGMENTED INTERVAL, an interval which is extended by the addition of a semitone to its normal dimension. (See INTERVAL.)

E. P.

AUGUEZ, NUMA (*b.* Saleux, on the Somme, 1847; *d.* Paris, Jan. 27, 1903), eminent French baritone. He entered the Paris Conservatoire in 1867, and sang at the Opéra from 1871–1881; and in Italy in 1883 and 1884. When Lamoureux made his brief but famous experiment of producing 'Lohengrin' at the Eden Théâtre he sang the part of the herald with conspicuous success. It was at concerts that he made his greatest effect, and all over France his beautiful voice, excellent style and perfect diction were universally admired. He sang often in Paris in the Ninth Symphony of Beethoven and Berlioz's 'Damnation de Faust.' He was appointed one of the professors of singing at the Paris Conservatoire in 1899 in succession to Archaimbaud. G. F.

AUGUSTINUS, AURELIANUS, SAINT, one of the four great Church Fathers (*b.* Tagaste, Numidia, Nov. 13, 354; *d.* Hippo (now Bona), Aug. 28, 430). He wrote 6 books, 'De Musica,' which are important for the understanding of the various metres of the early Christian period. St. Augustine was baptized in 387 by St. Ambrose, his personal friend and teacher.

E. V. d. S.

AULÍ, JUAN (*b.* Felanitx, Mallorca, 1797; *d.* there, 1867), a Dominican monk of precocious musical talent, who had already been an organist when, as a youth, he entered the order. On the dissolution of the Spanish monasteries in 1823, he wandered over Spain, playing the organ for a time at the Church of Our Lady of Atocha at Madrid. He returned to Mallorca; but being expelled once more in 1835, abandoned his Orders and became an organist at Gibraltar. The climate, however, drove him back to the Balearic Isles, where he spent the rest of his life in farming, varied by the practice of music. His works are severe in style and frankly monastic in feeling; a 'Misa de Coro,' with organ accompaniment, was published recently by Noguera. His two operas have never been performed. J. B. T

AULIN, TOR (*b.* Stockholm, Sept. 10, 1866; *d.* there, Mar. 1, 1914), most distinguished of the Scandinavian violinists since Ole Bull, leader of the Royal Opera, 1889, 1902, and afterwards conductor of the Stockholm Kunstverein.

He founded in 1887 the Aulin String Quartet, touring Russia and Germany as well as Sweden. His colleagues were A. G. Molander, R. Claeson, S. Blomguist and the pianist-composer W. Stenhammer. Among his compositions are an Orchestral Suite, 'Meister Oluf,' op. 22, and 3 violin concertos, of which one was published (No. 3 in C min., op. 14); but he is best known by his shorter pieces for piano and violin, some of which were played by Auer and Elman, displaying sound musicianship. W. W. C.

AULOS (Gr.), generally translated flute, but apparently referring quite as often to a reed instrument. See FLUTE.

AURELIANUS, REOMENSIS (*c.* middle of 9th cent.), a monk of Réomé or Moutier St. Jean, in the diocese of Langres, who wrote *Musica disciplina*, containing the earliest information about the melodic peculiarities of the 8 church-modes and the influence of the rhythmic structure of the text upon the construction of the melody. The treatise has been republished in *Gerbert*, i. 27. Fragments are contained in an 11th-century MS. (Ar. 77. B.M.) E. V. d. S.

AURIC, GEORGE (*b.* Lodève, Hérault, Feb. 15, 1899), studied first at the Paris Conservatoire, and afterwards at the Schola Cantorum under the direction of Vincent d'Indy.

His earliest attempts at composition betrayed a great admiration for the methods of Maurice Ravel, but when 18 years of age he came under the influence of Erik Satie and was, with Durey and Honegger, one of the original founders of the group which, by the subsequent adhesion of three others, soon became widely known as the 'Six.' The group avowed no common method, that of Auric, for instance, having some kinship with that of Poulenc, his contemporary, but none with those of Durey and Honegger, his seniors. He adopted in those days Satie's precept that in simplicity lies nowadays the greatest audacity, and flirted for a time ironically with the vernacular of popular music ('Adieu, New York,' fox-trot). Later compositions show this to have been a passing phase. Of these the work generally considered to be at this date the most representative is the overture and dances composed as incidental music to *Les Fâcheux* (Molière), and subsequently converted into a ballet. Although the frequent harshness of his polyphony is an attribute which he shares with others of Satie's disciples, and he has recently been strongly influenced by Stravinsky, his style is steadily developing towards an emancipated personal quality reflecting his musical outlook, which is alert, intelligent and perhaps somewhat

sceptical. He contributes musical criticism to the *Nouvelles littéraires.* E. E.

LIST OF WORKS

SONGS.—Trois Interludes; 8 Poèmes; 'Les Joues en feu,' 3 Poèmes; 'Alphabet,' 6 Poèmes; 5 Melodies.
PIANO.—Trois Pastorales; 'Adieu, New York,' Fox-Trot; Sonatine.
PIANO DUET.—Chandelles romaines.
ORCHESTRA.—Fox-Trot; Nocturne; Suite.
STAGE.—'Les Noces de Gamache,' ballet; 'La Reine de cœur'; 'Les Fâcheux'; 'Les Pélicans'; 'Les Matelots,' ballet; incidental music to 'Malbruck s'en va-t-en guerre' and 'Mariage de M. le Trouhadec.'

AURISICCHIO, ANTONIO (*d. circa* 1779), a composer of the Roman school, maestro di cappella at the Spanish chapel of S. Giacomo, Rome. He wrote masses, psalms and other church music, also secular vocal music. Some airs by him were sung in the opera 'Attalo,' performed in London, 1758. Before his death he was custodian of the library of the Accademia di San Cecilia, Rome. E. V. D. S.

AURRESKU, see SONG, subsection SPAIN (5).

AUSDRUCK, see EXPRESSION.

AUSGEWÄHLTE MADRIGALE und Mehrstimmige Gesänge berühmter Meister des 16.–17. Jahrhundert (Select Madrigals and Part-songs by composers of the 16th and 17th centuries) is the name of a series of 50 madrigals, etc., edited by W. Barclay Squire, and published by Breitkopf & Härtel. The series contains a liberal selection of English works together with specimens of the Flemish, Italian and German schools. The original texts, whether in English, Italian or French, are given and supplemented with a translation into German.

AUSTIN, (1) FREDERIC (*b.* London, Mar. 30, 1872), is a most versatile musician who has made a high reputation as baritone singer, as composer, and as the arranger of the music for the brilliant revivals of 'The Beggar's Opera' and 'Polly.'

Austin comes of a musical family; his mother and his uncle, the late Dr. W. H. Hunt of Birkenhead, were his first teachers, and he began his career as an organist. After holding several church appointments he became a teacher of harmony, etc., at the Liverpool College of Music. Meantime he studied singing under Charles Lunn, made his début in London in Mar. 1902, but continued his teaching work at Liverpool until 1906. His fine voice and strong interpretative instinct soon brought him important engagements. He not only took leading parts at the old-established festivals (his performance in 'Elijah' was much admired), but wherever modern music was brought forward Austin's aid was sought and given. He sang the solo part in the first English performances of Delius's 'Seadrift' (Sheffield Festival, 1908; London, 1909), and this was one among a number of instances in which his intelligent grasp of the newer music furthered its cause with the public. Himself a composer of ability he was naturally in specially close sympathy with contemporary English composers, whose songs he sang at his own recitals and at many of the more important concerts of London. His operatic career began decisively in 1908 when his singing of the part of Gunther in Richter's performances of 'The Ring' in English, at Covent Garden, created a most favourable impression. He took important parts in Beecham's season at His Majesty's Theatre and at Covent Garden in 1910, singing in such widely different works as Strauss's 'Elektra,' 'Tales of Hoffmann,' 'Così fan tutte,' and D'Albert's 'Tiefland.' When the Beecham Opera Company was established (1915) he took leading bass-baritone parts in a wide repertory. It should also be remembered that he took an active share in the Glastonbury Festival movement (see BOUGHTON). When 'The Beggar's Opera' was revived at Hammersmith (June 1920) a large part of its success was undoubtedly due to his musical arrangement of the melodies and the delicate instrumentation for a small orchestra including the harpsichord. His own singing and acting as Peachum during the first part of its astounding 'run' was one of the best features in a brilliant cast. His work as arranger for the companion production of 'Polly,' two and a half years later (while 'The Beggar's Opera' was still running), was no less excellent. He did not, however, appear on the stage in 'Polly.' He accepted the post of 'artistic director' to the BRITISH NATIONAL OPERA COMPANY (*q.v.*) in 1924.

Austin's success in these several directions has tended to overshadow his work as a composer, but here too he has done serious and consistent work. His 'Spring' rhapsody for orchestra (Promenade Concerts, 1907) has been played with fair frequency, and a symphonic poem, 'Isabella,' was produced at Liverpool (1909) by the Musical League, one of the many organisations started for the furtherance of British music. A symphony in E, produced at Queen's Hall at one of Balfour Gardiner's concerts (1913), is his most ambitious work of the kind. Some chamber music and songs also deserve mention. C.

(2) ERNEST (*b.* London, Dec. 31, 1874), brother of the above, had reached the age of 33 years when he determined on a musical career. Previously he had been in the office of the Board of Trade and in business in the city. He had therefore but little definite early education in music, and he came to composition with a mind unfettered by conventions. In his large output there are signs that he has had to evolve a technical method of his own. He has experimented over a wide range of music from symphonic works for orchestra to small piano pieces intended for the schoolroom. He has shown a special predilection for music based on old English tunes. The best known of his orchestral works is a set of variations for strings on 'The Vicar of Bray' (op. 35), which

was produced at a Queen's Hall Promenade Concert (1910). In the finale of this genial work other well-known tunes are introduced in comical rivalry with the principal one. Austin has composed much chamber music which has been performed in London, though most of it remains in manuscript. Several trios, however, are published, and amongst them is a 'Phantasy on Old Tunes' (op. 65). Perhaps his most ambitious experiment is a Narrative Tone-Poem (in 12 parts) for organ on the subject of *The Pilgrim's Progress*; but in smaller designs, for example, the 'tone-stanzas' for piano and the songs, he has expressed himself with more spontaneity. (See *B. M. S. Ann.*, 1920.) C.

AUSTRAL, Florence (*b.* Melbourne, Australia, Apr. 26, 1894), a dramatic soprano, conspicuously successful in the part of Brünnhilde.

Her real name is Wilson, but from childhood she has been known by the name of her stepfather, Favaz. She won a scholarship at the Melbourne Conservatory (1914). In 1918 she studied in New York with Sibella and was offered a contract at the Metropolitan Opera House, which, however, was not accepted. Introduced to the Grand Opera Syndicate in London by Robert Radford, she was engaged for the Syndicate's season of 1921, but that season was abandoned. She made her first appearance at Covent Garden with the British National Opera Company on May 16, 1922, as Brünnhilde in 'The Valkyrie,' and followed this with the same part in 'Siegfried.' The exceptional beauty of her voice won her instant success. She added other important parts, notably Isolde and Aïda in subsequent seasons, and first sang at the Handel Festival, Crystal Palace, in 1923 and again in 1926. S. H. P.

AUSWAHL VORZÜGLICHER MUSIKWERKE, a collection of musical works in strict style, containing specimens by some 50 composers ranging from Palestrina to Haydn, published with the countenance of the *Königliche Akademie der Künste* of Berlin in 1840 (8vo, Trautwein). Some copies have an appendix including a dozen additional works.

AUTHENTIC. Such of the ecclesiastical modes are called authentic as have their sounds comprised within an octave from the final. (See Modes, Ecclesiastical.)

AUVERGNE, Antoine d', see Dauvergne.

AUXCOUSTEAUX (Hautcousteaux), (Artus, Arthur), a musician of the 17th century, whose biography is uncertain. According to his contemporary Gantez (*L'Entretien des muses*, 1643), he was born in Picardy; others (Magnin), linked him with the family Auxcousteaux of Beauvais, an assertion which comparatively recent research could not prove. He is also said to have come from St. Quentin (Gomart). There is, however, reason to connect him with the family Auxcousteaux of Amiens, as he is named priest of the diocese of Amiens on the registers of the Ste.-Chapelle. He was 'haute-contre' for 13 years in the chapel of Louis XIII., as appears from the preface of the French psalms of Godeau set to music by Auxcousteaux (1656, Pierre Le Petit), probably at the beginning of his career, 1613–27. At this last date, Fétis asserts he was singer at the church of Noyon. In any case, he occupied the post of 'maître de musique' at the cathedral of St. Quentin (preface of his Latin Psalms, 1631), and that of 'maître des enfants' (1633), probably in the place of Jean de Burnonville, who went to the Ste.-Chapelle at Paris (Gomart, *Notice historique de la cathédrale de St. Quentin*).

Auxcousteaux entered the Sainte-Chapelle, not as 'maître de musique,' but as clerk 'haute-contre,' June 24, 1634. He became chaplain-in-ordinary, 1637; then was temporarily in charge of the precentorship, May 7, 1639. On May 17, 1651, he was no longer in office, but he obtained a canonry at the church of St. Jacques-de-l'Hôpital on leaving the Sainte-Chapelle. He died in 1656, the year of the publication of the *Psaumes de David . . . mis en vers français par A. Godeau* (see preface). His works consist of sacred music, masses, 'Magnificat dans tous les tons,' Noëls, cantiques spirituels, chansons, etc. (see *Fétis*; *Q.-L.*).

Bibl. — Michel Brenet, *Les Musiciens de la Sainte-Chapelle du Palais* (1910). M. L. P.

AVERY, John (*d.* 1808), a celebrated organ-builder, who built a number of instruments between 1775 and 1808. Nothing whatever is known of his career beyond the fact that he died while engaged in finishing the organ of Carlisle Cathedral. The organs he is recorded to have built are:

St. Stephen's, Coleman Street, 1775; Croydon Church, Surrey, 1794 (destroyed by fire in 1866); Winchester Cathedral, 1799; Christ Church, Bath, 1800; St Margaret's Church, Westminster, 1804; King's College Chapel, Cambridge, 1804 (some of the earlier work of Dallam's organ was, no doubt, incorporated in this instrument, but the case is the original one, erected by Chapman & Hartop in 1606); Sevenoaks Church, Kent, 1798; Carlisle Cathedral, 1808. E. F. R.

AVERY BURTON, or BURNETT, see Burton, Avery.

AVILEZ, Manoel Leitão de (*b.* Portalegre, beginning of 16th cent.), a Portuguese composer who became in 1625 maestro de capilla to the cathedral of Granada. The library of John IV. (destroyed in the Lisbon earthquake of 1755) contained works by him for 8 and 12 voices. J. B. T.

AVISON, Charles (*b.* Newcastle-upon-Tyne, *c.* 1710; *d.* there, May 9, 1770), an English musician whose name is remembered chiefly by a critical essay in æsthetics, remarkable for its freedom from the accepted views of the time.

When a young man Avison visited Italy for

the purpose of study, and after his return to England became a pupil of Geminiani. On July 12, 1736, he was appointed organist of the church of St. Nicholas (now the Cathedral) in his native town. In addition to his musical attainments, he was a scholar, and a man of some literary acquirement. In 1752 he published the work by which he is best known, *An Essay on Musical Expression.* It contains some judicious reflections on the art, and throughout the work we find the highest encomiums on Marcello and Geminiani, frequently to the disparagement of Handel. In the following year it was answered anonymously by Dr. W. Hayes, the Oxford professor, in a pamphlet entitled *Remarks on Mr. Avison's Essay on Musical Expression.* Before the conclusion of the same year, Avison republished his *Essay* ,with a reply to these *Remarks*, in which he was assisted by the learned Dr. Jortin, who added *A Letter to the Author, concerning the Music of the Ancients.* In 1757 Avison joined John Garth in editing an edition of Marcello's Psalms, adapted to English words. He prefixed to the first volume a Life of Marcello, and some introductory remarks.

As a composer, Avison is known, if at all, by his concertos. Of these he published 5 sets (50 concertos in all) for a full band of stringed instruments, some quartets and trios, and 3 volumes of sonatas for the harpsichord and 2 violins—a species of composition little known in England until his time. The once favourite air 'Sound the loud timbrel' is found in one of the concertos. Geminiani held his pupil in high esteem, and in 1760 paid him a visit at Newcastle. Avison is buried in the churchyard of St. Andrew there. He was succeeded as organist of St. Nicholas by his son EDWARD (*d.* 1776) who was followed by Matthias Hamdon. (Hawkins, *Hist.*; Kippis, *Biog. Brit.*; Brand, *Newcastle*, etc.) E. F. R.

AVISON EDITION, the name of a collection of music issued under the auspices of the SOCIETY OF BRITISH COMPOSERS (*q.v.*). The publication was first undertaken by Breitkopf & Härtel, subsequently by Novello, and from 1914 to the dissolution of the Society, by Cary. It is impossible to give a complete list of the edition or of the composers represented. The more important publications were :

Bax, Arnold	Fatherland, tenor solo, chorus and orch.
	PF. trio.
Bell, W. H.	Arcadian Suite, full score.
Dale, B. J.	Suite for vla. and PF.
	Sonata for PF.
Gardiner, H. Balfour .	String Quartet in 1 movement.
Gatty, N. C.	Opera, 'Duke or Devil.'
	Sonata, vln. and PF.
Hurlstone, W. Y. . .	Swedish Variations, full score.
	Sonata, bassoon (or v'cl.) and PF.
	Four characteristic pieces, clarinet (or vla.) and PF.
McEwen, J. B. . . .	'Grey Galloway,' for orch., full score.
Mackenzie, A. C. . .	Suite, vln. and orch., full score.
Warner, H. Waldo . .	Phantasy for string quartet, No. 2.
Williams, R. Vaughan .	'On Wenlock Edge,' song-cycle, tenor and PF. (*ad lib.* string quartet).

It may be added that some of the works in this edition have been transferred by their composers to other publishers.

AVOGLIO, SIGNORA, was one of those who accompanied Handel in his visit to Ireland, at the end of 1741. In the newspapers of the time she is called 'an excellent singer,' and she had the honour of sharing with Mrs. Cibber the soprano music of 'Messiah' at its first and succeeding performances in Dublin. Handel, in a letter to Jennens, Dec. 29, 1741, says—'Sig^ra^ Avolio, which I brought with me from London, pleases extraordinary.' She sang again in 'Messiah,' when given in London, after Handel's return from Dublin, dividing the soprano part with Mrs. Clive. Before this time, she had sung with success in 'L' Allegro, il Penseroso, ed il Moderato'; and she appeared subsequently in 'Semele' and in 'Samson,' 1743. In this last she sang the famous 'Let the bright Seraphim' at the first performance of the oratorio, Feb. 18. J. M.

AVONDANO, PEDRO ANTONIO (*b.* Lisbon; *d.* there, 1782), a Portuguese composer of operas and oratorios, who played the violin in the royal band and afterwards joined a monastic order. After the Lisbon earthquake of 1755 he took an important part in the reorganisation of the brotherhood of Santa Cecilia, to which most of the musicians belonged. His father was Pietro Giorgio Avondano, a Genoese musician who settled in Lisbon.

Among his works are :

1. Il Mondo della Luna (1765). Comic opera, in which the female parts were sung by Italian *castrati*. (Bibl. da Ajuda; MS. score.)
2. Il Voto de Jefte, dramma sacro . . . posto in musica dal sig. Pietro Antonio Avondano, Virtuoso di Camera di S.M.F., Lisbon, 1771. (Libretto only.)
3. Adamo ed Eva, dramma sacro, . . . Lisbon, 1772. (Libretto only.)
4. Sinfonia, for 2 vlns., viola and v'cl. (MS. Brussels, Bibl. du Conservatoire.)

Besides these, two or three scenas exist from unidentified operas. Avondano is also said to have composed pieces for the harpsichord and a small quantity of church music. J. B. T.

AXMAN, EMIL (*b.* Rataje, near Kroměříž, Moravia, June 3, 1887), composer and critic, studied at a school in Kroměříž, and afterwards the science of music at the university in Prague. He was a pupil of Vít. Novák for composition. He took the degree of Doctor of Philosophy in 1912, and is at present (1926) the musical archivist of the National Museum, Prague.

Beginning with a series of male voice choruses, some Moravian national songs and minor works for piano, he wrote among more important works :

Two male choruses 'Z vojny' (From the war), 'Měsíčné noci' (Moon-nights); for mixed choir, 'Vánoce Chudých' (Christmas of the Poor); the song-cycles with orchestral accompaniment, 'Vzpomínámí' (Remembering), 'Duha' (The Rainbow); Symphonic Poems, 'Smutky a naděje' (Griefs and Hopes), 'Jasno' (Serenity); two sonatas for piano; (1) Appassionate, (2) 'Památce velkého člověka' (To the memory of a great man); sonatina for piano, and a sonata for violin and piano.

As author and critic he wrote a series of essays, *Moravské opery v XVIII. stol* (Moravian operas in the 18th century); *Jos. L. Zvonař*, and other articles, including a book entitled,

Morava v české hudbě XIX století (Moravia in the Czech music of the 19th century). B. V.

AYLWARD, (1) THEODORE, Mus.D. (*b.* 1730; *d.* London, Feb. 27, 1801), a composer chiefly of glees and other songs. He became organist of Oxford Chapel, London, about 1760; of St. Lawrence, Jewry, in 1762; and of St. Michael's, Cornhill, 1768. In 1769 the Catch Club awarded him the prize medal for his serious glee, 'A cruel fate,' a surprising decision, as one of the competing compositions was Arne's fine glee, 'Come, shepherds, we'll follow the hearse.' On June 5, 1771, Aylward was appointed professor of music in Gresham College. In 1784 he was nominated one of the assistant directors of the Commemoration of Handel. In 1788 he succeeded Edward Webb as organist and master of the choristers of St. George's Chapel, Windsor. Aylward published 'Six Lessons for the Organ, op. 1'; 'Elegies and Glees, op. 2'; 'Six Songs in Harlequin's Invasion, Cymbeline, Midsummer Night's Dream,' etc.; and 'Eight Canzonets for two soprano voices.' Two glees and a catch by him are included in Warren's collections. Hayley, the poet, inscribed some lines to his memory (see West's *Cath. Org.* p. 166). He is buried at St. George's Chapel, Windsor. Aylward's great-great-nephew, (2) THEODORE EDWARD (*b.* Salisbury, 1844), was a pupil of S. S. Wesley, and was appointed organist of Llandaff Cathedral in 1870, of Chichester Cathedral, 1876, and of St. Andrew's Church and the Public Hall, Cardiff, 1886. He edited the *Sarum Hymnal* in 1870 (West's *Cath. Org.* p. 24).

W. H. H.

AYRE, old English spelling of AIR (*q.v.*).

AYRTON, the name of a family of English organists, two brothers and their sons who flourished in the 18th century.

A certain barber-surgeon of Ripon of this name, who was magistrate of the borough and Mayor in 1760, had two sons:

(1) EDMUND (*b.* Ripon, 1734; *d.* Westminster, May 22, 1808), the younger but more distinguished in his profession, studied with Dr. Nares, organist of York Minster. In 1754 he was elected organist, auditor and *rector chori* of the collegiate church of Southwell, where he remained until 1764, when he was appointed a gentleman of the Chapel Royal. In 1767 he was installed as a vicar-choral of St. Paul's, and in 1780 became one of the lay-clerks of Westminster Abbey. In 1780 he was promoted by Bishop Lowth to the office of master of the children of His Majesty's chapels, on the resignation of Dr. Nares. In 1784 the University of Cambridge created him Doctor in Music, and he was admitted *ad eundem* by the University of Oxford in 1788. The anthem by which he obtained his degree, 'Begin unto my God with timbrels,' was performed in St. Paul's Cathedral, July 28, 1784, the day of general thanksgiving for the termination of the American revolutionary war, and was afterwards published in score. Ayrton's contributions to the Church consist of two complete Morning and Evening Services, and several anthems. He is buried in the north cloister of Westminster Abbey.

(2) WILLIAM (*b.* 1726; *d.* Feb. 2, 1799), the elder brother, was organist of Ripon Cathedral, 1748–99. He was succeeded by his son,

(3) WILLIAM FRANCIS MORRALL (*b.* Chester, 1750), who, appointed by the Dean and Chapter on June 25, 1799, retired only three years later, in 1802.

(4) NICHOLAS THOMAS DALL (*b.* 1782; *d.* Oct. 24, 1822), another son of William (2), succeeded his brother as organist of Ripon and held the appointment till his death.

(5) WILLIAM (*b.* London, Feb. 24, 1777; *d.* Westminster, Mar. 8, 1858), son of Edmund (1), made some mark as a writer on musical subjects. He married the daughter of Dr. S. ARNOLD (*q.v.*). In the palmy days of the *Morning Chronicle* Ayrton was its honorary musical and literary critic from 1813–26; and he wrote the reviews of the Ancient Concerts and Philharmonic Society in the *Examiner* from 1837–51, also gratuitously. He was a Fellow of the Royal and Antiquarian Societies, and an original member of the Athenæum Club. He was one of the promoters and members of the Philharmonic Society at its foundation in 1813, and subsequently a director. More than once he held the important post of musical director of the King's Theatre, and in that capacity had the merit of first introducing Mozart's 'Così fan tutte' and 'Zauberflöte' (1811), and 'Don Giovanni' (1817) to an English audience. According to a writer of the period he twice, if not oftener, regenerated that theatre, when its credit was weakened by repeated failures. In 1823 he started, in conjunction with Clowes the printer, the publication of the *Harmonicon*, a monthly musical periodical. This was followed in 1834 by the *Musical Library*, a collection of vocal and instrumental music extending to 8 volumes. A supplement containing biographical and critical notices, theatrical news, etc., was issued monthly, making 3 extra volumes. He wrote the musical articles for the *Penny Cyclopædia*; the chapters on music in Knight's *Pictorial History of England*; and the musical explanations for the *Pictorial Shakespeare*. His latest work was a well-chosen collection of 'Sacred Minstrelsy,' published by J. W. Parker, in 2 vols. (See *D.N.B.* and West's *Cath. Org.*)

E. F. R., with addns.

AYTON, FANNY (*b.* Macclesfield, 1806), opera singer, was taught singing by Manielli at Florence, and first appeared in Italy, so successfully that Ebers engaged her for the season of 1827 at the King's Theatre, at a salary of £500.

She made her appearances there as Ninetta in 'La Gazza' (Feb. 23), and as Fiorilla in 'Il Turco in Italia.' In the same year she sang at Drury Lane in an English version of 'Il Turco' and as Rosetta in 'Love in a Village.' In 1829 she sang at the Birmingham Festival, and in opera with Malibran under Michael Costa. In 1831 she sang again at the King's Theatre for the season, as Creusa, in 'Medea' (Simon Mayr), and she played Isabel in a mutilated version of 'Robert' ('The Dæmon, or the Mystic Branch,' Feb. 21, 1832), after which she disappears from view. A portrait of her, drawn and engraved by B. Holl, was published in July 1828.

A. C.

AZOR AND ZEMIRA, or THE MAGIC ROSE. (See ZEMIRE.)

AZZAJOLO (AZZAJUOLO), FILIPPO (*b.* Bologna), published between 1557 and 1569 3 books of 'Villote del fiore' *a* 4 v., containing madrigals, bergamascas, etc., by various authors (*Eitner*).

AZZOPARDI, FRANCESCO (latter half of 18th cent.), a learned Italian theorist from whose work, *Il musico prattico*, published in the form of a French translation only (Paris, 1786) Cherubini quotes some interesting examples in his *Course of Counterpoint and Fugue*. Azzopardi held the appointment of maestro di cappella in Malta.

W. S. R.

B

B, the name of the 7th degree of the natural scale of C. In French and Italian it is called *Si*, and in German *H*, the name *B* being given to our B♭. The reason of this anomalous arrangement is explained in the article ACCIDENTALS. (See also NOTATION; HEXACHORD.)

The further nomenclature is as follows:

ENGLISH.	FRENCH.	GERMAN.	ITALIAN.
B flat.	Si bémol.	B (Be).	Si bemolle.
B double flat.	Si double bémol.	Bes.	Si doppio bemolle.
B sharp.	Si dièze.	His.	Si diesis.
B double sharp.	Si double dièze.	Hisis.	Si doppio diesis.

In the modal system B is theoretically the final of Modes XI. and XII. (Locrian and Hypolocrian). (See MODES.)

Wind instruments said to be 'in B' are in B flat.

BABÁN, GRACIÁN, a Spanish composer of church music, who was maestro de capilla in the cathedral at Valencia from 1657 to 1675 or 1676. He developed the baroque style of polyphonic church music with large numbers of voices, which had been practised before him at Valencia by COMES. Eslava printed a psalm for eight voices and continuo; among his MS. works are the following:

1. *Valencia Cathedral,*
   MS. 154. Hymns, Masses, Psalms, Sequences and Motets (6 to 14 voices and continuo).
2. *Valencia, Colegio del Patriarca.*
   Dixit Dominus, Beatus vir, Laudate Dominum, Magnificat, Mass, Lamentation 1 for Good Friday (all for 8 voices, with continuo).
3. *Segorbe Cathedral.*
   Missa de defunctis (8 and 5 v.). 2 Masses (8 and 12 v.), 4 Lamentations, 16 Psalms, 3 Motets for Holy Week.
4. *Málaga Cathedral.*
   2 Psalms (8 v. and 4 v.) for the Adoration of the Cross.
5. *Munich, Hofbibliothek.*
   2 Lamentations for 2 choirs and organ.

A portrait of Babán is to be seen in Valencia Cathedral. Our Lady is depicted sheltering the composer and his choir beneath her mantle, while they watch how Christ chastises the world with pestilence, represented by tongues of fire. J. B. T.

BABBINI, MATTEO (*b.* Bologna, Feb. 19, 1754; *d.* there, Sept. 22, 1816), a celebrated Italian tenor.

He was intended for the practice of medicine, but, on the death of his parents, went to live with an aunt, the wife of a musician named Cortoni, who taught him. His début was so brilliant that he was at once engaged for the opera of Frederick the Great. After staying a year at Berlin, he went to Russia, and entered the service of Catherine II. In 1785, he sang with success at Vienna; and in the next season in London, with Mara, when he took, though a tenor, the first man's part, there being no male soprano available. As far as method and knowledge went, he was a very fine singer, but he did not please the English *cognoscenti*; his voice was produced with effort, and was not strong enough to have much effect. He sang again, however, the next year (1787), and returning to Italy in 1789, appeared in Cimarosa's 'Orazi,' and was afterwards engaged at Turin. In 1792, the King of Prussia recalled him to Berlin, where he distinguished himself in the opera of 'Dario.' During the next ten years he sang at the principal theatres of Italy, and appeared in 1802, at Bologna, though then fifty years old, in the 'Manlj' of Niccolini, and Mayr's 'Misteri Eleusini.' His friend, Doctor Pietro Brighenti, published *Elogio di Matteo Babbini*, Bologna, 1822. J. M.

BABELL, WILLIAM (*b. circa* 1690; *d.* Canonbury, Sept. 23, 1723), was celebrated for his proficiency on the harpsichord, and was also a good performer on the violin. He was a member of the royal band, and for some years organist of All Hallows, Bread Street.

His father, a bassoon-player, and Dr. Pepusch were his teachers. Taking advantage of the rise and popularity of the opera in England, he was the first to arrange the favourite airs as lessons for the harpsichord. In this he was highly successful, and his arrangements of 'Pyrrhus and Demetrius,' 'Hydaspes,' 'Rinaldo,' etc., were standard works of their class at the beginning of the 18th century. Babell's fame reached to France, Holland and Germany, where some of his works were printed. He was the author of several 'Suits of the most celebrated Lessons, collected and fitted to the Harpsichord or Spinnet'; 'Twelve Solos for a Violin or Hautboy'; 'Twelve Solos for the German Flute or Hautboy'; 'Six Concertos for small Flutes and Violins,' and a MS. concerto grosso for 2 violins with string accompaniment, in the town library at Hamburg. He was buried in the church of which he had been organist (see Hawkins, *History*). E. F. R.

BABORÁCKA, a Bohemian national dance, resembling the Styrienne. E. v. d. S.

BABORÁK, a Bohemian national dance, consisting of 3 eight-bar repeated sentences, the first and third being in the key of the tonic, the second in the key of the dominant. Each of these sentences is subdivided into 2 four-bar phrases, of which the first two are in 3-4, the other two in 2-4 time. E. v. d. S.

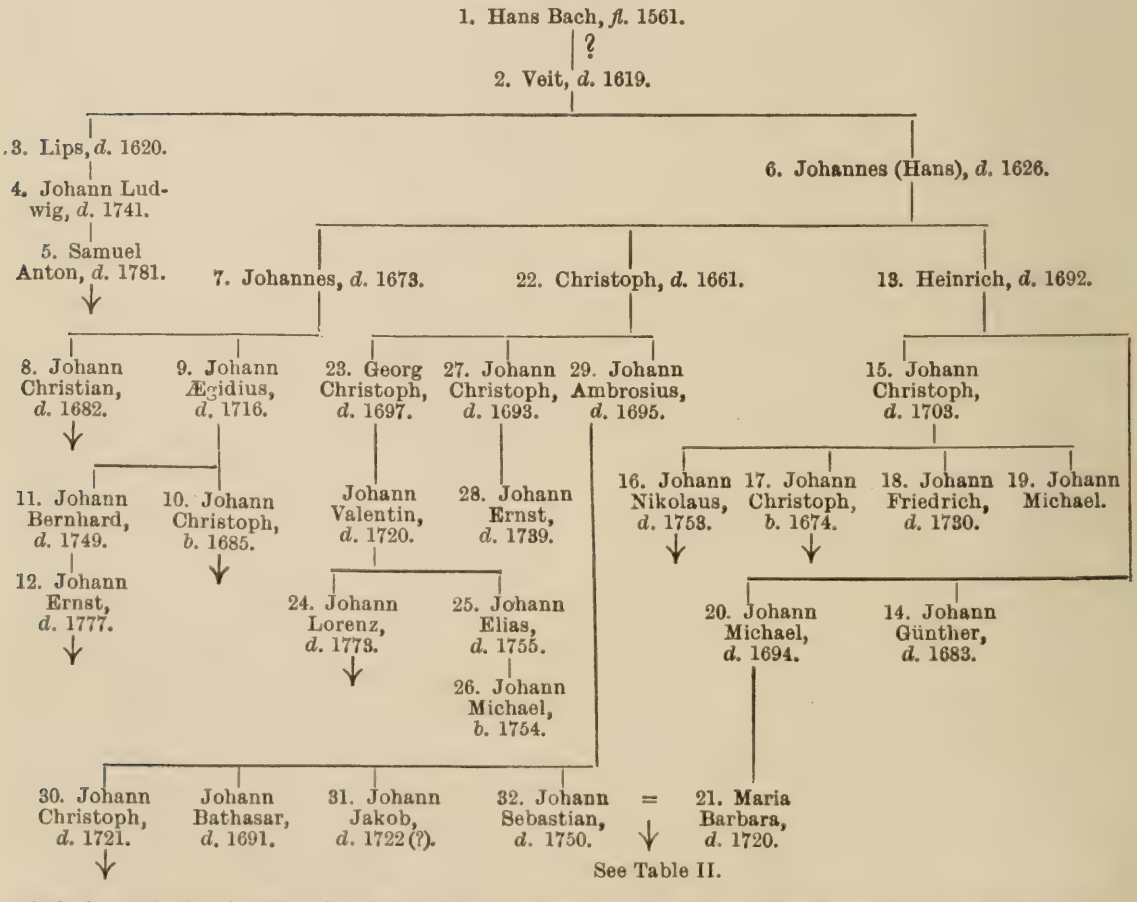
BACCHIUS THE ELDER (*c.* A.D. 130),[1] a Greek author, who wrote a musical catechism in form of a dialogue: *Isagoge musicae artis*; first published by Mersenne in 1623, with a French translation in his *Harmonie universelle*, 1627; also one by Ruelle, 1896. The treatise, not in dialogue form, which was published by Fr. Bellermann in 1841 and translated into French by A. J. H. Vincent as that of Bacchius, is not by him but by his contemporary, Dionysios. E. v. d. S.

[1] Riemann says 4th century A.D.

BACCUSI (Baccusio, Bacchusi), Ippolito (*b.* Mantua before middle of 16th cent.; *d.* Verona, 1609). Cerreto asserts that he was already composing in 1550, but this appears too early. In 1570 he was at Ravenna, but his first book of madrigals appeared at Verona where, in 1572, he was maestro di cappella of the Signori di Spilimbergo, and at the church of San Eufemia. In 1584 and 1587 he calls himself maestro di cappella at the cathedral of Mantua, and from 1592 to the time of his death he held a similar position at the cathedral of Verona. He was an outcome of the schools of Willaert, Morales, Jachet and Phinot.

E. v. d. S.

Baccusi was one of the first composers who, in his published works, acknowledged the presence of instruments playing in unison with the voices. The first of these publications is intituled *Hippolyti Baccusi, Eccl. Cath. Veronae musicae magistri, missae tres, tum vivâ voce tum omni instrumentorum genere cantatu accommodatissimae, cum octo vocibus*, Amadino, Venice, 1596. The other is a volume containing the psalms used at vespers, with 2 Magnificats, Venice, 1597. It has a frontispiece occupied by an analogous inscription of even greater length and, if possible, of even less elegant latinity. The rest of his compositions consist principally of masses, madrigals, motetti and psalms, and were published for the most part during his lifetime by Venetians such as Gardano, Vincenti and Rampazetti. Isolated pieces of his are found in several miscellaneous publications of the period. Perhaps the most interesting of these is that contributed by him to the volume dedicated by 14 different Italian composers to their great contemporary, Palestrina.



E. H. P.

Both Fétis and Eitner give a long list of works including 5 books of masses, several books of psalms and motets, 7 books of madrigals and single pieces in various collective volumes, as well as a number of MS. compositions. He also wrote: *Regulae spiritualis melodiae, seu Liber spiritualium cantionum* (Antwerp, 1617, apparently a second edition).

E. v. d. S.

BACH. The name of a family domiciled, certainly from the early 16th century, in the Thuringian duchies of Saxe-Weimar-Eisenach, Saxe-Gotha-Coburg and Saxe-Meiningen, and the principality of Schwarzburg-Arnstadt, whose hereditary profession was music, and whose talents culminated in the genius of Johann Sebastian. His grandson (*d.* 1845)

Pedigree Table I[1]

[1] The dates of birth and death in this article, being for the most part extracted from church registers, are generally those of baptism and burial, and therefore are, as a rule, two days posterior to the actual dates. Ascertained dates of birth and death are indicated by an asterisk throughout this article.

J. S. BACH

From the painting by G. Haussmann, in the possession of Messrs. C. F. Peters

PRINTED IN GREAT BRITAIN.

represented the seventh generation from Veit Bach, the 16th-century ancestor of the family. In the interval, of some sixty Bachs known by name and profession all but seven were organists, cantors, or town musicians, many of them of eminence in their profession. So closely were they associated with music in public regard that the town musicians of Erfurt were known as 'the Bachs' long after there ceased to be a Bach among them. The record is astonishing and unparalleled. The family of Scarlatti was notable in less than half a dozen individuals through two, or at most three, generations. But the Bachs without intermission were making music in Germany from the age of Luther to the advent of Bismarck. Their history is explored in this article in three sections: I. The Family of Bach; II. Johann Sebastian Bach; III. Johann Sebastian's Children. The numerals attached to each name refer to the Pedigree Tables.

I. The Family of Bach

Born and bred in Thuringia, the Bachs remained in that area without spreading far afield until the sons of Johann Sebastian carried his genius abroad, developing a standard of moral excellence and artistic achievement which reached its fullness in the great exemplar of their tradition. Even after offshoots from the main stem had rooted themselves in neighbouring Saxony and Franconia, it was the habit of the Bachs to hold annual reunions at Eisenach, Erfurt and Arnstadt, for social intercourse, musical recreation and mutual instruction, relaxing to extemporise a harmonious 'Quodlibet,' a jocular exercise which Johann Sebastian illustrates in Variation 30 of the Goldberg 'Aria mit 30 Veränderungen.' Throughout the Thirty Years' War, and in the generations that followed it, the Bachs pursued their seemly ways. Modest in their needs, frugal in their pleasures, unambitious for fame or distinction, they served their generation unostentatiously, dedicated their art especially to the service of religion, and were guided alike in it and their home life by the simple piety that characterised Johann Sebastian.

The strong family sense which united the Bachs is evidenced by a genealogy or *Ursprung der musicalisch-Bachischen Familie*, a small quarto of eighteen pages containing fifty-three entries compiled *circa* 1735 by Johann Sebastian and annotated by Carl Philipp Emanuel. The original is in the Preuss. Staatsbibliothek, Berlin. A facsimile of it was published in 1917 by the Neue Bachgesellschaft (Jhrg. xvii. Heft 3). With its help, supplemented by the researches of Spitta (vol. i. bk. i.) and the present writer, it is possible to trace the origin and activities of the family.

Though his connection with the pedigree has not been ascertained, the earliest Bach is discovered in a locality which in itself asserts a relationship. On Feb. 23, 1509, Count Günther of Schwarzburg-Arnstadt-Sondershausen threw his protection over his vassal ('unser Undertan') Hans Bach of Gräfenroda, a village some ten miles south-west of Arnstadt. Presumably a prosperous peasant, Hans Bach's descendants survived in Gräfenroda until shortly before Johann Sebastian's birth. Early traces of the name exist also at Rockhausen, a short distance from Arnstadt on the north-east. Here, in the second half of the 16th century, Wolf Bach devised his comfortable fortune to his wife and a characteristically large family, whose descendants appear to have died out by the first decade of the 18th century. At Molsdorf, not distant from Rockhausen in a westerly direction, another colony of Bachs is discovered, whose Christian names, Johann, Andreas, Georg, Ernst, Heinrich, Christian, anticipate the designations of future generations of authentic Bachs. Among them, Johann Bach, described as 'Musicant' to Carl Gustav von Wrangel, the Swedish general, is the first known of a line, which, migrating to Bindersleben, near Erfurt, produced many admirable musicians, among them Johann Christoph Bach (1782–1846).

Unrecorded by the *Ursprung*, another Hans Bach [1] was living at Wechmar, near Gotha, in 1561, a member of the municipal body ('Gemeindevormundschaftglied'): therefore of some maturity; his birth may be dated *circa* 1520 or earlier. A 'Margarethe Bach von Wechmar' named in the Ohrdruf marriage register on Feb. 13, 1564 (Fr. Thomas, *Der Stammbaum des Ohrdrufer Zweiges der Familie von J. S. Bach*, 1899, p. 18) may have been his daughter. But interest attaches chiefly to a third of the name at Wechmar, Veit Bach [2], who heads Johann Sebastian's family tree. Johann Matthias Korabinsky, in 1785, concluded that Veit was of Hungarian ancestry.[1] Assuming the family genealogy to be correct, he was driven out of that country by the Counter-Reformation under Rudolf II. (1576–1612), settled at Wechmar, where, as in Hungary, he made a livelihood as a miller and baker. In view of the existence of other Bachs there, it can hardly be a coincidence that Veit bore the name of Wechmar's patron saint, a fact which, with reasonable certainty, supports the inference that Wechmar and not Hungary was his original home. His love of music is recorded in the Genealogy. Inside the mill, while the wheel groaned and clattered, it was his habit to play the lute or zither ('cythringen'). 'A pretty noise they must have made together,' the compiler comments.

[1] A Croatian origin also has been proposed. Cf. W. H. Hadow, *A Croatian Composer*, 1897.

'However,' he adds, 'he learnt to keep time, and this apparently was the beginning of music in our family.' He died Mar. 8, 1619, leaving two sons, one of whom, LIPS BACH [3] (*d.* Oct. 10, 1620), briefly survived his father and had three sons [1] whose musical gifts are attested by their residence in Italy to complete their musical education.

Other descendants of Lips were four Bachs who successively filled the office of organist to the Duke of Saxe-Meiningen. The first of them, JOHANN LUDWIG BACH [4], born 1677, was Hof-Cantor and Director of the Kapelle at Meiningen during Johann Sebastian's residence at Weimar. For his compositions (cf. Spitta, i. 574 f.) Johann Sebastian had great regard; there is no other composer whose works are found so frequently in his handwriting. A catalogue of them is in the B.-G. Jhrg. xli. Appendix II. (cf. *Miscellanea Musicae Bio-bibliographica*, Jhrg. i. Heft 4, p. 80). He died in 1741. His son, SAMUEL ANTON BACH [5], was Johann Sebastian's pupil, and the last of the four, JOHANN PHILIPP BACH, died in 1846.[2]

JOHANNES (HANS) BACH [6], Veit's younger son, distinguished as 'der Spielmann,' has been confused with a contemporary bearing the same name and designation. In the Genealogy he is said to have inherited his father's calling and musical aptitude. He was apprenticed to Caspar Bach,[3] Stadtpfeifer of Gotha, with whom he lived there. Having fulfilled his apprenticeship, he returned to Wechmar after his father's death, married Anna Schmied, daughter of the innkeeper, was in demand as a player at Gotha, Arnstadt, Erfurt, Eisenach, Schmalkalden, and Suhl, and died in 1626 'in damalig grassirende Contagion Zeit,' the Genealogy states. His wife died in 1635. The Wechmar register confirms his death and calling—'26 December 1626: Hans Bach, ein Spielmann.' The funeral sermon preached at his son Heinrich's funeral in 1692 states that he was a carpet-maker as well as musician.

Carl Philipp Emanuel Bach possessed two pictures presumed to be portraits of Hans Bach, and Spitta carelessly accepted their identification. They represent, however, another Hans Bach altogether, whose relationship to Veit's son cannot be determined. The earlier portrait, a folio etching, now in Berlin, represents a man of about forty-five, close-cropped save for a wisp of hair flattened over the forehead, with squinting eyes, clean-shaven cheeks, beard and moustache. He wears a large ruff round his neck, carries a fiddle in his left hand pressed against his right breast, a bow in his right hand, and on his right shoulder a jingling bell such as jesters wore. A tablet in the left-hand top corner bears a doggerel legend in German:

'Here at his fiddling see Hans Bach!
Whatever he plays he makes you laugh;
For he scrapes away in a style all his own,
And wears a queer beard by which he is known.'

Under the tablet a fool's cap is shown over the initials S A P intertwined. The second portrait, a copperplate engraving now in the Paris Bibliothèque Nationale, is of a man at least ten years older than the original of the etching. His close-cropped head shows a similar arrangement of the hair and he wears a similar ruff. His left hand carries a fiddle, his right a goblet bestowed by some wealthy patron. A ribbon round his neck bears three medals of similar origin. Surrounding the portrait an oval inscription runs: 'Hans Bach; morio celebris et facetus: fidicen ridiculus: homo laboriosus simplex et pius.' Surrounding the inscription is an exhibition of eighteen tools, all of them such as are used by joiners or cabinet-makers, except two—a jester's staff with bell attached, and a yarn-winder. To the left of the face is an inscription, 'obijt Sexagenarius penult. Nov. 1615'; and, in the bottom right-hand corner, 'M. W. S. fecit Nirtingae, Anno 1617.' Assuming that the two portraits are of the same individual, their original was a Spielmann of notoriety, who practised the craft of a carpenter, was born in 1550, and died in his sixtieth year on Nov. 30, 1615. The register of deaths at Nürtingen, in the Black Forest, independently proves his existence and death on Dec. 1, 1615, burial on Dec. 3, and faithful service to the widow of Duke Ludwig of Württemberg (1568–93), who, after her husband's death, occupied the castle of Nürtingen. Thus there existed two contemporary Hans Bachs, one at Wechmar, the other at Nürtingen. The Genealogy correctly records the activities of the Wechmar Spielmann. Tradition eventually confused him with his more famous namesake, who cannot, however, be numbered among the direct ancestors of Johann Sebastian (cf. *B. J.-B.*, 1910, p. 70 f.).

Hans Bach of Wechmar, Johann Sebastian's great-grandfather, was survived by three sons, Johannes, Christoph, Heinrich. It will be advantageous to explore the three branches consecutively.

JOHANNES BACH [7], eldest of the sons of Johannes Bach (No. 6 *supra*), born at Wechmar Nov. 26, 1604,* was apprenticed to the Stadtpfeifer of Suhl, a town frequented by his father on his professional journeys. Seven years he spent there as apprentice and assistant and then proceeded to distant Schweinfurt as organist. After his father's death he served as Spielmann in Wechmar, married (July 6, 1635) Barbara Hoffmann of Suhl, to whose father he had been apprenticed, and in the same year was appointed 'Direktor der Raths-

[1] Veit Bach certainly had another son besides Hans. That he was the Lips Bach who died Oct. 10, 1620, may be inferred but cannot be stated positively. The three sons named in the text can only conjecturally be regarded as his.

[2] His grandson, Herr Paul Karl Bernhard Bach, of Weimar, owns the portraits of his ancestors.

[3] Perhaps a brother of Veit [2].

Musikanten' at Erfurt and organist of the Prediger-Kirche there, a detail added to the Genealogy in C. P. E. Bach's hand. On the death of his wife he married Hedwig, daughter of Valentin Lämmerhirt, from whose family Johann Sebastian's father also took his wife. Johannes died May 13, 1673, leaving four sons: Johann Christian, Johann Ægidius, Johann Jakob (*b.* 1650), and Johann Nikolaus (*d.* 1682), of whom the first two alone need be noticed.

Johann Christian Bach [8], eldest son of Johannes (No. 7 *supra*), was born Aug. 25,[1] 1640, served under his father among the town musicians of Erfurt, and thence migrated to Eisenach, first of his family to settle in Johann Sebastian's birthplace. Here he married (Aug. 28, 1665) Anna Margaretha Schmidt, daughter of a town musician. In, or soon after, 1671 he returned to Erfurt to fill his father's place as 'Direktor der Raths-Musikanten,' married a second time (June 11, 1679) Anna Dorothea Peter, a widow, and died in 1682. Of his children, Johann Jakob (*d.* 1692) followed his father's profession at Eisenach. Another, Johann Christoph, cantor at Gehren, near Arnstadt, in 1698, died in 1727, leaving children, none of whom was a musician.

Johann Ægidius Bach [9], second son of Johannes Bach (No. 7 *supra*), born Feb. 9, 1645, a viola-player in his father's company of musicians at Erfurt (1671), subsequently became organist of the Michaelis-Kirche there. He married (June 9, 1674) Susanna Schmidt, sister of his brother Johann Christian's wife, and secondly (Aug. 24, 1684) Juditha Katharina Syring. He died in 1716. Of his five sons two survived him. Johann Christoph [10], the younger son, born Aug. 15, 1685, succeeded his father as 'Direktor der Musikanten' at Erfurt, and was surviving in 1735. None of his children followed his profession.

Johann Bernhard Bach [11], elder surviving son of Johann Ægidius (No. 9 *supra*), born Nov. 23, 1676, the most distinguished of the Erfurt line descended from Johannes Bach (No. 7 *supra*), filled the post of organist at the Kauffmanns-Kirche, Erfurt, and at Magdeburg, a locality whose remoteness from the Bach country testifies to his notorious ability. Thence, in 1703, he returned to Thuringia to succeed his distinguished cousin Johann Christoph (No. 15 *infra*) as organist at Eisenach. Here he received appointment as Kammer-Musikus in the court orchestra of Duke Johann Wilhelm of Saxe-Eisenach. He died, holding that office, June 11, 1749, a year before his greater contemporary at Leipzig. His compositions, besides pieces for the clavier (a Fugue in F is No. 95 of the Steingräber edn.) and organ (a Choralvorspiel is in Ritter's *Kunst des Orgelspiels*, Bd. ii. (Peters)), include four suites or overtures, the MSS. of which are in the Preuss. Staatsbibliothek, Berlin (No. 1, in G minor for solo violin and strings, is published by Breitkopf & Härtel). Forkel (p. 6) regarded them as 'remarkably fine,' and Spitta (i. 26) declares them to excel the best examples of their period. Johann Sebastian copied the greater part of them, and performed them at Leipzig. Johann Bernhard's son,

Johann Ernst Bach [12], born Sept. 1, 1722,[2] was a pupil of Johann Sebastian at Leipzig, where he briefly attended the Thomasschule in 1737, being dismissed for exceeding leave of absence (*B. J.-B.*, 1907, p. 73), studied jurisprudence at the university there, and settled as a lawyer at Eisenach. In 1748 he was associated with his father as organist there, and in 1756 was appointed Kapellmeister 'von Haus aus' (non-resident) to the ducal court of Weimar, a post which, forty years earlier, Johann Sebastian had coveted and failed to obtain. He contributed a preface to Jakob Adlung's *Anleitung zu der musikalischen Gelahrtheit* (1758), and was a composer of merit. He died Jan. 28, 1777. The list of his compositions in Eitner (i. 270-71) includes a Trauer-Ode (MS. in the Berlin Hochschule f. Musik) on the death of his patron Duke Ernst August II. Constantin (*d.* 1758), a Magnificat (in *ibid.*), five church cantatas, and clavier music (MSS. in Preuss. Staatsbibliothek). The British Museum (Add. MSS. 31,310 ff. 21-36) possesses a short sacred cantata by him, entitled 'Mein Odem ist schwach,' for bass solo, four-part chorus, and strings; and a motet, 'Aus der Tiefen' (Add. MSS. 32,138 f. 75); also a copy of three sonatas for violin and clavier (Eisenach, 1772). A Fantasia and Fugue for clavier in F major is in E. Pauer's *Alte Claviermusik*, 2nd Folge, Heft 3 (Senff.). His 'Sammlung auserlesener Fabeln mit darzu verfertigten Melodeyen,' is published in Bd. 42 of *D.D.T.* (ed. Kretzschmar), and a 'Passions-oratorium' (not mentioned by Eitner) is in Bd. 48 of that collection (Breitkopf & Härtel).

Heinrich Bach [13], youngest son of Johannes (No. 6 *supra*), was born at Wechmar Nov. 7, 1614 *.[3] His remarkable gifts were developed, probably in Schweinfurt and Suhl. He married Eva, daughter of Christoph Hoffmann, 'Handelsmann' of Suhl. According to the Genealogy the two brothers were town musicians at Arnstadt. Heinrich accompanied Johannes to Erfurt, and in Sept. 1641 became organist at Arnstadt, holding the post until his death, July 12, 1692. Johann Gottfried Olearius, preaching his funeral sermon, eulogised his piety. C. P. E. Bach added to the brief notice of him in the Genealogy, 'war ein guter

[1] Wrongly stated as Aug. 2 in the English edition of Spitta.

[2] In the Thomasschule register his birth is given as Feb. 2, 1723.

[3] Cf. *Arnstädter Anzeiger* for June 15, 1924. Spitta, i. 28, misstates the date.

Componist und ein muntern Geist.' Of his compositions are known only organ Choralvorspiele on the tune 'Christ lag in Todesbanden' (A. G. Ritter's *Orgelfreund*, Bd. vi. No. 14), which are also attributed to Heinrich Buttstedt; and 'Erbarm dich mein, O Herre Gott' (Ritter, *Zur Geschichte des Orgelspiels*, ii. No. 101); a choral work with accompaniment for strings for the seventeenth Sunday after Trinity, 'Ich danke dir, Gott' (parts in the Michaelis-Kirche, Erfurt); a Whitsuntide composition for five voices and strings, 'Als der Tag der Pfingsten erfüllet war'. A 'Lamento' for alto solo and strings on the text 'Ach! das ich Wassers gnug hätte in meinem Haupte' is attributed to Heinrich's son Johann Christoph in C. P. E. Bach's (1790) Catalogue, and is published as his by Breitkopf & Härtel. The MS. of it, inscribed with Heinrich's name, is in the Kungl. Universitetets Bibliotek, Uppsala, which also possesses the MS. of two 'Symphonies à 4,' of a later period, by 'Signor Back.'[1] A thematic catalogue of Heinrich's compositions is in *B. J.-B.*, 1907, p. 105. His youngest son, Johann Günther [14], born July 17, 1653, was associated with his father as organist from Nov. 1682 until his premature death, Apr. 8, 1683. Heinrich's surviving sons carried the fame of the Bachs to an altitude which only Johann Sebastian surpassed.

Johann Christoph Bach [15], eldest son of Heinrich (No. 13 *supra*), was born Dec. 8, 1642. In 1665, at the age of twenty-three, he became organist at Eisenach, and in 1679 is described as 'wohlverordneter Organist bey denen Kirchen alhier' in that town. Whether he succeeded Johann Pachelbel in 1678 as court organist cannot be determined. For the last seven years of his life he had apartments in the ducal mint and stabling for two horses. He married (1667) Maria Elisabeth Wedemann, daughter of the town clerk of Arnstadt, who bore him four sons and three daughters. He died Mar. 31, 1703. 'Dies ist der gross und ausdrückend Componist,' C. P. E. Bach noted in the Genealogy. Forkel (p. 4) commented on his 'bold' use of the augmented sixth, recalling how 'quizzically' C. P. E. Bach glanced at him as he played these daring harmonies. His most important works are vocal. They include an elaborate setting of Rev. xii. 7-12, 'Es erhub sich ein Streit,' for two choirs of five voices, strings, bassoon, trumpets, tympani and organ (analysed by Spitta, i. 44), a work on a scale of distinction that puts it by itself in the literature of its generation. Performed by Johann Sebastian at Leipzig, it made a profound impression, according to C. P. E. Bach, who included it in the 'Alt-bachisches Archiv,' now in the Preuss. Staatsbibliothek. C. P. E. Bach's Catalogue (1790) names also as Johann Christoph's, a 'Sterb-Arie,' 'Es ist nun aus,' for four voices; a wedding composition in twelve parts, 'Meine Freundin, du bist schön'; and a piece for four voices and continuo, 'Mit Weinen hebt sichs,' dated 1691 (all these are lost). A 'Lamentatio' for bass solo, strings, and continuo, 'Wie bist du denn, O Gott, im Zorn,' sung at Lüneburg *circa* 1700–3, also is lost.[2] The parts of a 'Dialogus,' 'Herr, wende dich und sei mir gnädig,' for S.A.T.B., strings and continuo, are in the Michaelis-Kirche, Erfurt. Eight of Johann Christoph's motets are extant and are analysed by Spitta, i. 75-96 (see *B. J.-B.*, 1907, p. 132 f., for a thematic catalogue): 1. 'Der Gerechte, ob er gleich zu zeitig stirbt, ist er doch in der Ruhe' (Wisdom of Solomon iv. 7 f.), in five parts, with orchestral accompaniment; F major. Dated 1676 in C. P. E. Bach's Catalogue; printed in F. Naue's *Neun Motetten f. Singechöre von J. C. Bach und J. M. Bach* (Hofmeister, Leipzig, Hft. 1, No. 1); Bote & Bock, *Musica sacra* (Berlin; Bd. vii. No. 14). 2. 'Der Mensch vom Weibe geboren lebt eine kurze Zeit' (Job xiv. 1), in five parts; G minor. MS. in Hochschule f. Musik, Berlin. 3. 'Fürchte dich nicht, denn ich habe dich erlöst' (Isaiah xliii. 1), in five parts, with continuo; A minor. MS. in Berlin Amalienbibliothek, ed. V. Junk (B. & H.). 4. 'Herr, nun lassest du deinen Diener in Frieden fahren' (St. Luke ii. 29), double chorus; E major. Ed. V. Junk (B. & H.). 5. 'Ich lasse dich nicht' (Gen. xxxii. 26), double chorus; F minor. MS. (Preuss. Staatsbibliothek) apparently in Johann Sebastian's handwriting of the Weimar period, and formerly attributed to him; printed by Naue (Hft. iii. No. 9), Bote & Bock, and others, and as 'I wrestle and pray,' by Novello. 6. 'Lieber Herr Gott, wecke uns auf,' double chorus and cont.; E minor. MS. in Preuss. Staatsbibliothek, inscribed 'Eisenach ao. 1672 Xbris. Joh. Christo Bach org.'; printed by Breitkopf & Härtel, and in English by Novello. (No. 20A of *The Bach Choir Book*) and Ditson (Boston) as 'Gracious Lord.' 7. 'Sei getreu bis in den Tod' (Rev. ii. 10), in five parts; A major. MS. in Hochschule f. Musik, Berlin. 8. 'Unsers Herzens Freude hat ein Ende' (Lam. v. 15-16); double chorus, with continuo; G minor; ed. Karl Straube (B. & H.). Johann Christoph's organ compositions include eight Choralvorspiele formerly in Gerber's possession and since lost. A MS. (*circa* 1700), *Choraele, welche bey wärenden Gottes Dienst zum Praeambuliren gebrauchet werden können gesetzet und herausgegeben von Johann Christoph Bachen, Organ. in Eisenach*, in the Berlin Hochschule f. Musik, contains forty-four preludes brought together upon a design similar to that which inspired Johann Sebastian's *Orgelbüchlein*

[1] Copies of them are in the library of the R.C.M.

[2] See *supra* for another 'Lamento' attributed to him.

seventeen years later. Three of the preludes are published: 'In dich hab ich gehoffet, Herr' (Körner's *Orgelfreund*, Bd. vi. No. 36; 'Wir glauben all' an einen Gott' (A. G. Ritter's *Kunst des Orgelspiels*, Bd. ii. No. 9); 'Wenn wir in höchsten Nöten sein' (Körner's *Praeludien-Buch*, Bd. ii. Lief. 2). An organ prelude and fugue in E flat by Johann Christoph are published as Johann Sebastian's in B.-G. Jhrg. xxxvi. No. 12. Of his clavier music a Sarabande and Variations in G is published in the Steingräber edition, No. 93. The MS. of an 'Aria Eberliniana pro dormiente Camillo,' dated 'Mens. Mart. ao. 1690,' also exists.

Johann Nikolaus [16], eldest of Johann Christoph's (No. 15 *supra*) sons, born Oct. 10, 1669, was University and town organist at Jena from 1695 until his death. He married (1697) Anna Amalia Baurath, daughter of a Jena goldsmith, and, after her death (Apr. 14, 1713), Anna Sibylla Lange, daughter of a former pastor of Isserstedt. He travelled in Italy, and was recognised by his generation as a composer of orchestral suites, none of which has survived. Two of his vocal compositions are in print and prove him a worthy son of his father: a 'Missa' (Kyrie and Gloria) in E minor and G major, for S.A.T.B., strings and continuo (Breitkopf & Härtel) in style betrays the influence of Antonio Lotti, though it is essentially German and Protestant in spirit. The MS. (Breitkopf & Härtel) is dated Sept. 16, 1716. A second, in the Preuss. Staatsbibliothek, is marked 1734. Johann Nikolaus also composed a comic operetta, 'Der Jenaische Wein- und Bierrufe' (Breitkopf & Härtel), slight, tuneful and spirited, for four characters (A.T.T.B.), two violins and continuo. Johann Nikolaus was distinguished by his practical skill in constructing organs and claviers, and his Lautenclaviere, an instrument combining the tone of the lute with the action of the clavier, was praised by Jakob Adlung, who as a student at Jena was befriended by him. Johann Nikolaus died Nov. 4, 1753, predeceased by his two sons. In him the genius of Heinrich Bach's descendants in the male line culminated. His brother, Johann Christoph [17], born Aug. 27, 1674, taught the clavier in Erfurt, Rotterdam, and England (*circa* 1730). A second brother, Johann Friedrich [18], succeeded Johann Sebastian at Mühlhausen in 1708, and died childless in 1730. A third brother, Johann Michael [19], skilled in organ-building, settled in 'the North,' according to the Genealogy, and is lost sight of. In the male line Johann Christoph's (No. 15 *supra*) descendants were extinct or expatriated by 1753, three years after Johann Sebastian's death.

Johann Michael Bach [20], second son of Heinrich Bach (No. 13 *supra*), born Aug. 9, 1648, survived his father for two years. He married (1675) Katharina Wedemann of Arnstadt, sister of his brother Johann Christoph's wife, who bore him one son, Gottfried, who died in infancy (1691), and five daughters, the youngest of whom [21], Maria Barbara, born Oct. 20, 1684, became the first wife of her cousin Johann Sebastian. Johann Michael died in early manhood, but not before exhibiting the genius he and his brother inherited from their father. From 1673 till his death in May 1694 he lived at Gehren, near Arnstadt, where he was both organist and parish clerk, constructed musical instruments, composed much music, but lacked his brother's surer touch in the handling of forms still unfamiliar and tentative. Of his compositions named in C. P. E. Bach's Catalogue the following sacred arias are lost: 'Auf, lasst uns den Herren loben,' for alto and four instruments; 'Ach wie sehnlich wart ich,' for soprano, five instruments and continuo. Spitta mentions also, 'Nun ist alles überwunden,' for four voices (Arnstadt, 1686); 'Weint nicht um meinen Tod,' for four voices (1699); 'Die Furcht des Herrn,' for nine voices and five instruments. The parts of a soprano aria, 'Es ist ein grosser Gewinn,' with accompaniment of three violins and continuo, are in the Erfurt Michaelis-Kirche. Twelve of Johann Michael's motets are analysed by Spitta (i. 59-73): 1. 'Sei nun wieder zufrieden, meine Seele,' double chorus and cont.; A minor. Printed in Naue (Heft. 1, No. 3). 2. 'Lobt ihn mit vollen Chören,' or 'Sei lieber Tag willkommen,' in six parts; D major. MS. in a collection of ninety-three motets in the Königl. und Universitätsbibliothek, Königsberg (press mark, 13,661, No. 37). 3. 'Ich weiss, dass mein Erlöser lebt' (Job xix. 25), in five parts, with cont. accompaniment; G major. In Naue (Heft. i. No. 2), Bote & Bock (*Musica sacra*, Bd. v. No. 24), and in English as No. 4 of *The Bach Choir Magazine* (Novello), and Ditson (Boston). 4. 'Das Blut Jesu Christi,' or 'Wo soll ich fliehen hin,' in five parts; F major. In Naue (Heft. ii. No. 5), Bote & Bock. 5. 'Herr, wenn ich nur dich habe, so frage ich nichts nach Himmel und Erde,' in five parts and cont.; B flat major. In Naue (Heft. ii. No. 6), Bote & Bock (Bd. vii. No. 15). 6. 'Dem Menschen ist gesetzt einmal zu sterben,' or 'Mein Wallfahrt ich vollendet hab,' double chorus and continuo; E minor. MS. in Amalienbibliothek, 30 Bd. 116. 7. 'Halt was du hast,' or 'Jesu, meine Freude,' double chorus; E minor. MS. in Amalienbibliothek, Bd. 326. 8. 'Herr, du lässest mich erfahren,' or 'Ach, was soll ich Sünder machen?' double chorus; E minor. MS. in Amalienbibliothek, 30 Bd. 116. 9. 'Herr, ich warte auf dein Heil,' or 'Ach, wie sehnlich wart ich der Zeit,' double chorus and continuo; C major. MS. in Amalienbibliothek, 30 Bd. 116. 10. 'Fürchtet euch nicht' (St. Luke ii. 10), double chorus; G major. MS. in Berlin Singakademie and Amalienbibliothek,

29 Bd. 90. 11. 'Nun hab ich überwunden,' double chorus and cont.; G major. Composed in 1679. Naue (Heft iii. No. 8), Bote & Bock (Bd. vii. No. 16.) 12. 'Unser Leben ist ein Schatten,' double chorus (six and three parts); C minor. Of doubtful authenticity[1] (B. & H.). Max Schneider (*B. J.-B.*, 1907, p. 114) names one more: 13. 'Unser Leben währet 70 Jahr,' in five parts, with organ; C major Parts in Michaelis-Kirche, Erfurt. In the Preuss. Staatsbibliothek are the parts of a four-part cantata, 'Ach, bleib bei uns, Herr Jesu Christ,' with accompaniment of strings, bassoon and organ (analysed by Spitta, i. 51-3). Johann Michael's organ works were still played in the second half of the 18th century. Ernst Ludwig Gerber (1746–1819) included seventy-two of his choralvorspiele in a collection now lost, 'not one of which is unworthy of the name of Bach.' Max Schneider catalogues the following: 'Wo Gott der Herr nicht bei uns hält' (MS. in Preuss. Staatsbibliothek); 'Wenn mein Stündlein vorhanden ist' (In Ritter's *Zur Geschichte des Orgelspiels*, Bd. ii. No. 104); 'Von Gott will ich nicht lassen' (Peters); 'Wenn wir in höchsten Nöten sein' (MS. in Preuss. Staatsbibliothek); 'Dies sind die heiligen zehen Gebot' (Ritter's *Orgelfreund*, Bd. vi. No. 46); 'In dich hab ich gehoffet, Herr' (MS. in Königsberg Universitätsbibliothek); 'Allein Gott in der Höh sei Ehr' (MS. in *ibid.*); 'Nun freut euch lieben Christen g'mein' (*Orgel-Journal*, Mannheim, i. Heft 7).

It remains to unfold the pedigree of Christoph Bach, second son of Johannes Bach (No. 6 *supra*), direct ancestor of Johann Sebastian.

Christoph Bach [22], second surviving son of Johannes Bach (No. 6 *supra*), was born at Wechmar, Apr. 19, 1613.* He is described in the Genealogy as 'fürstlicher Bedienter' (court lackey) at Weimar, a post with which also duty in the court band was associated. The fact that he married (*circa* 1640) Maria Magdalena Grabler of Prettin, a Saxon town, suggests his residence there. In 1642 he was a member of the Erfurt *compagnie* of musicians, under his brother Johannes, and eleven or twelve years later, certainly before 1655 (*B. J.-B.*, 1908, p. 135), joined his younger brother Heinrich at Arnstadt, where he died on Sept. 12, 1661,* holding the position of 'gräflicher Hof- und Stadt-Musikus.' His widow died on Oct. 6 of the same year. They were survived by three sons and two daughters.

Georg Christoph Bach [23], the eldest son of Christoph (No. 22 *supra*), born Sept. 6, 1642,* at Erfurt, taught for a time in a school at Heinrichs, near Suhl. Thence, in 1668, he proceeded to Themar, near Meiningen, to take up the post of cantor, exchanging it twenty years later for a similar position at Schweinfurt, where he died, Apr. 24, 1697.* That he was a composer is evidenced by the existence among the Bach Archives of a cantata 'Siehe, wie fein und lieblich ist es, wenn Brüder einträchtiglich bei einander wohnen' (Psalm cxxxiii. 1) for T.T.B., violin, three viole da gamba and continuo. The composition, said to have been written in 1689, is lost.

Georg Christoph founded a Franconian line of Bachs. Of his two surviving grandsons, Johann Lorenz Bach [24], born Sept. 10, 1695,* was organist at Lahm and composer of a prelude and fugue in D. He died Dec. 14, 1773. His brother, Johann Elias Bach [25], born Feb. 12, 1705,* afterwards cantor at Schweinfurt, was a student at Leipzig, lived with his cousin Johann Sebastian, occupying a responsible position in his household, and left letters (1738–1744) illustrating his life there (*Die Musik*, vol. 46, pp. 3-19). He died Nov. 30, 1755,* leaving three sons, of whom the second, Johann Michael Bach [26], born 1754 (Spitta, iii. 298), published (MS. in Brit. Mus., Add. MSS. 31,996) a treatise entitled *Anleitung zum General-Bass und der Tonkunst* (1780).[2] He was cantor at Tonna, travelled in Holland, England and America, and in 1779–80 was a student at Jena. Subsequently he settled as 'advokat' at Güstrow, in Mecklenburg. He published as 'Op. I.' six 'Concerts aisés pour le clavier' at Berlin in 1770 (Gerber, *Lexikon*, i. col. 213). Eitner (i. 273) names three cantatas by him in the Berlin Preuss. Staatsbibliothek and at Schwerin, and the MS. of six concertos for two claviers (dated 1776) at Dresden. A catalogue of his works at the end of his published *Anleitung* (*supra*) includes a melodrama entitled 'Cephalus and Procris.'

Johann Christoph Bach [27], the twin younger son of Christoph (No. 22 *supra*), was born Feb. 22, 1645.* C. P. E. Bach, who collaborated with Johann Friedrich Agricola in the earliest notice of his father's life (*Nekrolog*, reprinted in *B. J.-B.*, 1920), records there that the twins were so alike in appearance and disposition, and even in the 'Wissenschaft' of their music, that they could be distinguished only by their clothes. To the family Genealogy C. P. E. Bach appended a note, which Forkel repeats, that even their wives recognised their husbands only by these external marks, adding, that if one was ill, so was the other. Both received their early instruction in music from their father at Erfurt, and at an early age accompanied him to Arnstadt. His early death set them on diverging roads. Johann Christoph, on Feb. 17, 1671, succeeded to his father's former post as Hof Musikus to Count Ludwig Günther of Schwarzburg-Arnstadt, a man of musical tastes, whose deed of appointment required Bach to spend his time in acquiring 'the technique of violin-playing and music-making.'

[1] Perhaps by Johannes Bach (No. 7 *supra*).

[2] Riemann suggests that the treatise actually is C. P. E. Bach's work; but a collation disproves the conjecture.

Though the fault does not appear to have been his, Johann Christoph's relations with his professional colleague, the Stadt-Musikus, were uncordial and even litigious. On Jan. 7, 1681, the angry Count dismissed all his musicians 'wegen ihres Unfleisses (laziness) und ihrer Uneinigkeit (quarrelling).' Johann Christoph's uncle Heinrich was still living at Arnstadt, and for some months he acted as his assistant, until, in 1683, he was reinstated as Hof-Musikus and Stadtpfeifer, and held these offices at his death on Aug. 25, 1693. He married Martha Elisabeth Eisentraut, daughter of the town clerk of Ohrdruf. Their son, JOHANN ERNST [28], born Aug. 8, 1683,* succeeded Johann Sebastian at Arnstadt in 1707, and died Mar. 21, 1739. A younger son of Johann Christoph was perhaps organist at Keula. The names of his grandchildren are not recorded.

JOHANN AMBROSIUS BACH [29], twin brother of Johann Christoph (No. 27 *supra*) and father of Johann Sebastian, was born at Erfurt, Feb. 22, 1645,* deriving his name, not found elsewhere in the Bachs' conservative tradition, from his godfather, Ambrosius Marggraf. He received from his father the violin and viola technique he in turn imparted to his son, and four years after his father's death returned to Erfurt, whence his cousin Johann Christian (No. 8 *supra*) had recently been called to Eisenach, the first of the Bachs to establish himself there. Appointed a member of the Erfurt *compagnie*[1] of musicians on Apr. 12, 1667, under his uncle Johannes (No. 7 *supra*), Johann Ambrosius married a year later (Apr. 8, 1668) Elisabeth (*b.* Feb. 24, 1644), daughter of Valentin Lämmerhirt, a furrier at the sign of 'The Three Roses' in the Junkersande, and a town councillor. Six sons and two daughters were the issue of the marriage. Only the eldest two were born at Erfurt: for in Oct. 1671 Ambrosius succeeded his cousin Johann Christian (No. 8 *supra*) at Eisenach. Here, as Stadt-Musikus and, according to the *Nekrolog* and Genealogy, Hof-Musikus also, the rest of his life was spent in the house on the Frauenplan which is now the Bach Museum, where six children were born to him, Johann Sebastian being the youngest of them. Their mother died May 3, 1694, and seven months later (Nov. 27, 1694) Ambrosius married Barbara Margaretha Keul,[2] widow of an Arnstadt deacon, and formerly wife of Johann Günther (No. 14 *supra*). He briefly survived the event and was buried Jan. 31, 1695.* That he was respected by the community he served is declared in a sermon preached at the funeral of his idiot sister. That his talents were considerable is suggested by the refusal of the Burgomaster and Rath of Eisenach in 1684 to allow him to leave Eisenach for Erfurt. A portrait of him, painted *circa* 1685, is in the Preuss. Staatsbibliothek.

[1] The English Spitta, i. 173, mistranslates 'Rathscompagnie' as 'town council.'

[2] Not Krûl, as Spitta i. 34

JOHANN CHRISTOPH BACH [30], eldest son of Johann Ambrosius (No. 29 *supra*), was born at Erfurt, June 16, 1671, where he was the pupil of Johann Pachelbel, organist of the Prediger-Kirche there. At the time of his parents' deaths he was settled at Ohrdruf as organist, and in Oct. 1694 married Dorothea von Hof. He died Feb. 22, 1721,* leaving five sons, every one of whom was an organist or cantor.[3] In his honour Johann Sebastian wrote the early 'Capriccio in honorem Joh. Christoph Bachii, Ohrdruf,' for clavier in Peters' edn., bk. 215, p. 34. Johann Sebastian's other surviving brother, JOHANN JAKOB [31], born Feb. 9, 1682, served his apprenticeship among the town musicians in Eisenach, and about 1704 entered Sweden's military service as an oboist. He was present at the battle of Poltawa (1709), accompanied Charles XII. to Bender, and after studying the flute at Constantinople under Pierre Gabriel Buffardin, became (*circa* 1713) Hof-Musikus at Stockholm. Of his later fortunes nothing is known. Johann Sebastian distinguished his departure (*circa* 1704) by composing the clavier 'Capriccio sopra la lontananza del suo fratello dilettissimo' (Peters, bk. 208, p. 62).

The foregoing survey of the branches of the family descended from the brothers Johannes (No. 7 *supra*), Christoph (No. 22 *supra*), and Heinrich (No. 13 *supra*) reveals the fact that until the advent of Johann Sebastian his branch, descended from Christopher, was the least distinguished in the field of composition. While the eldest (Johannes) branch could boast Johann Bernhard (No. 11) and Johann Ernst (No. 12), and the second (Heinrich) branch had produced Heinrich (No. 13), Johann Christoph (No. 15), Johann Nikolaus (No. 16), and Johann Michael (No. 20), Johann Sebastian could only point to his grandfather Christoph (No. 22) and a distant cousin, Johann Michael (No. 26), as notable in that art.

II. JOHANN SEBASTIAN BACH

JOHANN SEBASTIAN BACH [32], youngest child of Johann Ambrosius Bach (No. 29 *supra*) and Elisabeth Lämmerhirt, was born at Eisenach on Mar. 21, 1685.* His second name, borne by none of his predecessors, he received from his godfather, Sebastian Nagel, one of the town musicians of Gotha (*B. J.-B.*, 1908, p. 110). His first name was that of his second godfather, Johann Georg Koch, of Eisenach, an official connected with the forests. It would be difficult

[3] Four of Johann Christoph's grandchildren also were cantors or organists. See the Pedigree Tables in Terry's *Joh. Seb. Bach: a Biography.*

to propose another town so appropriate as Eisenach for Bach's birthplace. On the Lutherplatz stands the Cottahaus in which the Reformer lived as a boy. In the stately Wartburg of Duke Frederick the Wise, reared above the town, the German vernacular Bible had its birth, the stalwart tunes were first hummed that Bach enriched, the gracious Elisabeth lived, and German minstrelsy flowered. Religion, music, romance, all were in the atmosphere of Eisenach to quicken the creative impulse of one in whom, in Wagner's words, 'the German spirit was born anew.'

EARLY YEARS, 1695–1708.—The swift tragedy of his parents' deaths fell upon a household ill-equipped to support it. Sebastian, its youngest member, was three months short of ten years when his father died in Jan. 1695. His brother Johann Jakob was three years his senior. Of his two surviving sisters, one was a girl of fifteen, the other soon to be married to Joh. Andreas Wiegand, of Erfurt. She perhaps housed her orphaned sister. Sebastian and Jakob were received in Feb. 1695 by their elder brother, Johann Christoph, recently married, at Ohrdruf. Both had attended the Gymnasium at Eisenach, entering the fifth class in 1693 and passing to the fourth in 1695. The Catechism, Psalter, Latin declensions and conjugation comprised the curriculum. Sebastian was absent 96 school hours in his first year, 59 in the second, and 103 in the third, irregularity which suggests ill-health or a mother's over-anxious solicitude for her last-born (*B. J.-B.*, 1906, p. 137). On the roll of the Ohrdruf Lyceum the names of Sebastian and Jakob appear in 1696. Sebastian, youngest of the *novitii* in the third class in 1696, was head of the class in 1697, and entered the second class in 1698. Fifth in that class in 1698, he was second in it in 1699, and passed out to the first class after four years of unusually rapid promotion (Fr. Thomas, *J. S. Bachs Ohrdrufer Schulzeit*, 1900, p. 8 f.). Latin, history, geography, Greek and composition were studied, and four or five hours a week were devoted to music under the recently appointed cantor, Elias Herder. Possessing an 'ungemein schöne Sopranstimme,' says the *Nekrolog*, Sebastian sang in the church and in school Kurrende, while from his brother, according to Forkel, he received his earliest systematic instruction on the clavier. The precocity of his genius is illustrated by a story told in the *Nekrolog*. Behind the lattice of his brother's bookshelf was a volume of clavier pieces by German masters. Refused permission to use it, Sebastian copied it out by moonlight and completed his task in six months. The achievement illustrates a habit which accompanied him through life. There is hardly any school of music accessible to him of which specimens do not exist in his careful manuscript. The exercise ruined his eyesight; but it proves him an omnivorous student at every period of his career, and in some measure explains the sureness with which he settled problems of form whose complexities had impeded his predecessors.

In 1700, approaching his fifteenth year, Sebastian freed himself from dependence on his brother's bounty. Jakob already had left Ohrdruf to earn his living at Eisenach. Sebastian, through Erda's good offices, followed him further afield. The cantor had served his apprenticeship in the Michaelis-Kirche at Lüneburg, over 200 miles distant, and was aware of a need there for good soprano voices. Setting out from Ohrdruf in Mar. 1700, Sebastian and a schoolfellow, Georg Erdmann, were enrolled at Easter in the select or principal choir of 'Mettenschüler.' The choir's repertory was eclectic and extensive (W. Junghans, *J. S. Bach als Schüler zu St. Michaelis*, Lüneburg, 1870; *Sammelband der Int. Musik. Gesell.*, 1908, p. 593), though neither the cantor nor the organist was a man of mark. But at the neighbouring Johannis-Kirche Georg Böhm (1661–1733), one of the finest players in Germany, was organist since 1698. His influence upon the impressionable Sebastian was deep, and it is reasonable to conjecture that Bach knew him personally. Böhm himself had probably attended the Ohrdruf Lyceum, must have known Sebastian's godfather at Gotha, and more than one member of Sebastian's family (cf. *B. J.-B.*, 1908, p. 107 f.). His advice, it is probable, set Sebastian upon a thirty-mile walk to Hamburg, where Böhm's master, Johann Adam Reinken (1623–1722), was organist of the Katharinen-Kirche. More than once Sebastian pilgrimaged to hear the veteran, and once had an adventure it pleased him in after years to recall. Outside a roadside inn, weary, moneyless and prodigiously hungry, he sniffed tantalising odours from the kitchen as a window opened and two unpromising fish heads fell at his feet. Picking them up with some disappointment, he found in each a coin which provided dinner and the means to return to Hamburg. In another direction lay Celle, whose duke maintained an orchestra largely composed of Frenchmen, and patronised French music. French art had an admirer in Böhm, whose advice, or his own insatiable quest for knowledge, impelled Sebastian to make the journey. At Celle he learnt to admire the art of Couperin (cf. Pirro, *L'Esthétique de J. S. Bach* and *B. J.-B.*, 1910, p. 33 f.), and found inspiration for the chamber music characteristic of his later activity at Cöthen.

At Lüneburg Bach's earliest compositions were put on paper.[1] Almost certainly the

[1] Four very early Choralvorspiele attributed to Bach are in *Musica sacra*, Bd. 1, Nos. 1-4.

variations 'Christ, der du bist der helle Tag,' 'O Gott, du frommer Gott,' and (in part) 'Sei gegrüsset, Jesu gütig' (Peters' edn., bk. 244, pp. 60, 68, 76) were written there. To the same period belong the preludes on the melodies 'Christ lag in Todesbanden' (Peters, bk. 245, p. 40) and 'Erbarm dich mein, O Herre Gott' (Novello edn. bk. 18, p. 35; Augener edn. vol. 9, p. 1116). If genuine, a set of seventeen variations on 'Allein Gott in der Höh' sei Ehr,' and others on 'Ach, was soll ich Sünder machen' (Aug. edn. vol. 9, pp. 1260, 1244), belong to these experimental years. The almost entire absence of an independent pedal in them suggests their composer's lack of access to an organ. Otherwise they show him as yet more familiar with the clavier's deficient sustaining power (cf. Harvey Grace, *The Organ Works of Bach*, 1922).

Sebastian's opportunities to develop his musical culture at Lüneburg were exceptional. But a livelihood called him elsewhere. He applied for the organistship of the Jakobi-Kirche at Sangerhausen, vacant 1702, and was preferred; but ducal influence secured the post for J. A. Kobelius. On Apr. 8, 1703 (Bojanowski, p. 3), Bach entered, as a violinist, the private band of Duke Johann Ernst (*d.* 1707), brother of the reigning Duke Wilhelm Ernst (*d.* 1728). His employment was brief. The municipality of Arnstadt had installed a well-equipped organ in the new church recently built to replace the Bonifacius-Kirche, an edifice which had stood in ruins for more than a century (Weissgerber, *J. S. Bach in Arnstadt*, 1904). The organ existed until 1863, and some of it was incorporated into its successor. On July 13, 1703, Sebastian accepted an invitation to inspect the instrument. A month later (Aug. 14, 1703) he was formally installed as organist. His stipend was adequate, his duties were not exacting, and an organ was at his service. At Arnstadt, therefore, he exhibited the first-fruits of his laborious apprenticeship. The first of the Church Cantatas 'Denn du wirst meine Seele nicht in der Hölle lassen' (No. 15), was performed on Easter Day, 1704. The Clavier compositions dedicated to his brothers (*supra*, p. 155) and the Sonata in D major (Peters, bk. 215, p. 44) date from this period. The familiar Prelude and Fugue in C minor (Peters, bk. 243, p. 32), probably the Fugue in C minor (Peters, bk. 243, p. 50), which is also attributed to C. P. E. Bach, and the Toccata and Fugue in C (E) (Peters, bk. 242, p. 62) were first played on the Arnstadt organ. Imperfect as they are, they declare their composer on a path of his own, already distinguished from his contemporaries by the melodic distinction of his fugal subjects.

The organ was Bach's first, as it was his last, absorbing study. According to the *Nekrolog*, the three players he most esteemed were Nikolaus Bruhns (1665–97), Johann Adam Reinken, and Dietrich Buxtehude (1637–1707). Bruhns was dead; to Reinken Bach had already made pilgrimage; Buxtehude remained, old and inconveniently accessible at Lübeck, where, since 1668, he was organist of the Marien-Kirche and the most potent musical influence in North Germany, conducting the famous 'Abendmusiken' yearly between Martinmas and Christmas on a scale not usual elsewhere. It is probable that Bach, for whom music was primarily an adjunct to the service of God, desired especially to hear these performances. In Oct. 1705 he obtained a month's leave, installed his cousin Johann Ernst (No. 28 *supra*) as his deputy, and set off on foot to his distant goal. Forkel, misinterpreting the *Nekrolog*, declares that Bach did not make himself known to Buxtehude. On the contrary, probably he took lessons from him, and valued the opportunity so highly that Arnstadt and his duties were forgotten. It is suggested that he coveted the reversion of Buxtehude's post, and might have obtained it had he been willing to accept Buxtehude's daughter with it. Fortunately the spinster was too much his senior to make the bargain agreeable. Had Bach settled in Lübeck, in proximity to Hamburg's flourishing opera, and in a prosperous commercial atmosphere, his genius must have been diverted from the channels it ultimately explored and the art forms it so lavishly enriched. Late in Jan. 1706 Bach took leave of Buxtehude, and in February, after four months' absence, was again in Arnstadt.

The Lübeck visit is of high importance in the development of Bach's genius: it powerfully stimulated him, especially to organ composition, introduced him to a mind touched by the poetic vision that filled his own, and provided him with models his art rapidly surpassed. But it immediately embroiled him with his superiors. Its sequel is recorded with unusual animation in the records of the Arnstadt Consistory. On Feb. 21, 1706, Bach was invited to explain his prolonged absence, and also its apparent effect upon his playing: 'Charge him,' the Consistory instructed, with playing 'viele wunderliche Variationes' during the congregational hymns, and of using 'frembde Thöne' to the confusion of the congregation—(an example is afforded in Peters's edn. bk. 246, p. 56 and Aug. edn. vol. 10, p. 1308). With a reprimand he was restored to favour. But a few months later (Nov. 11, 1706) he was again admonished for neglecting to rehearse his singers and permitting 'die frembde Jungfer'—his cousin Maria Barbara (No. 21 *supra*) to sing in the church. After her mother's recent (1704) death she had come to Arnstadt to her maternal

aunt. The young couple were married a year later. Meanwhile Bach awaited an opportunity to escape from an employment no longer congenial, and had been approached from more than one quarter when, early in 1707, he was invited to undergo his 'Probe' at the Blasius-Kirche, Mühlhausen, where an organist was required in succession to Johann Georg Ahle (1651–1706), to follow whom was a distinction. On June 15, 1707, Bach received the appointment. A fortnight later (June 29) he resigned his Arnstadt employment, leaving his cousin Johann Ernst to fill his place.

Bach remained at Mühlhausen a few days short of twelve months. The Free Imperial city was larger and richer than Arnstadt, its musical traditions more distinguished. Its resources permitted it to perform church music on a considerable scale; every year the Council's inauguration was celebrated by the rendering of a cantata composed for the occasion. Bach could regard his appointment as promotion, though for income he asked and received no more than he had at Arnstadt—eighty-five gulden a year. Three months after entering upon his new office he returned to Arnstadt to fetch his bride. The young couple were married at Dornheim on Oct. 17, 1707, by Pastor Johann Lorenz Stauber, soon to become their uncle by marriage. A timely legacy to Bach from his deceased maternal uncle Tobias Lämmerhirt smoothed financial difficulties.

Influenced by his experience at Lübeck, Bach entered Mühlhausen with positive views upon what he called 'the right ordering of church music.' The city, however, was torn by religious dissension, Pietism and Lutheran orthodoxy opposing each other with passionate vehemence, while the former offered Puritan opposition to Bach's conviction of the fellowship of music and worship. Their conflict eventually drove him elsewhere and meanwhile constrained his art. Within the space of ten months he produced three cantatas, the severe character of whose libretti exposes the influences that hampered him. The Arnstadt cantata already noticed, archaic in form, reveals in its libretto the inveterate subjectivity of his religion. The first of the three Mühlhausen cantatas, 'Aus der Tiefe rufe ich, Herr, zu dir' (No. 131), is a setting of Psalm cxxx. The second, 'Gott ist mein König' (No. 71), performed at the inauguration of the Council on Feb. 4, 1708, consists of Old Testament passages, a hymn-stanza, and but three original verses.[1] The third, 'Der Herr denket an uns' (No. 196), composed for the marriage of Frau Bach's aunt to Pastor Stauber on June 5, 1708, is set to four verses of Psalm cxv. On the score of No. 131 Bach notes that it was composed at the request of Georg Christian Eilmar, an aggressive foe of Pietism, whose authorship of the other two can be inferred. His austere orthodoxy is probably to be detected also in the libretto of 'Gottes Zeit ist die allerbeste Zeit' (No. 106), composed, perhaps, for the funeral of Bach's Erfurt uncle, Tobias Lämmerhirt, in Sept. 1707, rather than the Weimar (1711) occasion Spitta (i. 456) suggests. On June 25, 1708, Bach informed the authorities of his acceptance of an employment which promised more sufficient subsistence than his present stipend afforded, on which, 'simple as is my household, I can scarcely live.' More compelling was the prospect of pursuing at Weimar his views regarding church music without being impeded by the 'Verdrieslichkeit'—his own word—which hampered him at Mühlhausen. As at Arnstadt, he was succeeded by a cousin (No. 18 *supra*), and left a city to which his son Johann Gottfried Bernhard (No. 35 *infra*) returned after an interval in which his father's name had become famous.

Weimar, 1708–17.—Bach went to Weimar as Hof-Organist and Kammer-Musikus to the reigning Duke Wilhelm Ernst (*d.* 1728). The Court orchestra was small and efficient, but until Bach's appointment as Konzertmeister its direction was in other hands, while the position of Kapellmeister, which he coveted, was not offered him in 1716 when it was vacant. His most responsible duty at the outset was as organist of the Schloss-Kirche, whose instrument, inconveniently placed[2] and small, possessed a 32-feet pedal, whose absence Bach had regretted at Mühlhausen. On it were heard for the first time most of the masterpieces whose production makes the Weimar years an epoch in the history of organ music: the Passacaglia and Fugue in C minor; the Vivaldi Concertos; most of the mature Preludes and Fugues; the Toccatas; the *Orgelbüchlein*[3]; and others. In this period, too, Bach became famous as a player in Saxony and beyond. As early as 1716, Johann Mattheson (1681–1764) writes in high praise of the 'berühmter Organist' of Weimar. Three years earlier, in 1713, Bach was invited to succeed Handel's master, Friedrich Wilhelm Zachau (1663–1712), in the Liebfrauen-Kirche at Halle, after performing his 'Probe' upon the new but unfinished organ. He refused the invitation in a letter (Mar. 19, 1714) which fails to make clear his original entertainment of it; he had in fact been promoted to the Weimar Konzertmeistership a fortnight earlier (Mar. 2). In 1716 he again inspected and performed on the instrument, when the feeling roused by his action three years earlier had entirely abated (M. Seiffert, *J. S. Bach 1716 in Halle*, in *Sammelbd. I.M.G.* vi., 1905). In 1714 he visited Cassel,

[1] Bach had the satisfaction of seeing the parts in print at the Council's expense. His title-page describes the cantata as a 'Glückwünschende Kirchen-Motetto.'

[2] A picture of the chapel is in Terry's *Bach: a Biography*.

[3] The design of the *Orgelbüchlein* is exposed in Terry, *Bach's Chorals*, iii. 18 f

his virtuosity so astonishing the future Frederick I. of Sweden that he presented the player with a diamond ring from his finger: an admirer declared that Bach's feet 'flew over the pedal-board as if they had wings' (C. Scherer, *Bachs Aufenthalt in Kassel*, in *Monatshefte f. Musik*, xxv., 1895). Early in 1716 Bach accompanied his master on a visit to Duke Christian of Saxe-Weissenfels, and performed (Feb. 23), as 'Tafelsmusik,' a secular cantata on Salomo Franck's libretto, *Was mir behagt*, a melodious work for which Bach found subsequent uses.

In the last months of his service at Weimar Bach was prominent in an event which gave him a national reputation. In the autumn of 1717, Jean Louis Marchand (1669–1732), organist to Louis XV., visited Dresden. Forkel supposes that Bach was specially summoned from Weimar to challenge the Frenchman. More probably he was already in Dresden to hear Marchand, whose compositions he admired (Pirro, *J. S. Bach*, p. 51). The idea of a contest between the two perhaps suggested itself to Jean Baptiste Volumier (1677–1728), probably a Spaniard by birth, Konzertmeister to the Dresden court. Bach agreed and undertook to play at sight whatever Marchand put before him, provided the Frenchman submitted himself to a similar test (details as to the conditions vary). Marchand agreed and the contest was appointed to take place in the house of Count Flemming, who had witnessed Handel's triumphant descent upon the Saxon court some years before. Bach arrived at the hour appointed. Marchand, anticipating defeat, already had left the town.

Bach was promoted to be Konzertmeister at Weimar on Mar. 2, 1714, under an obligation to compose 'monatlich neue Stücke' for the court chapel (Bojanowski, p. 25). Thenceforward he produced a steady stream of cantatas in collaboration with Salomo Franck, like Bach himself in the duke's service, and Erdmann Neumeister (1671–1756), who opportunely evolved a type of libretto poetic, sincere, delicate, reflective, and singularly in harmony with Bach's notions of what cantata texts should be. Towards the close of 1716 the series abruptly ceased. The ducal Kapellmeister, Johann Samuel Drese, died on Dec. 1, 1716. Whether Bach resented the duke's neglect to offer him the post, or his friendly relations with Duke Ernst August (*d.* 1748), the reigning duke's nephew and heir, involved him in their inharmonious relations, or whether he was merely tired of a master whose actions proclaim him a martinet, Bach seized an opportune chance to betake himself elsewhere.

Early in 1716 Duke Ernst August married the sister of the reigning Prince Leopold of Anhalt-Cöthen. The latter, according to the *Nekrolog*, 'ein grosser Kenner und Liebhaber der Musik,' was introduced by his sister's marriage to the talented Konzertmeister of the Weimar court. A protocol of the expenses of the Cöthen Kapelle shows that Bach drew a stipend as Kapellmeister there from Aug. 1, 1717, though the princely document permitting his resignation six years later names Aug. 5, 1717, as the date of his appointment as Kapellmeister and 'Direktor unserer Kammer-Musik' (*B. J.-B.*, 1905, pp. 24, 30). Since the Cöthen court was 'reformed,' its service offered Bach no opportunity for the composition of church music. The chapel organ, though new, was not one to attract a player of his eminence. His family of four children, the eldest of whom was in her ninth year and the youngest an infant of two, had not reached an age when the question of their education can be supposed to have influenced their father's decision. Hence, it must be supposed that Bach, who at no period accepted without protest treatment which he deemed derogatory to himself or his art, either was dissatisfied with his circumstances at Weimar or flattered by the friendliness of Leopold, whose relations with his musicians contrasted with Duke Wilhelm August's feudal aloofness. The latter refused to release Bach from his engagement, and on Nov. 6, 1717, placed him under arrest for demanding his release in a manner which displeased his master. He remained in confinement till Dec. 2, 1717, when he received permission to betake himself elsewhere. By Dec. 10 he entered upon his duties at Cöthen.

CÖTHEN, 1717–23.—As Weimar is distinguished by the composition of his organ works, and Leipzig by that of the Oratorios, Passions, Masses and Cantatas, the Cöthen period is pre-eminently marked by the production of Bach's chamber music. His sole responsibility was to conduct the Court Kapelle, in which, anticipating Frederick the Great, the Prince himself played. The Concertos dedicated on Mar. 24, 1721, to Duke Christian Ludwig of Brandenburg, the Suites (Ouvertures) for orchestra, Violin concertos, Sonatas (Suites) for violin (*B. J.-B.*, 1920, p. 30 f.), violoncello, flute, viola da gamba, Prince Leopold's instrument (*ibid.*, 1911, p. 75 f.), were products of the Cöthen period. Secular instrumental music was beginning to take a position of its own; the fact may have attracted Bach to experiment in an idiom hitherto outside his practical experience. His normal orchestra consisted of strings, oboes, bassoons, horns, trumpets and drums. More rarely he employed the oboe d' amore and da caccia and also corno da caccia. Like Handel, he was hindered by the conventions of his period from getting from his instruments their fullest contribution to orchestral effect. Where the modern composer colours his score by subtle combinations of orchestral tone, Bach

drew in line, imposing as their chief function on his instruments the duty to expose or reinforce the polyphonic structure of the movement in which they were engaged. Hence he made little contribution to the problems of modern orchestration (cf. Parry, *Style in Musical Art*, p. 76 f.; C. Forsyth, *Orchestration*, *passim*). On the other hand, his sensitiveness to orchestral tone is exhibited by his invention of new or modification of existing instrumental types, and by the extraordinary diversity of orchestral combinations in his scores. (See Lauten Clavicymbal and Viola Pomposo.) Otherwise, the effect of his Cöthen experience upon his artistic development cannot be overestimated: it provided him with an equipment without which his distinctive work at Leipzig must have been impoverished and incomplete. The Clavier music of the Cöthen period includes the Chromatic Fantasia[1] and Fugue, the English and French Suites, and (primarily for his elder children's education) the *Wohltemperirte Clavier* (first part), Little Preludes, Inventions and Symphonies. Johannes Schreyer (*B. J.-B.*, 1906, p. 134) gives ground for doubting whether the two note-books for Anna Magdalena Bach actually were written for her.

Excepting one tragic occurrence, Bach's years at Cöthen, if not the happiest, were the most placid in his career. His relations with his master were intimate. He accompanied the Prince in May-June 1718 and May-July 1720 to Carlsbad, where, with others of the court orchestra, he entertained visitors of fashion. On Nov. 17, 1718, the Prince stood godfather to the short-lived youngest child of Bach's first marriage. Bach reciprocated with music in honour of his patron. For his birthday in 1718, probably, he offered the 'Serenada,' 'Durchlaucht'ster Leopold,' of whose libretto also he may be supposed the author. A few years later (?1722) he offered tribute on a similar occasion in the cantata 'Mit Gnaden bekröne.' The text of a lost 'Gratulations-Kantate' for the New Year 1723 is in the Bach Museum at Eisenach (Falck, *W. F. Bach*, 1919, p. 4). On Nov. 30, 1726, after he had left Cöthen, Bach returned to celebrate the birthday of the Princess with the cantata 'Steigt freudig in der Luft,' for which Picander wrote the words. All these works were refashioned for other purposes at Leipzig. A wedding cantata, 'Weichet nur betrübte Schatten,' also seems to belong to an occasion unrecorded in the Cöthen period. To the Prince's infant son Bach presented the autograph of the first (B flat) Partita in the first part of the *Clavierübung*, the first of his works published (1726) since the Mühlhausen Cantata. Two years later the death of Prince Leopold summoned him to perform a last duty to his patron. The Prince died on Nov. 19, 1728, and on March 24, 1729, Bach performed at Cöthen a work which Forkel, who had seen the score, described as 'a funeral cantata containing remarkably fine double choruses.' It was assumed to be one of the many works of Bach lost or destroyed until, in 1873, Wilhelm Rust (B.-G. xx. (2), pref.) was able to show, from a study of Picander's libretto, that Bach adapted to it nine movements[2] from the 'Matthäuspassion' which he was then writing, prefacing them with the opening chorus of the 'Trauer-Ode' (1727).

Meanwhile Bach continued to display his powers, or give expert advice, as an organist. Ten days after his release from confinement at Weimar he examined and reported on the newly completed organ in the Pauliner-Kirche at Leipzig—his receipt for 20 thalers is dated Dec. 18, 1717 (B. F. Richter's article on Bach and the University in *Gesellschaft f. Musikforschung*, 1901). In 1719 he sought out Handel at Halle, but found him already returned to England. The two men never met. In 1729, when Handel was again in Halle, Bach was too unwell to travel, but sent an invitation to Leipzig by the hand of his eldest son, which Handel was unable to accept. Handel's last visit, in 1750, coincided with Bach's fatal illness. Returning to Cöthen with the Prince from Carlsbad in July 1720, Bach found his wife dead and buried (July 7) during his absence. A desire to sever himself from Cöthen and its associations is suggested by his visit to Hamburg in the autumn of 1720. To Reinken, who was still active there, Bach gave an improvisation upon the melody 'An Wasserflüssen Babylon' in the Böhm-Buxtehude manner, which elicited a high compliment: 'I thought this art was dead; but I see that it survives in you,' Reinken addressed the younger master. Coincidently the post of organist in the Jacobi-Kirche at Hamburg fell vacant.[3] Erdmann Neumeister, its 'Haupt-Prediger,' was eager to secure Bach, himself not unwilling. The post, however, was given to a musician whose coincident contribution to the church's treasury exposes the considerations which obtained him the appointment. Neumeister remarked caustically, that had one of the Seraphim descended to compete he must have been rejected unless a heavy purse commended his candidature.

Grounded upon domestic reasons, Bach's inclination to leave Cöthen was spurred by his patron's marriage (Dec. 11, 1721) to a youthful princess of Anhalt-Bernburg, 'eine *amusa*,' in

[1] Forkel's copy, received from W. F. Bach, was appropriately inscribed 'bleibt schön in alle Saecula!'

[2] They were used in this order: Nos. 10, 47, 58, 66, 29, 26, 75, 19, 78. The opening chorus of the 'Trauer-Ode' preceded No. 10, and a setting of Psalm lxviii. 20 separated Nos. 10 and 47. The numbers refer to the Novello edition.

[3] Bach's application for the Jacobi-Kirche post is preserved in the Hamburg Staatsarchiv. See *Archiv. f. Musikwissenschaft*, 1921, Heft 2, p. 123 *f.*

Bach's opinion, who diverted her husband from music to other pursuits. Personal reasons also directed him. A week before his patron's wedding he married (Dec. 3, 1721) Anna Magdalena Wilcken (Wülcke, Wölckner), youngest daughter of Johann Caspar Wilcken, Hof- und Feld-Trompeter and Kammer-Musikus successively at Zeitz, Weissenfels and Zerbst (*B. J.-B.*, 1907, p. 178), a young wife of twenty to control a family of children the eldest of whom was twelve, and whose education was now a matter of concern. In Calvinist Cöthen the best educational facilities were provided in the Calvinist or 'reformed' school. Bach would not permit his children to attend it, preferring the newly established Lutheran seminary (*B. J.-B.*, 1905, p. 28). Therefore, though it was 'not entirely agreeable to become a mere Cantor after being a Kapellmeister,' as Bach wrote to Georg Erdmann, a prospect of employment at Leipzig in 1722 was not unwelcome.

Johann Kuhnau, cantor of the Leipzig Thomasschule, died on June 5, 1722. For the post six candidates forthwith appeared, the most distinguished of whom, Georg Philipp Telemann (1681–1767), already well known in Leipzig, was unanimously elected by the Council on Aug. 11, 1722. He declined the appointment, however, and so brought Bach into the field. On Dec. 21 his name was formally before the Council, who gave the appointment to Christoph Graupner (1683–1760), a former pupil of Kuhnau's in the Thomasschule and now Kapellmeister at Darmstadt, who vainly (Jan. 20, 1723) requested the Landgraf to release him. Still hoping to secure him, the Leipzig Council proceeded with its task of selection. Other candidates having been heard, on Quinquagesima Sunday (Feb. 7, 1723) Bach presented himself, fulfilled his 'Probe,' and performed the cantata 'Jesus nahm zu sich die Zwölfe' (No. 22). Graupner's definite withdrawal was announced on Apr. 9, a member of the Council remarking that, as the best musicians (*i.e.* Telemann and Graupner) were not available, 'müsse man mittlere nehmen'! On Apr. 22, 1723, to a full session of the Council Bach declared his willingness to instruct the scholars 'in den colloquiis Corderi und in der Grammatic' With permission to employ a deputy in the task, and an official caution that his music must be 'nicht theatralisch,' he was elected (*B. J.-B.*, 1905, p. 48 f.; cf. *ibid.*, 1913, p. 145 f.). On May 5, 1723, Bach signed the bond, originally prepared for Telemann, pledging him to lead an 'eingezogenen' life, teach the scholars 'treulich,' show the Council 'allen schuldigen *Respect* und Gehorsam,' provide music neither too diffuse nor 'opernhafftig,' and not leave the town without the burgomaster's permission (Spitta, App. iii. 301). A week later (May 13), having subscribed to the *corpus* of Lutheran doctrine, his appointment was confirmed by the Leipzig Consistory, and on Tuesday, June 1,[1] he was formally inducted in the school. Two days before (May 30), the First Sunday after Trinity, he had begun his duties by conducting in the Nicholai-Kirche his cantata 'Die Elenden sollen essen' (No. 75). Like his other cantatas for this Sunday it is in two parts, an innovation in Leipzig use involving the interposition of the sermon between them.

Leipzig, 1723–50.—The Thomasschule to which Bach was attached for the rest of his life was an Augustinian foundation dating from Mar. 20, 1212 (R. Sachse, *Ältere Geschichte der Thomasschule zu Leipzig*, 1912), whose control had been assumed by the Municipal Council on May 1, 1543, its scholars thenceforth supplying the music in the town's churches. Under the 'Schul-Ordnung' of 1634, effective at the time of Bach's appointment, the staff consisted of the rector, conrector, cantor and tertius, who formed the *superiores*, and four junior masters for the lower classes of non-foundation pupils. The cantor, like the rector, was lodged in the schoolhouse and was concerned exclusively with the four classes of foundation scholars, who numbered fifty-five, to whom he gave collective instruction in singing every week-day morning except Thursday, when he accompanied the school to church. The school supplied the choirs of the city churches. In the Thomas-Kirche and Nicholai-Kirche elaborate concerted music was performed with orchestral accompaniment. Both churches had their own organist, the cantor directing the choir and orchestra in St. Thomas's in the organ gallery on the west wall of the church. On ordinary Sundays a cantata was performed in the two churches alternately. On the principal festivals cantatas were sung in both churches, and in Holy Week the Passion was performed in them alternately. In the Neue-Kirche hymns and motets from Erhard Bodenschatz's (1576–1636) collection were sung under the direction of a prefect. In the Peters-Kirche the music consisted only of hymns.

Bach's duties brought him into touch with three authorities—the University, the Rector, and the Town Council, with all of whom his relations at first were uncordial. From his predecessor Kuhnau he inherited a controversy with the University relating to the cantor's duties in the Pauliner-Kirche, the University Church. Until 1710 service was held in it only on the three great Festivals, the Reformation Festival, and in special circumstances, the cantor, since the cantorate of Seth Calvisius (1594–1615), directing the music on these occasions. In 1710 the University instituted a regular Sunday service in the church and

[1] Not May 31, as Spitta and other writers prefer.

provoked a controversy. Kuhnau, cantor since 1701, claimed its direction *ex officio*. Unwilling to establish a precedent which would tie it in perpetuity to the 'Stadtkantor,' in whose appointment it had no voice, the University demurred, but accepted Kuhnau's undertaking to fulfil the new duty without an augmentation of his emolument (12 thalers). Telemann, on his appointment as 'Stadtkantor,' applied for and received the University office (Aug. 18, 1722), with the intimation that it was his because he had asked for it and not as having a right to it. Upon his withdrawal, and three weeks before Bach's appointment, Johann Gottlieb Görner (1697–1778), organist of the Nicholai-Kirche, petitioned for and received (Apr. 3, 1723) the post, and was charged not only to direct the 'neu Gottesdienst' instituted in 1710, but the 'alt Gottesdienst' as well. Upon his election as 'Stadtkantor,' Bach made his protest, claimed at least his emolument for the 'old service,' and was refused it (Sept. 28, 1723) on the ground that the appointment was not vacant and that he had no *jus prohibendi*. Bach persisted: for association with the University was essential to his new activities. In dissociating the 'old service' from the cantorship the University was clearly in the wrong, and in the face of Bach's persistence, yielded (May 13, 1723), but offered only half the traditional emolument. After vain negotiations Bach appealed direct (Sept. 14, 1725) to the King-Elector; the University sent up a counter-statement (Dec. 31, 1725); and, on Jan. 21, 1726, the sovereign delivered a Solomonic judgment: since the 'old service' was supported by ancient endowments, it must remain attached to the cantorship of the Thomasschule; with regard to the 'new service' the University was competent to make its own regulations.

Irritation and discord were not removed by the judgment. Bach provided the music for the University celebrations honouring Dr. August F. Müller (Aug. 3, 1725) and Dr. Gottlieb Korte (Dec. 11, 1726). (See Secular Cantatas, Nos. 1, 2 *infra*.) But Görner had his partisans, and the death of the Electress Christiane Eberhardine on Sept. 6, 1727, brought the two factions into collision. A fortnight later (Sept. 23), Hans Carl von Kirchbach begged of the University permission to deliver an oration on the event in the Pauliner-Kirche. Anticipating a royal command to mark the occasion officially, the University hesitated. Kirchbach appealed direct to Dresden, whence came an order to proceed with the solemnity. Thereupon Kirchbach commissioned Professor J. Chr. Gottsched to write a 'Trauer-Ode' and Bach to compose the music. Görner now intervened: as 'Direktor Chori Musici Academici' he insisted on his prerogative to write the music for the ceremony, demanding protection against invasions of his rights in future. The University supported him. Notwithstanding Kirchbach's assurance that Bach was at work upon the score and had been paid for it, its performance was ordered (Oct. 9) to be handed over to Görner and his University choir. Kirchbach threatened to abandon the celebration altogether if difficulties were put in his way, and as his munificence was relieving the University of the costs of a public obligation, its authorities proposed a compromise: Görner accepted a solatium of 12 thalers and surrendered his rights for the occasion, provided that Bach signed a document declaring his present intervention to be by favour only, and that in future he would contract with no one to provide music for similar celebrations without the University's express permission. The clerk was sent forthwith to obtain Bach's signature, spent an hour in vain effort to procure it, and handed the document unsigned to Kirchbach on Oct. 13 (*Gesellschaft f. Musikforschung*, 1901, p. 101 f.). The performance of the 'Trauer-Ode' took place four days later (Oct. 17). For lack of occasion Bach never again conducted a composition in the University Church, with the exception of the motet 'Der Geist hilft unsrer Schwachheit auf' performed at the funeral of Johann Heinrich Ernesti (*d.* Oct. 16, 1729), who was both rector of the Thomasschule and Professor of Poetry. The University solemnities for which Bach in future supplied the music were held elsewhere, and though they originated with the students and not their impecunious seniors, their character and their frequency prove that Bach was regarded as the natural provider of cantatas on ceremonial occasions.

When Bach came to Leipzig in 1723 there existed two musical societies (Collegium Musicum), of one of which, founded by Telemann in 1704, he became conductor in 1729. It met once a week, in the summer in Gottfried Zimmermann's garden in the Windmühlstrasse, in winter in his coffee-house in the Catherstrasse. Its hours were four to six in summer, eight to ten in winter. For the most part the members were University students, who provided an intelligent audience before whom distinguished musicians were willing to perform, and produced the ceremonial cantatas with which Bach's unflagging and not disinterested loyalty acclaimed the reigning house (cf. Secular Cantatas *infra*). The programmes of 'Tönet ihr Pauken' (Dec. 8, 1733) and 'Blast Lärmen, ihr Feinde' (Jan. 17, 1734) announce their performance 'in unterthänigster Ehrfurcht in dem Collegio Musico durch J. S. B.' (*B. J.-B.*, 1913, pp. 85, 87). For the Abendmusik on Oct. 5, 1734, when 'Preise dein Glücke, gesegneter Sachsen' was performed, the students and others subscribed 299 thalers 22 groschen, most of which was expended on

white wax torches, though 50 thalers, ten of which went to the Stadtpfeifern, found their way into Bach's purse for the music. In honour of the newly wedded Princess Amalia, on Apr. 28, 1738, the University directed the proceedings, since an oration formed part of the solemnity. Several professors preferred an ode set to music by Görner. But a majority concluded to revive the collaboration of Bach and Gottsched. The latter's text, 'Willkommen! ihr herrschenden Götter der Erden,' survives; Bach's music is lost. Bach received 58, Gottsched 12, and the Stadtpfeifern 8 thalers (*Gesellschaft f. Musikf. ut supra*). No other instance of Bach's employment by the University is recorded, and probably none occurred. He was succeeded by Carl Gotthelf Gerlach in the conductorship of the Collegium Musicum (*B. J.-B.*, 1913, pp. 89, 96).[1] On May 2, 1741, an 'Abendmusik' for the King-Elector was composed by Görner to Gottsched's text. Two years later (1743), a new organisation, founded and supported by wealthy members of the commercial community, came into existence, whose institution marked a development in the musical life of Leipzig with which Bach was not associated. Out of it the Gewandhaus or 'Grosses Konzert' came into existence thirty-eight years later (1781).

With the Municipal Council Bach involved himself in controversy in 1729, over their patronage of the scholarships in the Thomasschule which provided him with singers. A report by him in 1730 gives their number as fifty-five. He described seventeen of them as 'brauchbaren' on whom he relied for the performance of concerted music: only five or six of this competent body—which included the Krebs brothers—were under seventeen years of age (*B. J.-B.*, 1907, p. 61).[2] In a second category were the 'Motetten Singer,' scholars not yet competent to perform concerted music. They numbered twenty, equally divided between those above and below seventeen. Six of them formed the core of the Neue-Kirche (to-day the Matthai-Kirche: cf. *Die Musik*, 1912, vol. 42, p. 153) choir; the remainder served that one of the two principal churches in which on alternate Sundays concerted music was not performed. The third body numbered seventeen, and was made up of those, Bach reported, 'die sind gar keine Musici.' Eight of them served the Peters-Kirche, where only simple hymns were sung; the rest were distributed between the Motet choir and the Neue-Kirche: those above and below seventeen were nine and eight respectively. Thus Bach had about 24 sopranos and altos and 30 tenors and basses.

[1] The date of the termination of Bach's connection with the Collegium Musicum is not ascertained. A letter of Johann Elias Bach's (Sept. 28, 1739) clearly implies that Bach then was still connected with it (*Die Musik*, 1912-13).

[2] By far the greater number of scholars in Bach's time entered the Thomasschule at the age of fourteen and upwards: 43 entered at sixteen, 19 at seventeen, 9 at eighteen, 3 at nineteen and twenty, 1 at twenty-one (*B. J.-B.*, 1907, p. 50).

A 'Chorordnung' for 1744–45 gives the following distribution of parts in the four choirs: *Choir I.* S. 5, A. 2, T. 3, B. 7 = 17. *Choir II.* S. 4, A. 4, T. 5, B. 4 = 17. *Choir III.* S. 3, A. 4, T. 4, B. 2 = 13. *Choir IV.* S. 1, A. 1, T. 4, B. 1 = 7 (*B. J.-B.*, 1907, p. 77). Help was rarely provided; but in 1745–47 Bach's future son-in-law Altnikol was paid 'für assistence' as a bass. Evidently the resources at Bach's disposal were weak and inexperienced. His memorandum to the Council (1730) very reasonably invited that body to reflect that the 'status musices' had changed; that 'die ehemalige Arth von Music' was no longer tolerable; that it was therefore unreasonable to expect his young singers to function either with justice to the music they were now called upon to perform, or, he added, to the satisfaction of the composer of it.

Unfortunately for Bach the period was one of transition in the schools, where music no longer held its place unchallenged among the humanities. A new type of scholar demanded admission to the Thomasschule, as elsewhere, to which the musical obligations of school life were as irksome as its ability to perform them was inconsiderable. On the other hand, the cantor was concerned to insist that the foundationers possessed the qualifications necessary to fulfil the purposes for which the school traditionally existed. These opposing interests clashed in 1729, when the Council was called upon to appoint ten scholars. Twenty-three candidates appeared, on whom Bach presented a report, recommending 9 sopranos, 2 altos, 1 tenor, and dismissing 11 as of no musical value. The Council selected five candidates on Bach's list (4 sopranos and 1 alto), 4 whom he had rejected, and one whom he had not even examined, a candidate whose social position—his father was Hof-Sekretar—suggests that private influence guided the decision. Bach did not conceal his dissatisfaction, and as the Council retaliated with charges of perfunctory performance of his duties, resolved to expose the conditions under which he worked. On Aug. 23, 1730, he addressed a memorandum to the Council, pointing out that if unskilled youths were admitted it was impossible, out of the school's restricted membership, to form the four choirs required. The instrumental material at his disposal was equally unsatisfactory The town maintained four Stadtpfeifern, three Kunstgeigern (string players) and one Geselle (assistant). At the moment one of these posts was vacant; the rest provided him with a first and second trumpet, two violins, a first and second oboe and a bassoonist. He needed, however, an orchestra of twenty (strings, flutes, oboes, bassoons, trumpets, drums), and for string players was dependent on the Collegium Musicum and school scholars, whose presence

in the orchestra, however, withdrew them from the choir. Bach complained that the Council had ceased to provide him with the means to secure competent instrumental assistance, and, by withholding former *beneficia*, put it out of his power to set things on a better footing. The Choral cantatas of his latest period, after the termination of his connection with the Collegium Musicum, with their simple orchestra of strings, oboes and cornetto, show how seriously he was handicapped by the imperfect instrumental resources at his disposal.

The immediate outcome of Bach's controversy with the Council was his resolution to solicit a court title to compel the deference of his civic masters. He retained his Cöthen appointment till 1728, and in 1728 or 1729 was appointed Kapellmeister 'von Haus aus' at the court of Weissenfels, for whose Duke Christian he composed 'Was mir behagt' in 1716. But these distinctions carried little weight in Leipzig, where, Bach judged, an appointment to the Dresden court would shield him from the annoyances to which he was subjected. This is clear from the letter he addressed on July 27, 1733, to Augustus III., the new King-Elector of Poland-Saxony, requesting his 'powerful protection' and declaring himself the victim of 'undeserved affronts which are likely to continue' unless his sovereign graciously appointed him to his Kapelle. The parts of the B Minor Kyrie and Gloria accompanied the petition, and in the following months Bach indefatigably serenaded the royal house with secular examples of his art. In Sept. 1736 he renewed his application, and a month later (Nov. 19) was rewarded with the title 'Königlicher Hof-Componist.'

The award of the coveted title found Bach involved in a fresh controversy. Johann Henrich Ernesti had been rector of the Thomasschule since 1684, a year before Bach's birth. An old man, and at no time well fitted for the duty, he had permitted the school to decline in numbers and efficiency, resented proposals for reform, and, like the rest of the higher staff, was financially interested in the continuance of some of the admitted evils. Ernesti's death (1729) brought in his place (1730) Johann Matthias Gesner, lately conrector of the Weimar Academy, where Bach had known him. Gesner restored school discipline, his relations with the cantor were cordial, and his interest in music was as evident as his admiration of Bach, in whom were combined, he declared in after years, 'multos Orpheos et viginti Arionas!' Had he remained, Bach would have been spared many annoyances, and the school an unedifying example of strife in high places. In 1734 he gave place to Johann August Ernesti, a young man of twenty-seven, conrector of the school since 1732.

The new rector proved as antipathetic to the musical curriculum of the school as his predecessor was the reverse. With an obstinacy that matched Bach's, he proposed to make it indisputable that he was master of the institution, that music was of subordinate importance in it, and that if his authority and that of the cantor clashed, his own must prevail. The inevitable collision occurred in 1736 over the cantor's claim to control the Chor-Präfecten, among whom the head prefect, as the cantor's deputy, stood in a particularly intimate relation towards him. In the summer of 1736 this office was held by Gottfried Theodor Krause, of Herzberg, who had been eight years in the school and was on the eve of leaving it for the University. A strict disciplinarian, it was reported to the rector that he had threatened to flog younger scholars whose conduct at a wedding called for rebuke. Krause was nearly twenty-two years old (*B. J.-B.*, 1907, p. 69), his previous conduct blameless; yet Ernesti proposed to flog him publicly, an indignity which Krause evaded by leaving the school. Upon his own authority Ernesti promoted to the vacant prefectship another Krause (Johann Gottlieb). Bach already had objected to his character, while admitting his abilities to be adequate for the position of junior prefect. He concurred, however, in his promotion. A few weeks later, finding Krause incompetent in his more responsible post, Bach put in his place Samuel Kittler, a youth of twenty-one. Krause complained to the rector and Ernesti referred him to Bach, who injudiciously admitted that he had degraded him in order to assert his authority against the rector's. Naturally Krause reported the admission to Ernesti, to whom Bach angrily repeated it. Ernesti accordingly reinstated Krause, whom Bach turned out of the organ gallery on the Sunday morning following, and at vespers in the afternoon ejected him again. On the following Sunday (Aug. 19, 1736) these unedifying altercations were repeated, and Bach appealed to the Council to support his authority. That body, however, was not eager to involve itself in a dispute in which the rival authority of the ecclesiastical Consistory already had been invoked. Not until Apr. 1737 did the Council deliver a judgment which left things much as they were before. On Oct. 18, 1737, Bach appealed directly to his sovereign, whose visit to Leipzig on Apr. 28, 1738, afforded him opportunity to express his loyalty in the cantata 'Willkommen! ihr herrschenden Götter der Erden.' Augustus's intervention seemingly concluded in Bach's favour a squabble whose larger interest is its illustration of the new influences at work to depreciate music among the school humanities, a prejudice illustrated by Ernesti's contemptuous

reference to any of his scholars who played an instrument as a 'Bierfiedler.' An echo of the controversy was heard in 1749, when 'Phöbus und Pan' was revived and Bach remodelled the last recitative in order to impale Ernesti and a similarly prejudiced pedagogue, Johann Gottlieb Biedermann, of Freiberg, who had expressed himself contemptuously upon music's value in the curriculum.

These aggravations were forgotten as Bach's increasing reputation abroad reacted upon his relations with his fellow-citizens. As early as Aug. 1730 the Leipzig Council complained of his leaving the town without leave. He appears once at least to have revisited Weimar, whose new sovereign, Duke Ernst August (1728–48), continued his regard for him. In 1732 he was invited to Cassel to play the renovated organ in the Martinus-Kirche there, receiving 50 thalers remuneration and half as much for the travelling expenses of himself and his wife, who accompanied him (Scherer, *ut sup.* i. 176). On Sept. 26, 1746, he visited Naumburg on a similar mission (*B. J.-B.*, 1906, p. 131). His official position at the Saxon court, and his son Friedemann's appointment as organist to the Sophien-Kirche, invited Bach to the congenial society of Dresden musicians, especially Johann Adolf Hasse (1699–1783), director of the opera there, and his gifted wife Faustina Bordoni. He was present at the first performance of Hasse's 'Cleofide' on Sept. 13, 1731, and on the following afternoon gave an organ recital in the Sophien-Kirche which drew a compliment to his 'hurtigen Hand' as more potent than Orpheus's fingers! In Count Hermann Carl Keyserlingk he found a powerful patron, to whom he probably owed his court appointment, and on whose commission he wrote the Goldberg Variations. He performed again on the Silbermann organ in the Sophien-Kirche on Dec. 1, 1736, and subsequent visits took place in May 1738 and Nov. 1741 (Falck, *W. F. Bach*, p. 18).

His son Carl Philipp Emanuel's appointment to Frederick the Great's service in 1740 drew Bach to a circle still more august. In Aug. 1741 he visited Berlin on a purpose not stated (Letters of Johann Elias Bach of Aug. 5 and 9, 1741, in *Die Musik*, 1912–13, pp. 3-19). In the spring [1] of 1747, Potsdam being again accessible to a Saxon, Bach made a second journey thither, in response to repeated expressions of Frederick's desire to receive him. It was the king's custom to hold a private concert in the evening, himself playing the flute. On such an evening, when the musicians were at their desks, a chamberlain entered with a list of passengers newly set down by the coach. Frederick, running his eye down it, rose suddenly in some excitement. 'Gentlemen, old Bach has arrived,' he announced. A summons brought Bach from his son's lodging in his travelling dress, having been forbidden time to put on his cantor's black gown. High compliments were exchanged, the concert was abandoned, and, accompanied by the king and his musicians, Bach passed from room to room of the palace, trying Frederick's new Silbermann pianofortes, and extemporising on them to the king's admiration. At Bach's invitation Frederick played him a subject to treat extempore. Frederick then asked for a fugue in six parts. Bach forthwith improvised one, and on his return to Leipzig developed Frederick's interesting theme in a similar manner. Judiciously including a trio for flute, violin and clavier, he despatched the gift to Frederick as a 'Musikalisches Opfer,' with a dedication (July 7, 1747) to 'a sovereign admired in music as in all other sciences of war and peace.'

The Potsdam visit was probably the last, as it was the most flattering and agreeable, of Bach's professional perambulations. As a player he was already distinguished as 'the Great,' 'the prince of clavier and organ players.' His compositions were little known outside Leipzig, except in the repertory of his pupils, and his vocal works invited the adverse criticism of two of the leading critics of the day. Johann Mattheson, of Hamburg, criticised Bach's declamation in the only cantata, perhaps, known to him—'Ich hatte viel Bekümmernis' (No. 21), while Johann Adolf Scheibe (1708–76) ventured more spiteful comment. His animus dated from 1729, when Bach failed to support his candidature for the vacant organ in the Thomas-Kirche. Bach answered his notorious criticisms in 'Phöbus und Pan' (1731), where, in the character of Midas, he had the pleasure of calling Scheibe an ass. In 1737 Scheibe retaliated. Entirely unsusceptible to the poetic and romantic inspiration of Bach's music, but recognising him as the most prominent of those who, he deplored, were putting German music in bondage to Italian artificialities, he printed an anonymous attack upon Bach's art in his *Kritischer Musikus*. Bach, incensed, invited his friend Johann Abraham Birnbaum, Professor of Rhetoric in the University, to take up the cudgels in his behalf in a contest which he felt himself unqualified to conduct. In Jan. 1738 Birnbaum published an academic and anonymous reply which Scheibe answered a few weeks later. Extending the radius of his criticism, he foolishly asserted that Bach lacked the literary equipment necessary to a composer who desired 'den Natur und Vernunft zu untersuchen und zu kennen.' Standing at length on his own ground, Birnbaum easily

[1] Bach was at Potsdam on May 7 and 8. Forkel's account (*supra*) is unreliable.

routed Scheibe, who in later years exhibited signs of regret for the acerbities of his earlier criticism.

There are few materials out of which to reconstruct an intimate interior of Bach's domestic life at Leipzig. A letter to Georg Erdmann in 1730 (Spitta, ii. 258), which speaks of his children as all born musicians, and declares 'I can already form a concert, vocal and instrumental, in my own family'; two letters to Johann Elias Bach in 1748 which reveal Bach's frugal parsimony (Spitta, iii. 271, 272); and a series of letters written by Johann Elias from 1738 to 1740 while he was a member of Bach's family (*Die Musik*, 1912–1913, pp. 3-19), all exhale the atmosphere of a household singularly fragrant, well ordered, and homely. The cantor's official residence was in the south wing of the schoolhouse, under the shadow of the church. Bach brought to it four children of his first marriage, and for the first seven years of their residence in it Anna Magdalena presented him annually with a son or daughter. The family outgrew its quarters, and found a lodging elsewhere in 1731, while extra storeys were added to the schoolhouse. The building was reopened and dedicated on June 5, 1732, when Bach, collaborating with his colleague Winkler, produced the cantata 'Froher Tag, verlangte Stunden.' From thenceforward till his death eighteen years later his occupancy was not interrupted. Pupils resorted to him, distinguished, Forkel declared in 1802, 'according as they came early or late under his influence.' Among them were his kinsmen, Samuel Anton Bach, of Meiningen; Johann Ernst, son of Bernhard Bach, of Eisenach; Johann Elias Bach, of Schweinfurt. Others were Heinrich Nikolaus Gerber (1702–75), Johann Tobias Krebs's (himself a Weimar pupil) three sons, of the eldest of whom, Johann Ludwig (*b.* 1713), Bach declared punningly that he was 'the best crab (Krebs) in the brook (Bach)'; Johann Schneider (1702–87); Georg Friedrich Einicke; Johann Friedrich Agricola (1720–1774); Johann Friedrich Doles (1715–97); Gottfried August Homilius (1714–85); Johann Philipp Kirnberger (1721–83); Rudolf Straube, Christoph Transchel, and Johann Theophilus Goldberg (*b. circa* 1730) (who studied chiefly under W. F. Bach). During his last years, when his sons were already distinguished elsewhere, those outside his family closest to him were his pupils Johann Christian Kittel, Johann Gottfried Müthel (*b.* 1720), and Johann Christoph Altnikol (*d.* 1759), whose marriage with Bach's daughter Liessgen (Elisabeth) in Jan. 1749 was the single event of that character in his family.

Indifferent as a schoolmaster, Bach was the rarer product, a teacher from whom the talented drew inspiration. Forkel devotes a section of his monograph to this aspect of Bach's genius, concluding, from the evidence of Bach's pupils, that he was 'the most instructive, clear, and definite teacher that has ever been.' In teaching the clavier he began with simple exercises to develop the sympathetic touch which was his own, as it was Handel's, distinction. The familiar preludes and inventions were written for this purpose. He next instructed his pupils in the various ornaments. When this elementary foundation had been laid he allowed them to study his larger works, playing them over first with the remark, 'That's how it ought to sound.' He taught a system of fingering of his own which gave the thumb an active function hitherto denied it, an innovation set forth, along with the general principles of Bach's method, by C. P. E. Bach in his *Versuch über die wahre Art des Klavier zu spielen* (1753). On the organ he directed much attention to registration, his unusual combinations frequently astonishing both organists and organ-builders. In composition, postponing the technicalities of counterpoint, he started his pupils on four-part harmony over a figured bass, making them write out the parts on separate staves in order to impress them with the need to give an individuality to each. Thence he passed to hymn-tunes, insisting again on each part having a clear melodic form. When these qualities had been grasped and enforced by the study of classic models, the pupil was permitted to proceed to counterpoint. Bach insisted on the exercises brought to him being composed away from the clavier, ridiculing those who did otherwise as 'harpsichord horsemen' riding aimlessly up and down the keyboard. He insisted upon the separate individuality of each part, and if an irrelevant note occurred in it, let its author understand why it could not be admitted. Outside these fundamental restrictions he encouraged originality in his pupils. It was not customary to allow such liberty, and Kirnberger's *Kunst des reinen Satzes* (Berlin, 1774–79), based on his experience as Bach's pupil, unfolds his master's method.

There is little to indicate that Bach frequented the cultured society of Leipzig. Gottsched and Marianne von Ziegler provided him with libretti for his cantatas, but he does not appear to have been admitted to their circle. Officially he was connected with the University, but, excepting Rambaum and one or two others, he does not seem to have been on terms of intimacy with its staff. His indifference to Mattheson's request for biographical details to publish in his *Ehrenpforte* is characteristic of one whose interests were concentrated steadily upon his art and home. Only with reluctance was he induced to apply for admission to his former pupil L. C.

Mizler's, 'Sozietät der musikalischen Wissenschaften,' founded in 1738. Not until June 1747 did he permit his name to be added to its exclusive roll, depositing as his diploma work the canonic variations on the melody 'Vom Himmel hoch,' and (probably) his portrait by Elias Gottlieb Haussmann, court painter at Dresden, which shows in his hand the 'canon triplex à 6 voc.' posthumously printed in the society's journal in 1754. Along with it may be mentioned the *Kunst der Fuge*, published to an indifferent public in 1750.

It is easily observed in Haussmann's portrait[1] that the lifelong strain of copying music irreparably injured Bach's eyesight. Before the end of 1749 the symptoms were distressing, and on the advice of friends he submitted to an operation by the Chevalier John Taylor, surgeon oculist to George III., a plausible practitioner who also operated on Handel. In his *History of the Travels and Adventures of the Chevalier John Taylor* (1761), amid much that is inaccurate, Taylor refers to his patient at Leipzig, 'a celebrated master of music . . . with whom I once thought to have had the same success [as with Handel], having all circumstances in his favour, motions of the pupil, light, etc. But, upon drawing the curtain, we found the bottom defective from a paralytic disorder' (vol. i. 25). Bach lost his sight completely, and pernicious medicines increased his disorder. He passed his time almost entirely in a darkened room, attempting, when health permitted, the revision of the 'Eighteen' Choral Preludes. Ten days before his death his eyesight returned. But the promise of recovery was not fulfilled. A paralytic stroke followed by high fever supervened and defied the skill of his physicians. On July 28, 1750,* in the sixty-sixth year of his age, he passed away at a quarter before nine in the evening. Three days later (July 31) he was buried near the south door of the Johannis-Kirche, in whose churchyard for more than two centuries the citizens of Leipzig had been laid to rest. No outward mark distinguished Bach's grave, and its locality could only be generally indicated when, on the second centenary of his birth in 1885, a tablet was placed on the south wall of the church to record his burial. On Oct. 22, 1894, while excavating to extend the foundations of the church, three coffins were disclosed, one of which contained the bones of an elderly man, well proportioned, but not largely built (*Mus. Wochenblatt*, xxvi., Leipzig, 1895).[2] Investigations conducted by a skilled anatomist, Geheimrat Wilhelm His, proved conclusively that the skull was Bach's. His ashes now lie in a sarcophagus beneath the Johannis-Kirche, bearing the terse inscription, 'Johann Sebastian Bach, 1685–1750.'[3] His contemporary townsman, Christian Früchtegott Gellert (1715–69), lies beside him in the vault.

Music, to Bach, was the apparatus of worship, and, it has been truly observed, the line of demarcation between the sacred and secular forms was for him not decisively drawn (Parry, *J. S. Bach*, p. 563). He himself defined music as 'eine wohlklingende Harmonie zur Ehre Gottes und zulässiger Ergötzung des Gemüths.' Even the little clavier exercises he composed for his children are prefaced with the words 'In nomine Jesu.' The *Orgelbüchlein*, that outline never completed, he inscribed 'Dem Höchsten Gott allein zu Ehren.' He rarely failed to add 'Soli Deo Gloria' as a colophon to his scores, or omitted the petition 'Jesu juva' as he sat down to write them. Religion, tinged with the pietism and mysticism of his generation, was the foundation of his character. Beside this trait the rest are of trivial account. An obstinate disposition which developed easily to pugnacity is the single blemish, if it be one, in a personality otherwise equable, serene, modest, and wholly lovable.

In the history of his art Bach is the link between the old and new, not exclusively a reformer, the originator of new forms, but rather 'a spectator of all musical time, and existence' (D. F. Tovey, *Ency. Brit.* iii. 126), wedded to no formula, old or new, but attracted by every utterance that rang true. His career is the progress of a curiosity as insatiable as Queen Caroline's, determined to explore every path of promise in the mystery of his art. From the day when he copied a coveted manuscript in the moonlight at Ohrdruf his life was the indefatigable pursuit of a purpose undeviatingly observed, a searching for all that was best in his art to refine it in the fire of his genius. His distinctive achievement was to present in its final shape the fabric of polyphony. The new sonata form as yet was too immature to attract him, the opera too superficial to engage his pen. These were the standards of the generation that followed his death, to which his sons conformed. Hence the neglect which obscured his grandeur for nearly a century. The science of polyphony which he demonstrated in its perfection, the cantata, oratorio, motet, expressed an artistic idiom already passing out of date. Bach's fame as an organ-player, and so far as his works were known, as a composer for the organ, survived. Otherwise he awaited the advent of a generation better equipped to fathom him.

The Leipzig Compositions.—The nature of his employment governed the productiveness of Bach's genius during the Leipzig years. By

[2] Cf. 'Un portrait et les ossements de J.-S. Bach (avec illustrations)' in *Le Ménestrel*, lxi. 31, 1895.

[3] Subscriptions for a monument were invited. Cf. *Mus. T.*, 1896, p. 309.

far the greater number of his compositions in the period were written for the church. Enumerating Bach's then unpublished works the *Nekrolog* names five ' Jahrgänge ' of church cantatas. Compositions of this kind were familiar in Leipzig from the cantorate of Sebastian Knüpfer (1657–76) (*B. J.-B.*, 1912, p. 87); but the word had hardly established itself in Bach's time. He writes it on only five of his scores, whereas ' Concerto ' is found on forty of them. The cantata (' Stück '; ' principal music ') was sung immediately before the prayer preceding the sermon, and, if in two parts, the second followed the announcements that concluded the sermon. It is not extraordinary that Bach should have written five complete yearly sets of cantatas: Telemann produced twelve! Of Bach's 295 (5 × 59) cantatas, approximately 265 were composed at Leipzig between 1723 and 1744. Of the number 202 have come down to us, some of them doubtfully genuine, besides four (B.-G. Jhrg. xli.) whose non-authenticity is admitted. For his libretti Bach drew upon the published cycles of Neumeister, Salomo Franck, Christian Friedrich Henrici (Picander) (1700–64), and Marianne von Ziegler. But he depended chiefly upon texts specially written for him, a large number of which, it is conjectured, were provided by two of the Thomas-Kirche clergy, Christian Weiss, father and son. Bach's own hand is frequently visible in his libretti, and Gottsched provided him with one (No. 198). In the last period of his activity he adopted a libretto in which he had been patiently experimenting—the so-called ' Choral Cantata ' of his maturest art, a madrigalised version of congregational hymns, in whose transformation the facile but superficial pen of Picander is generally apparent.

The *Nekrolog* assigns five Passions to Bach, ' worunter eine zweychörige.' The statement is probably inaccurate. The ' Lukaspassion,' published by the Bachgesellschaft (Jhrg. xlv. (2)), is certainly not his composition. (Cf. J. Schreyer, *Beiträge zur Bach-Kritik* (1911), p. 27 f.; *B. J.-B.*, 1911, p. 105 f.; *ibid.* 1922, p. 63 f.). Apart from internal evidence, only twenty-three of its fifty-seven pages are in his handwriting. Four Passions, however, can be accounted for. On Good Friday, 1723 (rather than 1724), the ' Johannespassion ' had its first performance in the Thomas-Kirche (*B. J.-B.*, 1905, p. 62). Its libretto, based as to some of its numbers upon B. H. Brockes' poem, may be attributed to Bach himself. The performance in 1723 was not given in its present form, which probably dates from 1727.[1] For Good Friday 1725 Picander published an indifferent libretto (Spitta, Germ. edn. ii. 873) which Bach may be assumed to have set to music. It differs from the others in the paucity of Chorals and versification of the Evangelist's narrative. For Good Friday 1729 Picander wrote the ' Matthäuspassion,' a portion of which, as has already been noticed, was used as a ' Trauer-Ode ' at Cöthen a few weeks earlier. The score of the ' Matthäuspassion ' is published in facsimile by the Insel-Verlag, Leipzig. For Good Friday 1731 the same author wrote a ' Passions-Music nach dem Evangelisten Marco.' Wilhelm Rust (B.-G. xx. (2)) was the first to discover that Bach's music for it is not wholly lost, since certainly five movements of the ' Trauer-Ode ' for Queen Christiane Eberhardine of Poland-Saxony in 1727 are incorporated into it.

To three of his compositions Bach attached the title ' Oratorium,' each work treating events in the life of Christ in narrative and reflective movements. The ' Weihnachts-Oratorium ' (Christmas Oratorio), was produced as a whole in 1734,[2] but was certainly written in or by 1733. Its arias and choruses, with eight exceptions, were adapted for the secular cantatas ' Lasst uns sorgen ' (produced Sept. 5, 1733), ' Tönet, ihr Pauken ' (produced Dec. 8, 1733), and ' Preise dein Glücke ' (produced Oct. 5, 1734), but, contrary to the hitherto generally accepted opinion, were not written originally to those secular libretti. Probability points to 1736 as the year in which the ' Oster-Oratorium ' was composed. It differs from the other two oratorios in its lack of a scriptural narrative and in the fact that Bach twice revised it. It was customary to celebrate the Easter festival at Leipzig with a musical setting of the Easter story, such as appears at pages 311-361 of Gottfried Vopelius' *Neu Leipziger Gesangbuch* (1682). Bach's original oratorio was of that character. The B.-G. score represents an attempt to reproduce his final version by a collation of the surviving vocal parts of the last revision with the score of the intermediate version. Picander's authorship of the Easter and Christmas Oratorios can be assumed. The Ascension Oratorio ' Lobet Gott in seinen Reichen ' (Cantata No. 11) may be dated *circa* 1735–36. Judging from the faulty declamation, its opening chorus was borrowed from a secular cantata, while its alto aria provided the subject of the Agnus Dei of the Mass in B minor.

Six authentic motets by Bach have survived, all of which are of the Leipzig period: 1. ' Lobt den Herrn, alle Heiden ' (S.A.T.B. and continuo); 2. ' Jesu meine Freude ' (S.S.A.T.B.); 3. ' Der Geist hilft unsrer Schwachheit auf ' (S.S.A.A.T.T.B.B.); 4. ' Singet den Herrn ein neues Lied ' (S.S.A.A. T.T.B.B.); 5. ' Fürchte dich nicht ' (S.S.A.A. T.T.B.B.); 6. ' Komm, Jesu, komm, mein Leib

[1] The existing opening and concluding choruses replace movements transferred respectively to the ' Matthäuspassion ' (No. 35) and Cantata No. 23 (last movement). Three deleted arias (B.-G. xii. (1) Anhang) were (1) interpolated between Nos. 15-16, and (2), (3) replaced by Nos. 19, 31 and 32 of the present edition.

[2] Cf Terry *Bach's Cantata Texts*, p. 75

ist müde' (S.S.A.A.T.T.B.B.). Spitta's inference (ii. 597) that these motets were designed to take the place of the cantata in the church service cannot be entertained. The motet had its peculiar place in the Leipzig liturgy, at the beginning of the morning or principal service ('Hauptgottesdienst'); at the beginning of vespers; and, if required, during the celebration of the Communion at the 'Hauptgottesdienst.' The motets sung at these points of the service were taken chiefly from Erhard Bodenschatz' *Florilegium Portense* (1621), Bach's use of which is proved by a fact recorded in Spitta ii. 252. With the possible exception of No. 1 (a setting of Psalm cxvii., probably the opening chorus of a cantata [1]), Bach's motets are mourning music. It was a recent and occasional custom to hold a funeral service for prominent citizens in place of Sunday vespers, when a sermon was preached and music was sung. Motets 2, 3, 4, 5 and 6 were composed for such occasions, and those that are extant are probably all that Bach wrote. No. 2, a setting of Johann Franck's hymn, with passages from Romans viii. 1, 2, 9, 10, was probably composed for the funeral of Frau Käse, wife of the Oberpostmeister of Leipzig, on Sunday, July 18, 1723 (*B. J.-B.*, 1912, p. 9). No. 3, a setting of Romans viii. 26, 27, was composed (as the autograph states) for the funeral of Johann Heinrich Ernesti (*d.* Oct. 16, 1729). Alone among the motets it has orchestral parts, a circumstance certainly due to the fact that Ernesti was both rector of the Thomasschule and Professor of Poetry in the University. Hence, the motet was sung in the Pauliner-Kirche as well as the Thomas-Kirche. In the latter the performance was *a cappella*, a restriction which did not rest upon the University Church. No. 4 is a setting of Psalms cxlix. 1-3, and cl. 2, with a middle hymn section. Spitta's conjecture (ii. 603) that it was composed for New Year's Day is not tenable: the text of the middle section clearly declares it a funeral composition. No. 5, a setting of Isaiah xli. 10, xliii. 1, with a hymn stanza, was written for the funeral of Frau Winkler, wife of the Stadthauptmann of Leipzig, on Feb. 4, 1726 (*B. J.-B.*, 1912, p. 11). No. 6, a setting of verses 1 and 2 of an anonymous funerary hymn, founded on St. John xiv. 6, also was clearly written for a funeral.

Five of the Leipzig works bear the title 'Missa' (Messe: Mass)—the Mass in B minor, and four miscalled 'short' Masses in F major, A major, G minor and G major. In Lutheran liturgical use the 'Missa' was a setting of the Kyrie and Gloria in Excelsis sung at the beginning of the 'Hauptgottesdienst' after the Introit. The four 'short' Masses are complete Lutheran *Messen*. The Mass in B minor in its original form also was a Lutheran *Messe*, composed in 1733 in circumstances already related. The subsequent addition of the Credo, Sanctus (with Osanna and Benedictus) and Agnus Dei enlarged it to conform in structure to the Roman *Ordinarium Missae*, though Bach neither wrote it for Roman use nor made it serviceable for use at Dresden by sending the added portions of it to his Roman Catholic sovereign. These addenda were to a large extent drawn from earlier works,[2] and the autograph of the complete Mass may be dated *circa* 1738. A facsimile is published by the Insel-Verlag, Leipzig. The four shorter Masses were written probably to fulfil Bach's obligations as Hof-Componist, and may be regarded as the homage of four consecutive years, *circa* 1737–40. His sovereign's neglect of the B minor Kyrie and Gloria offered no encouragement to the composer to make more than a formal gesture. The Masses in G major and G minor are constructed entirely of old material. In the A major only the Kyrie and Domine Deus are original. In the F major the Kyrie, Gloria and Domine Deus alone cannot be identified in earlier cantatas.

On high festivals concerted music was performed at Vespers after the sermon (Paul Graff, *Geschichte der Auflösung der alten gottesdienstlichen Formen* (1921), p. 114), when the German Magnificat, sung on ordinary Sundays, was replaced by a Latin setting of the canticle. Graupner brought a Latin Magnificat to Leipzig for Christmas 1722 (*B. J.-B.*, 1913, p. 147), and Bach composed one, probably for Christmas 1723. Two scores of it exist (Preuss. Staatsbibliothek). The older (E flat major) has four Christmas hymns inserted between its movements (B.-G. xi. (1), Anhang). The later version (D major) lacks them. A third setting, apparently written *circa* 1723–27, in existence so recently as 1855, has since been lost.

For academic ceremonials Bach composed a number of secular cantatas, of which the greater number survive. 1. 'Der zufriedengestellte Äolus' celebrated the birthday of Professor August Friedrich Müller (Aug. 3, 1725). Subsequently (Jan. 17, 1734) the music was performed to another text, *Blast Lärmen, ihr Feinde!* to celebrate Augustus III.'s 'Krönungs-Feste' (libretto in Spitta, Germ. edn. ii. 881). 2. 'Vereinigte Zwietracht der wechselnden Saiten' celebrated the inauguration (Dec. 11, 1726) of Dr. Gottlieb Korte as Professor of Roman Law. Subsequently (Aug. 3 (?), 1734) the music was performed to another text, *Auf, schmetternde Töne*, to celebrate the king's birthday. 3. 'Froher Tag, verlangte Stunden' was per-

[1] The fact that it has a continuo part and no Choral puts it in a category apart from the other five.

[2] About one-third of the whole is borrowed material. So instructed a scholar as Dr. Arnold Schering, in an article 'Über Bachs Parodieverfahren' in the *B. J.-B.*, 1921, is unaware that No. 19 of the 'Confiteor' is a masterly reconstruction of the first chorus of Cantata No. 120.

formed at the opening of the reconstructed Thomasschule on June 5, 1732. The music is lost (libretto in Spitta, Germ. edn. ii. 888). 4. 'Schwingt freudig euch empor' is a reconstruction of the Cöthen 'Steigt freudig in die Luft,' probably in honour of Rector Johann Matthias Gesner. 5. 'Die Freude reget sich' is a reconstruction of No. 4 *supra* in honour of Professor Florens Rivinus, *circa* 1733 (libretto of these recensions in B.-G. xxxiv. Pref.). 6. 'Thomana sass annoch' celebrated the induction of Johann August Ernesti as rector of the Thomasschule on Nov. 21, 1734. The music is lost (libretto in B.-G. xxxiv. p. lviii).

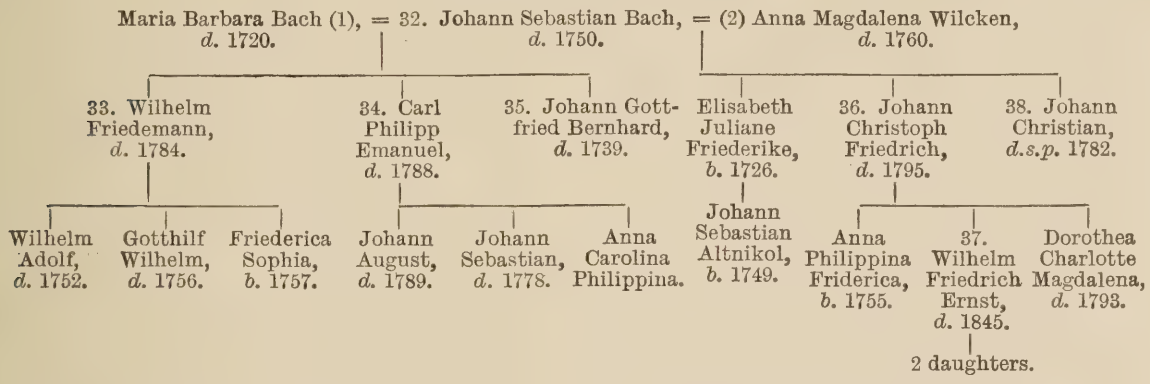
For civic ceremonials the following secular cantatas were composed: 7. 'Entfernet euch, ihr heitern Sterne,' in honour of Augustus II.'s birthday, May 12, 1727. The music is lost (libretto in B.-G. xxxiv. p. xliii). 8. 'Erwählte Pleissen-Stadt,' a revision of No. 18 *infra*, performed *post* 1728 in honour of the Leipzig Council (libretto, by Bach, in Spitta, Germ. edn. ii. 891). 9. 'Lasst uns sorgen' ('Die Wahl des Herkules,' or 'Herkules auf dem Scheidewege') celebrated the birthday of the Saxon Crown Prince Christian Friedrich, Sept. 5, 1733. 10. 'Tönet ihr Pauken,' for the birthday of the Queen-Electress, Dec. 8, 1733 (libretto in Spitta, Germ. edn. ii. 886). (See Nos. 1 and 2 *supra*.) 11. 'Preise dein Glücke, gesegnetes Sachsen,' for the anniversary of the election of Augustus III. to the Polish throne, Oct. 5, 1734. 12. 'Schleicht spielende Wellen,' for the birthday of Augustus III., Oct. 7, 1734; repeated in 1736.[1] 13. 'Willkommen! ihr herrschenden Götter der Erden,' performed at an Abend-Musik in honour of the marriage of Princess Amalia and Charles IV. of the Two Sicilies, Apr. 28, 1738. The music is lost (libretto, by Gottsched, in B.-G. xxxiv. p. xlviii).

The remaining secular cantatas lack a uniform purpose: 14. 'Angenehmes Wiederau,' performed on the occasion of Johann Christian Hennicke taking possession of the estate of Wiederau, Sept. 28, 1737. 15. 'Mer hahn en neues Oberkeet' (the Peasant Cantata), for a similar occasion (Carl Heinrich von Dieskau), Aug. 30, 1742. 16. 'Der Streit zwischen Phöbus und Pan,' a satirical burlesque, 1731. 17. 'Schweigt stille, plaudert nicht' (the Coffee Cantata), a satirical burlesque, ? 1732. 18. 'Vergnügte Pleissen-Stadt,' for the wedding of Johann Heinrich Wolff and Fräulein Hempel, Feb. 5, 1728. The voice parts have recently been discovered and are published (Schlesinger) to an accompaniment by Dr. G. Schumann. 19. 'O holder Tag, erwünschte Zeit,' for a wedding, probably in Sept. 1746 (*B. J.-B.*, 1913, p. 115). 20. 'Amore traditore' (authenticity doubtful. Cf. Johannes Schreyer, *Beiträge zur Bach-Kritik*, 1910). 21. 'Ich bin in mir vergnügt,' *circa* 1730. 22. 'Non sa che sia dolore' (authenticity questioned. Cf. Schreyer *ut supra*). 23. 'O angenehme Melodei,' *circa* 1749. 24. Spitta (ii. 637) mentions a third Italian cantata (lost), 'Andro dal colle al prato.' The books of the firm of Breitkopf & Härtel reveal three others (lost) (*B. J.-B.*, 1913, p. 69 f.). 25. 'Es lebe den König,' for the birthday of Augustus II., Aug. 3, 1732. 26. 'Frohes Volk, vergnügte Sachsen,' for the birthday of Augustus III., Aug. 3, 1733; judging from the metre of the Arias, a revision of No. 3 *supra*. 27. 'Schliest die Gruft,' for the birthday of Duke Heinrich of Merseburg, 1735 (cf. *B. J.-B.*, 1907, p. 79 f.).

In 1736 Georg Christian Schemelli, Schloss-Cantor at Zeitz, published with Breitkopf his *Musicalisches Gesangbuch*, a collection of 954 hymns on the model of Freylinghausen's (1704) popular hymn-book. Bach edited the tunes, twenty-one of which are not found earlier in print; sixteen of them undoubtedly were composed by himself (Terry, *Bach's Original Hymn-Tunes*, 1922). The Preface announced two hundred more melodies as ready for a second edition. They were not called for, but subsequently were published by C. P. E. Bach. (See Bach Gesellschaft.)

Bach's preoccupations as cantor did not divert him entirely from instrumental music. The six Partitas in Part I. of the *Clavierübung* were published 1726–31; the Italian Concerto and Partita in B minor in Part II. of the *Clavierübung*, in 1735; the four Duetti, Catechism Choralvorspiele, and Prelude and Fugue in E flat in Part III. of the *Clavierübung*, in 1739[2]; the Goldberg Variations, in Part IV. of the *Clavierübung*, in 1742. In 1744 the second part of *Das wohltemperirte Clavier* was finished (autograph in Brit. Mus. Add. MS. 35,021). The Concertos for one, two, three and four claviers may be dated 1727–36. For the organ, the canonic variations on 'Vom Himmel hoch' were published *circa* 1746, and the 'Sechs Choräle' by Johann Georg Schübler at about the same time.[3] During his last illness Bach was revising the 'Achtzehn Choräle' for publication. The first fifteen in the MS. (Preuss. Staatsbibliothek) are Bach's holograph; Nos. 16 and 17 are in Altnikol's hand; No. 18 is unfinished. The unpublished organ works of the Leipzig period include the Six Sonatas and the 'Great' Preludes and Fugues in G major, C major, B minor, and E minor.

[1] For Aug. 3, 1735, the Cöthen Cantata, 'Was mir behagt' seems to have been used in the king's honour (*B. J.-B.*, 1913, p. 86).



[2] The year may be stated positively. On Jan. 10, 1739, J. Elias Bach writes to his step-brother: 'My cousin [Joh. Seb. Bach] wishes to publish some Clavier pieces, which are eminently adapted for organists and are exceptionally well written. They may be ready by the Easter Fair and consist of eighty sheets' (*Die Musik*, 1912-13, pp. 3-19).

[3] Max Schneider (*B. J.-B.*, 1906, p. 93) gives the date as 1740.

Herr Paul Bach (Weimar) owns a small painting of Johann Sebastian by his Meiningen cousin, Gottlieb Fr. Bach (1714–85).

Pedigree Table II

III. Johann Sebastian's Children

Johann Sebastian Bach was twice married. By his first wife, Maria Barbara Bach (*d.* 1720), he had a daughter, Catharina Dorothea (*b.* Dec. 27, 1708; *d.* unmarried on Jan. 14, 1774), two sons, Wilhelm Friedemann and Carl Philipp Emanuel, all of whom survived him; two sons who predeceased him, Johann Gottfried Bernhard and Leopold Augustus (*b.* Nov. 15, 1718; *d.* Sept. 28, 1719); and twins who briefly survived their birth on Feb. 23, 1713 (Bojanowski, p. 33). Wilhelm Friedemann, Carl Philipp Emanuel, and Johann Gottfried Bernhard are the subjects of detailed notices.

Wilhelm Friedemann Bach [33], second child and eldest son of Johann Sebastian and Maria Barbara Bach, was born at Weimar on Nov. 22, 1710.* Baptized at the Stadt-Kirche on Nov. 24, he received his Christian names from his godparents, Wilhelm Ferdinand Baron von Lyncker, Chamberlain to the Electoral Court of Saxony, and Friedemann Weckbach, a lawyer at Mühlhausen. He received no systematic instruction in music until his tenth year, when his father gave him the *Clavier-Büchlein vor Wilhelm Friedemann Bach.* The first part of the *Wohltemperirte Clavier*, the 'Little Preludes,' and 'Preludes for Beginners,' as well as the Inventions and Symphonies, were written, 1722–23, for his instruction. At Cöthen Friedemann attended the Lutheran Gymnasium and was enrolled by Ernesti in the Thomasschule on his father's appointment to Leipzig in 1723. That Sebastian's departure from Cöthen was influenced by consideration of his children's education is revealed in his letter to Georg Erdmann in 1730 (Spitta, ii. 253) and in the fact that expeditiously, on Dec. 22, 1723, he entered Friedemann's name for the University. The boy meanwhile progressed rapidly in his musical studies under his father, who wrote the six Sonatas for clavicembalo for him (Forkel, p. 136). He also received violin lessons from Johann Gottlieb Graun (1698–1771) at Merseburg in 1726–27, and obtained practical experience in the concerts of his father's Collegium Musicum. A clavier concerto in A minor (Steingräber edn. 163) reveals his proficiency as a composer at this period. On Mar. 5, 1729, Friedemann matriculated at Leipzig University, and three months later (June) visited Handel at Halle, bearing an invitation to Leipzig which, owing to his mother's ill-health, Handel could not accept. Friedemann frequently accompanied his father to Dresden, and was present on Sept. 13, 1731, at the first performance of Hasse's 'Cleofide,' attending his father's recital on the following afternoon in the Sophien-Kirche, to which he was appointed organist two years later.

On June 7, 1733, in a letter which bears evident marks of his father's composition, Friedemann applied for the vacant post and begged to be admitted 'zur Probe.' Six other candidates came forward, among them Carl Hartwig and C. H. Gräbner, pupils of the Thomasschule. Neither was selected to compete in the Sophien-Kirche on June 22,

1733, when Friedemann's performance was eulogised by Kammermusiker Pantaleon Hebenstreit (1669–1750), who acted as assessor. At a salary of eighty-five thalers, his duties began on the following Aug. 1. They were not exacting: to play during service on Sunday afternoons and Monday mornings, at eight, the so-called 'alt Gottesdienst' instituted by Sophia, the wife of Christian I. (1586–91), after whom the church was named. Friedemann had considerable leisure to compose, give lessons, and continue his studies in mathematics, a subject to which he had been attracted at Leipzig, perhaps by his father's former pupil L. C. Mizler. His father's eminence, Count Keyserlingk's favour, and his own pre-eminent abilities gave Friedemann a prominent position in the musical society of the Saxon capital. He attended the court concerts and produced a considerable amount of instrumental music. To the Dresden years belong the Clavier Concertos in D major and F major (Steingräber edn. 162 and 164), the Sonata in F major for two claviers (edited anonymously by Brahms; also Steingräber edn. 148), the greater number of the Symphonies and Clavier Sonatas (Steingräber edn. 165), trios, and some of the Polonaises (Univ. edn. 1539). The D major Sonata was published at Dresden in 1745 (Brit. Mus. c. 62).

Desiring greater independence and a more adequate income, Friedemann resigned his appointment on Apr. 16, 1746, intimating his intention to accept an engagement elsewhere at Whitsuntide, and recommending, unsuccessfully, his future brother-in-law, Altnikol, as his successor. His new employment was at Halle, where the death of Gottfried Kirchhoff, Zachau's gifted successor as organist of the Liebfrauen-Kirche, on Jan. 21, 1746, created a vacancy. It is a testimony to Friedemann's ability and reputation, that whereas his father was invited to compete in similar circumstances in 1713, the post was now granted without the usual 'Probe.' Friedemann's appointment, dated on the day of his resignation of his Dresden post, admitted him to a considerably augmented stipend and more responsible duties. Besides playing the organ he was required to direct the concerted music, which was performed, with instrumental accompaniment, at Christmas, Easter and Whitsuntide, on the first day of each festival in the Liebfrauen (Unserer Lieben Frauen)-Kirche, on the second day in S. Ulrich's, and on the third in the S. Moritz-Kirche. 'Grosse Musik' was also performed on Sundays in the three churches in rotation, and in the Liebfrauen-Kirche alone on the lesser festivals. In Passion Week the Passion was sung. At Friedemann's disposal were the 'Schulchor' and 'Stadtchor,' the former attached to the Liebfrauen-Kirche, the latter serving the other two churches. The Collegium Musicum and Stadtmusiki provided an excellent orchestra.

Friedemann entered upon his duties on Whitsunday 1746 with a performance of his cantata 'Wer mich liebet.' Probably he resided,[1] from 1746 till 1763, with Gotthilf Georgi, an excise official whose second daughter, Dorothea Elizabeth (*b.* 1721), he married on Feb. 25, 1751. Georgi's respectable standing challenges the allegation that Friedemann was addicted to drink. Moreover, seeing that his colleague, the cantor Mittag, was dismissed for irregularity in 1748, and Friedemann himself was reprimanded for a prolonged absence in 1750, it is improbable that he should have escaped censure had he been notorious for greater fault. His absence in 1750 was caused by his father's death, which called him to Leipzig to wind up Sebastian's affairs. He acted there for Carl Philipp Emanuel (Spitta, Germ. edn. ii. 973), and thereafter conducted his youngest half-brother, Johann Christian, to Emanuel's charge in Berlin, which he had already visited in 1747. The discreditable anecdotes of his Halle career detailed by Friedrich Wilhelm Marpurg (1718–95), Johann Friedrich Reichardt (1752–1814), and Johann Friedrich Rochlitz (1769–1842) are rejected by facts which testify palpably to the rectitude of his public deportment. For his eldest son, Wilhelm Adolf (baptized Jan. 13, 1752; *d.* Nov. 20, 1752), Count Johann Georg von Einsiedl, Oberhofmarschall at the Dresden court, Frau von Dieskau, for whose husband's 'homage' Johann Sebastian wrote the Peasant Cantata, and Wilhelm von Happe of Berlin stood sponsors. For the second son, Gotthilf Wilhelm (*b.* July 30, 1754; *d.* Jan. 16, 1756), the godparents were relatives. For the youngest child, Friederica Sophia (*b.* Feb. 7, 1757), the sovereigns of Anhalt-Cöthen and the Countess of Schwarzburg-Rudolstadt acted as sponsors.

Soon after his marriage, Friedemann's dissatisfied nature moved him to apply for the organistship of the Johannis-Kirche at Zittau, vacant by the death of G. Krause in 1753. Carl Philipp Emanuel, eager to escape from the bondage of Potsdam, J. L. Krebs and Altnikol also were candidates. The post was given to Johann Trier, an alumnus of the Leipzig Thomasschule. Nine years later Friedemann was invited (July 6, 1762) to succeed Christoph Graupner (1683–1760), Kapellmeister at the Darmstadt court, Johann Sebastian's successful rival in 1723. After some delay, he accepted the appointment (Aug. 28, 1762), but apparently was attracted by the title rather than the duties of the office. Whether his negotiations with the Landgraf reached a definite settlement is not known: in 1767 he used the title in his dedication of the E minor

[1] A picture of the house is in *B. J.-B.*, 1910, p. 110.

Clavier Concerto (Steingräber edn. 161). A statement, repeated by Reichardt, that Friedemann at this period received an invitation to Rudolstadt, appears to be based on the Darmstadt incident.

Embittered by failure to receive the recognition to which his evident abilities entitled him, indolent, ungracious even to his friends, self-centred, and somewhat eccentric, Friedemann resigned his Halle appointment on May 12, 1764, and for the last twenty years of his life drifted aimless and without settled employment. During the period 1746–64, besides a large number of cantatas, he had written the Symphony in D major (unpublished), the unfinished E flat Clavier Concerto, the twelve Polonaises (Univ. edn. 1539), the E flat Clavier Sonata (Steingräber edn. 165, No. 7), and smaller works. Among his pupils in the same period were Johann Christian Bach (of Halle), Johann Samuel Petri (1738–1808), of Sorau, and Fr. Wilhelm Rust (1739–96), grandfather of the most able of the B.-G. editors. At Dresden Johann Theophilus Goldberg (*b. circa* 1730) had received early lessons from him on the clavier. In Aug. 1770 his wife's property at Halle, valued at 630 Rthalers, was announced for sale, and in the following Oct., after dating the E minor Fantasia (Steingräber edn. 165, No. 12), he transferred his household to Brunswick.

Intermittently Friedemann sought regular employment. In Apr. 1771, he applied without success for the organistship of the new Stadt-Kirche at Wolfenbüttel. A month later (May 17) he petitioned the duke for the vacant organ in the Aegidius-Kirche there. On June 14 he performed his ' Probe ' and received from the adjudicator a weighty declaration in his favour—' Er hat auch gänzl. gezeigt, wie volkommen mächtig er der Orgel sey.' But he was over sixty, and a less competent candidate half his age obtained the appointment. For two years longer Friedemann remained in Brunswick, earning a precarious living by teaching and public recitals. The story of his brother's recognition of him in a band of wandering players is an improbable legend. In straitened circumstances good fortune brought him into touch with Johann Nikolaus Forkel, whose interest in and projected monograph on Johann Sebastian inclined him to befriend Sebastian's son. In 1773 Friedemann visited him at Göttingen and played in the University church there. He was again in Brunswick on Aug. 22 of that year, when he gave an organ recital, followed by another at Wolfenbüttel. In Apr. 1774 he moved to Berlin, leaving behind him for auction at Brunswick a portion of his father's autographs, the *Kunst der Fuge* among them. Whether their sale was effected is not known; in 1778 Friedemann tardily asked for information.

Until his death Berlin remained his home. He made a slender livelihood by organ recitals at which his great powers were acknowledged, by the composition and sale of clavier pieces and other trifles, and by teaching—Sara Levi, Mendelssohn's grandmother, took lessons from him Kirnberger, his father's former pupil, and the Princess Amalia, to whom he dedicated (Feb. 24, 1778) the eight clavier fugues (Peters edn. 750), admired his genius and befriended him until he lost her favour by an attempt to undermine Kirnberger in her regard. Desperate circumstances perhaps drove him to unfilial and dishonest acts. Among his father's autographs was the score of an Organ Concerto in D minor arranged from Antonio Vivaldi's Concerto Grosso (op. 3, No. 11) in the same period as the four published by the B.-G. (Jhrg. xxxviii.). The score is Sebastian's holograph and the paper of the Weimar period. Friedemann's authorship therefore is impossible; but the manuscript (Preuss. Staatsbibliothek) bears the inscription in his handwriting, ' di W. F. Bach manu mei patris descript ' (cf. *Allgem. Musik-Zeitung*, 1912). The Concerto is published by Augener (5863); a piano arrangement of it is in Breitkopf, edn. 2241. Two compositions of his own—a Kyrie in G minor and a setting of the 100th Psalm, ' Dienet dem Herrn mit Freuden,' composed in 1755—Friedemann attributed to his father by substituting ' J. S.' for ' F. W.' on the manuscripts. That he was in want and dependent on the sale or loan of his MSS. is stated by Forkel. On July 1, 1784,* he died at Berlin of ' Brustkrankheit,' leaving his widow and daughter, aged twenty-six. A grant to relieve their necessities was made from the proceeds of the performance of Handel's ' Messiah ' at Berlin in 1785 (Bitter, ii. 267).

Forkel, who had opportunities to form a judgment, eulogises Friedemann's remarkable abilities as a player; on the clavier his touch was elegant, delicate, agreeable; on the organ he excited ' reverent awe '; on the one he was charming, on the other impressive. As a composer, he came nearest among his brothers to his father in the originality and bent of his genius, and in his powers of improvisation. Though he expressed himself in rococo forms which Johann Sebastian had not touched, his compositions have a distinction which sets them above his brothers', whose artistic conscience adjusted itself more readily to the standards of their generation. Forkel complained that he preferred to expend his genius on improvisations, shrinking, with characteristic indolence,[1] from putting them on paper. Their number, in fact, is not inconsiderable. According to Falck's *Thematisches Verzeichnis*, Friedemann wrote *for the Clavier* at least 9 Sonatas (6 in

[1] It is observable that hardly any of his extant letters are holograph.

Steingräber edn. 165, unpublished in C, A, B); 2 Sonatas (concerto) for two claviers, in F (Steingräber edn. 148) and D (lost); 12 Polonaises (Univ. edn. 1539), and another in C (unpublished); 10 Fantasias (6 in Steingräber edn. 165, and Kistner (ed. Carl Banck), unpublished in C, C minor (2), G); a Suite in G minor and smaller pieces (Steingräber edn. 165); 8 Fugues dedicated to Princess Amalia in 1778 (Peters edn. 750), and 3 unpublished in C minor, F, B. *For the Organ*, 3 Fugues (C, F, G minor), 7 Choralvorspiele, an organ trio on the melody 'Allein Gott in der Höh sei Ehr' (lost), canons and six studies, all unpublished. *Concertos*: 5 for clavier and strings (4 in Steingräber edn. 161-4; 1 in E flat unpublished) and a doubtful one in G minor (unpublished); 1 for two claviers and orchestra in E flat (arranged for two claviers in Steingräber edn. 149, 2398). *Sonatas*: 5 Trio-sonatas for violin or flute (one in B flat, for strings, in Breitkopf's *Coll. Mus.*, 1875); 3 Sonatas for flute and continuo (lost); 6 *Duets* for flute and 3 for viola, all unpublished; 9 *Symphonies*, in C, D, D minor (Erich Prieger, 1910, Brit. Mus. Add. MSS. 32,147 f. 1), D minor (Brit. Mus. Add. MS. 32,147 f. 25), F, G (2), A, B). *Vocal Works*: 21 cantatas, a 'Deutsche Messe,' an opera 'Lausus und Lydie,' and smaller works, all unpublished. A Rembrandtesque picture of Friedemann, by an unknown artist, is in the Halle Städt. Kunstsammlung. Bitter reproduces another.

Carl Philipp Emanuel Bach [34], second son of Johann Sebastian and Maria Barbara Bach, born at Weimar on Mar. 8, 1714,* received his second and third names from his godparents, Adam Emanuel Weltzig, 'Pagen Hof-Meister' and Hof-Musikus at Weissenfels, and Georg Philipp Telemann (1681–1767), Kapellmeister at Frankfort-on-Main (Bojanowski, p. 34). Educated at the Leipzig Thomasschule, whence he proceeded in 1734 to the University of Frankfort, the statement that Sebastian destined him for a learned profession is improbable. Though he was left-handed, and therefore impeded in the playing of all instruments except the clavier and organ, his musical precocity was remarkable. At the age of eleven, a swift glance over his father's shoulder enabled him to play forthwith the music he was writing. Before he left the Thomasschule he had composed a number of clavier pieces and other works (Bitter, ii. 325), and on the clavier, as for composition, had no other teacher than his father. Probably attracted to Frankfort by his godfather's association with the town, he found there ample opportunity to employ his musical gifts. He was active in the Musik-Akademie and Collegium Musicum, and in 1737 performed his compositions in the presence of the Markgraf Friedrich Wilhelm, and Friedrich Wilhelm I. of Prussia, the father of his future patron.

Had Friedrich Wilhelm's tastes been other than they were, the conjecture might be hazarded that his Frankfort visit was the link between Emanuel and Prussian service. According to Fétis, Emanuel waited on the Crown Prince in 1738, but was disappointed of an engagement by Frederick's impecuniousness. Burney confirms the story. Emanuel himself declared that the summons to Rheinsberg was 'unvermutheter.' Probably he was aware of Frederick's proficiency on the flute, an instrument for which he had already written, and sought an interview, receiving encouragement to anticipate an engagement when circumstances permitted. In May 1740, Frederick succeeded his father, and in the following winter launched his unchivalrous attack upon Maria Theresa. Supposing himself forgotten, Emanuel was about to accompany a young pupil on his travels, when, in 1740, he was appointed cembalist in the King's Kapelle. According to Burney, he accompanied Frederick in the first flute solo he played at Charlottenburg after his accession. His salary was 300 thalers.

Emanuel's duty bound him to attend the royal concerts, held in the palace every evening except Mondays and Fridays, the opera nights. Frederick himself put out the parts before summoning the players—some 40 performers—and Burney, privileged to attend one of these evenings in 1772, from an adjacent room distinctly heard the King practising solfeggi and difficult passages (*State of Music in Germany*, ii. 150). Frederick's taste was conservative, his repertoire restricted to some 300 concertos, which had been performed in rotation for more than forty years. For other compositions than those of the two Grauns and his flute-master, Johann Joachim Quantz (1697–1773), he had no liking. Emanuel's music found little favour with him. Nor was Frederick agreeable to accompany; he took many liberties with the tempo and required from his cembalist deference which Emanuel found it increasingly difficult to accord. In 1750 he applied unsuccessfully for the vacant cantorship at Leipzig. In 1753 he was ready to find employment at Zittau (Falck, *W. F. Bach*, p. 34). In 1756, Carl Friedrich Christian Fasch (1736–1800) was appointed second cembalist, and, showing himself less impatient of the king's imperfections, won Frederick's preference. Emanuel, however, vainly sought permission to accept an appointment elsewhere, and though, as a Saxon,

he was at liberty to go if he pleased, his marriage to a Prussian subject in 1744 made him dependent on the King's favour.

At Berlin Emanuel enjoyed the friendship of the King's sister-in-law, Princess Amalia, and counted among his pupils the future Duke Carl Eugen of Württemberg (*d.* 1793). His reputation as a clavier-player was established by the publication, in two parts (1753, 1762), of his *Versuch über die wahre Art das Klavier zu spielen* (ed. Walter Niemann, Kahnt, Leipzig). The work is the first methodical treatise on its subject, laying down principles derived from Johann Sebastian and developed by Muzio Clementi (*d.* 1832), Johann Baptist Cramer (1771–1858) and Johann Nepomuk Hummel (1778–1837). Mozart owned his obligation to its author in emphatic terms: 'Er ist der Vater, wir sind die Buben. Wer von uns was rechts kann, hat von ihn gelernt; und wer das nicht eingesteht ist ein Lump' (Jahn, ii. 441). Haydn, whom Emanuel declared to be the only man who thoroughly understood him (*ibid.* ii. 377), made it for a time his chief object to master Emanuel's form. Both in the technique he developed and the music he wrote for it Emanuel may be regarded as the father of modern pianoforte playing. Reichardt, who visited him at Hamburg in May 1774, was impressed by his improvisation: 'Bach would become lost for hours in new ideas and a sea of fresh modulations. . . . His soul seemed absent from the earth. His eyes swam as though in some delicious dream. The lower lip drooped over his chin, his face and form bowed apparently lifeless over the keyboard' (*Allgem. Musik-Zeitung*, Jan. 12, 1814). Burney (ii. 246), too, remarked 'the wild careless manner' in which Bach 'threw away thoughts that would have set up any one else.' Emanuel wrote a *Kurze Anweisung zum General-Bass*, the autograph of which is in the Fétis Library, Brussels (press-mark 6487). Riemann (p. 65) groundlessly suggests that this may be the work published by Joh. Michael Bach in 1780 (*supra*, p. 154).

The death of his godfather Telemann on June 25, 1767, conveniently opened to Emanuel a door of escape from Potsdam. He had longed unceasingly, he told Burney (ii. 252), for 'more tranquillity and independence' than Frederick's service allowed him, and there is no reason to doubt the correctness of Fasch's attribution to him of the remark, that the King might be the autocrat of his kingdom, but enjoyed no prescriptive pre-eminence in the realm of art. Frederick, however, appreciated his genius and was proud of his pre-eminence; only after repeated solicitations and on grounds of health (*B. J.-B.*, 1915, p. 41) was he permitted to resign. The Princess Amalia, who interested herself in Emanuel's candidature, appointed him her Kapellmeister 'von Haus aus' in token of her regard upon his departure. He entered upon his duties at Hamburg on Nov. 3, 1767, the *Wochentliche Nachrichten* welcoming 'this great master of clavier playing' to a post 'in which he will be able to display his distinguished talents in another idiom.'

Hamburg had long outlived the traditions of Mattheson and Handel, and Emanuel playfully chided Burney in 1772 for visiting the city 'fifty years too late.' He was himself the only musician of eminence in it, directing, as cantor of the Johanneum, the music in its five principal churches. The opera no longer flourished (Burney, ii. 245), but Emanuel was active as a concert giver. The *Magazin f. Musik* of 1784 speaks of 'die besten und frequentesten Konzerte' conducted by 'der grosse Bach,' who played the clavier and produced his much-appreciated works at them. Burney, visiting him in 1772, found him in his fifty-ninth year, 'rather short in stature, with black hair and eyes,[1] and brown complexion, a very animated countenance, and of a cheerful and lively disposition.' Reichardt, too, was impressed by his keen wit; but his allegations of avarice seem to rest upon a foundation as unsubstantial as that which supports his defamation of Friedemann. Emanuel died at Hamburg, in his seventy-fifth year, on Dec. 15, 1788,* of 'Brustkrankheit.' A writer in the *Zeitung Hamburg. unparth. Correspondenten*—probably Karl Friedrich Cramer (1752–1807)—eulogised him a day later as one of the greatest musicians of his generation, both theoretical and practical, the creator of clavier technique, a player unmatched on that instrument, and a man of wit and humour whose name 'wird auf immer heilig sein.' The erection of a memorial to his memory at Hamburg and Weimar was proposed and designs for both were prepared. Neither was carried into effect. Haydn, actually unaware of his death, visited Hamburg in 1795 in hope to meet him, and found his daughter the sole survivor of the family. Emanuel married at Berlin in 1744 Johanna Maria Danneman, youngest daughter of a wine merchant, by whom he had two sons and a daughter. The eldest son, Johann August (*b.* Nov. 30, 1745), practised as a lawyer at Hamburg and died on Apr. 24, 1789. The younger son, Johann Sebastian [2] (*b.* Sept. 1748), studied painting in Leipzig and Dresden, and died at Rome in Sept. 1778. Their mother died, in her seventy-first year, at Hamburg on July 19-20, 1795. Her daughter Anna Carolina Philippina, announcing her death in the public press, declared her intention to carry on 'mit der äussersten Aufmerksamkeit' the

[1] Portraits of Emanuel and Friedemann are in Bitter.

[2] The initials 'I. S.' are under his portrait (*B. J.-B.*, 1911, p. 90). His father called him 'Hans.' 'S' certainly stands for 'Sebastian'; but Wustmann suggests 'Samuel.' Korabinsky names him Sebastian.

business connected with her father's and grandfather's 'Musikalien,' a natural announcement which unnecessarily suggests to Schweitzer (i. 234) sordid trafficking in her grandfather's manuscripts. Anna Carolina lived on at Hamburg (Valentinskamp); her name is not found in the 'Adressbüchern' after 1804.

As a composer Emanuel stands out prominently in the transition generation that separates Johann Sebastian from the full maturity of Haydn's genius. Though he professed, to Burney and Forkel, high respect for his father's work, the 'taste,' 'refinement,' 'melody and expression,' which Burney discovered to be his characteristics were not founded upon his father's art. In conversation (Burney, ii. 252) he expressed himself contemptuously on 'learned music,' and spoke 'irreverently' of canons as 'dry and despicable pieces of pedantry that any one might compose who would give his time to them.' Being told that there were no great contrapuntists in Italy, he rejoined that their absence was no great matter: 'for many more essential things [than counterpoint] are wanting to constitute a good composer.' The characteristics of his art are, homophonic treatment of thematic material, formality of design and delicacy of workmanship. Extraordinarily prolific in every form of musical expression, he excelled upon the clavier, for which he wrote the best music of his generation. His instrumental style is discussed under FORM and SONATA. His compositions are exceedingly numerous. Bitter's chronological list (ii. 325 f.) reveals nearly 700, vocal and instrumental, which are conveniently tabulated in Wotquenne's *Thematisches Verzeichnis* (1905) The 'Oden und Lieder' include *Gellerts geistliche Oden und Lieder mit Melodeyen* (1758, 4th edn., 1771, in Brit. Mus. F. 324, b. (1)), and its continuation, *Zwölf geistliche Oden und Lieder* (1764, Brit. Mus. F. 324, b. (2)); *Oden mit Melodien* (1762, Brit. Mus. E. 601, h. (2)); *Cramers übersetzte Psalmen mit Melodien* (1774, Brit. Mus. F. 324, c.); *Ch. Ch. Sturms geistliche Gesänge mit Melodien* (1780–81, Brit. Mus. F. 324); *Neue Lieder-Melodien nebst einer Kantate zum singen beym Klavier* (1789, Brit. Mus. C. 582); Gleim's 'Singode,' *Der Wirth und die Gaste* (1766, 3rd edn., 1791, in Brit. Mus. E. 270, d. (2)); a number (fifty-six) of songs, printed and in MSS., scattered among various collections (Wotquenne, No. 202); *Neue Melodien zu einigen Liedern des neuen hamburgischen Gesangbuchs* (1787, Brit. Mus. E. 602, m. (1): No. 23 of this collection, 'Wie gross ist die Allmächt'gen Güte,' arranged for T.T.B.B. and wind orchestra, is published by Forberg, Leipzig. Selections from the foregoing collections are published by Peters (No. 3748), C. F. Kahnt (ed. Dittberner), and Drei Masken Verlag (Munich), ed. O. Vrieslander. The motets, psalms, etc., include two Litanies for double chorus (1786, Brit. Mus. D. 619, j. (1)); a Magnificat in D for S.A.T.B. and orchestra (MS. 1749); and a popular 'Heilig' (Sanctus) for double chorus (1779, Brit. Mus. I. 45). Among the larger concerted vocal works are the secular cantatas 'Phillis und Thirsis' (1766, in Vrieslander, *supra*), 'Selma' (1770), and 'Der Frühling' (1770–72); two 'Passions' (St. Matthew and St. Luke, 1787, 1788), and a 'Passions-Cantate' 'Du Gottlicher! warum bist du' (1770, Brit. Mus. F. 955 (1)); two Oratorios: 'Die Israeliten in der Wüste' (1775, Brit. Mus. I. 45, a.)[1]: three soprano arias, ed. Fr. Commer, are in Trautwein's *Cantica sacra*, tom. i.); and a setting of C. W. Rammler's 'Auferstehung und Himmelfahrt Jesu' (1787, Brit. Mus. H. 1819, b., and R.C.M.); a setting of Klopstock's 'Morgengsang am Schöpfungsfeste' (1784, pub. B. & H.); four Easter Cantatas, including 'Gott hat den Herrn auferwecket' (1784, Brit. Mus. Add. MSS. 33,569 ff. 25-54); four Michaelmas cantatas; a 'Weihnachts-Musik' (MS. 1775); and four cantatas written for the induction of a pastor. Of fifty Clavier Concertos, No. 18 (of Wotquenne's catalogue) in D (1745) is published in Steingräber edn. 103; No. 23, in D minor (1748), in *ibid.* 2091; four of the six dedicated to Princess Amalia (1772), in D, E flat, C minor, G, in *ibid.* 104, 105, 101, 102, and August Crantz (Hamburg). Senff publishes a Clavier Concerto in F minor (neither in Bitter nor Wotquenne). Wotquenne's Nos. 2 (E flat, 1734), 11 (D, 1745), 14 (E, 1760), 24 (E minor, 1748), 25 (B flat, 1752), 34 (G, 1755) are in the Brit. Mus. Others are in the Royal Collection there. The two Concertos for two claviers are in Steingräber edn. 2145 (1740, F), 2144 (1788, E flat). Of the Clavier Sonatas, those 'für Kenner und Liebhaber' are published in Breitkopf's *Urtextausgabe klassischer Musikwerke*, Universal edn., and F. Leuckart (Breslau); No. 6 of the six dedicated to Frederick II. (A, 1742) is in Steingräber edn. 94; Nos. 1, 2, 5 of the six dedicated to the Duke of Würtemberg (1744) in Peters edn. 276, and Senart edn. 32-3, 135-6, 353-4; No. 4 (F sharp minor) of six published in 1763, in Steingräber edn. 94; Nos. 4 and 6 (A and G) of the six 'für Kenner und Liebhaber' (1779) in Peters edn. 276; three of those in the *Dritter Sammlung*, 1781, in C minor, D minor, F minor, are in Peters edn. 276, and the first Rondo (E) is in Steingräber edn. 94, which also publishes a 'posthumous' sonata in B flat. Nos. 48-51, 53-59, 61, 107, 265, of Wotquenne's Catalogue are in the Brit. Mus. Smaller and popular clavier pieces

[1] The score is also in the Euing Library of the Royal Technical College, Glasgow, and the Royal College of Music.

are in the Steingräber, Augener, Schlesinger, Universal, Forberg, Steffenhagen, Piper, Kahnt, Senart and Rühle edns. Of five sonatas for violin and clavier two (B minor and C minor, 1763) are in Peters edn. 3619, a. and b. The sonata for viola da gamba and clavier in G minor (1759), arranged for violoncello, is in Peters edn. 2063. Of the instrumental trios the Brit Mus. has Nos. 89-91, and 161 of Wotquenne's Catalogue. One of the trios, in G, is in the Collegium Musicum (Breitkopf and Max Brockhaus), and two string quartets (Sinfonia), in G and D, are published by Beyer (Langensalza). Of the three violoncello concertos the earliest (A minor, 1750) is in Breitkopf edn. 3836; the third (A major, 1753) is published by Senart (Paris). Four flute concertos (MS.) are in the R.C.M. Three of the four orchestral symphonies dedicated to the Crown Prince (1780) are published by Peters. Schuberth and Peters print piano arrangements of them. The adagio of the organ sonata in G minor is in Ritter's *Kunst des Orgelspiels*, Bd. ii. (Peters). Zimmermann published (1925) the Vienna MS. of the sonata in C for flute and clavier.

The Meiningen Johann Phil. Bach's pastel of Carl Philipp Emanuel is in the Preuss. Staatsbibliothek. Herr Paul Bach (Weimar) has another. An original silhouette is in the Archives of Breitkopf & Härtel.

JOHANN GOTTFRIED BERNHARD BACH [35], third surviving son of Johann Sebastian and Maria Barbara Bach, born at Weimar on May 11, 1715,* received his first and third names from his godparents, Johann Andreas Rheuert, Hof-Registrator at Ohrdruf, and Johann Bernhard Bach, of Eisenach (No. 11 *supra*) (Bojanowski, p. 34). Of his early Weimar and Cöthen years no details survive. In 1730, aged fifteen, he was in the second class (presumably of the Thomasschule) at Leipzig (Spitta, ii. 254). On May 2, 1735 (*ibid.* iii. 269) his father successfully proposed him, as being 'so *habil* in der Music,' for the organistship in the Marien-Kirche at Mühlhausen. On Oct. 30 and Nov. 18, 1736, Sebastian wrote to Johann Friedrich Klemm, a town councillor of Sangerhausen, soliciting his favour in Bernhard's behalf for the vacant organ in the Jacobi-Kirche there.[1] Bernhard passed his 'Probe' on Jan. 13, 1737, and on the following day his appointment was approved, subject to the production of testimonials of good character from Mühlhausen. It was apparently not known that Bernhard was already involved in financial difficulties. He succeeded, therefore, in securing two (Mar. 11-12, 1737) which testified to his 'höflich und honnett' conduct, and on Apr. 4, 1737, the Leipzig Consistory confirmed his appointment. In the spring of 1738 Bernhard left the town secretly to avoid his creditors, and on July 1 the Town Council intimated to the Consistory that he had proved otherwise unsatisfactory. Meanwhile, on May 24, 1738, Sebastian addressed a piteous letter to Klemm begging that the situation might be kept open until the whereabouts of his son, whose former debts he had paid, was discovered. Two days later, he wrote again, bewailing his ignorance of his son's movements. Bernhard in fact was at Jena. The parish register records his death there, as a law student ('Rechtsgelahrtheit Beflissener'), of high fever ('hitzigen Fieber') on May 27, 1739.* At Tenbury is a copy of Praetorius' Syntagma (I.) which belonged to J. B. Bach and afterwards to J. C. Bach [38]; 'alumnus Scholae Thom. 1739 d. 1 Jan' is on the title-page.

BIBL.—SPITTA, *J. S. Bach, passim.* FRIEDRICH SCHMIDT'S article in *Zeitschrift der Internationalen Musik-Gesellschaft*, Jhrg. iii., 1902, pp. 351-60. R. EITNER, *Q.-L.*, vol. i., 1899. *Mühlhäuser Geschichts-Blätter*, Jhrg. 1919–20, p. 50. *Ibid.* 1920–21, p. 71.

By his second wife, Anna Magdalena Wilcken, Johann Sebastian had seven daughters, one of whom, Elisabeth Juliane Friederike (*b.* Apr. 3, 1726), married Johann Christoph Altnikol and had issue Johann Sebastian (*b.* Oct. 4, 1749). Two other daughters, Johanna Caroline (baptized Oct. 30, 1737; *d.* Aug. 18, 1781) and Regine Susanna (baptized Feb. 22, 1742; *d.* Dec. 14, 1809), died unmarried. Of the six sons, three —Gottfried Heinrich (baptized Feb. 27, 1724; *d.* Feb. 12, 1763, in Naumburg), Johann Christoph Friedrich and Johann Christian—survived their father. The last two are the subject of separate notices. Since Sebastian died intestate, his widow received only one-third of his realised estate. In 1752 she was receiving charitable relief and, to the discredit of her sons and stepsons, died, an 'Almosenfrau,' on Feb. 27, 1760. The last surviving daughter, Regine Susanna, was the object of a public subscription, to which Beethoven contributed. She was the last survivor of Bach's children.

JOHANN CHRISTOPH FRIEDRICH BACH [36], eldest surviving son of Johann Sebastian and Anna Magdalena Bach, born at Leipzig on June 21, 1732,* received his first and second names from his godparents, Johann Sigismund Beiche, Kammer-Kommissarius at Pegau, and Christoph Donndorf, a Leipzig lawyer. His godmother was the daughter of Christian Weiss, one of the clergy of the Thomas-Kirche, who provided Bach with cantata libretti. Friedrich's early training probably was received from

[1] Incidentally the letter of Nov. 18 reveals the fact that in his early youth Sebastian had sought a similar position at Sangerhausen.

Johann Elias Bach, then residing in the cantor's house (*Die Musik*, 1912–13, p. 7). He attended the University at Leipzig, and early in 1750, aged eighteen, was appointed Kammer-Musikus to Count Wilhelm of Schaumburg-Lippe at Bückeburg. The Count favoured Italian music, and the posts of Konzertmeister and Kapellmeister were held respectively by Angelo Colonna and Giovanni Battista Serini. On Jan. 8, 1755, Friedrich married Lucia Elizabeth Münchausen, daughter of one of the court musicians, herself a court singer. In May 1756 the Italians resigned, and about 1758 Friedrich was promoted to be Konzertmeister. A daughter, Anna Philippina Friderica, had been born to him in 1755 (baptized Oct. 7), and a son, Wilhelm Friedrich Ernst [No. 37 *infra*], to whom the Count stood godfather, followed in 1759 (baptized May 24).

Though Italian music continued in favour, Friedrich dedicated to his patron in 1769 and published with Bock of Hamburg (English edn. (? 1780) in Brit. Mus. g. 397), six quartets for flute, violin, viola and bass. In the same year he produced a setting of C. W. Rammler's 'Der Tod Jesu' and (1773) 'Auferstehung und Himmelfahrt Jesu.' But in May 1771 the arrival of Johann Gottfried Herder (1744–1803) brought him into sympathetic association with a poet who provided texts of imaginative merit. The first of their joint works was the 'biblische Gemählde' 'Die Kindheit Jesu'[1] (*D.D.T.* Bd. 56 : Breitkopf & Härtel) for chorus and orchestra, first performed on Feb. 11, 1773. On Dec. 2 of the same year another joint work 'Die Auferweckung Lazarus' (*D.D.T.* Bd. 56) was produced, and in Apr. 1776 the oratorio 'Der Fremdling auf Golgotha' (lost). Herder also provided the libretti of a 'Pfingst-Kantate' (1773, lost), an Ascension Cantata 'Gross und mächtig, stark und prächtig' (July 10, 1776), a Michaelmas Cantata (1775) 'Der Streit des Guten und Bösen in der Welt,' a 'Musikdrama' 'Brutus' (Feb. 27, 1774 : music lost) and the 'Szenen mit Gesang' 'Philoktetes' (1774, music lost). Friedrich in these years also contributed simple melodies to Balthasar Münther's first (1773) and second (1774) *Sammlung geistlicher Lieder.*

The death of his sympathetic patroness, Countess Eleanore (1776), the subsequent departure of Herder, and the death of Count Wilhelm on Sept. 10, 1777, changed the atmosphere of the court for Friedrich, whose relations with all of them had been cordial. In the spring of 1778 he visited his brother Johann Christian in London, taking with him his son Wilhelm, and visiting his brother Emanuel at Hamburg on the way. After a short illness Friedrich died of 'hitzigen Brustfieber' on Jan. 26, 1795.* His youngest daughter, Dorothea Charlotte Magdalena, predeceased him on June 21, 1793. His widow, aged 75, followed him on Oct. 1, 1803.

Though the London visit diverted his interest to instrumental composition, Bach's works after 1778 include the cantatas 'Singet dem Herrn' (Feb. 6, 1785, lost), 'Gott wird deinen Fuss nicht gleiten lassen' (June 8, 1787), the oratorio 'Die Hirten bey der Krippe' (1785, lost), the 'Duodrama' for sopranos, 'Mosis Mutter und ihre Tochter' (1788), the cantatas 'Cassandra' for contralto, 'Pygmalion' for contralto, 'Ino' for soprano (Breitkopf, 1786), a setting of Gerstenberg's 'Die Amerikanerin' (ed. 1776 in Brit. Mus., ed. G. A. Walter, 1919) (see letters of Bach and Gerstenberg in *B. J.-B.*, 1916, p. 20 f.), a solo cantata 'L' inciampo,' 'O wir bringen gerne dir' (duet), and 'Luci amate' (soprano aria).

To another *genre* belong the three motets 'Ich lieg und schlafe ganz mit Frieden' (1780), 'Wachet auf, ruft uns die Stimme' (*Ausgewählte Werke*, Bd. i.), and 'Er ist erstanden' (*Die heilige Cäcilia*, i. 24). Friedrich's secular songs are in his *Musikalische Nebenstunden* (1787) and C. P. E. Bach's *Musikalisches Vielerley* (Hamburg, 1770). Senart publishes five of his quartets (ed. Duttenhofer), in E flat, A, D, G, F.

Friedrich's numerous instrumental compositions include several clavier sonatas, eight clavier concertos, instrumental trios, quartets, a sextet, septet, and fourteen symphonies not unworthy to stand beside those of Haydn. Four clavier sonatas (A, D, A, C (four hands)) are in Bd. v. of the *Ausgewählte Werke* (Siegel) ; another (A major, 4 hands, dated 1786) is in Steingräber edn. 167. A Rondo in C is in Pauer's *Alte Klaviermusik*, Heft 4 (Senff), and an 'Allegretto con variazioni' in Steingräber edn. 166. Bd. vii. of the *Ausgewählte Werke* contains two instrumental trios in G and C and the septet in C. An organ fugue in B flat is in Ritter's *Kunst des Orgelspiels*, Bd. ii. 30 (Peters). Zimmermann publishes six sonatas for flute and clavier, and Litolff publishes (2375) a violoncello sonata in D (another in G is unpublished). Bach's *Ausgewählte Werke* are in process of publication by Siegel (Linnemann) for the Bückeburg Institut f. musikwissenschaftliche Forschung. As yet Bde. i. v. vii. have appeared. A *Thematisches Verzeichnis* of Bach's works, by Georg Schünemann, is in *D.D.B.*, Bd. 56.

Bibl.–C. H. Bitter, *C. P. E. und W. F Bach und deren Brüder*, Berlin, 1868 (vol. ii chap. 7). C. H. Bitter, *Die Söhne Sebastian Bach's*, Leipzig, 1883. Georg Schünemann, *Johann Christoph Friedrich Bach* (*B. J.-B.*, 1914, pp. 45-165.) George Schünemann, *Friedrich Bachs Briefwechsel mit Gerstenberg und Breitkopf* (*B. J.-B.*, 1916, p. 20 f.). R. Eitner, *Q.-L.*, vol. i., 1899.

Wilhelm Friedrich Ernst Bach [37], only son of Johann Christoph Friedrich (No. 36 *supra*), baptized May 24, 1759 (*B. J.-B.*, 1914, p. 54), took his first name from his godfather, Count Wilhelm of Schaumburg-Lippe. He

[1] A copy in the Brit. Mus. (Add. MSS. 32,039 f. 25) incorrectly attributes the work to Friedrich's son.

received his early musical education from his father, whom he accompanied to London in 1778, visiting on the way his uncle Emanuel at Hamburg, where he played in public (Bitter, ii. 117). At London, under Johann Christian's tuition, he became an accomplished player, and after his uncle's death in 1782 visited France and Holland and eventually settled at Minden, where he is mentioned in 1787 as Musik-Direktor (Eitner, i. 259). In honour of Friedrich Wilhelm II. of Prussia's first visit to Minden after his accession (1786), Wilhelm performed his cantata 'Westphalens Freude, ihren viel geliebten König zu sehen,' which was received with favour by the music-loving sovereign, who summoned the composer to Berlin in 1789. Here Wilhelm held in succession the office of Kapellmeister to the queens of Friedrich Wilhelm II. and Friedrich Wilhelm III. (1797–1840). The latter sovereign and his brothers were Wilhelm's pupils. After the death of Queen Louisa in 1810 he retired from the court, and as the last male representative of Sebastian's line attended the inauguration of the monument to his grandfather at Leipzig on Apr. 23, 1843. Two years later (Dec. 25, 1845)* he died at Berlin in his eighty-seventh year. By his marriage he had two daughters, who, with their mother, accompanied him to Leipzig in 1843.

Wilhelm Bach as a composer achieved none of the popular success of his uncles Emanuel and Christian. The Brit. Mus. possesses a clavier sonata (Dresden, 1745), six sonatas for clavier and violin (or violoncello) dedicated to Miss Dumergue (London, 1785 ?), and the vocal score of the cantata 'Westphalens Freude' (Rinteln, 1791). Of his unpublished works (chiefly autograph) the Museum possesses a 'Vater Unser' for tenor and bass and orchestra (Add. MSS. 32,039 ff. 1-24, b.),[1] a 'Ballet Pantomime' (dated Berlin, 1798) (Add. MS. 32,041), a scena apparently from an opera 'Columbus oder die Entdeckung von America' (Add. MSS. 32,040 f. 1-38, b.), a 'Concerto buffo' for bass, toy instruments and orchestra (Add. MS. 32,081), two symphonies in C and G (Add. MSS. 32,042 f. 10-25, b.; 32,043 f. 40-60, b.), two orchestral suites in E flat and B flat (Add. MSS. 32,040 f. 39-73; 32,316 f. 1-12, b.), a Sonata in C for clavier and violin (Add. MSS. 32,043 f. 61-69, b.), a Divertimento and Sestetto in E flat for orchestra (Add. MSS. 32,043 f. 21-39, b.; 32,147 f. 9-24), a 'Dreyblatt' in F for three performers on one pianoforte (Add. MS. 32,045), and various instrumental and vocal pieces. Few of these are named in Eitner's list (i. 259). The autograph score of a 'Trauer-Cantate' performed at Minden in 1787 on the death of Frederick the Great is in the Danzig Stadtbibliothek (*Misc. Mus. Bio-bibliographica*, Jhrg. i. Heft 4, p. 81).

[1] The MS. also contains J. C. F. Bach's 'Die Kindheit Jesu,' here attributed to his son.

Bibl.—C. H. Bitter, *C. P. E. und W. F. Bach und deren Brüder*, Berlin, 1868 (vol. ii. chap. 7). Georg Schünemann, 'Johann Christoph Friedrich Bach' (*B. J.-B.*, 1914, pp. 45-165). R. Eitner, *Q.-L.* vol. i., 1899.

Johann Christian Bach [38], youngest son of Johann Sebastian and Anna Magdalena Bach, was born at Leipzig on Sept. 5, 1735.* His godfathers were Johann August Ernesti, rector of the Thomasschule, and Johann Florens Rivinus, in whose honour Sebastian produced the cantata 'Die Freude reget sich' *circa* 1733. The infant took his second name from his godmother, Christiana Sibylla, daughter of Georg Heinrich Bosen, a Leipzig merchant. There is no record of his attendance at the Thomasschule, and his father's death in 1750 denied him the university training his elder brothers received. Probably his earliest tutor was his kinsman Johann Elias Bach, a member of the cantor's household at that time. Christian's proficiency, or a father's partiality for his youngest son, is suggested by Sebastian's gift to him of three clavicembali (Spitta, iii. 358). After his father's death Christian was taken to Berlin by his half-brother Friedemann, and remained for four years under Emanuel's tuition (1750–54). Rejecting an appointment as organist, Christian left Berlin for Italy in 1754. The alleged scandalous circumstances of his departure are apocryphal. He probably went directly to Milan with an introduction to the Conte Cavaliere Agostino Litta, who afforded him the means to study at Bologna under Padre Giambattista Martini (1706–84). Here (1754–56) he became a Roman Catholic and devoted himself chiefly to ecclesiastical music (Burney, iv. 482). On July 29, 1757 (Bach's letter of July 30, 1757, in La Mara), a private rehearsal took place at Milan of a Mass composed under Martini's supervision. Its reception was enthusiastic, and a public performance was given in the Church of San Fedele a month later (Aug. 23). In 1758 Bach composed a Magnificat for double chorus in C major, a Te Deum for double chorus in D, and in 1760 another setting of the former canticle in C (autographs in Royal Collection, Brit. Mus.; copies of the Magnificats in the R.C.M.). A Requiem, Paternoster, and study of Palestrina, to whose works Martini directed him, further declare the bent of his mind at this period. Litta's desire to retain his 'amatissimo giovannino' in Italy was gratified by his appointment (June 1760) as organist of Milan Cathedral, in the room of Angelo Caselli. But Christian's agreeable though superficial genius was already attracted to another form of his art. In 1760 he was employed at Reggio and Parma to discover singers for the opera at Turin, where in 1761 he produced his

'Artaserse,' an opera in three acts (autograph score in Royal Collection, Brit. Mus.). In the same year his 'Catone in Utica' was produced in the San Carlo Theatre at Naples,[1] the librettist of both being the prolific Pietro Metastasio (1698–1782), who also furnished the text of Christian's 'Allessandro nell' Indie,' produced at Naples on Jan. 20, 1762. These preoccupations, and the prolonged absences they entailed, roused in Milan complaints of neglected duty and suspicions of Christian's 'frivolous character' (Litta to Martini, Apr. 7, 1762). Opportunely, therefore, the prospect of employment presented itself elsewhere.

Since 1757, Signora Mattei, impressaria of the King's Theatre, London, had employed the Neapolitan Gioacchino Cocchi (1715–1804) as composer to the opera. Finding his powers of invention exhausted and his abilities of little use except for pasticcios, she engaged Bach, who arrived in England in the autumn of 1762. That he had been for some time in touch with England is suggested by his setting of John Lockman's 'Ode on the auspicious Arrival and Nuptials of Queen Charlotte' (Sept. 1761), and the wedding ode, 'Happy Morn, auspicious rise,' written for the same occasion; the autographs of both are in the Royal Collection in the Brit. Mus. A Latin Te Deum, dated 1762, is in the same collection. Disappointed with the singers at his disposal, Bach discovered in the Neapolitan Anna Lucia de Amicis, then singing in opera-buffa in London, an artist whose gifts afterwards delighted Mozart (Jahn, i. 142). Bach's first opera in England, 'Orione ossia Diana vindicata' (Brit. Mus. H. 348, c. (2); G. 159; and Add. MSS. 31,717 f. 1; also in Tenbury Catalogue, 348) was produced at the King's Theatre on Feb. 19, 1763. The King and Queen attended the first two performances, which were 'extremely applauded by a very numerous audience,' while the occasion is remarkable for the first introduction of clarinets into an English orchestra (Burney, iv. 481).[2] The opera ran for nearly three months and was succeeded on May 7, 1763, by Bach's 'Zanaida' (Brit. Mus. G. 159, and g. 212, a.), which filled the theatre until the season closed a month later (June 11). Bach's success was marked by his appointment as music-master to the Queen. The youthful Mozart, visiting London in 1764, was won by his kindness and interest. The two performed a sonata together, each in turn playing a bar, and then a fugue, which Bach began and Mozart completed (Jahn, i. 39). On Feb. 20, 1764, at Spring Gardens, the first of the concerts took place in which Bach collaborated with Carl Friedrich Abel (1725–87), one of Sebastian's latest pupils in the Thomasschule. They were continued, at Almack's and the Hanover Square Rooms, for seventeen years; the last concert was given on May 9, 1781 (*Public Advertiser*, May 8, 1781).

Meanwhile, after a production of Arne's, which had little success, Bach opened the season in 1765 with a pasticcio, 'Berenice,' to which he contributed the popular song 'Confusa smarrita.' On Jan. 26, 1765, he produced his 'Adriano in Siria' (Brit. Mus. H. 348, c. (1)), which failed to please. He was more successful with his 'Carattaco' (Brit. Mus. H. 740, c.) in 1767. In 1769 he produced Nicola Piccini's (1728–1800) 'Olimpiade,' with additions of his own, and treated Gluck's 'Orfeo' in a similar manner (1769–70) (Brit. Mus. E. 91, c. 1). In *c.* 1770 he produced 'Manalcas, a Pastoral,' a one-act pasticcio (words by James Harris), consisting of five numbers by Bach and a concluding chorus of shepherds by Handel. A copy of the score formerly belonging to the Society of British Musicians was in the collection of Dr. Erich Prieger of Bonn, at the sale of which (at Cologne, July 15, 1924) it was bought by Dr. Ernst von Waldhausen of Essen. In 1770 his oratorio 'Gioas rè di Giuda' (Brit. Mus. H. 348, c. (3)) was given at the King's Theatre. His last English productions were the operas 'La clemenza di Scipione' (Brit. Mus. H. 740), performed in 1775, and revived for her benefit by Mrs. Billington in 1805, 'Siface,' and 'Exio' (a pasticcio). Meanwhile, in 1772 and 1774, Bach visited Mannheim and produced on the first occasion his opera 'Temistocle,' and on the second 'Lucia Silla,' a libretto by Giovanni da Camera which Mozart already had put to music (Jahn, i. 178). He was attracted to Mannheim, it may be presumed, by the fact that among the singers there was Dorothea Spurni (1737–1811), wife of the flautist Johann Christian Wending, 'the German Melpomene of Mannheim's Golden Age' (Jahn, i. 373), whom he himself had desired to marry (cf. Ludwig Landshoff's article). The cantatas for Tenducci, 'Amor vincitore' and 'L' Endimione,' also were performed at Mannheim, and the latter was first produced at Oggersheim in 1772 (*ibid.*). In 1778 Bach was invited to write an opera for Paris. Mozart met him there in August, with his 'bosom friend,' the singer Giusto Ferdinando Tenducci, engaged in sounding the qualities of the French singers (Jahn, ii. 64; *B. J.-B.*, 1914, p. 106). Bach's opera, 'Amadis des Gaules' (Brit. Mus. H. 740, a.), was produced at Paris on Dec. 14, 1779, in the theatre of the Royal Academy of Music and was severely criticised. He died childless in London on Jan. 1, 1782,* and was survived by his widow, Cecilia Grassi, who received from Queen Charlotte a pension and money for her return to Italy.

As a pianist, according to Burney, Bach

[1] An earlier performance in 1758, at Milan, is stated, but improbable.

[2] The wedding ode of 1761 is also scored for clarinets.

lacked the technique to perform difficult music, though his style was much admired. His compositions for the clavier therefore were 'such as ladies can execute with little trouble.' Max Schwarz prints a complete catalogue of his compositions. Of thirty-three clavier concertos, the original editions of many are in the British Museum, and three (in G, E, D) are published in the Steingräber edn. 92, 106, 107. The number of sonatas and smaller pieces is considerable (see Brit. Mus. Cat. Printed Music, i. 110–11); ten are published in ed. Peters (No. 3831); another in B flat (ed. Pauer) in Senff's *Alte Klaviermusik* (Folge 2, Heft iv.); others (for four hands) in Steingräber edn. 2260 and Schott, 04,865-6. An Adagio and Allegretto are in Univ. edn. 745. Of Bach's numerous symphonies, overtures, instrumental concertos and chamber music, a very full collection is in the British Museum, including a Concerto in E flat in the Royal Collection. A Trio in D for piano and strings is in the Collegium Musicum, No. 1737-38 (B. & H.). Besides the operas already named, Schwarz mentions four cantatas written for Tenducci, including 'Aurora' (Brit. Mus. Add. MSS. 24,310), a large number of arias and duets (see B.M. Cat. of MSS. vol. ii.), 'Salve Regina,' for treble voice and orchestra (B.M. Add. MSS. 29,293: autograph), and a number of early works for church use. G. A. Walter publishes two arias with orchestral accompaniment (1919). The MS. of an oratorio, in two parts, 'Gli Ebrei nel deserto,' attributed to Bach, is in the Euing Library of the Royal Technical College, Glasgow. Bach's early training under Emanuel bore fruit in a treatise entitled *Méthode ou Recueil de connaissances élémentaires pour le fortepiano ou clavecin*, written (with F. P. Ricci) for the Naples Conservatoire (Preuss. Staatsbibliothek, No. 250). A collection of his concert and operatic Arias (ed. Dr. Ludwig Landshoff) is published by the Drei Masken Verlag (1925). Bach's portrait was painted by Gainsborough (cf. *Radford's Art Sales*, i. 42). It is in the Liceo musicale at Bologna, where also is preserved a series (1757–78) of letters from Bach to Padre Martini. Another portrait of him is in the Preuss. Staatsbibliothek, Berlin, by Matthieu (1774). There is an engraved medallion of him, by Bartolozzi after Carlini, dated 1782, and, from this, one by J. F. Schröter dated 1789; also a lithograph by H. E. Wintter in 1816. Bach was buried in London, in the burial-ground of St. Pancras.

BACH CHOIR, THE. (1) In 1875 a body of amateurs was got together by A. D. COLERIDGE (*q.v.*) for the purpose of studying Bach's Mass in B minor, a work concerning which musicians in England were then in almost total ignorance. The music was studied under the direction of Otto GOLDSCHMIDT (*q.v.*), who had devoted much preparatory care to the Mass; and the work was performed at St. James's Hall, Apr. 26, 1876, and again in May of the same year. Its success was such as to encourage the promoters of the scheme to convert the temporary choir into a permanent association for the production of classical vocal music. The new society was called 'The Bach Choir' (in commemoration of the inaugural performance), and its object was defined by the rules to be the practice and production of choral works of excellence of various schools. Lord Coleridge became president, Goldschmidt musical director and conductor, and A. D. Coleridge honorary secretary, while the details of the administration were handed over to a salaried secretary and librarian. In Mar. 1879 Queen Victoria graciously consented to become patron of the choir, and her successors have continued the Royal Patronage.

While practising and producing other choral works, the Mass was not neglected, and it was performed, for the 8th time in London, in the Albert Hall, Mar. 25, 1885, in celebration of the bicentenary of Bach's birth. For this performance the choir was largely augmented by voices selected from other leading societies, and many retired members resumed for the occasion their places in the chorus. Interest was also lent to this performance by the use for the first time in England of the trumpet and oboi d' amore parts as written by Bach. The whole forces were directed by Otto Goldschmidt, who shortly afterwards resigned the post of conductor, and, declining re-election, was succeeded by C. V. Stanford (1885–1902). Subsequent conductors have been H. Walford Davies (1902–07), H. P. Allen (1907–20), R. Vaughan Williams (1920–). During Stanford's *régime* two three-days festivals of Bach's music were given in Queen's Hall (Apr. 1895 and 1897). Under Allen the choir, largely reconstituted, entered on a very vigorous period of activity which culminated in a four-days festival of Bach in the Central Hall, Westminster (Apr. 16-20, 1920). A jubilee festival, four performances including, with the Mass, other works with which the choir had been specially associated during its 50 years, was held in the same hall, June 7-11, 1926, under the direction of Vaughan Williams.

Apart from Bach the choir has performed many choral works new and old. Certain classics have been edited specially for it and published in a series known as 'The Bach Choir Magazine.' The present (1926) officers

are the Earl of Balfour (president), R. Vaughan Williams (musical director), F. V. Schuster (hon. treasurer), F. J. Belton (secretary). Its affairs are managed by a committee of members. M. L.; addns. C.

(2) Many other choral societies in England and elsewhere use the title, devoting themselves in various degrees to the music of Bach. Among the most important are those of OXFORD and NEWCASTLE (*q.v.*). That of Glasgow holds a high place. The formation of a Bach Cantata Club in London (1926) is noteworthy.

(3) In America the name is specially associated with an organisation formed at Bethlehem, Pennsylvania, in 1900, by Mrs. Ruth Porter Doster at the instigation of John Frederick WOLLE (*q.v.*), for the performance of Bach's music in a series of festivals. These festivals, all conducted by Wolle, have extended from two to six days, and the Mass in B minor has been a constant feature. The two settings of the 'Passion,' the 'Christmas Oratorio,' Magnificat and many church cantatas have been given; the Philadelphia orchestra has been employed since 1912 and Wolle's energy and devotion has made the Bethlehem Bach Choir an important institution in the musical life of America.

BACH GESELLSCHAFT. A German society established in 1850 with the object of publishing a 'vollständige kritische Ausgabe aller Werke Johann Sebastian Bach's,' in commemoration of the first centenary of his death. The project, urged by Robert Schumann (*Neue Zeitschrift f. Musik*, xix. 87), and stimulated by the foundation of the Handel Society in 1843, was brought to maturity by Otto Jahn, who, in association with Schumann, Carl Fr. Becker, of Leipzig, Moritz Hauptmann, cantor of the Thomasschule, and the firm of Breitkopf & Härtel, issued (July 3, 1850) a circular outlining its purpose. The response being cordial, a formal proposal to found a 'Bachgesellschaft' was addressed (July 28, 1850) 'an die Freunde ernster Tonkunst,' bearing the additional signatures, among others, of Ferdinand David, Konzertmeister in Leipzig; S. W. Dehn, Custos of the department of music in the Berlin Königl. Bibliothek; Franz Liszt; I. Moscheles, Professor in Leipzig; Johann Theodor Mosewius, Musikdirector in Breslau; Louis Spohr, Kapellmeister in Cassel; and Carl von Winterfeld, Geh. Obertribunalrath in Berlin. On Dec. 15, 1850, the constitution of the Society was approved at a meeting in the Old Gewandhaus at Leipzig, which continued to be its headquarters until 1873. An executive was appointed, consisting of Hauptmann as president, Jahn as secretary, Breitkopf & Härtel as treasurers, along with Becker and Moscheles. The first publication, containing Cantatas 1-10, edited by Hauptmann, appeared in Dec. 1851, with a list of members which included 23 royal patrons, 237 subscribers in Germany, 1 in Belgium (J. A. Gevaert), 4 in Denmark (Niels W. Gade among them), 11 in England, 6 in France, 1 in Galicia, 3 in the Netherlands, 1 in Norway, 1 in Poland, 5 in Posen, 22 in Russia, 1 in Sweden, 4 in Switzerland, and 1 in the U.S.A. The total number of volumes subscribed for was 403, at a yearly subscription of five thalers. When the Society was dissolved in 1900 the number of volumes issued to subscribers had risen to 652. Italy, Spain and South America were represented in the membership, and English subscribers had risen to 76.

The foundation of the Bach Gesellschaft marked the culmination of a generation of rediscovery. Forkel's monograph (1802) was the first to announce Bach's greatness; while Johann Friedrich Rochlitz (1769–1842), Bach's earliest critic on the æsthetic side, used the pages of the *Allgemeine musikalische Zeitung* to proclaim the art of one whom that generation was disposed to regard as 'an unintelligible musical arithmetician.' More effective still, Bach's music began to win converts. The motets were sung, soon after their publication, by the Berlin Singakademie, under Carl Friedrich Zelter (1758–1832), whose letters to Goethe express the admiration they roused in him. At his house the Mendelssohns, Felix and Fanny, and the Devrients met to study what Zelter called 'die borstigen Stücke von Sebastian Bach' (Devrient, *Recollections*, p. 13). With the feeling of the Passions and cantatas Zelter was less in touch. It was therefore a propitious mood that moved him to stand aside in favour of Mendelssohn for the performance of the 'Matthäuspassion' in 1829, on the centenary of its first production. Since 1827 Mendelssohn had been rehearsing it with a small choir of enthusiasts, and early in 1829 Zelter and the Singakademie were won over to the proposal to give it public performance. The work was produced on Mar. 11, 1829, and made 'an extraordinary sensation in the educated circles of Berlin' (Devrient, p. 62). A second performance followed on Mar. 21, and Zelter himself conducted a third on Good Friday, Apr. 17, of the same year, in place of Graun's customary 'Tod Jesu.' In the following years it was given at a number of other towns. Leipzig heard it in 1841 and did tardy homage to its composer by erecting (1843) his monument before the Thomasschule. Of that action also Mendelssohn was the indefatigable inspirer, to whose enthusiasm, endorsing its motive, Schumann made his compliment (*Gesammelte Schriften*, iii. 256). Meanwhile in 1833 the Berlin Singakademie produced the 'Johannispassion' and a truncated version of the Mass in B minor in 1835, whose 'Credo,' 'Kyrie,'

and 'Gloria,' already had been revived by Johann Nepomuk Schelble (1789–1837) at Frankfort in 1828–31. In Breslau, in the same period, Mosewius was producing the recently published cantatas, and at Leipzig, during the cantorates of Johann Gottfried Schicht (1810–23) and Moritz Hauptmann (1842–68), his church's neglect of Bach ceased to be a reproach. Robert Franz, in a later year, devoted himself to the provision of accompaniments suited to the modern orchestra, a labour of doubtful morality, which, however, facilitated the performance of the works it edited.

England also, though faintly, responded to the new impulse. Johann Christian, the 'English Bach,' did nothing to propagate his father's cult, and until Kollmann's treatise (*infra*, p. 184) in 1799 probably not a note of Bach's music was in print except a portion of the Goldberg Variations in Hawkins's *General History* (1776). Dr. Benjamin Cooke (1734–1793), of Westminster Abbey, possessed a manuscript of the Organ Prelude in C major (Peters edn. bk. 241, No. 1), but attributed it to his predecessor, John Robinson! (1682–1762). The effective pioneer of Bach's English cult was Samuel Wesley (1766–1837), actively supported by Charles Frederic Horn (1762–1830), organist of St. George's, Windsor, and Benjamin Jacob (1778–1829), organist of Surrey Chapel, Blackfriars Road. Wesley's concerts of Bach music in 1808 and 1809, his enthusiasm for 'Old Wig,' as he, like Johann Christian, called Bach, and his association with Horn in the publication of Bach's organ trios, are told with boisterous ardour in his letters to Benjamin Jacob (*q.v.*) (London, 1875). On June 3, 1809, the motet 'Jesu, meine Freude' was sung at his concert in the New Rooms, Hanover Square, probably the earliest performance of Bach's vocal music in England. In 1808 he was preparing an English edition of Forkel's monograph, aided by E. Stephenson, the banker, of Great Ormonde Street, owner of a remarkable collection of Cremona violins (W. T. Parkes, *Memoirs*, i. pp. 301, 302). T. Boosey & Co., of Holles Street, Cavendish Square, published the book in 1820. Wesley's zeal meanwhile converted William Crotch (1775–1847), whose asserted distinction it is to have been the first to play in public, on the pianoforte, the 'St. Ann's' Fugue, in 1816. Henry John Gauntlett (1806–76) claimed to share with Samuel Sebastian Wesley the honour of first playing it on the organ publicly at St. Stephen's, Coleman Street, on Oct. 17, 1827. But the knowledge of Bach's organ works made slow progress, though the introduction of the CC, superseding the G, compass removed a serious impediment to their study and performance. The English visits of Mendelssohn in 1829 and 1832 brought his zeal for Bach to this country. His performances of Bach's music, at St. Paul's Cathedral and elsewhere, introduced fugues that had not so far been heard in England, and afforded lessons in interpretation that were not unnecessary. With Coventry and Hollier he published (preface dated Feb. 17, 1845) the Choralvorspiele of the *Orgelbüchlein* from his copy of the Autograph.[1] At his instigation a portion of the 'Matthäuspassion' was performed at the Birmingham Festival in 1837. A year later (Apr. 25, 1838) Nos. 1, 2, 11 of the 'Magnificat' were sung at one of the Ancient Concerts, at which also, on the following 23rd May, a ruthlessly incompetent performance of the 'Gloria,' 'Qui sedes,' and 'Quoniam tu solus' of the B minor Mass was perpetrated. In 1840 the B minor Mass was rehearsed, but not performed, by the Sacred Harmonic Society. On June 24, 1844, Bach's name appeared for the first time on the programmes of the Philharmonic Society, when the Overture in D (Peters, bk. 269) was conducted by Mendelssohn. J. W. Davison, the leading critic, found the Gigue 'bag-wiggish' and the whole composition 'somewhat tedious.' Bach could still be styled 'this great and comparatively unknown master' when, at a meeting at Sterndale Bennett's house on Oct. 27, 1849, the 'Bach Society' was founded, under his presidency, with two objects: To collect Bach's works and all biographical material relating to him and his family in a library of reference for the use of members; and, to further acquaintance with his works by their performance.

Indicative of awakening interest is the increasing publication of Bach's works in the half-century preceding the Society's formation. During his lifetime only the following were engraved: Cantata No. 71, 'Gott ist mein König' (1708; parts only); the six Partitas in *Clavierübung* Part I. (1726–31); *Clavierübung* Part II. (1735); certain hymn-tunes in G. C. Schemelli's *Gesangbuch* (1736); *Clavierübung* Part III. (1739); the Schübler 'Sechs Choräle' (1740); *Clavierübung* Part IV. (1742); the 'Vom Himmel hoch' variations (*circa* 1746); and the 'Musikalisches Opfer' (1747).

In the half-century following Bach's death the only additions to his engraved works were *Die Kunst der Fuge* (1750); *XXII. Inventiones vors Clavier* (Breitkopf, 1763); *Vierstimmige Choralgesänge, gesammelt von C. Ph. E. Bach*, published by Birnstiel, 1765 (second part, 1769), followed by a complete collection, edited by C. P. E. Bach, issued by Breitkopf & Härtel in four parts, 1784–87. In 1799 Augustus Fr. Kollmann (1756–1829), organist of 'His Majesty's German Chapel at St. James's', printed, as examples in his 'Essay on practical musical composition,' No. 1 (Prelude and Fugue

[1] It is stated in the *Mus. T.* for 1896, p. 724, that the Fugue in E minor was first printed in England from a copy supplied to Novello by Mendelssohn in 1833 (No. 42 of Novello's 'Select Organ Pieces'). The Fugue was published in the same year by Breitkopf & Härtel.

in C) of Part II. of the *Wohltemperirte Clavier* (autograph in the Brit. Mus. Add. MS. 35,021) and the Trio in E flat for pedal clavicembalo,[1] announcing his intention, 'if I find sufficient encouragement,' to publish the '24 Fugues by Sebastian Bach.' But the intention was not fulfilled (*Mus. T.* vol. 37, p. 587); in 1801 the *Wohltemperirte Clavier* was published elsewhere, by Simrock at Bonn, Nägeli at Zürich, Hoffmeister at Vienna and Hoffmeister & Kühnel at Leipzig. Broderib and Wilkinson shortly after issued a London edition.[2] Hawkins (1776) printed the Goldberg Aria and Variations in his *History*.

Following the appearance of Forkel's *Über Johann Sebastian Bachs Leben* (1802), the publication of Bach's neglected MSS. proceeded with awakened interest. In 1802–03 Johann Gottfried Schicht, subsequently (1810–1823) cantor of the Thomasschule, edited the motets (vocal parts, 1845), excepting 'Lobet den Herrn' (published 1821?), for Breitkopf & Härtel. Simrock published the 'Magnificat' (in E flat) in 1811 and the Mass in A in 1818 (vocal parts and pianoforte score, 1834), both edited by Georg Pölchau. In 1819, according to Fétis, the 'Trauer-Ode' appeared, and two years later (1821) Breitkopf & Härtel published the first of the cantatas, 'Ein feste Burg' (No. 80). In 1828 Pölchau edited the Mass in G (vocal parts, 1830; pianoforte score, 1834) for Simrock, and Schlesinger (Berlin) published the score of the 'Matthäuspassion' in 1830 (piano score and vocal parts, 1834). In 1830, also, Simrock issued six more cantatas: 'Nimm von uns, Herr' (No. 101), 'Herr, deine Augen sehen' (No. 102), 'Ihr werdet weinen und heulen' (No. 103), 'Du Hirte Israel' (No. 104), 'Herr, gehe nicht ins Gericht' (No. 105) and 'Gottes Zeit' (*Actus tragicus*, No. 106), under the editorship of Professor A. B. Marx, and Trautwein published the piano score of the 'Johannespassion' (vocal parts, 1834). In 1833 Nägeli published in score the B minor 'Kyrie' and 'Gloria,' the remainder of the work being issued by Simrock in 1845; the piano score (ed. A. B. Marx) and vocal parts of the work having been already published (1834) by him. In 1837 Crantz published at Berlin the 'Peasant' and 'Coffee' cantatas, edited by S. W. Dehn. In 1840 the opening chorus of Cantata 115, 'Mache dich, mein Geist, bereit,' was issued by Schott. In 1843–45 Trautwein published four more cantatas: 'Nimm, was dein ist' (No. 144), 'Siehe zu dass deine Gottesfurcht' (No. 179), 'Himmelskönig, sei willkommen' (No. 182) and 'Barmherziges Herze der ewigen Liebe' (No. 185). Three more were engraved in the third volume (1847) of Carl von Winterfeld's *Der evangelische Kirchengesang* (pp. 145, 172, 230)—'Warum betrübst du dich' (No. 138), 'Wachet auf, ruft uns die Stimme' (No. 140) and 'Also hat Gott die Welt geliebt' (No. 68)—in which also the Choral 'Jesu, richte mein Beginnen' (No. 42 of the 'Christmas Oratorio') first appeared (p. 121) in print.

Of the organ works, in the same period, Breitkopf & Härtel published four books of 'Choralvorspiele' (1803–06). In 1809–10 Wesley & Horn published the Organ Trios. Riedl of Vienna published six Preludes and Fugues in 1817, and Preston (London) issued others *circa* 1820. Publication of separate movements proceeded with increasing frequency in the two following decades, until in 1845–47, with the editorial assistance of Conrad Griepenkerl and Ferdinand August Roitzsch, Peters issued a complete 'kritisch-correkte' edition of Bach's organ compositions.

Of the clavier works, Kollmann's 'Celebrated Fantasia Chromatica, with additions' by himself (1806), was the earliest of a series of separate publications, followed by the issue of Hoffmeister & Kühnel's (subsequently Peters) 'Œuvres complettes' (1801–17) and 'Édition nouvelle, soigneusement revue, corrigée, métronomisée et doigtée par un Comité d'Artistes' (Czerny, Griepenkerl, Dehn, Roitzsch) (1837–51).

Of the chamber and orchestral music, Simrock published the solo violin sonatas, 1817–28, and Nägeli those for violin and clavier, 1804–17. Breitkopf & Härtel published the violoncello suites in 1826. The 'English Suites' were published by Trautwein in 1828–30, and the D major concerto for clavier and strings (Peters edn. bk. 251) by Kistner (Whistling) of Leipzig in 1838. In 1847 Crantz published the violin Chaconne, with additional accompaniments by Mendelssohn. The Sinfonia (suite) in D for orchestra appeared at Paris in 1817, and Schott published the concerto in A minor for clavier and orchestra (Peters edn. bk. 255) in 1848.

Thus, in 1850, while the bulk of Bach's organ and clavier work was already in print, little of his chamber music was published; the three oratorios were still in MS.; two of the masses were unpublished; only two of the secular cantatas were known; and of Bach's distinctive work at Leipzig, the church cantatas, only a meagre fraction had been brought to light.

The editorial work of the Society was considerably eased by the concentration of Bach's MSS. in Berlin. The bulk of them passed at his death to Friedemann and Carl Philipp Emanuel. Those entrusted to Friedemann were negligently treated. Emanuel

[1] Kirnberger also had printed the Prelude in A minor of Part II. as well as the Fugue in B minor of Part I. to illustrate his 'Kunst des reinen Satz,' published 1776.

[2] The edition appears to be a reprint of Simrock's. The title-page is undated (Brit. Mus. f. 11 d.). The firm was dissolved in 1808, and therefore the edition is earlier than Wesley and Horn's (Birchall: 1810-13).

took the greatest care of his, and a catalogue of them has been of the greatest use to investigators. Dispersed at his death, his collection passed into various hands, in particular those of Georg Pölchau, librarian of the Berlin Singakademie (1833–36). The Berlin Königl. Bibliothek (now the Preuss. Staatsbibliothek) bought his private collection in 1841 and that of the Singakademie in 1855. The exceedingly comprehensive collection of Bachiana made by Franz Hauser (1794–1870) also was of the greatest service to the editors, and is now in the Berlin Library's custody, which also possesses the collection of Count von Voss, who acquired many of Friedemann's MSS. Johann Nikolaus Forkel, Joh. Christoph Westphal, Professor Fischhof, the Vienna Archiv des Musikvereins, and the Brussels Conservatoire also contributed materials. Though Bach's sons acquired the scores of the cantatas, the vocal and instrumental parts of a considerable number of them were found in the Thomasschule. A collection of Bach MSS., formerly belonging to his pupil Johann Philipp Kirnberger, in the Amalienbibliothek of the Berlin Joachimsthal'sche Gymnasium, was also of service. Another valuable collection was that of Professor Ernst Rudorff, who placed it at the disposal of the editors. It has since been dispersed. Much of it is to-day in the Musikbibliothek Peters at Leipzig; but the autograph score of Cantata 115 is in the Fitzwilliam Museum, Cambridge, and that of Cantata 97 is in private possession in New York. Philipp Spitta, Bach's biographer, owned a large number of MSS. which he placed at the service of the Society and after his death passed to the Berlin Hochschule f. Musik. C. F. Becker, Breitkopf & Härtel, Griepenkerl, Jähns, Kötschau (Mendelssohn's brother), Moscheles, Mosewius, Schelble, Gleichauf, Wilhelm Rust, S. W. Dehn and Spohr were also among those intimately involved in the Society's activities who contributed material for its volumes. Writing to Hauser in Feb. 1833, Mendelssohn could name as many as 672 authentic Bach MSS. then in Berlin.

At the outset, however, the Society's difficulties were due in large measure to inadequate knowledge of its materials. In Jan. 1851 the subscribers were promised the score of the Mass in B minor for the first volume. It was proposed to reconstruct the score from the parts of the 'Kyrie' and 'Gloria' at Dresden and materials in the Berlin Library. But the autograph score itself was in the hands of Hermann Nägeli, who inherited it from his father (who bought it from C. F. Schwenke (1767–1822), C. P. E. Bach's successor at Hamburg), and, when appealed to, refused to lend it, on the curious ground that the Handel Society was sufficiently commemorating the achievements of German art, and that its activities were likely to prejudice the Bach Gesellschaft's operations. Publication of the Mass was delayed until 1856 (Jahrgang 6). In 1857, the Autograph having become available, a 'neue Redaktion' of the 'Credo,' 'Sanctus' and 'Agnus Dei' was issued to members. In place of the Mass the first volume issued by the Committee contained ten unpublished Church Cantatas, edited by Moritz Hauptmann, chiefly from the original parts in the Thomasschule, supplemented by scores lent by the Königl. Bibliothek, Hauser, Ernst Rudorff, and original parts in Count von Voss's collection. In 1863 (Jahrgang 13, Lieferung 2) a defective edition of the French and English Suites was published, rectified subsequently by the issue of a 'neue berichtigte Ausgabe' in 1897 (Jahrgang 45, Lieferung 1). But having repaired one error, the Committee in 1898 committed a greater by publishing the 'Lukaspassion,' a work partly in Bach's autograph, but certainly not by him (cf. *supra*, p. 168). Elsewhere, too, the editors showed a disposition to err on the side of liberality where doubt existed regarding the authenticity of their MSS. Thus in 1894 (Jahrgang 43, Lieferung 1) Friedemann Bach's Sonata in F major for two claviers was admitted (p. 47). In the same year (Jahrgang 42), in an appendix of 'Compositionen, derer Ächtheit nicht sicher verbürgt ist,' a 'Toccata quasi Fantasia con Fuga' in A major by Henry Purcell is discovered (p. 250). The motet 'Ich lasse dich nicht,' by Johann Christoph Bach (*d.* 1703), appears in Jahrgang 39 (p. 157). In Jahrgang 36 the Prelude and Fugue in E (p. 88) also is by Johann Christoph Bach. MSS. of doubtful authenticity are included among the clavier works in Jahrgang 42 (pp. 173, 243). Among the organ works a similar category appears in Jahrgang 38 (p. 213) and 40 (p. 167). R. Buchmayer (*Int. Mus. Gesell.* ii. p. 253 f.) shows that the Passacaglia in D minor (B.-G. xlii. No. 15, p. 234) is by Ch. Fr. Witt (1660–1716) and the Rondeau in B major in A. M. Bach's *Notenbuch* (B.-G. xliii. Lief. 2, No. 6) by Couperin. Other works of doubtful authenticity are discussed in Johannes Schreyer's *Beiträge zur Bach-Kritik* (Leipzig, 1911–13).

The editorial work was undertaken in unequal proportions and merit by ten editors over a period of fifty years. Sixty volumes altogether were issued, and the original promise to produce a 'complete and critical edition' of Bach's works was fulfilled. Only two additions (*infra*, p. 189) have since been made to the literature published by the old Bach Gesellschaft. The preface to each volume, while varying in ability and information, sets forth invariably the sources of the texts, collates them where more than one were

available, and exposes Bach's corrections of score and parts. In the early years the editorial work was undertaken by different members of the Committee—an editor was not among the officers instituted in 1850. Hauptmann edited the first, second, and eighth years' volumes; Becker the third; Kapellmeister Julius Rietz the fourth and sixth; Franz Kroll the fourteenth; and Alfred Dörffel the twenty-fourth, twenty-sixth and twenty-seventh. With the issue of the fifth year's volume, and until the completion of the twenty-eighth, however, the editorial work was undertaken otherwise by Wilhelm Rust, grandson of Friedrich Wilhelm Rust (1739–96), whose prefaces stand beside Spitta's work as an invaluable contribution to Bach criticism. His labours extended from 1855 to 1881. In 1882 he resigned the editorship, having been appointed to the cantorship of the Thomasschule in 1880, though Spitta's criticisms contributed to mould his decision. For the remainder of the Society's existence the editorial work was undertaken chiefly by Professor Ernst Naumann, of Jena, Alfred Dörffel and Paul Count Waldersee. On Jan. 27, 1900, the concluding volume, edited by Hermann Kretzschmar, Professor in the University of Leipzig, was laid before the Committee.

The following is a complete catalogue of the Society's publications:

1851. First Year.
Ed. M. Hauptmann.
Church Cantatas. Vol. I.

1. Wie schön leuchtet.
2. Ach Gott, vom Himmel.
3. Ach Gott, wie manches (*c.* 1740).
4. Christ lag in Todesbanden.
5. Wo soll ich fliehen hin.
6. Bleib' bei uns.
7. Christ unser Herr.
8. Liebster Gott, wann werd' ich sterben?
9. Es ist das Heil.
10. Meine Seel' erhebt den Herren!

1852. Second Year.
Ed. M. Hauptmann.
Church Cantatas. Vol. II.

11. Lobet Gott in seinen Reichen.
12. Weinen, Klagen.
13. Meine Seufzer.
14. Wär' Gott nicht mit uns.
15. Denn du wirst meine Seele.
16. Herr Gott dich loben wir.
17. Wer Dank opfert.
18. Gleich wie der Regen.
19. Es erhub sich ein Streit.
20. O Ewigkeit, du Donnerwort.

1853. Third Year.
Ed. C. F. Becket.
Clavier Works. Vol. I.

15 Inventions and 15 Symphonies.
Clavierübung:
Pt. 1. 6 Partitas.
Pt. 2. Concerto in F major, and Partita in B minor.
Pt. 3. Org. Prel. and Fugue in E flat; Duetti; Catechism Choral Preludes (Org.).
Pt. 4. Air, with 30 Variations.
Toccata in F minor.
Toccata in C minor.
Fugue in A minor.

1854. Fourth Year.
Ed. Julius Rietz.
Passion Music (St. Matthew).

1855. Fifth Year.
Ed. W. Rust.
(1) Church Cantatas. Vol. III.

21. Ich hatte viel Bekümmerniss.
22. Jesus nahm zu sich.
23. Du wahrer Gott.
24. Ein ungefärbt Gemüthe.
25. Es ist nichts Gesundes.
26. Ach wie flüchtig.
27. Wer weiss, wie nahe mir.
28. Gottlob! nun geht das Jahr.
29. Wir danken dir, Gott.
30. Freue dich, erlöste Schaar.

(2) (1856) Christmas Oratorio.
Ed. W. Rust.

1856. Sixth Year.
Ed. J. Rietz.
Mass in B minor.
A 'cancel' of pp. 155 to end was issued in 1857.

1857. Seventh Year.
Ed. W. Rust.
Church Cantatas. Vol. IV.

31. Der Himmel lacht.
32. Liebster Jesu.
33. Allein zu dir, Herr Jesu Christ.
34. O ewiges Feuer.
35. Geist und Seele.
36. Schwingt freudig euch.
37. Wer da glaubet.
38. Aus tiefer Noth.
39. Brich dem Hungrigen.
40. Dazu ist erschienen.

1858. Eighth Year.
Ed. M. Hauptmann.
Four masses: in F, A, G minor, and G.

1859 (1860). Ninth Year.
Ed. W. Rust.
Chamber Music. Vol. I.
3 Sonatas for Clavier and Flute.
Suite in A major for Clavier and Violin.
6 Sonatas for ditto, ditto.
3 ditto for Clavier and Viola ad gamba.
Sonata for Flute, Violin and Clavier in G major.
Ditto for 2 Violins and Clavier in C major.
Ditto for Clavier and Violin in G minor.

1860. Tenth Year.
Ed. W. Rust.
Church Cantatas. Vol. V.

41. Jesu, nun sei gepreiset.
42. Am Abend aber desselbigen.
43. Gott fähret auf.
44. Sie werden euch.
45. Es ist dir gesagt.
46. Schauet doch und sehet.
47. Wer sich selbst erhöhet.
48. Ich elender Mensch.
49. Ich geh' und suche.
50. Nun ist das Heil.

1861 (1862). Eleventh Year.
Ed. W. Rust.
(1) Magnificat in D.
Four Sanctuses, in C, D, D minor, and G.

(2) Chamber Music. Vocal. Vol. I.
Ed. W. Rust.
Phöbus und Pan.
Weichet nur, betrübte Schatten.
Amore traditore.
Von der Vergnügsamkeit.
Der zufriedengestellte Äolus.

1862 (1863). Twelfth Year.
Ed. W. Rust.
(1) Passion Music (St. John).

(2) Church Cantatas. Vol. VI.
Ed. W. Rust.

51. Jauchzet Gott.
52. Falsche Welt.
53. Schlage doch.
54. Widerstehe doch.
55. Ich armer Mensch.
56. Ich will den Kreuzstab.
57. Selig ist der Mann.
58. Ach Gott, wie manches (1733).
59. Wer mich liebet (1716).
60. O Ewigkeit (1732).

1863 (1864). Thirteenth Year.
Ed. W. Rust.
(1) Wedding Cantatas.
Dem Gerechten muss das Licht.
Der Herr denket an uns.
Gott ist uns're Zuversicht.
Three Chorals.

(2) (1863) Clavier Works. Vol. II.
Ed. W. Rust.
The English Suites.
The French Suites.

(3) (1865). Trauer-Ode.
Ed. W. Rust.

1864 (1866). Fourteenth Year.
Clavier Works. Vol. III.
Ed. Franz Kroll.
Das wohltemperirte Clavier, with Appendix.

1865 (1867). Fifteenth Year.
Ed. W. Rust.
Organ Works. Vol. I.
6 Sonatas.
18 Preludes and Fugues.
3 Toccatas.
Passacaglia.

1866 (1868). Sixteenth Year.
Ed. W. Rust.
Church Cantatas. Vol. VII.

61. Nun komm, der Heiden (1714).
62. Ibid. (*c.* 1740)
63. Christen, ätzet diesen Tag.
64. Sehet, welch' eine Liebe.
65. Sie werden aus Saba.
66. Erfreut euch, ihr Herzen.
67. Halt' im Gedächtniss.
68. Also hat Gott die Welt.
69. Lobe den Herrn.
70. Wachet, betet, seid bereit.

1867 (1869). Seventeenth Year.
Ed. W. Rust.
Chamber Music. Vol. II.
Concertos for Clavier and Orchestra: D minor; E; D; A; F minor; F; G minor.
Concerto for Clavier, Flute and Violin, with Orchestra, in A minor.

1868 (1870). Eighteenth Year.
Ed. W. Rust.
Church Cantatas. Vol. VIII.

71. Gott ist mein König.
72. Alles nur nach Gottes Willen.
73. Herr, wie du willt.
74. Wer mich liebet (? 1735).
75. Die Elenden sollen essen.
76. Die Himmel erzählen.
77. Du sollst Gott.
78. Jesu, der du meine Seele.
79. Gott, der Herr, ist Sonn'.
80. Ein' feste Burg.

1869 (1871). Nineteenth Year.
Ed. W. Rust.
Chamber Music. Vol. III.
6 Concertos (Brandenburg) for Orchestra.

1870 (1872). Twentieth Year.
Ed. W. Rust.
(1) Church Cantatas. Vol. IX.

81. Jesus schläft.
82. Ich habe genug.
83. Erfreute Zeit.
84. Ich bin vergnügt.
85. Ich bin ein guter Hirt.
86. Wahrlich, ich sage euch.
87. Bisher habt ihr nichts.
88. Siehe, ich will viel Fischer.
89. Was soll ich aus dir machen.
90. Es reifet euch.

(2) (1873). Chamber Music. Vocal. Vol. II.
Ed. W. Rust.
Schleicht, spielende Wellen.
Vereinigte zwietracht.
Auf, schmetternde Töne.

1871 (1874). Twenty-first Year.
(1) Chamber Music. Vol. IV.
Ed. W. Rust.
2 Concertos for Violin and Orchestra.
1 ditto for 2 ditto and ditto.
Symphonic movement for Violin and Orchestra in D major.

(2) Chamber Music. Vol. V.
Ed. W. Rust.
3 Concertos for 2 Claviers and Orchestra.

(3) Easter Oratorio.
Ed. W. Rust.

1872 (1875). Twenty-Second Year.
Church Cantatas. Vol. X.
Ed. W. Rust.

91. Gelobet seist du.
92. Ich hab' in Gottes.
93. Wer nur den lieben Gott.
94. Was frag ich.
95. Christus, der ist mein Leben.
96. Herr Christ, der ein'ge.
97. In allen meinen Thaten.
98. Was Gott thut (*c.* 1732).
99. Ditto (*c.* 1733).
100. Ditto (*c.* 1735).

1873 (1876). Twenty-third Year.
Church Cantatas. Vol. XI.
Ed. W. Rust.

101. Nimm von uns, Herr.
102. Herr, deine Augen sehen.
103. Ihr werdet weinen und heulen.
104. Du Hirte Israel.
105. Herr, gehe nicht ins Gericht.
106. Gottes Zeit ist die allerbeste Zeit.
107. Was willst du dich betrüben
108. Es ist euch gut.
109. Ich glaube, lieber Herr.
110. Unser Mund sei voll Lachens.

1874 (1876). Twenty-fourth Year.
Church Cantatas. Vol. XII.
Ed. Alfred Dörffel.

111. Was mein Gott will.
112. Der Herr ist mein getreuer Hirt.
113. Herr Jesu Christ, du höchstes Gut.

114. Ach, lieben Christen.
115. Mache dich, mein Geist, bereit.
116. Du Friedefürst, Herr Jesu Christ.
117. Sei Lob und Ehr'.
118. O Jesu Christ, mein's Lebens Licht.
119. Preise Jerusalem, den Herrn.
120. Gott, man lobet dich.

1875 (1878). Twenty-fifth Year.
Ed. W. Rust.
(1) Die Kunst der Fuge: 1749-50.

(2) Organ Works. Vol. II.
Ed. W. Rust.
Orgelbüchlein.
6 Choral Preludes (Schübler).
The 'Eighteen' ditto.

1876 (1878). Twenty-sixth Year.
Ed. Alfred Dörffel.
Church Cantatas. Vol. XIII.
121. Christum wir sollen loben schon.
122. Das neugebor'ne Kindelein.
123. Liebster Immanuel.
124. Meinen Jesum lass' ich nicht.
125. Mit Fried' und Freud'.
126. Erhalt' uns, Herr.
127. Herr Jesu Christ, wahr'r Mensch.
128. Auf Christi Himmelfahrt.
129. Gelobet sei der Herr.
130. Herr Gott, dich loben alle wir.

1877 (1879). Twenty-seventh Year.
Ed. A. Dörffel.
(1) Chamber Music. Vol. VI.
6 Sonatas (Suites, Partitas) for Violin.
6 Suites (Sonatas) for Violoncello.

(2) (1878) Thematic Index to the Church Cantatas. Nos. 1-120.
Ed. A. Dörffel.

1878 (1881). Twenty-eighth Year.
Ed. W. Rust.
Church Cantatas. Vol. XIV.
131. Aus der Tiefe.
132. Bereitet die Wege.
133. Ich freue mich in dir.
134. Ein Herz, das seinen Jesum.
135. Ach, Herr, mich armen Sünder.
136. Erforsche mich, Gott.
137. Lobe den Herren.
138. Warum betrüb'st du dich.
139. Wohl dem, der sich auf seinen Gott.
140. Wachet auf, ruft uns die Stimme.
Mit Gnaden bekröne (No. 134 adapted).
Ein Herz das seinen Jesum (No. 134 adapted).

1879 (1881). Twenty-ninth Year.
Ed. Paul Count Waldersee.
Chamber Music. Vocal. Vol. III.
Was mir behagt.
Non sa che sia dolore.
O holder Tag.
Höchsterwünschtes Freudenfest.
Schweigt stille.
Mer hahn en neue Oberkeet.
Mit Gnaden bekröne.
O angenehme Melodei.
Instrumental piece for Violin, Flute, and Clavier.

1880 (1884). Thirtieth Year.
Ed. Paul Count Waldersee.
Church Cantatas. Vol. XV.
141. Das ist je gewisslich wahr.
142. Uns ist ein Kind geboren.
143. Lobe den Herrn.
144. Nimm, was dein ist.
145. So du mit deinem Munde.
146. Wir müssen durch viel Trübsal.
147. Herz und Mund und That.
148. Bringet dem Herrn Ehre.
149. Man singet mit Freuden.
150. Nach dir, Herr, verlanget mich.

1881 (1885). Thirty-first Year.
Ed. A. Dörffel.
(1) Orchestral Works.
4 Overtures (Suites).
Sinfonia in F.

(2) Musikalisches Opfer.
Ed. Alfred Dörffel.

(3) Chamber Music. Vol. VII.
Ed. Paul Count Waldersee.
2 Concertos for 3 Claviers.

1882 (1886). Thirty-second Year.
Ed. Ernst Naumann.
Church Cantatas. Vol. XVI.
151. Süsser Trost.
152. Tritt auf die Glaubensbahn.
153. Schau', lieber Gott.
154. Mein liebster Jesus.
155. Mein Gott, wie lang'.
156. Ich steh' mit einem Fuss.
157. Ich lasse dich nicht.
158. Der Friede sei mit dir.
159. Sehet, wir geh'n hinauf.
160. Ich weiss, dass mein Erlöser.

1883 (1887). Thirty-third Year.
Ed. Franz Wüllner.
Church Cantatas. Vol. XVII.
161. Komm, du süsse Todesstunde.
162. Ach, ich sehe.
163. Nur Jedem das Seine.
164. Ihr, die ihr euch von Christo nennet.
165. O heil'ges Geist und Wasserbad.
166. Wo gehest du hin?
167. Ihr Menschen, rühmet Gottes Liebe.
168. Thue Rechnung! Donnerwort.
169. Gott soll allein mein Herze haben.
170. Vergnügte Ruh'.

1884 (1887). Thirty-fourth Year.
Ed. Paul Count Waldersee.
Chamber Music. Vocal. Vol. IV.
Durchlaucht'ster Leopold.
Schwingt freudig euch empor, *or* Die Freude reget sich.
Hercules auf dem Scheidewege.
Tönet, ihr Pauken.
Preise dein Glücke.
Angenehmes Wiederau.
Auf, schmetternde Töne.

1885 (1888). Thirty-fifth Year.
Ed. A. Dörffel.
Church Cantatas. Vol. XVIII.
171. Gott, wie dein Name.
172. Erschallet, ihr Lieder.
173. Erhöhtes Fleisch und Blut.
174. Ich liebe den Höchsten.
175. Er rufet seinen Schafen.
176. Es ist ein trotzig und verzagt Ding.
177. Ich ruf' zu dir, Herr Jesu Christ.
178. Wo Gott der Herr.
179. Siehe zu, dass deine Gottesfurcht.
180. Schmücke dich, o liebe Seele.

1886 (1890). Thirty-sixth Year.
Ed. E. Naumann.
Clavier Works. Vol. IV.
Suites, Toccatas, Preludes, Fugues, Fantasias, etc.

1887 (1891). Thirty-seventh Year.
Ed. A. Dörffel.
Church Cantatas. Vol. XIX.
181. Leichtgesinnte Flattergeister.
182. Himmelskönig, sei will kommen.
183. Sie werden euch in den Bann thun.
184. Erwünschtes Freudenlicht.
185. Barmherziges Herze der ewigen Liebe.
186. Ärg're dich, o Seele, nicht.
187. Es wartet Alles auf dich.
188. Ich habe meine Zuversicht.
189. Meine Seele rühmt und preist.
190. Singet dem Herrn.

1888 (1891). Thirty-eighth Year.
Ed. E. Naumann.
Organ Works. Vol. III.
Preludes, Fugues, Fantasias, etc., and Concertos arranged from Vivaldi.

1889 (1892). Thirty-ninth Year.
Ed. Franz Wüllner.
Motets, Chorals and Hymns.

1890 (1893). Fortieth Year.
Ed. E. Naumann.
Organ Works. Vol. IV.
25 Choral Preludes for Organ (Kirnberger).
28 Choral Preludes.
4 Choral Variations.

1891 (1894). Forty-first Year.
Ed. A. Dörffel.
Church Music (supplementary vol. XX.).
191. Gloria in Excelsis.
Incomplete Church Cantatas:
Nun danket alle Gott.
Ihr Pforten zu Zion.
Ehre sei Gott.
Incomplete Wedding Cantatas:
O ewiges Feuer.
Herr Gott, Beherrscher aller Dinge.
Sanctus in D, etc.
Four Cantatas, not certainly by Bach:
Gedenke, Herr, wie es uns gehet.
Gott der Hoffnung.
Siehe, es hat überwunden.
Lobt ihn mit Herz und Munde.
Catalogue of the church compositions of J. Ludwig Bach.

1892 (1894). Forty-second Year.
Ed. E. Naumann.
Clavier Works. Vol. V.
Arrangements from other works, including sixteen concertos after Vivaldi.
Preludes, fugues, etc.

1893 (1894). Forty-third Year.
Ed. Paul Count Waldersee.
Chamber Music. Vol. VIII.
(1) Three sonatas for flute and clavier, and sonata and fugue for violin and clavier, sonata for two claviers (by W. F. Bach), concerto for four claviers (after Vivaldi).

(2) Anna Magdalena Bach's music-books.
Ed. Paul Count Waldersee.

1894 (1895). Forty-fourth Year.
Ed. Hermann Kretzschmar.
Facsimiles of Bach's handwriting and autographs.

1895 (1897). Forty-fifth Year.
Ed. A. Dörffel.
(1) Clavier Music. Vol. II. (Revised edition).
New versions of the English and French Suites, canons, a prelude and fugue in E flat, suites in E minor and C minor, sonata in A minor, four inventions, an overture for strings in G minor, the contents of the *Clavierbüchlein for W. F. Bach.*
Various readings for *Das Wohltemperirte Clavier.*

(2) (1898) Passion (St. Luke).
Ed. A. Dörffel.

1896 (1899).* Forty-sixth Year.
Ed. Hermann Kretzschmar.
Thematic Index to Cantatas 121-191, Oratorios, Masses, Motets, secular Cantatas, instrumental music, prefaced by a history of the Bach Gesellschaft.

* Issued in 1900.

Upon the date of the dissolution of the Bach Gesellschaft (Jan. 27, 1900) the 'Neue Bach Gesellschaft' came into existence. Its first Committee was thus constituted: Hermann Kretzschmar, president; Gustav Schreck (cantor of the Thomasschule), secretary; Breitkopf & Härtel, treasurers; Joseph Joachim, Franz Wüllner (Köln), Professor Martin Blumner (Berlin) and Professor Siegfried Ochs (Berlin). Among the 'Ausschussmitglieder' were Ferrucio Busoni, Gustav Mahler, Fritz Steinbach, Julius Stockhausen and Felix Weingartner.

The new Society's declared object was, to popularise Bach's music by publishing it in practicable form and performing it at Bach Festivals throughout Germany. A secondary object, the foundation of a Bach Museum in the Bachhaus at Eisenach, was achieved in 1907. Festivals have been held in Berlin (1901), Leipzig (1904, 1920), Eisenach (1907, 1917), Chemnitz (1908), Duisburg (1910), Breslau (1912, 1922), Vienna (1914), Hamburg (1921), Essen (1925). Since 1904 the Society has issued an annual *Bach-Jahrbuch* containing critical articles and reviews of Bach literature. The musical publications of the Society necessarily are of less novelty than those of its predecessor. For the most part they consist of 'practicable' scores and arrangements. But in 1913, under the editorship of

C. A. Martienssen, the Society published (Jahrgang 13, Heft 2) the score (and vocal score) of an unpublished solo cantata for soprano, 'Mein Herze schwimmt im Blut,' written apparently for the Eleventh Sunday after Trinity *circa* 1714, and therefore of the Weimar period. The Autograph is in the Royal Library, Copenhagen; the parts in the Preuss. Staatsbibliothek, Berlin. Both are named in C. P. E. Bach's Catalogue (1790), and appear to have been subsequently in Pölchau's possession. Breitkopf announced the work 'in Stimmen 1 Thlr' in 1770, and Rust contemplated publication in 1853 from the Berlin parts (*B. J.-B.*, 1911, p. 1 f.). Six other lost cantatas have been revealed. The Purification cantata, 'Ich habe Lust zu scheiden,' which Spitta (ii. 687) mentions, has been discovered in the Danzig Stadtbibliothek; its authenticity is questionable (*B. J.-B.*, 1911, p. 43). In the archives of Breitkopf & Härtel are records of three secular cantatas whose music has not survived: 'Es lebe den König' (Aug. 3, 1732), 'Frohes Volck, vergnügte Sachsen' (Aug 3, 1733), and 'Schliesst die Gruft! ihr Trauerglocken' (1735) (libretto by Balthasar Hoffmann) (*B. J.-B.*, 1913, pp. 76, 80, 94). Judging from the metre of the Aria stanzas, Bach incorporated into the second of these three cantatas the music written for Winkler's 'Froher Tag, verlangte Stunden' in 1732. The vocal parts of the secular wedding cantata 'Vergnügte Pleissen-Stadt' have been recovered, and the cantata is now published by Schlesinger (Berlin). The text of a 'Gratulationskantate' for the New Year of 1723 is in the Bach Museum at Eisenach.

The *B. J.-B.*, 1907 (p. 81 f.) prints seven short 'geistliche Oden' and one 'Gedicht' published in Christian Hofmann von Hofmannswaldau's *Deutschen Übersetzungen und Gedichten* (1704), which are attributed to Bach in a copy of the book in the Bach Museum at Eisenach. There is nothing in them to justify the ascription. On the other hand, the Organ Concerto in D minor (Augener edn. 5863: PF. arrangement ed. Breitkopf 2241) attributed to W. F. Bach is his father's arrangement of a Vivaldi Concerto (op. 3, No. 11) and should be added to the four printed in B.-G. xxxviii. (*B. J.-B.*, 1911, p. 23 f.; *Allgem. Musik-Zeitung*, 1912, Nos. 9 and 11). C. S. T.

BACH SOCIETY, THE. This Society, instituted in London, Oct. 27, 1849, dissolved Mar. 21, 1870, had for its objects—

(1) the collection of the compositions of J. S. Bach, either printed or in MS., and of all works relating to him, his family, or his music; and (2) the furtherance of a general acquaintance with his music by its public performance.

The original committee consisted of Sterndale Bennett (chairman), R. Barnett, George Cooper, F. R. Cox, J. H. B. Dando, W. Dorrell, W. H. Holmes, E. J. Hopkins, C. E. Horsley, John Hullah, H. J. Lincoln, Oliver May and Henry Smart, with Sir George Smart and Cipriani Potter as auditors, and Charles Steggall as hon. secretary. Under the auspices of the Society the first performance in England of the 'Matthew' Passion took place at the Hanover Square Rooms on Apr. 6, 1854, Sterndale Bennett conducting. The principal vocalists were Mme. Ferrari, Misses B. Street, Dolby, Dianelli and Freeman; and Allen, Walworth, W. Bolton, and Signor Ferrari. W. Thomas was principal violin, Grattan Cooke first oboe, and E. J. Hopkins was at the organ. The English version of the words was by Miss Helen F. H. Johnston. It was repeated on Nov. 28, and a third performance was given at St. Martin's Hall on Mar. 23, 1858, Bennett again conducting. On June 21, 1859, the Society gave a performance of miscellaneous works by Bach, including the concerto in C minor for two pianofortes, the chaconne for violin (played by Joachim), and the fugue for pianoforte solo in D. The concert of 1860, on July 24, included the first eleven movements from the Mass in B minor. Three years later, on June 13, 1861, the Society gave the first performance in England of the 'Christmas Oratorio' also under Bennett's direction. On the dissolution of the Society the library was handed over to the R.A.M. C. M.

BACH TRUMPET, see TRUMPET.

BACHE, (1) FRANCIS EDWARD (*b.* Birmingham, Sept. 14, 1833; *d.* there, Aug. 24, 1858), composer and pianist, chiefly remembered in association with his more vigorous brother, WALTER BACHE (*below*). As a child he studied the violin with Alfred Mellon (then conductor of the Birmingham Theatre), and in 1846 was allowed to play in the festival orchestra when Mendelssohn conducted 'Elijah.'

In the autumn of 1849 he left school at Birmingham to study under Sterndale Bennett in London. His first overture was performed at the Adelphi Theatre, Nov. 1850, and about a year later his 'Three Impromptus' (his first piano piece) came out. He remained studying with Bennett, and during the latter part of the time writing for Addison, Hollier and Lucas, from 1849–53. In June 1852 he played the allegro of a MS. pianoforte concerto with much success. In Oct. 1853 he went to Leipzig, studied with Hauptmann and Plaidy, and took occasional organ lessons from Schneider at Dresden. He returned to London (after a short visit to Paris), Feb. 1855. In Jan. 1856 he was driven by severe illness to Algiers, but returned to Paris and Leipzig for the summer and autumn; then went to Rome for the winter, calling on Czerny in Vienna, who was much pleased with him, and wrote to that effect to Kistner. He reached England very ill in June 1857, passed that winter in Torquay, where he gave a concert, Feb 1858, and in

April returned to Birmingham, which he never again left.

Bache's published compositions are numerous, and include :

4 Mazurkas, op. 13 ; 5 Characteristic pieces, op. 15 ; 'Souvenirs d'Italie,' op. 19, for PF. solo ; Polonaise, for PF. and orch., op. 9 ; trio for PF. and strings, op. 25 ; Romance for PF. and v'cl., op. 21 ; 6 songs, op. 16 ; also a Concerto in E for PF. and orch., and 2 operas, 'Rübezahl' and 'Which is Which,' all unpublished.

G., rev.

(2) Walter (*b.* Birmingham, June 19, 1842 ; *d.* London, Mar. 26, 1888), pianist and conductor, famous for his unflinching advocacy of the music of Liszt at a time when it was little known in England. He studied the pianoforte and theory under James Stimpson, organist of the Birmingham Town Hall. In Aug. 1858 he went to Leipzig, where he studied under Plaidy, Moscheles, Hauptmann, Reinecke and Richter. After a short stay in Milan and Florence, he went in the summer of 1862 to Rome, where for 3 years he received regular lessons from Liszt. In May 1865 Bache came to London, where he subsequently resided, with the exception of a short stay in Florence in 1871, where he had lessons from Hans von Bülow. He appeared for the first time at the Crystal Palace in the autumn of 1874, playing Liszt's transcription of Weber's Polonaise in E. For several years he gave orchestral and vocal concerts, at which he brought forward the following important works of his master, many of which had not been heard in London before :

Symphonische Dichtungen : Les Préludes, Orpheus, Tasso, Festklänge, Mazeppa ; 'Von Fels zum Meer,' march ; Rhapsodie hongroise, No. 4 ; 'The Legend of St. Elizabeth' ; Psalm xiii. ; Reapers' Chorus (Prometheus) ; 'Loreley' ; 'Jeanne d'Arc' ; Faust Symphony ; Mephisto Walzer ; Piano Concertos, Nos. 1 and 2, and Fantasie über ungarische Volksmelodien.

During Liszt's visit to England in the spring of 1886 Bache gave a memorable reception at the Grosvenor Gallery on Apr. 8, when the master played the finale of Schubert's 'Divertissement à la Hongroise,' and his own Hungarian Rhapsody in A minor. Bache's contribution to the programme was Liszt's 'Bénédiction de Dieu.' He was mainly instrumental in founding the Liszt Scholarship at the R.A.M., where he was a professor of the piano. W. B. S.

(3) Constance (*b.* Birmingham, 1846 ; *d.* Montreux, June 1903), sister of the above and their biographer, was a highly gifted woman. She translated *The Early Correspondence of Dr. Hans von Bülow* (1896) ; her concise little memoir, *Brother Musicians*, came out in 1901. She also translated many songs from the Russian. E. J. H[3].

BACHELET, Alfred Georges (*b.* Paris, Feb. 26, 1864), French composer, was trained at the Conservatoire, obtaining the Grand Prix de Rome (1890) for the cantata 'Cléopâtre,' as pupil of E. Guiraud. Though his musical production has been limited until now, it is distinguished by two works, which, from a dramatic point of view, bear the mark of a strong personality. One of his earlier compositions, a sort of lyric poem, 'Fiona,' betrayed Wagnerian tendencies. After a long interval, when the composer seemed to have retired within himself, appeared 'Scemo' (3 acts and 5 scenes), a lyric drama (libretto by Ch. Méré), performed at the Opéra, May 6, 1914. Eight years after, the Opéra-Comique produced his one-act musical drama, 'Quand la cloche sonnera,' libretto by Y. d'Hansewick and P. de Wattyne, on Nov. 6, 1922. In both works there is a striking sense of dramatic power and expression. His music, elaborate in itself, richly orchestrated, with strong harmonic colour, is based on the development of leading themes. It is driven, as it were, by a vivid animation, a kind of tormenting inspiration, with even a certain violence in the accents of the declamation. He has composed few songs and pianoforte pieces ; a 'Ballade' for violin and orchestra (1st performance, Société Nationale de Musique, May 14, 1919). Conductor at the Opéra in the war period, 1914–18, he directed, amongst others, Rameau's 'Castor et Pollux' (1918), a ballet, 'La Fête chez la Pouplinière,' libretto by H. Prunières, for which he orchestrated some 18th-century music. He has been, since 1919, head of the Conservatoire at Nancy, succeeding J. G. Ropartz, appointed to that of Strassburg. M. L. P.

BACHELOR OF MUSIC, see Degrees.

BACHMANN, (1) Anton (*b.* Berlin, 1716 ; *d.* there, Mar. 8, 1800), court musician and instrument maker, who made several inventions for the construction of instruments, including the machine (screw) heads for contrabasses and violoncellos, in 1778. (2) Karl Ludwig, his son (*b.* 1743 ; *d.* Berlin, May 26, 1809), was appointed viola-player in the Royal Chapel in 1765, and excelled as solo-player. In 1770 he founded, with E. F. Benda, the 'Liebhaber Konzerte,' which flourished under the directorship of the latter. On Benda's decease Bachmann followed him as director, but without success. He resigned in favour of his brother, (3) Friedrich Wilhelm, but it came to an end in 1797. Since 1791 Karl Ludwig devoted himself entirely to his father's business. He married in 1785 (4) Charlotte Caroline Wilhelmine Stöwe (*d.* Berlin, 1817), an eminent singer and pianist, one of the first twenty members of the Vocal Academy founded by Fasch in 1791. In connexion with that academy she instituted annual performances of Graun's 'Death of Jesus' between 1797 and 1806, which were responsible for the great cult of that work in Berlin. The members of the Vocal Academy erected a monument in her memory and Hartung & Klipfel published her biography. She composed some songs of which one appeared in Rellstab's *Klavier Magazin*. E. v. d. S.

BACHMANN, Father Sixtus (*b.* Kettershausen, July 18, 1754 ; *d.* monastery of

Marchthal?, 1818). As a boy of nine he emerged with honour from an organ contest with the young Mozart, and his memory was so strong that he knew by heart over 200 pieces, including many by J. S. Bach. He studied composition in the monasteries of Elchingen and Marchthal on the Danube. For some time he lived in Würtemberg, until he became collaborator in the collection of the music library by Hofmeister in Vienna, in 1786. Dissatisfied with the manner of publication, he broke his connexion with Hofmeister and retired to the monastery of Marchthal, where he wrote a large number of masses, cantatas, symphonies, quartets, etc., which remained in MS., as he refused to have anything more published. E. v. d. S.

BACHOFEN, Johann Caspar (*b.* Zürich, 1697[1]; *d.* there, June 24, 1755), a singing-master and composer of hymns. In 1718 he was singing-master in the Latin school and cantor of one of the Zürich churches. He succeeded Albertin as director of the 'Chorherrn-Gesellschaft.' His hymns were very popular in Switzerland, and his works give abundant evidence of his diligence and the wide range of his talent.

(1) 'Musikalisches Halleluja oder schöne und geistreiche Gesänge,' etc., 1727, containing 600 melodies for 2 and 3 v., with organ and figured bass, 8 ed. down to 1767. (2) 'Psalmen Davids . . . sammt Fest- und Kirchengesängen,' etc., 8vo, 1759 (2nd ed.). (3) 'Vermehrte Zusatz von Morgen, Abend . . . Gesängen,' 1738. (4) 12 monthly numbers containing sacred airs arranged in concert-style for 2 and 3 v., 1755 (4th ed.). (5) Brockes' 'Irdisches Vergnügen in Gott,' set to music, 1740. (6) 'Musikalische Ergetzungen,' 1755. (7) 'Der für die Sünden der Welt,' etc. (Brockes' 'Passion'), 1759. (8) 'Music. Notenbüchlein,' an instruction-book in music and singing. F. G.

BACILIERI (Bacilerius), Giovanni, a 16th/17th century priest of Ferrara, who composed 'Lamentationes, Benedictus et Evangelia,' 5 v., op. 1 (1607); 'Vesperae,' 8 v., op. 2 (1610); 'Totum defunctorum officium,' 5 v., op. 3 (1619), all published by Gardano, Venice. E. v. d. S.

BACILLY, Bénigne de (*b.* Lower Normandy, *c.* 1625; *d.* Paris, 1692), a priest who, from a benefice, held the title of 'Prieur de Bacilly.' A few years before Lully (*c.* 1650), he came to Paris, and was one of the first to study and write about the production and cultivation of the human voice. He taught the Princess Marie-Marguerite, daughter of the Duke of Lorraine. His book, *Remarques curieuses sur l'art de bien chanter* . . ., appeared first only under his initials 'B. d. B.' in 1668. The second and third editions, under his full name, appeared in 1671 and 1679, and a fourth in 1681. Although he possessed no creative talent he published a number of interesting collections of airs (for list see *Q.-L.*) which he provided with vocal embellishments. E. v. d. S.

BACK, in stringed instruments, the lower or posterior part of the resonant box across the upper part, Belly (*q.v.*) or 'table,' of which the strings are extended. The belly vibrates freely under the strings, and has one or more sound-holes; the back has no sound-holes, and its functions are distinct from those of the belly, to which it is sometimes similar, sometimes different, in shape. Thus, the crwth, guitar and cittern have a flat back and a flat belly; the violin, in all its sizes, a curved back and a curved belly; the rebec, lute and mandoline, a curved back and a flat belly; the viol, in all its forms, a flat back and a curved belly. The banjo has no back, the piece of vellum strained over the metal drum, and serving as a belly, being sufficiently resonant to enable the back to be dispensed with. This illustrates the fact that the primary function of the back is to produce a reverberation of the air-waves generated by the vibration of the belly under the strings. In bowed instruments the back also serves as a support to the rigid sound-post, which in its turn supports the vibrating bridge, the two forming a compound apparatus resting on the thick part of the back as its foundation, and analogous to the reed, fixed at one end and vibrating at the other in the clarinet. In the violin the back has a third function. By reason of its similarity to the belly it vibrates sympathetically with the vibrations produced in the belly by those of the strings and bridge, and thus reinforces the reverberation of the air-waves in the interior. The more powerful tone of the violin, as compared with the viol, is due to this function.

While the belly of stringed instruments is always of pine, the back is usually of maple, pear or some other harder wood. The deeply hollowed backs of the lute and mandoline are built up in sections, and it is customary to give contrast in colour by making these alternately of a white wood, such as maple or pear, and a dark wood, such as walnut or cedar. Some old makers of 'fancy' viols did the same, making the back of alternate strips of maple and cedar or walnut, but the practice is detrimental to the tone. The back of the viol and violin is usually made in two parts cut from a single block, the halves being so disposed as to show a similar but opposite figure in the grain of each. Occasionally the back is made in a single piece; but this practice, as is shown elsewhere, is wasteful.

The viol, especially in its larger sizes, was long kept in use by the comparative simplicity and cheapness of its back, which is made of two or more flat sections of maple strengthened and made more resonant by stout pieces of pine glued across it. Such a back produces tone of a penetrating quality, but small volume; hence the gradual abandonment of the viol for the more powerful violin with its curved or 'model' back, so called because assimilated to the model of the belly. Like the belly of the violin, the back is thickest in the middle and thins out towards the edges. In a flat-modelled

[1] Eitner gives the date 1692.

violin the rise of the back is about equal to that of the belly; in a high-modelled one, something less. The earliest Italian violin-makers often painted or elaborately inlaid the backs of their instruments; later ones were content to utilise the opportunity for decoration afforded in the unbroken expanse of the back by displaying the sparkling grain of their finest wood, finishing its curves, both of outline and of section, with mathematical exactness, and covering it with lustrous varnish. Usually the blocks for the back are sawn as wedges radiating from the centre of the tree. Occasionally they are sawn the reverse way, *i.e.* the tree is squared, as for ordinary use as timber, and the blocks are sawn as planks from the outside; such backs are called 'slab' backs. A 'handsome back' is usually considered a desideratum by purchasers, but some excellent instruments have very plain backs. E. J. P.

BACKER-GRÖNDAHL, (1) AGATHE URSULA (*b.* Holmestrand, Norway, Dec. 1, 1847; *d.* Ormöen, near Christiania, June 6, 1907), a famous Norwegian pianist and composer.

After studying with Kjerulf in her own country, she was a pupil of Kullak in Berlin (1866) and of Bülow in Florence (1867). In 1875 she married O. A. GRÖNDAHL (*q.v.*) of Christiania. She composed many songs and pianoforte pieces; the best known of the former is an exquisitely graceful setting of a translation of Shelley's 'To the Queen of my heart.' She frequently visited England with success. M.

(2) FRIDTJOF (*b.* Christiania, Oct. 5, 1885), son and pupil of the above, is a first-rate pianist and a composer of piano music. He studied at the Berlin Hochschule, and since 1920 has paid repeated visits to England. While his performances of the classics are admired, he has also made a point of giving prominence in his programmes to the music of Norway, including the compositions of his mother. C.

BACKER-LUNDE, JOHAN (*b.* Le Havre, July 6, 1874), a Norwegian pianist and composer, who was a pupil first of Agathe BACKER-GRÖNDAHL (*q.v.*) at Christiania and later of Busoni in Berlin.

He has travelled, giving successful concerts in various parts of Europe, and in London he has played a sufficient number of his own compositions to give a definite impression of their worth. While they include a number of slight but effective pieces, several of them, and notably a 'Ballade' played by the composer in 1912, and since by others, are of a finely serious type. C.

BACKFALL, see ORNAMENTS: ENGLISH.

BACKHAUS, WILHELM (*b.* Leipzig, Mar. 26, 1884), studied at Leipzig Conservatoire under A. Reckendorf until 1899, when he became a pupil of Eugen d'Albert at Frankfort-on-M. He toured in 1900; was a teacher at the Royal College of Music, Manchester, in 1905, when he received the Rubinstein prize; and since then has toured as virtuoso. In 1907 and 1908 he gave holiday master-courses for pianoforte-playing at Sondershausen Conservatoire. E. v. d. S.

BACON, SIR FRANCIS (LORD VERULAM) (*b.* York House, London, Jan. 22, 1561; *d.* London, Mar. 1626), was the first to show the way for the measuring of the velocity of sound-waves in his *Silva silvarum*, in which he treats also of the phenomenon of sympathetic vibrations and their application to stringed instruments, which led to Farunt's invention of viols with sympathetic strings. E. v. d. S.

BACON, RICHARD MACKENZIE (*b.* Norwich, May 1, 1776; *d.* Cossey, near Norwich, Nov. 27, 1844), musical critic.

Bacon's father was proprietor of the *Norwich Mercury*, which he inherited, and bequeathed to his son, who began to write for this journal at seventeen; its editorship was the standard occupation of his whole life. He is remembered as the projector, editor and chief writer of the *Quarterly Musical Magazine and Review*, which was the first journal (Jan. 1818) devoted to music in England. In 1824 he published *The Elements of Vocal Science*, a work of considerable merit, the materials of which had previously appeared in the *Musical Magazine*. He was the author of a *Life of Pitt*, a *Life of the Earl of Suffolk*, and of numerous political pamphlets. E. F. R.

BACON (BACO), ROGER (*b.* Ilchester, Somerset, 1214; *d.* Oxford, 1294), the great English philosopher, D.D. of Paris, and Franciscan monk, has an important treatise *De valore musices* in his *Opus majus* (republished by Jebb, London, 1733). E. v. d. S.

BADAJOZ (*b.* 1460?; *d.* 1526?), possibly identical with Garci Sánchez de Badajoz, the Spanish poet. 'Badajoz el músico' is mentioned in various poems of the 16th century; and his name occurs once in conjunction with that of Lope de BAENA (*q.v.*) as a notable organist and one of the most distinguished Spanish musicians of his day. He was for a time choirmaster to John III. of Portugal. The 'Cancionero musical de los siglos XV y XVI,' edited by Barbieri, includes eight secular compositions by him; for 3 and 4 voices. One of these is sung in Gil Vicente's Portuguese play 'Dom Duardos,' while the *villancico*, 'Quien te hizo, Juan, pastor,' is said to refer to Juan del ENZINA (*q.v.*), dramatist and composer, who sometimes took the part of a shepherd in his own plays. This composition was known as early as 1514; it occurs again, in a different form, in the lute-book of Estéban DAZA (*q.v.*) (1576). J. B. T.

BADIA, CARLO AGOSTINO (*b.* Venice, 1672; *d.* Vienna, Sept. 23, 1738), appointed composer to the Viennese court, July 1, 1696 (the first to hold that office). He wrote 27 operas and

serenades, 21 oratorios, and a large number of cantatas. E. v. d. s.

BADIALI, Cesare (*b.* Imola, early 19th cent.; *d.* there, Nov. 17, 1865), a very distinguished basso cantante who made his first appearance at Trieste, 1827.

After achieving a brilliant success at every one of the chief theatres of Italy, and especially at Milan, where he sang in 1830, 1831 and 1832, he was engaged for the opera of Madrid, then at Lisbon, and did not return to Italy till 1838. On his reappearance at Milan, he was welcomed with enthusiasm and continued to sing there, and at Vienna and Turin, until 1842, when he was appointed principal chamber-singer to the Emperor. He sang afterwards at Rome, Venice, Trieste, Turin, and other towns of less importance. In 1845 he was at Leghorn. The Accademia di S. Cecilia of Rome received him as a member of its body. In 1859 he made his first appearance in London, when he made the quaint remark, 'What a pity I did not think of this city fifty years ago!' He retained at that time, and for some years longer, a voice of remarkable beauty, an excellent method, and great power of executing rapid passages. He was one of the few who have ever sung the music of Assur in Rossini's 'Semiramide' as it was written: in that part he was extremely good, and not less so in that of the Conte Robinson in the 'Matrimonio segreto.' A singular feat is ascribed to him. It is said that, when supping with friends, he would drink a glass of claret, and, while in the act of swallowing it, sing a scale; and if the first time his execution was not quite perfect, he would repeat the performance with a full glass, a loud voice, and without missing a note or a drop.

He was a good musician, and left a few songs of his own composition. For the last 10 years of his life he resided and sang in Paris. J. M.

BAECKER, Casimir (*b.* Berlin, *c.* 1790; *d.* France, after 1735), harpist and composer. Mme. de Genlis, the celebrated writer, teacher and harpist, adopted him in 1799, during a stay at Berlin, and made him her chosen disciple. Aided by an exceptional readiness, Baecker made a public appearance in Paris between 1808 and 1810, with great success. He then retired into obscurity, not appearing again until 1829, when he announced a course on the harp, for which he published a prospectus. He appeared again in 1835 as a virtuoso, but without recovering his old success. From this time we lose sight of him.

He is chiefly interesting for the influence upon him of Mme. de Genlis's doctrines, of which one finds trace in the *Nouvelle Méthode pour apprendre à jouer de la harpe*, which she dedicated to him (Paris, Mme. Duhan, ed. s.d.).

Bibl.—*Fétis.* M. Brenet, *Madame de Genlis, musicienne, S.I.M.* viii. 2. H. Lapauze, *Lettres inédites de Mme de Genlis à son fils adoptif, Casimir Baecker*, Paris, 1902.

M. P.

BAENA, Lope de (15th/16th cent.), Spanish composer of secular vocal music. In 1498 his name appears as that of an organist in a list of officials of the household of Queen Isabella. In 1505 he was cantor and organist to the Chapel Royal; and he was among those who accompanied the body of Doña Isabel from Medina del Campo to her burial-place in Granada. In 1508 he is referred to as 'a very subtle composer, the sweetness of whose music took away all pain.' Seven of his compositions are found in the 'Cancionero musical,' published by Barbieri, and two more exist in MS. in the Biblioteca de la Diputació at Barcelona. J. B. T.

BÄR, see Beer.

BÄRMANN, the name of a remarkable family of musicians. (1) Heinrich Joseph (*b.* Potsdam, Feb. 14, 1784; *d.* Munich, June 11, 1847), one of the finest of clarinet-players, 'a truly great artist and glorious man,' as Weber calls him, was educated at the oboe school at Potsdam, where his ability procured him the patronage of Prince Louis Ferdinand of Prussia, and a place in a regiment of Guards at Berlin. The peace of Tilsit (1807) released him from a French prison, and he then obtained a place in the court band at Munich. He next undertook a tour through Germany, France, Italy, England and Russia, which established his name and fame far and wide. His special claim on our interest arises from his intimate connexion with C. M. von Weber, who arrived in Munich in 1811, and wrote various concert-pieces for Bärmann, which remain acknowledged masterpieces for the clarinet. Meyerbeer also became closely acquainted with him during the congress at Vienna in 1813. Mendelssohn was evidently on the most intimate footing with him and his family, and wrote for him the two duets for clarinet and basset-horn published as op. 113. He left compositions behind him which are highly esteemed for their technical value.

(2) His brother Karl (*b.* Potsdam, 1782; *d.* 1842), a renowned bassoon-player, belonged to the royal band at Berlin.

(3) Karl, the son of Heinrich (*b.* Munich, 1811; *d.* May 24, 1885), was a true scholar and successor to his father as a clarinet-player.

During a lengthened tour in 1838 he was introduced by his father to the musical world as a virtuoso of the first order. After this he at once took the place of first clarinet in the Munich court band, with which he had indeed been accustomed to play since the age of fourteen. His compositions for the clarinet are greatly esteemed, especially his 'Clarinet School' (Andre, Offenbach) in two parts, the second of which contains 20 grand studies; also a supplement thereto, 'Materialien zur weiteren technischen Ausbildung,'—a collection of difficult passages from his own works.

(4) His son, KARL jun. (*b.* July 9, 1839; *d.* Boston, Jan 17, 1913), a fine pianoforte-player, pupil of Liszt, and of F. Lachner for composition, was teacher in the music school at Munich, and was a successful and highly esteemed teacher in Boston, U.S.A., from 1881.

Two of Weber's letters to the Bärmanns will be found in *Letters of Distinguished Musicians* (pp. 351, 381). The same collection contains no less than 13 letters from Mendelssohn to Heinrich, and one to Karl. Other references to Bärmann will be found in Mendelssohn's *Reisebriefe.* A. M.

BÄUMKER, WILHELM (*b.* Elberfeld, Oct. 25, 1842; *d.* Rurich-Aachen, Mar. 3, 1905), an historian of Catholic church music, ordained priest in 1867.

His chief work is entitled *Das katholische deutsche Kirchenlied in seinen Singweisen von den frühesten Zeiten*, etc., in 3 volumes, 1883–91. The 2nd volume, which was first published in 1883, was originally a continuation of an earlier work on the same subject begun by Karl Severin Meister, of which a 1st volume was published in 1862, but Bäumker afterwards (1886) revised and enlarged Meister's volume by the acquisition of so much fresh material as to make it quite a new work. A full account is given of the various collections of Hymns with tunes which were in use among German Catholics in the 16th and 17th centuries. A 3rd supplementary volume was published in 1891 to bring the subject down to a later period than the end of the 17th century, as originally planned. He also edited 'Niederländische geistliche Lieder nebst ihre Singweisen aus Handschriften des 15ten Jahrhunderts' (1888). Other works by him are two small monographs, *Palestrina* (1877) and *Lassus* (1878), and a work entitled *Zur Geschichte der Tonkunst in Deutschland von den ersten Anfängen bis zur Reformation*, giving an account of the German mediæval writers and treatises of music, also of the beginnings of the vernacular Kirchenlied. He was also a frequent contributor to Eitner's *Monatshefte* and Haberl's *Kirchenmusikalisches Jahrbuch.* J. R. M.

BAGATELLE (Fr.), 'a trifle,' a short piece of pianoforte music in a light style. 'Les Bagatelles' forms the picturesque title of a harpsichord piece by François Couperin (Ordre X., Book II.). The name was probably first used generically by Beethoven in his 'Seven Bagatelles,' op. 33, who subsequently also wrote 3 other sets, 2 of which are published as opp. 119 and 126; the third, consisting of 2 pieces only, composed 1797, was first printed in Breitkopf & Härtel's complete edition, supplementary volume, p. 350. As bearing upon the title, it is worth while to mention that Beethoven's manuscript of his op. 119 has the German inscription 'Kleinigkeiten,' instead of the French equivalent. The name Bagatellen is given to Dvořák's op. 47, 4 pieces for harmonium (or PF.), 2 violins and violoncello; and in one form or another it has been adopted by many modern composers. E. P.

BAGGE, SELMAR (*b.* Coburg, June 30, 1823; *d.* Basle, July 17, 1896), son of the rector of the Gymnasium at Coburg, attained distinction as a critic.

His musical studies began early, and in 1837 he entered the Conservatorium at Prague under D. Weber. Later still he was a pupil of Sechter at Vienna, where in 1851 he became professor of composition at the Conservatorium, and in 1854 organist at Gumpendorf, near Vienna. In 1855 he resigned his professorship and took to writing in the *Monatsschrift für Theater und Musik*, and in 1860 in the *Deutsche Musikzeitung*, of which periodical he was founder and editor. In 1863 he transferred himself to Leipzig as editor of the *A.M.Z.*, but this he relinquished in 1868 for the directorship of the music school at Basle. Bagge was a strong conservative and an able writer. Beethoven and Schumann were his models in art, and he had no mercy on those who differed from him, especially on the New German school. His music is correct and fluent, but poor in invention and melody. G.

BAGPIPE (Fr. *cornemuse*; Ger. *Sackpfeife*; Ital. *cornamusa*), an instrument, in one or other of its forms, of very great antiquity (see *PLATE IV.*). By the Greeks it was named ἄσκαυλος or συμφώνεια; by the Romans *tibia utricularis.* Mersenne calls it *surdeline*, and Bonani *piva* or *ciaramella.* In Lower Brittany it is termed *bignou* (*biniou*), from a Breton word *bigno*—'se renfler beaucoup.' It has been named *musette* (possibly after Colin Muset, an officer of Thibaut de Champagne, King of Navarre). Corruptions of these names, such as *samponia* or *samphoneja*, and *zampogna*, are also common.

It appears on a coin of Nero, who, according to Suetonius, was himself a performer upon it. It is mentioned by Procopius as the instrument of war of the Roman infantry. In the crozier given by William of Wykeham to New College, Oxford, in 1403, there is the figure of an angel playing it. Chaucer's miller performed on it—

'A bagpipe well couth he blowe and sowne.'

During the Middle Ages the bagpipe was largely used both in England and on the Continent, and may have served as an accompaniment to the chanting in monasteries and religious houses, for an illustration of an instrument of this kind of the 9th century is given by Gerbert, Abbot of St. Blaise (*De cantu et musica sacra*), and called by him 'Chorus.' It appears to have retained its popularity for some centuries later, and to have been in general use, for on the minstrels' gallery in Exeter Cathedral another representation of it is seen. The gallery

dates from the 14th century. At the close of the 15th century the bagpipe seems to have come into general favour in Scotland.

Shakespeare often alludes to it. He speaks of 'the drone of a Lincolnshire bagpipe,' of the antipathy some people have to its sound, and of some who laugh like parrots at a bagpiper.

Its essential characteristics have always been, first, that it is a reed instrument, having a combination of fixed notes or 'drones,' with a melody or 'chaunter'; secondly, the presence of a wind-chest or bag. From these peculiarities, the Greek, and from the second of them the Latin names clearly come. The reeds vary but little from those described under HIGHLAND BAGPIPE.

The wind has been variously supplied, either from the breath of the player, or from a small pair of bellows placed under one arm, the sac or bag being under the other. In the latter form it contains all the essentials of the organ. It is somewhat remarkable that the use of the lungs themselves as the wind-chest to reed instruments should have been adopted later and less universally.

The two systems of supplying wind—one, from the breath, and the other, from bellows—afford a convenient means of grouping bagpipes.

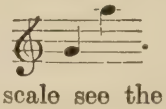
(*a*) *Blown from the mouth.*—Historically, the varieties inflated by the breath have the first place, and in addition to the mediæval instruments referred to above, the following may be noted:

GERMAN SACKPFEIFE.—Praetorius in his *Syntagma musicum* (1618) gives minute descriptions of four or five different varieties, ranging from the Grosser Bock with a single drone sounding the sixteen foot G to the little Dudey with three drones sounding $e\flat'$, $b\flat'$ and $e\flat''$, and a chaunter going up to c'''.

CORNEMUSE.—Formerly a popular rustic instrument in France and the Netherlands. The chaunter has eight finger-holes and a vent-hole not fingered. The drones were latterly two, tuned an octave apart, and known as *le grand* and *le petit bourdon*.

BINIOU, or BRETON BAGPIPE.—A small instrument having one drone, and a chaunter with seven finger-holes.

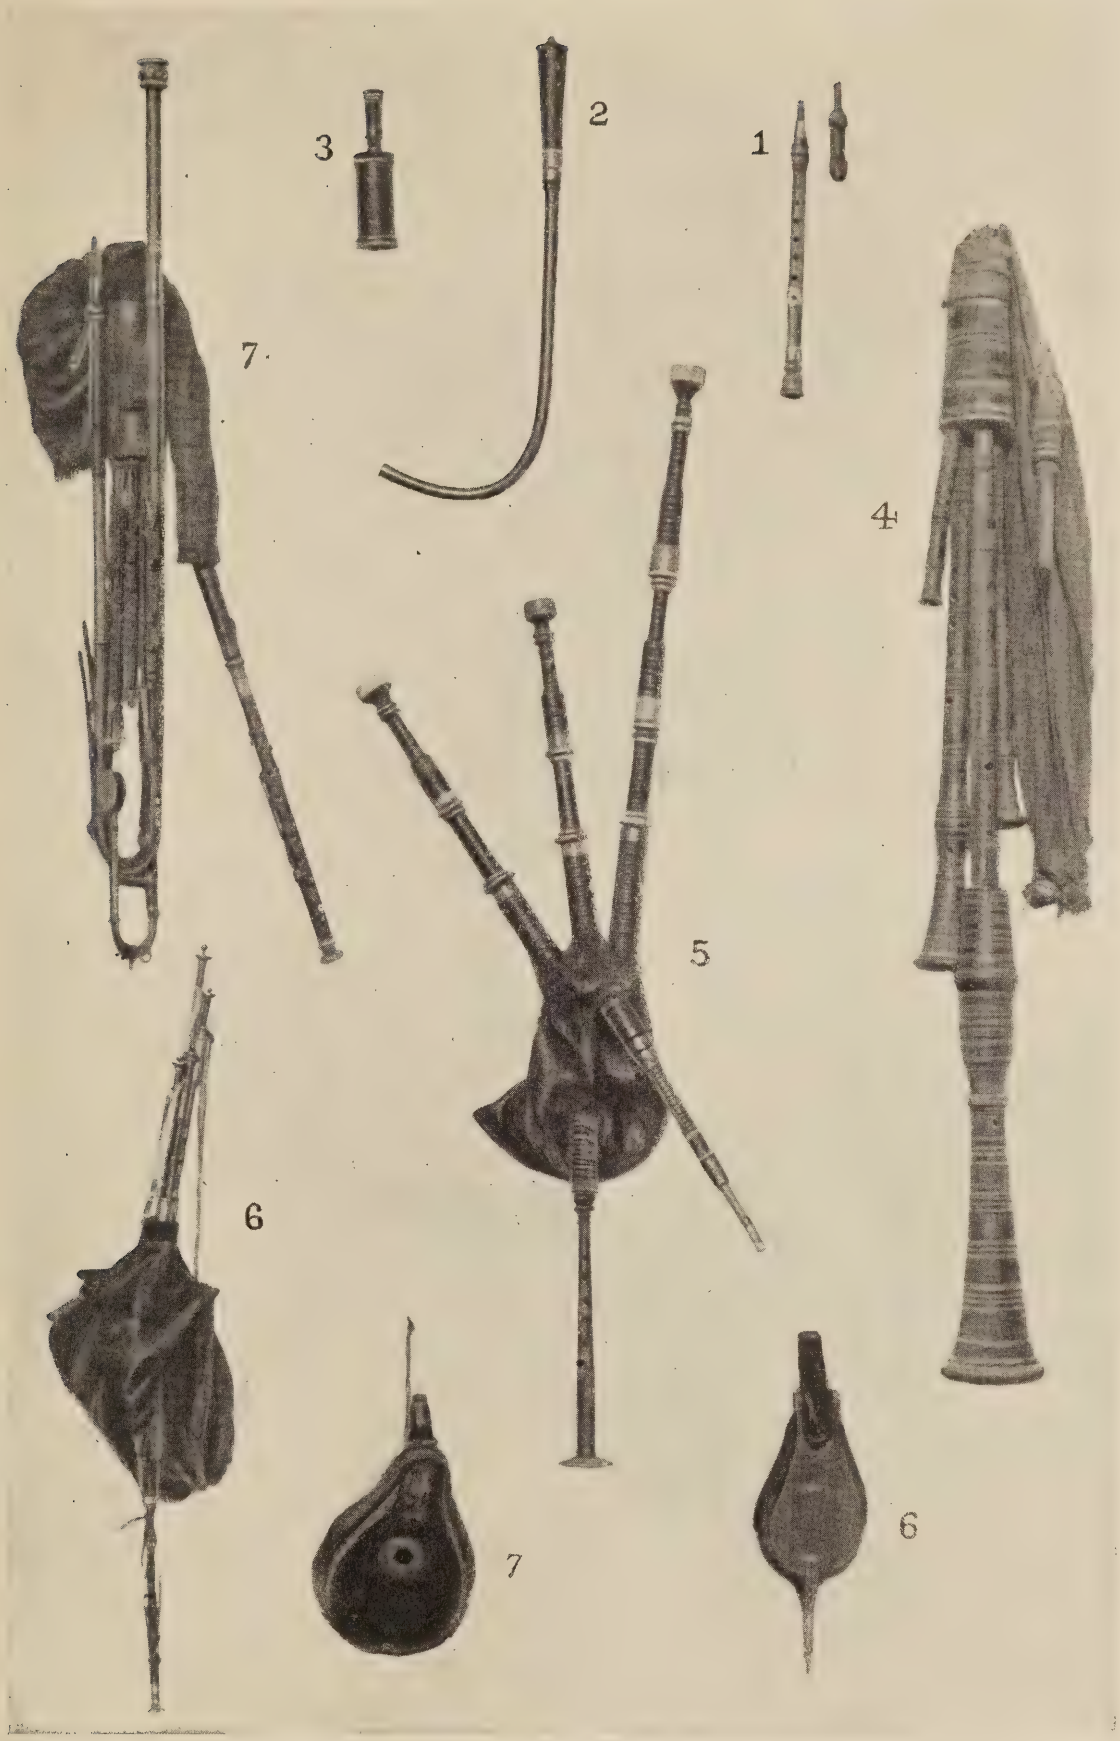
CALABRIAN BAGPIPE, or ZAMPOGNA.—In this instrument four drones, two of them with finger-holes, are fitted to one stock or base. The reeds are all double, and the melody is not given from the main instrument, but from a small rude chaunter or oboe with five finger-holes played by a second performer.



OLD IRISH BAGPIPE.—Before the 16th century, the Irish pipe did not differ much from the Scotch pipe of the same time. The Irish had a chaunter with six finger-holes and two drones.[1]

[1] The antiquity of the Irish bagpipe is shown by the fact that it is mentioned in the Brehon Laws of the 5th century (Rolls Series). There is a drawing of the Irish pipes in a MS. in the British Museum, dated 1300, describing the Irish who accompanied King Edward to Calais. W. H. G. F.

HIGHLAND BAGPIPE.—In this instrument a valved tube leads from the mouth to a leather air-tight bag, which has five orifices, into which are bound five short tubes or 'stocks.' Into these stocks are fitted the three long tubes or drones, the blow-pipe, and the melody-pipe or 'chaunter.' The chaunter and the three drones are fitted with reeds. The drone reeds are made by splitting a round length of 'cane' or reed backwards towards a joint or knot from a cross cut near the open end; they thus somewhat resemble the reed in organ pipes, the loose flap of cane replacing the tongue, the uncut part the tube or reed proper. These are then set downwards in a chamber at the base of the drone, so that the current of air issuing from the bag tends to close the fissure in the cane caused by the springing outwards of the cut flap, thus setting it in vibration. The drone reeds are only intended to produce a single note, which can be tuned by a slider on the pipe itself, varying the length of the consonating air-column.



The chaunter reed is different in form, being made of two approximated edges of cane tied together, and is thus essentially a double reed, like that of the oboe or bassoon, while the drone reed roughly represents the single beating reed of the organ or clarinet. The drone reed is an exact reproduction of the 'squeaker' which children in the fields fashion out of joints of tall grass, probably the oldest form of the reed in existence.

The drone tubes are in length proportional to their note, the longest being about three feet high. The chaunter is a conical wooden tube, about fourteen inches long, pierced with eight sounding-holes, seven in front for the fingers, and one at the top behind for the thumb of the right hand. Two additional holes bored across the tube below the lowest of these merely regulate the pitch, and are never stopped.

The compass is only of nine notes, from G to A inclusive  . For the constitution of the scale see the note at the end of this article.

Until recently music for the bagpipe was not written according to the usual system of notation, but was taught by a language of its own, the notes having each names, such as hodroho, hananin, hiechin, hachin, etc. A collection of piobaireachd (pibrochs) in this form was published by Capt. Niel Macleod at Edinburgh in 1828.

(*b*) *Blown from bellows.*—Pipes blown with bellows appear to have come into use in Europe generally about the 16th century. In these instruments the reservoir or wind-bag is under the control of one arm, and is supplied by a feeder worked by the other. Of the different varieties, the following have distinctiveness, and are therefore briefly described:

Galpin Collection

1. IRISH PASTORAL PIPE (18th cent.). 2. KRUMMHORN or CROMORNE (15th-17th cent.).
3. RACKETT or CERVELAS (16th and 17th cent.). 4. ITALIAN CORNEMUSE.
5. GREAT HIGHLAND PIPES (*c.* 1800). 6. NORTHUMBRIAN PIPES (*c.* 1820) with bellows
7. IRISH UILLEANN (Union) PIPES (*c.* 1800) with bellows.

Musette (*q.v.*).—In France the bagpipe blown from bellows eventually took the form of the musette, which has double reeds throughout, and a chaunter with a narrow cylindrical bore. To the original chaunter, known as *le grand chalumeau*, the elder Hoteterre added a smaller one (*le petit chalumeau*) for the extension of the compass upwards, one well-known specimen having a chalumeau compass from *f′* to *d‴*, the grand and the petit chalumeau having respectively seven and six keys, and the former eight finger-holes. The drones, four or five in number, are all fitted into one cylinder, being brought into small space by the doubling of the tubes within this cylinder, which is provided with sliding stops for tuning the drones. The instrument, as fully developed and perfected, became popular and fashionable in the reign of Louis XIV., in whose time it was one of the instruments included in the band of the 'Grande Écurie,' and was played at court concerts.[1] It was introduced into the orchestra by Lully; but towards the latter part of the 18th century fell into disuse. The musette here described must not be confounded with a totally different instrument of the same name, played like an oboe from the mouth. (See Shepherd's Pipe.)

Lowland Bagpipe.—The chief difference between this and the Highland form is the blowing from bellows instead of from the mouth.

Northumbrian Bagpipe.—The chaunter, which has seven finger-holes and one thumb-hole, is stopped at the lower end, as are also the drones, so that when all the holes are closed, the pipe is silent. The drones were formerly three in number; but the modern instruments have four, and chaunters fitted with seven keys. The tone is small and pleasant.

Irish Bagpipe.—The most modern form of the Irish bagpipe, formerly known as the Union pipes, a corruption of the Gaelic *Uilleann* (elbow), is an elaborate and complicated instrument. The chaunter, with seven finger-holes, a thumb-hole and eight keys, has a chromatic scale of two octaves from *d′* to *d‴*. In addition to the drones there are three pipes known as regulators, and fitted with keys worked by the wrist of the player. The drones are tuned to A in different octaves, and the regulators are capable of giving a rude harmony.

Spanish Bagpipe.—The Spanish bagpipe, *gaita* (Arab. *ghaidâ*, a species of oboe), is practically confined to Galicia, the N.W. corner of the Peninsula; it has had a notable effect on the form of popular music there. It consists of four pipes: *soprete*, which fills the bag; two drones (*ronco* and *ronquillo*), and chanter (*punteiro*). Some instruments have only one drone. The usual tuning is in diatonic intervals from *b* to *c″*, including *b′* flat. Additional sharps and flats are introduced by half covering the holes of the chaunter or, occasionally, by means of keys.

Considering the small compass of the bagpipe, the music written for it appears singularly abundant. Patrick Macdonald's 'Airs for the Scotch Bagpipes' was published in 1784. *Tutors* for the instrument have been published by Donald MacDonald and Angus Mackay. Glen's collection of music for the great Highland bagpipe contains instructions for the management of the reeds, etc., with 213 tunes. Ulleam Ross, Queen Victoria's piper, published a collection of pipe music in 1869 consisting of 243 marches, piobaireachd (pibrochs), strathspeys and reels, selected from a thousand airs, amassed during thirty years from old pipers and other local sources. The chief collection of Northumbrian music is known as Peacock's —a book which is now so scarce as to be almost unprocurable. W. H. S.; with addns. by D. J. B. and J. B. T.

Scale of the Highland Bagpipe Chaunter.—An interest has been added to the examination of this scale since the publication by A. J. Ellis of *The Musical Scales of various Nations*. The intonation of the chaunter, which had been regarded by ears accustomed only to the diatonic scale or to its modern representative in equal temperament, as a result either simply accidental or merely barbarous, was found to be so closely similar to certain Arabic and Persian scales as to suggest derivation from an Eastern source, possibly through the Crusades. The intervals between *b′* and *d″*, and between *e″* and *g″* are equally divided, so that the *c′* and *f″* are each about a quarter of a tone sharp, and this peculiar tuning has been traditionally maintained by the pipers. The particular instrument the intervals of which were recorded by Ellis, was played by Charles Keene; but the writer has supplemented this observation by others taken from different chaunters in the hands of good players. The result of these different trials is here noted, the octave being divided into twelve equal-tempered semitones of one hundred cents each, and the figures showing the interval in cents between each pair of notes.

I. Ellis's record of Chas. Keene's chaunter by MacDonald.

II. Mean of three records of other modern chaunters taken by the writer.

III. Scale in equal temperament.

	Octave divided into 1200 cents.

[1] See Mersenne's *Harmonie universelle*; Borjon's *Traité de la musette*, a folio with plates (Lyons, 1672); and L. Hoteterre's *Méthode pour la musette* (Paris, 1737).

BAGUER, Carles (*b.* Barcelona, 1768; *d.* there, 1808), a Catalan organist and composer who for many years held an appointment in the cathedral at Barcelona. MS. works by him are found in the Biblioteca de la Diputació, the Cathedral Archives, and the University Library at Barcelona; also in the Escurial. Eslava published a fugue by him. J. B. T.

BAHR-MILDENBURG, see Mildenburg.

BAI, Tommaso (*b.* Crevalcuore, near Bologna, latter part of 17th cent.; *d.* Dec. 22, 1714), was for many years one of the tenor singers in the chapel of the Vatican.

In 1713 he was made maestro of that basilica, according to an extract from the chapel books cited by Baini, because he was the oldest and most accomplished member of the choir.[1] His fame rests on a single achievement. His Miserere, written at the request of his choir, is the only one (if we except that by Baini) out of a long series by composers known and unknown, including Naldini, Felice Anerio, Tartini and Alessandro Scarlatti, which has been thought worthy to take permanent rank with those of Allegri and Palestrina. Other works by Bai exist, but they are in manuscript. They consist of 2 masses, 13 motetti for 4, 5 and 8 v., and a Miserere for 8 v. (*Q.-L.*). E. H. P.

BAILDON, (1) Joseph (*b. circa* 1727; *d.* 1774[2]), a lay-vicar of Westminster Abbey in the middle of the 18th century. In 1763 he obtained one of the first prizes given by the Catch Club for a catch, and in 1766 was awarded a prize for his fine glee 'When gay Bacchus fills my breast.' In 1762 he was appointed organist of the churches of St. Luke, Old Street and All Saints, Fulham. Ten catches and four glees by him are contained in Warren's collections, and others are in print. Baildon published a collection of songs in two books, entitled 'The Laurel,' and 'Four Favourite Songs sung by Mr. Beard at Ranelagh Gardens.' W. H. H.

(2) Thomas, appointed gentleman of the Chapel Royal, 1755, contributed 7 songs to 'Clio and Euterpe,' a collection published 1758.

BAILEY, Lilian June (*b.* Columbus, Ohio, Jan. 18, 1860; *d.* London, Nov. 4, 1901), learnt singing from Mme. Rudersdorff, and made a successful début at Boston in 1876. In 1878 she was taken to Paris, where she studied with Mme. Viardot-Garcia, and after her appearance at a London Philharmonic Concert, she had lessons of Henschel (*q.v.*), whom she married on Mar. 9, 1881, at Boston. She had made a distinct success in London, the provinces and abroad, by her charmingly fresh soprano voice, admirable method and musical feeling; but as time went on she gained maturity of style, and the vocal recitals given by the husband and wife for many seasons were an unfailing enjoyment to musicians, as well as a great attraction to the general public. M.

BAILLOT, Pierre Marie François de Sales (*b.* Passy, near Paris, Oct. 1, 1771; *d.* Paris, Sept. 15, 1842), takes a prominent place among the great French violin-players.

His father kept a school at Passy. He showed very early remarkable musical talent, and got his first instruction on the violin from an Italian named Polidori. In 1780 Sainte-Marie, a French violinist, became his teacher, and by his severe taste and methodical instruction gave him the first training in those artistic qualities by which Baillot's playing was afterwards so much distinguished. When ten years of age, he heard Viotti play one of his concertos. His performance filled the boy with intense admiration, and although for 20 years he had no second opportunity of hearing him, he often related later in life, how from that day Viotti remained for him the model of a violin-player, and his style the ideal to be realised in his own studies. After the loss of his father in 1783, a Mons. de Boucheporn, a high Government official, sent him, with his own children, to Rome, where he was placed under the tuition of the violin-player Pollani, a pupil of Nardini. We find him during the next five years living with his benefactor alternately at Pau, Bayonne and other places in the south of France, acting as his private secretary, and devoting but little time to his violin. In 1791 he came to Paris, determined to rely for the future on his musical talent. Viotti procured him a place in the band of the Théâtre Feydeau, but Baillot very soon resigned it, in order to accept an appointment in the Ministère des Finances, which he kept for some years, devoting merely his leisure hours to music and violin-playing. After having been obliged to join the army for 20 months, he returned, in 1795, to Paris, and, as Fétis relates, became accidentally acquainted with the violin compositions of Corelli, Tartini, Geminiani, Locatelli, Bach (?) and Handel. The study of the works of these great masters filled him with fresh enthusiasm, and he once more determined to take up music as his profession. He studied theory under Catel, Reicha and Cherubini, and soon made his appearance in public with a concerto of Viotti, and with such success that his reputation was at once established, and a professorship of violin-playing was given him at the newly opened Conservatoire. In 1802 he entered Napoleon's private band, and afterwards travelled for 3 years in Russia (1805–08) together with the violoncello-player Lamare, earning both fame and money. In 1814 he started concerts for chamber music in Paris, which met with great success, and acquired him the reputation of an unrivalled quartet-player. In 1815 and 1816 he travelled in Holland, Belgium and England,

[1] 'Come il più antico e virtuoso della Cappella.'
[2] The MS. registers of St Paul's Cathedral show that he was buried May 2, 1774.

where he performed at the Philharmonic concert of Feb. 26, 1816, and afterwards became an ordinary member of the Society. From 1821–1831 he was leader of the band at the Opéra; from 1825 he filled the same place in the Royal Band; in 1833 he made a final tour through Switzerland and part of Italy, working to the end with unremitting freshness.

He was the last representative of the great classical Paris school of violin-playing. After him the influence of Paganini's style became paramount in France. His playing was distinguished by a noble, powerful tone, great neatness of execution, and a pure, elevated, truly musical style. An excellent solo-player, he was unrivalled in Paris as interpreter of the best classical chamber music. Mendelssohn and Hiller both speak in the highest terms of praise of Baillot as a quartet-player. An interesting account of some of his personal traits will be found in a letter of the former, published in *Goethe and Mendelssohn* (1872). Although his compositions are almost entirely forgotten, his *Art du violon* (1834) still maintains its place as a standard work. He also took a prominent part with Rode and Kreutzer in compiling and editing the *Méthode de violon*, and a similar work for the violoncello. His obituary notices of Grétry (Paris, 1814) and Viotti (1825), and other occasional writings, show remarkable critical power and great elegance of style.

His published musical compositions are:

15 trios for 2 vlns. and bass; 6 duos for 2 vlns.; 12 études for vln.; 9 concertos; symphonie concertante for 2 vlns. with orch.; 30 airs variés; 3 string quartets; 1 sonata for PF. and vln.; 24 préludes in all keys, and a number of smaller pieces for vln.

P. D.

BAILLY, Louis (*b.* Valenciennes, 1882), player on the viola in the Flonzaley Quartet, obtained first prize at the Paris Conservatoire in 1899. He became a member of, and toured with, the Capet Quartet, and was also a member of the Geloso Quartet. He went to America to join the Flonzaley Quartet in 1917.

W. W. C.

BAINES, William (*b.* Horbury, Yorkshire, Mar. 26, 1899; *d.* York, Nov. 6, 1922), English composer. He showed remarkable musical gifts at a very early age; but his circumstances were such that little could be spent on musical tuition. He had a few lessons from Albert Jowett of Leeds; beyond that, he was entirely self-taught. Without the stimulus of travel, or even secondary education, he found inspiration in Yorkshire scenes, the gardens at York, the Flamborough seas, the Knaresborough sunsets, in the music of a few of the modern adventurous composers (Scriabin, Ravel, Debussy), in the writings of Keats and Edgar Allan Poe, and in the friendships of a few choice spirits, Frederick Dawson, the pianist, and others. He was always in weak health, and a most promising career was cut short by his death at the age of 23. A memorial has been raised to him in his birthplace, in the Primitive Methodist Church at Horbury, and progress has been made with a similar fund in York.

A symphony (MS.) and the 'Seven Piano Preludes' and 'Paradise Gardens' were written before he was 20. The last two works are thoroughly representative of his style, although the later pieces go further in harmonic technique. There is no *morbidezza* in any of them, but there is a brilliant imagination and an extraordinary audacity of harmony which succeeds in its expression.

A symphony, a Phantasy for string quartet, pieces for violoncello, other chamber music and some songs are all in MS. For PF., 'Paradise Gardens,' 7 'Preludes'; sets of pieces entitled 'Silverpoints,' 'Milestones,' 'Tides,' 'Coloured Leaves,' 4 'Poems,' are published (Elkin; Augener); there is also a PF. sonata (MS.). (See articles by the writer in *British Music Bulletin*, Mar. 1920 and Dec. 1922; also *Mus. T.*, July 1924.) A. E. H.

BAINI, Giuseppe, known as the Abbé Baini (*b.* Rome, Oct. 21, 1775; *d.* May 21, 1844), master of the Papal Choir, composer, and biographer of Palestrina, was the nephew of Lorenzo Baini, a Venetian composer who had become maestro di cappella at the Church of the Apostoli.

Giuseppe received his first musical instruction at the competent hands of his uncle, and completed his studies under the well-known Jannaconi, with whom he came to be on terms of very close friendship. Shrewd, enthusiastic, studious and devout, by the time of his entry into Holy Orders he was at once an erudite theologian, an expert musician, and an accomplished literary man. Further, nature had endowed him with a beautiful bass voice which he had carefully cultivated. With such qualifications his reception into the Pontifical Choir was easy, and once a member of it (1802), his succession to the Mastership was a certainty. As composer and maestro di cappella he was alike an exponent and a representative of the old Roman school of the 16th century. He was indeed a cinque-cento priest of the higher order born out of due time. For him the sun of music had begun to set at the close of the one period which he loved and understood. Very few of his musical compositions have been published (see *Q.-L.*), but one of them at least is famous. His 10-part Miserere, composed for Holy Week (1821) by order of Pope Pius VII., is the only one out of the hundreds that have been produced in Rome which has taken its place permanently in the services of the Pontifical Chapel side by side with the two celebrated compositions of Allegri and Bai. His first contribution to the literature of music was a pamphlet evoked by the ignorance of the directors of the Accademia Napoleone in Lucca, who, in the year 1806,

bestowed their annual prize upon a motet for 4 choirs written by Marco Santucci, as though it were a production of a new order. Baini exposed their mistake, and cited a long list of similar pieces by Antonelli, Agostini, Benevoli, Abbatini, Beretta and a host of other composers, dating from the 16th century downwards, and including one by his own master and friend, Jannaconi. His second literary work was an essay on the identity of Musical and Poetic rhythm (1820). It was written in obedience to a request of the Comte de St. Leu, brother of the Emperor Napoleon ; the subject was one well calculated to display the solid learning and delicate analysis of Baini, but it may be doubted whether it is not one of those efforts in which abstruseness and mysticism are unaccompanied by any practical result. But the masterpiece of Baini, to which and for which he was alike led by temperament and fitted by power, is his great monograph on Palestrina (*Memorie storico-critiche*, etc., Rome, 1828, 2 vols. 4to.). It is something more and something less than a biography, for the details of the life of Palestrina are somewhat scanty, and later research has proved many of them to be inaccurate (see PALESTRINA). Still, the portrait of the man, the lovable husband, father and friend, the conscientious worker, the devoted man of genius, the pure liver and faithful Catholic, is full and finished. Moreover, any lack of view into his family interior is more than compensated for by the glimpses we get of cinque-cento life and society in Rome. To snatch these from the materials to which he had access, and to reproduce without intruding them, was a task absolutely congenial to the nature and genius of Baini, and he performed it to perfection. Many subsidiary notices of the composers of the Italian school from the days of Goudimel to the middle of the 17th century are grouped around that of the central figure ; and it is hardly too much to say that in it we have a sketch of the rise and progress of Italian music from the deposition of the Flemings and the establishment of a national school to the close of the ecclesiastical era and the rise of opera.

Baini thought to publish a complete edition of the works of the great master, whom, with a constantly recurring enthusiasm, he calls ' Il principe della musica ' ; but he died before he had transcribed and published more than two volumes out of the vast mass of his compositions. E. H. P., rev.

BAINTON, EDGAR LESLIE (*b.* London, Feb. 14, 1880), composer, won the open scholarship for piano-playing at the R.C.M. in 1896, and the same institution awarded him the Wilson scholarship for composition three years later. His professors were Stanford, Walford Davies, Charles Wood and Franklin Taylor.

In 1901 Bainton was appointed professor of the pianoforte and composition at the Conservatoire of Music, Newcastle-on-Tyne, of which he became the principal in 1912. A year earlier he was nominated conductor of the Newcastle Philharmonic Orchestra. His career suffered a very serious interruption during the war ; from 1914 until Mar. 1918 he was interned at the Ruhleben Camp in Germany, and afterwards, until Dec. 1918, at The Hague. After his release in Holland he was engaged to conduct two concerts of British music with the Concertgebouw orchestra in Amsterdam. He subsequently resumed his duties at Newcastle.

Bainton's most important work is the symphony ' Before Sunrise,' for contralto solo, chorus and orchestra, on three poems from Swinburne's *Songs before Sunrise*, which was performed at Newcastle-on-Tyne, Apr. 1921, having gained the Carnegie Trust Award in 1917. The same distinction was conferred on his ' Concerto-Fantasia' for piano and orchestra in 1920, this work being performed by Miss Winifred Christie at the Royal Philharmonic Society's concert of Jan. 26, 1922, as well as at Bournemouth, Birmingham, Newcastle and Harrogate.

The following is a list of other noteworthy works by him :

Opera in one act : ' The Crier by Night.'
Orchestra : Symphony in B flat (Bournemouth Symphony Concerts, Oct. 1903) ; Symphonic Poem, ' Pompilia ' (Queen's Hall Promenade Concerts, Oct. 1903) ; Celtic Sketches (Promenade Concerts, Oct. 1912) ; Three Pieces (Promenade Concerts, Sept. 1919, and Hereford Festival, 1921) ; Symphonic Poem, ' Paracelsus ' (Promenade Concerts, Aug. 1921) ; Eclogue (1923).
Chorus and Orchestra : ' The Blessed Damozel ' (with soprano and baritone soli) ; ' Sunset at Sea ' ; ' The Vindictive Staircase ' ; ' A Song of Freedom and Joy ' ; ' The Tower ' (Hereford Festival, 1924) ; ' A Hymn to God the Father ' (Worcester Festival, 1926).
Chamber Music : String Quartet in A major (De Lara Chamber Concerts, June 1919) ; Sonata for viola and piano (1923).
Partsongs, Songs and Piano Pieces.

E. B.

BAIRSTOW, EDWARD CUTHBERT (*b.* Huddersfield, Aug. 22, 1874), had lessons in music from Henry Farmer, and in 1891 became music-master at a private school in Windsor. In 1893 he was articled to Sir Frederick Bridge, and remained with him nearly six years as pupil and amanuensis. In 1894 he became organist and choirmaster of All Saints', Norfolk Square, till 1899, when he was appointed organist of Wigan Parish Church. In 1906 he became organist of Leeds Parish Church, which he left in 1913 for York Minster. He graduated at Durham as Mus.B. in 1894 ; Mus.D. in 1901. He has had an unusually wide experience as a choir trainer, and has been conductor of choral societies at Petworth, Southport, Blackburn, Preston, Barnsley, York, Leeds (Philharmonic Society) and Bradford (Festival Choral Society). His marked success in this capacity is due to the fact that he is equally efficient as teacher and conductor. As a composer his output has hitherto been limited in character, and consists chiefly of anthems (*e.g.* ' Lord, Thou hast been our Refuge,' for the Sons of the Clergy Festival, 1917), service music, and organ solos, which

are invariably scholarly, thoughtful and expressive, and, while showing the influence of Bach and Brahms, follow and extend the best traditions of Anglican church music. His many-sided activity has been shown in his work as Examiner for Durham University, the Associated Board and the R.C.O., and as judge at most of the important Competition Festivals. His eminently sound and practical views on church music have been enunciated by him in lectures and otherwise,[1] and it may be asserted that few of our church musicians are so capable on all sides of their activity. (See *Mus. T.*, 1914, p. 297.) H. T.

BAKER, Dalton (*b.* Merton, Surrey, Oct. 17, 1879), bass singer trained at the R.A.M.; made his first appearance in London at a St. James's Hall ballad concert in 1902, and soon made a reputation in oratorio. He sang in the first performance of Elgar's 'The Kingdom' (see Elgar) and in that of Bantock's 'Omar Khayyam' at Birmingham. In 1914 he went to Canada, taught singing at Toronto, and has subsequently lived in New York. C.

BAKER, George, Mus.B. (*b.* Exeter, *c.* 1773; *d.* Feb. 19, 1847), organist and composer. He was appointed organist of All Saints, Derby, in 1810, and at Rugeley, 1824. He retained this post until his death, but his duties were performed by a deputy from 1839 (*D.N.B.*). His compositions comprise anthems, glees, organ voluntaries, pianoforte sonatas and other pieces, the music to an unfortunate musical entertainment called 'The Caffres,' produced for a benefit at Covent Garden Theatre, June 2, 1802, and at once condemned, and numerous songs, many of them composed for Incledon, his former fellow-pupil under Jackson. W. H. H., cond.

BAKER, Theodore (*b.* New York, June 3, 1851), has devoted his life to musical research and, amongst many other literary works, produced in 1900 *Baker's Biographical Dictionary of Musicians*, which remains the most valuable work of musical reference issued from America.

Baker went to Germany in 1874 for study, and took his degree (Ph.D.) at Leipzig in 1881. His thesis, *Über die Musik der Nordamerikanischen Wilden*, was based on investigations made personally among the Seneca Indians of New York State. It was the first public study of the music of the North American Indians. Baker remained in Germany until 1890, and in 1892 joined the firm of Schirmer in New York as literary editor.

Baker's works include, in addition to the *Biographical Dictionary*, a *Dictionary of Musical Terms*, 1895, and a *Pronouncing Pocket Manual of Musical Terms*, 1905. The *Biographical Dictionary*, a model of concise arrangement, has passed through three editions; the last, 1918, being revised and enlarged by Alfred Remy. Baker's activities further include the translation of a large number of works on musical technique by German authors. *Amer. Supp.*

BALAKIREV, Mily Alexeivich (*b.* Nijny-Novgorod, Dec. 31, 1836 (O.S.); *d.* St. Petersburg, May 30, 1910), was the composer and teacher to whom the nationalist school of Russian music owed its formation.

His mother taught him the rudiments of music, but the most valuable part of his musical education was derived from Oulibishev, author of the *Life of Mozart*, in whose country house Balakirev spent part of his youth, profiting by a fine musical library to become acquainted with all the classical masterpieces. Practice with Oulibishev's private band taught him something of instrumentation; and, what was even more important to his development, he became completely imbued with the music of the people. In this remote province of Russia, surrounded by conservative influences, his sensitive intelligence seemed to divine the changes which Wagner, Berlioz and Liszt were effecting in Western Europe. As a mere boy he faced the problem of infusing fresh vitality and interest into forms which seemed too inelastic for modern requirements. The idea of solving the question by Wagnerian principles never occurred to Balakirev, for in 1860–70 Wagner was hardly known in Russia. Besides, there existed for the Russians a source of fresh inspiration: the fountain of national melody which Glinka had but just unsealed. Full of zeal for the national idea, Balakirev, at 18, arrived in St. Petersburg to preach the gospel of nationality to the worshippers of Bellini and Meyerbeer. His enthusiasm and intelligence made a deep impression on Glinka, then in failing health, and bitterly disappointed by the public indifference to his opera 'Rousslan and Lioudmilla.' The older composer formally recognised Balakirev as destined to continue his own work. Though young, he was well fitted for the task, possessing not merely extraordinary musical erudition and untiring zeal, but that persuasive and contagious enthusiasm which goes with true conviction.

Formation of a New School. — From 1861 Balakirev became the centre of a new musical movement. His first disciple was César Cui, then a sub-lieutenant of engineers. Later on, Moussorgsky submitted his wayward genius to Balakirev's discipline, and finally Rimsky-Korsakov and Borodin joined this school, which was consolidated by the idea of nationality in music. Tchaikovsky received his education from other sources but his correspondence clearly shows that he, too, came under the influence of Balakirev's ideas. He was both teacher and comrade in this circle

[1] Dr. Bairstow is a joint-editor of 'The English Psalter' (Novello, 1925), which is pointed for chanting 'upon the principles of natural speech-rhythm,' and is a noteworthy attempt to improve congregational singing.

of earnest workers, several of whom were older than himself. They began by studying the classics, particularly Bach and Handel, before passing on to more modern music ; and among contemporary masters, Schumann, Berlioz and Liszt influenced them far more than Brahms or Wagner. Balakirev analysed each work with his pupils, pointing out every peculiarity of harmony or rhythm, noting every new instrumental combination, or deviation from accepted form. He aimed at a thorough æsthetic grounding, without undue deference to tradition ; and we must bear in mind that at this period, following immediately on the emancipation of the serfs, individual liberty was the keynote of Russian intellectual life. The discarding of academical principles ended in a wider differentiation of aims and methods than Balakirev had reckoned upon. As Borodin graphically puts it :

'So long as we were eggs laid by one hen (Balakirev) we were more or less alike, but when the young birds appeared, each was clad in different feathers and flew off in a different direction.'

Thus, to the principles of reformed opera laid down by Dargomijsky in 'The Stone Guest,' only Moussorgsky can be said to have approached ; while the national idea, so innately strong in Borodin and Balakirev himself, became attenuated in the music of Cui. In 1862 Balakirev, with the assistance of the famous choral conductor Lomakin and the critic V. Stassov, established the Free School of Music in St. Petersburg. This institution rendered great educational service to Russia by its excellent symphony concerts, conducted by Balakirev on less conservative lines than those of the Imperial Musical Society. At these concerts, works by Borodin, Cui, Moussorgsky and, later on, by Glazounov and Liadov, were given for the first time. The school exists no longer. Balakirev also conducted performances at Prague of Glinka's operas in 1866 and 1867. In 1869 he reached the climax of his musical career, being appointed director of the Imperial Chapel and conductor of the Imperial Russian Musical Society. Balakirev's programmes were the most eclectic imaginable. It was one of his chief merits that, while devoted to the interests of his compatriots, he used these high positions for the propagation of the best music, without distinction of school or nationality. For many years he led a secluded life. As with Gogol, Dostoievsky and Tolstoi, mysticism claimed Balakirev in middle age. Occasionally he was heard at a charity concert, for he was reckoned a fine pianist, even in the land which produced the two Rubinsteins.

Compositions.—Balakirev's output, though remarkable, is not great in quantity. As a composer he stands in close relationship to Glinka. He has the same lyrical sentiment, the same poetical sensibility ; but more passion and a greater command of technical resources.

A series of songs published between 1858 and 1860 displays the exquisite and finished quality of his workmanship. He touches every chord of passion and tenderness. A book of 'Ten Songs,' published later, has not the ardour and fascination of the earlier collection, although it contains some graceful and vocal examples. Balakirev has added some new elements to Russian song and given a variety and independence to his accompaniments not to be found in any of his predecessors ; his two collections of National Songs are the best that have been made.

Balakirev appended no definite programme to his first orchestral works, although Stassov unhesitatingly placed them in the category of 'programme music.' The 'Overture on Russian Themes' (1858) is built on three folk-songs, one of which ('In the fields stood a birch-tree') reappeared twenty years later as the chief subject of the finale of Tchaikovsky's fourth symphony. In 1867 he wrote a companion work, the 'Overture on Czech Themes.' A third 'Overture on Spanish Themes,' rewritten and published in 1869, actually dates from 1857. Balakirev gave the following account of this work :

'The first theme is my own, written in the oriental style, in accordance with the programme which depicts the struggle between the Moors and the Spaniards and the victory of the latter with the help of the *auto da fé* of the Inquisition. The second theme is the original one of the Spanish March, given to me by Glinka when I was twenty. Just before his departure for Berlin, where he died, Glinka proposed that I should write an overture on this theme. But he did not suggest the programme, which is entirely of my own invention.'

In all Russian music there is nothing more brilliant and piquant then the orchestration of the chivalric march which closes this overture. These three works show how greatly Balakirev was attracted by the ethnographical side of music. Not in Russia only, but in other lands, it is the intimate melody of race which appealed to him most directly. The fascination of the East is reflected in Balakirev's fantasia for pianoforte 'Islamey,' and still more in the symphonic poem 'Tamara.' This work is programme music of a highly coloured description, scored in the style of Berlioz. The overture and entr'actes to 'King Lear,' a picturesque commentary on the Shakespearian tragedy, dates from 1861. The symphonic poem 'Russ' (old Slavonic form of Russia) was composed in 1862 for the 1000th anniversary of the Russian nation. It is an orchestral epic, built upon three national melodies, each of which characterises a particular period in Russian history, while the finale, it is said, breathes a prayer for the future welfare of the country. Balakirev wrote but one symphony in the strict sense of the word. This work was

first heard in England at the Queen's Hall Promenade Concerts of 1901.

The following is a complete list of his works :

ORCHESTRAL

1. Overture on the theme of a Spanish March.
2. 'Russia,' Symphonic Poem.
3. Overture on three Russian Themes.
4. 'Tamara,' Symphonic Poem.
5. Symphony.
6. Overture, 'King Lear.'
7. Overture to Lvov's opera 'Andine,' orchestrated by Balakirev.

VOCAL

1. 20 Songs.
2. 10 Songs.
3. A collection of Folk-songs.
4. 30 National Songs.

PIANOFORTE

3 Scherzos, 6 mazurkas, 3 nocturnes, 4 waltzes, 'Islamey' Oriental fantasia, Spanish serenade on themes given by Glinka, miscellaneous pieces, and transcription of Berlioz's overtures, 'La Fuite en Égypte,' the cavatina from Beethoven's quartet op. 130, Glinka's 'Lark,' Glinka's 'Komarinskaya,' and a fantasia on 'Life for the Tsar.'

R. N.

BALALAIKA, a form of guitar with a triangular or sometimes slightly rounded body. The neck is fretted, and it has generally three gut strings tuned *a'*, *e'*, *e'*, but tunings in fifths are also used. It is Tartar in origin, and now very popular with the Russian peasants as an accompaniment to their songs and dances. The instruments are made in various sizes, the largest being rested upon the ground. A few years ago a Balalaika Band visited this country. (See *PLATE XXIII.* No. 3.) F. W. G.

BALANCÉ, another name for *pincé*; an *agrément* of the French school. (See ORNAMENTS.) E. B[L].

BALANCEMENT, the name of a French *agrément*, also called BEBUNG (*q.v.*). (See also ORNAMENTS.) E. B[L].

BALBI, LODOVICO (*b.* Venice, *c.* middle of 16th cent.; *d.* Venice, before Dec. 15, 1604), church musician and composer.

He was a pupil of Costanzo Porta, a monk of the Minorite order, singer in the choir of St. Mark's, *c.* 1570, subsequently in the cathedral of Verona. About 1578, he became maestro di cappella at the Frari in Venice, and was appointed in 1585 to the church of St. Antonio in Padua, retaining the post till 1591 when he retired to the convent of his order in Venice. His published works are :

1570, First Book of Madrigals (25); 1578, Ecclesiasticarum cantionum, 4 v.; 1580, Missæ 4, *a* 5 v.; 1586, Capricci, *a* 6 v. (21); 1587, Graduale and Antiphonarium; 1589, Musicale Essercitio, 5 v. (27 madrigals in which Balbi used the upper voice of various well-known examples by other composers; 1595, Missæ 5, *a* 5; 1605, masses and motets with a Te Deum, *a* 8 v.; 1606, Ecclesiastici concentus, bk. i. compositions with and without accompaniment; 1609, Completorium, *a* 12 v.

Besides these *Q.-L.* enumerates motets and masses in the libraries of Breslau, Leipzig and Munich. One 7-part and four 8-part motets by him are printed in BODENSCHATZ's *Florilegium Portense*, pt. 2. M.

BALDASSARRI, BENEDETTO (18th cent.), an eminent Italian singer, who sang the tenor part of Timante in Handel's opera 'Floridante,' at its first and succeeding performances in 1721. He appeared also in Bononcini's 'Crispo,' and other pieces, in the next year. He had already sung in 'Numitor' by Porta, and other operas, with Durastanti and her companions of the old troupe. J. M.

BALDENECKER, NICOLAUS (*b.* Mayence, 1782), first violin at the Frankfort theatre from 1803–51, and joint-founder with Schelble of the amateur concerts which resulted in the famous Cäcilien-Verein of that city. He was a member of an extensive family of musicians.

BALDI (18th cent.), a counter-tenor singer, who sang in London in operas of Handel, Bononcini and others, from 1725–28.

In the first year he sang in 'Elisa' and Leonardo Vinci's 'Elpidia,' replacing Pacini in the latter, who previously sang in it. In 1726 he appeared in Handel's 'Alessandro,' 'Ottone' and 'Scipione'; in 1727 in 'Admeto' and 'Riccardo,' as well as in Bononcini's 'Astianatte'; and in 1728 he sang in 'Tolomeo,' 'Siroe' and 'Radamisto,'—all by Handel. He seems to have been an excellent and useful artist, only eclipsed by the great Senesino, who monopolised the leading parts. J. M.

BALDWIN, JOHN (*d.* 1615), for some part of his life 'a singing man of Windsor,' but was admitted a gentleman of the Chapel Royal in 1594 (Rimbault, *Cheque Book*). He is chiefly remembered as a 'celebrated copyist of Queen Elizabeth's time' (Burney). The collection of virginal pieces in Lady Neville's Book was copied out by him, while some parts of the Forrest-Heyther song-books in the library of the Music School at Oxford (now in the Bodl. Lib.) are in his hand. These are all very beautifully done. His most important contribution, however, is a MS. book which was evidently kept for his own use, and which was written out by him at various times between 1581 and 1606. This is in the Roy. Lib. (B.M.), and is really a commonplace book containing extracts, and, in some cases, complete works by a variety of composers (some of whom would be otherwise unknown). These are all copied out in short score, and in particular many works by Byrd, as well as an interesting motet by Henry VIII. ('Quam pulchra es'), are thus preserved. There are also a few lessons on descant by Giles and others, while at the end is a long and rather awkward rhyme in alliterative couplets which mentions by name and reputation most of the composers whose works are in the book. Byrd is praised at great length, while the book itself is described as follows :

'A store-housse of treasure this booke may be saiede
Of songes most excelente and the beste that is made,
Collected and chosen out of the best autours
Both stranger and English borne, whiche be the best makers
And skilfulst in musicke. . . .'

The following anthems, motets, etc., of his own composition are copied out in the book :

A Browninge of three voices.
A fancie upon a grounde (*a* 3).
Agnus Dei (*a* 2).
'Behold how good and joyful' (*a* 3).
'Cuckow as me walked' (*a* 2). (Founded on the interval of the cuckoo's call.)
'If reason did rule' (*a* 3).

'In manus tuas.'
In nomine (1) (*a* 5). (Canon.)
In nomine (2) (*a* 4).
'In the merie monthe of Maye' (*a* 3).
'O Lord who shall dwell' (*a* 3).
'O Lux' (*a* 3)
'Save me, O God' (*a* 3).
'Sermone blando angelus.'
'Spes mea.'
'Ut re mi fa' (*a* 2).
Upon the plainsong (*a* 3).

The two compositions below are at Ch. Ch. (979-83):

'Pater Noster' and 'Redeme me.'

These partbooks (the tenor book is wanting) also contain a 3-part fancy by Baldwin, as well as the 'Cuckow as me walked' included in the list above.

Q.-L. also mentions a Magnificat in the choir books at Eton. J. MK.

BALELLI, an Italian basso engaged at the opera in London towards the end of the 18th century.

In 1787 he sang in 'Giulio Cesare in Egitto,' a pasticcio, the music selected by Arnold from various works of Handel; and in the 'Re Teodoro,' a comic opera of Paisiello. In 1788 he appeared in Sarti's 'Giulio Sabino'; and the next year in Cherubini's 'Ifigenia,' and in operas both comic and serious by Tarchi.

J. M.

BALFE, Michael William (*b.* Dublin, May 15, 1808; *d.* Oct. 20, 1870), composer of English operas, and an important figure in the musical life of his day.

When he was two years old his family removed to Wexford, and he soon began to take lessons on the violin from the bandmaster of the Cavan militia (Joseph Halliday), after which, in 1814, he was placed under a Mr. Meadows. William Balfe, the father, was a dancing-master, and Michael's first appearance as a musician was in the capacity of violinist for the dancing-class, during the season 1814–15. At the age of seven he was able to score for a band a polacca composed by himself. His father now placed him under O'Rourke (afterwards known in London as Rooke), who brought him out as a violinist in June 1817. In that year he composed a ballad, 'Young Fanny,' afterwards sung by Madame Vestris in the comedy of 'Paul Pry,' under the title of 'The Lover's Mistake.' On Jan. 6, 1823, his father died, and he came to London as an articled pupil of Charles Edward Horn, the singer; he gained considerable credit by his performance of violin solos at the so-called oratorios. He was then engaged in the orchestra at Drury Lane, and when T. Cooke, the director, had to appear on the stage (which was sometimes the case in the important musical pieces), he led the band. At this period he took lessons in composition from C. F. Horn, organist of St. George's Chapel, Windsor, and father of his former teacher. About this time he tried his fortune on the operatic stage, and appeared at Norwich in a garbled version of 'Der Freischütz': he failed, but in 1825 he met with a patron, Count Mazzara, whom he accompanied to Italy, being introduced to Cherubini on the way. At Rome he was located in the house of his patron, studying in a desultory manner with Paër; he was afterwards sent to Milan, where he studied counterpoint under Federici, and singing under Filippo Galli. Here he made his first public essay as a dramatic composer by writing the music to a ballet entitled 'La Pérouse,' the melody and instrumentation in which created a favourable sensation. He was now in his 20th year. Visiting Paris, he was introduced to Rossini, then director of the Italian Opera; the maestro was not slow to perceive his talent, and offered him an engagement for three years as principal baritone, on condition that he should take a course of preparatory lessons from Bordogni. He made his first appearance at the close of 1827, as Figaro in the 'Barbiere,' with decided success. At the close of his Paris engagement, which was curtailed by his ill-health, he returned to Italy, and was welcomed by a new patron, the Count Sampieri of Bologna. In the carnival season of 1829–30 he was principal baritone at Palermo, and here produced his first complete opera, 'I Rivali di se stessi,' written in the short space of 20 days. At Milan, he was engaged to sing with Malibran at La Scala. At Bergamo he met Mlle. Lina Rosa, a Hungarian singer, whom he married. He continued to sing on the stage in Italy until the spring of 1833, when he came to London, and appeared at several public and private concerts.

Balfe's career as a writer of English operas began in 1835, when he produced the 'Siege of Rochelle' at Drury Lane (Oct. 29), with distinguished success. It was played for more than three months without intermission, and completely established the composer's fame. 'The Maid of Artois' came out on May 27, 1836, its success heightened by the exquisite singing of Malibran. In the autumn of this year Balfe appeared as a singer at Drury Lane. He sang the part of Papageno in the first performance of 'Die Zauberflöte' in English, Mar. 10, 1838. 'Falstaff,' produced at Her Majesty's Theatre, was the first Italian opera written for that establishment by an English composer since Arne's 'Olimpiade.' In 1839, after a successful tour in Ireland, he was much on the boards, playing Farinelli in Barnett's opera of that name at Drury Lane, and in an English version of Ricci's 'Scaramuccia' at the Lyceum. On Mar. 9, 1841, he entered the field as manager of the Lyceum, and produced his 'Keolanthe' for the opening night, with Madame Balfe in the principal character: but the enterprise was not successful.

Balfe now migrated to Paris, where his talent was recognised, and Scribe and St. George furnished him with the dramatic poems of 'Le

Puits d'amour' (1843, performed in London under the title of 'Geraldine'), and 'Les Quatre fils d'Aymon' (1844, known here as 'The Castle of Aymon'), both given at the Opéra-Comique. While thus maintaining his position before the most fastidious audience of Europe, Balfe returned *en passant* to England, and produced the most successful of all his works, 'The Bohemian Girl' (Nov. 27, 1843). This opera was translated into German, Italian and French. In 1845 he wrote 'L'Étoile de Seville' for the Académie Royale, in the course of the rehearsals of which he was called to London to arrange his engagement as conductor of Her Majesty's Theatre, which office he filled from the secession of Costa to the closing of the establishment in 1852. In 1849 he went to Berlin to reproduce some of his operas, when the King offered him the decoration of the Prussian Eagle, which, as a British subject, he was unable to accept. Between this year and 1852 Balfe had undertaken to conduct a series of National Concerts at Her Majesty's Theatre: several important works were produced in the course of the enterprise, which did not, however, meet with success.

At the close of 1852 Balfe visited St. Petersburg with letters of introduction from the Prince of Prussia, where he was received with all kinds of distinction. Besides popular demonstrations and imperial favour, he realised more money in less time than at any other period. The expedition to Trieste, where his next work, 'Pittore e Duca,' was given during the Carnival of 1856, with such success as the failure of his prima donna could permit, brings us to his return to England. It was not till 1882 that 'Pittore e Duca' was given in London, where it was produced at Her Majesty's Theatre by the Carl Rosa Company, as 'Moro.'

In the year after his return Balfe brought out his daughter Victoire (afterwards married to Sir John Crampton, and subsequently to the Duke de Frias) as a singer at the Italian opera at the Lyceum; and his next work, 'The Rose of Castile,' was produced by the English company also at this theatre on Oct. 29, 1857.

In Dec. 1869 the French version of his 'Bohemian Girl' was produced at the Théâtre Lyrique of Paris under the title of 'La Bohémienne,' for which the composer wrote several additional pieces, besides recasting and extending the work into five acts. The success attending this revival procured him the twofold honour of being made Chevalier de la Légion d'Honneur by the Emperor of the French, and Commander of the Order of Carlos III. by the Regent of Spain.

In 1864 Balfe retired into the country, became the proprietor of a small landed property in Hertfordshire, called Rowney Abbey, and turned gentleman farmer. Here he amused himself with agriculture and music, making occasional visits to Paris. He had several severe attacks of bronchitis, which eventually proved fatal. He was buried at Kensal Green, and a tablet with a medallion portrait was unveiled in Westminster Abbey, Oct. 20, 1882. Mme. Balfe died on June 8, 1888.

On Sept. 25, 1874, a statue to his memory, by a Belgian artist, Mallempré, was placed in the vestibule of Drury Lane, the scene of so many of his triumphs.

Balfe's miscellaneous pieces are numerous, including the operetta of 'The Sleeping Queen,' performed at the Gallery of Illustration; three cantatas—'Mazeppa,' performed in London, and two others composed at Paris and Bologna. Many of his ballads still retain a certain popularity, and 'The Bohemian Girl' holds its place in the repertory of provincial opera companies. His chief asset as a composer was a gift of facile melody, and his personal career as a singer gave him a sure instinct in securing simple vocal effect. (*Imp. Dict. Univ. Biog.*; Kenney's *Memoir*, 1875.)

E. F. R.; many corr. from *D.N.B.*, etc.

The following is a list of Balfe's principal operas with dates of production:

I Rivali di se stessi, Palermo 1829–30.
Un Avvertimento ai gelosi, Pavia.
Enrico Quarto, Milan.
Siege of Rochelle, Drury Lane, Oct 29, 1835.
Maid of Artois, Drury Lane, May 27, 1836.
Catherine Grey, Drury Lane, 1837.
Joan of Arc, Drury Lane, 1837.
Diadeste, Drury Lane, May 1838.
Falstaff, Her Majesty's Theatre, July 19, 1838.
Keolanthe, Lyceum, Mar. 9, 1841.
Le Puits d'amour (Geraldine), Opéra-Comique, Paris, 1843.
Les Quatres Fils d'Aymon, Opéra-Comique, Paris, 1844.
The Bohemian Girl, Drury Lane, Nov. 27, 1843.
Daughter of St. Mark, Drury Lane, 1844.
The Enchantress, Drury Lane, 1844.
L'Étoile de Seville, composed for Académie Royale, 1845.
The Bondman, Drury Lane, Dec. 1846.
The Devil's in it, Surrey Theatre, 1847.
The Maid of Honour, Covent Garden, 1847. (This opera is on the same subject as Flotow's 'Martha.')
Sicilian Bride, Drury Lane, 1852.
Pittore e duca, Trieste, 1856. (Given as Moro by Carl Rosa Co. in 1882.)
The Rose of Castile, Lyceum, Oct. 29, 1857.
Satanella, Lyceum, 1858.
Bianca, 1860.
The Puritan's Daughter, 1861.
The Armourer of Nantes, Feb. 1863.
Blanche de Nevers, Nov. 1863.
Il Talismano (The Knight of the Leopard), Drury Lane, Jan. 11, 1874.

BALFOUR, Henry Lucas (*b.* Battersea, London, Oct. 28, 1859), organist and choral conductor.

Balfour was a scholar of the National Training School of Music, 1876–82, the precursor of the R.C.M. There he studied under Sullivan, Stainer and others, and afterwards went to Leipzig for further study. He held organ appointments at Croydon, 1872–1902, and also conducted the Croydon Philharmonic Society and other choral societies. In 1895 he was appointed organist to the Royal Choral Society, and his work both as organist at the Albert Hall concerts and as assistant chorus-master during 27 years gave proof of his thorough musicianship. On the retirement of Sir Frederick Bridge, Balfour was appointed to

succeed him as general conductor to the Royal Choral Society, guest conductors being invited to produce special works. In 1902 he had obtained the appointment of organist to the important church of Holy Trinity, Sloane St., where he has maintained the high traditions of the musical service inherited from distinguished predecessors. He still (1926) holds that appointment. C.

BALFOUR-GARDINER, see GARDINER.

BALINO, ANNIBALE PIO, see FABRI.

BALIUS Y VILA, JAIME (*d.* Córdoba, Nov. 3, 1822), a Spanish church musician and composer who held the appointment of maestro de capilla at Gerona, Córdoba and Madrid (Church of the Incarnation). His works, in MS., are preserved in the cathedrals of Córdoba, Málaga, Valencia, Barcelona; and also in the library of the Escurial. Three rondos and a sonata for cembalo are in the Biblioteca de la Diputació, at Barcelona (Pedrell collection). J. B. T.

BALLABENE, GREGORIO (*b.* Rome, 1720; *d.* there, *c.* 1803), was considered one of the greatest contrapuntists and most imaginative vocal composers of the 18th century, capable of writing in the strict *a cappella* style of earlier times. He lived a very retired and studious life. In Sept. 1755 he applied for an appointment at Macerata, and in 1778 for the place of maestro di cappella of the church of St. Anthony of Padua, and of St. Peter's, Rome, but without success. In 1754 he was made a member of the Accademia dei Filarmonici at Bologna, and in 1781 he is mentioned as examiner of the Congregazione dei Musici at Rome. He was fifty years of age before any one but his closest friends had any knowledge of the important works coming from his pen. A German musician, Jos. Heiberger, living in Rome, was the first to publish (1774) a letter concerning the effect of Ballabene's Mass in 48 parts, divided into 12 choirs. The Abbé Santini had MS. copies (or autographs) of the following works by Ballabene: 1 'Dixit,' 16 v.; 1 'Dixit,' 8 v.; masses and motets, 5 v.; sequences of St. Augustine, and Amen, 4 v. The R.C.M. has a Magnificat for 4 choirs (Autogr.). E. v. d. S.

BALLABILE (Ital.), from *ballare*, 'to dance,' a piece of music adapted for dancing. The term can be applied to any piece of dance music. Meyerbeer frequently uses it in his operas, *e.g.* in 'Robert le Diable,' where the three dances in the scene of the resurrection of the nuns in the third act are entitled in the score '1°. 2do. e 3°. ballabile'; also in the fifth act of the 'Huguenots.' More recently Hans von Bülow has given the title of 'Ballabili' to the dance-numbers of his 'Carnevale di Milano,' the individual dances being a polacca, a waltz, a polka, a quadrille, a mazurka, a tarantella and a galop. E. P.

BALLAD, from the Ital. *ballata*,[1] 'a dance,' and that again from *ballare*, 'to dance.' The form and application of the word have varied continually from age to age. In Italy a Balletta originally signified a song intended to be sung in dance measure, accompanied by or intermixed with dancing; 'in the Crusca dictionary,' says Burney, 'it is defined as Canzone, che si canta ballando'—a song sung while dancing. The old English ballads are pieces of narrative verse in stanzas, occasionally followed by an envoi or moral. Such are 'Chevy Chase,' 'Adam Bell, Clym of the Clough and William of Cloudeslee,' 'The Babes in the Wood'; and, to come to more modern times, such are 'Hozier's Ghost' (Walpole's favourite), Goldsmith's 'Edwin and Angelina' and Coleridge's 'Dark Ladie.' But the term has been used for almost every kind of verse—historical, narrative, satirical, political, religious, sentimental, etc. It is impossible to discover the earliest use of the word.

In a MS. of the Cotton collection, said to be as ancient as the year 1326, mention is made of ballads and roundelays (Hawkins, *Hist. of Music*). John Shirley, who lived about 1440, made a collection of compositions by Chaucer, Lydgate and others, and one of the volumes, now in the Ashmolean collection, is entitled

'A Boke cleped the abstracte brevyaire, compyled of diverse *balades*, roundels, . . . collected by John Shirley.'

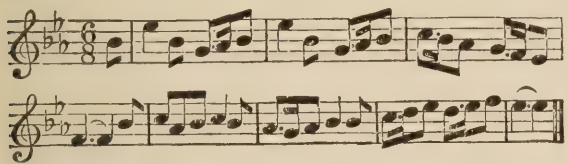
In the devices used at the coronation of Henry VI. (Dec. 17, 1431) the king was portrayed in three several ways, each 'with a ballad' (Sharon Turner). Coverdale's Bible, printed in 1535, contains the word as the title of the Song of Solomon—'Salomon's Balettes called Cantica Canticorum.'

Ballad-making was a fashionable amusement in the reign of Henry VIII., who was himself renowned for 'setting of songes and makyng of ballettes.' A composition attributed to him, and called 'The Kynges Ballade' (B.M. Add. MSS. 5665), became very popular. It was mentioned in *The Complainte of Scotland*, published in 1548, and also made the subject of a sermon preached in the presence of Edward VI. by Bishop Latimer, who enlarged on the advantages of 'Passetyme with good companye.' Amongst Henry's effects after his decease, mention is made of 'songes and ballades.' In Queen Elizabeth's reign ballads and ballad-singers came into disrepute, and were made the subject of repressive legislation. 'Musicians held ballads in contempt, and great poets rarely wrote in ballad metre.'

Morley, in his *Plaine and easie introduction to Practical Musicke*, 1597, says, after speaking of *Vilanelle*,

'there is another kind more light than this which they tearm *Ballete* or daunces, and are songs which being sung to a dittie may likewise be danced, these and

[1] *Ballata*=a dancing piece, as *suonata*, a sounding piece, and *Cantata*, a singing piece.



other light kinds of musicke are by a general name called *aires.*'

Such were the songs to which BONNY BOOTS (*q.v.*) both 'tooted it' and 'footed it.' In 1636 Butler published *The Principles of Musicke*, and in that work spoke of

'the infinite multitude of Ballads set to sundry pleasant and delightful tunes by cunning and witty composers, with *country dances* fitted unto them.'

After this the title became common.

The music of many real old ballads has survived, for which the reader may be referred to Chappell's *Popular Music of the Olden Time*, or the new edition, *Old English Popular Music*, edited by H. E. Wooldridge. 'Chevy Chase' appears to have been sung to three different melodies. One of these, 'The hunt is up,' was a favourite popular air, of which we give the notes—

This old tune was otherwise employed. In 1537 information was sent to the Council against John Hogon, who, 'with a crowd or a fyddyll,' sang a song with a political point to the tune 'The hunt is up.' 'If a man,' says Fletcher of Saltoun, 'were permitted to make all the ballads, he need not care who should make the laws of a nation.' 'LILLIBURLERO' (*q.v.*) is a striking proof of the truth of Saltoun's remark, since it helped to turn James II. out of Ireland. 'Malbrouck,' the 'Marseillaise' and the 'Wacht am Rhein' are other instances of ballads which have had great political influence.

Ballads have sunk from their ancient high estate. Writing in 1802 Dr. Burney said:

'A ballad is a mean and trifling song such as is generally sung in the streets. In the new French *Encyclopédie* we are told that we English dance and sing our ballads at the same time. We have often heard ballads sung and seen country dances danced; but never at the same time, if there was a fiddle to be had. The movement of our country dances is too rapid for the utterance of words. The English ballad has long been detached from dancing, and, since the old translation of the Bible, been confined to a lower order of song.'

Notwithstanding the opinion of Dr. Burney the fact remains incontrovertible that the majority of our old ballad tunes are dance tunes, and owe their preservation and identification to that circumstance alone—the words of old ballads being generally found without the music but with the name of the tune attached; the latter have thus been traced in various collections of old dance music. The quotation already made from Butler shows that the use of vocal ballads as dance tunes implied in the name had survived as late as the reign of Charles I.

The term 'ballad' is used loosely by modern poets and almost indiscriminately by modern composers both in vocal and instrumental music. Besides the many ballads among Schubert's songs, those of Zumsteeg and Carl Loewe may be referred to as having helped to fix the type of German ballad that reached its ultimate perfection in Brahms. In nearly all these instances the narrative idea is present, and the connexion of the word with the dance is more and more lost sight of. 'Choral ballads' are, generally speaking, musical settings for voices generally with orchestra of poems that would naturally be described as ballads; Stanford's setting of Tennyson's 'The Revenge' is a typical and successful example. 'Orchestral ballads,' specimens of which have been fairly abundant in recent days, are very often named from some well-known poem, of which they give instrumental illustration. Such are Somervell's 'Helen of Kirkconnel,' MacCunn's 'Ship o' the Fiend' and many others.

The four famous examples of 'Pianoforte ballades' by Chopin have the same rhythm of six-four or six-eight time; but beyond this it would be difficult to obtain any musical definition, and even this rhythmic feature is as often as not disregarded by other composers. Of the four ballades of Brahms, op. 10, one only is in six-eight time throughout. Liszt has written two ballades for piano solo. Vieuxtemps' 'Ballade and Polonaise' is one of the favourite pieces in the violin repertory, and from these comes the practice of applying the title to any piece of no very defined form but having a certain romantic feeling.

The word 'ballad,' as applied to certain kinds of modern English songs, implies a composition of the slightest possible degree of musical value nearly always set to three verses (neither more nor less) of conventional doggerel. 'Ballad Concerts' are carried on for the purpose of bringing such things before the notice of the public, although their programmes do not consist exclusively of what are sometimes called 'shop-songs.' W. H. C.; addns. M., etc.

BALLAD OPERA, a species of stage production, which, although peculiar to this country, nevertheless has certain features in common with early comic opera in France, Germany and Italy; indeed, it was Charles Coffey's 'The Devil to Pay,' a ballad opera of 1728, which, appearing in Germany about twenty years later as 'Der Teufel ist los,' was mainly responsible for the establishment of the 'Singspiel' tradition in that country. These operas are differentiated from opera in general in that the method of their composition was never considered sufficiently dignified to apply as a process for grand opera; and from comic opera proper by the fact that the dialogue was always spoken, and that the words of the lyrics were usually fitted to existing music. At first, as the name implies, the lyrics were adapted to English, Scotch or Irish ballad tunes of varying antiquity, but sometimes to

familiar tunes by English composers such as Locke, Purcell, or Eccles, and, on occasions, to tunes which were written and were popular about the time of production. Nursery-rhyme tunes were even employed, and, in at least one case, 'a puppet-show Trumpet tune.' The ballad tunes used can generally be traced in either Playford's *Dancing Master*, D'Urfey's *Pills to purge Melancholy*, Allan Ramsay's *Tea-Table Miscellany*, Thomson's *Orpheus Caledonicus*, or in Watt's *Musical Miscellany*. Sometimes French tunes were used (notably in the case of 'Polly'); while Handel and certain Italian composers, such as Geminiani, Corelli, and the Scarlattis, were also called upon for their minuets, sarabandes, and the like. When none of these were available or appropriate, some living composer supplied the music for an odd song or so; Henry Carey and Pepusch were thus employed, although an obscure musician, called Seedo, would seem to have done most of this occasional work. In the later ballad operas, when the surface strata of folk-song had been apparently exhausted, this last method began to obtain much more frequently, and it is at this stage of their evolution that they definitely anticipate the only type of native operatic production which has been convincingly popular in this country; namely, that having a comic or even farcical libretto, with the dialogue spoken, and the musical numbers separate, and chiefly existing as a comment on the stage situation at the moment.

The majority of these operas were produced at The Haymarket or the theatre in Lincoln's Inn Fields; but, in some cases, such as that of Thomas Walker's 'Quaker's Opera,' they were acted at theatrical booths in Bartholomew Fair.

The success of John Gay's famous 'Beggar's Opera' may fairly claim to have brought about the long series of ballad operas which followed from 1728 to about 1735. On Pope's authority, the author is said to have been influenced by a remark of Swift to the effect that a 'Newgate pastoral might make . . . an odd pretty sort of thing.' Gay no doubt realised this, but sought also to satirise, firstly, the Whig politicians then in power, and, secondly, the prevailing absurdities of Italian opera. Thus Walpole, in the person of Captain Macheath, is deliberately caricatured as a convivial and amorous highwayman, while the Italian producers and the foolish rivalries of the *prime donne* are referred to in the preliminary conversation between the Beggar and the Player:

'I have introduced the similes that are in all your celebrated operas: the swallow, the moth, the bee, the ship, the flower, etc. Besides, I have a Prison Scene, which the ladies always reckon charmingly pathetic. As to the parts, I have observed such nice impartiality to our two ladies that it is impossible for either of them to take offence.'

Other ballad operas which followed kept up this hostile and satirical attitude towards the Italian productions. Thus Fielding, in his 'Intriguing Chambermaid' refers to 'the barbarity of the town . . . who sacrifice (their) own native Entertainments to a wanton affected Fondness for foreign Musick,' while a certain character in J. Ralph's 'Harlequin's Opera' openly condemns the Italians for their 'squeaking Recitatives, paltry Eunuchs . . . and trills of insignificant, outlandish Vowels,' and maintains 'there is not a Country Parish Clerk, that has twang'd a couple of Staves thro' his Nose every Sunday . . . but knows more of true Musick than . . . all your Senesinos put together.'

In any case, the ballad operas were extremely successful, and their satirical references in this respect were received so sympathetically by the town, that Handel and Bononcini were scarcely able to keep Italian opera afloat. Oppressed as the Londoners were with the bombastic heroics of the Italians, the sudden appearance of gaolers, receivers, informers, pickpockets, highwaymen, and all the familiar corruptions of Newgate on an English stage was bound to be successful. 'The Beggar's Opera' ran for sixty-three nights (at that time an easy record), and was performed at all the principal towns in Great Britain, and even in Minorca. Hogarth published several engravings referring to it, songs and scenes from the opera were painted on fans, while the dress worn by Miss Lavinia Fenton (who acted the Polly of the first production) was adopted as a fashion model by all the ladies in the Town. It was at first refused by Colley Cibber, but then accepted by John Rich for performance at Lincoln's Inn Fields, where, with Gay, he made so much money that it was popularly said that the opera 'made Rich gay and Gay rich.' (See BEGGAR'S OPERA.)

Actually, in point of time, 'The Gentle Shepherd' of Allan Ramsay, which appeared three years before, must take place as the first ballad opera. This was a pastoral play with the lyrics adapted to well-known Scotch tunes. It is possible that Gay was directly indebted to it, and, indeed, if we consider Swift's remark seriously, it will be realised that 'The Beggar's Opera' only adds the 'Newgate' element to the 'pastoral' of Ramsay. Even this Newgate element itself can be traced back to a play which appeared in 1725 as 'The Prison Breaker.' This is written round the story of one of Jack Sheppard's famous escapes from Newgate, and was used by Thomas Walker (the original Macheath of Gay's opera) as the basis for his 'Quaker's Opera,' which closely resembles 'The Beggar's Opera' in its atmosphere and main situations. Ramsay's opera was revived later (in 1731) as 'Patie and Peggy,' with the dialect of Ramsay 'trans-

lated' into English couplets by Theophilus Cibber. This was sufficiently successful to embolden a certain Mr. Mitchell to bring out his 'Highland Fair' in which the music also consists 'wholly of Scotch tunes.' Besides Gay, and others already mentioned, the most notable ballad-opera writers were Colley Cibber and Henry Fielding. The latter was responsible for four in all, of which his 'Mock Doctor,' a clever adaptation of Molière's *Le Médecin malgré lui*, is perhaps the most interesting.

The first ballad-opera craze came to an end about 1735, although a few were written after that date. In 1762, however, 'Love in a Village' (which was founded on 'The Village Opera' of 1729, and the one-act version called 'The Chambermaid' which came out in the following year) appeared, and proved itself to be the beginning of a new series which persisted for some time. Here the evolution already hinted at in an earlier paragraph is almost brought about, as the tunes, although all constructed on the ballad model, are, in a large number of cases, entirely original. Among these operas, 'Midas,' with the libretto written by an Irishman, Kane O'Hara, is fairly well known and is both clever and amusing.

Below is a list of ballad-operas:

1725.	'The Gentle Shepherd' (all Scotch tunes)	Allan Ramsay.
1728.	'The Beggar's Opera'	John Gay.
	'Penelope'	John Mottley and Thomas Cooke.
	'The Quaker's Opera'	Thomas Walker.
1729.	'Love in a Riddle'	Colley Cibber.
	'Polly' (sequel to 'Beggar's Opera')	John Gay.
	'The Beggar's Wedding'	Charles Coffey.
	'The Cobler's Opera'	Lacy Ryan.
	'Flora' or 'Hob in the Well'	John Hippisley.
	'The Lover's Opera'	W. R. Chetwood.
	'Momus turn'd Fabulist'	Ebenezer Forrest.
	'The Patron'	Thomas Odell.
	'The Wedding'	Essex Hawker.
	'Damon and Phillida' (an adaptation of 'Love in a Riddle')	Colley Cibber.
	'The Village Opera'	Charles Johnson.
1730.	'The Chambermaid' (a one-act version of 'The Village Opera')	Edward Phillips.
	'The Fashionable Lady'	James Ralph.
	'Patie and Peggy' (adaptation of 'The Gentle Shepherd')	Theophilus Cibber.
	'The Female Parson'	Charles Coffey.
	'Robin Hood'	(Anon.)
1731.	'Silvia,' or 'The Country Burial'	George Lillo.
	'The Devil to Pay'	Charles Coffey.
	'The Jovial Crew'	Altered from Richard Brome's 'Jovial Crew,' 1641.
	'The Generous Freemason'	W. R. Chetwood.
	'The Lottery'	Henry Fielding.
	'The Highland Fair' (all Scotch tunes)	Mitchell.
	'The Amours of Billingsgate'	..
	'The Grub Street Opera'	(Revised version of 'The Welsh Opera.')
	'The Welsh Opera'	Henry Fielding.
1732.	'The Mock Doctor' (adapted from Molière's *Le Médecin malgré lui*)	Henry Fielding.
	'The Devil of a Duke'	Robert Drury.
	'The Humours of the Court'	(Not performed.)
	'Sequel to Flora'	John Hippisley.
1733.	'Achilles'	John Gay.
	'The Boarding School'	Charles Coffey.
	'The Decoy'	H. Potter.
	'The Lively Rake'	Edward Phillips.
	'The Mad Captain'	Robert Drury.
	'The Fancy'd Queen'	Robert Drury.
1734.	'Don Quixote in England'	Henry Fielding.
	'The Whim'	(From the French.)
	'The Intriguing Chambermaid'	Henry Fielding.
1735.	'Trick for Trick'	R. Fabian.
	'The Virgin Unmask'd'	Henry Fielding.
	'The Plot'	John Kelly (?).
	'The Merry Cobler' (sequel to 'The Devil to Pay')	Charles Coffey.
1736.	'The Lover his own Rival'	Abraham Langford.
1737.	'The Coffee House'	Rev. James Miller.
1738.	'The Disappointed Gallant'	Adam Thompson.
1739.	'The Tanner of York' (?)	..
1739.	'The Hospital for Fools' (?)	..
	'Britons, strike Home' (?)	..
1740.	'The Preceptor'	William Hammond.
1762.	'Love in a Village' (adaptation of 'The Village Opera') followed by	Isaac Bickerstaffe.
1767.	'Love in a City'	Isaac Bickerstaffe.
	'Lionel and Clarissa'	Isaac Bickerstaffe.
	'Midas' (and many others.)	Kane O'Hara.

For a further discussion and a much more extensive list of Ballad Operas compiled under a wider definition of the species, see an article by George Tufts in *The Musical Antiquary*, Jan. 1913; also another by W. Barclay Squire in the same magazine for Oct. 1910, giving a list of some 700 tunes used in these Operas.

J. M[K].

BALLARD, a family of printers, who for more than 200 years virtually enjoyed the monopoly of printing music in France. Their types were made in 1540 by Guillaume Le Bé, father-in-law of the first Ballard, (1) Robert, and remained in use as late as 1750. The first patent was granted to Robert Ballard by Henri II. in Feb. 1552, and he and his brother-in-law Adrien Le Roy printed many tablatures for the lute and other music. Robert Ballard, having died in 1606, was followed by his widow, Lucrèce Le Bé, and his son Pierre, who obtained a new patent in 1637.[1] At that time the house rose to its greatest height both in privileges and position. Then came Pierre's son Robert (2), who practised 1640–79, his widow and their son Christophe (*d.* 1715). Christophe was succeeded by his son Jean Baptiste Christophe (*d.* 1750), to whom a privilege had been granted in 1695. After 1750 the business was taken up by the widow and son, Christophe Jean François (*d.* 1765). The widow and son, Pierre Robert Christophe, of the last named continued to manage it till 1788.

One of the earliest specimens of their art of printing is 'Le Livre de tablature de guiterne d'Adrien Le Roy' (1561), and 'Les Psaumes de David mis en vers par Marot avec la musique' (1562). Lully's operas were printed by the Ballards—first about 1700, from movable types, and afterwards from engraved copper-plates.

F. G.; corr. and addns. M. L. P.

BALLARD, a distinguished lutenist, teacher of the lute, according to Jean Heroard's *Journal sur l'enfance et la jeunesse de Louis XIII*, of the future king, Louis XIII. He is probably the same as Robert Ballard, lute-player to Marie de Medicis and author of a lute-tablature printed 1611, now at the Bibliothèque Mazarine, Paris. He may also, possibly, be identified with the musician mentioned in Mersenne's *Harmonie universelle* as 'Monsieur Ballard.'

Bibl.—H. Prunières, *Le Ballet de cour en France avant Benserade et Lully*; Michel Brenet, *Notes sur l'histoire du luth en France* (Bocca, 1899. Extract from *R.M.I.* 5, 6). M. L. P.

BALLERINA (Ital.), a female ballet-dancer. (See Ballet-Dancing.)

BALLET-DANCING. A history of dancing would be an account of one of the most

[1] 1639, *Fétis*.

primitive and universal human activities. It is a law of the human organism that every impression conveyed to the brain through the outer or inner senses tends to provoke a movement in some part of the body. Dancing in its simplest form is the outcome of feelings of joy, grief, excitement or anger. By attaining measure and rhythm it becomes a more satisfying and calming vent for emotion, and also a means of corporate self-expression. Dancing is found almost everywhere to play a chief part in the religious rites of primitive peoples; it continued to do so in the civilisations of Egypt, Greece and Rome, and does so still in the countries of the East. As a social enjoyment, often closely connected with courtship and the manifestation of sexual attraction, it has taken shape in the popular and festal dances of different nations, while in antiquity war-dances, serving both as a drill to develop the muscles and a stimulus to the instinct of pugnacity, were widespread, and may be exemplified by the Pyrrhic dance of the Greeks.

Greek Dance and Roman Pantomime. — If we confine ourselves to dancing as a branch of art in Western countries our starting-point must be Greece, where philosophers and educators were agreed on its high value. From the testimony of Greek literature, and the mass of remains in sculpture, vase paintings and similar sources of information, we can see that, like all peoples, the Greeks knew originally a great variety of dances — religious, convivial and orgiastic, often of grotesque or even disgusting character. Such were the Cordax and Sikinnis, the rural Karpaia and the fighting Komastike. The real concern of the student of the art of dancing, however, is the evolution of a special ideal of grace and harmony in the æsthetic consciousness of Athens. While the more archaic dances doubtless survived in the Choruses of the satiric and comic stage, by degrees in the tragic Choruses, in religious dances and processions, and in the dances commended by educators to the practice of youth a more dignified ideal prevailed. The highest idea of it is to be gained from the Parthenon frieze of Pheidias. There we perceive a succession of movements designed to express the natural harmonies of the human body. Not only in actual dancing, but in walking and riding, the greatest freedom, balance and grace of which human limbs are capable are here shown with an almost scientific precision. The same principle is at work throughout Greek sculpture of the classical epoch. A norm is thus set which, on account of the fixity of the human body, has acquired a permanent authority; to it we shall find the art of the dancer returning to renew its inspiration, whenever it has for any length of time been diverted through social convention or some artificial ideal from its natural course.

A step forward, particularly in the mimetic form of dancing, was taken in that peculiar adaptation of the Greek theatre at Rome called pantomime. The Roman pantomime, which came into being in the early years of the Empire, is a Greek tragedy shorn of its chorus, and of its dialogues between two or three actors. A single actor remains, who, instead of speaking his lines, has them chanted by a singer, while he himself performs the gestures and steps expressive of the story. According to tradition this practice originated with the tragedian Livius Andronicus, who thus divided his rôle on an occasion when he was suffering from a failure of voice. The principal *pantomimi* of the Augustan age, Pylades and Bathyllus, acquired an enormous fame and popularity. The art was, however, decadent from its start; and its extreme lasciviousness and its connexion with gladiatorial sports (real executions and similar horrors were frequently portrayed on the Roman stage) made it an object of execration to the growing power of the Christian Church.

The Middle Ages and the Renaissance. — There is considerable difficulty in tracing the history of dancing, as of most forms of dramatic art and entertainment in the Middle Ages. Dancing and pantomime had been frowned upon by the Fathers of the Church, because of their corrupt associations with paganism, but the dance could not be extirpated from popular life or from the diversions of the great. Popular religious festivals and processions were inevitably accompanied by dancing; the organisation of the elaborate religious Mystery plays gave scope for ballets, and the Dance of Death originated in a form of dramatic procession just as the wild courses of the Flagellants bore traces of the old orgiastic dances. There is, further, a good deal of evidence that dancing penetrated into the services of the Church. It is held by some writers that the Mozarabic Rite in Spain allowed a dance to tambourines; a Council of Narbonne in the 16th century has regulations showing that in that day dancing still prevailed in the churches of Languedoc; the *seises*, the choir-boys of Seville Cathedral, continue to dance before the Sacrament in the cathedral on Corpus Christi Day (see *M.L.* vol. ii. p. 10). A notable event in the annals of the Middle Ages was the so-called *Ballet des Ardents*, a Court Masque of the reign of Charles VI. of France, in which the shaggy costumes of savages worn by the king and his companions accidentally took fire from a torch. Two nobles were burned to death, and the shock to the king affected his brain.

The Renaissance was an age of spectacles,

especially in courts and noble houses, where no festivity passed without a masque or display in which dancing had an important place. Ballets formed interludes in operatic pieces or poetic plays, and sometimes took the shape of independent pantomimic allegories. The impulse came from Italy, the home of the Comedy of Masks and many other types of reviving drama. In 1489, at the marriage of Gian Galeazzo Sforza, Duke of Milan, to Isabella of Aragon, a spectacle was produced which is a landmark in the history of the ballet. It was the work of a Lombard, Bergonzio di Botta, and in accordance with the classical taste of the time, presented Jason and the Argonauts with the Golden Fleece, Mercury, Diana and her nymphs, Orpheus, and other figures of myth and legend. It was talked about all over Europe, and set a fashion, particularly in France, where such interludes had been popular since the Middle Ages.

The Court of Louis XIV. — Catharine de Medicis stimulated the taste for Italian modes in this as in other matters, and in 1581 for the marriage of the Duc de Joyeux the famous 'Ballet comique de la Reine,' which depicted the fable of Circe, was played by the lords and ladies of the court. The fashion did not die out. During the reign of Henry of Navarre (1589–1610) more than eighty court ballets are said to have been produced; under Louis XIII. Cardinal Richelieu mounted a ballet on the prosperity of the Arms of France; Louis XIV. figured himself in many such entertainments, appearing for the first time at the age of thirteen in the 'Masque of Cassandra' in 1651, and for the last time in 'Flora' in 1669. His most famous rôle was 'Le Roi Soleil' in 'Le Ballet de la nuit' (1653). To an art so high in royal favour, the best talent naturally devoted itself. Molière furnished comedy-ballets, and Lully (*q.v.*) composed music. Bocan and Beauchamp were the maîtres de ballet of the period, and Ballon the most famous of the male dancers. Benserade's ballet, 'Les Muses' (1667), and Lully's magnificent 'Triomphe de l'Amour' (1681) may be taken as the climax of the era of great court ballets.

It was from the court that the ballet passed to the opera, to be developed by composers like Lully and Rameau (*q.v.*). There was a good deal in the stiff and ceremonious conventions of its original home to impede the freedom of its growth, and at first it lacked in the public theatres one important advantage which it had enjoyed at court. There ladies of the highest rank danced at the fêtes; whereas there were at first no professional *ballerine*, but only male dancers wearing masks. Lully contrived to break down this rule, and trained female dancers, of whom Mlles. Lafontaine and Prévost were among the first to be famous. But there was still much to be changed before the ballet could be considered free from the heavy and turgid fashions of the court of the Grand Monarque. Leather masks were still worn for a great number of characters, while the high heels, the full-skirted coats of the men and swelling *paniers* of the women, the towering perukes, plumes and helmets, impeded all rapid and natural steps or gestures.

French Ballet in the 18th Century. — The history of the ballet in the 18th century is the history of the breaking of these fetters. The age saw a succession of great dancers, to almost each of which tradition attributes some step forward. The first two to be mentioned are Mlles. Sallé and Camargo. To the first is attributed the audacity of dancing the ballet of 'Pygmalion' in London (1734) in a simple Greek robe of muslin, without the *paniers* or piled head-dress of the mode. The latter, who lived from 1710–70, and about whom many legends cluster, is credited with introducing the *entrechat à quatre* (the high springing step in which the feet are crossed in the air), and with inventing tights to permit of freer movement. But the real impulse to reform came in the middle of the century from the ballet-master Noverre (1727–1810), who published in 1760 his famous *Lettres sur la danse*. The aim of his work, which appeared at a time when the writings of Rousseau were spreading the ideal of a return to nature and to the virtues of classical antiquity, was to do away with the artificial conventions of costume, to simplify steps and make the expression of feeling and narration of a fable by pantomime more important than the mere display of virtuosity, and in general to inculcate a return to that classical norm of beauty which has been already described. Such drastic reforms could only be carried slowly, but Noverre laboured steadily at them, especially after becoming maître de ballet to the Duke of Würtemberg at Stuttgart. To his principal pupils many improvements are attributed. The name of Mlle. Heinel is associated with the pirouette, a step that presupposes freedom from the heavy trappings of the Louis Quartorze school, and that of Pierre Gardel with the abandonment of the mask, which he made a condition of his taking the place of Gaetan Vestris, when the latter was suddenly indisposed from playing the chief part in Rameau's 'Castor and Pollux' on Jan. 21, 1772. Besides Pierre Gardel (1758–1840); his brother Maximilian (1741–87), and Dauberval (1742–1806) were the most distinguished of the immediate successors of Noverre. To them must be added the two famous male dancers, Gaetan Vestris (1729–1808) and his son Auguste (1760–1842), known

as 'le dieu de la danse.' Among the successors of La Camargo, Madeleine Guimard (1743–1816), whose life has been written by E. de Goncourt, may be counted the most brilliant. A lithograph of the time portrays her in sandals and soft flowing skirt, with her hair hanging loose, except for a simple fillet. It may serve as a landmark in the change of ideals.

The 19th Century. Romanticism and Realism. — The transformation in sentiment, taste and costume wrought by the French Revolution completed the reform that the school of Noverre had begun. Both the Republic and the Empire were based on the models of classical antiquity, and the latter especially, in architecture, furniture and dress set the fashion of copying Grecian modes. Careless of the climate, women began to dress in sandals, low-necked gowns, gauze draperies, and other adaptations of ancient costume. This mode at least liberated the dancer and made it possible to turn again to the Pheidian model of grace and rhythm. The grand age of ballet-dancing was at hand. Its interpreter was Carlo Blasis (*b.* 1803), whose *Code of Terpsichore*, published in London in 1828, where he was then working at His Majesty's, is, as its name foreshadows, a manual of dancing and pantomime based entirely on the classical ideal. This is especially shown by the illustrative figures, which are reminiscent of the work of Flaxman, and show the tendency and limitations of the revival. The strictly classical epoch had passed into the era of Romanticism, but without serious change of principle, when we reach the greatest name in the history of ballet, Marie Taglioni. She was born in 1804 in Stockholm, of an Italian father and a Swedish mother, made her début in Paris in 1827 and practically founded a new æsthetic of dancing by her blend of classic simplicity and ethereal charm. With Taglioni the modern ballet dress is seen in its first stage. It is the Grecian type — wreathed hair, low-necked body, diaphanous skirt and sandals. There are, however, two noteworthy developments. The *caleçon* of Camargo has now been perfected by the flesh-coloured *maillot* (a kind of tights attributed to a costume designer at the Opéra named Maillot), and the skirt has been slightly shortened, though not yet far above the ankles, and spread out from the waist, in order to set free and to exhibit the limbs of the dancer. One further point, the most important of all, will be observed by any one who inspects the portraits of Taglioni. She is usually shown, posed on the *pointe*, that is to say, on the extreme tip of the toe, an attitude only possible to the wearer of a flexible sandal with a stiffened toe to it. It is not possible to say whether the use of the *pointes* was an innovation of Taglioni, but it is not a characteristic in drawings earlier than her age, and it is hard to see how it could have been introduced so long as the high-heeled shoes of the 18th century were worn by the *ballerina*. The most obvious result of this important reform was to endow the dancer with a lightness, a rapidity in turning, and a general look as of a figure floating over rather than touching the earth, which appealed to the Romantic age with its passion for sylphs and disembodied spirits. It also lowered the status of the man dancer, who could not achieve this effect from the shape of the male instep, and proved the beginning of a cult of pure technique that was to lead the ballet far as the century advanced. For the first time with the perfect freedom of her limbs and body and the artificial support of the ballet-sandal the dancer could make herself an æsthetic gymnast.

Taglioni's most famous part was that of 'La Sylphide.' Her chief rival in her own virginal and rather melancholy style was Carlotta Grisi, for whom Theophile Gautier, the Coryphæus of the Romantics, wrote his rather ghastly ballet of 'Giselle' with its episodes of madness and death and its dance of wraiths in the graveyard. Of Taglioni's other competitors, Fanny Cerrito was of a less tragic cast — she is remembered especially in 'Le Lac des Fées' — while Fanny Elssler, a hot-blooded woman of reckless temperament, was less a *ballerina* than a 'character dancer,' excelling in Spanish dances like the *Cachuca*. The climax of the Romantic ballet was the famous *pas de quatre* danced at His Majesty's in 1845 by the four great *ballerine* of the Taglioni school, Marie Taglioni, Carlotta Grisi, Fanny Cerrito and Lucille Grahn. Taglioni died in extreme old age and poverty in 1884.

After her retirement fresh changes came over the ballet. On the one hand, the tendency to transform a classical discipline into a technical virtuosity went forward apace. Although the fundamental æsthetics of ballet-dancing have always remained Greek, it has grown so hardened and stylised as to conceal from the ordinary observer its origin. Physical strength and dexterity in performing difficult and complicated motions of the feet and legs have usurped the place of the original Pheidian ideal, which aims simply at displaying the inherent beauty possible in human poses and motions. In order that the audience, like judges at a gymnastic competition, may appreciate the degree of exactness with which the steps are performed, the flowing skirt of the classical mode has been gradually cut away to a mere wisp (the *tutu*) encircling the waist of the dancer. Concurrently with this elaboration of technique, there proceeded a change in the character of ballets, which reflected the transition in literature from the Romantic to

the Realistic school. The tendency now was to write long spectacular librettos, giving scope for the newest devices of scientific stage mechanism, and where possible dealing with some modern or realistic theme. A celebrated instance of this development is the 'Excelsior' ballet of Manzotti, which traces the growth of science through the ages, and lays the scene of grand *ensembles* in such places as the New York telegraph office, or the Suez Canal. Another celebrated Manzotti ballet was a vast mythological reconstruction entitled 'Amor.'

The ballet in England in the later 19th century, finding its home in the London theatres of variety, as the Empire and Alhambra, was largely of this realistic type, as shown by titles like 'Round the Town,' 'The Press,' or 'By the Sea.' Its artistic level was, however, considerably raised by the versatile fancy of the principal English ballet designer, C. Wilhelm. In France there lingered something of the old Romantic traditions in the work of DELIBES (*q.v.*). 'Coppelia' (1870), and 'Sylvia' (1876), his two principal works, are of the poetic school, and we may rank with them Coppée and Widor's Breton ballet, 'La Korrigane' (1880). Among the notable *ballerine* of this latter epoch are to be reckoned Rosita Mauri, creator of 'La Korrigane,' Rita Sangalli, creator of 'Sylvia,' and at a later date at the London Empire the brilliant Danish dancer, Adeline Genée.

THE REVIVAL FROM RUSSIA. — A certain discredit hung over the ballet at the opening of the present century, owing to the apparently lifeless formalism into which it had sunk. But about 1909 an astonishing revival was apparent, the impulse to which came from Russia. To explain how this was possible it is necessary to look back a little. One of the results of the introduction of Western culture into Russia by Peter the Great was a passion for Western dancing, which the autocrat introduced at his court. In 1735 the Empress Anne introduced the ballet, with Areja for musical director and Landé as maître de ballet. The first plan adopted was to train military cadets for dancing, but it was soon perceived that ballet-dancing is a life's work, and accordingly a school was opened to which boys and girls of the poorer classes were admitted, receiving maintenance and education in return for their services. Such was the origin of the Russian Imperial school of ballet, which received a powerful impetus when Catherine II. built and organised the Grand Theatre, and again when in 1802 the brilliant French ballet-master Didelot took over the direction at St. Petersburg. The enthusiasm for dancing which inspired the society and court of Russia, and the concentration of artistic efforts facilitated by the Imperial school, made the Russian ballet, in spite of its isolation from the rest of Europe, an instrument of high artistic potentiality. Marius Petipa (1819–1910), who went to Russia in 1847, and became maître de ballet in 1862, was the dictator who maintained its vitality, though on strictly conservative lines, during the latter half of the 19th century. In 1888 he was seconded by Enrico Cecchetti, a brilliant Italian dancer and mime, whose career forms a link between the old school and the new. The foundation of the new school is properly to be dated from the alliance between the wealthy amateur Serge Diaghilev and the dancer Michel Fokine, which resulted in the formation of a company that gave its first season at Paris in 1909, and acquired in Western Europe (which did not realise that it was a secession from the Imperial school), the title of 'Le Ballet russe.' Fokine's ideals had been much influenced by the work of an American dancer standing apart from the regular ballet and its technique, Isadora Duncan. Her method is not, like that of the ballet, an adaptation of the principles implicit in Greek dancing, but a strict imitation of the Greek dance, as we are able to study it to-day in plastic remains. She and her school dance barefoot, or in sandals without the use of *pointes*, and replace the stiffened ballet skirt by the ordinary hanging Greek *chiton*. Within the range prescribed by such a method, Isadora Duncan, thanks to her personal grace, achieved results that appeared to throw into the shade the more mechanical methods of the trained ballet-dancers. The ideal of Fokine seems to have been, not precisely to abandon the ballet tradition in favour of the Neo-Greek mode, but to recall the ballet to its own first principles before its technique had been rigidified. In a certain sense his ballets are a return to Taglioni, and indeed one of the most famous of them is called 'Les Sylphides' and danced in skirts copied from those of the Taglioni epoch. But the reforms of the Diaghilev ballet were not restricted to dancing technique. Efforts were made to raise the level of ballet music, partly by adapting the works of eminent composers, Chopin in 'Les Sylphides,' Schumann in 'Carnaval,' Rimsky-Korsakov in 'Sheherazade' — partly by inducing young composers of talent to follow Tchaikovsky's example in producing 'La Belle au Bois Dormant,' in 1890, and write for ballet, an endeavour of which the most important results were the 'Pétrouchka' and 'Oiseau de feu' of STRAVINSKY (*q.v.*). 'Pétrouchka,' a tragedy of living marionettes, owing to its combination of musical excellence and expressive mimicry, is considered by many critics to be the highest achievement of the Diaghilev ballet. Another reform which belongs more to the history of scenic art than to that of dancing was the revolution in scenery and costumes wrought by Léon Bakst and his collaborators, which

swept away the heavy realistic scenery of the age of 'Excelsior,' just as the substitution of short ballets in one scene for the ponderous five-act 'machines' of the later 19th century marked, as a Russian critic, M. Svétlov, has observed, the transition from the Realistic to the Impressionistic age. The principal *ballerina* of the Diaghilev troupe was Tamar Karsavina, while among the men Adolf Bolm as *danseur mime* and the veteran Cecchetti as pantomimist and teacher of the ballet were both prominent.

But the most important figure in the movement after Fokine was the principal male dancer, W. Nijinski, a young Pole endowed with a physical agility resembling that of Vestris, who was vulgarly said to float at will in the air, and an intense dramatic talent in pantomime. The latest phase in the history of dancing was initiated by this remarkable man. Nijinski had never admired the traditional Pheidian ideal of the ballet. His taste was affected by the barbaric dances of the Slav warriors and peasantry and also by Oriental ideals, as he showed by his remarkable performance as the negro in 'Sheherazade.' Valuing strength and significance above grace, he felt an affinity in Cubist and post-Impressionistic art, and sought to create a new style of dancing based on the same æsthetic principles. 'L'Après-midi d'un faune,' a living frieze of a Cubist design, and the mysterious 'Sarce du printemps,' composed by Stravinsky, and portraying a feast of primitive barbarians, were his chief attempts to express his ideas. They are open to the objection that the freedom enjoyed by a painter in conventionalising the human figure and human movements is not shared by the ballet-master whose material is the actual human body, and not any abstract design suggested by it. Nijinski's early break-down in health prevented the development of his ideas. Of later ballet designers, such as L. Massine, who have continued the fashion of approximating the ballet to a living picture, the time has not yet come to speak.

Besides the Diaghilev company, we may mention some important Russian dancers of later years, unconnected on the whole with that enterprise, though contemporary with it. Among them Mme. Anna Pavlova has a place of her own. Her technique, though finished, is always carefully subordinated to the poetical inspiration of her dancing; she has a grace in the use of *pointes* that vindicates them from the common criticism of being unnatural, and her delicate personal charm, which shows to advantage more in a solo number than in a ballet with other characters, has given her an immense and lasting personality. During the same period English audiences had also an opportunity of studying the methods of two great dancers of the strictly traditional school, Mme. Catherine Geltzer, perhaps the most esteemed of all *ballerine* among technical connoisseurs, and the last Tsar's brilliant favourite, Preobrajenska, who met her death in the Russian Revolution. D. BALLETS (1) (Ital. *balletti*), compositions of a light character, but somewhat in the madrigal style, frequently with a 'Fa la' burden which could be both sung and danced to; these pieces, says Morley (*Introduction*), were 'commonly called Fa las.' Gastoldi is generally supposed to have invented or at all events first published ballets. His collection appeared in 1591, and was entitled,

'Balletti a cinque voci, con li suoi versi per cantare, sonare et ballare.'

The first piece in the book is a musical 'Introduzione al Balletto,' with directions for the performers:

'Su cacciam man a gli stromenti nostri, e suoniam et cantiam qualche balletti.'

These must, therefore, have had both instrumental and dancing accompaniments. In 1595 Morley published a collection of 'Ballets for 5 voices,' professedly in imitation of Gastoldi, and was followed 3 years later by Weelkes, with 'Ballets and Madrigals to 5 voices' (see Fellowes, *Eng. Madr. Sch.*).

'Balletto' is used by Bach for an allegro in common time. Two specimens are in the four inventions for violin and clavier, included in the B.-G. vol. xlv. (i.), pp. 173 and 182. W. H. C.

(2) For the stage use of the term see BALLET-DANCING.

BALLETTI, BERNARDIUS, a hitherto unknown 16th-century lutenist, who wrote 'Intavolatura de lauto . . .,' lib. 1 (Venice, Gardano, 1554). E. V. D. S.

BALLING, MICHAEL (*b.* Heidingsfeld a/M., Aug. 29, 1866; *d.* Darmstadt, Sept. 1925), a conductor whose career was closely associated with the works of Wagner and their presentation at Bayreuth.

Educated at the Music School of Würzburg, Balling began his career as a viola-player, and it was in that capacity that he first entered the orchestra of the Festspielhaus at Bayreuth. He became assistant conductor there in 1896, and was among the principal conductors of

the later festivals from 1906–14. Early in his career, however, before settling down to a series of musical appointments of increasing importance in Germany, he travelled. He went to New Zealand in 1892, where he founded a Music School and taught for over two years at Nelson. This experience stood him in good stead later when he came to England. He had reached an assured position in Germany as a conductor with his appointment at Carlsruhe in succession to Mottl, and he had visited Barcelona to conduct the first performances of 'Die Meistersinger' there, and had conducted a Beethoven Festival in Rome (*Mus. T.*, 1913, p. 9), when, on the recommendation of Richter, he undertook important work in England. In 1910 he conducted the performances of 'The Ring' in English, given by Denhof at Edinburgh, which were actually the first production of 'The Ring' as a whole in Scotland. In London he conducted the performances of Gluck's 'Orpheus,' given by Marie Brema at the Savoy Theatre in the same year. He was, therefore, already favourably known here when in 1912, Richter having retired, Balling was appointed to succeed him in conducting the Hallé Orchestra at Manchester. He gave a number of outstanding performances of large works such as Berlioz's Te Deum and Liszt's Faust Symphony, and generally conducted the Society with marked success until 1914. He even brought the orchestra to London, a rather rare event, for some Sunday concerts in 1913. From 1919 he was musical director at Darmstadt, and was engaged in the editorship of the collected works of Wagner for Breitkopf & Härtel (*Riemann*).

C.

BALLO IN MASCHERA, IL, opera in 4 acts; libretto by Somma; music by Verdi; produced Rome, Feb. 17, 1859; Paris, Théâtre des Italiens, Jan. 13, 1861; New York, Feb. 11, 1861; London, Lyceum (in Italian), June 15, 1861.

BALTAZARINI (Baldassaro da Belgioioso) (*d. circa* 1587), an Italian violinist, who came to France about 1555 as leader of the violin band, despatched by Marshal de Brissac to Catherine de Medicis. He is known to have been in her service as *valet de chambre* in 1567 and in 1585, and to have fulfilled the same function to Mary Stuart, Charles IX., the Duke of Alençon, Henri III., whose house he left in 1584. He changed his name into Balthasard de Beaujoyeulx. He was officer to Catherine de Medicis and equerry, with the title of 'Seigneur des Landes,' at the time of his death. His son Charles de Beaujoyeulx succeeded him in his first post, and his wife married again in 1595. From contemporary evidence he appears to have been a good musician with an ingenious mind. His reputation as a violinist was great, 'the best violin-player of Christendom,' according to Brantôme. His name is linked with the creation of the 'Ballet comique de la Reine . . .' (Ballard, 1582), produced for the marriage of the Duke de Joyeux and Mlle. de Vaudemont, on Oct. 15, 1581. The subject of this entertainment was the witchery of Circe vanquished by the King of France. The preface of the work gives a general illustration of Beaujoyeulx's aims; he proclaims himself to be the inventor of the dramatic 'ballet,' which was to lead gradually to the conception and foundation of opera. It is a collective production. The spoken part, sketched out by himself, was turned into verses by the King's almoner, de la Chesnaye; the decorations had been executed by Jacques Patin, painter to the King. The composers of the music were Lambert de Beaulieu, renowned for his bass voice, and 'Maistre Salmon,' who was 'chantre et valet de chambre du Roi.'

Nothing is known as to the contribution of each one in the different parts of the ballet, but it is not unlikely that Beaujoyeulx invented the dance tunes.

Several numbers of the 'Ballet comique' are given by Burney (*General History of Music*); a vocal score was published by J. B. Weckerlin in the *Collection des chefs-d'œuvres de l'opéra français* (Theod. Michaelis). No MSS. of Baltazarini have been preserved.

Bibl.—L. Cellier, *Les Origines de l'opéra et le ballet de la Reine*; Romain Rolland, *Histoire de l'opéra en Europe avant Lully et Scarlatti* (1895); Henry Prunières, *Le Ballet de cour en France* (1914).

BALTIMORE, see Peabody Concerts.

BALTZAR, Thomas (*b.* Lübeck, *c.* 1630; *d.* 1663), the finest violinist of his time, and the first really great performer heard in England.

He came to England in 1655 and stayed with Sir Anthony Cope, of Hanwell, Oxon. Evelyn heard him play, Mar. 4, 1656, and has left an account which may be read in his diary under that date. Anthony Wood met him on July 24, 1658, and

'did then and there to his very great astonishment, heare him play on the violin. He then saw him run up his Fingers to the end of the Fingerboard of the Violin, and run them back insensibly, and all with alacrity, and in very good tune, which he nor any in England saw the like before . . . Wilson thereupon, the public Professor, . . . did, after his humoursome way, stoop downe to Baltzar's Feet, to see whether he had a Huff on; that is say, to see whether he was a Devill or not, because he acted beyond the parts of a man. . . . Being much admired by all lovers of musick, his company was therefore desired; and company, especially musicall company, delighting in drinking, made him drink more than ordinary, which brought him to his grave.'

In 1661 Baltzar was appointed leader of the King's celebrated band of 24 violins. He is entered on the Register as 'Mr. Thomas Balsart, one of the violins in the King's Service, July 27, 1663.'

Baltzar did much towards placing the violin in England in its present position, at the head of all stringed instruments. Playford's 'Division Violin' contains all that appear to have been

printed of his compositions, but Burney speaks in high terms of some MS. solos in his possession; and a set of sonatas for a 'lyra violin, treble violin and bass viol' were sold at the auction of Thomas Britton the 'musical small-coal man.' A prelude and an allemande were printed in the *M.f.M.* xx. 5; 4 suites for strings are in the Bodl. Mus. Sch., and on one of them, dated 1659, is written 'Mr. Baltzar, commonly called the Swede.' Baltzar is buried in the cloister of Westminster Abbey.

M. C. C.

BANASTER, GILBERT, see BANESTRE.

BANCHIERI, ADRIANO (*b.* Bologna, *c.* 1567; *d.* there, Convent of San Bernardo, 1634), pupil of Guami, the organist of the Cathedral of Lucca and afterwards of S. Marco in Venice. He was organist of S. Michele in Bosco near Bologna in 1599, and from about 1600–07 was at Imola, as organist of Santa Maria in Regola. In 1607 he was at Monte Oliveto, and on many of his works he is described as 'monaco olivetano.' From the title-pages of some it would appear that in 1609–13 he was again organist of San Michele in Bosco, and in 1613 returned to Monte Oliveto, where he became abbot. He was the founder of the 'Accademia Florida' which met at Bologna from about 1623 (*Q.-L.*).

He was great in all departments, theory, the Church and the theatre. His most important theoretical work is probably his 'L' organo suonarino' (Amadino, Venice, 1605), which was often reprinted. It contains the first precise rules for accompanying from a figured bass—afterwards published separately by Lomazzo at Milan. (See THOROUGH-BASS.) In 'Moderna practica musicale' (Venice, 1613),[1] he treats of the influence of the basso continuo on the ornaments in singing, and the alterations necessary in consequence thereof. At the same time he mentions the changes in harmony and tonality which were at that time beginning to prevail, as incomprehensible. In addition to his many compositions for the Church, masses, 'Ecclesiastiche sinfonie,' etc., Banchieri wrote what were then called 'intermedi' for comedies. In his 'La pazzia senile,' published at Venice in 1598 and reprinted at Cologne—itself a kind of imitation of the 'Amfiparnasso' of Orazio Vecchi—the transition from the madrigal to the new form of the intermedio is very obvious; the work may be almost called the first comic opera. He afterwards composed a pendant to it under the name of 'La saviezza giovenile,' published by Gardano, Venice, 1628. Other analogous works were 'Il zabaione,' 1603, 'La barca di Venezia a Padua,' 1605, and 'La fida fanciulla, commedia esemplare, con musicali intermedi apparente de inapparenti,' Bologna, 1628 and 1629. Banchieri was a poet as well as a musician, and wrote comedies under the name of Camillo Scaligeri della fratta. In his *Cartella musicale* (1614) we find a project for the foundation of an academy of science and art in his monastery at Bologna, and a *Direttorio monastico di canto fermo* (1615) appeared in 1615. Ten of his organ pieces are printed in vol. iii. of *L' arte musicale in Italia.*

F. G., addns.

[1] Not mentioned in *Q.-L.*

BAND, a combination of various instruments for the performance of music. The old English term was 'noise.' Generally speaking, the French word, *bande*, was given to any group of instruments. It was specially applied to the 'Petits Violons' introduced by Lully, and to the 'Vingt-quatre violons' (*grande bande*) in the reigns of Henri II., Louis XIII. and Louis XIV. Charles II. of England had his 'four-and-twenty violins,' and the word doubtless accompanied the thing. It first appears in a MS. order ('Ld. Chamberlain's Warrt. Bks. May 31, 1661') that the King's band of violins shall take instructions from Hudson and Mell (see also State Papers, Domestic, lxxvii. No. 40, and lxxix. Aug. 19, 1663). It is not mentioned by Johnson (nor indeed in Latham's Johnson), Richardson or Webster.

The various kinds of bands will be found under their separate heads, viz. BRASS BAND; ORCHESTRA; KING'S BAND OF MUSIC; WIND BAND. Bandmaster and bandsmen are respectively the leader and members of a Military Band. G.; addns. M. L. P.

BANDERALI, DAVIDDE (*b.* Lodi, Jan. 12, 1789; *d.* Paris, June 13, 1849), a buffo tenor singer, which part may be said to have been created by him.

He first appeared in 1806, but soon relinquished the stage, and became professor of singing in the Conservatoire first of Milan, and afterwards—on the recommendation of Rossini—in that of Paris (1828). In both places he trained singers who became celebrated, and published some songs. M. C. C.

BANDINI, UBERTO (*b.* Rieti, Umbria, Mar. 28, 1860), composer, who studied at the Liceo S. Cecilia (Rome) under Tergiani and Sgambati. His overture 'Eleonora' (Crystal Palace, Mar. 12, 1881) won the prize among 87 competitors in a musical competition at Turin. He next produced a successful symphony at the Roman Royal Philharmonic Society's concerts, which was followed by 'Il Baccanale' for orchestra, produced at Perugia, Oct. 1880. W. B. S.

BANDORA, see PANDORE.

BANDURRIA (Gr. πανδοῦρα), a Spanish instrument, not unlike the old English CITHER (*q.v.*) in shape, with six double strings tuned in fourths from $g\sharp$ to a''. The strings may all be of gut, or three may be wire-wound; they are usually played with a plectrum. The instrument has been known in Spain since the beginning of the 16th century, when it had only 3 strings. At the present day it is in common use in the south, generally in

conjunction with the LAUD and the GUITAR (*q.v.*), the trio of these instruments making an admirable ensemble (with tone like a loud, clear harpsichord), for the outdoor performance of music, including pieces by Falla, Albéniz and Domenico Scarlatti. (See MANDOLINE.)

J. B. T.

BANESTRE (BANASTER), GILBERT, succeeded Henry Abyngdon as master of the children of the Chapel Royal, and,

'according to the Act of Resumption of the 22 Edward IV. (1482–83) was protected in the enjoyment of the same salary as his predecessor, for "the exhibition, instruction and governaunce of the children of the chapelle."'[1]

References to grants made to Banestre are found in the Calendar of Patent Rolls (1479 and 1482).[2] He was author of *The Miracle of St. Thomas*, MS. in Benet College Library, of which an account is given by Warton (*ibid.*). The Fayrfax MS. (B.M. Add. MSS. 5465) contains 'My feerful dreme' by him. A Motet *a* 3 'Vos secli justi judices' and an 'Alleluja laudate' *a* 2 are in the Pepys Collection (1236) in the Magdalene College Library, Cambridge. A 5-part 'O Maria et Elizabeth' is in the Eton College Library.

G. E. P. A.

BANISTER, HENRY CHARLES (*b.* London, June 13, 1831; *d.* Streatham, Nov. 20, 1897), composer and teacher of harmony.

He was the son of John Banister, a violoncellist, entered the R.A.M. at the age of 15, and was a pupil of Cipriani Potter there; he was subsequently sub-professor, and from 1853 professor of harmony. From 1880 he was professor at the Guildhall School of Music, and taught at the Royal Normal College for the Blind. He was a prominent member of the Incorporated Society of Musicians, and a member of the Board of Musical Studies in Cambridge, etc. His compositions include symphonies, overtures, pianoforte pieces and songs, but none of them have the importance that attaches to his work as a theorist. His *Musical Art and Study*, 1888, went through 3 editions; his *Life of Sir George Macfarren*, 1892, is a sympathetic and instructive work; and in the year of his death was published *The Harmonising of Melodies*, a very useful little treatise. Seven of the lectures delivered between 1891 and 1897 were published under the title of *Interludes*, and edited by Stewart Macpherson, in 1898.

M.

BANISTER, (1) JOHN (*b.* 1630; *d.* London, Oct. 3, 1679), a violinist and the first musician to establish lucrative concerts in London.

He was the son of one of the waits of the parish of St. Giles'-in-the-Fields, London. He received the rudiments of his musical education from his father, and arrived at great proficiency on the violin. He was noticed by Charles II., who sent him to France for improvement; and on May 3, 1662, he was appointed leader of the King's band. The State Papers inform us, '1663, Mr. Banister appointed to be chief of His Majesty's violins.' Pepys, in his Diary, under the date Feb. 20, 1666–67, says:

'They talk how the King's violin, Banister, is mad that a Frenchman is come to be chief of some part of the King's musique.'

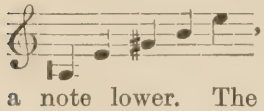
The Frenchman here alluded to was the impudent pretender Louis Grabu. It is recorded[3] that Banister was dismissed the King's service for saying to Charles II., when the King called for the Italian violins, that 'he had better have the English.' He established public concerts in London which were made known through the medium of the *London Gazette*. On Dec. 30, 1672, there appeared the following advertisement:

'These are to give notice that at Mr. John Banister's house, now called the Musick-school, over against the George Tavern in White Friars, this present Monday, will be musick performed by excellent masters, beginning precisely at four of the clock in the afternoon, and every afternoon for the future, precisely at the same hour.'

Many similar notices may be found in the same paper (1673–78), from which it appears that Banister carried on these concerts till near the period of his death. He was buried in the cloisters of Westminster Abbey. Banister wrote the music to the tragedy of 'Circe,' written by Dr. Charles Davenant, eldest son of Sir William Davenant, performed at the Duke of York's Theatre in 1677. Downes (*Roscius Anglicanus*, 1703) calls it an 'opera' and says:

'All the musick was set by Mr. Banister, and being well performed, it answered the expectation of the company.'

One of the songs is printed in the second book of 'Choice Ayres and Songs,' 1679, and a MS. copy of the first act is preserved in the library of the R.C.M. He contributed four numbers to the collection called 'The Ariel's Songs in the Play call'd the Tempest,' which also contained a song by Humfrey and one by Hart.[4] He contributed to Playford's 'Courtly Masquing Ayres,' 1662, and to Lock's 'Melothesia,' 1673; two slight compositions of his in two parts are included in some 'Lessons for Viols or Violins,' appended to a small volume entitled 'New Ayres and Dialogues,' 1678. Some of his compositions, including a song from Davenant's 'The Man's the Master' (1673), are in MS. at Christ Church, Oxford.



(2) JOHN (*d.* London, 1735), son of the above, was educated in music under his father, and attained great excellence as a performer on the violin. He was one of the 'musicians' of Charles II., James II., William and Mary and Anne; and, at the beginning of the 18th century, when Italian operas were first introduced in English form into this country, he occupied

the post of principal violin. He composed some music for the theatre, and, in conjunction with Godfrey Finger, published a small collection of these pieces. He was also a contributor to Henry Playford's 'Division Violin,' 1685, the first printed book for the violin put forth in England. He resided for many years in Brownlow Street, Drury Lane, where he died. There is a fine mezzotint engraving of him by Smith.

E. F. R.; addns. and corr. J. F. R. S., W. B. S., etc.

BANJO (American), an instrument of the guitar kind, but with a long neck, and a body like a drumhead, of parchment, strained upon a hoop to the required writhe or degree of stiffness for resonance. There is no back to it. Banjos have 5, 6, 7 or 9 catgut strings, the lowest in pitch being often covered with wire. The chanterelle or melody-string is called from its position and use the 'thumbstring,' and is placed not, as in other finger-board instruments, highest in series, but on the bass side of the lowest-tuned string, the tuning-peg for it being inserted halfway up the neck instead of in the head. The length of the thumbstring is given as 16″ from the nut to the bridge, and that of the others 24″. The 5-stringed banjo is tuned either

, the last note being the thumbstring, or in G, a note lower. The 6-stringed is tuned

. The 7-stringed introduces the middle C in the lowest octave, and the 9 has 3 thumbstrings but is rarely used. The pitch

of the banjo, like that of the guitar, is an octave lower than the notation. 'Barre' designates the false nut made by placing the first finger of the left hand across the whole of the strings at certain lengths from the bridge to effect transposition. (See Capo Tasto.)

As to the origin of the banjo, the existence of instruments of the lute or guitar kind implies a certain grade of knowledge and culture among the people who know how to stretch strings over sound-boards, and to determine the required intervals by varying the vibrating lengths of the strings. Such instruments found in use by savage or very uncivilised peoples suggest their introduction through political or religious conquest by a superior race. The Arabs may thus, or by trade, have bestowed a guitar instrument upon the negroes of Western Africa, and the Senegambian 'bania' be, as Carl Engel suggests (*Musical Instruments*, 1874, p. 151), the parent of the American negro's banjo. Others derive the name from Bandore. Jefferson, in 1784, says that the instrument is known to the negroes as 'Banger.' It was also up to 1830 known as 'Bonja.' A. J. H., rev.

BANKS, Benjamin (*b.* 1727; *d.* 1795), violin-maker, one of the most important of the English makers. He was reputed to be a pupil of Peter Wamsley of London and possibly Joseph Hill was his fellow-pupil. It had hitherto been the fashion among the London makers to follow the model of Jacobus Stainer, and Banks showed some originality in adopting the instruments of Amati as his pattern, although in a modified form, for his violins are smaller than those of the Amatis, and there are other notable differences. Banks was a good all-round craftsman and produced many meritorious instruments; his violas, however, are too small, but his violoncellos especially are excellent. It is unfortunate that he, like so many of the makers of this period, was so slow to recognize the supreme excellence of the Stradivari model. E. H. F.

BANTI, Brigitta Giorgi (*b.* Crema, Lombardy, 1759; *d.* Bologna, Feb. 18, 1806), a famous opera singer.

She was said to have been the daughter of a Venetian gondolier and began life as a 'cantante di piazza,' or street-singer, receiving some little instruction at the expense of a rich amateur. At the age of 19 she set out for Paris to seek her fortune, supporting herself by singing at inns and cafés by the way. De Vismes, director of the Opéra, happening to hear a splendid voice on the Boulevard at Paris one evening, stopped at the café where the girl was singing, and slipping a louis into her hand desired her to come to him at the Opéra the next day. Here, upon hearing an air of Sacchini twice or thrice, she astonished the director by singing it perfectly from beginning to end. He engaged her for the Opéra, where she made a triumphant début (Nov. 1, 1776) in a song between the 2nd and 3rd acts of 'Iphigénie en Aulide.' Agujari having left London, the managers of the Pantheon gave the young singer—still called Giorgi—an engagement, on condition that £100 a year should be deducted from her salary for the cultivation of her voice. Sacchini was her first master, but he soon gave her up in despair. Piozzi followed, with no better success. Abel was the last. She was at this time, without doubt, a very bad singer with a very beautiful voice; and of so indolent and careless a disposition that she never could be made to learn the first rudiments of music. In 1780 she left England, and sang to enthusiastic audiences at several foreign courts. Lord Mount-Edgcumbe heard her at Reggio in 1785, where, he says, her singing was delightful. In 1794 she returned to London, making her début in Bianchi's 'Semiramide,' in which she introduced an air from Guglielmi's 'Debora,' with violin obbligato, originally played by Cramer, afterwards by Viotti, Salomon and Weichsell, the brother of Mrs. Billington. This song, though long and very fatiguing, was always encored, and Banti never failed to repeat it.

Her voice was of most extensive compass, rich and even, and without a fault in its whole range—a true *voce di petto* throughout. In her youth it extended to the highest pitch, and was so agile that she excelled most singers in the bravura style; but, losing a few of her upper notes, she modified her manner by practising the cantabile, to which she devoted herself, and in which she had no equal. Her acting and recitative were excellent. Her most favourite pieces were the 'Alceste' of Gluck, in which she very greatly excelled, three of her songs in it having to be repeated every night; his 'Iphigénie en Tauride'; Paisiello's 'Elfrida' and 'Nina'; 'Mitridate,' by Nasolini; 'Alzira,' 'Merope,' 'Cinna,' and others composed expressly for her by Bianchi. She also acted in comic operas, and was particularly successful in Paisiello's 'Serva padrona.' Her spirits never flagged; nor did her admirers ever grow weary of her. They never wished for another singer; but Mrs. Billington had now returned, and astonished the public with her marvellous execution. The manager engaged her for the next season, and allowed Banti, whose health was now failing, to depart. Before the close of her last season (1802), however, an interesting performance took place. Banti prevailed on Mrs. Billington to sing with her on the night of her benefit, leaving her the choice of opera and character. Nasolini's 'Merope' was chosen, and produced Mar. 23, 1802, Mrs. Billington acting the part of the heroine, and Banti that of Polifonte, though written for a tenor.

Banti bequeathed her larynx (of extraordinary size) to the town of Bologna, the municipality of which caused it to be preserved in spirits. Her husband was the dancer Zaccaria Banti, who was dancing in London as early as 1777 in Sacchini's 'Creso.' She left a daughter, married to Dr. Barbieri, who raised to her memory a monument in the cemetery outside the walls of Bologna, which was afterwards repaired and adorned by her husband, and from which we learn the places and dates of her birth and death (*Harmonicon*, viii.). Her life, by her son, Giuseppe Banti, S.J., was published in 1869. J. M.

BANTOCK, Granville (*b.* London, Aug. 7, 1868), composer and professor of music in the University of Birmingham since 1908, was at first intended for the Indian Civil Service.

After a few lessons in harmony and counterpoint from Dr. G. Saunders at Trinity College, London, he entered the R.A.M. in 1889 as a pupil of Corder; he won the Macfarren Scholarship after his first term, being the first holder of the prize. During the period of his studentship the following works were given at the Academy concerts: overture, 'The Fire-Worshippers,' Egyptian suite de ballet from 'Rameses II.,' 'Wulstan,' scena for baritone and orchestra, and 'Caedmar,' one-act opera (in concert-form). This last, with extracts from other works, was given at an invitation concert in 1892, and in October of the same year the opera was presented at the Crystal Palace, being produced in London by Signor Lago during his unfortunate tenure of the Olympic Theatre, Oct. 25. Bantock's strong bent towards Oriental subjects, indicated in the names of two of the works given at the R.A.M., has remained with him throughout his career, and the performance of the overture to 'The Fire-Worshippers' under Manns at the Crystal Palace was Bantock's real introduction to the musical world. It was some 3 years before his name came prominently forward as a composer; from May 1893 till Feb. 1896 he was editor and proprietor of an excellent little magazine, *The New Quarterly Musical Review*, and during the same period acted as conductor of musical comedies, and light music generally, in the provinces, and with one of George Edwardes's companies which made the tour of the world in 1894 and 1895. The drudgery of this work gave him useful experience, and led to his engagement as conductor of the provincial tour of Stanford's 'Shamus O'Brien' in 1895. In the winter of 1896, he formed the bold project of giving a concert consisting entirely of compositions by the younger generation of English musicians, all performed for the first time, and all in MS. The writers represented were Erskine Allon, Stanley Hawley, Arthur Hinton, Reginald Steggall, William Wallace and Bantock himself. Although the concert, given Dec. 15, was a financial failure, it served the good purpose of giving six young composers an opportunity which the older institutions would doubtless have continued to deny them; the task of getting a hearing for the younger school was continued in a chamber concert in the following May, with the same result. After a short engagement as conductor for a series of French plays at the Royal Theatre (revival of 'L'Enfant prodigue,' etc.) he was appointed in 1897 musical director of the Tower, New Brighton, a post in which he did a great work for English music during the four years of his tenure. Like Manns at the beginning of the Crystal Palace concerts, Bantock had, for the first year, only a military band, but when he succeeded in establishing a concert-orchestra, he organised concerts of British music, many of which were conducted by the composers themselves. Among those whose works were thus represented were Mackenzie, Parry, Stanford, Corder, German, Elgar and Cowen. In 1898 Bantock founded the New Brighton Choral Society, and was appointed conductor of the Runcorn Philharmonic Society. In Feb. 1900 he conducted a concert of British music at Antwerp, including first performances of some of his own compositions. Foremost among these was a symphonic poem, 'Jaga-

Naut' (played at a Philharmonic concert in the following March), which was intended to form part of a series of 24 symphonic poems on subjects taken from Southey's *Curse of Kehama*. Even the framing of such a scheme shows an unusual degree of mental vigour and ambition, and several of the projected cycle of works were actually completed and published; ultimately, with the increase of other work, Bantock decided to abandon the idea, which never could have been a very practical one, for the whole 24 works could not have been given consecutively at a single concert. In Sept. 1900 he was appointed principal of the Birmingham and Midland Institute School of Music; in Feb. 1901 he conducted a second concert of British music at Antwerp; and in Oct. 1902 was appointed conductor of the Wolverhampton Festival Choral Society in succession to Henry J. Wood, and conductor of the Birmingham Amateur Orchestral Society. M.

Bantock had married in 1899 Helen, daughter of Hermann von Schweitzer, many of whose lyrical poems and translations have provided the texts for his songs. The Birmingham appointment coming thus early in their married life marks the beginning of Bantock's mature musicianship. He had imagined himself to be a rebel and especially a foe to academicism. He now had to frame a complete system of musical education and a few years later to endure the title of Professor. This latter appointment in the University of Birmingham, and in which he succeeded Sir Edward Elgar (1907), he still holds (1926). The executive work was satisfactorily accomplished and these years brought an enlargement of experience in several directions. While his educational system at the Institute was framed on modern lines, he himself was forming closer contacts with the classics, particularly those of English music of the Elizabethan era. His admiration for William Byrd and others bore fruit in sundry volumes of their selected works which he edited, and in the 'Old English Suite' (Hereford, 1909), which he transcribed for orchestra from pieces in the 'Fitzwilliam Virginal Book.' His setting for solo voices, chorus and orchestra of Fitzgerald's 'Omar Khayyam,' his largest completed work, and the one which seems likely to be regarded as his *chef-d'œuvre*, occupied him in these years. Its three parts were produced at several festivals (Birmingham, 1906; Cardiff, 1907; Birmingham, 1909), and subsequently the whole was given by the London Choral Society (*q.v.*) at Queen's Hall. In 1912 Bantock visited Vienna for a successful performance of it there.

Meantime his natural sympathy with democratic art had drawn him into close association with the Competition Festival movement, and after 'Omar' his next most important series of compositions was for unaccompanied voices (both male and female choirs separately and mixed voices). Such pieces as 'Lucifer in Starlight' and 'Kubla Khan' added materially to the rather small repertory of English works for men's voices, but the summit of his achievement in this direction is found in the two choral symphonies (mixed voices without accompaniment), 'Atalanta in Calydon' (Manchester, 1912) and 'Vanity of Vanities' (Liverpool, 1914). For a time it seemed as though Bantock's instinct for orchestral colour was being diverted to a series of experiments, not always equally successful, in effects of vocal colour. But he did not desert his first love. 'Dante and Beatrice' (London Musical Festival, 1911) and 'Fifine' (Birmingham, 1912) are important tone poems for orchestra alone, and they were followed by the Hebridean Symphony (Glasgow, 1916). He was drawn to the Hebridean song and legend largely through the researches made by Mrs. Kennedy-Fraser. With her as librettist he wrote his opera 'The Seal-Woman' (produced at the Birmingham Repertory Theatre, Sept. 27, 1924), which treats the material in a delicately imaginative vein, a small orchestra providing a commentary to the vocal parts. His interest in folk-song is further exemplified in a number of vocal arrangements of songs, English, Scottish and Irish, which he has made. 'The Great God Pan,' an extended work for solo voices, choir and orchestra in two parts, was written for Sheffield in 1914, though the postponement of that festival delayed its appearance until 1920. Bantock's wide sympathies show themselves in the many literary texts he has set, and his versatility as an artist as well as his generous relations with others have earned him a distinctive place in the music of his generation.

The following is a summary of Bantock's principal published compositions. A fuller list up to 1914, including many unpublished ones, is given in H. Orsmond Anderton's monograph, *Granville Bantock* (*Living Masters of Music*). See also *B. M. S. Ann.*, 1920.

ORCHESTRA

Saul. Symphonic Overture.
Processional. } Two orchestral scenes from Southey's
Jaga-Naut. } 'The Curse of Kehama.'
Russian Scenes. Suite for small orchestra.
English Scenes. Suite for small orchestra.
Helena. Variations on an original theme.
The Witch of Atlas. Tone poem.
The Pierrot of the Minute. Comedy overture.
Lalla Rookh. Tales and Dances.
Sappho. Prelude, and 9 fragments.
Old English Suite. For small orch.
Three Dramatic Dances.
The Sea-Reivers. Orchestral ballad.
Judith. Prelude and incidental music.
Arabian Nights.
Marionettes. A Ballet Suite.
Overture to a Greek Tragedy.
Dante and Beatrice. Poem for orch.
Fifine at the Fair. Orchestral drama.
Serenade for strings, 'From the Far West.'
Scottish Rhapsody.
Scenes from the Scottish Highlands. Suite for strings.
The Land of the Gael. Suite for strings.
Hebridean Symphony.
Coronach. For strings, harp and organ.

Orchestral arrangement of Bach's Variations, 'Wachet auf.'
Elegaic Poem (v'cl. and orch.).
Sapphic Poem (v'cl. and orch.).
Celtic Poem (v'cl. and orch.).

VOICES AND ORCHESTRA

The Fire-Worshippers. For soprano, tenor and bass soli, chorus and orch.
The Time Spirit. Rhapsody for chorus and orch.
Sea Wanderers. Poem for chorus and orch.
Christ in the Wilderness. Soprano and baritone soli, chorus and orch.
Omar Khayyám. Contralto, tenor and bass soli, chorus and orch. (In 3 parts.)
Gethsemane. Baritone solo, chorus and orch.
The Great God Pan. Soli, chorus and orch. (In 2 parts.)
Song of Songs (with Ps. cxlii.), soli, chorus and orch.

UNACCOMPANIED CHOIR

Atalanta in Calydon (choral symphony). Mixed v.
Vanity of Vanities (choral symphony). Mixed v.
A Pageant of Human Life (choral suite). Mixed v.
Many short pieces. Mixed v.
Three Cavalier Tunes. Male v.
The Lost Leader. Male v.
The Glories of our Blood and State. Male v.
Lucifer in Starlight. Male v.
Kubla Khan. Male v.
The Charge of the Light Brigade. Male v.
Many short pieces. Male v.
Pieces for female voices, children, arrangements both for mixed voices and female voices.

SONGS

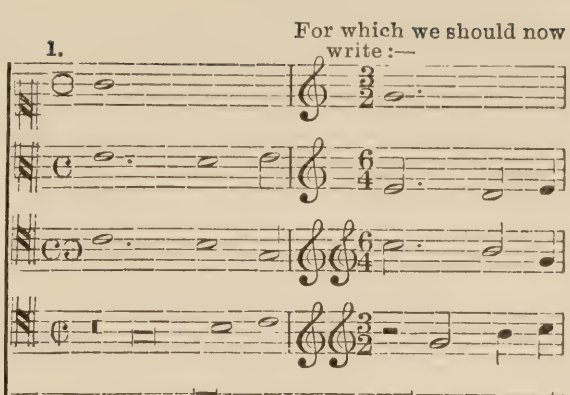
Songs of the East (6 vols. of 6 songs each as follows: Arabia, Japan, Egypt, Persia, India, China).
Songs of the Seraglio (set of 4).
Six Jester Songs.
Five Ghazals of Hafiz.
Ferishtah's Fancies (set of 13).
Sappho (9 fragments).
Songs from the Chinese Poets (2 series, 5 each).
Many others.

DRAMATIC MUSIC

Caedmar. Opera, 1 act.
Pearl of Iran. Opera, 1 act.
'The Seal-Woman.' Opera, 2 acts.
Ballet Music to Rameses II.
Incidental Music to Hippolytus; Electra; Judith; Salome.

Other instrumental music includes many short PF. pieces, 'Poems' for v'cl. and PF., a sonata for viola and PF. C.

BAPTIE, DAVID (*b.* Edinburgh, Nov. 30, 1822; *d.* Glasgow, Mar. 26, 1906), author of a useful *Handbook of Musical Biography*, 1883 (2nd ed., 1887). A similar work, *Musicians of All Times*, appeared in 1889. He published many glees, and left many more in MS. He edited many hymn-books, and compiled a 'descriptive catalogue,' or index, of vocal part music, the MS. of which is now in the British Museum. G.



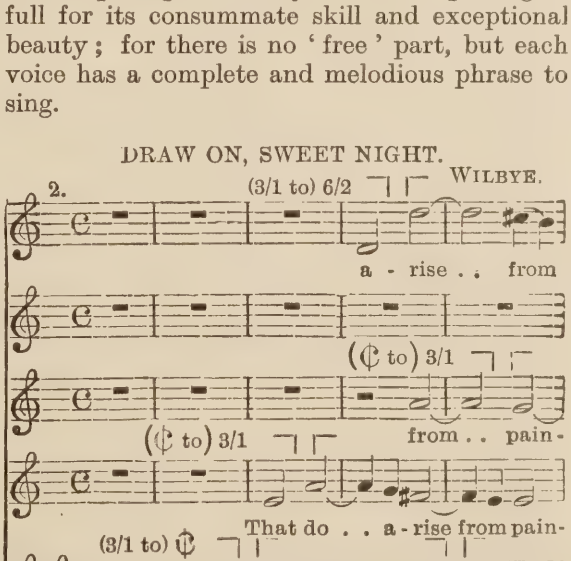
BAPTISTE, see ANET, Jean-Baptiste.

BAPTISTIN, JEAN, see BATTISTIN.

BAR. A bar (Fr. *barre*; Ger. *Taktstrich*) is, literally, the straight line drawn across the stave to mark the metrical ACCENT (*q.v.*). In ordinary parlance that is now called the 'bar-line,' and the 'bar' (*mesure*, *Takt*) is the collection of time-units between two bar-lines.

HISTORY.—The bar-line came in tentatively as a way of keeping the notes under one another. The bar did not at once emancipate itself from the foot. (See METRE.) Thus Morley in his *Plaine and Easie Introduction*, wishing to show the different kinds of 'Moode' and 'Prolation' (see PROPORTION), writes the following series (Ex. 1).

He is thinking in feet, not in bars, and writes these feet in the way in which they will be best understood. A foot in one voice is here given the same duration as a foot in another; hence the time-units have different durations in the different voices. The soprano semibreve is, owing to the time-signature, equal to three



minims; the alto and first tenor have six minims to the foot, the second tenor twelve, and the bass twenty-four. The bar, on the other hand, when we write it, makes the time-units of each voice equal, minim to minim, crotchet to crotchet, and the time-units are, so to say, photographed down to fit the bar.

Morley's is, of course, only an example in an instruction book to explain a particular point, but in the full-blown motet or madrigal (see Example 2) the time-units of the different voices were equal and the phrases composed of feet, marked thus (⌐ ¬), varied in size. In the 'air' (solo-song) it was different; this was based on the organ and lute tablatures into which the bar had been introduced a century earlier. Bar-lines are used for the clavichord in Virdung's 'Musica getutscht,' 1511, and in Caccini's 'Eurydice,' 1600, and yet not in a book of solfeggi by Caresana, 1693.

This passage of Wilbye is worth quoting in full for its consummate skill and exceptional beauty; for there is no 'free' part, but each voice has a complete and melodious phrase to sing.

DRAW ON, SWEET NIGHT. WILBYE.

It will be seen that the (modern) bar-lines have nothing to do here with the real time of the voices. Of these the bass is the only part that has not changed its time from what went before, and it is certainly not by accident that the others all have. These contrasting times are quite simply executed by attending to the true verbal accent, and the original singer had none of the distracting time marks, nor even the bar-lines. The time of the madrigal as a whole is $\frac{3}{1}$, as it appears here in the bass; the time signature, C, prefixed in the modern reprint, refers to the bar as we understand it. D'Indy in his C♯ minor quartet has cross-barred a canon in order, perhaps, to get it played with more emphasis; but it is doubtful if the cross-barred editions of the Elizabethan composers, by Leichentritt and others, are of more than theoretical value.

In Handel's autographs the barring is still irregular, but with a slight leaning towards groups of four. By these he is clearly telling us nothing about the size of the periods. He is simply following the old plan, and it often results, as in 'He shall feed His flock,' in a close at the half-bar. The remedy for this would be not, as has been suggested, to print it in $\frac{6}{8}$, because Handel has marked it himself with the more dignified $\frac{12}{8}$ in contrast with the lighter $\frac{6}{8}$ for 'O Thou that tellest', but to begin it (and 'How beautiful are the feet' and 'Every valley') at the half-bar. There can be little doubt that the composer felt them so.

The Modern Use.—The striking thing in modern music is the multiplicity of time-signatures. There are two or three alternatives at the beginning, perhaps; or one there and a corrective—a 'time-accidental' we might call it—on every page. One or two writers use a new time-signature for nearly every bar. There may be two reasons for this multiplicity.

The corrective signature substitutes, for instance, $\frac{2}{4}$ for $\frac{4}{4}$. This usually means that the accent has shifted unobserved in the course of conflicting phrases, and now that it has become comparatively settled a fresh start is made. This is analogous to the 'cancelling' key-signature which starts us in a new key. But when there are constant shifts at odd intervals—say from $\frac{9}{8}$ to $\frac{6}{8}$ and back again, varied by $\frac{3}{8}$ and $\frac{4}{8}$—this appears to be an attempt to abandon verse for prose rhythm, to establish a kind of 'chromatic' time, which is still at the experimental stage. In proportion as he writes frequent changes of time-signature, the composer is using the bar-line not for time but for phrase, and his music is neither contrapuntal enough to need the bar-line in its hitherto accepted sense, nor self-explanatory enough to make its phrases intelligible without a special mark. A. H. F. S.

BARALLA, Don Raffaello (*b.* Camigliano, Lucca, June 25, 1862), studied at the seminary of Camigliano and made a speciality of the study of Gregorian chant, of which he was appointed teacher at the Istituto Musicale at Lucca in 1903. In 1905 he made further studies under Dom Mocquereau at Appuldurcombe, Isle of Wight, and since 1910 he has been teacher of Gregorian Palæography at the school for church music, Rome. He published a number of articles and treatises on the subject, including an Italian translation of H. M. Bannister's *Paleografia musicale Vaticana.* E. v. d. s.

BARBAJA, Domenico (*b.* Milan, 1778; *d.* Oct. 16, 1841), a famous impresario.

He was of poor parentage; was successively waiter at a coffee-house on the Piazza, manager of an English riding-circus, lessee of the Cucagna playhouse at Naples, and director of the San Carlo theatre. While at Naples he made the acquaintance of Count Gallenberg, the Austrian ambassador, followed him to Vienna in 1821, and obtained the direction of both the 'Kärnthner-thor' theatre and that of 'auf der Wien,' which he held till 1828. He was the first to introduce a subscription into the Vienna theatres. During his management the company embraced the best talent of the day, including Mesdames Colbran-Rossini, Sontag, Esther Mombelli, Giuditta Grisi, Mainvielle-Fodor, Feron, Canticelli, Signori Donzelli, Cicimarra, Bassi, Tamburini, Rubini, David, Nozzari, Lablache, Ambrogi, Benedetti and Botticelli. The ballet was sustained by Duport, Salvatore and Taglioni. Though Barbaja introduced Rossini into Vienna, he by no means neglected German opera, and under his management Weber's 'Euryanthe' was produced Oct. 25, 1823. He was at the same time manager of the two most celebrated opera-houses in Italy, La Scala at Milan, and San Carlo at Naples; not to mention some smaller operatic establishments also under his direction.

Bellini's first opera, 'Bianca e Ferdinando,' was written for Barbaja and produced at Naples. His second opera, 'Il pirata,' was also composed for Barbaja, and brought out at Milan. Several of Donizetti's works, and all Rossini's later works for the Italian stage, were first presented to the public by the famous impresario, who was destined one day himself to figure in an opera. Barbaja is at least introduced by name in 'La Sirène,' by Scribe and Auber. From his retirement till his death he resided on his property at Posilipo. He was very popular, and was followed to his grave by an immense concourse of people. C. F. P.

BARBANDT, Carl (18th cent.), of German parentage, settled in London *c.* 1750, and appeared in public as a virtuoso on the oboe and the clarinet *c.* 1753–56. On the title-page of his 6 sonatas for 2 violins, 2 German flutes, or 2 'hoboys,' op. 1, published *c.* 1755, which are dedicated to the Princess of Wales, he calls himself 'Musician to His Majesty at Hanover.' Fétis says that in 1764 he was organist at the chapel of the Bavarian ambassador. In 1753–1763 he gave subscription concerts at the little theatre in the Haymarket, where oratorios were included in the programme, two being mentioned, 'The Universal Prayer,' words by Pope, and 'David and Jonathan.' It is said that Samuel Webbe was a pupil of his. He wrote a number of sonatas, duets and trios for various instruments; 'Hymni sacri,' 'Antiphonae,' etc. (1766), four favourite Italian songs, and also published 'Mr. B.'s yearly subscription of new music, to be deliver'd monthly' (1759–60). E. v. d. S.

BARBARINO, Bartolomeo, 'da Fabriano, detto il Pesarino' (*b.* Fabriano, 16th/17th cent.). In 1606 he was in the service of the Bishop of Padua. He wrote a number of books of madrigals, motets, canzonets, sacred and secular songs, several books appearing in 3 or 4 editions between 1606 and 1617. E. v. d. S.

BARBARINUS (Barberini), Lupus Manfredus (*b.* Corregio, early 16th cent.). About 1550 he settled, probably at the invitation of the art-loving Prince-Abbot, Diethelm Blarer, at the Abbey of St. Gall, where 204 of his songs are preserved in two magnificent parchment codices. He wrote also: 'Symphoniae, seu insigniores aliquot ac dulcisonae 5 v. melodiae super D. Henr. Glareani Panegyrico de Helvet. tredecim urbium laudibus per . . .' (Basileae, 1558); 'Musice epitome . . .' (1559); 'Cantiones sacrae,' 4 v. (Aug. Vindel., 1560); and a number of pieces in various MS. collections. E. v. d. S.

BARBELLA, Emanuele (*b.* Naples, *c.* 1704; *d.* there, 1773), violinist.

The following short account of his musical education was written by himself at the request of Dr. Burney, who gives it in his *History* (iii. 570):

'Emanuele Barbella had the violin placed in his hand when he was only six and a half years old, by his father, Francesco Barbella. After his father's decease he took lessons of Angelo Zaga, till the arrival of Pasqualino Bini, a scholar of Tartini, in Naples, under whom he studied for a considerable time, and then worked by himself. His first instructor in counterpoint was Michele Gabbalone; but his master dying, he studied composition under the instructions of Leo, till the time of his death.'

He adds,

'Non per questo, Barbella è un vero asino che non sa niente'—'Yet, notwithstanding these advantages, Barbella is a mere ass, who knows nothing.'

He wrote 9 trios for 2 violins and violoncello, 6 duets for violin and violoncello, several books of easy duets for 2 violins, 6 sonatas for violin, and 6 duos for violin and bass, adhering closely to the principles of Tartini. Burney gives an example of his composition, and says that his tone and manner were

'marvellously sweet and pleasing, even without any other accompaniment than the drone-bass of an open string.'

In 1753 an opera, 'Elmira generosa,' written in collaboration with Logroscino, was brought out at Naples. E. H. D.

BARBERIJS (Barberio, Barbariis, Barberis), Melchiore de, a 16th-century lutenist of Padua, who published 10 (?) books of pieces in lute tablature between 1546 and 1549, at Venice. E. v. d. S.

BARBER OF BAGDAD, THE (Der Barbier von Bagdad); comic opera in 2 acts; words and music by Peter Cornelius; produced Weimar under Liszt (*q.v.*), Dec. 16,[1] 1858; in English, by the pupils of the R.C.M., Savoy Theatre, Dec. 9, 1891; Covent Garden, May 11, 1906.

BARBER OF SEVILLE, THE. Operas of this name, founded on the celebrated play of Beaumarchais (1775), have been often produced. Two only can be noticed here: (1) that of Paisiello, produced St. Petersburg, 1780, and Paris, 1789—at the 'Théâtre de Monsieur,' in the Tuileries, July 12, and at the Théâtre Feydeau, July 22; (2) that of Rossini—libretto by Sterbini—produced Rome, Feb. 5, 1816; in London, King's Theatre, Jan. 27, 1818, in English, Covent Garden, Oct. 12, 1818; New York, Park Theatre (in English), May 3, 1819, in Italian, Nov. 29, 1825 (the first Italian opera given in the city); Paris, Salle Louvois, Oct. 26, 1819. G.

BARBERS OF BASSORA, THE, a comic opera in 2 acts; words by Madison Morton; music by John Hullah, produced Covent Garden, Nov. 11, 1837.

BARBETTA, Giulio Cesare, a 16th-century lutenist of Padua who published 4 books of lute tablature between 1569 and 1603. Eight pieces from the 1st book, published 1569, have been republished in Chilesotti's 'The Lute-player.'

[1] This date is given in the Leipzig *Signale* for Jan. 1859, but in Lina Ramann's *Life of Liszt* the day is given as the 15th.

BARBI, Alice (*b.* Modena, 1862), celebrated as a singer who revived in Italy the art of concert singing.

Alice Barbi inherited no small degree of musical talent. But although her early proficiency on the violin seemed to mark her as a musical prodigy, she underwent a course of training, not only in violin-playing under Verardi of Bologna, and afterwards Buzzoni, but also in general knowledge, music, and languages; travelling abroad at times with her father, and encouraged at home by princely friends and patrons. Barbi's voice, under instruction from Zamboni and Busi, and later, Vannuccini, developed into a mezzo-soprano of fine quality, extending to high B flat, and perfectly equal throughout the register.

Barbi's début as a vocalist took place at Milan, Apr. 2, 1882. Shortly afterwards she was associated with Sgambati in a concert at Rome, and her success was assured. The matinées Barbi then ventured to give in many Italian towns were crowded, and critics were agreed in welcoming a singer of high rank in her art who yet was not an operatic singer. Melodies by the old Italian masters were now brought to light and interpreted 'with truth and sobriety of feeling' by this original and gifted artist. The agility of her voice, the beauty of her shake, and the perfection of her ornamental passages were praised by Sgambati in an article translated by Sutherland Edwards for *The Musical World*, 1885, p. 452.

Her successes were repeated in England, Germany, Russia, etc. She first appeared in London in 1884, singing at Signor de Lara's concert of June 24, and at the Popular Concerts of Nov. 1 and 15. Barbi sang again in London in Jan., June and July, 1885. In the following year she gave recitals at the Princes Hall, July 11 and 18, 1886. Her repertory then included songs by Caldara, Astorga, Jommelli, Mozart, Rossini, Schubert, Bizet and Brahms, among others. That these were given from memory in their respective languages was at that time considered a remarkable achievement.

Before and after her retirement from the concert platform Alice Barbi wrote poems, some of which have been set to music by Bazzini. An Italian appreciation of her by G. B. Nappi, with a portrait, is in *La Gazzetta musicale* of 1887, p. 122. L. M. M.

BARBIERI, Francisco Asenjo (*b.* Madrid, Aug. 3, 1823; *d.* there, Feb. 19, 1894), a Spanish composer of comic operas, who did much towards the foundation of a distinctively Spanish type of operetta in opposition to the Italian. He entered the Madrid Conservatoire in 1837 and studied the pianoforte with Pedro Albéniz (*q.v.*) and composition with Carnicer (*q.v.*). His father was killed during a civil war, and finding himself without means, he joined the band of the National Militia as clarinettist, and afterwards earned a living as a pianist in cafés, as copyist, chorus-singer, prompter; and once at short notice he sang the part of Don Basilio in 'Il Barbiere di Siviglia.' By this time he had a thorough sense of the stage which enabled him to catch the public ear and hold it. From 'Jugar con fuego' (1851) he met with success; his comic operas 'Pan y toros' (1864) and 'El Barberillo de Lavapies' (1874) are still full of life.

Barbieri was a musician of considerable learning. In later life he transcribed and edited, under the name of 'Cancionero musical de los siglos XV. y XVI.,' a MS. in the library of the Royal Palace, containing a large and important collection of secular Spanish music belonging to the age of chansons and frottole. He also provided a valuable historical introduction to the *Cronica de la Opera italiana en Madrid desde 1758*, by L. Carmena y Millán, and edited the plays of Juan del Enzina (*q.v.*) for the Royal Spanish Academy, besides writing a number of learned articles on musical subjects for different periodicals. J. B. T.

BARBIREAU (Barbirian, Barbicola, Barbyrianus, Barbarian, Barwyrianus, Barbingant), Maître Jacques (*d.* Aug. 8, 1491), a celebrated musician, choirmaster and teacher of the boys in the cathedral of Antwerp from 1448 till his death. Under his leadership the precentorship became very important, and the number of musicians grew from 38 to 70. Among them were J. Ockeghem, H. Bredeniers, J. Godebrye (Jacotin). He maintained a correspondence with Rudolph Agricola, and is constantly quoted by his contemporary Tinctor as one of the greatest authorities on music of his time. Of his compositions a Mass for 5 v., 'Virgo parens Christi,' another for 4 v., 'Faulx perverse,' and a Kyrie for the same, are in the National Library at Vienna. Some songs for 3 and 4 v. in that of Dijon [1] and at Rome (Casanatense MSS.). Kiesewetter has scored the Kyrie from the first-named Mass and a song for 3 v., 'Lome (l'homme) bany de sa plaisance.' M. C. C.; addns. M. L. P.

BARCAROLLE (Fr.) — Ital. *barcaruola*—a 'boat-song'; pieces of music written in imitation or recollection of the songs of Venetian *barcaruoli* as they row their gondolas. Barcarolles have been often adopted by modern composers; as by Hérold in 'Zampa'; by Auber in 'Masaniello' and 'Fra Diavolo'; by Donizetti in 'Marino Faliero'; by Schubert, 'Auf dem Wasser zu singen' (op. 72); by Chopin for piano solo (op. 60); by Gabriel Fauré for piano; and by Sterndale Bennett for piano and orchestra in his 4th concerto. Mendelssohn has left several examples. The first 'Song without words' that he composed—

[1] *Q.-L.* gives the number of the Dijon MS. 295; it is now numbered 517.

published as op. 19, No. 6—is the 'Venetianisches Gondellied' in G minor, which the autograph shows to have been written at Venice, Oct. 16, 1830. Others are op. 30, No. 6; op. 62, No. 5; and the beautiful song, op. 57, No. 5, 'Wenn durch die Piazzetta.' One essential characteristic in all these is the alternation of a strong and a light beat in the movement of 6–8 time—Chopin's alone being in 12–8—with a triplet figure pervading the entire composition, the object being perhaps to convey the idea of the rise and fall of the boat, or the regular monotonous strokes of the oars. The autograph of Bennett's barcarolle is actually marked 'in rowing time.' The *tempo* of the barcarolles quoted above differs somewhat, but is mostly of a tranquil kind. The 'Gondoletta' entitled 'La Biondina,' harmonised by Beethoven, and given in his '12 verschiedene Volkslieder' (Nottebohm's Catalogue, p. 176), though of the same character as the boatmen's songs, is by Pistrucci, an Italian composer. W. H. C.

BARCROFT, (1) Thomas (16th cent.), an English church composer. There is an anthem by him, 'O Almighty God,' in the British Museum (Harl. MSS. 7340/31), where he is described as 'Organist of Ely in 1535.' A Te Deum and Benedictus (in F), and two anthems are ascribed to him in Tudway's MS. collection. The former, an early copy of which is in the Cathedral library at Ely, is dated 1532, a date much too early for an English setting of these hymns. The year 1582 has been suggested as a possible emendation, though the date on the MS. is quite distinct. It seems much more probable that the author of these compositions was (2) George Barcroft (possibly the son of Thomas), who matriculated as a sizar of Trinity College, Cambridge, on Dec. 12, 1574, and took the degree of B.A. in 1577–78. He was minor canon and organist of Ely Cathedral from 1579–1610, and was succeeded by John Amner in that year. The service above mentioned, and the anthem 'O Almighty God,' were printed by the Motett Society. J. Mk.

BARD. The following definition is given in Murray's *Oxford Dictionary*:

'An ancient Celtic order of minstrel-poets, whose primary function appears to have been to compose and sing (usually to the harp) verses celebrating the achievements of chiefs and warriors, and who committed to verse historical and traditional facts, religious principles, laws, genealogies, etc. . . . In Welsh specifically, a poet or versifier who has been recognised at the Eisteddfod.'

The functions of bards, which were at least as much political as musical, descended in many cases from father to son, and they were naturally very important in the early periods of national history. The attempted extermination of the Welsh bards by Edward I. in 1284 implies that they were far from being the merely pacific, picturesque old minstrels with which fiction has generally been concerned; but their political importance seems to have been greater in Wales than in any other country. Both in Wales and Ireland they were supposed to be able to read the future; in Scotland their ancient dignity was so far lost in the 15th century that laws were enacted against them, and they were classified with beggars and other vagabonds. No doubt, in all three countries, they did more than any other class of persons to preserve the traditional music, just as was done in England by the gleemen, and in Scandinavia by the scalds. The composition of extempore rhymes in celebration of any patron or his friends formed part of the duties of bards in the later days of their existence; and this form of skill has been continued by the work of the modern or revived Eisteddfodau, where the singing of impromptu 'penillions' is still rewarded with prizes. Independently of this artificial support, the same practice continued down to the middle of the 19th century in such places as Evans's supper rooms, after the manner recorded in the first chapter of *The Newcomes*. The 'bardic' rites and customs which take place at the Eisteddfodau in various parts of England and Wales, or at the preliminary Gorsedd, a year and a day before each, are of rather doubtful authenticity. See Eisteddfod. M.

BARDELLA, Antonio Naldi, called 'Il Bardello,' chamber musician to the Duke of Tuscany at the end of the 16th and beginning of the 17th centuries, and, according to Arteaga, inventor of the theorbo. Caccini states that he was an admirable performer on that instrument.

BARDI, Giovanni, Count of Vernio (end of 16th cent.), a Florentine noble and an accomplished scholar and mathematician, member of the Accademia della Crusca, and of the Alterati in Florence, maestro di camera to Pope Clement VIII.

Doni attributes to him the first idea of the opera, and it is certain that the first performances of the kind were held in his house by his celebrated band of friends, Vicenzo Galilei, Caccini, Strozzi, Corsi, Peri and Rinuccini, and that he himself composed the words for more than one such piece, *e.g.* 'L' amico fido,' and 'Il combattimento d' Apollino col serpente.' A 4-part composition, 'Miseri habitator,' by him appeared in Malvezzi's *Intermedii*, 1591, and a 5-part madrigal is attributed to him by Vogel, *Biblioth. d. gedruckten weltl. Vocalmusik*, ii. 429, in a collection of 1582: Eitner (*Q.-L.*) considers that the name is only given as that of the person to whom the madrigal was dedicated. M. C. C.

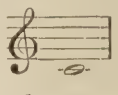
BARGAGLIA, Scipione (second half of 16th cent.), a Neapolitan composer and contrapuntist, mentioned by Cerreto. According to Burney the word 'concerto' occurs for the first time in his work 'Trattenimenti . . da suonare' (Venice, 1587).

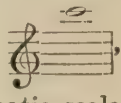
BARGIEL, Woldemar (*b.* Berlin, Oct. 3,

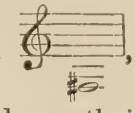
1828; *d.* there, Feb. 23, 1897), a teacher and composer; stepbrother of Mme. Clara Schumann (his mother being the divorced wife of Friedrich Wieck), and son of a teacher of music at Berlin.

He was made to play the piano, the violin and organ at home, and was instructed in counterpoint by Dehn. As a youth of eighteen, in accordance with the advice of his brother-in-law, Robert Schumann, he spent two years at the Conservatorium of Leipzig, which was then (1846) under Mendelssohn's supervision; and, before leaving it, he attracted general attention by an octet for strings, which was performed at one of the public examinations.

After his return to Berlin, in 1850, he began work as a teacher, and increased his reputation as a composer by the publication of various orchestral and chamber works, as well as pianoforte pieces. In 1859 he was called to a professorship at the Conservatorium of Cologne, which, in 1865, he exchanged for the post of Kapellmeister, and director of the institute of the Maatschappij tot bevordering van Toonkunst at Rotterdam. In 1874 he was appointed professor at the Königliche Hochschule für Musik at Berlin. He was made a member of the senate of the Academy of Arts, and head of one of the three Meisterschulen für musikalische Komposition connected with the Academy.







As a composer, Bargiel ranked among the foremost disciples of Schumann. Besides his pianoforte pieces, op. 1-5, and his trios for pianoforte and strings, 3 overtures for full orchestra, 'Prometheus,' op. 16, 'Zu einem Trauerspiel,' and 'Medea,' and the 23rd Psalm for female voices should be particularly mentioned, as well as a symphony in C, op. 30; 13th Psalm, for chorus and orchestra, op. 25; for pianoforte the suites, op. 7 and 13, and a sonata, op. 34; an intermezzo for orchestra, 3 trios, 4 string quartets, and smaller choral works. E. D.

BARIE, Augustin (*b.* Paris, Nov. 15, 1883; *d.* Apr. 22, 1915), organist at St. Germain des Prés. As a composer for his instrument he showed unusual promise in a symphony and a set of three pieces. H. G.

BARING-GOULD, Rev. Sabine (*b.* Exeter, Jan. 28, 1834; *d.* Lew-Trenchard, Jan. 1924), deserves record here for his pioneer work in the collection of English Folk-song (*q.v.*).

Educated at Clare College, Cambridge, of which he was made Honorary Fellow, Baring-Gould inherited family estates at Lew-Trenchard and became rector in 1881. He had travelled widely, and was a voluminous writer on innumerable subjects. He early developed a special interest in folk-lore, legend and myth. His main contribution to folk-song collection was in *Songs and Ballads of the West* (four parts, 1889–91), containing 110 songs noted down from the mouths of the people of Devon and Cornwall, and arranged with piano accompaniment. In this work the Rev. H. Fleetwood Shephard collaborated. *A Garland of Country Song* (54 numbers), the product of a similar collaboration, followed in 1894. A revised edition of *Songs of the West* under the musical editorship of Cecil J. Sharp (*q.v.*) appeared in 1905. Baring-Gould's collections were indeed a powerful influence in inducing Sharp to devote his life to folk-song research. Baring-Gould was the author of many popular hymns (words) published in *Hymns Ancient and Modern.* C.

BARITONE (1), the male voice intermediate in compass between the bass and tenor. The Greek *βαρύτονος*, signifying 'of heavy timbre,' suggests in relation to the tenor, but the voice is really a high bass, and owing to its weighty and brilliant quality in the upper register has been of the greatest value to opera composers, especially in the Italian and French schools. A flat is about the limit upwards, and downwards two octaves.

BARITONE (2), the name given to a brass valve instrument of the saxhorn type. It is generally built in B flat, but sometimes in C, of the same pitch as the euphonium, but differs in that the available compass begins from the second harmonic instead of the first. The range is therefore from  to  , the valves giving a complete chromatic scale from  , sounding a ninth lower. The bored mouthpiece being smaller, it has less volume in tone, but the highest notes are more effective. This instrument corresponds to the German tenor horn in B, or Bass Flügelhorn, and is known in the U.S.A. as the B-flat tenor. It is used chiefly in brass and military bands. It may be added that the term Baryton signifies in German the instrument corresponding to the euphonium. (See Saxhorn and Tuba.) D. J. B.

BARITONE OBOE, see Oboe (4).

BARKER, Charles Spackman (*b.* Bath, Oct. 10, 1806; *d.* Maidstone, Nov. 26, 1879), an organ-builder, who invented the pneumatic lever.

Left an orphan at 5 years old, he was educated by his godfather for the medical profession. But Barker, accidentally witnessing the operations of an eminent London organ-builder, Bishop, determined on following that occupation, and placed himself under the builder for instruction in the art. Two years afterwards he returned to Bath and established himself as an organ-builder there. About 1832 the newly built large organ in York Minster

attracted general attention, and Barker, impressed by the immense labour occasioned to the player by the extreme hardness of touch of the keys, turned his thoughts towards devising some means of overcoming the resistance offered by the keys to the fingers. The result was the invention of the pneumatic lever, by which ingenious contrivance the pressure of the wind which occasioned the resistance to the touch was skilfully applied to lessen it. Barker offered his invention to several English organ-builders, but finding them indisposed for financial reasons to adopt it, he went to Paris, where he arrived in 1837 about the time that Cavaillé-Coll was building a large organ for the church of St. Denis. Cavaillé, seeing the importance of the invention, immediately adopted it. The pneumatic lever was also applied to the organs of St. Roch and the Madeleine. Barker took out a patent for it in 1839. About 1840 he became director of the business of Daublaine and Callinet (afterwards Ducroquet, and later Merklin and Schütz), and built in 1845 a large organ for the church of St. Eustache, which was unfortunately destroyed by fire six months after its erection. He also repaired the fine organ of the church of St. Sulpice. At the Paris Exhibition of 1855 he received a first-class medal and the Cross of the Legion of Honour. Later, the pneumatic lever came gradually into use in England, and his patent for electric organs was purchased by Bryceson of London. He remained with Merklin until 1860, when he set up a factory of his own under the firm of Barker and Verschneider, and built the organs of St. Augustin and of Montrouge in Paris, both electric. The war of 1870 caused him to leave Paris and return to England, when he built the organs for the R.C. cathedrals of Cork and Dublin.

W. H. H. and V. de P.

BARKWORTH, John Edmund, Mus.D. (*b.* Beverley, May 20, 1858), composer, was educated at Rugby and Oxford, being classical scholar at University College. After a period of classical teaching and the study of architecture under T. G. Jackson, Barkworth went to the R.C.M. in 1885 and later held various organ appointments, notably, Fettes College, 1890–94, Tonbridge School, 1897, and St. George's, Ottawa, 1900. In 1901–06 he was organ professor at the Peabody Conservatory, Baltimore. Since then he has lectured on music at Cambridge, the R.C.M. and elsewhere. He studied composition under Parry, Stanford, Mandl (in Paris), Humperdinck (in Berlin) and Cecil Forsyth, and has written three operas: 'Romeo and Juliet,' produced by the Harrison-Frewin Co. at Middlesborough, Jan. 7, 1916, and revived by the Fairbairn-Miln Co. at the Surrey Theatre in 1920; a comic opera, 'The Well of Wishes,' and 'Fireflies,' in one act, to the text of Julian Sturgis, produced at the R.C.M. in 1925. He has also written a trio in A minor and published various songs. 'Romeo and Juliet' is Barkworth's principal work and is remarkable as being the first attempt to set a Shakespeare text exactly as it stands, without condensation or alteration. The sincerity of the music is unquestionable, and it was chosen for performance by the Ernest Palmer Opera Study Fund at the R.C.M. in Dec. 1926. N. C. G.

BARLEY, William (late 16th and early 17th cent.), one of the early English music printers.

He worked under an 'assignment' of the music-printing patent conferred on Thomas Morley by Queen Elizabeth in 1598. Barley, as bookseller and printer, lived, in 1592, in Gracechurch Street, and worked until at least 1614. His printing was particularly bold and good, and though his bibliography is rather limited, yet it includes many important works. He printed:

A Newe Booke of Tablature, 1596; *The Patheway to Musicke*, 1596; Anthony Holborne's 'P. vans, Galliards, Almains and other short Æirs,' 1599; Allison's 'Psalms,' 1599; John Farmer's First Set of 'Madrigals,' 1599; John Bennet's 'Madrigalls to Foure Voyces,' 1599; Weelke's 'Ayeres or Phantasticke Spirites,' 1608; 'Pammelia,' 1609; and Robinson's 'New Citharen Lessons,' 1609.

F. K.

BARNARD, Charlotte Alington, known by her pseudonym of 'Claribel' (*b.* Dec. 23, 1830; *d.* Dover, Jan. 30, 1869), a popular composer of ballads, who married C. C. Barnard in 1854.

She received some instruction in the elements of composition from W. H. Holmes, and between 1858 and 1869 published some hundred ballads, most of which attained an extraordinary popularity of a transient kind. 'Come back to Erin' is a typical specimen. A volume of *Thoughts, Verses and Songs* was published, and another volume of poems was printed for private circulation. (*D.N.B.*) W. B. S.

BARNARD, Rev. John, a minor canon of St. Paul's Cathedral in the time of Charles I., was the first who published a collection of cathedral music.

His work appeared in 1641 under the title of:

'The First Book of Selected Church Musick, consisting of Services and Anthems, such as are now used in the Cathedrall, and Collegiat Churches of this Kingdome. Never before printed. Whereby such Bookes as were heretofore with much difficulty and charges, transcribed for the use of the Quire, are now to the saving of much Labour and expence, publisht for the general good of all such as shall desire them either for publick or private exercise. Collected out of divers approved Authors.'

(Add. MSS. 30,085-7.) The work was printed, without bars, in a bold type, with diamond headed notes, in ten separate parts—medius, first and second contratenors, tenor and bassus—for each side of the choir, decani and cantoris. A part for the organ is absolutely necessary for some of the verse anthems in which intermediate symphonies occur, but it is extremely doubtful whether it was ever printed. From many causes—the wear and tear resulting from

daily use in choirs, the destruction of service-books during the civil war, and others—it happened that a century ago no perfect copy of this work was known to exist, the least imperfect set being in Hereford Cathedral, where 8 of the 10 vocal parts (some of them mutilated) were to be found, the bassus decani and medius cantoris being wanting. It so remained until Jan. 1862, when the Sacred Harmonic Society acquired by purchase a set consisting also of 8 vocal parts, including the two wanting in the Hereford set, and some also being mutilated. A duplicate of the bassus decani which had been with this set was purchased by the Dean and Chapter of Hereford, and a transcript of the imperfect medius cantoris was permitted by the Society to be taken for them, so that the Hereford set still retains its pre-eminence. This set was sold by the Dean and Chapter in 1917 to Ch. Ch., Oxford, for £100. The work does not include the compositions of any then living author, the compiler in his preface declaring his intention of giving such in a future publication.

BYRD. Prevent us.
E. HOOPER. Behold it is Christ.
ROBT. WHITE. The Lord bless us.
TALLIS. Wipe away.
BYRD. O God, whom our offences.
Do. O Lord, make thy servant Charles.
Dr. TYE. I lift my heart.
BYRD. O Lord, turn.
Do. (2nd pt.) Bow Thine ear.
Dr. GILES. O give thanks.

Full Anthems for 6, 7, 8 parts

BYRD. Sing joyfully, 6 v.
R. PARSONS. Deliver me, 6 v.
O. GIBBONS. Hosanna, 6 v.
Do. Lift up your heads, 6 v.
WEELKES. O Lord, grant, 6 and 7 v.

Anthems with Verses

BYRD. O Lord, rebuke me not.
Do. Hear my prayer.
W. MUNDY. Ah, helpless wretch.
MORLEY. Out of the deep.
O. GIBBONS. Behold Thou hast.
BATTEN. Out of the deep.
WARD. I will praise.
BYRD. Thou God.
Do. Christ rising.
Do. (2nd pt.) Christ is risen.
Dr. BULL. Deliver me.
WARD. Let God arise.

From the printed and MS. parts, aided by other old MS. organ and voice parts, John Bishop of Cheltenham made a score of the work, which, it is to be regretted, remains unpublished. It is now in the British Museum.

Seven separate parts of the MS. collections made by Barnard for this work, comprising upwards of 130 services and anthems besides those included in the published work, together with the set of parts which likewise belonged to the Sacred Harmonic Society, are now in the R.C.M. A bassus cantoris part is in the Manchester Free Library.

W. H. H., with addns.

BARNBY, SIR JOSEPH (*b.* York, Aug. 12, 1838 ; *d.* London, Jan. 28, 1896), besides gaining distinction as an organist and composer of church music, was famous as a conductor of choral works.

He was the son of Thomas Barnby, an organist. He entered the choir of York Minster when 7 years old, and was an organist and choirmaster at 12. In 1854 he entered the R.A.M., and was, two years afterwards, narrowly defeated by Arthur Sullivan in the competition for the first Mendelssohn Scholarship. He was organist successively at Mitcham, St. Michael's, Queenhithe, and St. James' the Less, Westminster, before he was appointed to St. Andrew's, Wells Street, where he remained from 1863–71, establishing the musical reputation of the services. From 1871–86 he was organist of St. Anne's, Soho, where he instituted the annual performances of Bach's Passion Music according to St. John, with orchestral accompaniment. In 1867 Novello, to whom he had been musical adviser since 1861, established 'Barnby's Choir,' which gave 'oratorio concerts' from 1869–72, when it was amalgamated with the choir formed and conducted by Gounod at the Albert Hall, under the title of the Royal Albert Hall Choral Society (now the ROYAL CHORAL SOCIETY). The same firm of publishers also gave daily concerts in the Albert Hall in 1874–1875 which were conducted by Barnby. He had conducted the St. Matthew Passion in Westminster Abbey in 1871, and in 1878, when the London Musical Society was formed, he became its conductor, and under his baton the Society produced Dvořák's Stabat Mater for the first time in England, Mar. 10, 1883. He gave up the post in 1886, being succeeded by A. C. Mackenzie. He was appointed precentor of Eton in 1875—a post of the highest importance in the musical education of the upper classes—and retained it till 1892, when he succeeded Thomas Weist-Hill as principal of the Guildhall School of Music. In 1886–88 he was conductor of the rehearsals and concerts of the R.A.M., of which he was a Fellow. On Nov. 10, 1884, he conducted the first performance in England of Wagner's 'Parsifal' as a concert in the Albert Hall. He was knighted on Aug. 5, 1892, and later in the same year conducted the Cardiff Festival ; he conducted the same festival in 1895, and a few months afterwards he died suddenly. He was buried in Norwood Cemetery, after a special service in St. Paul's Cathedral. Barnby's compositions include an oratorio, 'Rebekah' (1870), a psalm, 'The Lord

is King' (Leeds Festival, 1883), an enormous number of services and anthems, partsongs, and vocal solos, trios, etc.; a series of 'Eton Songs' had a great popularity with the class for which they were intended; he wrote also 246 hymn-tunes, published in one vol. in 1897; and edited 5 hymn-books, the most important of which was 'The Hymnary' (1872). (*D.N.B.*)

The popular partsong 'Sweet and Low' is a typical specimen of Barnby's mild melody emphasised by nicely sugared harmony. Having regard to the weaknesses of Barnby's music, it would be easy to underrate his work altogether, but there can be no doubt that he did much to popularise music, and if he fostered the admiration for Gounod's less satisfactory compositions, he also stimulated the love of Bach. As a choir-master he had great gifts, and managed to secure a wonderful degree of accuracy; under him, choir-singing was a kind of drill, and the precision he obtained, though valuable in itself, was not equally suited to all kinds of music.

M.

BARNEKOW, Christian (*b.* St. Sauveur, Pyrenees, July 28, 1837; *d.* Copenhagen, Mar. 20, 1913), came of Danish parents, and was educated at Copenhagen where he took a leading part in furthering Danish music. He founded a Society for the publication of Danish music and was president of the 'Musikforening' (Musical Society) of Copenhagen. His compositions are considerable and include much chamber music and piano music together with choral pieces and songs. C.

BARNETT, (1) John (*b.* Bedford, July 15, 1802; *d.* near Cheltenham, Apr. 16/17, 1890), a composer of music for the English stage.

His mother was a Hungarian, and his father a Prussian, whose name was Bernhard Beer, which was changed to Barnett Barnett on his settlement in England as a jeweller. It is worthy of remark that he was a second cousin of Meyerbeer. In his infancy John showed a marked predilection for music, and as his childhood advanced proved to have a fine alto voice. At the age of eleven he was articled to S. J. Arnold, proprietor of the Lyceum, Arnold engaging to provide him with musical instruction in return for his services as a singer. The young vocalist accordingly appeared on the stage at the Lyceum, July 22, 1813, in 'The Shipwreck,' and continued a successful career until the breaking of his voice. During this time he was receiving instruction in music, first from C. E. Horn, and afterwards from Price, the chorus-master of Drury Lane. He wrote, while yet a boy, a Mass, and many light pieces, some of which were published. At the expiration of his term with Arnold he took pianoforte lessons of Perez, organist of the Spanish embassy, and subsequently of Ferdinand Ries.

His first essay for the stage was the musical farce of 'Before Breakfast' (Lyceum, 1825), the success of which induced him to continue the line he had begun. Among the pieces he subsequently wrote may be enumerated:

'Monsieur Mallet,' 'Robert the Devil,' 'Country Quarters,' 'Two Seconds,' 'The Soldier's Widow,' 'The Picturesque,' 'Married Lovers,' 'The Deuce is in her,' 'Charles the Twelfth' (which contained the popular Ballad 'Rise, gentle Moon') and 'The Carnival of Naples' (Covent Garden, 1830).

In 1830 he published his oratorio of 'The Omnipresence of the Deity,' never performed in public. In 1831 he brought out at Sadler's Wells 'The Pet of the Petticoats,' subsequently transplanted to the greater theatres. This was his most important dramatic work up to this period. It was deservedly popular, and contained dramatic music then new to the English stage.

In 1832 Barnett was engaged by Madame Vestris as music-director of the Olympic Theatre, for which he wrote a number of popular musical pieces:

'The Paphian Bower,' 'Olympic Revels,' 'The Court of Queen's Bench,' 'Blanche of Jersey,' etc. Also for Drury Lane a lyrical version of Mrs. Centlivre's 'Bold stroke for a Wife,' with Braham in the principal character, under the title of 'Win her and Wear her.'

The music contains many gems introduced by the composer into his later works.

In 1834 he published his 'Lyrical Illustrations of the Modern Poets,' a collection of songs, and shortly afterwards 'Songs of the Minstrels' and 'Amusement for Leisure Hours.'

Barnett's best work, 'The Mountain Sylph,' was produced at the Lyceum, Aug. 25, 1834, with remarkable success. It was originally designed as a musical drama for one of the minor theatres, and afterwards extended into complete operatic form. It met with some opposition on the first night, but soon became a standard favourite. Professor Macfarren wrote that its production 'opened a new period for music in this country,' and this view is to a certain extent confirmed by Forsyth (*Music and Nationalism*, 1911), who declares, 'One feels that the composer, almost for the first time since the days of Purcell, really loved his characters.'

Barnett subsequently spent some time in Paris, with the purpose of producing there his opera of 'Fair Rosamond,' but returned, on the invitation of Bunn, to bring out the work at Drury Lane. It was performed Feb. 28, 1837, with indifferent success, mainly owing to its ill-constructed libretto. In this year Barnett married the daughter of Lindley the violoncellist, with whom he went to Frankfort, with the view of studying Vogler's system of harmony and the principles of composition under Schneider von Wartensee. Here he wrote a symphony and two quartets (unpublished). On his return to London in 1838, he produced his opera of 'Farinelli' at Drury Lane (Feb. 8, 1839). In this year, in conjunction with Morris Barnett, the actor, dramatist and journalist, he opened the St. James's Theatre, with the intention of founding an English opera-

house; but (owing to unforeseen circumstances) the theatre prematurely closed at the end of the first week.

At the beginning of 1841 Barnett established himself as a singing-master at Cheltenham, where he had an extensive practice. In later life, after a residence of some years in Germany and Italy, for the education of his children, he went to live in the district of the Cotswolds, where he eventually died. In 1842 he published a pamphlet of 60 pages, entitled *Systems and Singing Masters: an Analytic Comment upon the Wilhem System as taught in England*— cleverly and caustically written, but unjustly severe upon Hullah; in 1844 appeared his *School for the Voice.*

An unpublished opera, 'Kathleen,' to a libretto by Sheridan Knowles, is highly spoken of by those who have heard the music. His single songs are said to number nearly 4000.

His son (2) DOMENICO (*d.* 1911) was a teacher of the piano at Cheltenham, and on the staff of the Ladies' College there until his death. (*Imp. Dict. Univ. Biog.*) E. F. R., with addns.

BARNETT, JOHN FRANCIS (*b.* London, Oct. 16, 1837; *d.* there, Nov. 24, 1916), composer and teacher.

His father was Joseph Alfred Barnett, a professor of music (*d.* Apr. 29, 1898), and a brother of John BARNETT (*q.v.*). John Francis Barnett began the study of the pianoforte when six years old. When eleven he was placed under Dr. Wylde, and a year later gained the Queen's Scholarship at the R.A.M. During the first year of his scholarship he played Mendelssohn's concerto in D minor at the New Philharmonic Society, under the direction of Spohr (July 4, 1853). In 1857 he visited Germany, studied under Hauptmann and Rietz at the Conservatorium at Leipzig, and performed at the Gewandhaus (Mar. 22, 1860). At the expiration of three years he returned to London and played at the Philharmonic, June 10, 1861. The first composition that brought the young composer into notice was a symphony in A minor, produced at the Musical Society of London (June 15, 1864). Thenceforward, in spite of the preoccupations of a life primarily devoted to teaching, he continued to compose assiduously and produced work in almost every form, except the opera, some of which had considerable vogue. He was peculiarly successful in choral cantatas, of which the first was 'The Ancient Mariner' (Coleridge), written for the Birmingham Festival (1867), and the last, 'The Eve of St. Agnes' (Keats), produced by the London Choral Society (1913). His piano music too, of the school of Mendelssohn, had considerable grace and charm. He became a Fellow of the R.A.M. and was on the teaching staff of the R.C.M. and the G.S.M. In 1883 he completed the symphony in E flat by Schubert, from autograph sketches in the possession of Sir G. Grove; it was performed at the Crystal Palace, where, also, many of his own works were given at about the same time. The following is a list of his principal compositions:

INSTRUMENTAL

Symphony in A min. (1864.)
Ouverture symphonique for orch. (Philharmonic, 1868.)
Concerto in D min.
Overture, 'A Winter's Tale.' (British Orch. Soc., 1873.)
'The Lay of the Last Minstrel' for orch. (Liverpool, 1874.)
Suite for Orch., 'The Harvest Festival.' (Norwich, 1881.)
2 Orchestral Sketches, 'Ebbing Tide,' 'Elfland.' (Crystal Pal., 1883.)
2 Orchestral Sketches, 'Flowing Tide,' 'Fairyland.' (Crystal Pal., 1891.)
Pastoral Suite. (1892.)
'Liebeslied,' 'Im altem Styl.' (Crystal Pal., 1895.)
'Pensée mélodique,' 'Gavotte.' (London, 1899.)
'Concerto pastorale,' flute and orch.
Chamber music: quintets, quartets for strings, trios for PF. and strings, sonatas and many piano pieces.

VOCAL

'The Ancient Mariner,' cantata. (Birmingham, 1867.)
'Paradise and the Peri,' cantata. (Birmingham, 1870.)
'The Raising of Lazarus,' oratorio. (Hereford, 1876.)
'The Good Shepherd,' oratorio. (Brighton, 1876.)
'The Building of the Ship,' cantata. (Leeds, 1880.)
'The Wishing Bell,' cantata. (Norwich, 1881.)
'The Triumph of Labour,' cantata. (Crystal Pal., 1888.)
'The Golden Gate,' scena for contralto voice.
'Tantum ergo,' 8 v.
'The Eve of St. Agnes,' cantata. (London, 1913.)

E. F. R., with addns.

BARNS, ETHEL (*b.* London, 1880), violinist and composer, was educated at the R.A.M., learning violin under Sauret, and composition under Prout. Her début was made at the Crystal Palace in 1896. She toured the provinces in the following year, and America in 1913. In 1899 she married Charles Phillips, baritone singer, and gave with him a series of chamber concerts. Her compositions include a concerto, and a 'Concertstück' for violin and orchestra (played at Queen's Hall Promenade Concerts in 1910), two chamber trios, many short pieces for piano and violin, a very effective phantasy for two violins and piano (one of the Cobbett Commissions), and five sonatas for piano and violin. Of the latter, two are published. The sonata numbered 2, in A major, was played by Joachim in Germany in 1903. The sonata numbered 4, op. 24, in G minor, of a strikingly passionate and fiery character, contains a fugal finale, rather complex in rhythm, well carried out. W. W. C.

BARON, ERNST THEOPHILUS (*b.* Breslau, Feb. 17, 1696; *d.* Berlin, Apr. 12, 1760), a famous lute-player.

His first instruction was obtained from Kohatt, a Bohemian, in 1710, next in the Collegium Elizabethanum at Breslau; and he afterwards studied law and philosophy at Leipzig. After residing in Halle, Cöthen, Zeitz, Saalfeld and Rudolstadt, he appeared in Jena in 1720, whence he made an artistic tour to Cassel, Fulda, Würzburg, Nuremberg and Regensburg, meeting everywhere with brilliant success. In Nuremberg he made some stay, and there published his *Historisch-theoretisch und practische Untersuchung des Instrumentes der Lauten* (J. F. Rüdiger, 1727), to which he afterwards added an appendix in Marpurg's *Historisch-kritische Beiträge*, etc. In 1727

Meusel, lutenist at the court of Gotha, died, and Baron obtained the post in 1728, which, however, he quitted in 1732, after the death of the duke, to join the court band at Eisenach; in 1735 he became theorbist to the Crown Prince, afterwards Frederick the Great, at Rheinsberg, and in 1737 he undertook a tour by Merseburg and Cöthen to Berlin, and was engaged by King Friedrich Wilhelm I. as theorbist. Weiss, the great theorbist, was at that time living in Dresden, and from him, Hofer, Kropfgans and Belgratzky, a Circassian, Baron soon learnt the instrument. After this he remained in Berlin till his death, and published there a great number of short papers on his instrument and music in general. For his compositions for the lute see *Q.-L.* F. G.

BARONESS, THE, an artist of German origin, as is supposed, who sang in the operas abroad and in London, and was known by no other name. She sang the part of Lavinia, in the opera of 'Camilla,' by Bononcini (Drury Lane, 1706), and that of Eurilla in 'Love's Triumph,' at the Haymarket, some time afterwards. She had benefits at HICKFORD'S ROOM (*q.v.*), 1713, 1714, 1715, 1716 and 1717. She was a perfect mistress of the grandest method of singing, an art which was even then becoming rare, and she shared that proud pre-eminence with such singers as Cornelio Galli, Tosi and Siface. She took a great part, with Sandoni, in the teaching and cultivation of Anastasia Robinson, so far as that singer would submit to receive any instruction at all, being herself, at the same time, engaged at the Opera, and 'greatly caressed,' as Hawkins informs us. Her name must not be confounded with that of Hortensia, the mistress of Stradella, as was done by Humfrey Wanley, the compiler of the Harleian Catalogue, relying on the information of his friend Berenclow; for that unfortunate lady was, according to the best accounts, assassinated at the same time with her lover. J. M.

BARONI, (1) ADRIANA, *née* Basile, an early 17th-century singer and lute-player, known as the 'fair Adriana of Mantua,' immortalised in a book of verses, *Teatro delle glorie d' Adriana Baroni* (1623).

Her two daughters, (2) CATARINA (*b.* Mantua, after 1620), and (3) ELEONORA (*b.* Naples), both inherited their mother's beauty as well as her talents. Catarina was an excellent singer, harp-player and poetess. Leonora was the more famous of the two. In 1639 Leonora was at Rome, and is referred to by various writers as the greatest singer of her time. Milton, who was introduced to her by Cardinal Barberini, wrote three poems, *Ad Leonoram Romae canentem*, in her praise, in which he refers also to her mother's lute accompaniment. Cardinal Mazarin engaged her to sing in some of Cavalli's operas, produced by him during Louis XIV.'s minority. But the French had not as yet developed a taste for Italian music, and Leonora returned to Italy in disgust with French audiences. She was an excellent theorbo and viola da gamba player and also a composer. Andrée Maugars, the famous gambist, praises her great executive and artistic powers, and V. Castazuti published a collection of verses in her praise, *Applausi poetici alle glorie della Signora Leonora Baroni* (Rome, 1639), which was republished in 1641. The hospitable house of the Baroni was a gathering-place of artists, authors, statesmen and people of fashion from all over Europe. E. V. D. S.

BARRE, ANTONIO, was of French extraction. We find him as a composer of established repute at Rome in 1550, and in 1552 he was an alto in the choir of St. Peter's.

A book of his own madrigals was published in Rome in 1552 (Vogel, *Bibl. d. ged. weltl. Musik*), and in 1555 he started in that capital a printing-press, which he afterwards removed to Milan, and from which he published a series of seven volumes containing pieces by himself and other writers. The titles of these are as follows:

(1) 'Primo libro delle Muse a 5 voci, Madrigali di diversi autori.
(2) 'Primo libro delle Muse a 4 voci, Madrigali ariosi di Antonio Barre ed altri diversi autori.' Both of these volumes were dated 1555, and were dedicated, the first to Onofrio Virgili, the second to the Princess Felice Orsini.
(3) 'Secondo libro delle Muse a 5 voci, Madrigali d' Orlando di Lasso,' 1557.
(4) 'Secondo libro delle Muse a quattro voci, Madrigali ariosi di diversi eccellentissimi autori, con due Canzoni di Gianetto' (*i.e.* Palestrina), 'di nuovo raccolti e dati in luce. In Roma appresso Antonio Barre, 1558.'
(5) 'Madrigali a quattro voci di Francesco Menta novamente da lui composti e dati in luce; in Roma per Antonio Barre, 1560.'
(6) 'Il primo libro di madrigali a quattro voci di Ollivier Brassart. In Roma per Antonio Barre, 1564.' Of this last only the alto part is known to exist, having been actually seen by Fétis.
(7) 'Liber primus Musarum cum quatuor vocibus, seu sacræ cantiones quas vulgo mottetta appellant. Milan, Antonio Barre, 1588.'

Out of these seven works even the learned and indefatigable Baini had only thoroughly satisfied himself as to the existence of the first two, but copies of the third and fourth are at Bologna and elsewhere (*Q.-L.*). The last is said to contain no less than 29 pieces by Palestrina, besides specimens of the work of Orlando Lasso, Rore, Animuccia and other rare masters. E. H. P.

BARRÉ, APOLLON MARIE-ROSE (*b.* St. Brieux, Côtes du Nord, Nov. 15, 1804; *d.* London, Mar. 8, 1879), a remarkable oboe-player who introduced many mechanical improvements in the instrument (see OBOE).

He was a pupil of Vogt at the Conservatoire, solo-player at the Odéon and Opéra Comique, and at last permanently attached to the Italian Opera in London till 1874. Barré was the author of the *Complete Method for the Oboe, comprising all the new fingerings, new tables of shakes, scales, exercises*, etc. He won the first prize for oboe at the Conservatoire in 1824.

F. G.; corr. and addns. M. L. P.

BARRÉ (BARRAE, BARRIS, BARRET, BARÉ), LEONARD, a native of Limoges, and pupil of Willaert, a singer in the Papal Chapel from 1537–52, and thus contemporary with Arcadelt.

He was one of the musicians sent by the

Pope to the Council of Trent in 1545 to give advice on church music. His claims as a composer rest on motets and madrigals published by Gardane (Venice, 1544), on madrigals issued by Scoto (Venice, 1540) with those of Willaert, and on some in Arcadelt's 4th Book of Madrigals (1545). MS. compositions are also preserved in the Hofbibliothek at Munich, and the ducal library at Wolfenbüttel.

J. R. S. B. ; rev. M. L. P.

BARRE, Michel de la (*b.* Paris, *c.* 1674 ; *d.* there, 1743 or 1744), flautist and royal chamber musician, composed ballet-operas, trios, duos, solos and suites for flute, songs, etc.

BARREL ORGAN, see Mechanical Appliances (1).

BARRETT, John (*b. circa* 1674 ; *d. circa* 1735). He was a pupil of Dr. Blow, and was music-master at Christ's Hospital and organist of the church of St. Mary-at-Hill about 1710.

Many songs by him are in the collections of the period, such as D'Urfey's ' Wit and Mirth,' in which is ' Ianthe the lovely,' which furnished the tune of ' When he holds up his hand ' in ' The Beggar's Opera.' Barrett composed overtures and act tunes for :

' Love's last Shift, or, The Fool in Fashion,' 1696; ' The Pilgrim,' 1700; ' The Generous Conqueror,' 1702; ' Tunbridge Walks,' 1703; and ' Mary, Queen of Scots,' 1703.

His Ode at the Anniversary Feast of the Gentlemen of Kent was performed at Merchant Taylor's Hall, London, Nov. 21, 1700 ; words are in the British Museum. W. H. H.

BARRETT, Thomas, English violin-maker (see Violin Family).

BARRETT, (1) William Alexander, Mus.B. Oxon. (1871) (*b.* Hackney, Oct. 15, 1834 ; *d.* Oct. 17, 1891), an English writer on music.

He was a chorister at St. Paul's from 1846–1849, principal alto at St. Andrew's, Wells St., 1858–61, and in the latter year lay-vicar at Magdalen College, Oxford. He was choirmaster of St. John's, Cowley, Oxford, from 1863–66 ; assistant vicar-choral, St. Paul's, 1867, and vicar-choral, 1876 (*Brit. Mus. Biog.*). In 1881 Barrett was appointed Assistant Inspector of Music in Government Training Colleges together with Hullah and Stainer, and he held the position till his death. He published :

English Glee and Madrigal Writers (1877), *English Church Composers* (1882), *Balfe, his Life and Work* (1882), and other works ; he was joint-editor with Stainer of the *Dictionary of Musical Terms* (1875). A volume of ' English Folksongs ' (Novello, 1890), which he edited, played an early part in stimulating the revival which has had conspicuous results since.

He was musical critic of the *Morning Post* from 1867 till his death ; and for some time edited the *Monthly Musical Record*, and the *Musical Times*. G., with addns.

(2) Francis Ernest Horace Joyce (*b.* Nov. 14, 1869 ; *d.* London, Jan. 19, 1925), son of the above, followed in the footsteps of his father as musical critic of the *Morning Post*. Educated in music by his father, he also learnt singing from Manuel Garcia and stringed instruments from Carrodus and Edward Howell. He therefore had the training of a practical musician, to which he added that of a practical journalist. He entered the office of the *Morning Post* in 1890, first undertook its musical criticism in the following year, and succeeded Arthur Hervey as chief critic in 1908. His writings on music were confined to the columns of that paper and of more occasional periodicals such as the *Musical Times*. Like his father, he did pioneer work, for he championed the cause of British music long before it became the popular cry of journalism. C.

BARRIÈRE (early 18th cent.), a celebrated violoncellist who went to Italy in 1736 for further studies, returning in 1739, when he settled at Paris. In the same year he published ' Sonates de par-dessus de la viole,' livre 5 ; he also wrote sonatas for the violoncello, four books of which are in the National Library, Paris. E. v. d. s.

BARRINGTON, Daines, The Hon. (*b.* London, 1727 ; *d.* there, Mar. 14, 1800), recorder of Bristol and puisne judge in Wales, is mentioned here as the author of an account of Mozart during his visit to London in 1764, at eight years of age, in the *Philosophical Transactions* for 1780 (vol. xi.). Barrington also published *Miscellanies* (London, 1781), in which the foregoing account is repeated, and a similar account is given of the early powers of four other children, William Crotch, Charles and Samuel Wesley and Lord Mornington. He also wrote papers on the singing of birds, and on the ancient Welsh crwth and pib-corn.

M. C. C.

BARRIOS, Angel (*b.* Granada, 1886), a Spanish composer and guitarist, author of several works for his instrument, and for a trio of Bandurria (*q.v.*), laud and guitar : ' Guajiras,' ' Cantos de mi tierra,' and others. He collaborated with Conrado del Campo (*q.v.*) in the Goyesque opera ' El Avapies ' (Madrid, 1919), and has written short comic operas, *e.g.* ' Granada mia.' His style is deeply tinged with the native music of Granada. J. B. T.

BARRY, Charles Ainslie (*b.* London, June 10, 1830 ; *d.* Mar. 21, 1915), a writer on musical subjects and a composer.

Educated at Rugby School and Trinity College, Cambridge, he was a pupil of T. A. Walmisley, and afterwards studied music at Cologne, Leipzig and Dresden. He contributed for long to the *Guardian*, edited the *Monthly Musical Record*, 1875–79, and was well known as the ' C. A. B.' of the Richter Concert programmes, in which his admirable analyses of the compositions of the advanced school were of especial value and interest. He published several songs and PF. pieces. A MS. Festival March of his was often played at the Crystal Palace in 1862–63, and he had a

symphony and other orchestral pieces in MS. He was secretary to the Liszt Scholarship Fund, 1886, and was an earnest champion of musical advance. G.

BARSANTI, Francesco (*b.* Lucca, *c.* 1690), an instrumentalist.

In 1714 he accompanied Geminiani to England, which country henceforth became his own. He played both the flute and oboe, the latter for many years in the opera band. He held a lucrative situation in Scotland, and while there made and published ' A Collection of Old Scots Tunes, with the Bass for Violoncello or Harpsichord,' etc. (Edinburgh, 1742). After his return to England about 1750, he played the viola at the opera in winter and Vauxhall in summer. At the close of his life he was dependent upon the exertions of his wife and his daughter, a singer and actress of considerable ability. His other publications include concerti grossi, overtures, sonatas for strings and 6 ' Antifone ' in the style of Palestrina. M. C. C.

BARTEI, Girolamo, a native of Arezzo, general of the Augustinian Order of monks at Rome in the beginning of the 17th century.

In 1607 he was maestro di cappella in the cathedral of Volterra, and in the same year he published a set of ' Responsoria ' for 4 equal voices ; some masses for 8 v. appeared in 1608, a book of motets for 2 v. in 1609, and some ' concerti ' and ' ricercari ' for 2 v., both in 1618 (*Q.-L.*).

BARTH, Karl Heinrich (*b.* Pillau, near Königsberg, Prussia, July 12, 1847), pianist.

He received his first instruction from his father, beginning the piano at four years old. From 1856–62 he was studying with L. Steinmann, and for two years after the expiration of this term with H. von Bülow. From 1864 onwards he was under Bronsart, and for a short time was a pupil of Tausig. In 1868 he was appointed a teacher in the Stern Conservatorium, and in 1871 became a professor at the Hochschule at Berlin. The trio-party which he formed with de Ahna and Hausmann was justly renowned. He repeatedly undertook successful concert tours in Germany and England, and once appeared at a concert of Pasdeloup in Paris. He held the position of pianist to the Emperor Frederick of Germany. M.

BARTH, Richard (*b.* Grosswanzleben, Saxony, June 5, 1850), was being educated for the career of a violinist when an accident to his left hand compelled him to exchange the functions of his two hands ; he had his violin adapted so as to be fingered with the right hand and bowed with the left. He was a pupil of Beck of Magdeburg, and was from 1863–67 with Joachim in Hanover ; for some years he was Konzertmeister at Münster and (from 1882) at Crefeld. He subsequently became University music director at Marburg, and in 1895 succeeded Vernuth as conductor of the Philharmonic Concerts at Hamburg and of the Singakademie at the same place. His style has much of Joachim's breadth and dignity; he appeared in London, with remarkable success, at a chamber concert given by Miss Margaret Wild, June 4, 1896. His literary work includes *Johannes Brahms und seine Musik* (1904), and the editorship of Brahms's correspondence with J. D. Grimm (*Briefwechsel*, iv.). M.

BARTHEL, Johann Christian (*b.* Plauen, Apr. 19, 1776 ; *d.* June 10, 1831), a musician from a very early age.

In 1789 he played at the house of Doles before Mozart, who praised him highly, and soon after he entered the Thomasschule at Leipzig as a pupil of J. A. Hiller. At sixteen, on Hiller's recommendation, he was appointed concert conductor to the court of Schöneburg, and in 1797 occupied a similar post at Greitz. In 1804, on the death of J. G. Krebs, he was appointed organist to the court of Altenburg, where he remained till his death. *Q.-L.* mentions two organ fugues and a song by him, all in MS. M. C. C.

BARTHÉLEMON, François Hippolyte (*b.* Bordeaux, July 27, 1741 ; *d.* London, July 23, 1808), violinist and composer.

He was said to be the son of a French government officer and an Irish lady, but his baptismal certificate kept at his native town describes him as son of a ' perruquier,' Emmanuel Barthélemon. He began life as an officer in the Irish brigade, but being induced by the Earl of Kelly, a well-known amateur composer, to change his profession for that of music, he became one of the most distinguished violinists of his time.[1] In 1764 he came to England, and was engaged as leader of the opera band. In 1766 he produced at the King's Theatre a serious opera called ' Pelopida,' and in the same year married Miss Mary Young, daughter of Charles Young (*q.v.*), a niece of Mrs. Arne and Mrs. Lampe, and a favourite singer. In 1776 Garrick engaged him to compose the music for the burletta of ' Orpheus,' introduced in his farce ' A Peep behind the Curtain,' the great success of which led to his composing the music for other pieces brought out at the same theatre. In 1767 he went to Paris, played at the Concert Spirituel, May 28, 1767 (also in 1769), and produced there a pastoral opera called ' Le Fleuve Scamandre ' (Dec. 22, 1768). In 1770 Barthélemon became leader at Marylebone Gardens. He was in Dublin from May 1771 to Feb. 1773. In 1776 he left England with his wife for a professional tour through Germany, Italy and France. At Florence Barthélemon, at the request of the Grand Duke of Tuscany, set to music the Abate Semplici's oratorio ' Jefte in Masfa,' performed in Rome,1776. He returned to England late in 1777, and in that

[1] C. F. Pohl, *Mozart and Haydn in London.*

year invented an instrument of 5 strings which he called 'Ipolito.' An acquaintance with the Rev. Jacob Duché, chaplain to the Female Orphan Asylum, led to his composing, about 1780, the well-known tune for Ken's morning hymn 'Awake, my soul.' In 1784 Barthélemon and his wife made a professional visit to Dublin. *Q.-L.* gives the names of three ballets produced about 1785. In 1791–95 he became intimate with Haydn, then in London. His compositions for the violin are important. He published in London sonatas for 1 and 2 violins, concertos (3 violins), overtures, etc.; in Paris, violin sonatas, a trio, 'Six symphonies' (strings, oboes, horns), a concerto, etc. On Sept. 20, 1799, Mrs. Barthélemon died. Besides the compositions above named Barthélemon wrote the music for the following dramatic pieces:

'The Enchanted Girdle'; 'The Judgment of Paris,' 1768; 'The Election,' 1774; 'The Maid of the Oaks,' 1774; 'Belphegor,' 1778; a ballet, 'Le Bonheur est d'aimer,' 1785.

W. H. H.; addns. W. H. G. F. and M. L. P.

BARTHOLOMEW, William (*b.* London, 1793; *d.* there, Aug. 18, 1867). He was a man of many accomplishments — chemist, violin-player and an excellent flower-painter; but to the English public he is familiar as the translator or adapter of the words of most of Mendelssohn's vocal works.

The English text of 'St. Paul' was adapted by W. Ball, but those of 'Antigone' (rewarded with the gold medal of merit from the King of Prussia), 'Athalie,' 'Oedipus,' 'Lauda Sion,' the 'Walpurgisnacht,' the Finale to 'Loreley,' 'Elijah,' and the fragments of 'Christus,' with most of Mendelssohn's songs, were Bartholomew's work—not, as any one familiar with Mendelssohn's habits will believe, without constant suggestion and supervision from the composer. 'Hear my Prayer' (the original MS. of which is in the South Kensington Museum, headed 'a paraphrastic version of Ps. lv.') was composed at Bartholomew's request for the concerts of Miss Mounsey, a lady whom he married in 1853. Besides the above, Bartholomew wrote English words for Méhul's 'Joseph'; Spohr's 'Jessonda'; Costa's 'Eli,' 'Naaman' and 'The Dream'; and Mrs. Bartholomew's 'The Nativity,' etc.

G.

BARTLEMAN, James (*b.* probably Westminster, Sept. 19, 1769; *d.* there, Apr. 15, 1821), a bass singer of repute.

He was educated under Dr. Cooke in the choristers' school of Westminster Abbey. His voice while it remained a soprano was remarkable for strength and fine quality of tone. He distinguished himself as a boy-singer by his refined and expressive rendering of Greene's solo anthem 'Acquaint thyself with God.' He was greatly patronised by Sir John Hawkins, in whose family he was a frequent visitor (see Miss Hawkins's *Anecdotes*). In 1788 his name appears for the first time as a bass chorister, at the Concerts of Ancient Music, where he remained till 1791, when he quitted the institution to assume the post of first solo bass at the newly established Vocal Concerts. In 1795 he returned to the Ancient Concerts, and immediately took the station of principal bass singer in the first concert of the metropolis. His voice was, strictly speaking, a baritone, and his compass extended from E below the bass stave to *g'* above it. In the course of one season he revivēd many of Purcell's great bass songs, and continued to sing them with unabated applause until he sang no more. Bartleman's execution was that of his time and school, and confined chiefly to written divisions; his own ornaments were few, simple and chaste, and always in strict keeping with the feeling of the air in which they were introduced. He formed a large and valuable musical library, which was sold by auction by White of Storey's Gate, shortly after his death. He was buried in the cloisters of Westminster Abbey. His epitaph is by Dean Ireland. (*Harmonicon*, 1830; *Books of Ancient Concerts*; *Private Sources.*)

E. F. R., with addns.

BARTLET (Bartlett), John (*fl. c.* 1606–1610), lutenist and song-writer. Nothing whatever is known of Bartlet's personal history, except that he described Lord Hertford, formerly Sir Edward Seymour, as his master, a statement that may imply that he was household musician to Lord Hertford. He took the B.Mus. degree at Oxford in 1610; and in 1606 he published a volume of musical works under the following title:

'A Booke of Ayres with a Triplicitie of Musick, Whereof the First Part is for the Lute or Orpharion, and the Viole de Gambo, and 4. Partes to sing, The second part is for 2. Trebles to sing to the Lute and Viole, the third part is for the Lute and one Voyce, and the Viole de Gambo. Composde by John Bartlet, Gentleman and practitioner in this Arte. London Printed by John Windet, for John Browne and are to bee solde at his shoppe in Saint Dunstones Churchyeard in Fleetstreet. 1606.'

The first section is the most interesting; as was usual with this school of composers, the songs for four parts were also to be performed as solo songs with lute accompaniment. There are 14 songs in this section; notable among these are 'Go, wailing verse,' and 'I heard of late that love was fallen asleep'; while in the lighter vein 'A pretty duck' and 'Of all the birds that I do know' are attractive; the latter is a skit on Philip Sparrow, to words by George Gascoigne.

E. H. F.

BARTÓK, Béla (*b.* Nagyszentmiklós, Hungary, now Yugoslavia, Mar. 25, 1881), a composer who has founded an individual style on researches in national folk-song.

When he was eight years old he lost his father, who was director of an agricultural school and a good amateur musician, and his mother was obliged to make a living as a

teacher at elementary schools. Bartók thus came to live in different parts of Hungary, and so laid the first foundations of his knowledge of the variegated aspects of the country's folk-music. Until 1891 he remained at Nagyszöllös (now in Czecho-Slovakia), and in 1892 he was at Bistritz (now in Roumania). At the early age of 9 he began to compose small piano pieces, and in 1891 he appeared in public for the first time, both as pianist and composer.

It now seemed indispensable for Bartók's future development that his education should be continued at one of the larger towns, and in 1893 his mother succeeded in securing a new post at Pressburg, musically the most advanced of the provincial Hungarian cities of those days. There he studied the piano under László Erkel, son of Franz Erkel, and had many opportunities of hearing operatic and orchestral performances of such standard works as were to be found in a somewhat conservative repertory ; there was also no lack of chamber music in which the young student could take an active part, and he thus became well acquainted with classical music up to Brahms and early Wagner. Under the influence of Brahms and the first works of Dohnányi, his senior by four years, Bartók composed a good deal of music, which has never been published.

On leaving school at Pressburg at the age of 18, Bartók was induced by Dohnányi to depart from the usual custom of going to the Vienna Conservatorium, and to complete his studies at the Royal Hungarian Musical Academy of Budapest instead. At that institution he studied the piano under Stephan Thoman and composition under Hans Koessler from 1899 until 1903. Bartók's emancipation from the influence of Brahms, and his inability to find a new guidance in the works of Wagner and Liszt, which he now assiduously studied, resulted in a period of creative sterility ; but about 1902 two new influences made themselves felt : the acquaintance with the works of Richard Strauss and the chauvinistic tendencies which characterised musical Hungary at that time. Neither was powerful enough to prove lasting ; Bartók soon recognised that the study of Strauss could not lead him into the new channels he sought, and that what was generally taken for genuine Magyar Music (*q.v.*) was Hungarian only in the geographical sense. Nevertheless, a few works were composed under these influences, including a symphony ; a symphonic poem entitled ' Kossuth ' (1903), the first performance of which was given by Richter at Manchester in Feb. 1904 ; a violin sonata, produced in Vienna ; and a piano quintet. These and several other works belonging to this period have remained unpublished, but a record of Bartók's early efforts is preserved in a ' Rhapsody ' for piano (op. 1, 1904), another for piano and orchestra (op. 2, 1904), and the first orchestral suite (op. 3, 1905).

It was about this time that Bartók became aware that nearly everything which had passed for purely Magyar folk-music consisted partly of popularised art-music or old national melodies corrupted by the gipsies, and partly of music properly belonging to surrounding districts which, although then nominally included in Hungary, were, ethnographically speaking, foreign countries. With Zoltan Kodály as a collaborator, he therefore began a careful investigation, first of all of the question of what could really pass as the original folk-music of the Magyar peasantry, and later of the music belonging to the Roumanian and Slovak regions, the latter of which especially could only be separated by strictly scientific research from the Magyar music with which it had become almost inextricably entangled. Bartók soon discovered that much of what he had presented as genuinely Hungarian in the early rhapsodies and orchestral suite in reality belonged to the Slovaks and other neighbouring peoples, and from that moment he was careful to indicate it clearly whenever he resorted to Roumanian or Slovak material.

In 1907 Bartók was appointed professor of the pianoforte at the Royal Hungarian Musical Academy of Budapest. His works encountered great opposition in the capital and could not even be adequately performed, so that Bartók, Kodály and a few other young musicians strove, in 1911, to found a ' New Hungarian Musical Society,' a plan which failed to materialise. About 1912 Bartók retired from public life in order to devote himself entirely to composition and to the study of folk-music, not only of his own country, but of others. In 1913, for instance, he visited Biskra for the purpose of investigating the peasant music of the Arabs ; but the following year the European War interrupted similar projects. It was not until 1917, after the production of the ballet 'The Woodcut Prince ' at Budapest, that Hungary began to realise that it possessed a truly significant native musician. The next year the earlier one-act opera, ' Bluebeard's Castle ' (1911), was performed in the capital for the first time.

To regard Béla Bartók solely as a musical exponent of Hungarian nationalism is to set undue limits to his importance as a creative musician. As it has already been pointed out, he is interested in the folk-music of any country, and therefore naturally in that of his own, with which his art has certain racial affinities ; but a study of his works, excluding the settings of folk-music grouped together at the close of this article, reveals comparatively little that is actually borrowed from the music of Hungary and adjacent regions. Except in the earliest works already mentioned, and the

four volumes of 'Children's Pieces,' where Hungarian and Slovak themes are used in a most individual and yet singularly appropriate manner, his music expresses his own personality much more strongly than his nationality.

The great originality of Bartók's work, which ranges over a long scale of varying expression and differs absolutely from that of any other composer, is more easily perceived than analysed, since its secret lies precisely in the absence of any system of composition which can be verbally defined. Bartók considers himself bound by no accepted rules, and even the logical procedures of his own making he changes deliberately with almost every new work that he writes. He has no fixed method of gaining his ends, and his outlook varies in accordance with the requirements of the moment. His invention is never subordinated to the exigencies of form, the latter being invariably determined by the former. Scholarly attainments are to him merely a means of overcoming technical problems with the greatest possible ease: the actual construction of his music is empiric. The common chord, when it serves his purpose, is as welcome to him as the use of the harshest combination, and although he has immensely enriched his musical idiom by the adoption of Greek and Oriental scales, to say nothing of still more primitive modes, and progressions of his own invention, he would scorn to discard the conventional major and minor scales for no better reason than that they have served innumerable composers before him. He is not anxious to avoid either concord or discord, for to him neither has any but a relative existence, according to whatever he has for the moment adopted as a harmonic centre. Each of the twelve chromatic notes of our tempered scale is regarded by him as a free agent, not bound to others by arbitrary relations.

Unlike much modern music, that of Béla Bartók is not primarily harmonic. It is true that it may proceed in blocks of chords when such a method happens to express the composer's intention, but more frequently harmony is only the inevitable concomitant of melodic formations, or the result of the contrapuntal convergence of independent parts. Like his harmony, Bartók's melody and polyphony conform to laws which, although by no means scholastic, are none the less strictly logical.

No less independent is the rhythmic element. A perusal of Bartók's piano music alone, the most easily accessible portion of his work, reveals an infinite variety of novel uses of rhythm, not only as regards the pattern of individual bars, but the structure of whole movements. One piece may be built entirely on irregular periods, while another may have a wholly symmetrical shape. The composer may indulge in endless changes of time-signature, both in the *rubato* and the *tempo giusto*, according to the natural accentuation of the melodic line, while elsewhere he may deliberately choose a division into uniform bars.

In regard to sound-value Bartók's art is as individual as it is from any other view-point. He is obviously a musician for whom a method of inventing his material first and assigning it to certain instruments afterwards is unthinkable. For this reason, perhaps, scarcely any arrangements of his works have appeared, with the exception of the dramatic pieces, the piano scores of which, although necessary for the purpose of study, can give no adequate idea of the peculiarly spontaneous quality of his orchestral textures, which, compared with other modern scores, have an almost primitive simplicity and directness. In the orchestra, each instrument is given thematic matter that is always strikingly adapted to its nature, and between Bartók's piano music and his chamber works there is a very distinct variance of style. The bulk of the piano music is written in a vertical manner suited to the instrument's percussive character, while melodic formations, which it is least capable of rendering satisfactorily, are thrust into the background; in the string quartets the texture is predominantly contrapuntal; in the sonatas for violin and piano each instrument adheres to its own characteristics with the happiest results.

Bartók is essentially an instrumental composer. Apart from the folk-song arrangements, little vocal work of his has appeared up to 1927, and the treatment of the voice is ineffective both in the songs (op. 16) and in 'Bluebeard's Castle,' a grim and enigmatic work full of atmosphere and dramatic tenseness, and entirely free from operatic formulas.

Bartók might be reproached with a singular and systematic lack of emotion. The absence or presence of this quality, however, depends upon the outlook of each individual hearer. In order to appreciate his work it is necessary to expect nothing in the nature of subjective expression on the composer's part. Bartók never sets out to convey his personal feelings to his audience; his art is concerned solely with the delivery of its message in the most lucid possible way; but precisely because of its restraint it is capable of evoking in the listener, provided that he is sufficiently receptive, deeply human feelings of his own.

UNPUBLISHED

Symphony; Symphonic Poem, 'Kossuth' (1903); Violin Sonata; Piano Quintet; 4 Pieces, Étude for the left hand, 2 Fantasias and Scherzo, for piano solo. Numerous early and unimportant works.

PIANO SOLOS

Funeral March from 'Kossuth' (1903); Rhapsody, op. 1 (1904); 14 Bagatelles, op. 6 (1908); 2 Roumanian Dances, 2 Elegies, 3 Burlesques, op. 8 a-c (1908–10); Sketches, op. 9 (1908); 10 Easy Pieces (1908); 4 Dirges (1910); Suite, op. 14 (1918); Sonatina (1919); 3 Études, op. 18; Improvisations, op. 20; Allegro Barbaro; 'For Children,' easy pieces, 4 vols.

CHAMBER MUSIC

String Quartet No. 1, op. 7 (1908); String Quartet No. 2, op. 17 (1915–17); Violin Sonata No. 1; Violin Sonata No. 2 (1923).

VOCAL WORKS

5 Songs, op. 16 (1916).

ORCHESTRAL WORKS

Rhapsody for piano and orchestra, op. 2 (1904); Suite No. 1, op. 3 (1905); Suite No. 2, op. 4; Two Portraits, op. 5; Two Pictures (Deux Images), op. 10 (1912); 4 Orchestral Pieces, op. 12; Roumanian Folk-dances for small orchestra. Dance suite for orch. (1923, for the 50th anniversary of the union of Buda and Pest).

DRAMATIC WORKS

'Bluebeard's Castle,' Opera in one act, op. 11 (1911); 'The Wood-cut Prince,' Ballet, op. 13 (1914-16); 'The Miraculous Mandarin' Pantomime (1921).

FOLK-SONG SETTINGS

100 Hungarian Soldier Songs; 350 Roumanian Folk-songs; 5 Slovak Folk-songs (male voices); Hungarian Folk-songs (piano) (1920); 15 Hungarian Peasant Songs (piano); Roumanian Folk-songs (piano) (1920); Roumanian Folk-dances (piano); Roumanian Christmas Songs (piano).

E. B.

BARTOLINI, Vincenzio, a very good second soprano, appeared in London, 1782, in 'Il Convito,' a comic opera by Bertoni. In the next season he took part in 'L' Olimpiade,' a pasticcio; and in 1784 he sang in Anfossi's 'Issipile' and 'Due Gemelle,' and the 'Demofoönte' of Bertoni. He sang also in the Commemoration of Handel in Westminster Abbey that year, and in 1786 we find him still in London, performing in Tarchi's 'Virginia.' He was singing with success at Cassel in 1792.

J. M.

BARTON, Marmaduke (Miller) (*b.* Manchester, Dec. 29, 1865), pianist and teacher, son of the Rev. Samuel Saxon Barton, a prominent minister of the United Methodists, was educated at the R.C.M.

In 1883 he won one of the first fifty scholarships (Pringle) with which the new R.C.M. was opened, and was the first winner of the Hopkinson Gold Medal for pianoforte-playing (1886). He studied the pianoforte with John Francis Barnett, and composition with Stanford until 1888, when the College granted him a travelling scholarship. This enabled him to devote a year to further study under Stavenhagen, who was then carrying on the school founded by Liszt at Weimar. On his return to England Barton was immediately appointed to the teaching staff of the R.C.M. (1889), and it is as piano professor there that his most distinguished work has been done during the past 35 years. He was subsequently elected a member of the Board of Professors, and is now (1927) one of the leading pianoforte teachers of London. He joined the staff of the G.S.M. in 1911, has been a regular examiner for the Associated Board of the R.A.M. and R.C.M. for the past 25 years, and in that capacity has visited South Africa six times. In 1891 Barton married Anna Russell, who had also been one of the first fifty scholars of the R.C.M., a pupil of Jenny Lind and of Henschel, and a distinguished singer.

Though the main occupations of Barton's career have been educational, he has pursued his art both as a public pianist and to a certain extent as a composer. Indeed, his sensitive musicianship has survived the routine of teaching in a marked degree. In 1887, while still a scholar of the R.C.M., he played before Queen Victoria at Windsor in a concert arranged to celebrate the Queen's Jubilee. On his return from Germany he appeared at the Crystal Palace playing Brahms's concerto in B flat with Manns and his orchestra, and he has since played concertos with Wood (Promenade Concerts), Ronald (Albert Hall), and at Liverpool, Birmingham and elsewhere. His recitals in London and the provinces have been frequent, and he undertook recital tours in South Africa (1911) and in Holland (1912). His published compositions include a Mass in A (Novello) and works for the piano.

C.

BARTOŠ, Františ̌ek (*b.* Mlatcov, 1837; *d.* there, 1906), collector of Moravian folk-songs; director of the gymnasium at Brno (Brünn). He spent many years in the study and collection of the folk-music. His works include: 'Moravská Svatba' (Moravian Wedding-songs), 1892; 'Pisně Moravské' (Moravian Songs), 1889; and Moravian National Songs, 1901, in collaboration with Leos Janáček (*q.v.*).

R. N.

BARTOŠ, Josef (*b.* Vysoké Mýto, 1887), Czech writer, professor and musical critic, Ph.D. of Prague University; author of *Anton Dvořák* (1913); *Zdenko Fibich* (1913); *J. B. Foerster* (1922); wrote the article on the last-named for this Dictionary.

R. N.

BARYPHONUS, Heinrich (real name, Grobstimme) (*b.* Werningerode, *c.* 1580), cantor at Quedlinburg, an important writer on music. He wrote *Isagoge musica* (Magdeburg, 1609), *Plejades musicae* (Halberstadt, 1615), *Institutiones musico-theoreticae* (Leipzig, 1620), *Ars canendi* (Leipzig, 1626 and 1630).

E. v. d. S.

BARYTON (1) (*viola di bordone, viola bastarda*, see Viol, 5), a viola da gamba having sympathetic strings of metal passing under the finger-board. (See *PLATE LXXXVIII.* No. 2.)

The viola da gamba is said to have been first fitted with such strings in the second half of the 17th century. The invention is attributed to English makers, but the instrument never came into common use in England, where the climate is unfavourable to the use of sympathetic strings; and no baryton by an English maker is known to exist, although old English viole da gamba are extremely common. The instrument is almost peculiar to Germany, where the Hamburg maker, Joachim Tielke, made many fine specimens about 1680. The bridge, of peculiar shape, carries the six or seven ordinary strings of the viola da gamba, tuned in much the same way as on that instrument. Partly under the finger-board, and partly on the right-hand side of it, is a brass frame carrying a variable number of metal strings, seven being the smallest and forty-four the largest observed. The lowest of the sympathetic strings was commonly tuned to E, and the tuning of the rest depended very much on their

number. The largest number of strings would allow a pair to each semitone throughout the two octaves which the compass of the instrument comprises. An instrument with only seven sympathetic strings would probably have had these tuned to some diatonic scale. The baryton, essentially a chamber instrument, was a favourite with German amateurs in the 18th century. Leopold Mozart's account of it in the Introduction to his *Violin-Schule* is full of inaccuracies.

Besides the list given below, among the makers should be mentioned Norbert Bedler of Würzburg, 1723, who made the specimen in the Musée du Conservatoire at Paris. To the composers should be added the player Karl Franz, who published twelve concertos for the instrument in 1785. The name Baryton as applied to this instrument is of uncertain derivation, but is probably connected with the French *Bourdon* (see FAUX-BOURDON).

C. F. Pohl, in his Biography of Haydn (Berlin, 1875), gives us the following notices concerning the baryton :

1. Makers :

M. Feldlen (1656), H. Kramer (1714), D. A. Stadlmann (1732), J. Stadlmann (1750), all of Vienna; Joachim Tielke, Hamburg (1686), maker of the fine specimen in the S. Kensington Museum; and Andreas Stainer, of Absam in the Tyrol (1660).

2. Performers :

M. A. Berti, Vienna (1721-40); Signor Farrant, London (1744); Abell, London (1759-87). Anton Kraft, Karl Franz, and Andreas Lidl, members of Prince Esterhazy's private band under Haydn (Lidl played in concerts in England in 1776); Friedel, member of the royal band at Berlin at the end of the 18th and beginning of the 19th century. Fauner (1794) and V. Hauschka (1795-1823) are named as accomplished amateur performers.

3. Composers :

Niemecz, L. Tomasini, and A. Kraft of Esterház, Wenzl Pichl, Ferd. Paër, Weigl, and Eybler, all of Vienna; and last, but not least, Haydn. Pohl enumerates no less than 175 compositions of Haydn's for the instrument; viz. 6 Duets for 2 barytons, 12 Sonatas for baryton and violoncello, 12 Divertimenti for two barytons and bass, 125 Divertimenti for baryton, viola, and violoncello; 17 so-called Cassations; 3 Concertos for baryton with accompaniment of two violins and bass.

E. J. P.

BARYTON (2), the name by which the EUPHONIUM (or Tenor-tuba) or Bass Saxhorn in B flat is known in Germany (see SAXHORN and TUBA).

BASEVI, ABRAMO (*b.* Leghorn, Dec. 29, 1818; *d.* Florence, Nov. 1885), a learned Florentine musician, founder and proprietor of the musical periodical *Armonia* and of its continuation *Boccherini*, and one of the originators of the Società del Quartetto, which did much to introduce German music into Italy. Basevi was the composer of two operas, 'Romilda ed Ezzelino,' produced at the Teatro Alfieri, Mar. 1840, and 'Enrico Odoardo' at La Pergola, 1847; the author of theoretical works on music, of a treatise *Sulla divinazione*, a *Studio delle opere di G. Verdi*, 1859, and an *Introduzione ad un nuovo sistema d' armonia* (1862). F. G.

BASILI (BASILY), (1) ANDREA (*d.* 1775), maestro di cappella at Loreto in the middle of the 18th century. Santini's collection contained works by him; and a set of 24 studies of his for the clavier, entitled 'Musica universale,' etc., was printed by Alessandri of Venice, and is not without merit.

His son (2) FRANCESCO (*b.* Feb. 1766; *d.* Mar. 25, 1850) was sent to Rome and became a scholar of Jannaconi. While still young he was made maestro di cappella at Foligno. His first appearance in opera was at Milan, in 'Arianna e Teseo,' when he was 22. For Rome he wrote 'La Locandiera' (1789); for Florence 'Achille nell' assedio di Troja' (1798) and the 'Ritorno d' Ulisse' (1799), and for Venice 'Antigono.' About 1799 he became maestro di cappella at Macerata, and wrote a large number of comic operas for Venice, not all equally successful. He then made a rich marriage, which enabled him to give up work, but the marriage proved unhappy, and after a separation, in 1816, he returned to his former post at Loreto. For the San Carlo at Naples Basili composed an oratorio, 'Sansone,' in which Lablache sang the chief part. A Requiem which he had written for Jannaconi was performed, Mar. 23, 1816, at the Apostles' Church in Rome. In 1817 he wrote two operas, 'Ira d' Achille' and 'L' orfana egiziana,' for Venice. In 1827 he was appointed director of the Conservatorio at Milan, where it was his fortune to refuse admission to Verdi. In Aug. 1837 he was called to Rome to become maestro di cappella at St. Peter's, vacant by the death of Fioravanti, and remained there till his own death. Several of his settings of the Miserere, one at least for 8 v. unaccompanied, were sung in St. Peter's. In addition to many operas, besides those already named, and much church music, Basili composed symphonies in the style of Haydn, one of which used often to be played at Brussels under Fétis, and always with great applause (see *Q.-L.* for list of works). F. G.

BASS (1) (Fr. *basse*; Ger. *Bass*; Ital. *basso*), the lower or grave part of the musical system as contradistinguished from the treble, which is the high or acute part. But using the word in its etymological sense (the derivation is ultimately from the Greek *βάσις*) the meaning is clearly that of the foundation or support in a musical composition by the part which is actually the deepest in sound, and there is thus no implication as to the range in compass of such part. The bass of a composition, more especially when the lower range is employed, exerts a profound influence owing to the presence of harmonics which the tones set up, and on it very largely depend the qualities of strength and solidity in the ground structure, whether viewed vertically or horizontally.

C. H. H. P.

(2) The term used to describe the lowest or deepest of men's voices. It is usual to classify basses as Basso Profondo, Basso

Cantante and BARITONE (*q.v.*), while the CONTRA-BASSO is the name given to the specially trained Russian bass whose compass is extended downwards to FF. The practical range of the ordinary bass voice is from about E to *f* or *f* sharp.

BASSANI, GIOVANNI BATTISTA (*b.* Padua, *c.* 1657; *d.* Ferrara, Oct. 1, 1716), an eminent violin-player and composer.

He was a pupil of Castrovillari at Venice, was organist of the 'Accademia della Morte' at Ferrara as early as 1677, lived for some years at Bologna as conductor of the cathedral music, and from 1685 was again at Ferrara as cathedral organist. He was made a member, and in 1682 'principe' of the Accademia dei Filarmonici of Bologna. From 1680 to 1710 he wrote three oratorios, 'Giona,' 'La Morte delusa' and 'La tromba della divina misericordia,' and published 6 operas and 31 vocal and instrumental works, viz. masses, cantatas for 1, 2 or 3 voices with instruments, and 2 sets of sonatas for 2 violins with bass (*Q.-L.*) These works, copies of which are now very rare, are written in a noble pathetic style, and are marked by good and correct workmanship. Two books called 'Harmonia festiva,' being the 8th and 13th of Bassani's published works, and consisting of motets for a single voice with accompaniment, were published by W. Pearson in London, some time between 1699 and 1735. James KENT (*q.v.*) borrowed from Bassani largely. Amongst others the chorus 'Thy righteousness,' in his anthem 'Lord, what love,' is taken from Bassani's Magnificat in G minor with very slight alteration. The 'Hallelujahs' in 'Hearken unto this' are transcribed note for note from Bassani's 'Alma Mater.'

It is generally believed, though not absolutely proved, that Corelli was his pupil. P. D.

BASSANO, a long line of musicians employed at the English Court between 1538 and 1625. (See W. Nagel, *Annalen der englischen Hofmusik*; also *Q.-L.*).

BASSANO, GIROLAMO (JERONIMO), recorder player in the Royal Private Music, 1581–1625, wrote 'a Collection of Fancies in 5 parts' (R.C.M. MS. 1956; imperfect); 1 sonata *a* 4 and 4 fancies *a* 5 (MS.) in Ch. Ch. E. V. D. S.

BASS-BAR, an essential part of the fitting of viols and violins. The violin bass-bar is now made about 11 in. long, and $\frac{5}{16}$ in. thick, diminishing at either end, and is glued in a state of tension to the table of the instrument under the bass or left-hand foot of the bridge. The function of the bass-bar is to spread over the table the vibrations of the bridge produced by those of the strings, and to increase the resistance of the longitudinal arch formed by the fibres of the table. E. J. P.

BASS-BARITONE, a term which it is convenient to employ to describe the bass singer whose vocal resources combine those of the basso profondo and the basso cantante. For example, the music of Wotan or Elijah can only be justly delivered by a singer who has not developed the extent of his higher register at the expense of the weight and sonority of the lower.

BASS CLARINET, see CLARINET (4).

BASS CLEF. The well-known mark of the bass clef,  or  , is a modification of the letter *F*, which has in the course of centuries arrived at its present shape, in the same way that the *G* and *C* have altered their forms. (See CLEF.)

BASS DRUM, see DRUM (2).

BASSE DANSE, a dance of a stately character for two persons (originating from the 'Carole,' 'Karole'), much practised in France in the 14th, 15th and early part of the 16th centuries. The name has reference to the gliding movement of the feet, in contrast to the 'danse par haut' or 'danse sautée,' such as the Galliard. About 1545 it was superseded in popularity by the Pavane. The steps employed were four in number, Simple, Double, Reprise and Branle. According to Arbeau, *Orchésographie*, the steps of the Basse Danse were 'revisence, branle deux simples, double reprise'; the whole dance was divided in three parts, 'basse danse, retour de la basse danse, tordion.' He describes the Basse Danse in triple time, but a mixture of triple and duple measures also exists in French and Italian Basses-Danses.

The dance is described at the end of Alexander Barcley's *Introductory to wryte and to pronounce frenche*, London, 1521: and in A. de Arena's Latin poem, *Ad suos compagnones, etc.*; Paris, 1575. In both these books the names of many of the tunes are given, such as 'Filles à marier' and 'Le Petit Rouen,' but without music. Attaingnant published a collection of eighteen Basse Danse tunes in 1529, and nine more in the following year. Thoinot Arbeau, in his *Orchésographie* (1588), says that the Basse Danse has been obsolete for some forty or fifty years, but he gives a full description of it in the hope that it may be revived by 'sage and modest matrons,' and prints the tune entitled 'Jouyssance vous donneray.'

There is a 15th century 'Livre des basse-danses' once belonging to Marguerite de Bourgogne, formerly in the Royal Library at Brussels, now at Vienna. The Bibliothèque Nationale of Paris preserves two Italian MSS.: 'Guilielmi Hebraei Pisansiensis de pratica seu arte tripudii vulgare operculum soliciter incipit' (1416), and 'Domini Johannis Ambrosi,' etc. (1463). One of the tunes, which seems to have been known *par excellence* as 'La Basse Danse,' was used as the subject of a Mass by Vincent La Fage. This 'Missa La basse danse'

is still extant in manuscripts at Trent and in the Archives of the Sistine Chapel at Rome.

BASSÉE, ADAM DE LA (*d.* Feb. 25, 1286), canon at the College of St. Peter, Lille (Coussemaker, 5, 205), composer of 'Chants liturgiques' republished in facsimile by the Abbé D. Carnel in the *Messager de sciences historiques* p. 241 ff. (Hebbelynck; Gand, 1858). E. v. d. S.

BASSET-HORN, see CLARINET (2).

BASSET-OBOE, see OBOE (4).

BASSEVI, see CERVETTO.

BASS-FLUTE, see FLUTE (6).

BASS-HORN or KEYED-HORN (Ger. *Klappenhorn*). About the end of the 18th century attempts to improve the serpent resulted in the introduction of this instrument, of wood or brass, in which the tube, conical in bore like that of the horn, is doubled upon itself, as in the bassoon. The bass-horn was played with a cup-shaped mouthpiece; it had six finger-holes, bored laterally, and three or more keys. It is the transitional instrument between the serpent and the ophicleide. The Russian bassoon is a variety of the bass-horn. (See OPHICLEIDE.) (*PLATE LXXIV.* 7.) D. J. B.

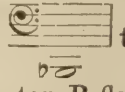
BASSI, LUIGI (*b.* Pesaro, 1766; *d.* Dresden, 1825), an eminent baritone singer; a pupil of Laschi at Florence.

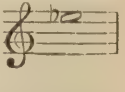
He first appeared on the stage in women's parts at the age of 13. In 1784 he went to Prague, where he made a great reputation, especially in Paisiello's 'Re Teodoro,' and 'Barbiere di Siviglia' and Martini's 'Cosa rara.' Mozart wrote the part of Don Juan for him.[1] He is said to have asked Mozart to write him another air in place of 'Fin ch' han dal vino' in 'Don Juan,' but Mozart replied, 'Wait till the performance: if the air is not applauded, I will then write you another.' A hearty encore settled the question. He is also said to have induced Mozart to rewrite 'La ci darem' five times to suit him. But these stories are probably mere legends of Mozart's good-humour. In 1806 Bassi left Prague in consequence of the war. For some years he was in the pay of Prince Lobkowitz, Beethoven's friend, appearing occasionally in public in Vienna; but in 1814 he returned to Prague, when Weber had the direction of the opera, and in 1815 was called to Dresden as a member of the Italian company there, but shortly afterwards became manager of the opera instead, and died there in 1825. Bassi was gifted with a fine voice, even throughout the register, a prepossessing appearance, and considerable dramatic ability. He is not to be confounded with Nicolo or Vincenzo Bassi. M. C. C.

[1] Bassi is usually said to have been also the original Almaviva in 'Figaro'; but this is incorrect; Mandini was the first. See Jahn's *Mozart* (2nd ed.), ii. 243.

BASSIRON (BASIRON, BASSERON), PHILIPPE, a native of the Netherlands, living in the 15th century. A Mass and a motet were printed by Petrucci of Fossombrone in 1505 and 1508; others exist in MS. J. R. S. B.; rev. M. L. P.

BASSO CANTANTE, See BASS (2).





BASSO CONTINUO, see THOROUGH-BASS.

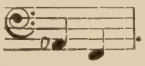
BASSO DA CAMERA, Italian for a chamber-bass; that is a small double-bass, such as is generally used by double-bass players for solo performances.

BASSON RUSSE, see BASS-HORN.

BASSOON (1) (Fr. *basson*; Ger. *Fagott*; Ital. *fagotto*), a wooden double-reed instrument of which there were formerly three varieties: (1) the ordinary bassoon; (2) double-bassoon an octave lower in pitch; and (3) the tenoroon in E flat or F, a fourth or fifth higher than (1) and now practically obsolete. (See *PLATES V.* Nos. 3 and 4; *LIV.* No. 1.)

The English and French names are derived from its pitch, which is the natural bass to the oboe and other similar reed instruments; the Italian and German names come from its resemblance to a faggot or bundle of sticks.

(1) The ordinary bassoon has a complete chromatic compass from  to  but the notes above the top B flat are somewhat ineffective. The parts are written as they sound on the bass and tenor clefs as required.



It consists of five pieces, named the crook, wing, butt, long joint and bell. These, when fitted together, form a hollow cone about eight feet long, tapering from $\frac{3}{16}$ of an inch at the reed to $1\frac{1}{2}$ inches at the bell end, but there is a constriction in the bell which modifies the open or blaring tone the bell-note would otherwise have in comparison with the notes from the side-holes. In the butt joint the bore is bent abruptly back upon itself, both sections being pierced in the same block of wood, and united at the lower end; the prolongation of the double tube being in general stopped by means of a flattened oval cork; but the much better plan of a connecting U-shaped sliding tube has also been adopted. The whole length of the instrument in the old Philharmonic, or high pitch, by internal measurement, being 109 inches, the height is reduced to a little over four feet by means of the doubling, and the various holes are brought within reach of the fingers. They would still be situated too far apart for an ordinary hand if they were not pierced obliquely; the upper hole for each forefinger passing upwards in the substance of the wood, and those for the third finger passing downwards in a similar way. There are three holes in the wing-joint—so named from a projecting wing of wood intended to contain them, closed by the first three fingers of the left hand; three others on the front of

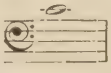
Messrs. Boosey & Co., Ltd.

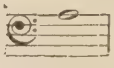
1 CONCERT FLUTE. 2. BASS SARRUSOPHONE. 3. DOUBLE BASSOON.
4. BASSOON. 5. COR ANGLAIS. 6. OBOE.

the butt joint—closed by the first three fingers of the right hand; a single hole on the back of the butt joint, for the thumb of the right hand; and a series of interlocking keys on the long joint producing the lowest notes of the scale by means of the left thumb.

It will thus be seen that the instrument is held in the hollow of the two hands, with the left uppermost, at the level of the player's breast, the right hand being somewhat below and behind the right thigh. A strap round the neck supports the bulk of the weight. The little finger of the right hand touches two keys which produce A♭ and F  . With this latter note the real fundamental scale ends, exactly as it does in the oboe; all the mechanism of the long joint and bell only strengthening the tone and producing the seven lowest semitones upwards from BB♭. In comparing the bassoon with its kindred treble instrument, the oboe, it must be remembered that it has this supplementary prolongation of its compass downwards, which the other lacks. The seven lowest holes and keys therefore produce only one sound apiece; but the case is totally different with those following next above them, from the little finger of the right hand to the forefinger of the left. These eight holes and keys can each be made to give two sounds at an interval of an octave by varying the pressure of the lip. After the double register thus obtained has been run through, there still remain a few notes to be got by cross-fingerings at the interval of a twelfth, namely the $f'\sharp$, $g'\natural$, and $a'\flat$, with which the natural scale has been stated to end. In modern instruments two or even three keys are added at the top of the wing-joint, to be worked by the thumb of the left hand stretched across from the other side. They open small harmonic holes close to the crook, and enable seven semitones to be added from $a'\natural$ to $e''\flat$ inclusive. Even above this there are two outlying notes, $e''\natural$ and f'', to be obtained by exceptional players without mechanism; and it is not improbable that still higher, although useless, harmonics might by assiduous study be exacted from this remarkable instrument.

The general scheme of the sequence of the notes of the scale being thus indicated, it should be noted that for many notes there are two or more alternative fingerings, and the choice between these must be left to the judgment of the player.



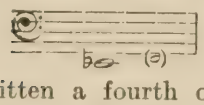


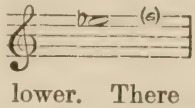
Like the oboe, of which it is the bass, in the sense that both are 'double-reed' instruments, the bassoon gives the consecutive harmonics of an open pipe, a fact which Helmholtz has shown mathematically to depend on its conical bore.

As confusion sometimes arises as to the relative pitch of wood wind instruments, it may be stated here, that although the lowest note on both the oboe and the bassoon is B♭ with an interval of two octaves, the bassoon cannot properly be regarded as two octaves below the oboe in pitch: the difference is really a twelfth, for the comparison should be based upon the results obtained from the use of the six finger-holes. Closing the three left-hand finger-holes, the oboe speaks g' and the bassoon c; closing all six finger-holes, the oboe speaks d', agreeing with the flute, and the bassoon speaks G; closing the open standing key for little finger right-hand, we have on the oboe c', and on the bassoon F, so that the bassoon is in its scheme a twelfth lower than the oboe, and an octave lower than the cor anglais.

It is probably, in one form or another, of great antiquity; the evidence of its discovery by Afranio, a Canon of Ferrara, has been discussed under Afranio. A class of instruments named bombards, pommers, or brummers, which were made in many keys, seems to have been the immediate predecessor of the bassoon, but as these instruments were straight, with the tube not doubled upon itself, they had not the characteristic which has given the bassoon its Italian and German names. It is the doubling of the tube which has made it possible for the fingers of the left hand to control holes or ventages in the upper portion, while the thumb of the same hand is conveniently placed for controlling keys on the lower extension of the instrument, by which means the downward relative compass has been much increased. The curtals, dolcians, rackets and sourdines appear to have been the first instruments embodying this device. Each is briefly described under its own heading. Some of the older forms of bassoon are well described, with representations of their shape, in the 'Metodo completo di fagotto' of Willent. They possess a contrivance which does not exist at the present day on any reed instruments, though it somewhat anticipates the 'crooks' and 'transposing slides' of the brass. Besides the holes to be stopped by the fingers, there are other intermediate apertures stopped by pegs, and only to be opened in certain keys. No doubt in the older style of music this mechanism may have been useful; but it would hardly adapt itself to the rapid modulations of later composers.

The bassoon is an instrument which has evidently originated in a fortuitous manner, developed by successive improvements rather of an empirical than of a theoretical nature; hence its general arrangement has not materially altered since the earliest examples. Various attempts have been made to give greater accuracy and completeness to its singularly capricious scale; but up to the present time all these seem either to have diminished the flexibility of the instrument in florid passages, or to have impaired its peculiar but telling and characteristic tone. For a long time it was used in the





orchestra as a purely bass instrument, although there is a remarkable exception in Handel's 'Saul.' Haydn valued its melodic possibilities, and after him Mozart and Beethoven established its position as an instrument of expression.

(2) The DOUBLE-BASSOON (Ital. *contrafagotto*; Fr. *contrebasson*; Ger. *Doppelfagott*) is one octave lower than the ordinary bassoon. In its modern form it has a compass from  to  . It is written for as a transposing instrument, an octave above the real sounds. The original instruments were unwieldy and ill-proportioned, the finger-holes, although spaced as far apart as possible, being too close for acoustical requirements. To Haseneier and Stone was due a much improved model, the compass of which was from  to  ; it could therefore play the  (actual note) required by Beethoven in the Ninth Symphony and Brahms in his C minor Symphony. The objection was made against it, however, that its tone was too 'open,' lacking something of the characteristic 'closeness' of the bassoon quality, and that it was difficult to obtain on it a good *piano*. In the later model brought out by Heckel, of Biebrich-am-Rhein, the advantages of modern key-mechanism are combined with the general bore and proportions of the old double-bassoon. The notes are equal in character, but, the calibre being less than on Dr. Stone's instrument, the tone is less broad.

A demi-contra-fagotto (Ger. *Quart-fagott*) is also made, standing in F, and therefore intermediate in pitch between the ordinary bassoon and the double-bassoon.

The double-bassoon in E♭ of brass was formerly common in large military bands; it carried the reed tone down to D of the 16-foot octave. A type of this instrument replaces the ordinary double-bassoon in French orchestras.

The double-bassoon was known to Handel (see ASHLEY, John; LAMPE); Haydn used it in the 'Creation'; Beethoven appears to have been the first to write for it at all largely. Wagner, it may be added, wrote for it in 'Parsifal' as a non-transposing instrument.

(3) The TENOROON (Fr. *basson quinte*; Ger. *Quintfagott, Tenorfagott*; Ital. *fagottino*) had a chromatic compass from  to  written a fourth or fifth lower. There are parts for fagotti in E flat in Haydn's Stabat Mater. (See also DOLCIAN.)

The name alto-fagotto or tenoroon appears to have been given to an instrument, now obsolete, invented by William Meikle and described in the *Harmonicon*, 1830; this, however, was played with a clarinet mouthpiece, *i.e.* a single reed. (See REED.) It is probable that this is the instrument upon which the cor anglais solo in the 'William Tell' overture was played when the opera was first given in England. Dr. Stone said that this melody was played at the written pitch (Italian composers at that time wrote cor anglais parts an octave lower, in the bass clef) on the oboè di caccia, but the part would be too low for that instrument. See *Mus. T.*, Dec. 1922. W. H. S. and D. J. B.

BASTARDELLA, LA, see AGUJARI, LUCREZIA.

BASTIEN ET BASTIENNE, a German operetta or pastoral in one act (16 Nos.), words by A. Schachtner from the French of Favart, *Les Amours de Bastien et Bastienne*; music by Mozart 'in his 12th year,' 1768; performed in a Garden-house at Vienna belonging to his friends the Messmers. (Köchel, No. 50; Jahn, 1st ed. i. 122.) Produced in English, Carl Rosa Co., Daly's Theatre, 1894.

BASTON, JOSQUIN, Netherlandish master. Most of his known works (45 motets and chansons) were published between 1542 and 1559 by Phalèse at Louvain, and Tylman Susato at Antwerp; some appeared in Salblinger's 'Concentus' (Augsburg, 1545), and, according to Eitner, one motet is found in Scotto's '1. lib. de' Motetti a 5 voci' (1549). The once frequently printed chanson, 'C'est à grand tort,' says Eitner, proves clearly that Baston received his training under Italian skies, as, like Willaert and Arcadelt, he assimilated the Italian style which placed more reliance on beauty of harmony and colouring than on the devices of strict counterpoint. E. v. d. S.

BATAILLE, GABRIEL, early 17th century lutenist at the French Court. He collaborated with Guédron, Mauduit and Bochet in the composition of the ballets at the court of Louis XIII., and published between 1608 and 1623 (according to *Riemann*), 11 books of lute-pieces and airs with lute accompaniment, 8 of which are mentioned by Eitner as still in existence. E. v. d. S.

BATES, JOAH (*b.* Halifax, Mar.[1] 1740/41;

[1] Baptized Mar. 8.

d. London, June 8, 1799), conductor of the Concert of Ancient Music.

He received his early education at Halifax under Dr. Ogden, and learned music from Hartley, organist of Rochdale. He subsequently removed to Manchester, where he studied organ-playing under John Wainwright, organist of the collegiate church, now the cathedral. He obtained a scholarship at Eton in 1756, and went in 1760 to Cambridge, where he became fellow and tutor of King's College. He took the degree of B.A. in 1764, and of M.A. in 1767. He then became private secretary to the Earl of Sandwich, First Lord of the Admiralty and a well-known musical amateur, who procured him a small post in the Post Office. About that time he conceived the plan of the Concert of Ancient Music, which was established in 1776, Bates being appointed conductor. In the same year he was appointed a commissioner of the Victualling Office, and in 1780 married Miss Sarah Harrop, a pupil of Sacchini, and a favourite concert singer, who had studied under him the music of Handel and the elder masters. He next, in 1783, in conjunction with Viscount Fitzwilliam and Sir Watkin Williams Wynn, projected the Commemoration of Handel, which was carried into effect the following year, Bates officiating as conductor.[1] He was afterwards appointed a commissioner of the Customs and a director of Greenwich Hospital. Having projected the Albion Mills, of the success of which he was so sanguine as to invest the whole of his own and his wife's fortunes in them, he was nearly ruined by their destruction by fire in 1791. In 1793 he resigned the conductorship of the Concert of Ancient Music. A fine painting of Joah Bates and his wife, by F. Cotes, R.A., is in the possession of Mr. Alfred H. Littleton. W. H. H.

BATES, William, a composer of the 18th century; produced music for the following dramatic pieces:

'The Jovial Crew,' comic opera, 1760; 'Pharnaces,' opera, 1765; 'The Ladies' Frolick,' an alteration of 'The Jovial Crew' (jointly with Dr. Arne), 1770; 'The Theatrical Candidates,' musical prelude, 1775.

He was also the composer of 'Songs sung at Marybon Gardens, 1768,' and of several glees, catches and canons, eleven of which are published by Warren. Also 'Flora, or Hob in the Well,' ballad opera, 1768; 'Songs sung at the Grotto Gardens,' 1771 (see Catley).

W. H. H.

BATESON, Thomas (*b. circa* 1570; *d.* Dublin, Mar. or Apr. 1630), a famous composer of madrigals. Rimbault states that he became organist of Chester Cathedral in 1599. This is probably correct, but cannot be verified, as the Cathedral Treasurer's accounts for the years before 1602 are missing

There is some reason to think that he was a Cheshireman and a native of the Wirral district, but he seems to have come to Chester as a complete stranger, and to have had no previous connexion with the Cathedral. That he was a young man we may infer from the preface to his first book of madrigals. He was married, and the old Cathedral (St. Oswald's) Registers give three children, Thomas baptized 1603, Jane 1605, and Sarah 1607. Richard Betson, a foundationer of the King's School 1611–15, may have been an older son, as the spelling of the name admitted of several variants. In the *Chapter Acts of Christ Church Cathedral*, vol. i. (1574–1634), the name is spelt Betson and Batson as well as in the more usual manner. The Cathedral accounts show several payments to Bateson.

'1601. Payd unto Mr. Bateson for ye new organ booke belonging to o'r Quier xl^{s}. 1602, Nov. 17. For a little Deske for Mr. Bateson his organ book vi^{s}. 1605, March. To Mr. Bateson for mending ye organs when they were removed iiij^{s} x^{d}.'

Two other payments in 1608 show that the Treasurer and Bateson were clearing up accounts between them preparatory to the latter leaving Chester for Ireland. On Mar. 24, 1608/09, he appears as 'Vicar Choral of the Cathedral of the Holy and undivided Trinity, Dublin,' and on Apr. 5 of the same year is described as 'Vicar and organist of this church.' He took advantage of his residence there to proceed to the degree of Bachelor of Music in 1612, in which year his son John, aged 20, was rector of Kiljarran, in the diocese of Ferns. He had a private grace of the senate of the M.A. degree on June 13, 1622. Bateson is generally considered to have been the first musical graduate of Trinity College, Dublin.[2] An anthem in seven parts, 'Holy Lord God Almighty,' reprinted by the Mus. Ant. Soc. from a set of partbooks formerly in the possession of John Evelyn, was probably the exercise for his degree. It has also been published under the editorship of James Fitzgerald (Novello). No other sacred music of Bateson is known, though a service by him was sung in Chester Cathedral up to the early part of the 19th century. His fame rests entirely on his Madrigals. In 1604 he published

'The first set of English Madrigales to 3, 4, 5 and 6 voices. Newly composed by Thomas Bateson, practicioner in the Art of Musicke, and Organist of the Cathedral Church of Christ in the Citie of Chester, 1604. 4to. *In London, Printed by Thomas Este.*'

The contents consist of six songs for three voices, six for four voices, ten for five voices, and seven for six voices (including the 'Oriana' madrigal). The work was dedicated 'To my honorable and most respected good friend Sir William Norres.' This patron was of the family of Norreys of Speke, Lancashire, but he had certain rights and duties connected with the Bridge Gate in the city of Chester, and

[1] See Burney, *Commemoration of Handel.*

[2] *Chapter Acts, Christ Church Cathedral, Dublin*, vol. ii. p. 73.

lived for some time at Blacon Manor House on the outskirts of the city.

At the back of the dedication is a madrigal 'When Oriana walkt to take the ayre,' and the following note :

'This song was sent too late, and should have been printed in the set of Orianas ; but being a work of this author, I have placed it before the set of his songs.'

This refers to 'The Triumphes of Oriana,' and the words of this madrigal were considered by Oliphant as 'the best poetry in the set.' Bateson's volume also contains a madrigal called 'Oriana's Farewell,' evidently written after the death of Queen Elizabeth.

In 1618 appeared

'The Second Set of Madrigales to 3, 4, 5 and 6 parts. Apt for Viols and Voyces. Newly composed by Thomas Bateson, Batcheler of Musicke, Organist, and Master of the Children of the Cathedrall Church of the blessed Trinitie, Dublin, in the Realme of Ireland. 4to. *London : Printed by Thomas Snodham for Matthew Lownes and John Browne*, 1618, *cum Privilegio.*'

This second set was dedicated 'To the Right Honourable Arthure Lord Chichester, Baron of Belfast,' etc., and the arms of that nobleman are on the title-page. The book contains six 'Songs' for three voices, six for four voices, twelve for five voices, and six for six voices. This is a rare work, and few perfect copies are extant. It may be noted that the words of No. 13, 'Have I found her ?' had previously been set in 1612 by Pilkington of Chester, with whom Bateson was, of course, well acquainted. Some MS. compositions by Bateson are in the Brit. Mus. Eg. MS. 995, and Add. MS. 31,398. Bateson died Mar. or Apr. 1630, as he made his will on Mar. 2, 1629/30, and on Apr. 30 of the same year the Chapter Acts above referred to mention the granting of a new lease of his house and allude to 'the widdow Batson.' In an entry under date May 1631, Bateson is said to have died just a fortnight before the rent was to be paid, so that it is possible that the date was in the early part of March.

AUTHORITIES.—*D.N.B.*, Cathedral and other Chester Records; information from W. H. Grattan Flood and L. McC. L. Dix.

J. C. B.

Bateson has in the past been very generally regarded as one of the best of the English madrigal composers ; but the discussion of their relative merits has hitherto been based upon a knowledge of no more than a small selection of their writings. A careful study of Bateson's work as a whole, in his two large volumes containing altogether fifty-eight madrigals, leaves the impression that he does not stand quite on the same level as the great leaders of the English Madrigal School. He lacks, for instance, some of the descriptive power of Wilbye in setting such lines as 'O break asunder, heart, to satisfy her,' or 'My grieved ghost with shrieks and dreadful crying,' and his chromatic harmonies never approach the daring examples of Weelkes. Again, on technical grounds, his part-writing compares unfavourably with that of such a master as Morley. But the comparison of his work with that of the giants must not be allowed to lead to the impression that Bateson did not write many fine madrigals, and this severe test of comparison is only introduced here to correct a prevailing estimate which does not appear quite a true one. One great point of merit in Bateson's work is his admirable choice of lyrics ; he must have had a fine taste in poetry, and this in itself counted for much in madrigal composition. Among the best madrigals in these two volumes may be mentioned 'Cupid in a bed of roses' ; 'Hark ! hear you not ?' 'Sister, awake,' and 'Come follow me, fair nymphs,' but there are several more in the first rank.

Bateson occasionally indulged in some curious harmonic experiments, especially as regards the simultaneous use of major and minor thirds, and his practice in this matter is somewhat different from that of Byrd. His use of a double suspension in 'Hark ! hear you not ?' is sometimes referred to, but this is by no means the only example of such a suspension in Bateson's work and his treatment of such chords is far less remarkable than that of the madrigalist John Ward.

His works are as follows :

1. The First Set English Madrigals to 3, 4, 5 and 6 voices. 1604. (*Eng. Madr. Sch.* xxi.)
2. The Second Set of Madrigals to 3, 4, 5 and 6 parts. 1618. (*Eng. Madr. Sch.* xxii.)
3. Holy Lord God. Anthem. B.M. Add. MSS. 17,792-6.

E. H. F.

BATH, HUBERT (*b.* Barnstaple, Devonshire, Nov. 6, 1883), a composer of ability and a musician who, as adviser to the London County Council and conductor of popular performances, orchestral and choral, has had considerable influence.

In 1901 he entered the R.A.M., studying the piano under Oscar Beringer, and composition under Corder. In 1904 he won the Goring Thomas Scholarship for composition with a one-act opera based on Longfellow's 'Spanish Student.' He first came to the fore with a set of Orchestral Variations, produced at the Queen's Hall in 1904. Further landmarks in Bath's career were the brilliantly successful performance at the Leeds Festival (1910) of his cantata 'The Wedding of Shon Maclean' (it had been given in London in the previous year), the production of a comic opera, 'Young England' (with G. H. Clutsam and Basil Hood), at Daly's Theatre (1915), and of a one-act opera, 'Bubbole,' at Milan in 1920. In 1908 Bath had written incidental music to 'Hannele' for His Majesty's Theatre, and this became the basis of one of his most ambitious works, the symphonic poem 'The Visions of Hannele,' first given at a Patron's Fund Concert in 1913, and after revision produced at

Queen's Hall in 1920. These and other works fall into two classes ; the popular cantatas, the comic opera, and certain orchestral pieces such as the overture ' Midshipman Easy ' (written for and dedicated to the Strolling Players' Orchestral Society, 1911), all show a genial sense of humour expressed in facile musical terms. The aspiration towards a deeper expression of feeling appears in the ' Visions of Hannele,' the early chamber music, which included 6 one-movement quintets for strings and PF.), and the songs and recitations to music. In the setting of words Bath has been clearly influenced by two things. In the first place, he has a special affection for things dealing with Celtic subjects; and, secondly, he seems to prefer prose to verse, doubtless because of the freedom of rhythm afforded by unmetrical words. These considerations lend a peculiar interest to his songs, some 30 of these being settings of ' Fiona Macleod.' The following list is based on that of the *B. M. S. Ann.*, 1920:

OPERAS AND INCIDENTAL MUSIC

Bubbole, 1 act. (Milan, 1920.)
Young England (with G. H. Clutsam). (London, 1915, 1916.)
The Sire de Maletroit's Door, 1 act.
The Three Strangers, 1 act.
Trilby, 3 acts.
Incidental Music to ' Hannele.' (London, 1908.)
Incidental Music to ' The Light of Asia.'
Aladdin Pantomime. (Kennington, 1919.)
Music for Pelissier's ' Follies.' (London, 1919.)

INSTRUMENTAL

Orchestral Variations. (London, 1904.)
Suites for Orchestra : (1) African ; (2) Woodland Scenes ; (3) Pierrette by the stream.
Symphonic Poem—Visions of Hannele. (London, 1913, 1920.)
Marches, etc.

VOCAL

Cantatas—Wedding of Shon Maclean, Look at the Clock, The Jackdaw of Rheims, The Wake of O'Connor, The Men on the Line (male ch.), Psyche's Departure (women's voices), Orpheus and the Sirens (tenor solo, women's voices).
Two Sea Pictures.
Songs and recitations to music.

G. S. K. B., with addns.

BATHE, William (*b.* Ireland, Apr. 2, 1564 ; *d.* Madrid, June 17, 1614), a writer on music, son of Judge John Bathe and grandson of Chief Baron Bathe.

He studied at Oxford, and constructed a ' harp of a new device,' which he presented to Queen Elizabeth (in 1584), to whom he taught mnemonics. He published his *Brief Introduction to the true art of Musicke*, in 1584, being the first standard work in English on musical theory. It was printed by Abel Jeffes, in Sermon Lane, near Paules Chaine, oblong quarto, and was dedicated to his grand-uncle, Gerald Fitz-Gerald, Earl of Kildare. On Jan. 20, 1585, Queen Elizabeth expressed approval of Bathe's diplomacy as the agent of Sir John Perrott, and on Mar. 7, 1587, he got various lands in Ireland, including Drumcondra Castle. He returned to Ireland in 1590, having got livery of his estate on Sept. 24, 1590, and gave over his estates to his younger brother. In Oct. 1591 he sailed for Spain, and became a Jesuit at Tournai, in Flanders, Aug. 6, 1596, entering the Novitiate, Sept. 21 of same year. He successively studied at St. Omer and Padua, where he was ordained priest in 1599. In 1600 he published, through Thomas East, of London, a second musical work, in English, entitled : *A Brief Introduction to the Skill of Song*, a small octavo of 25 pages, of which two copies are in the British Museum. The following year he went to the court of Spain as *socius* to the Nuncio, and in 1604 was made Spiritual Director of the Irish College of Lisbon. Thence he proceeded to Salamanca in 1606, and was there professed in 1612. In 1611 his famous *Janua linguarum* was printed at Salamanca, afterwards translated into twelve languages.

W. H. G. F.

BATI, Luca (*d.* Florence, 1608), a 16th/17th century Italian composer. He was a pupil of Corteccia, and towards the end of the 16th century was maestro di cappella of San Lorenzo, Florence. He composed the music for a great Masque, ' The Flames of Love,' which was publicly performed at that town on Feb. 26, 1595 ; also 2 books of madrigals published by Gardano, Venice, 1594 and 1598. Several odd madrigals of his are contained in collective volumes. (See *Q.-L.*) E. v. d. S.

BATISTE, Antoine Edouard (*b.* Paris, Mar. 28, 1820 ; *d.* there, Nov. 9, 1876), an organist and professor of music.

He was a son of the eminent comedian Batiste (whose memory is still fresh in the annals of the Comédie Française), and uncle of Léo Delibes. He was one of the pages in the chapel of Charles X., but after 1830 he was sent to the Conservatoire, where he went through a course of solfeggio, harmony, organ, counterpoint and fugue. In 1840, as a pupil of Halévy, he obtained the second Prix de Rome. In 1836, before he had finished his course at the Conservatoire, he had been appointed deputy professor of the solfeggio class ; after which he was successively appointed professor of the male choral class, of the joint singing class (suppressed in 1870), and of the solfeggio class for mixed voices. He also instituted an evening choral class at the Conservatoire. In Oct. 1872 he took a class for harmony and accompaniment for women. After having held from 1842–54 the post of organist at St. Nicolas des Champs, he was given a similar post at St. Eustache, which he filled until his death. A musician of severe and unerring taste, Batiste was one of the most noted organists of his time, but his compositions for the organ were far from equalling his talents as professor and executant. He will be chiefly remembered by his educational works, and particularly by his *Petit Solfège harmonique*, an introduction to the solfeggio and method of the Conservatoire, by his diagrams for reading music, and above all, by his accompaniments for organ or piano written on the figured basses of celebrated solfeggi by Cherubini, Catel, Gossec and other masters of that date, entitled *Solfèges du Conservatoire.* A. J.

BATISTIN, Jean (*b.* Florence, *c.* 1690; *d.* Dec. 9, 1755), a violoncellist whose real name was Johann Baptist Stuck; of German parentage. He came to Paris, and he and L'Abbé (l'aîné) were the earliest players of the violoncello in the orchestra of the Opéra. He had two pensions from the King, fixing him—the first to France, and the second to Paris (Dec. 15, 1718; 500 francs). He produced 3 operas (tragédies-lyriques), namely 'Méléagre' (1709), 'Manto, la fée' (1711), 'Polydore' (1720) at the Opéra. Fifteen operas or ballets written for the court were not performed in Paris. He also published 4 books of cantatas (1706, 1708, 1711, 1713). M. L. P.

BATKA (Bathka), Richard (*b.* Prague, Dec. 14, 1868), studied music and took his degree of Ph.D. and contributed articles on music to many musical papers. He founded the 'Dürerbund' (concerts of ancient and modern music), and wrote a large number of books, æsthetical, critical and historical, on music, including a general history of music (1908). (For list of works see *Riemann.*) E. v. d. S.

BATON (Fr. *bâton*), the stick with which the conductor of an orchestra beats the time. Hence the expression 'under Mr. ——'s baton,' *i.e.* under his direction. For the history of the use of the baton see Conducting.

When Berlioz and Mendelssohn met at Leipzig in 1841 they exchanged batons, and Berlioz accompanied his with the following letter, in the vein of Fenimore Cooper:

'Au chef Mendelssohn. Grand chef! nous nous sommes promis d'échanger nos tomahawcks; voici le mien! Il est grossier, le tien est simple; les squaws seules et les visages pâles aiment les armes ornées. Sois mon frère! et quand le Grand Esprit nous aura envoyés chasser dans les pays des âmes, que nos guerriers suspendent nos tomahawcks à la porte du conseil.'

Mendelssohn's reply is not extant, but no doubt it was quite apropos. G.

The Modern Baton.—The stick itself, as used by modern conductors, is a very different instrument from that first used by Spohr, and is now to be found in almost as many varieties as pens or golf clubs. The tendency most generally observable is towards lightness (of weight). The material is wood, though the writer has seen a very useful portable stick made of aluminium to pull out like a telescope. It is important that the wood should be light in colour, and if the stick is at all yellow it is wise to cover it with white paint or enamel to make it easily visible. Sticks vary in length from 15 in. to 28 in. or even 30 in., and many conductors use a handle either of thicker wood or of cork, as the point of balance is by this means brought close to the hand. When cork is used, an easy grip is insured even when the fingers are inclined to get moist.

Conductors in the 19th century were content to use the stick simply to secure the ensemble by indicating Time, while the expressive and musical side of the work was shown by the left hand or by word of mouth at rehearsal. The modern conductor, however, using a lighter stick and guiding it with the fingers instead of grasping it with the whole hand, is able to make it show a great deal more than the mere beats of the bar, and his left hand is thus free to indicate further subtleties of expression, which the wonderful receptivity of the modern orchestra enables it to follow with ease. Arthur Nikisch was probably the first to develop this change, and the expressive suppleness of his stick has been an example to many conductors. It seemed a part of himself, and appeared to grow out of his thumb as if made of flesh and blood. The energy saved by sympathetic management of the stick is the chief argument in favour of using a baton rather than the open hand. (See Conducting.) A. C. B.

BÂTON, Charles (*d.* Paris, 1758[1]), called 'le jeune' to distinguish him from his elder brother, Henri 'l'aîné' (*b. circa* 1710),[1] a performer on the musette. Charles, a virtuoso on the hurdy-gurdy (*vielle*), then very much in fashion, improved his instrument and composed for it: 'Suites pour 2 vielles ou musettes,' 1733 (op. 1); 'La Vielle amusante, divertissement en suites suivies pour les vielles, musettes,' op. 2, etc. He wrote a *Dissertation historique sur la vielle* ('privilège' of 1741), and published an *Examen de la lettre de M. Rousseau sur la musique française* (1754), a *Mémoire sur la vielle en D la ré* in the *Mercure de France* of 1757. Two Suites by Bâton are reprinted in the collection 'Amusements des maîtres français du XVIII[e] siècle' (Sénart, Paris). rev. M. L. P.

BATON, René (alias Rhené-Baton) (*b.* Courseulles-sur-Mer, Calvados, Sept. 5, 1879), conductor and composer, a pupil of the Conservatoire. He studied composition specially with A. Bloch and A. Gédalge, and has been chorus-director at the Opéra-Comique, conductor of the Société Sainte-Cécile at Bordeaux, of the Société des Concerts Populaires in Angers (1910–12). Since 1918 he has been president and conductor of the Concerts-Pasdeloup at Paris. Amongst his compositions are: Variations for piano and orchestra, a Suite for orchestra, numerous songs, pianoforte pieces, an unpublished lyric drama, etc. M. L. P.

BATTAILLE, Charles Amable (*b.* Nantes, Sept. 30, 1822; *d.* Paris, May 2, 1872), a distinguished bass singer.

He was at first a doctor of medicine, but gave up his practice and joined the company of the Opéra-Comique from 1848–57, when he was compelled to retire owing to an affection of the larynx. Thenceforward he appeared only very seldom on the stage (in 1860 he sang at the

[1] Fétis.

Théâtre Lyrique and the Opéra-Comique), but devoted his life to teaching singing; he had been appointed a professor in the Conservatoire in 1851, and in 1861 the first and most valuable portion of a voluminous treatise entitled *De l'enseignement du chant* appeared, under the title of *Nouvelles Recherches sur la phonation*, containing important results of physiological study. G. F.

BATTEMENT, see ORNAMENTS.

BATTEN, ADRIAN (*d.* London, 1637) was brought up in the cathedral choir of Winchester, under John Holmes the organist, and in 1614 appointed vicar-choral of Westminster Abbey.

In 1624 he removed to St. Paul's Cathedral, where he held the same office in addition to that of organist. He was living in 1635, when he made a transcript of some anthem music, to which the following note is appended:

'All these songs of Mr. John Holmes was prickt from his own pricking in the year 1635, by Adrian Batten, one of the vickers of St. Paul's in London, who sometime was his scholar.'

The date of his death is inferred from the fact that on July 22 in that year letters of administration of the estate of Adrian Batten, late of St. Sepulchre's, London, deceased, were granted by the Prerogative Court of Canterbury to John Gilbert, of the City of Salisbury, Clothier, with consent of Edward, John and William Batten, brothers of the deceased. (*MS. Accounts of Westminster and St. Paul's.*)

That Batten was a voluminous composer is shown by the list of works below. His importance cannot be computed until the MSS. have been subjected to thorough examination. His name was kept alive by the few anthems which crept into printed editions. There are 6 in Barnard, 2 more in Boyce, and 18 others are in Barnard's manuscript collection. A morning service has been republished in *The Choir* and several anthems by Novello. Apart from such anthems as 'Hear my Prayer' and 'Deliver us, O Lord,' still sung in cathedrals, his fame for the time being rests principally on the 'Batten Organ Book' (Tenbury 791) a quarto of 498 pages in Batten's handwriting containing a mass of valuable church music by 16th-century composers compressed into an organ score. Much of this music has not survived apparently elsewhere. An account of this valuable book is given in the preface to 'Tudor Church Music,' vol. ii., published by the Carnegie Trust (1922). E. F. R., with addns.

List of compositions in MS.:

SERVICES, Etc.

Morning and Evening Service in Dorian Mode (T.D., J., K., C., M., N.D.) Ch. Ch. 437-8 (organ score).
'Long Service' (T.D., J., K., C., M., N.D.). Ch. Ch. 1220-4 (Cantus part wanting).
First Service (M., N.D.). Durh., Durh. O.B. A 6/199.
First Verse Service (T.D., J., K.). R.C.M. 1045-51. Durh. O.B. A 6/183.
Second Service (M., N.D.). Durh.
Third Evening Service. Durh. E 4-11.
Fourth Evening Service. Durh. E 4-11.
Service (V., T.D., J., K., C., M., N.D.). R.C.M. 1045-51 and portions at Durh. C 13/80.
Full Service (T.D., M., N.D.). R.C.M. 1045-51.
Short Service in D sol re (T., B., K., C., M., N.D.). Yk., R.C.M. 1045-1051.
Short Service for men (1623). (Bcte., Litany, K., C., M., N.D.). R.C.M. 1045-51.
Kyrie and Creed. Durh. C 13/107.
Kyrie and Creed. R.C.M. 1045-51.
Litany. PH.
Preces and Psalms. Ch. Ch. 1148 (Bass part only).

ANTHEMS

'Almighty God, who in thy wrath.' R.C.M. 1045-51.
'Behold, I bring you glad tidings' (for Christmas Day). Tenb. O.B. /376.
'Blessed are all they.' Durh.
'Christ our Paschal Lamb.' R.C.M. 1045-51.
'Christ rising.' PH.
'Deliver us, O Lord' (*a* 4). PH., Ch. Ch. 438, 1228 (organ scores).
'Godliness is great riches.' R.C.M. 1045-51.
'Haste thee, O God.' } Barn.
'But let all those' (2nd part). }
'Have mercy upon me, O God' (*a* 5). PH., R.C.M. 1045-51.
'Hear my prayer, O God.' Durh., PH., Ch. Ch. 1228 (organ score).
'Hear my prayer with thine ears.' Durh.
'Hear the prayers.' R.C.M. 1045-51.
'Hide not now thy face' (*a* 4). Barn.
'Holy! Holy! Holy!' (*a* 5). PH.
'I heard a voice' (for Michaelmas). PH., Durh.
'I will always give thanks.' R.C.M. 1051/129v. (Bassus Cantoris part only).
'Jesus said' (for St. Peter's Day). PH.
'Let my complaint.' Yk.
'Lord, I am not highminded.' R.C.M. 1045-51.
'Lord, we beseech thee' (*a* 4). Barn.
'Lord, who shall dwell' (*a* 6). Yk., R.C.M. 1045-51.
'My soul truly' (*a* 4). Durh., Yk.
'O clap your hands' (*a* 8). Yk., R.C.M. 1045-51.
'O God, my heart is ready.' Tenb. O.B. /377v. (Bassus Cantoris part only).
'O God, that art my righteousness.' R.C.M. 1051-128v. (Bassus Cantoris part only).
'O God the King of Glory.' R.C.M. 1051/127v. (Bassus Cantoris part only).
'O how happy a thing it is.' PH.
'O Lord, make me know mine end.' PH.
'O Lord, our Governor.' Yk.
'O Lord, Thou hast searched me out.' PH., Durh., Ch. Ch. 6 (organ score).
'O praise God in His holiness.' R.C.M. 1051/128 (Bassus Cantoris part only).
'O praise the Lord' (i.) (*a* 4). Barn.
'O praise the Lord' (ii.). R.C.M. 1045-51.
'O praise the Lord' (iii.). R.C.M. 1045-51.
'O sing joyfully.' Yk.
'Out of the deep.' Barn.
'Ponder my words.' Durh., PH.
'Praise the Lord, O Jerusalem.' PH. O.B. 46/20v.
'Praise the Lord, O my soul.' Durh., PH.
'Sing we merrily' (1623) (*a* 7). R.C.M. 1045-51.
'Therefore rejoice.' Durh. Add. MSS. 30478 (Tenor Cantoris part only).
'Turn thou us' (for Ash-Wednesday). Durh., PH.
'We beseech Thee.' Yk., R.C.M. 1045-51.
'We yield Thee thanks' (sometimes ascribed to Weelkes). Tenb. O.B. /432.
'When the Lord' (*a* 4). Barn.
'Ye righteous in the Lord.' R.C.M. 1051/129 (Bassus Cantoris part only). J. M^{K}.

BATTERY, one of the *agréments* used in harpsichord music. The sign for its performance is identical with the curved form of the modern indication of the ARPEGGIO (*q.v.*), which implied that the chord to which it was prefixed was to be played twice in rapid succession. (See ORNAMENTS.) M.

BATTISHILL, JONATHAN (*b.* London, May 1738; *d.* Islington, Dec. 10, 1801), a composer chiefly of church music, and of some ephemeral theatrical works.

He was the son of Jonathan Battishill, a solicitor, and grandson of the Rev. Jonathan Battishill, rector of Sheepwash, Devon. In 1747 he became a chorister of St. Paul's Cathedral under William Savage, and on the breaking of his voice his articled pupil. On the expiration of his articles he officiated for Dr. Boyce at the organ of the Chapel Royal, and composed some songs for Sadler's Wells Theatre. He became a member of the Madrigal Society in 1758, and of the Royal Society of Musicians

in 1761. Soon afterwards he was engaged to play the harpsichord at Covent Garden Theatre, an early result of which engagement was his marriage in 1763 to Miss Davies, a singing-actress at that theatre, and the original performer of Madge in 'Love in a Village' (see ARNE). On her marriage Mrs. Battishill retired from the stage. In 1764 Battishill composed, in conjunction with Michael Arne, the music for the opera of 'Almena,' and in the same year he composed the music for the pantomime 'The Rites of Hecate.' About 1764 he was appointed organist of the united parishes of St. Clement, Eastcheap and St. Martin Ongar, and in 1767 of Christ Church, Newgate Street (*Brit. Mus. Biog.*) He naturally then turned his attention to church compositions, and two anthems, 'Call to remembrance' and 'Behold how good and joyful,' which have survived in modern editions, may be cited as worthy specimens of his art. In 1771 he gained the Catch Club prize for his fine Anacreontic glee 'Come bind my brows.' In 1777 his wife eloped with Webster, the actor, to Dublin, and this so affected him that he desisted from composition, and devoted much of his time to his books, of which he had collected between six and seven thousand volumes, chiefly classical works. He was buried, pursuant to his dying wish, in St. Paul's Cathedral, near the grave of Dr. Boyce. Battishill published two collections of songs for three and four voices, and a collection of favourite songs sung at the public gardens and theatres. Several of his glees and catches are printed in Warren's and other collections. Four of his anthems are included in Page's *Harmonia sacra.* In 1804 Page edited *Six Anthems and Ten Chants,* with a finely engraved portrait of the composer prefixed. In the same year Page also inserted in a collection of hymns twelve psalm tunes and an ode composed by Battishill. The popular song 'Kate of Aberdeen' was composed by Battishill for Ranelagh Gardens. W. H. H.

BATTISTINI, MATTIA (*b.* Rome, Feb. 27, 1857). By general consent the best Italian baritone of his day. He gained his first stage experience in Donizetti's 'La Favorita' at the Teatro Argentina, Rome (1878), and subsequently was engaged for the opera in Buenos Ayres. He paid his first visit to London in 1883, appearing at Covent Garden, without attracting any special attention. When four years later he was engaged by Augustus Harris for Drury Lane he had established his reputation on the Continent as a leading artist. Circumstances were rather against him at Drury Lane. Like every one else in the company in that momentous season of 1887 he was overshadowed by the triumph of Jean de Reszke—then heard for the first time in London as a tenor. In the following year Battistini's appearance at La Scala, Milan, enhanced his European fame. In his native country, in Spain and in Russia, he was for years almost without a rival. Apart from his ordinary repertory (the baritone parts of classical Italian opera) he was in Russia a famous Wolfram in 'Tannhäuser.' At last, in 1905, he came back to Covent Garden and appeared with great success in 'Rigoletto' (Nov. 15), 'Don Giovanni' and 'Eugéne Oniegin' (1906). Not for many a year had the part of Don Giovanni been sung in London with such perfection of vocal style. No more was seen of Battistini in England till after the war, but when in May 1922, and again in 1923, he returned and gave vocal recitals at Queen's Hall he caused quite a sensation. Time had left his beautiful voice almost untouched, and he could sing all his favourite songs without transposition. No listener, ignorant of his identity, would have guessed he was a man of sixty-five. S. H. P.

BATTLE OF PRAGUE, THE, see KOTZWARA.

BATTLE SYMPHONY, the ordinary English name for Beethoven's 'Wellingtons Sieg, oder die Schlacht bei Vittoria,' op. 91. The first performance took place in Vienna, Dec. 8, 1813, and it was first performed in London, under the direction of Sir George Smart, at Drury Lane Theatre on Feb. 10, 1815.

BATTON, DÉSIRÉ ALEXANDRE (*b.* Paris, Jan. 2, 1798; *d.* Versailles, Oct. 15, 1855), a dramatic composer.

His father was an artificial flower maker. Désiré Batton was a pupil at the Conservatoire (learning counterpoint under Cherubini) from 1806 to 1817, in which year he won the Grand Prix de Rome for his cantata 'La Mort d'Adonis,' entitling him to travel for five years in Italy and Germany at Government expense, and he accordingly started in 1818, after the performance of his comic opera 'La Fenêtre secrète' at the Théâtre Feydeau. During his tour he composed several works, chiefly sacred music, in Rome, and a symphony performed in Munich. After his return to Paris in 1823 he brought out three operas, 'Ethelvina' (1827), 'Le Prisonnier d'État' (1828) and 'Le Champ du drap d'or' (1828), the failure of which drove him to adopt his father's trade. 'La Marquise de Brinvilliers,' composed in 1831 in conjunction with Auber, Hérold and Carafa, was, however, better received. Batton's failure as a dramatic composer may in great part be attributed to the poverty of his libretti. In 1849 he was appointed professor of the choral class at the Conservatoire, and in 1851 inspector of the branch schools of the Conservatoire.

M. C. C.; addns. M. L. P.

BATTUTA (Ital.), 'beat,' or 'measure.' 'A battuta,' like 'a tempo,' means a return to the strict beat.

BATYPHONE, an obsolete instrument of

the bass clarinet type designed by Wieprecht. In pitch it was a fifth below the ordinary bass clarinet. In outward appearance it was somewhat like the RUSSIAN BASSOON. D. J. B.

BAUER, HAROLD (*b.* New Malden, Apr. 28, 1873), one of the most distinguished pianists of his generation, has in recent years exerted an important influence on music in America.

Brought up in England, he made his first public appearance at the age of 9 as a violinist, and it was not until 1892 that, partly on the advice of Paderewski, who gave him some lessons, he decided to pursue his musical career as a pianist. In the following year he played in Paris and then toured in Russia. Subsequently he played with great success all over Europe, making Paris his headquarters, and in 1900 paid a visit to America, appearing for the first time there with the Boston Symphony Orchestra in Brahms's concerto in D minor. He gave recitals annually in London up to 1913 and established a position not only as a fine solo player but as an ensemble player of the first rank. His concerts of trios with Thibaud and Casals will be long remembered. The Beethoven Association of New York (founded 1919), a chamber-music society to which artists give their services, owes its existence to him, and is now (1927) one of the most important organisations for the performance of concerted chamber music in New York. In America as in Europe he has constantly pursued a purely artistic ideal and has shown himself ready to subordinate personal prestige to the higher end. While his name is specially associated with fine performances of the major works of Brahms, Schumann and César Franck, his repertory is a very large one. He introduced many of Debussy's works to English audiences when they were new, and has done much to further the understanding of modern music as well as of the classics. C.

BAULDUIN (BAUDOIN, BALDUIN, BALDUINUS), NOËL (NATALIS) (*d.* Antwerp, 1530 [1]), a Belgian musician of the 15th century. From 1513–18 he was maître de chapelle of the church of Notre Dame at Antwerp.

Two of his motets were printed by Petrucci of Fossombrone in 1519 (motetti della Corona), which suggests that he visited Italy, and proves in any case that his fame had reached that country during his lifetime. The rest of his works are preserved in the Papal Chapel, in the libraries of Munich and Vienna, in the episcopal library at Regensburg, etc., and some are included in collections published some time after his death (see *Biog. Nat. de Belgique*).

BAUMANIS, K., see LATVIAN MUSIC.

BAUMGARTEN, KARL FRIEDRICH (*b.* Lübeck, *c.* 1740; *d.* London, 1824), pupil of the famous organist J. P. Kunzen; came *c.* 1758 to London; was organist at the Lutheran Chapel in the Savoy, leader of the band at the Haymarket in 1763, in Dublin in 1764; and leader of the band of the English opera, Covent Garden, from 1780.

He was also composer and leader of the Duke of Cumberland's private band, which contained Blake, Waterhouse, Shield, Parke and the elder Cramer. Baumgarten wrote much for the 'Professional Concerts' of 1783, and later, various operas and pantomimes — amongst others, Robin Hood, 1784, and Blue Beard, 1792. As an organist he had great skill in modulation and a thorough knowledge of his instrument, but as a violin-player, both in concerted music and as a leader, he was languid and wanting in energy—'a sleepy orchestra,' says Haydn in his diary. His theoretical knowledge was acknowledged by Haydn and Gyrowetz. 'He was the man to mix learning with effect, and therefore to write captivations that are felt by all' (*The World*, 1787). When he made Haydn's acquaintance in 1792 he had almost forgotten his mother-tongue. In 1794 he lost his position at Covent Garden, and was succeeded by Mountain (*The Oracle*, Sept. 19). He composed Three Fugues in 1798, and set Luther's Hymn with trumpet *obbligato* in 1805. Baumgarten was a man of much ability and culture; his pupils were numerous and distinguished. He wrote an admirable treatise on music, and was a keen student of astronomy, mathematics and history; but he does not seem to have possessed the art of making use of his advantages, and was quickly forgotten. A song of his, 'Her image ever rose to view,' from 'Netley Abbey,' is preserved in Ayrton's 'Musical Library.' C.F.P.; addns. W. H. G. F.

BAUSSNERN, WALDEMAR VON (*b.* Berlin, Nov. 29, 1866), pupil of Kiel and Bargiel. After conducting various musical societies in Mannheim and Dresden, he became a teacher at the Cologne Conservatoire in 1903, and director of the Weimar Conservatoire in 1908, receiving the title of Professor in 1910. He composed several operas, symphonies, choral and orchestral works, chamber music, songs, etc. He completed P. v. Cornelius' opera 'Gunlöd,' which was given at Cologne in 1906.

E. v. d. S.

BAX, ARNOLD EDWARD TREVOR (*b.* London, Nov. 6, 1883), one of the most prominent English composers of his generation, entered the R.A.M. in 1900 and studied composition for five years under Frederick Corder. His earliest works, which have since been either withdrawn or revised, date from 1903. As a student he impressed every one by the ease with which he overcame all difficulties. He could already then play any orchestral score at sight on the piano. This facility led him constantly to underestimate the complexity of his own writing, which for a time frustrated due

[1] *Q.-L.*, but 1529 *Fétis*.

appreciation. In 1910 he paid a brief visit to Russia, the impressions of which are recorded in some piano pieces. Otherwise the chief influence to be discerned in his music is that of the Celtic revival, and especially of the Irish literary movement with all its connotations, including an intense love of Irish folklore, sympathy with Irish ideals, and an abiding affection for Irish scenery. It would, however, be wrong to see the Celtic influence in all his works. Though it is premature to speak of the conventional three 'periods,' it is feasible to discern three phases of development in his writing. One turning-point occurred about 1913, when the luxuriant harmonic texture began to be more definitely subordinated to the polyphonic interest. The other came about 1920, from which date a tendency can be observed towards compression and conciseness — not that the length of preceding works could often be ascribed to diffuseness, for it was mostly due to exuberance of invention, and consequent abundance of material. Bax's two main characteristics are his feeling for poetic beauty of line, which would have been remarkable in any age, and is doubly so when the prevailing tendency is towards other ideals; and his use of a kind of harmonic arabesque, constantly varied, to enrich his texture. His Celtic predilections frequently induce a mystical softening of outlines in favour of what is termed 'atmosphere,' but that this was a yielding to the incentive of his subject, and not a constant feature of his musical thought, is proved by the robust virility of such a work as the symphony.

Bax's orchestral music clearly falls into the three phases indicated. To the period 1909–1913 belong the four Irish pieces performed at F. B. Ellis's concerts in the spring of 1914, the 'Festival Overture,' the scherzo, and two works inspired by Swinburne, 'Nympholept' and 'Spring Fire,' the latter of which has been withdrawn after having been put into rehearsal more than once. The years 1916–17 produced the popular 'Garden of Fand,' 'Tintagel' and 'November Woods,' and the most recent period is represented chiefly by the symphony.

The trio of 1906 has ceased to be representative. The most important chamber works are the piano quintet, string quartet and four sonatas, two for violin, one for viola and one for violoncello with piano. He has evolved a distinctly personal mode of pianistic writing derived largely from his decorative use of the harmonic arabesque, but the two piano sonatas are of more massive character, approaching to the epic. An early inclination to overburden the accompaniment delayed his recognition, which is now general, as one of the most delicately poetic song-writers of the day. An interesting recent development which promises much is his turning to choral music from 1921 onwards, when he set the carol 'Mater ora Filium' for double choir unaccompanied. This is one of the most striking works of its kind produced in recent years, and it has been followed by several other choral pieces for different combinations. Bax has written no opera, as he undoubtedly would have done in the ordinary course, had he lived on the Continent, but he has proved an aptitude for stage work in three ballets, the last being incidental to Barrie's fantasy 'The Truth about the Russian Dancers,' which was produced at the London Coliseum in 1920 with Tamar Karsavina in the leading part. On Nov. 13, 1922, a concert of his works was given at Queen's Hall, those performed comprising 'The Garden of Fand' and 'Mediterranean' for orchestra, the 'Phantasy' for viola and orchestra, the first three carols, the second piano sonata, and numerous piano pieces and songs. In 1924 the jury of the International Society for Contemporary Music selected Bax's symphony and his viola sonata for performance respectively at Prague in June and at Salzburg in August. E. E.

ORCHESTRAL

1. 'In the Faëry Hills.' 1909.
2. Festival Overture. 1909.
3. 'Christmas Eve on the Mountains.' 1912.
4. 'Nympholept.' 1912.
5. Four Pieces: (*a*) 'Pensive Twilight'; (*b*) 'Dance in the Sun'; (*c*) 'From the Mountains of Home'; (*d*) 'Dance of Wild Irravel.' 1912–13.
6. Scherzo. 1913.
7. 'The Garden of Fand.' 1916.
8. Symphonic Variations for piano and orchestra. 1917.
9. 'In Memoriam.' 1917.
10. 'Tintagel.' 1917.
11. 'November Woods.' 1917.
12. Phantasy for viola and orchestra. 1920.
13. Summer Music. 1920.
14. 'Mediterranean.' 1921.
15. Symphony. 1921–22.
16. 'The Happy Forest.' 1922.

BALLETS

1. 'Between Dusk and Dawn.' 1917.
2. 'The Frog-Skin.' 1918.
3. 'The Truth about the Russian Dancers.' 1920.

CHORAL

1. 'Fatherland.' (J. I. Runeberg.) (Two solo soprani choir and orchestra.) 1907.
2. 'Enchanted Summer.' ('Prometheus unbound,' Act 2, Sc. 2. Shelley). (Tenor solo, choir and orchestra.) 1909.
3. 'Mater ora Filium.' (Carol for unaccompanied double choir.) 1921.
4. 'Of a Rose I Sing.' (Carol for small choir, harp, v'cl. and bass.) 1921.
5. 'Now is the Time of Christymas.' (Carol for male voices, flute and piano.) 1921.
6. 'This Worlde's Joie.' (Unaccompanied motet.) 1922.
7. 'The Boar's Head.' (Carol for male voices.) 1923.
8. 'To the Name above Every Name.' (Choir and orchestra.) 1923.
9. 'St. Patrick's Breastplate.' (Choir and orchestra.) 1923–24.

CHAMBER MUSIC

1. Trio for violin, viola and v'cl. 1906.
2. Lyrical Interlude for string quintet. 1908.
3. Sonata No. 1 for violin and piano in E. 1910–15.
4. Quintet for piano and strings in G minor. 1914–15.
5. Legend for violin and piano. 1915.
6. Sonata No. 2 for violin and piano in D. 1915.
7. Four Pieces for flute and piano. 1916.
8. Trio for flute, viola and harp (elegy). 1916.
9. 'An Irish Elegy' for cor anglais, harp and strings. 1917.
10. String Quartet in G. 1918.
11. Folk-Tale for v'cl. and piano. 1918.
12. Quintet for strings and harp. 1919.
13. Sonata for viola and piano. 1921.
14. Quartet (one movement) for piano and strings. 1923.
15. Sonata for v'cl. and piano. 1923.
16. Quintet for oboe and strings. 1923.

PIANO

1. Valse de Concert. 1910.
2. 'May Night in the Ukraine.' 1911.
3. Gopak. 1911.
4. Mask. 1912.
5. Toccata. 1913.
6. 'The Happy Forest.' 1913.
7. Passacaglia. 1914.
8. 'The Maiden with the Daffodil.' 1915.
9. 'In a Vodka Shop.' 1915.
10. 'Sleepy-Head.' 1915.
11. 'Apple Blossom Time.' 1915.

12. 'The Princess's Rose Garden.' 1915.
13. 'A Mountain Mood.' 1915.
14. 'Winter Waters.' 1915.
15. 'Dream in Exile.' 1916.
16. 'Nereid.' 1918.
17. 'On a May Evening.' 1918.
18. Romance. 1918.
19. Sonata No. 1 in F sharp minor. 1910–19.
20. 'The Slave Girl.' 1919.
21. 'What the Minstrel told Us.' 1919.
22. Sonata No. 2 in G. 1919.
23. 'Whirligig.' 1920.
24. Lullaby. 1920.
25. A Hill Tune. 1920.
26. Country Tune. 1920.
27. Mediterranean. 1920.
28. Burlesque. 1920.
29. 'The Devil that Tempted St. Anthony.' 1920.

TWO PIANOS

1. 'Magh Mell.' (An Irish tone-poem.) 1917.

Numerous songs published in sets (Chester and Enoch) and separately (Murdoch). Traditional and other songs reset, etc.

BAYLY, Rev. Anselm, D.C.L. (*b.* 1719; *d.* 1794), a writer on music, son of Anselm Bayly of Haresfield, Gloucestershire. He matriculated at Exeter College, Oxford, Nov. 4, 1740. On Jan. 22, 1741, he was appointed lay-vicar of Westminster Abbey, and on the 29th of the same month was admitted a gentleman of the Chapel Royal, both places being vacant by the death of John Church. On Mar. 13, 1744, having resigned his place as gentleman, he was admitted priest of the Chapel Royal. He graduated as B.C.L. June 12, 1749, and D.C.L. July 10, 1764. In the latter year, on the death of the Rev. Dr. Fifield Allen, Bayly was appointed his successor as sub-dean of the Chapel Royal. He was author of *A Practical Treatise on Singing and Playing*, 1771, *The Alliance of Musick, Poetry and Oratory*, 1789, and of several theological and grammatical works (see *D.N.B.*). In 1769 he edited a collection of the words of anthems, to which he contributed an interesting preface on cathedral music.

W. H. H.

BAYREUTH. The name of the Franconian town in which Wagner placed his ideal theatre now stands as a symbol of the whole cult of Wagner, his art and his philosophy, and its subsequent interpretation through the efforts of his widow and the circle of friends who surrounded her at the Villa Wahnfried. The influence of Bayreuth, therefore, has been exerted directly through the festival performances in the theatre and indirectly through the views disseminated from Wahnfried. The latter cannot be assessed here, but in addition to the fact that the policy of the theatre has always been controlled by the Wagner family, Wahnfried as the social centre of the movement has played an important part in moulding what is called the 'Bayreuth tradition.'

The circumstances in which the theatre was founded are related in the article Wagner (*q.v.*). The theatre itself, built by a Leipzig architect, Brückwald, from plans by Gottfried Semper considerably modified by Wagner himself, is described there, and the casts of the first production of 'Der Ring' (1876), under Richter, and of 'Parsifal' (1882), under Hermann Levi and Franz Fischer, are given. With the death of Wagner (Feb. 13, 1883) the future of the Festspielhaus and all it stood for once more hung in the balance, but in the years 1883 and 1884 twelve performances of 'Parsifal' were given under the same musical direction. Emil Scaria (the Gurnemanz of the first performance) took control of the stage management in 1883 and Anton Fuchs in 1884. In these years the chorus and orchestra of the Munich Court Theatre was lent to the Bayreuth theatre by King Ludwig II.

In 1886 Wagner's widow came out of her retirement, and herself undertaking the scenic direction of the festival plays, resolved to produce in turn the earlier works. Her unrivalled authority, her ability and tireless energy, enabled her through twenty years of devoted effort to raise the Bayreuth theatre to a position of world-wide fame. At the end of that time ill-health obliged her to hand over the direction to her son, Siegfried Wagner (*q.v.*). From 1886 onward the festival orchestra was drawn from the most distinguished artists of the German opera houses and sometimes from further afield, for foreigners were not excluded. Richter, for example, exerted his influence to include occasional players from England, but as time passed the policy became more exclusively national in this matter. The chorus was similarly eclectic, and while the bulk of its members came from the German theatres many solo singers co-operated within its ranks. In the years without festivals careful preliminary rehearsals were held with the object of assigning parts to principal singers who then assembled for six weeks of combined training in the festival year. Many outstanding interpreters of Wagner first made their reputations on the stage of the Festspielhaus, and the care exercised in the choice of artists in the earlier years, the careful preparation of their parts down to the smallest detail and the ideal put forward of devotion to the work as all-important and superior to personal considerations, gave the Bayreuth productions an unique position. It must be admitted, however, that the tendency of ideals to harden into traditions and further to contract into conventions was illustrated in the later years of the Bayreuth festival, and when the outbreak of war closed the doors of the Festspielhaus in the midst of the 1914 festival it was generally felt that the constructive mission of Bayreuth had been completed and to some extent outlived.

Between the years 1876 and 1914, 380 performances were given as follows: 'Parsifal' 167, 'Die Meistersinger' 32, 'Der Ring' (the whole 27 times) 108, 'Tristan' 24, 'Tannhäuser' 21, 'Lohengrin' 16, 'Der fliegende Holländer' 12. The conductors were Hans Richter, Hermann Levi, Franz Fischer, Richard Strauss, Anton Seidl, Karl Muck,

Siegfried Wagner and Michael Balling. The following list shows the distribution of works in the several festival years.

1876. 'Ring.'
1882-3-4. 'Parsifal.'
1886. 'Parsifal,' 'Tristan.'
1888. 'Parsifal,' 'Meistersinger.'
1889. 'Parsifal,' 'Tristan,' 'Meistersinger.'
1891. 'Parsifal,' 'Tristan,' 'Tannhäuser.'
1892. 'Parsifal,' 'Tristan,' 'Tannhäuser,' 'Meistersinger.'
1894. 'Parsifal,' 'Lohengrin,' 'Tannhäuser.'
1896. 'Ring' (5 times).
1897. 'Parsifal,' 'Ring.'
1899. 'Ring,' 'Parsifal,' 'Meistersinger.'
1901-2. 'Ring,' 'Parsifal,' 'Holländer.'
1904. 'Ring,' 'Parsifal,' 'Tannhäuser.'
1906. 'Ring,' 'Parsifal,' 'Tristan.'
1908-9. 'Ring,' 'Parsifal,' 'Lohengrin.'
1911-12. 'Ring,' 'Parsifal,' 'Meistersinger.'
1914. 'Ring,' 'Parsifal,' 'Holländer.'

The festivals were resumed in 1924 and 1925, when 'Parsifal,' 'Tristan,' 'Die Meistersinger' and 'Der Ring' were given. There was no festival in 1926.

The above incorporates information kindly supplied by Professor Carl Gianicelli and Mrs. Sydney Loeb, daughter of Hans Richter. C.

BAZIN, Emmanuel Joseph François (*b.* Marseilles, Sept. 4, 1816; *d.* Paris, July 2, 1878), studied at the Paris Conservatoire, where he afterwards became professor of harmony, under Auber.

In 1840 his 'Loyse de Montfort' gained the Prix de Rome. In 1860, on the division of the Paris Orphéon into two sections, he was appointed conductor for the left bank of the Seine. He was professor successively of singing, harmony and composition at the Conservatoire, succeeding Amboise Thomas in the last capacity on the latter's promotion to be director of the institution in 1871. Bazin was made a member of the Académie in 1872. The following operas by him have been given at the Opéra-Comique:

'Le Trompette de M. le Prince,' 1846; 'Le Malheur d'être jolie,' 1847; 'La Nuit de la Saint-Sylvestre,' 1849; 'Madelon,' 1852; 'Maître Pathelin,' 1856; 'Les Désespérés,' 1858; and 'Le Voyage en Chine,' 1865.

Besides these, Bazin wrote several sacred compositions, a number of partsongs, and a 'Cours d'harmonie.' M.

BAZZINI, Antonio (*b.* Brescia, Mar. 11, 1818; *d.* Milan, Feb. 10, 1897), an eminent violinist and composer.

He was a pupil of Camisoni at Milan, and from 1840–45 he played with great success in most of the principal towns of Italy, Germany, France and Belgium. He visited Spain and France in 1848, and settled in Paris from 1852–1864, when he returned to Brescia to devote himself to composition. In Jan. 1867 his opera 'Turandot' was given at La Scala without success. In 1873 he was appointed professor of composition at the Conservatorio of Milan, and became director of the institution in 1882. His advance in artistic earnestness, as time went on, was most remarkable; in his maturer works, while the charm and spontaneity of his themes betray their Italian origin, the workmanship and style of his chamber compositions (among which are 6 string quartets and a quintet) tell of German influence. He also wrote 2 sacred cantatas, 'La Resurrezione di Cristo' and 'Senacheribbo,' besides settings of various psalms, and symphonic overtures to Alfieri's 'Saul' and 'King Lear' (played at the Crystal Palace in 1877 and 1880 respectively). Bazzini's name is probably best known by his 'Ronde des lutins' for violin. M.

BAZZINI, Francesco (*b.* Lovere, Brescia, 1600; *d.* Bergamo, Apr. 15, 1660), successively organist at S^ta^ Maria Maggiore, Bergamo, at the court of Modena and at Vienna, returning to Bergamo, 1636. He was a celebrated theorbo player, for which instrument he wrote some sonatas. He composed an oratorio, 'La representazione di S. Orsola'; also canzonettas for 1 voice. E. v. d. S.

BEACH, Mrs. H. H. A. (Amy Marcy Cheney) (*b.* Henniker, New Hampshire, Sept. 5, 1867), an American pianist and composer, who disclosed precocious musical talent. In 1873 she became a pianoforte pupil of Ernst Perabo in Boston, later of Carl Baermann; and in harmony of Junius W. Hill. Further theoretical studies she carried on by herself. Her first professional public appearance as a pianist was made in Boston in 1883. In the following year she gave several recitals and the next season played with the Boston Symphony Orchestra and Theodore Thomas's Orchestra. From that time till her marriage in 1885 she appeared frequently in recitals and orchestral concerts. Her compositions include the following:

Symphony ('Gaelic'), op. 32.
Concerto, pianoforte and orchestra, op. 45.
Sonata, pianoforte and violin, op. 34.
Mass, E flat, mixed chorus, soli and orchestra, op. 5.
Cantatas, 'The Minstrel and the King,' male chorus and orchestra, op. 16; 'The Chambered Nautilus,' mixed chorus, soli and orchestra, op. 66.
Church services, anthems, pianoforte pieces, songs and concerted instrumental pieces. R. A.

BEALE, John (*b.* London, *c.* 1796), pianist, a pupil of John Baptist Cramer. In 1820 he was elected a member of the Philharmonic Society, and in 1821 was an active promoter of a concert given to celebrate the birthday of Mozart. On the establishment of the R.A.M. he was named one of the professors of the pianoforte. W. H. H.

BEALE, William (*b.* Landrake, Jan. 1, 1784; *d.* London, May 3, 1854), madrigal writer.

He was brought up as a chorister of Westminster Abbey under Dr. Arnold and Robert Cooke. After the breaking of his voice he served as a midshipman on board the *Révolutionnaire*, a 44-gun frigate, which had been taken from the French. In 1813 he gained by his madrigal 'Awake, sweet Muse' the prize cup given by the Madrigal Society. From Jan. 30, 1816, to Dec. 13, 1820, he was one of the gentlemen of the Chapel Royal. He published in 1820 a collection of his glees and madrigals.

In November of the latter year he had been appointed organist of Trinity College, Cambridge. In Dec. 1821 he returned to London, and became successively organist of Wandsworth Parish Church and St. John's, Clapham Rise (*D.N.B.*). He gained a prize at the Adelphi Glee Club in 1840. His best-known compositions are the prize madrigal mentioned above, and 'Come let us join the roundelay.'

W. H. H. and W. B. S.

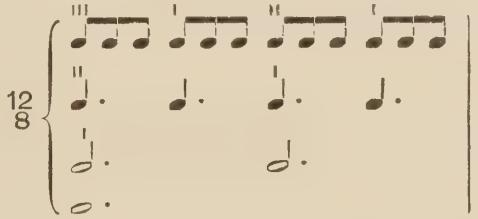
BEARD, JOHN (*b. circa* 1717; *d.* Feb. 5, 1791), one of the most eminent of English tenor singers.

In his boyhood he was a chorister of the Chapel Royal under Bernard Gates. After an early appearance in Galliard's 'Royal Chase' (1735) he appeared as a tenor singer in Handel's performances at Covent Garden Theatre in 1736, singing in 'Alexander's Feast,' 'Acis and Galatea' and 'Atalanta.' On Aug. 30, 1737, he appeared at Drury Lane Theatre as Sir John Loverule in Coffey's ballad opera 'The Devil to Pay,' and in the following season was regularly engaged there. In 1739 he married Lady Henrietta, the young widow of Lord Edward Herbert, and daughter of the Earl of Waldegrave, on which he retired for a short time from professional life. After 14 years of uninterrupted happiness, Lady Henrietta died in 1753, aged thirty-six. Beard performed at Drury Lane until 1743, after which he was engaged at Covent Garden until 1748; he then returned to Drury Lane, where he continued until 1759, in which year he married Charlotte, daughter of John Rich, proprietor of Covent Garden Theatre, and was again engaged at that house. During these years he appeared in various revivals of 'The Beggar's Opera,' in which Macheath was one of his most popular parts. Rich dying in 1761, Beard became, in right of his wife, proprietor and manager of the theatre, and so continued until an increasing deafness determined him to dispose of his interest in it and quit the stage. He took his leave of the public as Hawthorn in 'Love in a Village,' May 23, 1767. After his retirement he resided at Hampton until he died. His wife survived him until Aug. 26, 1818, when she died at Hampton at the great age of ninety-two. Beard throughout life bore the reputation of being a highly honourable and upright man. To form an estimate of his abilities as a singer it is only necessary to remember that Handel composed for him the great tenor parts in 'Israel in Egypt,' 'Messiah,' 'Samson,' 'Judas Maccabeus' and 'Jephthah.'

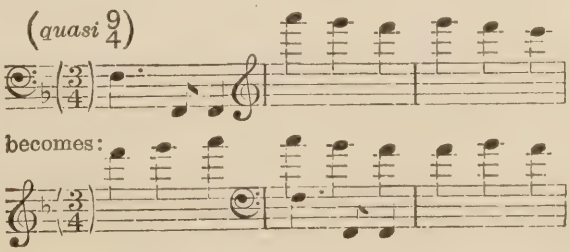
W. H. H.

BEAT (1), the name given in English to a melodic grace or ornament, but with considerable uncertainty as to which particular ornament it denotes, the word having been very variously applied by different writers.

With some authors it signifies the ACCIACCATURA, but it appears to be most generally understood to mean the MORDENT (Ger. *Beisser*) (Ex. 1), in which connexion it seems not impossible that its English name may have been originally 'bite.' Dr. Callcott, however, in his *Grammar of Music*, speaks of the beat as a reversed shake, and derives its name from *Battement*, giving an example as in Ex. 2. *Battement* again, according to Rousseau (*Dictionnaire de musique*), is a shake beginning on the upper instead of the principal note (Ex. 3). It is



doubtless owing to this uncertainty that the word has now almost fallen into disuse. (See Dannreuther's *Primer of Ornamentation.*)

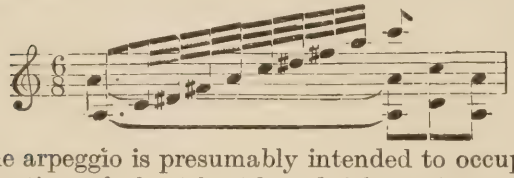


F. T.

BEAT (2), the movement of the hand or BATON (*q.v.*) by which the time of a piece of music is indicated by a conductor to performers. (See CONDUCTING.)

BEAT (3), the time-units, great and small, which constitute a bar, tend to fall into groups. Each group, and the bar itself, begins with a 'beat,' a strong beat in comparison with the other notes. For instance, a bar of $\frac{12}{8}$ divides into two groups of six and four groups of three quavers, and the strength of the accent, felt rather than expressed, appears thus:

A single group, or a bar of simple TIME (*q.v.*), has one beat; exceptionally, a group of three, or a bar of triple time, has a subsidiary accent on the third time-unit, but this does not amount to a strong beat. The Saraband and Mazurka have an agogic ACCENT (*q.v.*) on the second of the bar, and this may be called a (strong) beat because it defines the time, but it is a mistake to exaggerate it into a dynamic accent. The 'late' drum in the scherzo of Beethoven's Ninth Symphony is an instance of a transferred beat. The bars of $\frac{9}{4}$ are now accented on the second instead of on the first:



and flute, trumpet and horn ratify in succession this transferred beat. Popular music tends to exaggerate the beat, because that makes for intelligibility. Music, in proportion as it is in the van of progress, takes the beat for granted and rebels against the tyranny of the barline.

TIME-UNIT.—Two or three time-units—short, long and very long (prolate)—sufficed for early liturgical music. Secular music, involving passages or movements of diverse character, required more. We have been for long content with eight, of which from four to six only are used in any one movement. Multiples are formed by adding dots or tied notes (but untied rests) to one of these, or to some higher denomination, as required. Fractions—of a crotchet, for instance—are shown thus :

(The slur is often, the numeral sometimes, omitted.)

When very small fractions are in use the time-value is not always rigidly adhered to. In Brahms's Paganini Variations, ii. 10, at the first bar

the arpeggio is presumably intended to occupy the time of the 4th, 5th and 6th semiquavers (out of 12) ; but at the fourth bar

the time of the 4th (and 10th) semiquaver only. Hence in the first bar the duration of the  is about twice what it is in the fourth.

A. H. F. S.

BEATRICE DI TENDA, opera ; libretto by F. Romani; music by Bellini; produced Venice in 1833 ; Théâtre des Italiens, Paris, Feb. 8, 1841 ; King's Theatre, London, Mar. 22, 1836.

BÉATRICE ET BÉNÉDICT, opera in 2 acts, founded on Shakespeare's *Much Ado about Nothing* ; words and music by Hector Berlioz. Performed for the inauguration of the theatre at Baden, Aug. 9, 1862 ; given under Liszt at Weimar, Nov. 13, 1863 ; revived, 1887, under Felix Mottl at Carlsruhe, with the connecting dialogue set to music by the conductor.

M.

BEATS, see ACOUSTICS.

BEAUJOYEULX, CHAS. DE, see BALTAZARINI (2).

BEAULAIGNE (BAULÈGNE), BARTHÉLEMI, a French musician, singer (*c.* 1560) in the choir of Marseilles Cathedral. He wrote 'Mottez mis en musique à 4, 5, 6, 7 et 8 parties' (Lyons, 1559), 'Chansons nouvelles,' etc. (Lyons, 1559), some motets in 'Thesaurus musicus' (Nuremberg, 1564), and other collective volumes (*Q.-L.* ; *Fétis*).

BEAULIEU, MARIE DÉSIRÉ, whose family name was MARTIN-BEAULIEU (*b.* Paris, Apr. 11, 1791 ; *d.* Niort, Dec. 21, 1863), composer and writer upon music ; the son of an artillery officer of Niort.

He studied under Rodolph Kreutzer, Benincori and Méhul, and obtained the Grand Prix de Rome in 1810. He did not accept the five years' tour to which the prize entitled him, but settled at Niort (Deux-Sèvres). Here he founded quartet meetings, and in 1827 a Philharmonic Society, which was afterwards expanded into the Association Musicale de l'Ouest (1835). This Society was the first of its kind in provincial France, and through the untiring zeal of its founder attained a high pitch of excellence. Yearly festivals are held in turn at Niort, Poitiers, La Rochelle, Angoulême, Limoges and Rochefort ; and Mendelssohn's 'St. Paul' and 'Elijah,' Haydn's 'Seasons,' Handel's 'Alexander's Feast' were performed at La Rochelle and other towns by this Society long before they were heard in Paris. There he founded in 1860 a society with the same object as the preceding one, called Société des Concerts de Chant Classique, which is still (1926) in existence. Beaulieu wrote in all styles, but excelled in church music.

His principal work was a Requiem on the death of Méhul, composed 1819, performed 1840. His compositions further include :

2 operas, 'Anacréon' and 'Philadelphie' ; 2 lyric scenes, 'Jeanne d'Arc' and 'Psyché et l'Amour' ; 3 oratorios, 'Hymne du matin,' 'Hymne de la nuit' and 'L'Immortalité de l'âme,' besides masses, orchestral works, songs, etc.

His literary works include :

Cours de composition (with Méhul, 1809), *Du Rythme* (1852), *Mémoire sur ce qui reste de la musique de l'ancienne Grèce dans les premiers chants de l'Église* (1852), *Mémoire sur le caractère que doit avoir la musique d'Église* (1858), *Mémoire sur quelques airs nationaux* (1858), and *Mémoire sur l'origine de la musique* (1859).

M. C. C. ; rev. M. L. P.

BEAUMARCHAIS, PIERRE AUGUSTIN CARON DE (*b.* Paris, Jan. 24, 1732 ; *d.* there, May 19, 1799), musician and littérateur. In addition to being well known in his literary career, Beaumarchais early became known as a musician. He sang, and played the flute and harp. In his youth this last-named instrument was new in France. He adopted various mechanical improvements and studied its technique to the point of becoming one of the most popular executants. He was chosen to teach the harp to the daughters of Louis XV., and to organise the concerts at which the royal

family assisted privately. This drew upon him strong jealousies, and even a duel, from which he emerged victor.

Beaumarchais's strongest claim to fame is his authorship of the comedy, *Le Barbier de Seville*, and its successor, *Le Mariage de Figaro*. The former of these ' was originally intended as a comic opera, with music arranged by the author from his recollection of the songs and dances he had heard in Spain. It was refused by the Opéra-Comique, and required very little alteration to transform it into a ' comédie en prose, mêlée d'ariettes,' such as was at that date quite admissible at the Comédie Française. (Dent, *Mozart's Operas*, p. 153.) He has left, in the collections of the period, a certain number of ariettas and ballads with harp accompaniment.

Bibl.—*Fétis*, Supplement; H. Kling, in *R.M.I.*, 1900; L. de Loménie, *Beaumarchais et son temps*, Paris, 1856, I. 94; G. Roulleaux-Dugage, in *Revue Hebdomadaire*, Mar. 1911.

M. P.

BEAUMAVIELLE (*d.* 1688 or 1689), a baritone singer, brought from Toulouse by Pierre Perrin in 1670 to sing in ' Pomone,' the first French opera by Cambert, produced in 1671. After Lully had obtained the transference of Perrin's monopoly for himself, Beaumavielle became one of the best singers in the Académie. He was renowned for his beautiful voice and his sense of dramatic expression. He created various parts in Lully's operas, such as Cadmus in ' Cadmus et Hermione '; Jupiter in ' Isis '; Pluto in ' Proserpine.' At his death, soon after that of Lully, he was succeeded by Thévenard. M. C. C.; rev. M. L. P.

Bibl.—*Fétis*; *Eitner*; Ch. Mutter and Thoinau, *Les Origines de l'opéra français*; *Grande Encylopédie*: *Beaumavielle* by A. Pougin.

BEAUTY-STONE, THE, ' romantic musical drama ' in 3 acts; words by Comyns Carr and A. W. Pinero; music by Sullivan; produced Savoy Theatre, May 28, 1898. M.

BEBUNG (Ger.) (Fr. *balancement*; Ital. *tremolo*), a certain pulsation or trembling effect given to a sustained note in either vocal or instrumental music, for the sake of expression. On stringed instruments it is effected by giving an oscillating movement to the finger while pressing the string; on wind instruments and in singing by the management of the breath. (See Ornaments.)

The word Bebung refers, however, more particularly to an effect peculiar to the old clavichord, but not possible on the modern pianoforte, in which the continuous and uninterrupted repetition of a note was produced not by a fresh blow, but by a movement of the tip of the finger without leaving the key. This effect was formerly held in high estimation as a means of expression, and Emanuel Bach, in the introduction to his *Versuch über die wahre Art das Clavier zu spielen*, says, comparing the then newly invented pianoforte with the clavichord:

'I believe, nevertheless, that a good clavichord possesses—with the exception that its tone is weaker—all the beauties of the former (the pianoforte), and in addition the *Bebung* and the power of sustaining the tone, inasmuch as after striking each note I can give a fresh pressure.'

The Bebung was not often marked, except sometimes by the word *tremolo*. Marpurg, however (' Principes du clavecin '), gives the following as the sign of its employment, using as many dots over the note as there were to be repetitions of the sound—  . F. T.

BECHER, Alfred Julius (*b.* Manchester, Apr. 27, 1803; *d.* Vienna, Nov. 23, 1848), of German parentage, in the course of a varied career composed assiduously and made his mark as a critic.

After education at Heidelberg, Göttingen and Berlin his life was one of perpetual movement and adventure. Before he was forty he had lived in Elberfeld, Cologne, Düsseldorf, the Hague and London, had practised as an advocate, edited a mercantile newspaper, and twice filled the post of professor of composition. But whatever else he did he was always faithful to music. In 1841 his wanderings came to an end in Vienna, and at the instance of Mendelssohn he took up musical criticism, in which he was very successful, associating himself with the *Wiener Musik-Zeitung* and the *Sontagsblätter*. He was equally enthusiastic for the old masters and for Berlioz. In 1848 he threw himself into politics as a violent democrat, became editor of the *Radikale*, was tried by court-martial and shot in the Stadtgraben of Vienna. Becher published songs, sonatas, and pianoforte pieces, many of which became favourites. He composed a symphony, a violoncello fantasia (performed at a concert at which he had the aid of Jenny Lind), and string quartets. But these, though full of ability and intelligence, never made any impression on the public. Becher's literary works were almost entirely fugitive, but he published a history of the *Niederrheinische Musikfest* in 1836, and a biography of Jenny Lind 1846, 2nd augmented edition, Vienna, 1847. C. F. P.

BECHSTEIN. The founder of this firm of piano-makers was Friedrich Wilhelm Carl Bechstein (*b.* Gotha, June 1, 1826; *d.* Mar. 6, 1900).

He worked in several factories in Berlin, London and Paris, and began in 1856 the business in Berlin now so famous and influential. He opened a branch in London in 1879, which was removed to Wigmore Street in 1890. His sons succeeded to the inheritance of a business they had helped to develop. On June 1, 1901, they opened a Concert Hall in London, having already one in Berlin, suitable for piano recitals and chamber music. There was also a branch in Paris, and an important agency of many years' standing in St. Petersburg. A. J. H.

The foreign branches and agencies came to

an end with the war, the London branch being shut down in 1915. It was opened again in Mar. 1924, at 65 South Molton St., W.1, under the personal direction of Mr. C. Bechstein, grandson of the founder, and of Mr. Max Lindlar, who has represented the firm in England since 1884. The concert hall in London referred to above is now known as the WIGMORE HALL (*q.v.*). C.

BECK, FRANZ (FRANÇOIS) (*b.* Mannheim, Feb. 15, 1723; *d.* Bordeaux, Dec. 31, 1809 [1]), violinist and composer, is one of those musicians whose biography remains obscure for lack of research.

The son of a private counsellor of the Palatine Elector, Karl Theodor, educated at his expense and pupil of Johann Stamitz, it is admitted that, in consequence of a duel, he took refuge in France. His career there is almost unknown until the time he settled at Bordeaux, apparently between 1761 and 1767, in which year (Apr. 14) the music he wrote for *La Belle Jardinière* (words by Caprez) was performed. Called to the post of conductor at the theatre and the local concert society, he became later on corresponding member of the Académie des Beaux-Arts. He came to Paris in 1783, where his Stabat Mater was performed at the Concert Spirituel. But all his activity was concentrated at Bordeaux, leaving him the reputation of a first-rate composer and conductor, a brilliant organist, and a teacher of the highest merit. His pupils were Ch. Bochsa, Garat, P. Gaveaux and H. L. Blanchard, who wrote his biography. During the Revolution he took a leading part in all the fêtes in which music was played, and wrote two patriotic hymns. His compositions include sacred music, the Stabat Mater already mentioned being considered the best. He also wrote music for various plays: 'Pandore' (Paris, July 2, 1789), a melodrama; 'L'Île déserte,' and others; and composed some harpsichord sonatas. His renown and historic importance rest, however, on his instrumental music conceived in the traditions of the Mannheim School.

Of his numerous symphonic works, issued by the French publishers La Chevardière, Venier, Huberti, Bayard—as yet incompletely investigated—may be mentioned: 'Sei overture a più stromenti' (op. 1); 'Sinfonie a più stromenti . . . opp. 9, 10 and 13'; 'Six symphonies à 4 parties et cor de chasse, op. 2'; 'Six symphonies à plusieurs instruments, op. 4' (1776), etc. Stamitz's op. 5 also contains a symphony by Beck. Reprints of symphonies exist in the *D.D.T.*, 1906, 1907.

BIBL. — ROBERT SONDHEIMER, *Die Sinfonien Franz Becks*, *Z.M.W.*, Mar. 1922, pp. 323-51; May 1922, pp. 449-84. With copious musical examples. M. L. P.

BECK, JOHANN BAPTIST (*b.* Gebweiler, Alsace, Aug. 14, 1881), studied in Paris and Strassburg, where he took his Ph.D. in 1907. He has made the music of the troubadours and trouvères his special study. An important work on the subject, *Die Musik der Troubadours* (vol. i.), appeared in 1908. An essay on the rhythm and notation of the 12th and 13th centuries appeared in the *Riemann-Festschrift*, 1909, and *La Musique des troubadours* (1910) in *Musiciens célèbres*. E. V. D. S.

BECK, (1) JOHANN NEPOMUK (*b.* Pest, May 5, 1828; *d.* Presburg, Apr. 9, 1904). He studied singing and first appeared on the stage as Richard in 'I Puritani' in his native town, having been advised by Erl and Formes to adopt a musical career.

He afterwards sang at Vienna, Hamburg, Bremen, Cologne, Düsseldorf, Mayence, Würzburg, Wiesbaden and Frankfort, 1851–53. From 1853–88 he was at Vienna as principal baritone, where he was a great favourite, being alike excellent in singing, acting, and in classical and romantic opera. Among his best parts were Don Juan, Count Almaviva, Pizarro, Mikheli ('Wasserträger'), Hans Heiling, William Tell, Nelusco, Hamlet, Amonasro, Orestes, the baritone parts in Wagner's operas, etc. He also performed in the various cities of Germany and at Stockholm with great success.—His son (2) JOSEPH (*b.* June 11, 1850; *d.* Feb. 15, 1903), also a baritone of ability, appeared at Laibach (1870), and later with success, among other places, at Berlin and Frankfort, where he was regularly engaged from 1880 onward. A. C.

BECKEN (Ger.), CYMBALS (*q.v.*).

BECKER, an important Russian firm of piano-manufacturers which owes its origin to Jacob Becker, a native of the Bavarian Palatinate, who founded it in 1841. Although pianoforte-making was introduced into St. Petersburg early in the 19th century, until about 1850 pianists had imported their instruments for public performance. From that time, however, Becker succeeded in making concert instruments, and, aided by the patronage of Henselt and the Rubinsteins, made an effectual stand against a disadvantageous foreign competition. A. J. H.

BECKER, ALBERT ERNST ANTON (*b.* Quedlinburg, June 13, 1834; *d.* Jan. 10, 1899), a composer of some distinction.

He was first a pupil of Bönicke there, and of Dehn at Berlin, from 1853–56; became teacher of composition at Scharwenka's conservatorium in 1881, and in 1891 was appointed director of the Domchor. His first great mark as a composer was made by his symphony in G minor, to which the prize of the Gesellschaft der Musikfreunde in Vienna was awarded in 1861; in 1877 some of his songs, notably opp. 13 and 14, to words from Wolff's 'Rattenfänger' and 'Wilder Jäger,' attracted much attention

[1] According to contemporary documents and death certificate kept at Bordeaux.

and soon afterwards, in 1878, a Mass in B flat minor was produced by the Riedelsche Verein. Other important works are :

A 'Reformationscantate,' 1883; the oratorio, 'Selig aus Gnade,' 1890; 'Geistlicher Dialog,' Ps. 147, for double choir unaccompanied (op. 32, No. 1); cantata, 'Herr, wie lange,' op. 73; Ps. 104, op. 85; motets, and other sacred vocal pieces, among which the set of 'Geistlicher Lieder,' op. 51, contain some songs that are extremely beautiful.

In sacred music, in which Becker won his chief success, his style is broad and dignified, without losing sight of beauty and originality in his themes. In chamber music, a quintet for piano and strings, op. 49, is the most remarkable of his works ; several pieces for violin and orch., such as op. 70 and op. 86, one very effective work for violin and organ, op. 66, a fantasia and fugue for organ, op. 52, and an opera, 'Loreley,' in MS., may be mentioned. M.

BECKER, Carl Ferdinand (*b.* July 17, 1804; *d.* Oct. 26, 1877), an organist, and professor at the Conservatorium of Leipzig under Mendelssohn.

He studied the piano, harmony and composition, under Schicht and Schneider; and held organistships at Leipzig at the Peterskirche (1825) and the Nikolai-kirche (1837). On the foundation of the Conservatorium at Leipzig he was invited by Mendelssohn to join the new enterprise, and held the post of organ professor there from 1843–56. His literary works comprise :

Systematisch-chronologische Darstellung der Musikliteratur, etc. (1836), based on a work of Forkel's, with a supplement (1839), in which Becker is said to have been assisted by Anton Schmid, custos of the Hofbibliothek at Vienna; *Hausmusik in Deutschland in 16ten, 17ten, 18ten Jahrh.* (1840); *Die Tonwerke des 16ten und 17ten Jahrh.*—a catalogue of the music printed during that period (1847); and a catalogue of his own collection—*Alphabetisch und chronologisch geordnetes Verzeichniss*, etc. (B.H. 1847).

The collection itself, containing works of the greatest rarity, he bequeathed to the city of Leipzig at his death. F. G.

BECKER, Constantin Julius (*b.* Freiberg, Feb. 3, 1811; *d.* Dresden, Feb. 26, 1859). He showed an early talent for music, which was well developed by his master Anacker.

In 1835 he came to Leipzig and assisted Schumann in editing the *Neue Zeitschrift für Musik*; but in 1843 removed to Dresden and occupied himself in teaching singing. In 1846 he returned to Oberlössnitz, and lived there in solitude till his death. A symphony of his was performed with great applause at the Gewandhaus in 1843, and his opera 'Die Belagerung von Belgrad' was produced at Leipzig on May 21, 1848. But the work by which he will be remembered is his 'Männergesang-Schule,' 1845. He was the author of *Die Neuromantiker*, a novel (1840), and of a translation of Berlioz's *Voyage musicale.*

F. G.

BECKER, Dietrich, violinist and composer to the Hamburg senate towards the middle of the 17th century, was originally organist at Ahrensburg in Holstein, and came to Hamburg on his marriage in 1644. He was 'Rathsviolist' in 1668, when he published his 'Musikalische Frühlingsfrüchte,' consisting of pieces for instruments in 4 and 5 parts, with basso continuo and his sonatas or chorales for violin, viola da gamba and bass. F. G.

BECKER, Georg (*b.* Frankenthal in the Palatinate, June 24, 1834), wrote several books of some importance, such as :

La Musique en Suisse, depuis les temps les plus reculés jusqu'à la fin du XVIIIème siècle (Geneva, 1874), *Pygmalion de J.-J. Rousseau, Eustorg de Beaulieu, Guillaume de Guéroult, Notice sur Claude Goudimel, Aperçu sur la chanson française.*

For some time, at irregular intervals, Becker published a kind of periodical called *Questionnaire de l'association internationale des musiciens-écrivains*, and he contributed to the *Revue et gazette musicale*, the *Guide musical* of Brussels, the *Monatshefte für Musikgeschichte*, the *Musical World*, and the *Gazzetta musicale.*

G. F.

BECKER, (1) Jean (*b.* Mannheim, May 11, 1833; *d.* there Oct. 10, 1884), an eminent violin-player.

His first teachers were Kettenus, then leader of the Mannheim orchestra, and Vincenz Lachner, and he afterwards learned from Alard in Paris. He began to perform in public when only eleven, and he was still very young when he became the successor of Kettenus. In 1859 he played with great success in Paris, and thence went to London, where he appeared at the Monday Popular Concerts, and was for one season leader of the Philharmonic Concerts. After travelling for some years through most parts of Europe, he settled in 1866 at Florence, and associated himself with two Italian musicians, Enrico Masi (*d.* 1894) and L. Chiostri, and the German violoncellist, Fr. Hilpert. The last named was succeeded in 1875 by L. Spitzer-Hegyesi (1853–94). These artists, well known under the name of the 'Florentine Quartet,' earned, by their careful and spirited performances of the classical masterpieces of quartet literature, a great and well-deserved reputation in most musical centres of the Continent. Becker's style as a solo-player was a compromise between the severe style of the German school and the lighter and more brilliant one of the French. P. D.

(2) Hugo (*b.* Strassburg, Feb. 13, 1864), son of the above, one of the foremost violoncellists of our time.

Besides receiving some instruction from his father, he studied the violoncello under various eminent teachers, amongst them the elder Grützmacher, De Swert and Piatti. His first appearance was made at the Gewandhaus in Leipzig, and he afterwards went on tour with his father. In 1883 he was appointed solo violoncellist of the opera orchestra in Frankfort, teacher at the Hoch Conservatoire and violoncellist in the Frankfort Quartet led by Hugo Heermann. In 1909 he succeeded Robert Hausmann as professor at the Hochschule in Berlin, and took part with Flesch and

Friedberg in Trio Concerts. His main career has been that of a chamber-music player and soloist, in which capacities he has won laurels in almost every musical centre. His appearances in London and the provinces included Trios with Ysaÿe and Busoni. The features of his playing are the production of a tone of remarkable richness and sonority, and a fine left-hand technique. Several leading composers have written works for him and he has himself composed a violoncello concerto (A maj. 1898) and shorter pieces. W. W. C.

BECKMANN, Bror (*b.* Kristinehamm, Sweden, Feb. 10, 1866), pupil of J. Lindegren. In 1904 he was appointed director of Stockholm Conservatoire. He has composed a symphony in F major, 'Summer nights,' for string orchestra, songs with orchestra and PF., chamber music and PF. pieces. E. v. d. S.

BECKWITH, (1) John Christmas, Mus.D. (*b.* Norwich, Dec. 25, 1750; *d.* June 3, 1809), studied music under Dr. William Hayes and Dr. Philip Hayes at Oxford.

He became organist of St. Peter Mancroft, Norwich, on Jan. 16, 1794, and of the cathedral, succeeding Thomas Garland, in 1808. He composed many anthems—six of them published by Clementi—and a few vocal pieces, some of which became popular. In 1808 he published a set of chants under the following title:

'The First Verse of every Psalm of David, with an Ancient or Modern Chant, in Score, adapted as much as possible to the Sentiment of each Psalm.'

The preface to this work contains 'a short history of chanting,' which displays learning and research, and contains the first suggestion of marked psalters. Dr. Buck, who was his pupil and successor at Norwich Cathedral, describes his master as being almost as proficient in painting as in music. E. F. R.

He never wrote or gave his Christian name officially otherwise than 'John,' and it was sometimes believed that the name 'Christmas' was merely a playful addition made by his friends by reason of his having been born on Christmas Day. His great-grandson, however, stated in a private letter (1884) that Beckwith was christened 'John Christmas.'[1] He was succeeded in both his appointments by his son, (2) John Charles (*b.* 1788; *d.* Oct. 11, 1819). W. H. H.; addn. W. B. S.

BÉDARD, Jean-Baptiste (*b.* Rennes, *c.* 1765; *d.* Paris, *c.* 1815), violinist and conductor at Rennes theatre. He went to Paris in 1796. He composed two 'Symphonies périodiques,' sonatas for violin and harp, duos and solos for violin. E. v. d. S.

BEDFORD, Herbert (*b.* London, Jan. 23, 1867), composer, author and painter, pursued his musical studies at the G.S.M.

He is well known as a miniature painter, having exhibited portraits in London, Paris, New York, and elsewhere, and published a book on *The Heroines of George Meredith*, illustrated by twenty of his miniatures. In Oct. 1894 he married Mme. Liza Lehmann (*q.v.*). During the war (1914–18) Bedford held an R.N.V.R. commission in the London Anti-Aircraft Defences, and he distinguished himself by the invention of the Anti-Aircraft Range, adopted by the War Office for the instruction of Anti-Aircraft Gunnery Officers.

After his discharge, Bedford, who before the war had practised composition in a somewhat desultory manner, began to give his time more exclusively to music. His claim to distinction lies chiefly in his devotion to two particular species of composition: he was among the first to pay attention to the recent demands for military band music expressly written by serious musicians, and he has, more especially, taken a lead with his essays in unaccompanied song. In adopting this type of work he attempts several novel features, such as adherence to the original poetic idea and its natural declamation by preserving and artistically balancing the metrical line, a succession of figures designed and varied in such a way as to replace the missing elements of an accompaniment by something equally complete and satisfying, and the creation of a sense of 'horizontal harmony.'

His compositions include:

An Opera in one act, 'Kit Marlowe,' on a libretto by W. L. Courtney (1897); a setting of the Love Scene from *Romeo and Juliet* for contralto, baritone and orchestra (produced at the Norwich Festival of 1902); a Nocturne for 6 female voices, horn, harp and timpani; another, entitled 'Summer Dawn,' for contralto and orchestra; Shelley's Serenade for baritone and orchestra; a Poem, 'Vox Veris' (Alfred Perceval Graves), for soprano and orchestra (1912-13); a Piano Quintet (1894); Songs with Piano; Partsongs; 6 Songs with string quartet (with harp part added to two of them); a Suite of Three Roundels (1922) and 'Over the Hills' (1923) for military band; and the following orchestral works: Prelude to a Tragedy (1894); Concert Overture, 'Sowing the Wind' (1897); Suite, 'Queen Mab' (1900); Nocturne for horn and small orchestra (1900); Lullaby for small orchestra (1900); Symphonic Interlude (1905); Mélodie solennelle for strings (1905); Symphonic Fantasy, 'The Optimist' (1922); Divertimento, PF. and string orch. (pub. 1926); 'The Shepherd,' voice, fl., ob., PF. (Carnegie Trust, 1926).

The first unaccompanied songs appeared in 1922, and the composer has written an *Essay on Modern Unaccompanied Song*. published by the Oxford University Press. E. B.

BEDINGHAM, John, see Bedyngham.

BEDLER, Norman, see Baryton (1).

BÉDOS DE CELLES, Dom François (*b.* Caux, near Béziers, Jan. 24, 1709[2]; *d.* Toulouse, Nov. 25, 1779), a learned Benedictine of the fraternity of St. Maur in the Abbey of St. Denis at Toulouse, who entered the order in 1726. He is the author of *L'Art du facteur d'orgues* (Paris, 1766–78), an admirable work for the time, and which has remained classical. It forms part of the *Collection des arts et métiers* published by the Académie des Sciences, and was translated into German by J. Chr. Vollbeding as *Kurzgefasste Geschichte der Orgel* (1793). Dom Bédos was an expert on organs. He wrote an account of his survey of the organ at St. Martin de Tours, built by Nicolas le Fèvre (July 24, 1761), in the *Mercure de France*, of which a German translation by J. F. Agricola

[1] He is entered as 'John Christmas' in the Burial Register. W. B. S.

[2] From baptismal certificate.

will be found in Adlung's *Musica mechanica organoedi* (1768). Amongst his surveys is that of the new organ at St. Lazare, constructed by Pierre Dallery (1765). He was elected a member of the Académie des Sciences of Bordeaux (Apr. 3, 1759), and corresponding member of that of Paris. An eulogium of him was read on Jan. 30 and Feb. 24, 1780, by Dom Carrière.

BIBL.—*Bulletin de la Société Française de Musicologie*, 1917–20. F. RAUGEL, *Les Lepines et Dom François Bédos de Celles*, 1917 ; *Recherches sur les maîtres de l'ancienne facture française* (Paris, 1914).

BEDYNGHAM, JOHN (early 15th cent.), an English composer of sacred music who was apparently known under the nickname of 'Longstrides.' In certain partbooks, compiled between 1430 and 1470, and used in the cathedral at Trient, there are preserved about 40 works by English composers. These have since been transferred to Vienna, and the following compositions of Bedyngham are still to be found there : 'O rosa bella,' 'Et in terra pax,' 'Le serviteur,' 'Grand temps,' 'Beata es virgo Maria' (*Q.-L.*). In the commonplace book kept by John BALDWIN (*q.v.*) there are also extracts from the following motets by Bedyngham : 'Manus Dei' (*a* 2), 'Salva Jesu,' and 'Vide dire' (*a* 2).

J. MK.

BEECHAM, SIR THOMAS (*b.* Apr. 29, 1879), conductor and impresario, the son of Joseph Beecham, a well-known and wealthy business man. His father was created a baronet in 1914 and Thomas succeeded to the title on his father's death in 1916.

Beecham received the conventional education of a prosperous young Englishman at Rossall School and Wadham College, Oxford, and it was not till 1906 that he made any important appearance as a conductor in London. In that year he founded the New Symphony Orchestra (now the ROYAL ALBERT HALL ORCHESTRA (*q.v.*)) and gave concerts of old music at the Wigmore Hall. In 1907, 1908 and 1909 he initiated and conducted a series of Symphony Concerts at the Queen's Hall which were as remarkable for the enterprise of their programmes as for the sparseness of their audiences. Perhaps the most signal service that they rendered to music was the introduction of works by Frederic Delius to the British concert platform.

Nevertheless it is as an operatic conductor and impresario that Beecham is best known to the public at large. During his career in this dual capacity he has produced some 120 operas in all, of which some 60 were new to this country or revived after a long period of neglect. Not only that, he was responsible (in the summer of 1911) for introducing the Russian Ballet to London, and no musician can forget the debt of gratitude that England owes to him for his courage in maintaining a regular series of operatic performances during the war, often under the most difficult circumstances. These performances, which were given in English at Drury Lane, the Shaftesbury and Aldwych Theatres, included Stanford's 'The Critic,' Ethel Smyth's 'The Boatswain's Mate,' 'Tristan,' 'The Valkyrie,' 'Othello,' 'Figaro' and 'Louise.'

Beecham's first operatic venture in London, however, dates from June 1909, when he produced 'The Wreckers' at His Majesty's Theatre. This was followed in the spring of 1910 by a season at Covent Garden during which 'Elektra,' 'The Village Romeo and Juliet,' 'L'Enfant Prodigue' and 'Ivanhoe' were performed. In the summer of the same year he inaugurated another season at His Majesty's, of which 'Così fan tutte,' 'Seraglio,' 'Feuersnot,' 'Shamus O'Brien,' and 'Werther' were the principal features. This was followed in the autumn by yet another season at Covent Garden, the most important operas given being 'Fidelio,' 'Don Giovanni' and 'Salome.' The seasons of 1911 and 1912 were devoted to the magnificent performances associated with the name of the Russian Ballet, but in the spring of 1913 Beecham produced 'Rosenkavalier' in the midst of a ballet season that was remarkable, among other things, for the first performance of 'Petrouchka.' In the summer of the same year he produced 'Ariadne in Naxos' at His Majesty's in conjunction with Tree, and at Drury Lane he introduced London not only to the 'Sacre du printemps' but to 'Boris Godounov,' 'Khovantchina,' and 'Ivan the Terrible,' in which operas the famous Russian baritone Chaliapin made his first appearance in this country. In 1914, at the same theatre, there was another brilliant season when 'The Magic Flute,' 'Prince Igor,' 'Nuit de mai,' 'Rossignol,' 'Daphnis and Chloe,' 'Coq d'Or,' and 'Légende de Joseph' were added to the respective repertories of opera and ballet. Then came the war and the operatic performances in English already mentioned. In the spring and the summer of 1919 Sir Thomas' most important productions at Covent Garden were 'Falstaff' and 'Meistersinger'; in the autumn, 'Parsifal.' The summer of 1920 saw the last of his operatic ventures. These, although remarkable from an artistic point of view, were financially unsuccessful. Nevertheless, in 1923 he made his reappearance as an orchestral conductor in Manchester and London. He also arranged and conducted the music to Fletcher's 'The Faithful Shepherdess' for the Phœnix Society. Up to the present (1926), however, he has shown no sign of reverting to his former operatic activities.

BEECHAM OPERA COMPANY, see BEECHAM, Thomas ; BRITISH NATIONAL OPERA Co.

BEECKE, IGNATZ VON (*b.* Wimpfen im

Thal, Oct. 28, 1733; *d.* Wallerstein, Jan. 2, 1803), served as officer in a regiment of Würtemberg Dragoons and was pensioned as major in 1792. He was adjutant and Kapellmeister to Prince Oettingen-Wallerstein. He was an excellent pianist, who with Schobert inaugurated the modern technique of pianoforte-playing. He played a concerto for PF. duet with W. A. Mozart at the coronation of the German Emperor at Frankfort-on-Main. Jomelli was his master in composition, and Gluck, with whom he was on intimate terms, intended to use a libretto for an opera which he had written. Among his works are a number of operas, including Goethe's *Claudine von Villa Bella*, an oratorio, 'The Resurrection,' a large number of songs, symphonies, concertos and sonatas for pianoforte, etc. E. v. d. S.

BEER, Jacob Meyer, the original name of Giacomo Meyerbeer (*q.v.*).

BEER (Bär, Bähr, Boer), Joseph (*b.* Grünwald, Bohemia, May 18, 1744; *d.* Potsdam, 1811), a remarkable clarinet-player.

He served as trumpeter first in the Austrian and then in the French army during the Seven Years' War. In 1771 he went to Paris, and there took up the clarinet, on which he rapidly became the first performer of his time. In 1782 he left Paris, and travelled through Holland, Italy, Russia and Hungary, exciting everywhere the greatest possible enthusiasm. He was in the royal band at Potsdam when he died. As a performer Beer united a masterly execution to great power of expression, and indeed effected a complete revolution in the clarinet, which he greatly improved by the addition of a fifth key. His compositions comprise 3 concertos for 2 clarinets, variations and duets. M. C. C.

BEER-WALBRUNN, Anton (*b.* Kohlberg, near Weiden, Palatinate), a school teacher at Amberg and Eichstätt, where he also filled the post of organist at the cathedral. Dom-Kapellmeister Widmann of that town induced and assisted him to study at the Academy of Music at Munich under Rheinberger, Bussmeyer and Abel. The patronage of Count Schack enabled him to produce his compositions in public. In 1901 he became teacher of counterpoint, composition and pianoforte at the Academy, and in 1908 he received the title of Professor. He has written several operas, a symphony, chamber music, organ and pianoforte pieces, choral songs and Lieder. E. v. d. S.

BEETH, Lola, (*b.* Cracow, 1864), operatic soprano, studied first in Berlin, afterwards in Paris with Mme. Viardot-Garcia and Mme. Desirée-Artôt. She sang for the first time on the stage in 1882 at the Berlin Royal Opera as Elsa in 'Lohengrin,' and remained there seven years. She was then engaged for the Vienna Hofoper, where she sang with success for a similar period before making her début at Covent Garden, in 1896, as Elisabeth. Her voice was at that time beginning to show slight signs of wear, and, notwithstanding her dramatic intelligence and rare personal charm, she was not re-engaged. She sang subsequently at the Paris Opéra, in New York, at Budapest and at Monte Carlo; then returned to Vienna and continued there until 1902.

Bibl.—*International Who's Who in Music.* H. K.

BEETHOVEN, Ludwig van[1] (*b.* Bonn, probably Dec. 16, 1770[2]; *d.* Vienna, Mar. 26, 1827). The earliest form of the name is that with which we are familiar, but it takes many other shapes in the uncertain spelling of the time, such as Biethoffen, Biethofen, Biethoven, Bethoven, Betthoven and Bethof. He himself appears to have always spelt it as we know it.[3]

The Family belonged originally to a village near Louvain; thence in 1650 they moved to Antwerp, where in 1680 the name appears in the registers. His father Johann or Jean, and his grandfather Ludwig, were both musicians in the court band of the Elector of Cologne, at Bonn—the latter a bass singer, and afterwards Kapellmeister, appointed Mar. 1733, the former a tenor singer, Mar. 27, 1756.

The grandfather lived till Dec. 24, 1773, when the little Ludwig had just completed his third year. He was a small lively person with extraordinarily bright eyes, much respected and esteemed as a musician, and he made an indelible impression on his grandson. His portrait was the only one which Beethoven had sent from Bonn to Vienna, and he often spoke of it to the end of his life. Beethoven's mother—daughter of the chief cook at Ehrenbreitstein—was married to Johann on Nov. 12, 1767. She was several years younger than her husband; her original name had been Keverich, but at the time of the marriage she was a widow—Maria Magdalena Leym or Laym. She died after a long illness on July 17, 1787, a woman of soft heart and easy ways, much beloved by her son. The father, on the other hand, was a severe, hard man of irregular habits, who evidently saw his son's ability, gave him the best instruction that his poverty would allow, and kept him to his music with a stern, strict, perhaps cruel, hand. It is perhaps fortunate he did so.

The first house they occupied in Bonn, that in which the great composer was born, was 515 in the Bonngasse, designated by a tablet erected in 1870. In 1889 it was purchased by an association of amateurs, and dedicated for ever as a 'Geburtshaus Beethovens.' Joachim was its

[1] *Van* in Dutch is not, like *von* or *de*, a sign of nobility. On the attempts to assign a Dutch origin to the composer see a *Lettre à M. le Bourgmestre de Bonn, contenant les prénoms de l'origine hollandaise de L. v. Beethoven*, Amsterdam, 1837.

[2] The baptism is registered on the 17th, and it was the custom to baptize on the day following birth. Beethoven's own belief was that he was born in 1772, which accounts for an occasional mistake in his estimate of the age at which he wrote his early works. Even when a copy of his certificate of baptism was sent to him in 1810, he wrote at back of it: 'This seems not correct as there was a Ludwig before me.' There was, in fact, a first child, Ludwig Maria, who lived only six days, but he was born in 1769.

[3] In his letters; but in an advertisement of his, Mar 31, 1804, it is Bethofen (Nottebohm, *Beethoveniana*, p. 4).

first president. Besides their eldest, Ludwig Maria, baptized Apr. 2, 1769, who lived but six days, and Ludwig the second, the Beethovens had three sons—Caspar Anton Carl, baptized Apr. 8, 1774; Nikolaus Johann, Oct. 2, 1776; and August Franz Georg, Jan. 17, 1781, who died Aug. 16, 1783; a daughter, baptized Feb. 23, 1779, who lived only four days, and a second girl, Maria Margaretha Josepha, baptized May 5, 1786. The first of these was the father of the ill-fated youth who gave his uncle so much distress. He died at Vienna, Nov. 15, 1815. The second, Johann, was an apothecary, at Linz and Vienna, the 'Gutsbesitzer' of the well-known anecdote, his brother's *bête noire*, and the subject of many a complaint and many a nickname. He died at Vienna, Jan. 12, 1848. From the Bonngasse the family migrated to 7 or 8 on the Dreieck, and thence to the Rheingasse, No. 934.[1] To the latter they came in 1775 or 1776, and there they remained for a few years. Johann Beethoven's income from the chapel was 300 florins a year—a miserable pittance, but that of most musicians of the chapel; and this appears to have been his sole means of subsistence, for his voice was nearly gone, and there is no sign of his having had other employment.[2]

Early Years.—According to Beethoven's own statement in the dedication to his earliest publication—the three sonatas for pianoforte (Bossler, 1783)—he began music in his fourth year. The few traits preserved of that early period show that, like other children, he did not acquire it without tears. His father was his first teacher, and from him he learned both violin and clavier; reading, writing, arithmetic and a little Latin he obtained in one of the common public schools, and even this ceased when he was thirteen. At school he was shy and uncommunicative, and cared for none of the ordinary games of boys.[3] On Mar. 26, 1778, he played at a concert.[4] Before he was 9 his music had advanced so far that his father had no longer anything to teach him, and in 1779 he was handed over to Pfeiffer, a tenor singer who had recently joined the opera in Bonn, and seems to have lodged with the Beethovens, and by whom he was taught, irregularly enough, but apparently with good and lasting effect, for a year. About the same time he fell in with a certain Zambona, who taught him Latin, French and Italian, and otherwise assisted his neglected education.[5] The organ he learned from Van den Eeden, organist to the court chapel, and an old friend of his grandfather's. About this time, 1780–81, there is reason to believe that the Beethovens found a friend in Mr. Cressener, the English *chargé d'affaires*, long time resident at Bonn, and that he assisted them with a sum of 400 florins. He died on Jan. 17, 1781, and Beethoven (then just past ten) is said to have written a Funeral Cantata to his memory, which was performed. The cantata, if it ever existed,[6] has hitherto been lost sight of. One composition of this year we have in nine variations on Dressler's march in C minor,[7] which though published in 1783, are stated on the title to be 'composées . . . par un jeune amateur Louis van Beethoven, âgé de dix ans, 1780.'[8] In Feb. 1781 Neefe succeeded Van den Eeden as organist at the court, and Beethoven became his scholar. This was a great step for the boy, since Neefe, though somewhat over conservative as a musician, was a sensible man, and became a real friend to his pupil.

There is ground for believing that during the winter of 1781 Ludwig and his mother made a journey in Holland, during which he played at private houses, and that the tour was a pecuniary success.[9] On June 19, 1782, old Van den Eeden was buried, and on the next day the band followed the Elector to Münster, where as Bishop he had a palace, Neefe leaving Ludwig, then eleven and a half years old, behind him as his regularly appointed deputy at the chapel organ, a post which, though unpaid, was no sinecure, and required both skill and judgment. This shows Neefe's confidence in his pupil, and agrees with his account of him, written a few months later, as 'playing with force and finish, reading well at sight, and, to sum up all, playing the greater part of Bach's Well-tempered Clavier, a feat which will be understood by the initiated.' 'This young genius,' continues he, 'deserves some assistance that he may travel. If he goes on as he has begun, he will certainly become a second Mozart.'[10]

The Electoral Chapel.—On Apr. 26, 1783, Neefe was promoted to the direction of both sacred and secular music, and at the same time Beethoven (then twelve years and four months old) was appointed 'Cembalist im Orchester,' with the duty of accompanying the rehearsals in the theatre; in other words of conducting the opera band, with all the responsibilities and advantages of practice and experience which belong to such a position. No pay accompanied the appointment at first, but the duties ceased when the Elector was absent, so that there was leisure for composition. The pieces published in this year are a song, 'Schilderung eines Mädchens,'[11] and 3 sonatas for piano solo,[12] composed, according to the statement of the dedication, in 1781. On Aug. 16, 1783, the

youngest boy, August Franz, died, the father's voice began still further to fail, and things generally to go from bad to worse.

The work at the theatre was now rather on the increase. From Oct. 1783 to Oct. 1785, 2 operas of Gluck, 4 of Salieri, 2 of Sarti, 5 of Paisiello, with a dozen others, were studied and performed; but Ludwig had no pay. In Feb. 1784 he made an application for a salary, but the consideration was postponed, and it was probably as a set-off that he was shortly afterwards appointed second court organist. Meantime, however, on Apr. 15, 1784, the Elector Max Friedrich died, and this postponed still further the prospect of emolument. The theatrical company was dismissed, and Neefe having only his organ to attend to, no longer required a deputy. The Beethovens were now living at No. 476 in the Wenzelgasse, whither they appear to have moved in 1783,[1] and Ludwig played the organ in the Minorite church at the six o'clock mass every morning.

The music of 1784 consists of a rondo for the piano in A,[2] published early in the year, and a song 'An einen Säugling'[3]; a concerto for piano,[4] and a piece in three-part harmony, probably belonging to this year.

One of the first acts of the new Elector Max Franz was to examine his establishment, and on June 27, 1784, he issued a list of names and salaries of his band,[5] among which Beethoven's father appears with a salary of 300 florins, and Beethoven himself, as second organist, with 150 florins. A memorandum of the same date[6] shows that an idea was entertained of dismissing Neefe and putting Beethoven into his place as chief organist. In fact Neefe's pay was reduced from 400 to 200 florins, so that 50 florins a year was saved by the appointment of Beethoven. An economical Elector! In the Holy Week of 1785 the incident occurred (made too much of in the books) of Beethoven's throwing out the solo singer in chapel by a modulation in the accompaniment, which is chiefly interesting as showing how early his love of a joke showed itself.[7] During this year he studied the violin with Franz Ries—father of Ferdinand. The music of 1785 consists of three quartets for piano and strings,[8] a song 'Wenn jemand eine Reise thut' (op. 52, No. 1), and probably a minuet for piano in E♭.[9]

In 1786 nothing appears to have been either composed or published, and the only incident of this year that has survived is the birth of a second girl to the Beethovens—Maria Margaretha Josepha, May 4.

First Visit to Vienna.—In 1787 occurred the first real event in Beethoven's life—his first journey to Vienna. Concerning this there is an absolute want of dates and details. Some one must have been found to supply the means for so expensive a journey, but no name is preserved. As to date, his duties as organist would probably prevent his leaving Bonn before the work of Holy Week and Easter was over. The two persons who were indelibly impressed on his recollection by the visit[10] were Mozart and the Emperor Joseph. From the former he had a few lessons in composition,[11] and carried away a distinct—and not very appreciative[12]—recollection of his playing; but Mozart must have been so much occupied by the death of his father (May 28) and the approaching production of 'Don Giovanni' (Oct. 29) that it is probable they had not much intercourse. The well-known story of Beethoven's introduction to him, when divested of the ornaments[13] of Seyfried and others, stands as follows: Mozart asked him to play, but thinking that his performance was a prepared piece, paid little attention to it. Beethoven seeing this entreated Mozart to give him a subject, which he did; and the boy, getting excited with the occasion, played so finely that Mozart, stepping softly into the next room, said to his friends there, 'Pay attention to him; he will make a noise in the world some day or other.' His visit seems not to have lasted more than three months, but, as we have said, all detailed information is wanting. He must, however, have left a certain fame behind him. Haydn in a letter to Artaria of Vienna (May 2, 1787) says, 'I should like to know who this Ludwig is.' This seems to refer to Beethoven, though it is of course possible that Ludwig may be a surname. He returned by Augsburg, where he had to borrow three Carolins (£3) from Dr. Schaden. His return was hastened by the illness of his mother, who died of consumption, July 17, 1787, and his account of himself in a letter[14] to Dr. Schaden, written seven weeks after that date, is not encouraging. A short time more, and the little Margaretha followed her mother, on Nov. 25, so that 1787 must have closed in very darkly. The only compositions known to belong to that year are a trio in E♭,[15] and a prelude in F minor for piano solo.[16]

Friendships.—However, matters began to mend; he made the acquaintance of the von Breuning (*q.v.*) family—his first permanent friends—a mother, three boys and a girl.[17] He gave lessons to the girl and the youngest boy, and soon became an inmate of the house, a far better one than he had before frequented, and on terms of close intimacy with them all. The family was a cultivated and intellectual one, the mother—the widow of a man of some distinction—a woman of remarkable sense and refine-

ment ; the children, more or less of his own age. Here he seems to have been first initiated into the literature of his country, and to have acquired the love of English authors which remained with him through life. The intimacy rapidly became strong. He often passed whole days and nights with his friends, and accompanied them on excursions of several weeks' duration to their uncle's house at Kerpen, and elsewhere. At the same time he made the acquaintance of Count WALDSTEIN (*q.v.*), a young nobleman eight years his senior, an amateur musician, whose acquaintance was peculiarly useful in encouraging and developing Beethoven's talent at a time when it naturally wanted support. On Waldstein Beethoven exercised the same charm that he did later on the proud aristocracy of Vienna. The Count used to visit him in his poor room, gave him a piano, got him pecuniary help under the guise of allowances from the Elector, and in other ways sympathised with him. Either now or shortly afterwards, Beethoven composed a set of variations for 4 hands on a theme of the Count's,[1] and in 1805 made him immortal by dedicating to him the grand sonata (op. 53) which is usually known by his name. Another acquaintance was the Countess of Hatzfeld, to whom he dedicated the ' Venni Amore ' variations, which were for long his show-piece.

WORK AT BONN.—In the summer of 1788, when Beethoven was 17½ years old, the Elector altered the plan of his music,[2] and formed a national theatre on the model of that of his brother the Emperor Joseph. Reicha was made director, and Neefe pianist and stage-manager. The band was 31 strong, and contains names such as Ries, the two Rombergs, Simrock, Stumpff—which often recur in Beethoven's life. He himself played second viola, both in the opera and the chapel, and was still assistant Hof-organist. In this position he remained for four years ; the opera repertory was large, good and various, the singers were of the best, and the experience must have been of great practical use to him. Among the operas played in 1789 and 1790 were Mozart's ' Entführung,' ' Figaro ' and ' Don Giovanni '—the first two apparently often. Meantime Johann Beethoven was going from bad to worse. Stephen Breuning once saw Ludwig take his drunken father out of the hands of the police, and this could hardly have been the only occasion. At length, on Nov. 20, 1789, a decree was issued ordering a portion of the father's salary to be paid over to the son, who thus, before he was 19, became the head of the family.

The compositions of 1789 and 1790 include 2 preludes for the piano (op. 39), 24 variations on Righini's ' Venni Amore,' [3] a song ' Der freie Mann,' [4] and 2 cantatas, one on the death of the Emperor Joseph II., the other on the accession of Leopold II.[5] The only extra-musical event of 1790 was the visit of Haydn and Salomon on their road to London. They arrived on Christmas Day. One of Haydn's Masses was performed ; he was complimented by the Elector, and entertained the chief musicians at dinner at his lodgings.

1791 opened well for Beethoven with a ' Ritter-ballet,' a kind of masked ball, in antique style. Count Waldstein appears to have arranged the plan, and Beethoven composed the music ; but his name does not seem to have been connected with it at the time, and it remained unpublished till 1872, when it appeared arranged for piano.[6] In the autumn the troupe accompanied the Elector to Mergentheim, near Aschaffenburg, to a conclave of the ' Deutschen Orden ' ; the journey was by water along the Rhine and Main, the weather was splendid,—there was ample leisure, and the time long remained in Beethoven's recollection ' a fruitful source of charming images.' At Aschaffenburg he heard a fine player—the Abbé Sterkel, and showed his instant appreciation of the Abbé's graceful finished style by imitating it in extemporising. In Mergentheim the company remained for a month (Sept. 18-Oct. 20). An interesting account of the daily musical proceedings is given by Junker, the chaplain at Kirchberg,[7] including an account of Beethoven's extempore playing. He compares it with that of Vogler, whom he knew well, and pronounces it to have displayed all Vogler's execution, with much more force, feeling and expression, and to have been in the highest degree original.

The Beethovens were still living in the Wenzelgasse, Carl learning music, and Johann under the Court Apothecary. Ludwig took his meals at the Zehrgarten [8]—a great resort of the University professors, artists and literary men of Bonn, and where the lovely Babette Koch, daughter of the proprietress, was doubtless an attraction to him.[9] His intimacy with the Breunings continued and increased ; Frau von Breuning was one of the very few people who could manage him, and even she could not always make him go to his lessons in time : when he proved too obstinate she would give up the endeavour with the remark, ' he is again in his *raptus*,' an expression which Beethoven never forgot.[10] Music was their great bond, and Beethoven's improvisations were the delight of the family. His duties at the organ and in the orchestra at this time were not very great ; the Elector's absences were frequent, and gave him much time to himself, which he spent partly in lessons, partly in the open air, of which he was

already very fond, and partly in assiduous practice and composition. The sketch-books of that time are crammed with ideas, and confirm his statement, made many years later,[1] that he began thus early the method of working which so emphatically distinguishes him.

In July 1792 Haydn again passed through Bonn on his return from London. The Elector's Band gave him a dinner at Godesberg, and Beethoven submitted a cantata to him, 'which Haydn greatly praised, warmly encouraging the composer to proceed with his studies.'[2] What the cantata was is not known.

The compositions which may perhaps be fixed to the years 1791 and 1792 consist of songs (portions of op. 52), the octet, op. 103, and a rondino[3] for wind instruments, the trio for strings, op. 3, an allegro and minuet for 2 flutes (Aug. 23, MS.[4]), and a set of 14 variations for pianoforte, violin and violoncello, in E♭, published in 1804 as op. 44; 12 Variations[5] for piano and violin on 'Se vuol ballare'; 13 ditto for piano[6] on 'Es war einmal'; 8 ditto[7] for piano, four hands, on an air of Count Waldstein's, and the above-mentioned Ritter-ballet and 'Venni Amore' variations.

Departure for Vienna.—Hitherto the Elector seems to have taken no notice of the most remarkable member of his orchestra. But in the course of this year—whether prompted by Neefe or Waldstein or by his own observation, or possibly by Haydn's approbation—he determined that Beethoven should visit Vienna in a more permanent manner than before, for the purpose of studying at his expense. Haydn was communicated with, and in the very beginning of November Beethoven left Bonn, as it proved, never to return to it again. His parting words to Neefe are preserved[8]:

'Thank you for the counsel you have so often given me on my progress in my divine art. Should I ever become a great man you will certainly have assisted in it, which will be all the more gratifying to you, since you may be convinced that,' etc.

The Album[9] in which his friends—Waldstein, the Breunings, the Kochs, Degenhart, and others—inscribed their farewells is still existing, and the latest date is Nov. 1. E. Breuning's lines contain allusions to 'Albion,' as if Beethoven were preparing to visit England—possibly with Haydn. Waldstein's entry is as follows:

'Dear Beethoven, you are travelling to Vienna in fulfilment of your long-cherished wish. The genius of Mozart is still weeping and bewailing the death of her favourite. With the inexhaustible Haydn she found a refuge, but no occupation, and is now waiting to leave him and join herself to some one else. Labour assiduously, and receive Mozart's spirit from the hands of Haydn. Your true friend Waldstein. Bonn, Oct. 29, 1792.'

What provision the Elector made for him beyond his modest pay of 150 florins is not known.[10] An entry of 25 ducats (£12 : 10s.) is found in his notebook shortly after he reached Vienna, but there is nothing to show what length of time that moderate sum represented, or even that it came from the Elector at all.

Thus ended the first period of Beethoven's life. He was now virtually 22. The list of his known compositions to this time has been given year by year. If we compare them with those of other composers of the first rank, such as Mozart, Schubert or Mendelssohn, it must be admitted that they are singularly few and unimportant. For the orchestra the Ritter-ballet already referred to is the single composition known[11]; while Mozart—to mention him only—had in the same period written 36 symphonies, including so mature a masterpiece as the 'Parisian' in D. Against Mozart's 28 operas, cantatas and masses, for voices and full orchestra, composed before he was 23, Beethoven has absolutely nothing to show. And the same in other departments. That he meditated great works, though they did not come to paper, is evident in at least one case. A resident in Bonn, writing to Schiller's wife Charlotte, on Jan. 26, 1793,[12] says:

'I enclose a setting of the *Feuerfarbe* on which I should like your opinion. It is by a young man of this place whose talent is widely esteemed, and whom the Elector has now sent to Vienna to Haydn. He intends to compose Schiller's *Freude*, and that verse by verse. I expect something perfect; for, as far as I know him, he is all for the grand and sublime. Haydn informs us that he shall set him to great operas, as he himself will shortly leave off composing. He does not usually occupy himself with such trifles as the enclosed, which indeed he composed only at the request of a lady.'

This letter, which shows how early Schiller's 'Hymn to Joy' had taken possession of Beethoven—there to remain till it formed the finale to the ninth symphony thirty years later—is equally interesting for the light it throws on the impression which Beethoven had already made on those who knew him, and who credited him with the intention and the ability to produce great works, although he had not yet produced even small ones. This impression was doubtless due mainly to the force and originality of his extempore playing, which even at this early age was prodigious, and justified his friends in speaking of him as one of the finest pianoforte-players of the day.[13]

Studies in Vienna.—By the middle of Nov. 1792 Beethoven was settled at Vienna. His

first lodging was a garret at a printer's in the 'Alservorstadt' [1] outside the walls, in the direction of the present Votive-Church; but this was soon exchanged for one 'on the ground floor,' [2] of which we have no nearer description. On the journey from Bonn we find him for the first time making notes of little occurrences and expenses—a habit which never left him. In the entries made during his first few weeks in Vienna we can trace the purchase of a wig, silk stockings, boots, shoes, overcoat, writing-desk, seal, and hire of piano. From the same source we can infer the beginning of his lessons. The first payment to Haydn is 8 groschen (say 9½d., we may surely presume for one hour) on Dec. 12. The lessons took place in Haydn's house [3] (Hamberger Haus, No. 992), now destroyed. They were lessons in 'strict counterpoint,' and the text-book was Fux's *Gradus ad Parnassum*. Of Beethoven's exercises 245 have been preserved,[4] of which Haydn has corrected 42. Haydn was naturally much occupied, and it is not surprising that Beethoven should have been dissatisfied with his slow progress, and with the cursory way in which his exercises were corrected, and have secretly accepted the offer of additional instruction from Schenk, a well-known Vienna composer. But no open rupture as yet took place. Beethoven accompanied Haydn to Eisenstadt some time in 1793,[5] and it was not until Haydn's departure for England on Jan. 19, 1794, that he openly transferred himself to another master. He then took lessons from Albrechtsberger in counterpoint, and from Schuppanzigh on the violin, three times a week each. In the former the text-book was Albrechtsberger's own *Anweisung zur Composition*, and the subject was taken up where Haydn had left it, and pursued much farther. No fewer than 263 exercises are in existence under the following heads: simple strict counterpoint; free composition in simple counterpoint; imitation; simple fugue; fugued chorale; double fugue; double counterpoint in the 8th, 10th and 12th; triple counterpoint and triple fugue; canon. Nottebohm has pointed out the accuracy and pains which Albrechtsberger bestowed on his pupil,[6] as well as the care with which Beethoven wrote his exercises, and the characteristic way in which he neglected them in practice. He also gives his reasons for believing that the lessons did not last longer than Mar. 1795. The impression they left on Albrechtsberger was not flattering: 'Have nothing to do with him,' said the old contrapuntist to an inquiring lad, 'he has learnt nothing, and will never do anything in decent style.' [7] In fact what was a contrapuntist to do with a pupil who regarded everything in music—even consecutive fifths [8]—as an open question, and also thought it a good thing to 'learn occasionally what is according to rule, that one may hereafter come to what is contrary to rule?' [9] Besides the lessons with Haydn and Albrechtsberger, some exercises exist in Italian vocal composition, dating between 1793 and 1802, and showing that Beethoven availed himself of Salieri's well-known kindness to needy musicians, to submit his pieces to him. Salieri's corrections are chiefly in the division of the Italian syllables.[10] Another musician whom he consulted, especially in his early attempts at quartet writing, was Aloys Förster, to whom he remained long and greatly attached.[11]

Meantime Beethoven kept up communication with Bonn. On Dec. 18, 1792, his poor father died, and the 100 thalers applied to the support of his brothers naturally stopped. On Beethoven's application, however, the grant was allowed to go on, in addition to his own pay. Ries drew and transmitted the money for him.[12] The Breunings still held their place in his heart; two [13] letters to Eleonore, full of affection, are preserved, and he mentions having also written twice to one resident of Bonn, and three times to another, in the course of the first twelvemonth. In Jan. 1794, the Elector visited Vienna, and with the March quarter-day Beethoven's allowance ceased. In the following October, Bonn was taken possession of by the French republican army, and the Elector fled.

A Study of Character

Now that Beethoven is landed in Vienna—as it turns out, never again to leave it—and is left to his own resources, it may be convenient to pause in the narrative of his life, and sketch his character and person as briefly as possible. He had already a large acquaintance among the aristocracy of Vienna. Among his kindest friends and most devoted admirers were the Prince and Princess Karl Lichnowsky. They devoured his music, gave him a quartet of valuable instruments [14] for the performance of it, put up with his caprices and eccentricities, gave him an annuity of 600 guldens, and made him an inmate of their house for years. He was also frequently at the houses of Baron van Swieten, Prince Lobkowitz, Count Fries, and other noblemen, at once leaders of fashion and devoted amateurs. At these houses he was in the constant habit of playing, and in many of them no doubt he taught, but as to the solid results of this no record remains—nor do we

know the prices which he obtained for his published works, or anything of the value of the dedications, at this period of his career. Musical public, like that which supported the numerous concerts flourishing in London at this date,[1] and enabled Salomon to risk the expense of bringing Haydn to England, there was none; musicians were almost directly dependent on the appreciation of the wealthy.

That Beethoven should have been so much treasured by the aristocracy of Vienna notwithstanding his personal drawbacks, and notwithstanding the gap which separated the nobleman from the *roturier*, shows what an immense power there must have been in his genius, and in the absolute simplicity of his mind, to overcome the abruptness of his manners.[2] If we are to believe the anecdotes of his contemporaries [3] his sensitiveness was extreme, his temper ungovernable and his mode of expression often quite unjustifiable. At the house of Count Browne, when playing a duet with Ries, a young nobleman at the other end of the room persisted in talking to a lady; several attempts to quiet him having failed, Beethoven suddenly lifted Ries's hands from the keys, saying in a loud voice, 'I play no longer for such hogs'; nor would he touch another note nor allow Ries to do so, though entreated by all.[4] On another occasion, when living in the house and on the bounty of the Lichnowskys, the Prince, knowing how sensitive Beethoven was to neglect, ordered his servants whenever they heard Beethoven's bell and his at the same time to attend to Beethoven's first. No sooner, however, did Beethoven discover that such an order had been given than he engaged a servant of his own to answer his bell.[5] During one of the rehearsals of 'Leonora,' the third bassoon was absent, at which Beethoven was furious. Prince Lobkowitz, one of his best friends, tried to laugh off the matter, saying that as the first and second were there the absence of the third could not be of any great consequence. But so implacable was Beethoven that in crossing the Platz after the rehearsal he could not resist running to the great gate of the Lobkowitz Palace and shouting up the entrance, 'Lobkowitzscher Esel'—'ass of a Lobkowitz.'[6] Any attempt to deceive him, even in the most obvious pleasantry, he could never forgive. When he composed the well-known 'Andante in F' he played it to Ries and Krumpholz. It delighted them, and with difficulty they induced him to repeat it. From Beethoven's house Ries went to that of Prince Lichnowsky, and not being able to contain himself played what he could recollect of the new piece, and the Prince being equally delighted, it was repeated and repeated till he too could play a portion of it. The next day the Prince by way of a joke asked Beethoven to hear something which he had been composing, and thereupon played a large portion of his own 'Andante.' Beethoven was furious; and the result was that Ries was never again allowed to hear him play in private. In fact it led in the end to Beethoven's ceasing to play to the Prince's circle of friends.[7] And on the other hand, no length of friendship or depth of tried devotion prevented him from treating those whom he suspected, however unjustly, and on however insufficient grounds, in the most scornful manner. Ries has described one such painful occurrence in his own case apropos of the Westphalian negotiations [8]; but all his friends suffered in turn. Even poor Schindler, whose devotion in spite of every drawback was so constant, and who has been taunted with having 'delivered himself body and soul to Beethoven,' had to suffer the most shameful reproaches behind his back, the injustice of which is most surely proved by the fact that they were dropped as suddenly as they were adopted.[9] When Moritz Lichnowsky, Schuppanzigh and Schindler were doing their utmost to get over the difficulties of arranging a concert for the performance of the choral symphony and the mass in D, he suddenly suspected them of some ulterior purpose, and dismissed them with the three following notes [10]: 'To Count Lichnowsky. Falsehoods I despise. Visit me no more. There will be no concert. Beethoven.' 'To Herr Schindler. Visit me no more till I send for you. No concert. Beethoven.' 'To Herr Schuppanzigh. Visit me (*besuche er mich*) no more. I give no concert. Beethoven.'

The style of the last of these three precious productions—the third person singular—in which the very lowest rank only is addressed, seems to open us a little door into Beethoven's feeling towards musicians.[11] When Hummel died, two notes from Beethoven [12] were found among his papers, which tell the story of some sudden violent outbreak on Beethoven's part. 'Komme er [the same scornful style as before] nicht mehr zu mir! er ist ein falscher Hund, und falsche Hunde hole der Schinder. Beethoven.' And though this was followed by an apology couched in the most ultra-affectionate and coaxing terms—'Herzens Natzerl,' 'Dich küsst dein Beethoven,' and so on—yet the impression must have remained on Hummel's mind. There can be no doubt that he was on bad terms with most of the musicians of Vienna. With Haydn he seems never to have been really cordial. The old man's neglect of his lessons embittered him, and when, after hearing his

BEETHOVEN

From the painting by J. C. Stieler, in the possession of Messrs. C. F. Peters

PRINTED IN GREAT BRITAIN

first three trios, Haydn, no doubt in sincerity, advised him not to publish the third, which Beethoven knew to be the best, it was difficult to take the advice in any other light than as prompted by jealousy. True he dedicated his three pianoforte sonatas (op. 2) to Haydn, and they met in the concert-room, but there are no signs of cordial intercourse between them after Beethoven's first twelve months in Vienna. In fact they were thoroughly antagonistic. Haydn, though at the head of living composers, and as original a genius as Beethoven himself, had always been punctilious, submissive, subservient to etiquette. Beethoven was eminently independent and impatient of restraint. It was the old world and the new—De Brézé and Mirabeau [1]—and it was impossible for them to agree. They probably had no open quarrel, Haydn's tact would prevent that, but Haydn nicknamed him 'the Great Mogul,' [2] and Beethoven retorted by refusing to announce himself as 'Haydn's scholar,' [3] and when they met in the street their remarks were unfortunate, and the antagonism was but too evident.

For Salieri, Eybler, Gyrowetz and Weigl, able men and respectable contrapuntists, he had a sincere esteem, though little more intimate feeling. Though he would not allow the term as regarded Haydn, he himself left his characteristic visiting-card on Salieri's table as his 'scholar'—'Der Schuler Beethoven war da.' [4] But with the other musicians of Vienna, and the players of his own standing, Beethoven felt no restraint on open war.[5] They laughed at his eccentricities, his looks and his Bonn dialect,[6] made game of his music, and even trampled [7] on it, and he retorted both with speech and hands. The pianoforte-players were Hummel, Woelfl, Lipawsky, Gelinek, Steibelt. Steibelt had distinctly challenged him,[8] had been as thoroughly beaten as a man could wish, and from that day forward would never again meet him. Gelinek, though equally vanquished, compensated himself by listening to Beethoven on all occasions, and stealing his phrases and harmonies,[9] while Beethoven retorted by engaging his next lodging where Gelinek could not possibly come within the sound of his piano. Woelfl and Hummel were openly pitted against him, and no doubt there were people to be found in Vienna in 1795, as there are in London in 1876,[10] to stimulate such rivalry and thus divide artists whom a little care might have united. Hummel is said to have excelled him in clearness, elegance and purity, and Woelfl's proficiency in counterpoint was great, and his huge hands gave him extraordinary command of the keys; but for fire, and imagination, and feeling, and wealth of ideas in extempore [11] playing, none of them can have approached Beethoven. 'His improvisation,' says Czerny,[12]

'was most brilliant and striking; in whatever company he might chance to be, he knew how to produce such an effect upon every hearer, that frequently not an eye remained dry, while many would break out into loud sobs; for there was something wonderful in his expression, in addition to the beauty and originality of his ideas, and his spirited style of rendering them.'

He extemporised in regular 'form,' and his variations—when he treated a theme in that way—were not mere alterations of figure, but real developments and elaborations of the subject.[13] 'No artist,' says Ries,[14]

'that I ever heard came at all near the height which Beethoven attained in this branch of playing. The wealth of ideas which forced themselves on him, the caprices to which he surrendered himself, the variety of treatment, the difficulties, were inexhaustible.'

Even the Abbé Vogler's admirers were compelled to admit as much.[15] He required much pressing, often actual force, to get him to the piano, and he would make a grimace or strike the keys with the palm of the hand [16] as he sat down; but when there he would extemporise for two hours and even more at a time, and after ending one of his great improvisations he would burst into a roar of laughter, and banter his hearers on their emotions. 'We artists,' he would say, 'don't want tears, we want applause.' [17] At other times he would behave as if insulted by such indications of sympathy, and call his admirers fools, and spoiled children.

And yet no outbursts of this kind seem to have made any breach in the regard with which he was treated by the nobility—the only unprofessional musical society of Vienna. Certainly Beethoven was the first musician who had ever ventured on such independence,[18] and there was possibly something piquant in the mere novelty; but the real secret of his lasting influence must have been the charm of his personality—his entire simplicity, joined to his prodigious genius. This charm even counterbalanced his horribly bad manners. And he enjoyed good society. 'It is good,' said he, 'to be with the aristocracy; but one must be able to impress them.' [19]

This personal fascination acted most strongly on his immediate friends — on Krumpholz [20] (who seems to have played the part of

18 His radicalism was very pronounced. It was no mere fashion. 'That a man should humble himself to another distresses me,' says he, in a letter supposed to be written to Giulietta (Sch. ii. 52). He loved freedom, and when the debates against slavery were going on in Parliament in 1823, when he was writing the ninth symphony ('Alle Menschen werden Brüder'), used to take home the *Allg. Ztg.* to read Lord Brougham's speeches.
19 *Thayer*, ii. 313, and Nohl, ii. 25.
20 'Gesang der Mönche' was written *in memoriam* Krumphols, 1817.

Coleridge's humble follower John Chester [1]), on the somewhat cold and self-possessed Breuning, as well as on Ries, Zmeskall, Schindler, Holz and others, who had not, like Haslinger or Streicher, anything to gain from him, but who suffered his roughest words and most scurvy treatment, and returned again and again to their worship with astonishing constancy. Excepting Breuning none of these seems really to have had his confidence, or to have known anything of the inner man which lay behind the rough husk of his exterior, and yet they all clung to him as if they had.

Of his *tours de force* in performance too much is perhaps made in the books. His transposing the concerto in C into C♯ at rehearsal was exactly repeated by Woelfl [2]; while his playing the piano part of his horn sonata, his Kreutzer sonata, or his C minor concerto without book, or difficult pieces of Bach at first sight, is no more than has been done by Mozart, Mendelssohn, Sterndale Bennett and many inferior artists. No, it was no quality of this kind that got him the name of the 'giant among players'; but the loftiness and elevation of his style, and his great power of expression in slow movements, which when exercised on his own noble music fixed his hearers and made them insensible to any faults of polish or mere mechanism.

It was not men alone who were attracted by him,[3] he was an equal favourite with the ladies of the court. The Princess Lichnowsky watched over him—as Frau von Breuning had done—like a mother.[4] The Countesses Gallenberg and Erdödy, the Princess Odescalchi, the Baroness Ertmann, the sisters of the Count of Brunswick, and many more of the reigning beauties of Vienna adored him, and would bear any rudeness from him. These young ladies went to his lodgings or received him at their palaces as it suited him. He would storm at the least inattention during their lessons, and would tear up the music and throw it about.[5] He may have used the snuffers as a toothpick in Madame Ertmann's drawing-room, but when she lost her child he was admitted to console her; and when Mendelssohn saw her [6] fifteen years later she doted on his memory and recalled the smallest traits of his character and behaviour. He was constantly in love, and though his taste was very promiscuous,[7] yet it is probable that most of his attachments, returned or tolerated, were for women of rank.[8] Unlike poor Schubert, whose love for the Countess Caroline Esterhazy was so carefully concealed, Beethoven made no secret of his attachments. Many of them are perpetuated in the dedications of his sonatas. That in E♭ (op. 7), dedicated to the Countess Babette de Keglevics, was called in allusion to him and to her, 'die verliebte.' To other ladies he writes in the most intimate, nay affectionate style. He addresses the Baroness Ertmann by her Christian name as 'Liebe, werthe, Dorothea Cäcilia,' and the Countess Erdödy—whom he called his confessor—as 'Liebe, liebe, liebe, liebe, liebe, Gräfin.' [9] Thayer's investigations [10] have destroyed the romance of his impending marriage with Giulietta Guicciardi [11] (afterwards Countess Gallenberg); yet the fact that the story has been so long believed shows its abstract probability. One thing is certain, that his attachments were all honourable, and that he had no taste for immorality.[12] 'O God! let me at last find her who is destined to be mine, *and who shall strengthen me in virtue*.' Those were his sentiments as to wedded love.

In a letter 'An das Bigot'sche Ehepaar' he says, 'It is one of my first principles never to stand in any relations but those of friendship to the wife of another man.' [13]

His dedications have been mentioned. The practice seems virtually to have begun [14] with him,[15] to have sprung from the equal and intimate relation in which he—earliest among musicians—stood to his distinguished friends; and when one looks down the list,[16] from op. 1 to op. 135—unsurpassed even by any later composer—and remembers that the majority were inspired by private friendship,[17] and that only a minority speak of remuneration, it is impossible not to be astonished.

Formal religion [18] he apparently had none; his religious observances were on a par with his manners. It is strange that the Bible does not appear to have been one of his favourite books. He once says to a friend,[19] 'It happens to be Sunday, and I will quote you something out of the Gospel—Love one another'; but such references are very rare. But that he was really and deeply religious, 'striving sacredly to fulfil all the duties imposed [20] on him by

humanity, God and nature,' and full of trust in God, love to man, and real humility, is shown by many and many a sentence in his letters. And that in moments of emotion his thoughts turned upwards is touchingly shown by a fragment of a hymn—'Gott allein ist unser Herr'—which Nottebohm[1] has unearthed from a sketch-book of the year 1818, and which Beethoven has himself noted to have been written, 'Auf dem Wege Abends zwischen den und auf den Bergen.' The following passages, which he copied out himself and kept constantly before him, served him as a kind of creed, and sum up his theology:

'I am that which is.

'I am all that is, that was, and that shall be. No mortal man hath lifted my veil.

'He is alone by Himself, and to Him alone do all things owe their being.'[2]

How he turned his theology into practice is well exemplified in his alteration of Moscheles's pious inscription. At the end of his arrangement of 'Fidelio,' Moscheles had written 'Fine. With God's help.' To this Beethoven added, 'O man, help thyself.'[3]

In his early Vienna days he attempted to dress in the fashion, wore silk stockings, perruque, long boots and sword, carried a double eye-glass and a seal-ring. But dress must have been as unbearable to him[4] as etiquette, and it did not last; 'he was meanly dressed,' says one of his adorers, 'and very ugly to look at, but full of nobility and fine feeling, and highly cultivated.'[5] Czerny first saw him (about 1803) in his own room, and there his beard was nearly half an inch long, his pitch-black hair stood up in a thick shock, his ears were filled with wool which had apparently been soaked in some yellow substance, and his clothes were made of a loose hairy stuff, which gave him the look of Robinson Crusoe. But we know that he never wore his good clothes at home[6]; at any rate the impression he usually made was not so questionable as this. When at Mödling in 1818 he wore a light-blue tailed coat (*Frack*) with yellow buttons, white waistcoat, and tie—all very untidy.[7] Those who saw him for the first time were often charmed by the eager cordiality of his address,[8] and by the absence of the bearishness and gloom[9] which were attributed to him by others. His face may have been ugly, but all admit that it was remarkably expressive. 'Every change of feeling,' says the painter Klober who took him in 1818, 'in his mind, showed itself at once unmistakably in his features.'[10] When lost in thought and abstracted his look would naturally be gloomy, and at such times it was useless to expect attention from him; but on recognising a friend his smile was peculiarly genial and winning.[11] He had the breadth of jaw which distinguishes so many men of great intellect; the mouth firm and determined, the lips protruded with a look almost of fierceness: but his eyes were the special feature of the face, and it was from them that the earnestness and sincerity of his character beamed forth. They were not large but bright,[12] and when under the influence of inspiration—the *raptus* of Frau von Breuning—they dilated in a peculiar way. His head was large, the forehead both high and broad, and the hair abundant. It was originally black,[13] but in the last years of his life, though as thick as ever, became quite white, and formed a strong contrast to the red colour[14] of his complexion. Beard or moustache he never wore. If he had done so his beard would have been a prodigious one, for, apropos of an amusing anecdote of Beethoven's impulsiveness, Ries tells us (p. 116) that he had to shave up to his eyes. His teeth were very white and regular, and good up to his death; in laughing he showed them much.[15] When in pleasant frame of mind his voice was soft,[16] but on occasion he could raise it,[17] and in singing we read of him roaring.[18] The portraits and busts of Beethoven are with few exceptions more or less to blame; they either idealise him into a sort of Jupiter Olympus, or they rob him of all expression. It must have been a difficult face to take, because of the constant variety in its expression, as well as the impatience of the sitter. The most trustworthy[19] likenesses are (1) the miniature by Hornemann, taken in 1802, and photographed in Breuning's *Schwarzspanierhaus* (Vienna, 1874): (2) the head by Letronne, engraved by Höfel, and (badly) by Riedel for the *A.M.Z.*, 1817; (3) the little full-length sketch by Lyser, to the accuracy of which Breuning expressly testifies, except that the hat should be straight on the head, not at all on one side. He was below the middle height—not more than 5 feet 5 inches,[20] but broad across the shoulders and very firmly built—

19 I heartily wish it were in my power to give these two portraits, so full of character and so unlike the ordinary engravings. The first of the two has a special interest as having been sent by Beethoven to Breuning as a pledge of reconciliation. See the letter, *infra*. The second, difficult as it is to believe it, was allowed by contemporaries to exhibit the 'soul' of the great composer. How unfortunate for the world that Sir Thos. Lawrence did not paint B. during his visit to Vienna in 1817! With all Lawrence's weaknesses this portrait would have been far better than any we possess.

20 Same height as Napoleon.

'the image of strength.'[1] His hands were much covered with hair, the fingers strong and short (he could barely span a tenth), and the tips broad, as if pressed out with long practising from early youth. He was very particular as to the mode of holding the hands and placing the fingers, in which he was a follower of Emanuel Bach, whose method he employed in his earlier days. In extempore playing he used the pedal far more that one would expect from his published sonatas, and this made his quick playing confused, but in adagios he played with divine clearness and expression. His attitude at the piano was perfectly quiet[2] and dignified, with no approach to grimace,

except to bend down a little towards the keys as his deafness increased. This is remarkable, because as a conductor his motions were most extravagant.[3] At a pianissimo he would crouch down so as to be hidden by the desk, and then as the crescendo increased, would gradually rise, beating all the time, until at the fortissimo he would spring into the air with his arms extended as if wishing to float on the clouds. When, as was sometimes the case after he became deaf, he lost his place, and these motions did not coincide with the music, the effect was very unfortunate, though not so unfortunate as it would have been had he himself been aware of the mistake. In the orchestra, as at the piano, he was urgent in demanding expression, exact attention to piano and forte, to the slightest shades of nuance, and to tempo rubato.

[3] Seyfried, p. 17, confirmed by Spohr, *Selbstbiog.* i. 201.

Generally speaking he was extremely courteous to the band, though to this rule there were now and then exceptions. Though so easily made angry, his pains as a teacher must have been great. 'Unnaturally patient,' says one pupil,[4] 'he would have a passage repeated a dozen times till it was to his mind'; 'infinitely strict in the smallest detail,' says another,[5] 'until the right rendering was obtained.' 'Comparatively careless [6] as to the right notes being played, but angry at once at any failure in expression or nuance, or in apprehension of the character of the piece; saying that the first might be an accident, but that the other showed want of knowledge, or feeling, or attention.' What his practice was as to remuneration does not appear, but it is certain that in some cases he would accept no pay from his pupils.

His simplicity and absence of mind were now and then oddly shown. He could not be brought to understand why his standing in his nightshirt at the open window should attract notice, and asked with perfect simplicity 'what those d—d boys were hooting at.'[7] At Penzing in 1823 he shaved at his window in full view, and when the people collected to see him, changed his lodging rather than forsake the practice.[8] Like Newton he was unconscious that he had not dined, and urged on the waiter payment for a meal which he had neither ordered nor eaten. He forgot that he was the owner of a horse until recalled to the fact by a long bill for its keep. In 1825 or 1826 he was found by two visitors with nothing on but his shirt, beating time and writing notes on the wall of his room in the Schwarzspanierhaus.[9] In fact he was not made for practical life; never could play at cards or dance, dropped everything that he took into his hands, and overthrew the ink into the piano. He cut himself horribly in shaving. 'A disorderly creature' (*ein unordentlicher Mensch*) was his own description, and 'ein konfuser Kerl' that of his doctor,[10] who wisely added the saving clause 'though he may still be the greatest genius in the world.' His ordinary handwriting was terrible, and supplied him with many a joke. 'Yesterday I took a letter myself to the post-office, and was asked where it was meant to go to. From which I see that my writing is as often misunderstood as I am myself.'[11] It was the same twenty years before—'this cursed writing that I cannot alter.'[12] Much of his difficulty probably arose from want of pens, which he often begs from Zmeskall and Breuning for some of his MSS.[13] are as clear

and flowing as those of Mozart, and there is a truly noble character in the writing of some of his letters, *e.g.* that to Mr. Broadwood (see p. 295), of which we give the signature.

Notwithstanding his illegible hand, Beethoven was a considerable letter-writer. The two collections published by Nohl contain 721, and these are probably not more than half of those he wrote.[1] Not a large number when compared with those of Mendelssohn or even Mozart—both of whom died so early—but large under all the circumstances. 'Good letters' they cannot be called. They contain no descriptions or graces of style; they are often clumsy and incorrect. But they are also often eminently interesting from being so brimful of the writer's personality. They are all concerned with himself, his wants and wishes, his joys and sorrows; sometimes when they speak of his deafness or his ill-health, or confess his faults and appeal to the affections of his correspondent, they overflow with feeling and rise into an affecting eloquence, but always to the point. Of these, the letters to Wegeler and Eleonore von Breuning, and that to his brothers (called his 'Will'), are fine specimens. Many of those addressed to his nephew are inexpressibly touching. But his letters are often very short. Partly perhaps from his deafness, and partly from some idiosyncrasy, he would often write a note where a verbal question would seem to have been more convenient. One constant characteristic is the fun they contain. Swift or Shakespeare himself never made worse puns with more pleasure, or devised queerer spelling [2] or more miserable rhymes, or bestowed more nicknames on his friends. He lived in a world of nicknames and jokes. His cook was 'Frau Schnapps, my fast-sailing noble frigate'[3]; Krumpholz is 'my fool'; he himself is 'the Generalissimus,' Haslinger 'the Adjutant,' Schindler 'the Samothracian' and 'Papageno'; Schuppanzigh is 'Falstaff'; Bernard, 'Bernardus non Sanctus'; Linke is 'Liebe linke und rechte'; Leidesdorf is 'Dorf des Leides'; Hoffmánn is adjured to be 'kein Hófmann,' Kuhlau is 'Kühl nicht lau,' and so on. Nor are they always *comme il faut*, as when he addresses Holz as 'lieber Holz vom Kreuze Christi,' or apostrophises 'Monsieur Friederich, nommé Liederlich.' Sometimes such names bite deeply: his brother Johann is the 'Braineater,' 'Pseudo-brother,' or 'Asinus,' and Caspar's widow the 'Queen of Night.' No one is spared. A canon to Count Moritz Lichnowsky runs 'Bester Herr Graf, du bist ein Schaf.' Fitzli Putzli was a name by which he spoke of Prince Lobkowitz.[4] The anecdote about his brother just mentioned is a case in point.[5] Johann, who lived on his own property, called on him on one *jour de fête*, and left his card 'Johann van Beethoven, Gutsbesitzer' (land proprietor), which Beethoven immediately returned after writing on the back 'L. van Beethoven, Hirnbesitzer' (brain proprietor). This fondness for joking pervaded his talk also; he liked a home-thrust, and delivered it with a loud roar of laughter.[6] To tell the truth he was fond of horse-play, and that not always in good taste. The stories—some of them told by himself—of his throwing books, plates, eggs, at the servants; of his pouring the dish of stew over the head of the waiter who had served him wrongly; of the wisp of goat's beard sent to the lady who asked him for a lock of his hair—are all instances of it.[7] No one had a sharper eye or ear for a joke when it told on another. He was never tired of retailing the delicious story of Simon the Bohemian tenor who in singing the sentence 'Auf was Art Elende' transformed it into 'Au! fwa! Sartellen Thee!'[8] But it must be confessed that his ear and his enjoyment were less keen when the joke was against himself. At Berlin in 1796 he interrupted Himmel in the middle of an improvisation to ask when he was going to begin in earnest. But when Himmel, months afterwards, wrote to him that the latest invention in Berlin was a lantern for the blind, Beethoven not only with characteristic simplicity did not see the joke, but when it was pointed out to him he was furious, and would have nothing more to do with his correspondent.

The simplicity which lay at the root of so many of his characteristic traits, while it gave an extraordinary force and freshness to much that he did and said, must often have been very inconvenient to those who had intercourse with him. One of his most serious quarrels arose

from his divulging the name of a very old and intimate friend who had cautioned him privately against one of his brothers. He could see no reason for secrecy ; but it is easy to imagine the embarrassment which such disregard of the ordinary rules of life must have caused. Rochlitz describes the impression he received from him as that of a very able man reared on a desert island, and suddenly brought fresh into the world. One little trait from Breuning's recollections exemplifies this—that after walking in the rain he would enter the living room of the house and at once shake the water from his hat all over the furniture, regardless, or rather quite unaware, of the damage he was doing. His ways of eating in his later years became quite unbearable.

One fruitful source of difficulty in practical life was his lodgings. His changes of residence were innumerable during the first year or two of his life in Vienna ; it is impossible to disentangle them. Shortly after his arrival the Lichnowskys took him into their house, and there for some years he had nominally a *pied à terre* ; but with all the indulgence of the Prince and Princess the restraint of being forced to dress for dinner, of attending to definite hours and definite rules, was too much for him, and he appears very soon to have taken a lodging of his own in the town, which lodging he was constantly changing. In 1803, when an opera was contemplated, he had free quarters at the theatre, which came to an end when the house changed hands early in 1804. A few months later and he was again lodged in the theatre free. At Baron Pasqualati's house on the ramparts he had rooms—with a beautiful look-out [1] —which were usually kept for him, where he would take refuge when composing, and be denied to every one. But even with this he had separate and fresh quarters nearly every winter.[2] In summer he hated the city, and usually followed the Vienna custom of leaving the hot streets for the delicious wooded environs of Hetzendorf, Heiligenstadt or Döbling, at that time little villages absolutely in the country, or for Mödling or Baden, farther off. To this he ' looked forward with the delight of a child. . . . No man on earth loves the country more than I do.' At Teplitz in 1812 daybreak finds him already walking in the woods still bathed in the night mists.[3] Neate never met any one who so delighted in Nature or so thoroughly enjoyed flowers or clouds or any other natural object.[4] ' Woods, trees and rocks give the response which man requires.' ' Every tree seems to say Holy, Holy.' [5] Here, as already remarked, he was out of doors for hours together, wandering in the woods, or sitting in the fork of a favourite lime-tree in the Schönbrunn gardens [6] sketch-book in hand ; here his inspiration flowed, and in such circumstances the ' Mount of Olives,' ' Fidelio,' the ' Eroica Symphony,' and the majority of his great works were sketched, and resketched, and erased and rewritten, and by slow degrees brought far on to perfection.

His difficulties with his lodgings are not hard to understand ; sometimes he quarrelled with them because the sun did not shine into the rooms, and he loved the light ; sometimes the landlord interfered. Like other men of genius whose appearance would seem to belie the fact, Beethoven was extremely fond of washing.[7] He would pour water backwards and forwards over his hands for a long time together, and if at such times a musical thought struck him and he became absorbed, he would go on until the whole floor was swimming, and the water had found its way through the ceiling into the room beneath. On one occasion he abandoned a lodging, for which he had paid heavily in advance, because his landlord, Baron Pronay, insisted on taking off his hat to him whenever they met. One of the most momentous of his changes was in 1804. After he was turned out of his lodgings at the theatre, Beethoven and Stephen Breuning inhabited two sets of rooms in a building called ' Das rothe Haus.' As each set was large enough for two, Beethoven soon moved into Breuning's rooms, but neglected to give the necessary notice to the landlord, and thus after a time found that he had both lodgings on his hands at once. The result was a violent quarrel, which drove Beethoven off to Baden, and estranged the two friends for a time. We have Beethoven's version of the affair in two letters to Ries—July,[8] and July 24, 1804—angry, implacable letters, but throwing strong light on his character and circumstances, showing that it was not the loss of the money that provoked him, but an imputation of meanness ; showing further that here, as so often elsewhere, his brother was his evil genius ; and containing other highly interesting personal traits.

Besides the difficulties of the apartments there were those with servants. A man whose principles were so severe as to make him say of a servant who had told a falsehood that she was not pure at heart, and therefore could not make good soup [9] ; who punished his cook for the staleness of the eggs by throwing the whole batch at her one by one ; and who distrusted the expenditure of every halfpenny, must have had much to contend with in his kitchen. The books give full details on this subject, which need not be repeated, and, indeed, are more unpleasant to contemplate than many other drawbacks and distresses of the life of this great man.

In the earlier part of his career money was no object to him, and he speaks as if his purse were always open to his friends.[1] But after the charge of his nephew was thrust upon his hands a great change in this, as in other respects, came over him. After 1813 complaints of want of money abound in his letters, and he resorted to all possible means of obtaining it. The sum which he had been enabled to invest after the congress he considered as put by for his nephew, and therefore not to be touched, and he succeeded in maintaining it till his death.

It is hard to arrive at any certain conclusion on the nature and progress of Beethoven's deafness, owing to the vagueness of the information. Difficulty of hearing appears first to have shown itself about 1798 in singing and buzzing in his ears, loss of power to distinguish words, though he could hear the tones of voice, and great dislike to sudden loud noise. It was even then a subject of the greatest pain to his sensitive nature[2]; like Byron with his club-foot he lived in morbid dread of his infirmity being observed, a temper which naturally often kept him silent; and when a few years later[3] he found himself unable to hear the pipe of a peasant playing at a short distance in the open air, it threw him into the deepest melancholy, and evoked the well-known letter to his brothers in 1802, which goes by the name of his Will. Still, many of the anecdotes of his behaviour in society show that during the early years of the century his deafness was but partial; and Ries, intimate as he was with his master, admits that he did not know it till told[4] by S. Breuning. A few facts may be mentioned bearing on the progress of the malady. In 1805 he was able to judge severely of the nuances in the rehearsal of his opera. In 1807, 1809, 1813 he conducted performances of his own works. In 1814 he played his B flat trio—his last appearance in public in concerted music.[5] From 1816 to 1818 he used an ear trumpet.[6] At the opening of the Josephstadt Theatre in 1822, he conducted the performance—nearly to ruin it is true, but at the same time he was able to detect that the soprano was not singing in time, and to give her the necessary advice. A subsequent attempt (in Nov. 1822) to conduct 'Fidelio' led to his having to quit the orchestra, when his mortification was so great that Schindler treats the occurrence as an epoch in his life.[7] At this time the hearing of the right ear was almost completely gone; what he did hear—amongst other things a musical box[8] playing the trio in 'Fidelio' and Cherubini's overture to 'Medea'—was with the left ear only. After this he conducted no more, though he stood in the orchestra at the performance of the choral symphony, and had to be turned round that he might see the applause which his music was evoking.[9] From this to the end all communication with him was mostly carried on by writing, for which purpose he always had a book of rough paper, with a stout pencil, at hand.

The connexion between this cruel malady and the low tone of his general health was closer than is generally supposed. The post-mortem examination showed that the liver was shrunk to half its proper size, and was hard and tough like leather, with numerous nodules the size of a bean woven into its texture and appearing on its surface. There were also marks of ulceration of the pharynx, about the tonsils and Eustachian tubes. The arteries of the ears were atheromatous, and the auditory nerves—especially that of the right ear—were degenerated and to all appearance paralysed. The whole of these appearances are most probably the result of syphilitic affections at an early period of his life.[10] The pains in the head, indigestion, colic and jaundice, of which he frequently complains, and the deep depression which gives the key to so many of his letters, would all follow naturally from the chronic inflammation and atrophy implied by the state of the liver, and the digestive derangements to which it would give rise, aggravated by the careless way in which he lived, and by the bad food, hastily devoured, at irregular intervals, in which he too often indulged. His splendid constitution and his extreme fondness for the open air must have been of great assistance to him. How thoroughly he enjoyed the country we have already seen, for, like Mendelssohn, he was a great walker, and in Vienna no day, however busy or however wet, passed without its 'constitutional'—a walk, or rather run, twice round the ramparts, a part of the city long since obliterated; or farther into the environs.

Beethoven was an early riser, and from the time he left his bed till dinner—which in those days was taken at, or shortly after, noon—the day was devoted to completing at the piano and writing down the compositions which he had previously conceived and elaborated in his sketch-books, or in his head. At such times the noise which he made playing and roaring was something tremendous. He hated interruption while at work,[11] and would do and say the most horribly rude things if disturbed. Dinner—when he remembered it—he took sometimes in his own room, sometimes at an

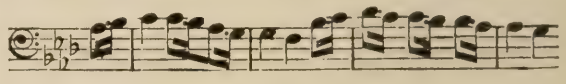
[9] In music he seemed to hear by a kind of feeling or instinct. During a rehearsal of one of the last quartets he made a movement showing that something was wrong, and on inquiry it turned out that Holz, playing 2nd violin, had bowed a passage wrongly. Thayer, *Krit. Beitrag*, 46.
[10] This diagnosis, which I owe to the kindness of my friend Dr. Lauder Brunton, is confirmed by the existence of two prescriptions, of which, since the passage in the text was written, I have been told by Mr. Thayer, who heard of them from Dr. Bartolini. (See also *Krehbiel*, iii. 308.)
[11] 'Im Feuer der Eingebung ganz in meinem Werke.' *Thayer*, iii. 465.

eating-house, latterly at the house of his friends the Breunings; and no sooner was this over than he started on his walk. He was fond of making appointments to meet on the glacis. The evening was spent at the theatre or in society. He went nowhere without his sketch-books,[1] and indeed these seem to distinguish him from other composers almost as much as his music does. They are perhaps the most remarkable relic that any artist or literary man has left behind him. They afford us the most precious insight into Beethoven's method of composition. They not only show—what we know from his own admission—that he was in the habit of working at three, and even four, things at once,[2] but without them we should never realise how extremely slow and tentative he was in composing. He even sketched his most comical effusions.[3] Audacious and impassioned beyond every one in extemporising, the moment he takes his pen in hand he becomes the most cautious and hesitating of men.[4] It would almost seem as if this great genius never saw his work as a whole until it actually approached completion. It grew like a plant or tree, and one thing produced another.[5] There was nothing sudden or electric about it, all was gradual and organic, as slow as a work of nature and as permanent. One is prompted to believe, not that he had the idea first and then expressed it, but that it often came in the process of finding the expression. There is hardly a bar in his music of which it may not be said with confidence that it has been rewritten a dozen times.[6] Of the air 'O Hoffnung' in 'Fidelio' the sketch-books show eighteen attempts, and of the concluding chorus ten. Of many of the brightest gems of the opera, says Thayer, the first ideas are so trivial that it would be impossible to admit that they were Beethoven's if they were not in his own handwriting. And so it is with all his works. It is quite astonishing to find the length of time during which some of his best-known instrumental melodies remained in his thoughts till they were finally used, or the crude vague commonplace shape in which they were first written down. And yet this repeated elaboration does not injure the thoughts. Beethoven did not 'add and alter many times, till all was ripe or rotten.' On the contrary, the more they are elaborated the more fresh and spontaneous do they become.

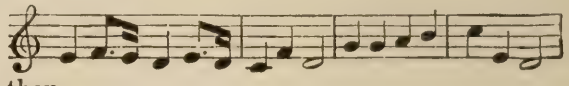
[1] In allusion to his sketch-books he quoted Schiller, 'Nicht ohne meine Fahne darf ich kommen,' Seyfried, App. 20.

[2] Letter to Wegeler, June 1801. 'I cannot nail my mind to one subject of contemplation, and it is by nourishing two trains of ideas that I can bring one into order.' *Walter Scott's Life*, vii. 179.



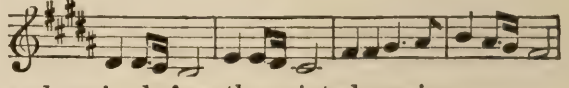
[3] See Nohl, iii. 872.

[4] In keeping with this is the strange contrast, already noticed, between his frequent use of the pedal when extemporising and his economy of it in print.



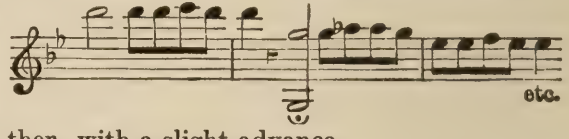
[5] Thus the 3-bar rhythm of the scherzo of the Ninth Symphony gradually came as he wrote and rewrote a fugue subject apparently destined for a very different work. Nottebohm, *Z.B.* p. 158.

[6] Mendelssohn used to show a correction of a passage by Beethoven, in which the latter had pasted alteration after alteration, up to 13 in number. Mendelssohn had separated them, and in the 13th the composer had returned to the original version. Described in a letter written to Sir George Grove by Mrs. Arthur Somervell.

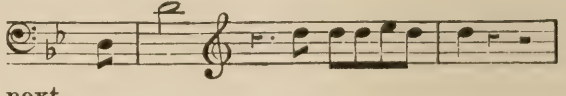


To quote a few instances out of many. The theme of the andante in the C minor symphony, completed in 1808, is first found in a sketch-book of the year 1800, mixed with memoranda for the 6 quartets, and in the following form[7]:

Here are the first bars of the first sketch of the slow movement of the pianoforte concerto in E flat, op. 73,[8]

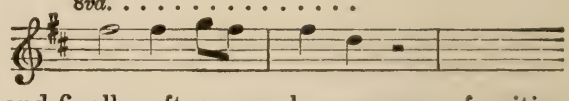


then



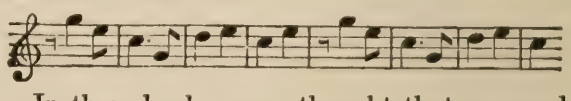
and again, before the printed version,

Another is the first subject of the allegro in the sonata op. 106. It first appears thus[9]:



then with a slight advance,

next



then

and finally, after several pages more of writing and rewriting, it assumes its present incisive and spontaneous shape.

Once again here is the fresh, impulsive sketch of the finale of the 'Waldstein' sonata, op. 53, as first written down:

In these books every thought that occurred to him was written down at the moment[1]; he even kept one by his bedside for use in the night.[11] Abroad or at home it was all the same; only out of doors he made his notes in pencil, and inked them over on his return to the house.

[7] First given by Thayer, *Chron. Verzeichniss*, No. 140.

[8] Nottebohm, *Z.B.* p. 256.

[9] *Ibid.* pp. 123-4.

[10] Though this habit of at once entering his ideas seems to have existed from a very early age (see letter to Archduke Rudolph, July 23, 1815), yet in one of the sketch-books of 1810 we find an injunction 'to accustom oneself at once to put the whole of the parts as they come into one's head.'

[11] Breuning, p. 98.

It is as if he had no reliance whatever on his memory. He began the practice as a boy and maintained it to the last. In the sale catalogue of his effects more than fifty of such books are included. Many of them have been parted and dispersed, but some remain intact. They are usually of large coarse music paper, oblong, 200 or even more pages, 16 staves to the page, and are covered from beginning to end, often over the margin as well, with close crowded writing.[1] There is something very affecting in the sight of these books,[2] and in being thus brought so close to this mighty genius and made to realise the incessant toil and pains which he bestowed on all his works, small and great.[3] In this he agreed with Goethe, who says, apropos of his *Ballad*, 'Whole years of reflection are comprised in it, and I made three or four trials before I could bring it to its present shape.'[4] The sketch-books also show how immense was the quantity of his ideas. 'Had he,' says Nottebohm,[5] 'carried out all the symphonies which are begun in these books we should have at least fifty.'

But when, after all this care and hesitation, the works were actually completed, nothing external made him change them.[6] No convenience of singers or players weighed for a moment against the integrity of his finished composition. When Sontag and Unger protested against the unsingable passages in the ninth symphony, and besought him to bring them within the compass of their voices, 'Nein, und immer nein,' was the dry answer.[7] When Kraft, the violoncellist in the Schuppanzigh Quartet, complained that a passage 'did not lie within his hand,' the answer was 'it must lie' —'muss liegen.'[8]

A man to whom his art was so emphatically the business of his life, and who was so insatiable in his standard of perfection, must have been always advancing. To him more than to any other musician may be applied Goethe's words on Schiller: 'Every week he altered and grew more complete, and every time I saw him he appeared to me to have advanced since the last in knowledge, learning and judgment.'[9] It is no wonder then that he did not care for his early works, and would sometimes even have destroyed 'Adelaide,'[10] the septet and others of his youthful pieces, if he could. Towards the end of his life he heard a friend practising his thirty-two variations[11] in C minor. After listening for some time he said, 'Whose is that?' 'Yours,' was the answer. 'Mine? That piece of folly mine?' was his retort; 'Oh, Beethoven, what an ass you were in those days!' A good deal of this may have been momentary caprice; but making all allowance, one can imagine his feelings at the close of his life on receiving a commission from an English amateur for a 'Symphony in the style of his second or of his septet,' or on reading the contemporary effusions on the Eroica and C minor symphonies, in which his honest and well-meaning though short-sighted critics[12] entreated him to turn to the clearness and conciseness of his early works.

Hardly less characteristic than the sketch-books are his diaries or journals, in which the most passionate and personal reflections, resolutions, prayers, aspirations, complaints are mixed up with memoranda of expenses and household matters, notes about his music, rules for his conduct, quotations from books and every other conceivable kind of entry. These books have been torn up and dispersed as autographs; but a copy of one extending from 1812 to 1818 fortunately exists, and has been edited with copious notes and elucidations by Nohl, the whole throwing great light on that unfortunate period of his life. A ray of light is also occasionally to be gained from the conversation-books already mentioned, 136[13] of which have been preserved, though, as Beethoven's answers were usually spoken, this source is necessarily imperfect.

If now we ask what correspondence there is between the traits and characteristics thus imperfectly sketched and Beethoven's music, it must be confessed that the question is a difficult one to answer. In one point alone the parallel is obvious — namely, the humour, which is equally salient in both. In the finales of the seventh and eighth symphonies there are passages which are the exact counterparts of the rough jokes and horse-play of which we have already seen some instances. In these we almost hear his loud laugh. The scherzo of symphony No. 2, where the F♯ chord is so suddenly taken and so forcibly held, might almost be a picture of the unfortunate *Kellner* forced to stand still while the dish of stew was poured over his head. The bassoons in the opening and closing movements of No. 8 are inimitably humorous; and so on in many other instances which will occur to every one. But when we leave humour and go to other points, where in the life shall we look for the grandeur and beauty which distinguish the music? Neither in letters nor anecdotes do we find anything answering to the serene beauty of the slow movements (No. 2, No. 4, No. 9), or the mystic

[1] Those he carried out of doors were half the size (Nottebohm, *Z.B.* p. 314).
[2] There are some in the MS. department of the British Museum.
[3] Jahn remarks (*Ges. Aufs.* 297) that for little occasional pieces like the 'Hochzeitslied' (1819), for Gian. Rio, the Italian Cantata for Malfatti (1816) and an Abschiedsgesang (1816) for a friend (Tuscher), there are many sketches, as many as for great works. These are Pope's 'patient touches of unwearied Art.'
[4] *Conversations with Eckermann*, Oxenford's translation, ii. 112. Sometimes the most characteristic are put in, in the course of writing—the pauses and statement, for instance, of the subject in the C minor symphony.

tone of such passages as those of the horns at the end of the trio of the Eroica, or of certain phrases in the finale of the 'Choral Fantasia' and of the choral symphony, which lift one so strangely out of time into eternity. These must represent a state of mental absorption when all heaven [1] was before his eyes, and in which he retired within himself far beyond the reach of outward things, save his own divine power of expression.

Equally difficult is it to see anything in Beethoven's life answering to the sustained nobility and dignity of his first movements, or of such a piece as the 'Overture to Leonora, No. 3.' And then if we come to the most individual and characteristic part of all Beethoven's artistic self, the process by which his music was built up—the extraordinary caution which actuated him throughout, the hesitation, the delays, the incessant modification of his thoughts, the rejection of the first impressions —of the second—of the third—in favour of something only gradually attained to, the entire subordination of his own peculiarities to the constant thought of his audience, and of what would endure rather than what pleased him at first—to all this there is surely nothing at all corresponding in his life, where his habit was emphatically a word and a blow. The fact is that, like all musicians, only in a greater degree than any other, in speech Beethoven was dumb, and often had no words for his deepest and most characteristic feelings. The musician has less connexion with the outside world than any other artist, and has to turn inward and seek his art in the deepest recesses of his being only.[2] This must naturally make him less disposed to communicate with others by the ordinary channels of speech and action, and will account for much of the irritability and uncertainty which often characterise his dealings with his fellow-men. But the feelings are there, and if we look closely enough into the life we shall be able to detect their existence often where we least expect it. In Beethoven, for example, what was his treatment of his nephew—the strong devotion which seized him directly after his brother's death, and drove him to sacrifice the habits of a lifetime; his inexhaustible forgiveness, his yearning tenderness—what are these, if properly interpreted, but a dumb way of expressing that noble temper which, when uttered in his own natural musical language, helps to make the first movement of the Eroica so lofty, so dignified and so impressive?

Chronicle of Later Life

We must now return to the chronicle of the events of Beethoven's life.

His position at Bonn as organist and pianist to the Emperor's brother, his friendship with Count Waldstein, who was closely related to some of the best families in Vienna, his 'Van,' and his connexion with Haydn, were all circumstances sure to secure him good introductions. The moment was a favourable one, as, since Mozart's death a twelvemonth before, there had been no player to take his place; and it was as a player that Beethoven was first known. It is pleasant to know that his show-piece, with which he took the Vienna connoisseurs by storm, was his variations on 'Venni Amore,' which we have already mentioned as composed before he left Bonn. Public concerts in our sense of the word there were few, but a player had every opportunity at the musical parties of the nobility, who maintained large orchestras of the best quality, and whose music-meetings differed from public concerts chiefly in the fact that the audience were better educated and were all invited guests. Prince Lichnowsky and Baron van Swieten appear to have been the first to secure Beethoven, the former for his regular Friday morning chamber performances, the latter for soirées, when he had either 'to bring his night-cap in his pocket' or else to stay after the other guests had gone, and send his host to bed with half a dozen of Bach's fugues as an *Abendsegen*. The acquaintance with the former probably began shortly after Beethoven's arrival; and after a twelvemonth of unpleasant experience in the Vienna lodgings the Prince induced him to accept apartments in his house. His wife was a Princess of Thun, famous for her beauty and her goodness; he himself had been a pupil of Mozart; and both were known as the best amateur musicians of Vienna. Beethoven was poor enough to be tempted by such hospitality, but it was an absurd arrangement, and he very soon infringed it by disregarding the Prince's hours, often dining at the *Gasthof*, having a lodging of his own elsewhere, and by other acts of independence. Here, however, he was frequently heard, and thus became rapidly known in the most musical circles, and Ries's anecdotes show (after making allowance for the inaccuracy of a man who writes thirty years after the events) how widely he was invited, how completely at his ease he was, and how entirely his eccentricities were condoned for the sake of his playing and his great qualities. Not that we are to suppose that Beethoven gave undue time to society. He was too hard a worker for that.

His lessons with Haydn and Albrechtsberger (from the latter he had three a week) were alone enough to occupy a great deal of time, and his own studies in counterpoint exist to show that he did not confine himself to the mere tasks that were set him. Moreover, his lessons with Albrechtsberger contain sketches for various compositions, such as 'Adelaide,' a part of one

[1] While writing the 'Hallelujah' chorus of the 'Messiah,' Handel did think 'I did see all Heaven before me, and the great God Himself' (Anecdotes of Music).

[2] Goethe, *Wilhelm Meisters Wanderjahre*, Bk. ii. chap. 9.

of the trios (op. 1), and a symphony in C,[1] all showing how eager he was to be something more than a mere player or even a splendid improviser. These sketches afford an early instance of his habit of working at several compositions at one and the same time. The date of one of them, about Feb. 1795, seems to imply either that the story—grounded on Ries's statement—that the trios were in MS. for many months [2] before they were printed, is inaccurate, or, more probably, that Beethoven rewrote one of the movements very shortly before delivering the work to the publisher, which he did on May 19. In this case it would show the wisdom of the plan which he adopted with most of his early works,[3] of keeping them in MS. for some time and playing them frequently, so as to test their quality and their effect on the hearers, a practice very consistent with his habitual caution and fastidiousness in relation to his music. At any rate the trios were presented first to the subscribers, by July 1795, and then, on Oct. 21, to the public. They were shortly followed by a work of equal importance, the first three pianoforte sonatas,[4] which were first played by their author at one of the Prince's Fridays in presence of Haydn, and published on the 9th of the following March as op. 2, dedicated to him. He had not then written a string quartet, and at this concert Count Appony [5] proposed to Beethoven to compose one, offering him his own terms, and refusing to make any conditions beyond the single one that the quartet should be written—a pleasant testimony to the enthusiasm excited by the new sonatas, and to the generosity of an Austrian nobleman. In addition to the trios and sonatas, the publications of his three first years in Vienna include the 12 variations on 'Se vuol ballare' [6] (July 1793); the 13 on 'Es war einmal' (early in 1794); the 8 for four hands on Count Waldstein's theme (1794); and 9 for piano solo on 'Quant' è più bello' [7] (Dec. 30, 1795). The compositions include a trio for oboes and corno Inglese (op. 87), which remained unpublished till 1806; a rondo in G for pianoforte and violin,[8] which he sent to Eleonore von Breuning, and which remained unpublished till 1808; the concerto in B flat (op. 19) for piano and orchestra, which is earlier than the one in C (op. 15); songs, 'Adelaide' and 'Opferlied,' [9] both to Matthisson's words, and 'Seufzer eines Ungeliebten,' [10] all probably composed in 1795; canon, 'Im Arm der Liebe,' [11] an exercise with Albrechtsberger; 12 Minuets and 12 'Deutsche Tänze' for orchestra,[12] composed Nov. 1795.

On Mar. 29, 1795, Beethoven made his first appearance before the outside public at the annual concert in the Burg Theatre, for the widows' fund of the Artists' Society. He played his concerto in C major.[13] The piece had probably been suggested by Salieri, and with it Beethoven began a practice which he more than once followed when the work was bespoken—of only just finishing the composition in time; the rondo was written on the afternoon of the last day but one, during a fit of colic. At the rehearsal, the piano being half a note too flat, Beethoven played in C♯.[14] Two days after he appeared again at the same theatre at a performance for the benefit of Mozart's widow, playing a concerto of Mozart's between the acts of the 'Clemenza di Tito.' [15] Later in the year he assisted another benevolent object by writing the above-mentioned minuets and 'Deutsche Tänze' for orchestra for the ball of the 'Gesellschaft der bildenden Künstler' on Nov. 22. He was evidently a favourite with the artists, who advertise 'the masterhand of Herr Ludwig van Beethoven,' while they mention Süssmayer—who also contributed music—without an extra word. These dances, after publication, remained in favour for two more seasons, which is mentioned as a great exception to rule. On Dec. 18 he again appeared in public at a concert of Haydn's in the 'little Redoutensaal,' playing a concerto of his own—but whether the same as before is not stated. The dedication of the sonatas and his co-operation at Haydn's concert allow us to hope that any ill-feeling which may have arisen had vanished. So closed the year 1795. Bonn was at this time in the hands of the Republican army, and Beethoven's brother the Apotheker was serving as a 'pharmacien de 3ème classe.'

1796 was a year of wandering. Haydn and he appeared together at a second concert on Jan. 10.[16] In the interval Beethoven went perhaps to Prague, certainly to Nuremberg.[17] On Feb. 19 he was in Prague again, where he composed the Scena [18] 'Ah! perfido' for Madame Duschek, the friend of Mozart.

[1] See Nottebohm's *Z.B.* pp. 228-9.

[2] Haydn left Vienna for London on Jan. 19, 1794, and did not return till Sept. 1795, when the trios had been printed and in the subscribers' hands for some weeks. If he therefore advised Beethoven not to publish the third it must have been before he left Vienna. Ries's statement is so explicit that the alternative suggested in the text seems the only escape from the difficulty. It appears to have been Haydn's intention to take Beethoven with him to London on his second journey (see Pohl's *Haydn in London*, p. 260), but nothing came of it.

[3] He maintained this plan till 1812, when he informs Varenna that he never publishes until a year after composition. Letter, Feb. 8, 1812.

[4] In the *Adagio* of No. 1 the corresponding movement in No. 3 of the early piano quartets is partially adopted—a rare thing with Beethoven.

[18] 'Une grande scène mise en musique, par L. v. Beethoven, à Prague, 1796,' is Beethoven's own title (Nottebohm, *Beethoveniana*, p. 1, note). Writing about 1808 he says: 'The Aria is in the dramatic style and written for the theatre, and can't make any effect in the concert-room. All its meaning is lost without a curtain, or something of the kind—lost—lost—all to the devil . . . a curtain, or the air will be lost' (*B.B.* No. 50).

From thence he travelled to Berlin, played at court—amongst other things the two violoncello sonatas, op. 5, probably composed for the occasion—and received from the king a box of louis d'or, which he was proud of showing as 'no ordinary box, but one of the kind usually presented to ambassadors.' At Berlin his time was passed pleasantly enough with Himmel the composer and Prince Louis Ferdinand. He went two or three times to the Singakademie,[1] heard the choir sing music by Fasch, and extemporised to them on themes from those now forgotten compositions. In July the court left Berlin, and Beethoven probably departed also; but we lose sight of him till Nov. 15, the date of a 'farewell-song'[2] addressed to the volunteers on their leaving Vienna to take part in the universal military movement provoked by Napoleon's campaigns in Italy. The war was driving all Germans home, and amongst others Beethoven's old colleagues the two Rombergs passed through Vienna from Italy, and he played for them at a concert.[3]

The publications of 1796 consist of the 3 piano sonatas, op. 2 (Mar. 9); 12 variations on a minuet *à la Vigano*[4] (Feb.), and 6 on 'Nel cor più non mi sento'[5] (Mar. 23); 6 minuets (also in Mar.) for piano, probably originally written for orchestra—perhaps the result of his success with the *Bildende Künstler*.[6] Of the compositions of the year, besides those already named, may be mentioned as probable the piano sonata in G,[7] the second of the two small ones (op. 49); and a fragment of an easy sonata in C[8] for Eleonore von Breuning; we may perhaps also ascribe to the latter part of this year the duet sonata (op. 6); 12 variations on a Russian dance[9]; the string quintet (op. 4), arranged from an octet for wind instruments, very probably of his pre-Vienna time. The Russian variations were written for the Countess Browne, wife of an officer in the Russian service, from whom Beethoven received the gift of the horse which we have already mentioned as affording an instance of Beethoven's absence of mind. But the winter months must have been occupied by a more serious work than variations—the quintet for piano and wind (op. 16),[10] which Beethoven produced at a concert of Schuppanzigh's on Apr. 6, 1797, and which is almost like a challenge to Mozart on his own ground, and the not less important and far more original pianoforte sonata in E♭ (op. 7). This great work, 'quite novel, and wholly peculiar to its author, the origin of which can be traced to no previous creation, and which proclaimed his originality so that it could never afterwards be disputed,' was published on Oct. 7, 1797, but must have been often played before that date. The sketches for the three sonatas, op. 10, are placed by Nottebohm in this period, with the variations on the 'Une Fièvre brûlante.' The three string trios (op. 9) also probably occupied him during some part of the year. The serenade trio (op. 8), though published in 1797, more probably belongs with op. 3 to the Bonn date. The variations on 'See the conquering hero' for pianoforte and violoncello, dedicated to the Princess Lichnowsky, were published during this year, and were probably written at the time.[11]

Vienna was full of patriotism in the spring of 1797. Haydn's 'Emperor's Hymn' had been sung in the theatre for the first time on Feb. 12,[12] and Beethoven wrote a second military Lied, 'Ein grosses deutsches Volk sind wir,'[13] to Friedelberg's words, which is dated Apr. 14, but did not prove more successful than his former one. In May he writes to Wegeler in terms which show that with publications or lessons his pecuniary position is improving; but from that time till Oct. 1—the date of an affectionate entry in Lenz von Breuning's album—we hear nothing whatever of him. A severe illness has to be accounted for,[14] and this is probably the time at which it happened. In November occurred the annual ball of the *Bildende Künstler*, and his dances were again played for the third time; the seven Ländler,[15] ascribed to this year, were not improbably written for the same ball. His only other publications of 1797 not yet mentioned are the pianoforte rondo in C major, which many years afterwards received the opus number 51, and last, but not least, 'Adelaide.' Some variations[16] for two oboes and corno Inglese on 'La ci darem' were played on Dec. 23 at a concert for the Widows' and Orphans' Fund, but are still in MS.

The chief event of 1798 is one which was to bear fruit later—Beethoven's introduction to Bernadotte, the French ambassador, by whom the idea of the Eroica symphony is said[17] to have been first suggested to him. Bernadotte was a person of culture, and having R. Kreutzer, the violin-player, as a member of his establishment, may be presumed to have cared for music. Beethoven, who professed himself an admirer of Bonaparte, frequented the ambassador's levees; and there is ground for believing that they were to a certain extent intimate. On Apr. 2 Beethoven played his piano quintet (op. 16) at the concert for the Widows' and Orphans' Fund.[18] The publications of this year show that the connexion with the von Brownes, indi-

cated by the dedication of the Russian variations, was kept up and even strengthened; the 3 string trios, op. 9 (published July 21), are dedicated to the Count, and the 3 sonatas, op. 10 (subscribed July 7, published Sept. 26), to the Countess. The third of these sonatas forms a landmark in Beethoven's progress of equal significance with op. 7. The letter [1] which he appended to the trios speaks of 'munificence at once delicate and liberal,' and it is obvious that some extraordinary liberality must have occurred to draw forth such an expression as 'the first Mæcenas of his muse' in reference to any one but Prince Lichnowsky. In other respects the letter is interesting. It makes music depend less on 'the inspiration of genius' than on 'the desire to do one's utmost,' and implies that the trios were the best music he had yet composed. The trio for piano, clarinet and violoncello (op. 11), dedicated to the mother of Princess Lichnowsky, was published on Oct. 3. This is the composition which brought Steibelt and Beethoven into collision, to the sad discomfiture of the former.[2] Steibelt had shown him studied neglect till they met at Count Fries's, at the first performance of this trio, and he then treated him quite *de haut en bas*. A week later they met again, when Steibelt produced a new quintet and extemporised on the theme of Beethoven's finale—an air from Weigl's 'Amor marinaro.' Beethoven's blood was now fairly up; taking the violoncello part of Steibelt's quintet, he placed it upside down before him, and making a theme out of it, played with such effect as to drive Steibelt from the room. Possibly this fracas may account for Beethoven's known dissatisfaction with the finale.[3] The other publications of 1798 are variations: 12 for piano and violoncello on an air in the 'Zauberflöte,' afterwards numbered as op. 66; 6, easy,[4] for piano or harp, possibly written for some lady friend, and published by Simrock at Bonn; and 8 on 'Une Fièvre brûlante.' [5]

This year he again visited Prague, and performed at two public concerts, making an immense impression.[6] After his return, on Oct. 27, he played one of his two concertos at the theatre 'auf den Wieden.' Woelfl was in Vienna during this year, and in him Beethoven encountered for the first time a rival worthy of his steel. They seem to have met often at Count Wetzlar's (Woelfl's friend), and to have made a great deal of music together, and always in a pleasant way.[7] It must have been wonderful to hear them, each excited by the other, playing their finest, extemporising alternately and together (like Mendelssohn and Moscheles), and making all the fun that two such men at such an age and in capital company would be sure to make.[8] Woelfl commemorated their meeting by dedicating three sonatas [9] to Beethoven, but met with no response.

But Beethoven did not allow pleasure to interfere with business, as the publications of the following year fully show. The three sonatas for piano and violin, dedicated to Salieri (op. 12), published on Jan. 12, 1799, though possibly composed earlier must at any rate have occupied him in correction during the winter. The little sonata in G minor (op. 49, No. 1) is a child of this time, and is immediately followed in the sketch-books by the 'Grande Sonate pathétique'—Beethoven's own title—(op. 13), dedicated to Prince Lichnowsky, as if to make up for the little slight contained in the reference to Count Browne as his 'first Mæcenas.' The well-known rondo to the sonata appears to have been originally intended for the third of the string trios.[10] Of the origin of the two sonatas, op. 14 (published Dec. 21), little is known. The sketches for the first of the two are coincident in time with those for the concerto in B♭, which was completed by 1795,[11] and there is ground for believing that it was originally conceived as a string quartet, into which indeed Beethoven converted it a few years after. The second is probably much later. Both are specially interesting from the fact that Beethoven stated that they had for subject 'a dialogue between a husband and wife, or a lover and his mistress,' [12] and explained the allegro of the second. The sonatas are dedicated to the Baroness Braun.

The other publications of 1799 are variations: 10 on Salieri's 'La stessa'; 7 on Winter's 'Kind, willst du'; and 8 on Süssmayer's 'Tändeln.' [13] A comparison of the dates of publication with those of the appearance of the operas from which the themes are taken, shows that two of these were composed shortly before publication.

Beethoven was now about to attack music of larger dimensions than before. His six string quartets, the septet, the first symphony and the 'Mount of Olives' are fast approaching, and must all have occupied him more or less during the last year of the century.[14] In fact the sketches for the first three of the quartets (first in date of composition, Nos. 5, 1, 6),[15] are positively assigned to this year, though there is evidence that the earliest of the three had been begun as far back as 1794 or 1795. And though

[12] See Moscheles, ii. 123 ff.
[13] B. & H. 172, 173, 174.
[14] Schindler, 1st ed., p. 46, states that B. was at work on his oratorio in 1800, and if that statement be correct it is quite possible that he commenced sketching it the year before. Schindler, however, in 3rd ed. (i. 90) gives 1801 as the date of sketching. Ries (*Biog. Not.* p. 75) states that in 1800 B. was busy completing his oratorio, but *Thayer*, ii. 161-3, has shown that this date ought to be 1801. See also *Thayer*, ii. 133, and *Krehbiel*, i. 289, 364.
[15] Nottebohm, *Z.B.* p. 494, but the order is given as 3, 1, 2.

sketches of the septet have not yet been made public,[1] yet it is contrary to all Beethoven's habits in the case of so important a piece, and one apparently quite spontaneously undertaken, that he should not have been at work at it for a long while before its production. The same with regard to the first symphony. Both were produced on Apr. 2, 1800. Traces of the symphony, or of a previous one in the same key,[2] are found as early as the beginning of 1795, and there is no doubt that two such experiments in a new field must have occupied much time and caused much labour. Besides these he was working on a very important new sonata in B♭ (op. 22). In fact this year was a very busy and a very prosperous one. Writing on June 29, 1801, he tells Wegeler that

'my compositions bring me in a great deal, and I can say that I have more orders than I can execute. I have six or seven publishers for each one of my works and could have more if I chose. No more bargaining; I name my terms and they pay.'

The few recorded events of 1800 are all closely connected with music. On Wednesday, Apr. 2, Beethoven gave the first concert which he had attempted in Vienna for his own benefit. It took place at the Burg Theatre, which was given him for the occasion, at 6.30 P.M., and the programme was as follows:

1. Symphony, Mozart.
2. Air from the 'Creation.'
3. A grand Pianoforte Concerto, 'played and composed' by Beethoven.
4. The Septet.
5. Duet from the 'Creation.'
6. Improvisation by Beethoven on Haydn's 'Emperor's Hymn.'
7. Symphony, No. 1.

The concerto was doubtless one of the two already known—the septet had been previously performed at Prince Schwarzenberg's,[3] had pleased immensely, and Beethoven was evidently proud of it. 'It is my Creation,' said he—let us hope not in Haydn's presence. He had not forgotten Bonn, and the theme of the variations is said by Czerny[3] to be a Rhine Volkslied. The work was dedicated in advance to the Empress, and though not published for some time, became rapidly popular. So much for the compositions, but the performance appears from the report in the Leipzig paper[4] to have been shameful; the band disliked Wranitzky the conductor, and vented their dislike on the music. In addition to this it appears that the rehearsal, if it took place at all, was a very imperfect one. A reference in one of Beethoven's letters (Apr. 22, 1801) shows that it was his custom not to write in the piano part into his concertos, and therefore to play them from memory.

On the 18th[5] of the same month Beethoven appeared again at the concert of Punto the horn-player, with a sonata for horn and piano, composed for the occasion. This he had naturally not been able to touch while preparing for his own concert, and in fact it was written down on the day before the performance.[6] Here again there cannot have been much chance of rehearsal. But with two such players it was hardly needed; and so much did the sonata delight the hearers, that in defiance of a rule forbidding applause in the Court Theatre the whole work was unanimously encored. On the 27th, the anniversary of the day on which he first entered Bonn, Beethoven's old master, the Elector, returned to the capital. In May Steibelt made his appearance in Vienna from Prague, where his *charlatanerie* and his real ability had gained him prodigious financial success. We have already alluded to his conflict with Beethoven. In Vienna he does not appear to have succeeded, and in August he was again in Paris.

The announcement of Beethoven's benefit concert names No. 241 'im tiefen Graben,' third story, as his residence. He had now left Prince Lichnowsky's, and he maintained this lodging for two years. In this year we hear for the first time of his going to the country for the autumn. He selected Unter-Döbling, a village two miles north of Vienna, and his lodging was part of the house occupied by the Grillparzer family. Frau Grillparzer long recollected his fury on discovering her listening to his playing outside the door, and the stern revenge he took.[7]

As regards publications 1800 is a blank, but composition went on with immense energy. If we throw back the symphony and the septet into 1797, we have still the horn sonata and the piano sonata in B♭ (op. 22)—a work of great moment—the six quartets, the string quintet in C, the piano concerto in C minor. Of most of these very important works we have Beethoven's own mention in a letter of Dec. 15, 1800, in addition to the evidence as to date afforded by the sketch-books. And besides these we are bound to believe that the ballet of 'Prometheus,' performed Mar. 28, 1801, occupied him at least during the latter portion of the year.[8] An incident of this summer was Beethoven's letter to Matthisson (Aug. 4) sending him his 'Adelaide,' a letter interesting for its courteous and genial tone, for its request for another poem, and for its confession that his early works had already begun to dissatisfy him. After his return to town occurred Czerny's introduction to him. Czerny, then a lad of just upon ten, became Beethoven's pupil in pianoforte-playing, and has left a delightful account of his first interview, and of much which occurred after it.[9] Among the letters of this winter and the spring of 1801 are some to

[9] Published by C. F. Pohl, *Jahresbericht des Conservatoriums der Gesellschaft der Musikfreunde in Wien*, 1870. The drawback to this, and to so much of the information regarding Beethoven, is that it was not written till many years after the events it describes. See also *Thayer*, ii. 106, and *Krehbiel*, i. 314.

Hoffmeister, formerly a composer, and then a music-publisher in Leipzig, which ended in his publishing the septet, the symphony in C, the piano concerto in B♭, and the sonata (op. 22) in the same key. The price given for these works was 20 ducats each, except the concerto, which was 10. The ducat was equal to 10s. English. The concerto is priced so low because 'it is by no means one of my best, any more than that I am about to publish in C major, because I reserve the best for myself, for my journey'[1]—a confession which proves that the concerto in C minor was already in existence. The letters show keen sympathy with projects for the publication of Bach's works, and of Mozart's sonatas arranged as quartets.[2] They speak of his having been ill during the winter, but the vigorous tone of the expression shows that the illness had not affected his spirits. On Jan. 30, 1801, he played his horn sonata a second time, with Punto, at a concert for the benefit of the soldiers wounded at Hohenlinden.

He was now immersed in all the worry of preparing for the production of his ballet of 'Prometheus,' which came out on Mar. 28 at the Court (Burg) Theatre. Its great success is evident from the fact that it was immediately published in a popular form—pianoforte solo,[3] dedicated to Princess Lichnowsky—and that it had a run of sixteen nights during 1801, and thirteen during the following year. Apart from its individual merits the 'Prometheus' music is historically interesting as containing a partial anticipation of the storm in the Pastoral symphony, and (in the finale) an air which afterwards served for a contretanz, for the theme of elaborate variations, and for the subject of the last movement of the Eroica symphony. The ballet gave occasion for an unfortunate little encounter between Beethoven and Haydn, evidently unintentional on Beethoven's part, but showing how naturally antagonistic the two men were. They met in the street the day after the first performance. 'I heard your new ballet last night,' said Haydn, 'and it pleased me much.' '*O lieber Papa*,' was the reply, 'you are too good: but it is no *Creation* by a long way.' This unnecessary allusion seems to have startled the old man, and after an instant's pause he said, 'You are right: it is no *Creation*, and I hardly think it ever will be!'

The success of 'Prometheus' gave him time to breathe, and possibly also cash to spare: he changed his lodgings from the low-lying 'tiefen Graben' to the Sailer-Stätte, a higher situation, with an extensive prospect over the ramparts.[4] For the summer of 1801 he took a lodging at Hetzendorf, on the south-west side of the city, attracted by the glades and shrubberies of Schönbrunn, outside which the village lies, and perhaps by the fact that his old master the Elector was living in retirement there. It was his practice during these country visits to live as nearly as possible in entire seclusion, and to elaborate and reduce into ultimate form and completeness the ideas which had occurred to him during the early part of the year, and with which his sketch-books were crowded. His main occupation during this summer was 'The Mount of Olives,' which Ries found far advanced when he arrived in Vienna in 1801.[5] The words were by Huber,[6] and we have Beethoven's own testimony[7] that they were written, with his assistance, in fourteen days. He was doubtless engaged at the same time, after his manner, with other works, not inferior to that oratorio in their several classes, which are known on various grounds to have been composed during this year. These are two violin sonatas in A minor and F, dedicated to Count von Fries—originally published together (Oct. 28) as op. 23, but now separated under independent numbers; the string quintet in C (op. 29); and no fewer than four masterpieces for the piano—the grand sonatas in A♭ (op. 26) and D (op. 28); the two entitled 'Sonata quasi una fantasia' in E♭ and in C♯ minor (op. 27); which, though not published till 1802, were all four completed during this year.[8] To each of them a word or two is due. The sonata in A♭—dedicated, like those of op. 1 and 13, to his prime friend Prince Carl Lichnowsky—is said[9] to owe its noble Funeral March to pique at the praises on a march by no means worthy of them in Paër's 'Achille.' That opera—produced at Vienna on June 6 of this year—is the same about which Paër used to tell a good story of Beethoven, illustrating at once his sincerity and his terrible want of manners. He was listening to the opera with its composer, and after saying over and over again, 'O! que c'est beau!' 'O! que c'est intéressant!' at last could contain himself no longer, but burst out, 'Il faut que je compose cela.'[10] The grand sonata in D received its title of 'Pastorale' (more appropriate than such titles often are) from Cranz the publisher, of Hamburg. The andante, by some thought inferior to the rest of the sonata, was Beethoven's peculiar favourite, and very frequently played by him.[11] The fly-leaf of the autograph of the work contains a humorous duet and chorus—'the praise of the fat one,' making fun of Schuppanzigh[12]—'Schuppanzigh ist ein Lump, ein Lump,' etc. The remaining two, qualified as 'Fantasia' by their author,

have had very different fates. One, that in E♭, has always lived in the shadow of its sister, and is comparatively little known. The other, the so-called 'Moonlight Sonata,'[1] is as widely played and as passionately loved as any of Beethoven's pianoforte works. It is one of his most original productions. The dedication to the Countess Guicciardi, upon which so much romance has been built, has had a colder light thrown on it by the lady herself. 'Beethoven,' said she, 'gave me the rondo in G, but wanting to dedicate something to the Princess Lichnowsky he took the rondo away, and gave me the sonata in C♯ minor instead.'[2]

Meantime his deafness, which began with violent noise in his ears, had gradually merged into something more serious. He consulted doctor after doctor—Dr. Frank, the hospital doctor, his friend Wegeler, and Vering—but the malady constantly increased. It gave him the keenest distress; but so great were his resolution and confidence that not even the prospect of this tremendous affliction could subdue him.

'I will as far as possible defy my fate, though there must be moments when I shall be the most miserable of God's creatures.' . . . 'I will grapple with fate; it shall never drag me down.'

The letters to Wegeler of June 29[3] and Nov. 16, 1801, from which these words are taken, give an extraordinary picture of the mingled independence and sensibility which characterised this remarkable man, and of the entire mastery which music had in him over friendship, love, pain, deafness, or any other external circumstance.

'Every day I come nearer to the aim which I can feel, though I cannot describe it, and on which alone your Beethoven can exist. No more rest for him!

'I live only in my music, and no sooner is one thing done than the next is begun. As I am now writing, I often work at three and four things at once.'

How truly this describes the incessant manner in which his ideas flowed, may be seen from the sketch-book published by Nottebohm,[4] and which is the offspring of this very period—Oct. 1801 to May 1802. It contains sketches for the finale of the second symphony, for the three violin sonatas (op. 30); for piano sonatas in G and D minor (op. 31); for the variations in F (op. 34), and in E♭ (op. 35); and a large number of less important works, the themes of which are so mixed up and repeated as to show that they were all in his mind and his intention at once.

The spring of 1802 saw the publication of several very important pieces, the correction of which must have added to his occupations—the serenade (op. 25); the sonatas in B♭[5] (op. 22), A♭ (op. 26), E♭ and C♯ minor (op. 27, Nos. 1 and 2); the variations for piano and violoncello on Mozart's 'Bei Männern,' and 6 Contretänze.[6] All the works just enumerated were out by April, and were followed in the later months by the septet, issued in two portions; the sonata in D (op. 28); 6 Ländler[7]; the rondo in G (op. 51, No. 2); and in December by the quintet in C (op. 29). After finishing the sonata in D (op. 28), he told Krumpholz, says Czerny, that he was not satisfied with his works, adding, 'From to-day I will strike out a new road.'[8] Soon after appeared the three sonatas (op. 31).

Beethoven had recently again changed his doctor. Vering did not satisfy him, and he consulted Schmidt, a person apparently of some eminence, and it was possibly on his recommendation that he selected the village of Heiligenstadt, at that time a most retired spot, lying beyond Unter-Döbling, among the lovely wooded valleys in the direction of the Kahlenberg and Leopoldsberg. Here he remained till October, labouring at the completion of the works mentioned above, which he had sketched early in the year, and which he probably completed before returning to Vienna. Here too he wrote the very affecting letter usually known as 'Beethoven's Will,' dated Oct. 6, and addressed to his brothers, to be opened after his death,[9] a letter full of depression and distress, but perhaps not more so than that written by many a man of sensibility under temporarily adverse circumstances; anyhow it does not give us a high idea of Dr. Schmidt's wisdom in condemning a dyspeptic patient to so long a course of solitude. At any rate, if we compare it with the genial, cheerful strains of the music which he was writing at the time—take the symphony in D as one example only—and remember his own words: 'Letter-writing was never my *forte*, . . . I live only in my music'—it loses a good deal of its significance.[10] Once back in town his spirits returned; and some of his most facetious letters to Zmeskall are dated from this time. On returning he changed his residence from the Sailer-Stätte, where we last left him, to the Peters-Platz, in the very heart of the city, and at the top of the house. In the story above Beethoven lived his old friend Förster, who had won his affection by giving him hints on quartet writing on his first arrival in Vienna. Förster had a little son whom Beethoven undertook to instruct, and the boy, then just six, long[11] remembered having to get up in the dark in the winter mornings and descend the stairs for his lessons. This winter again there were many proofs to correct—the 2 piano sonatas (op. 31, 1 and 2), the 3 violin

[1] This foolish sobriquet is derived from a criticism on the work by Rellstab mentioning moonlight on the Lake of Lucerne.
[2] *Thayer*, ii. 172; *Krehbiel*, i. 322.
[3] No year is given in the date of the letter. Wegeler places it in 1800, but *Thayer*, ii. 155, 156 has proved it to belong to 1801.

ditto (op. 30), 2 sets of variations (op. 34, 35), all which appeared early in 1803. The piano sonatas just mentioned he regarded as a change in his style—which they certainly are, the D minor especially. The variations he mentions [1] as distinct in kind from his earlier ones, and therefore to be included in the series of his large works, and numbered accordingly. In addition there were published in 1803 two preludes (op. 39), dating from 1789; 7 bagatelles, some of them as old as 1782, but one at least (No. 6) written within the last twelve months. Also the Romance in G for violin and orchestra (op. 40), and 6 sacred songs (op. 48), dedicated to his Russian friend Count von Browne. And proofs at that date appear to have been formidable things, and to have required an extraordinary amount of vigilance and labour. Not only had the engravers' mistakes to be guarded against, and the obscurities of Beethoven's writing, but the publishers were occasionally composers and took on themselves to correct his heresies and soften his abruptnesses as they passed through their hands. Thus in the sonata in G (op. 31, No. 1), Nägeli of Zurich interpolated four bars.[2] Of course Beethoven discovered the addition on hearing Ries play from the proof, and his rage was naturally unbounded. The mistakes were corrected, and an amended proof was transmitted at once to Simrock of Bonn, who soon got out an 'édition très correcte'; but Nägeli adhered to his own version of Beethoven's music, and editions are still issued [3] containing the four redundant bars. It is needless to say that after opus 31 he published no more for Beethoven. But even without such intentional errors, correcting in those days was hard work. 'My quartets,' he complains, 'are again published full of mistakes and *errata* great and small; they swarm like fish in the sea—innumerable.' [4] The quintet in C (op. 29), published by Breitkopf, was pirated by Artaria of Vienna, and being engraved from a very hasty copy was extraordinarily full of blunders.[5] Beethoven adopted a very characteristic mode of revenge; fifty copies had been struck off, which he offered Artaria to correct, but in doing so caused Ries to make the alterations with so strong a hand that the copies were quite unsaleable.[6] It was an evil that never abated. In sending off the copies of the A minor quartet twenty years later, he says, 'I have passed the whole forenoon to-day and yesterday afternoon in correcting these two pieces, and am quite hoarse with stamping and swearing'—and no wonder, when the provocation was so great. The noble sonatas, op. 31, to the first of which one of the above anecdotes refers, were unfortunate in more ways than one. They were promised to Nägeli, but Caspar Beethoven [7] by some blunder — whether for his own profit or his brother's does not appear —had sold them to a Leipzig house.[8] The discovery enraged Beethoven, who hated any appearance of deceit in his dealings; he challenged his brother with the fact, and the quarrel actually proceeded to blows. Knowing how much Beethoven disliked his early works, it is difficult not to imagine that the appearance of the two boyish preludes, op. 39, and, in the following year, of the variations, op. 44 (composed 1792 or 1793), both published at Leipzig —was due to the interference of Caspar.[9]

A great event in 1803 was the production of 'The Mount of Olives,' his first vocal composition on a larger scale than a scena. The concert took place in the theatre 'an der Wien' on Apr. 5, and the programme included three new works—the oratorio, the symphony in D, and the pianoforte concerto in C minor, played by Beethoven himself. Interesting accounts of the rehearsal (in which Prince Lichnowsky showed himself as friendly as ever) and of the performance will be found in Ries and Seyfried.[10] Difficult as it is to conceive of such a thing, the symphony appears to have been found too laboured by the critics, and not equal to the former one.[11] The success of the oratorio is shown by the fact that it was repeated three times (making four performances) by independent parties in the course of the next twelve months. The sonata for piano and violin, now so well known as the 'Kreutzer Sonata,' was first played on May 17, at the Augarten, at 8 A.M. There was a curious bombastic half-caste English violin-player in Vienna at that time named BRIDGETOWER (*q.v.*). He had engaged Beethoven to write a sonata for their joint performance at his concert. Knowing Beethoven's reluctance to complete bespoken words, it is not surprising to find him behind time and Bridgetower clamouring loudly for his music. The finale was easily attainable, having been written the year before the sonata in A (op. 30, No. 1), and the violin part of the first movement seems to have been ready a few days before the concert, though at the performance the pianoforte copy still remained almost a blank, with only an indication here and there. But the variations were literally finished only at the last moment, and Bridgetower had to play them at sight from the blurred and blotted autograph of the composer. 'Beethoven's rendering of the Andante

was so noble, pure, and chaste, as to cause a universal demand for an encore.'[1] A quarrel with Bridgetower caused the alteration of the dedication.

Before Beethoven left town this year he made an arrangement to write an opera for Schikaneder, Mozart's old comrade, the manager of the theatre 'an der Wien.'[2] Beyond the bare fact nothing is known on the subject. It is possible that a MS. trio[3] preserved in the library of the 'Gesellschaft der Musikfreunde' at Vienna, and afterwards worked up into the duet in 'Fidelio,' is a portion of the proposed work, but this is mere conjecture. The arrangement was announced on June 29, and Beethoven had before that date, perhaps as early as April, taken up his quarters at the theatre with his brother Caspar, who, with all his faults, was necessary to a person so inapt at business as Ludwig. His summer and autumn were again spent—after a few weeks' *Kur* at Baden[4]—at Ober-Döbling, and were occupied principally with his third symphony on 'Napoleon Bonaparte,' the idea of which, since its suggestion in 1798, appears to have ripened with the contemplation of the splendid career of the First Consul as soldier, lawgiver, statesman and hero, until it became an actual fact.

Of the order in which the movements of this mighty work were composed we have not yet any information, but there is no doubt that when Beethoven returned to his lodgings in the theatre in the autumn of 1803 the finale was complete enough, at least in its general outlines,[5] to be played through by its author. There are traces of Beethoven being a great deal in society this winter. Two young Rhinelanders—Gleichenstein, a friend and fellow-official of Breuning's in the War Office, and Mähler, also a Government official and an amateur portrait-painter, were now added to his circle.[6] With another painter, Macco,[7] he appears to have been on terms of great intimacy. The Abbé Vogler was in Vienna this season with his pupil Carl Maria von Weber, and a record[8] survives of a soirée given by Sonnleithner, at which Vogler and Beethoven met, and each gave the other a subject to extemporise upon. The subject given by Beethoven to Vogler we merely know to have been 4½ bars long, while that on which he himself held forth was 'the scale of C major, three bars, *alla breve*.' Vogler was evidently the more expert contrapuntist, but Beethoven astonished even his rival's adherents by his extraordinary playing, and by a prodigious flow of the finest ideas. *Noctes coenaeque deorum*.—Clementi too was in Vienna about this time, or a little later, with his pupil Klengel. He and Beethoven often dined at the same restaurant, but neither would speak first, and there was no intercourse.[9] Not for want of respect on Beethoven's side, for he had a very high opinion of Clementi, and thought his *Méthode* one of the best. This winter saw the beginning of a correspondence[10] which was not destined to bear fruit till some years later—with THOMSON (*q.v.*) the music-publisher of Edinburgh. Thomson had already published arrangements of Scotch airs by Pleyel and Kozeluch, and, with the true eye of a man of business, was now anxious to obtain from a greater and more famous musician than either, six sonatas on Scotch themes. Beethoven replies on Oct. 5, offering to compose six sonatas for 300 ducats (£150). Thomson responded by offering half the sum named, and there for the present the correspondence dropped. The prospect of an opera from Beethoven was put an end to at the beginning of 1804 by the theatre passing out of Schikaneder's hands into those of Baron von Braun, and with this his lodging in the theatre naturally ceased.[11] He moved into the same house with Stephen Breuning—'Das rothe Haus,' near the present Votive Church, and there the rupture already spoken of took place.

The early part of 1804 was taken up in passing through the press the symphony No. 2 (dedicated to Prince Carl Lichnowsky), and the three four-hand marches, both of which works were published in March—but the real absorbing occupation of the whole winter must have been the completion of the Bonaparte symphony. At length the work was done, a fair copy was made, the outside page of which contained the words 'Napoleon Bonaparte[12] . . . Louis van Beethoven,' and it lay on the composer's table for the proper opportunity of official transmission to Paris. On May 3 the motion for making Napoleon emperor passed the Assembly, and on the 18th, after his election by plebiscite, he assumed the title. The news must have quickly reached Vienna, and was at once communicated to Beethoven by Ries. The story need not be given here in detail. In a fury of disappointment and with a torrent of reproaches he tore off the title-page and dashed it on the ground. At some future time it received the new name by which we know it, and under which it was published—'Sinfonia eroica per festeggiare il sovvenire d' un gran uomo'—but this was probably an afterthought, and the cover of the MS. now in the Bibliothek at Vienna runs thus[13]:

---

[12] Ries (p. 78) has merely Buonaparte.
[13] The description of the title on the autograph, according to *Thayer*, ii. 248, bought by J. Dessauer at the sale of Beethoven's things in 1827, is similar to the one given on the next page, excepting that under 'Sinfonia grande' are two words scratched through. As Thayer does not give those words, it would seem that they are illegible. Nottebohm, by the way, speaks of the score in the possession of J. Dessauer as a revised copy. See *Them. Verz.* p. 52; *Krehbiel*, ii. 25.

Sinfonia grande
Napoleon Bonaparte
804 im August
del Sigr.
Louis van Beethoven

Sinfonie 3 Op. 55

The right to use the symphony was purchased by Prince Lobkowitz, to whom it is dedicated. It was played at his house during the winter, and remained in MS. till Oct. 1806.

The *fracas* at Breuning's rooms, already mentioned, ended by Beethoven's dashing off to Baden, and then returning to his old quarters at Döbling. There he composed the grand sonata in C, which he afterwards dedicated to Count Waldstein, and that in F, op. 54, which, though only in two movements and dedicated to no one, is not inferior in originality to its longer companion. It is to the finale of this work, and not that of the 'Appassionata' as usually believed, that Ries's story applies.[1] Ries appears to have gone out, as he very often did, to Döbling—within an easy walk of Vienna—and to have remained with his master all the after part of the day. They went for an immense walk, and did not get home till eight in the evening. During the whole time Beethoven had been humming and growling to himself, but without anything like a tune. On Ries asking him what it was, he replied that it was a theme for the finale of the sonata. The instant they reached the house he sat down to the piano without taking off his hat, and for more than an hour pounded away at his new idea. Ries sat in a corner listening.—The sonata in C, just mentioned, contained when completed a long Andante in F—the subject of a very characteristic story, already alluded to (p. 264). This, however, at the advice of some judicious critic, he was induced to take out and replace[2] by the present short introductory Adagio, after which it was published separately, and became the well-known 'Andante favori.'[3] During this summer, on July 19 or 26, there was a concert at the Augarten, at which Beethoven conducted; the symphony in D was performed, and Ries made his first public appearance as Beethoven's scholar in the C minor concerto. Ries's story of his cadenza is too long for these pages, but should be read.[4] The pianoforte part having to be written out for Ries, the concerto was at last ready for publication, and in fact made its appearance in November, dedicated to Prince Louis Ferdinand of Prussia, an amateur of remarkable musical gifts, whose acquaintance Beethoven made when he visited his uncle's court in 1796, and who while in Vienna at this very time was one of the first to hear and appreciate the new symphony.[5] When Beethoven came back it was to a new lodging, in a house of Baron Pasqualati's, on the Mölker-Bastion near Prince Lichnowsky's, and in some sense this was his last; for though he left it more than once, yet the Baron always forbade the rooms to be let, saying that Beethoven was sure to come back to them again. Breuning and he soon met, and a reconciliation took place which was not interrupted for many years—but they never again put their friendship so far to the proof as to live together. Breuning's attitude through the whole affair is in keeping with his solid sensible character, and does him infinite credit. His letter to Wegeler of Nov. 13 gives no hint of a quarrel, but is full of the deepest sympathy with Beethoven under the affliction of his deafness.

In addition to the works already mentioned as published during 1804 must be named the great sonata in E♭, which ultimately became the third of opus 31; 7 variations on 'God save the King,' and 5 on 'Rule, Britannia'[6]; a song, 'Der Wachtelschlag,'[7] and 'Ah! perfido.'[8] Why he selected these two English airs does not appear. At a later date he said, apropos of its use in his 'Battle Symphony,' 'I must show the English a little what a blessing they have in "God save the King."'[9] It is satisfactory to find him so fond of it.—The first trial of the Eroica took place in December[10] at Prince Lobkowitz's. The opinions expressed concerning it are collected by Thayer, and should be read and digested by all who are tempted to regard music from the 'finality' point of view.

The Production of 'Fidelio.'—Beethoven's connexion with the theatre 'an der Wien,' though interrupted, was not at an end. Baron von Braun took Schikaneder into his service, and one of their first acts was to renew the offer. Bouilly's libretto, which had been already set by Gaveaux[11] and Paër,[12] was chosen, and Sonnleithner was employed to make the German translation. Beethoven went back to his rooms at the theatre, and set to work with energy. But, remembering his habit of doing several things at once, we need not suppose that, though at work on a text, he dropped other compositions. A letter to Artaria shows that on June 1, 1805, he was engaged on a new quintet, the suggestion of Count Fries. Though he had even proceeded so far as to mention it to the publisher, its ultimate fate is still a matter of complete uncertainty; it certainly never arrived at publication. He also completed the sonata

[1] Ries himself (p. 99) says 'Sonata in F minor, op. 57'; *Thayer*, however (ii. 258), declares that Ries is in error. *Krehbiel*, ii. 31, says 'The sonata in question was that in F minor, op. 57.'

[2] The autograph score clearly shows that the Adagio was inserted; the writing and ink differ; thus Ries's account (*Notiz.* p. 101) is confirmed.

in F (op. 54), and probably entirely composed the triple concerto (op. 56). But the opera was his main and absorbing business. During the whole of the spring he was hard at work, and in June he betook himself to Hetzendorf, there to put his sketches into shape, and to get inspiration from his favourite woods and fields. To give an idea of the extraordinary amount of labour and pains which he bestowed on his work, and of the strangely tentative manner in which so great a genius proceeded, we may mention that in the sketch-book which contains the materials for the opera—a thick oblong volume of 346 pages, 16 staves to the page—there are no fewer than 18 distinct and different beginnings to Florestan's air 'In des Lebens Frühlingstagen,' and 10 to the chorus 'Wer ein holdes Weib.'[1] To reduce these chaotic materials to order, and to score the work, was the entire occupation of these summer months. Closely as he was occupied he could occasionally visit Vienna, and on one occasion in July[2] we find him at Sonnleithner's rooms with Cherubini and Vogler. Cherubini arrived in Vienna with his wife early in the month, and remained till the following April. His operas had long been favourites on the Vienna stage. The 'Deux Journées' was performed under his direction shortly after his arrival, and 'Faniska' was produced for the first time on Feb. 25, 1806. Beethoven knew them well, and has left on record[3] that he esteemed their author above all then living writers for the stage. He also thought so highly of Cherubini's Requiem as to say that he should borrow largely and literally from it in the event of his writing one.[4] But the influence of Cherubini on Beethoven's vocal music is now[5] acknowledged. The two artists were much together, and agreed as well as two men of such strong character and open speech were likely to agree. Cherubini presented the composer of 'Fidelio' with a copy of the *Méthode* of the Conservatoire, and the scores of 'Médée' and 'Faniska' are conspicuous in the sale catalogue of Beethoven's scanty library.[6]

One proof that 'Fidelio' was complete before his return to town is afforded by the fact that he allowed others to hear it. On one occasion he played it to a select set of friends,[7] when Ries (as already mentioned) was excluded; and thus—as he was shortly afterwards called to Bonn by the conscription—lost his chance of hearing the opera at all in its first shape. That Beethoven's voice in singing was detestable'[8] will not have diminished the interest of the trial. The work of rehearsing the music now began, and was evidently attended with enormous difficulties, especially in regard to the singers. They complained that their passages were unsingable, while Beethoven on his part was determined to make no alterations—and apparently none were then made.[9] With the band he fared little better. He even invokes his deafness as an assistance. Writing only two days before the first performance, he says[10]:

'Pray try to persuade Seyfried to conduct my opera to-day, as I wish to see and hear it from a distance; in this way my patience will at least not be so severely tried by the rehearsal as when I am close enough to hear my music so bungled. I really do believe it is done on purpose. Of the wind I will say nothing, but——. All *pp. cresc.*, all *decresc.*, and all *f. ff.* may as well be struck out of my music, since not one of them is attended to. I lose all desire to write anything more if my music is to be so played.'

And again,[11] 'the whole business of the opera is the most distressing thing in the world.'

The performance at the theatre 'an der Wien'[12] was fixed for Wednesday, Nov. 20. External events could hardly have been more unpropitious. The occupation of Ulm and Salzburg had been followed on Nov. 13 by the entry of the French army into Vienna. Bonaparte took up his quarters at Schönbrunn; the Emperor of Austria, the chief nobility and other wealthy persons and patrons of music had deserted the town, and it was a conquered city tenanted by Frenchmen. It was in such circumstances that 'Fidelio, oder die eheliche Liebe' was produced. The opera was originally in 3 acts. It was performed on the 20th, 21st and 22nd, and was then withdrawn by the composer.[13] The overture on these occasions was that known as 'Leonora No. 2.' It was felt by Beethoven's friends that, in addition to the drawbacks of the French occupation and of the advanced character of the music, the opera was too long; and a meeting was held at Prince Lichnowsky's house, when the whole work was gone through at the piano, and after a battle lasting from 7 till 1 in the morning, Beethoven was induced to sacrifice three entire numbers. It is characteristic of Beethoven that though furious and unpleasant to the very greatest degree while the struggle was going on, yet when once the decision was made he was in his most genial temper.[14] The libretto was at once put into the hands of Stephen Breuning, by whom it was reduced to two acts and generally improved, and in this shortened form, and with the revised overture known as 'Leonora No. 3,' it was again performed on Mar. 29, 1806, but,

owing to Beethoven's delays over the alterations, with only one band rehearsal.[1] It was repeated on Apr. 10, and after that each time to fuller and more appreciative houses, and then, owing to a quarrel between Beethoven and Baron Braun, the intendant of the theatre, suddenly and finally withdrawn.[2] Attempts were made to bring it out at Berlin, but they came to nothing, and this great work was then practically shelved for seven or eight years.

Symphonic Works.—It is an astonishing proof of the vigour and fertility of the mind of this extraordinary man, that in the midst of all this work and worry he should have planned and partly carried out two of his greatest instrumental compositions. We have the assurance of Nottebohm [3] that the piano concerto in G and the symphony in C minor were both begun about 1805. There are many indications in his letters that his health was at this time anything but good, and the demands of society on him must have been great. Against them he could arm himself by such reflections as the following pencil [4] note in the margin of a sketch-book of this very date: 'Struggling as you are in the vortex of society, it is yet possible, notwithstanding all social hindrances, to write operas. Let your deafness be no longer a secret—even in your Art!'

On May 25,[5] the marriage contract of Caspar Carl Beethoven with Johanna Reis was signed —harbinger of unexpected suffering for Ludwig —and on May 26 he seriously began the first of the three quartets which were afterwards dedicated to the Russian Ambassador, Count Rasoumowsky, as op. 59. So says his own writing at the head of the autograph.[6] These quartets, the Russian airs in which it is natural to suppose were suggested by the Ambassador (a brother-in-law of Prince Lichnowsky), are another link in the chain of connexion between the republican composer and the great imperial court of Petersburg, which originated some of his noblest works.

His favourite summer villages had been defiled by the French, and perhaps for this reason Beethoven did not pass the summer of 1806 at the usual spots, but went to the country-house of his friend Count Brunswick—whose sisters [7] were also his great allies—at Martonvásár in Hungary. Here he wrote the magnificent sonata in F minor, than which nothing more impetuous, more poetical, or more enduring ever came from his pen. His letters may have been full of depression [8]—but it vanished when he spoke in music, and all is force, elevation and romance. In October he left Count Brunswick for the seat of Prince Lichnowsky, near Troppau, in Silesia, 40 miles N.E. of Olmütz. The war was in full progress (Jena was fought on Oct. 16), and the Prince had several French officers quartered upon him. They were naturally anxious to hear Beethoven, but he refused to play to them; and on being pressed by his host and playfully threatened with confinement to the house, a terrible scene took place—he made his escape, went off by night post to Vienna, and on his arrival at home was still so angry as to demolish a bust of the Prince in his possession.

The violin concerto (op. 61) was first played by Clement—a well-known virtuoso, and at that time principal violin of the theatre 'an der Wien'—at his concert on Dec. 23, and there is evidence to show, what might have been assumed from Beethoven's habit of postponing bespoken works to the last, that it was written in a hurry, and Clement played his part without rehearsal, at sight. What chance can such great and difficult works, new in spirit and teeming with difficulties, have had of influencing the public when thus brought forward? No wonder that the concerto was seldom heard till revived by Joachim. The MS. shows that the solo part was the object of much thought and alteration by the composer—evidently after the performance.

The publications of 1806 consist of the sonata in F, op. 54 (Apr. 9); a trio for two violins and viola (Apr. 12), adapted from a trio [9] for two oboes and cor anglais, and afterwards numbered op. 87; the Andante in F (May 10) already mentioned as having been originally intended for the Waldstein sonata; and lastly, on Oct. 29, in time for the winter season, the Eroica symphony, dedicated to Prince Lobkowitz. In addition to these an arrangement of the second symphony as a pianoforte trio,[10] by Beethoven's own hand, was published at Vienna.

The first external musical event of 1807 was the performance of the new symphony, No. 4, which took place before a very select audience in the middle or end of March.[11] The concert was organised for Beethoven's benefit, no doubt to compensate him for his disappointment with the opera, and was largely subscribed to. No programme of equal length was probably ever put together; it contained the first and second symphonies, the Eroica—hardly known as yet, and in itself a programme—and the new work —2½ hours of solid orchestral music without relief! A second performance of the symphony was given at a public concert on Nov. 15. The overture to 'Coriolan'—a tragedy by Collin—must have occupied him during the opening of the year, since it is included with the new symphony, the new concertos for violin and piano, and the three string quartets, in a sale of copy-

11 See, however, Sch. i. 141.

rights for England,[1] which Beethoven effected on Apr. 20 to Clementi, who had for some years been at the head of a musical business in London. For these and an arrangement of the violin concerto for piano (dedicated to the wife of Stephen von Breuning), Clementi paid £200 down, Beethoven binding himself to compose three new sonatas for the sum of £60 more—a part of the bargain which was not carried out. Beethoven's finances were thus for the time flourishing,[2] and he writes in high spirits on his prospects.[3]

Another overture belonging to this period is that in C, known as op. 138, and erroneously styled 'Leonora No. 1,' the fact being that it was written as 'a new overture' for the proposed production of 'Fidelio' at Prague in the spring of this year.[4] Another great work approaching completion during the summer was the Mass in C, which was written for Prince Esterhazy, Haydn's patron, and after considerable delay was first sung in the chapel at Eisenstadt on Sept. 13, to celebrate the name-day of the Princess Marie of Esterhazy (Sept. 8). Beethoven and his old rival Hummel—then the Prince's Kapellmeister—were both present. After the Mass the Prince, perhaps puzzled at the style of the music, so different from that to which he was accustomed in his chapel—hinted as much to Beethoven, in the strange question 'What have you been at now?' Hummel overheard the remark, and probably amused at the naïveté of the question (for Hummel can surely have found nothing to question in the music) unfortunately smiled. Beethoven saw the smile, misinterpreted it, and left the Palace in a fury. This occurrence possibly explains why the name of Esterhazy, to whom Beethoven first dedicated the Mass, is replaced by that of Prince Kinsky in the published copy (1812).

The date of the C minor symphony has not yet been conclusively ascertained, but there is good ground for believing that it and the Pastoral symphony were completed, or at any rate much advanced, during this year,[5] at Heiligenstadt and in the country between that and the Kahlenberg, as Beethoven pointed out to Schindler in 1823[6]—the visit to Eisenstadt being probably undertaken for the sake of the Mass only. Of his activity in town during the winter there are more certain traces. A musical society of amateurs was formed, who held their concerts in the Hall of the Mehlgrube. At one of these, in December, the Eroica symphony was performed, and the overture to Coriolan played for the first time. At another the B flat symphony was performed for the second time, with immense appreciation. Beethoven himself conducted both of these concerts. December is also the date of a memorial to the directors of the Court Theatre, praying that he might be engaged at an annual salary of 2400 florins, with benefit performances, to compose one grand opera and an operetta yearly—a memorial evidently not favourably received.

The publications of 1807 are not numerous; they consist of the sonata in F minor (op. 57), dedicated to Count Brunswick (Feb. 18)[7] and since designated 'Appassionata' by Cranz of Hamburg; the 32 variations for piano[8] (April); and the triple concerto (op. 56), dedicated to Count Lobkowitz (July 1).[9]

1808 opened with the publication of the overture to 'Coriolan' (op. 62), dedicated to the author of the tragedy, and the three new string quartets (op. 59). There is reason to believe[10] that Beethoven again passed the summer at Heiligenstadt, whence he returned to Vienna, bringing with him ready for performance the two symphonies, C minor and Pastoral, the two pianoforte trios in D and E flat, and the 'Choral Fantasia,' a work new not only in ideas and effects but also in form, and doubly important as the precursor of the 'Choral Symphony.' It and the symphonies[11] were produced at a concert given by Beethoven in the theatre 'an der Wien' on Dec. 22. It was announced to consist only of pieces of his own, all to be performed in public for the first time. In addition to the three just mentioned the programme contained the piano concerto in G, played by himself; two extracts from the Eisenstadt Mass; 'Ah! perfido'[12]; and an extempore fantasia on the pianoforte. The result was unfortunate. In addition to the enormous length of the programme and the difficult character of the music the cold was intense and the threatre unwarmed. The performance appears to have been infamous, and in the 'Choral Fantasia' there was actually a break-down.[13]

The concerto had been published in August, and was dedicated to Beethoven's new pupil and friend the Archduke Rudolph. It commemorates the acquisition of the most powerful and one of the best friends Beethoven ever possessed, for whom he showed to the end an unusual degree of regard and consideration, and is the first of a long series of great works which bear the Archduke's name. The publications of the year 1808 were: the pianoforte concerto in G (op. 58), the 3 quartets (op. 59), the PF.

13 On this occasion the Introduction to the 'Choral Fantasia' was extemporised; it was not written down for eight or nine months later. *Thayer*, iii. 57, 58; *Z.B.* p. 272; *Krehbiel*, ii. 133.

arrangement of the violin concerto (op. 61), the 'Coriolan' overture (op. 62), and No. 1 of the four settings of Goethe's 'Sehnsucht.'

Hitherto Beethoven had no settled income beyond that produced by actual labour, except the small annuity granted him since 1800 by Prince Lichnowsky. His works were all the property of the publishers, and it is natural that as his life advanced (he was now thirty-nine) and his aims in art grew vaster, the necessity of writing music for sale should have become more and more irksome. Just at this time, however, he received an invitation from Jerome Bonaparte, King of Westphalia, to fill the post of maître de chapelle at Cassel, with a salary of 600 gold ducats (£300) per annum, and 150 ducats for travelling expenses, and with very easy duties. The first trace of this offer is found in a letter of his own, dated Nov. 1, 1808; but he never seems seriously to have entertained it except as a lever for obtaining an appointment under the Court of Austria. In fact the time was hardly one in which a German could accept service under a French prince. Napoleon was at the height of his career of ambition and conquest, and Austria was at this very time making immense exertions for the increase of her army with a view to the war which broke out when the Austrians crossed the Inn on Apr. 9. With this state of things imminent it is difficult to imagine that King Jerome's offer can have been seriously made or entertained. But it is easy to understand the consternation into which the possibility of Beethoven's removal from Vienna must have thrown his friends and the lovers of music in general, and the immediate result appears to have been an undertaking on the part of the Archduke Rudolph, Prince Lobkowitz and Prince Kinsky, dated Mar. 1, 1809, guaranteeing him an annual income of 4000 (paper) florins, payable half-yearly, until he should obtain a post of equal value in the Austrian dominions.[1] He himself, however, naturally preferred the post of imperial Kapellmeister under the Austrian Government, and with that view had drawn up the memorial above mentioned,[2] which, however, appears to have met with no success, even if it were ever presented. At this time, owing to the excessive issue of bank-notes, the cash value of the paper florin had sunk from 2s. to a little over 1s., so that the income secured to Beethoven, though nominally £400, did not really amount to more than £210, with the probability of still further rapid depreciation.

Meantime the work of publication went on apace, and in that respect 1809 is the most brilliant and astonishing year of Beethoven's life. The fourth symphony and the violin concerto were published by the Bureau des Arts et d'Industrie. He now for the first time entered into relations with the great firm of Breitkopf & Härtel. They published the symphonies in C minor (op. 67) and Pastoral (op. 68), the sonata for violoncello and piano in A (op. 69), and the two pianoforte trios (op. 70), dedicated to the Countess Erdödy, in whose house Beethoven had been living since his rupture with Lichnowsky.[3]

On May 12 the French again entered Vienna; on the 21st Aspern was fought, and Napoleon took possession of the island of Lobau, close to the city. Wagram took place on July 6, and the whole summer, till the peace was concluded on Oct. 14, must have been a very disturbed season for the inhabitants of Vienna. Beethoven's lodging being on the wall was much exposed to the firing. The noise disturbed him greatly,[4] and at least on one occasion he took refuge in the cellar of his brother's house in order to escape it. He had his eyes open, however, to the proceedings of the French, and astonished a visitor many years afterwards with his recollections of the time.[5] It is remarkable how little external events interfered with his powers of production. As far as quality goes the piano concerto in E flat and the string quartet in the same key—both of which bear the date 1809—are equal to any in the whole range of his works. The 6 variations in D (op. 76)—the theme afterwards used for the march in the 'Ruins of Athens'—are not remarkable, but such is not the case with the piano sonata in F♯ written in October. Though not so serious as some, it is not surpassed for beauty and charm by any of the immortal 32. It seems to have been a special favourite of the author's. 'People are always talking of the C♯ minor sonata,' said he once, 'but I have written better things than that. The F♯ sonata is something very different.'[6] A more important sonata had been begun on May 4 to commemorate the departure of the Archduke from Vienna on that day. It is dated and inscribed by Beethoven himself, and forms the first movement of that known as 'Les Adieux, l'absence et le retour.' Among the sketches for the Adieux is found a note:[7]

'Der Abschied am 4ten Mai—gewidmet und aus dem Herzen geschrieben S. K. H.'

words which show that the parting really inspired Beethoven, and was not a mere accident for his genius to transmute, like the four knocks in the violin concerto, or the cook's question in the last quartet. A march for a military band in F, composed for the Bohemian Landwehr under Archduke Anton, and 3 songs—'L'amante impaziente' (op. 82, No. 4), 'Lied aus der

Ferne,'[1] and probably 'Die laute Klage'[2]—complete the compositions of 1809. Haydn had gone to his rest on May 31, in the middle of the French occupation, but we find no allusion to him in any of Beethoven's journals or letters.

The correspondence with Thomson of Edinburgh, opened in 1806, was renewed this autumn. It began with a letter from Thomson, sending 43 airs, which was promptly answered by Beethoven, and it lasted until May 25, 1819, during which time Beethoven harmonised no fewer than 164 national melodies. For these he received in all a sum of some £200.[3]

1810 began with the return of the Archduke on Jan. 30, and the completion of the sonata. The sketch-books[4] show that the next few months were occupied with the composition of the music to 'Egmont,' the string quartet in F minor, songs of Goethe's (including the Erl King,[5] which, though well advanced, was never completed), and with the preliminary ideas of the B flat trio. The music to 'Egmont' was first performed on May 24, probably at some private house, as no record of it survives in the theatrical chronicles. It was in May that Beethoven had his first interview with Bettina Brentano, then twenty-five years old, which gave rise to the three well-known letters,[6] the authenticity of which has been so hotly disputed.[7] Knowing Beethoven's extreme susceptibility it is not difficult to believe that the letters are in the main genuine, though some of the expressions have probably been tampered with. Beethoven's relation to the Archduke, and his increasing reputation, were beginning to produce their natural result. He complains[8] that his retirement is at an end, and that he is forced to go too much into society. He has taken up his summer quarters at Hetzendorf as before, but the old seclusion is no longer possible; he has to be in and out of Vienna at the season which he detested, and which hitherto he had always devoted entirely to composition. That he was also at Baden in August is evident from some MS. pieces of military music, all dated Baden, 1810, and one of them August.[9] He seems to have had some prospect of marriage at this time, though the only allusion to it is that it has been broken off.[10] Meantime this winter was a busy one for the publishers of his music. The pianoforte arrangement of 'Fidelio,' as revised for 1806 (without overture or finales), was published by Breitkopf in October, and is dedicated to the Archduke Rudolph. In December the same firm issued the quartet in E♭ (op. 74), inscribed to Prince Lobkowitz, the variations in D (op. 76), the fantasia in G minor, the sonata in F♯—dedicated respectively to Count Brunswick and his sister Therese—and the sonatina[11] in G (op. 79); also earlier in the year the sextet for wind instruments (op. 71), and the setting of Matthisson's 'Andenken.' Another sextet (op. 81*b*)—probably, like that just mentioned, an early work—was issued by Simrock, and four settings of Goethe's 'Sehnsucht,' with a few more songs by other publishers. The frequent appearance of Goethe's name in the music of this year is remarkable, and coupled with the allusion in his letter to Bettina of Aug. 11, implies that the great poet was beginning to exercise that influence on him which Beethoven described in his conversation with Rochlitz in 1823.

The trio in B flat was completed during the winter,[12] and was written down in its finished form between Mar. 3 and 26, 1811, as the autograph informs us with a particularity wanting in Beethoven's earlier works, but becoming more frequent in future. The Archduke (to whom it was ultimately inscribed) lost no time in making its acquaintance, and as no copyist was obtainable, seems to have played it first from the autograph.[13] The principal compositions of 1811 were the music to two dramatic pieces written by Kotzebue, for the opening of a new theatre at Pest, and entitled 'Hungary's first hero,' or 'King Stephen,' and the 'Ruins of Athens.' The introduction to the 'Choral Fantasia'—which may be taken as a representation of Beethoven's improvisation, inasmuch as it was actually extemporised at the performance—was written down apropos of the publication of the work in July, and a song, 'An die Geliebte,'[14] is dated December in the composer's own hand.

The publications of the year are all by Breitkopf, and include the overture to 'Egmont' in February; the piano concerto in E♭, and the sonata in the same key (op. 81*a*) in May and July respectively, both dedicated to the Archduke; the 'Choral Fantasia' (op. 80), dedicated to the King of Bavaria (July), and the 'Mount of Olives' (Oct.). The preparation of the last-named work for the press so long after its composition must have involved much time and consideration. There is evidence that an additional chorus was proposed[15]; and it is known that Beethoven was dissatisfied with the treatment of the principal character. A note to Treitschke (June 6) seems to show that he was contemplating an opera. The first mention of a metronome[16] occurs in a letter of this autumn.

The depreciation in the value of paper money had gone on with fearful rapidity, and by the

end of 1810 the bank notes had fallen to less than $\frac{1}{10}$th of their nominal value—*i.e.* a 5-florin note was only worth half a florin in silver. The *Finanz Patent* of Feb. 20, 1811, attempted to remedy this by a truly disastrous measure—the abolition of the bank-notes (*Bancozettel*) as a legal tender, and the creation of a new paper currency called *Einlösungsscheine*, into which the bank-notes were to be forcibly converted at $\frac{1}{5}$th of their ostensible value, *i.e.* a 100-florin note was exchangeable for a 20-florin *Einlösungsschein*. Beethoven's income might possibly have been thus reduced to 800 florins, or £80, but the subscribers continued to pay the annuity in full, regardless of the patent, and Rudolph gave the necessary instruction to his agents in writing. Prince Kinsky would have done the same as to his 1800 florins, if his residence at Prague and his sudden death (Nov. 3, 1812) had not prevented his giving the proper instructions. Beethoven sued the Kinsky estate for his claim, and succeeded after several years, many letters and much heart-burning, in obtaining (Jan. 18, 1815) a decree for 1200 florins *Einlösungsscheine* per annum with arrears; and the final result of the whole, according to Beethoven's own statement (in his letter to Ries of Mar. 8, 1816), is that his pension at that time was 3400 florins in *Einlösungsscheine*, which were then worth 1360 in silver = £136, the *Einlösungsscheine* themselves having fallen to between a half and a third of their nominal value.[1]

1812 opens with a correspondence with Varenna, an official in Graz, as to a concert for the poor, which puts Beethoven's benevolence in a strong light. He sends the 'Mount of Olives,' the 'Choral Fantasia,' and an overture as a gift to the Institution for future use—promises other (MS.) compositions, and absolutely declines all offer of remuneration. The theatre at Pest was opened on Feb. 9 with the music to the 'Ruins of Athens' and 'King Stephen,' but there is no record of Beethoven himself having been present. This again was to be a great year in composition, and he was destined to repeat the feat of 1808 by the production of a second pair of symphonies. In fact, from memoranda among the sketches for the new pair, it appears that he contemplated [2] writing three at the same time, and that the key of the third was already settled in his mind—'Sinfonia in D moll—3te Sinf.' However, this was postponed, and the other two occupied him the greater part of the year. The autograph score of the first of the two, that in A (No. 7), is dated May 13; so that it may be assumed that it was finished before he left Vienna. The second—in F, No. 8—was not completed till October. His journey this year was of unusual extent. His health was bad, and Staudenheim, his physician,[3] ordered him to try the baths of Bohemia—possibly after Baden or some other of his usual resorts had failed to recruit him, as we find him in Vienna on July 4, an ususually late date. Before his departure there was a farewell meal, at which Count Brunswick, Stephen Breuning, Maelzel, and others were present.[4] Maelzel's metronome was approaching perfection, and Beethoven said good-bye to the inventor in a droll canon, which was sung at the table—he himself singing soprano [5]—and afterwards worked up into the lovely allegretto of the eighth symphony. He went by Prague to Töplitz [6] and Carlsbad—where he notes the postilion's horn [7] among the sketches for the eighth symphony—Franzensbrunn, and then Töplitz again [8]; and lastly to his brother Johann's at Linz, where he remained through October and into November, as the inscriptions on the autographs of the eighth symphony and of three trombone pieces written for All Souls' Day demonstrate. The trombone pieces became his own requiem. At Töplitz he met Goethe, and the strange scene occurred in which he so unnecessarily showed his contempt for his friend the Archduke Rudolph and the other members of the imperial family.[9] At Töplitz [10] he met Amalie Sebald, and a series of letters to her shows that the symphony did not prevent him from making love with much

[1] The above paragraph on the effect of the Austrian finance-patent of 1811 upon Beethoven's annuity, and his suit against the Kinsky estate, accords perfectly with all the authorities known at the time it was written. But these authorities, from Schindler down, are in error. It is true that from an after Mar. 1811, the bank-notes (*Bancozettel*) then in circulation were reduced in value to the rate of five for one in silver; and notes of redemption (*Einlösungsscheine*), equal to silver, were issued in their place at that rate; but the payment of contracts previously made, Beethoven's annuity included, was regulated by the depreciation at the date of the contract. The date of the document conferring the annuity is Mar. 1, 1809, when the depreciation (decimally) was 2·48 for one, and it follows that his income under the finance patent was reduced—not to one-fifth or 800 florins, as Schindler and his copyists unanimously state, but to 1612·90 florins. That is to say,

Kinsky, instead of 1800, paid		725·80	fl.
Rudolph,	,,	604·84	,,
Lobkowitz,	,,	282·26	,,
		1612·90	

When the subscribers continued to pay the annuity in full, regardless of the patent, Kinsky unfortunately neglected to do this, and thus, upon his untimely death, unwittingly deprived Beethoven of all *legal* claim to more than the above-named 725·80 florins; for the trustees of the estates had no power to add to that sum, being responsible to the Landrecht or high tribunal at Prague for their action. Beethoven, trusting to the equity of his claim, seems to have been so foolish as to instruct his advocate in Prague, Dr. Wolf, to enter a suit—which could have had no favourable issue. It was fortunate for him that the legal agent of the Kinsky estates (*Verlassenschaftscurator*), Dr. Johann Kanka, was a musician of considerable attainments, a great admirer of his music and on intimate terms with him during his first years in Vienna. On a visit to the capital, Kanka discussed the matter with him; the suit was abandoned, and a compromise at last effected—confirmed by the Landrecht, Jan. 18, 1815—by which 1200 florins a year were secured to him, and arrears to the amount of 2479 florins, paid in cash, on Mar. 26, to his representative, Baron Joseph von Pasqualati.

Beethoven's letters to Kanka (Thayer's *Beethoven*, iii. App. viii.) and his dedication of op. 94, 'An die Hoffnung,' to the widowed Princess Kinsky, prove how well satisfied he was with the result.

ardour.[1] While in Carlsbad he[2] gave a concert for the benefit of the sufferers in a fire at Baden.[3] The fact of his extemporising at the concert, and hearing the postilion's call, as well as an entry among the sketches for the eighth symphony, to the effect that 'cotton in his ears when playing took off the unpleasant[4] noise' —perhaps imply that his deafness at this time was still only partial.

One of his first works after returning to Vienna was the fine sonata for piano and violin, published as op. 96. It was completed by the close of the year, and was first played by the Archduke and Rode—whose style Beethoven kept in view in the violin[5] part—at the house of Prince Lobkowitz, on Dec. 29.[6] A comparative trifle is the 'Lied an die Geliebte,'[7] written during this winter in the album of Regina Lang. The only works published in 1812 were the 'Egmont' entr'actes and the Mass in C (op. 86), the latter dedicated—possibly as an acknowledgment of his share in the guarantee—to Prince Kinsky. The state of his finances about this time compelled him to borrow 2300 florins from the Brentanos of Frankfort, old friends who had known and loved him from the first.[8] A trace of the transaction is perhaps discernible in the trio in B♭ in one movement,[9] written on June 2, 1812, 'for his little friend Maximiliana Brentano, to encourage her in playing.' The effect of the Bohemian baths soon passed away, the old ailments and depression returned, the disputes and worries with the servants increased, and his spirits became worse than they had been since the year 1803.

The only composition which can be attributed to the spring of 1813 is a 'Triumphal March,' written for Kuffner's tragedy[10] of *Tarpeia*, which was produced—with the march advertised as 'newly composed'—on Mar. 26. On Apr. 20 the two new symphonies appear to have been played through for the first time at the Archduke's.[11] On the advice of his medical men he went at the end of May to Baden, where[12] he was received with open arms by the Archduke. Hither he was followed by his friend Frau Streicher, who remained at Baden for the summer, and took charge of his lodgings and clothes, which appear to have been in a deplorable state. On his return to town he reoccupied his old rooms in the house of Pasqualati, on the Mölk Bastion. The Streichers continued their friendly services; after some time procured him two good servants, and otherwise looked after his interests. These servants remained with him for a year or two, and this was probably the most comfortable time of the last half of Beethoven's life.[13]

As early as April we find him endeavouring to arrange a concert for the production of his two symphonies; but without success.[14] The opportunity arrived in another way. The news of the great defeat of the French at Vittoria (fought June 21) reached Vienna on July 13, following on that of the disaster of Moscow and the battles of Lützen and Bautzen (May 2 and 21), and culminating in Leipzig, Oct. 19. It is easy to understand how great the sensation was throughout the whole of Germany, and how keenly Beethoven must have felt such events,[15] though we may wonder that he expressed his emotion in the form of the orchestral programme-music, entitled 'Wellington's Victory, or the Battle of Vittoria,' a work conceived on almost as vulgar a plan as the 'Battle of Prague,' and containing few traces of his genius. This, however, is accounted for by the fact that the piece was suggested by Maelzel[16] the mechanician, a man of undoubted ability, who knew the public taste far better than Beethoven did. An occasion for its performance soon suggested itself in a concert for the benefit of the soldiers wounded at Hanau (Oct. 30), where the Austrians endeavoured to cut off the retreat of the French after Leipzig.[17] The concert took place on Dec. 8, in the large hall of the University, and was organised by Maelzel. The programme, like the 'Battle Symphony' itself, speaks of a man who knew his audience. It was of reasonable length and contained the seventh symphony—in MS. and produced for the first time—two marches performed by Maelzel's mechanical trumpet, and the 'Battle Symphony.' The orchestra was filled by the best professors of the day—Salieri, Spohr, Mayseder, Hummel,[18] Romberg, Moscheles, etc. Beethoven himself conducted, and we have Spohr's testimony that the performance of the symphony was really a good one; the programme was repeated at a second concert on the 12th. The success of both concerts was immense, and Beethoven addressed a letter of thanks to the performers, which may be read at length in Schindler and elsewhere.

It was probably about this time that Beethoven forwarded a copy of the 'Battle Symphony' to the Prince Regent.[19] The letter which accompanied it has not been preserved, but it was never acknowledged by the Prince, and

[1] At Töplitz he wrote the remarkable letter to a little girl (Emilie M.) who had sent him a letter-case (*Thayer*, iii. 205); it shows his modesty in a remarkable light. *Krehbiel*, ii. 228.

[15] See the note to *Thayer*, ii. 313. The idea noted in his diary is a far nobler one—a national Hymn, each nation engaged to be represented by a march, and the whole to close with a Te Deum. Nohl, *Beethoven-feier*, pp. 71, 72.
[16] See Moscheles's note to his edition of Schindler, i. 153, 154.
[17] Maelzel wanted to arrange concerts to raise money for Beethoven to be able to go with him to London (*Thayer*, iii. 258). But of course the receipts of above concert, after expenses paid, were handed over to the soldiers' fund (*Thayer*, iii. 260; *Krehbiel*, ii. 253 *et seq.*).
[18] Beethoven's droll note to Hummel (Nohl, *Neue Briefe*, No. 96) shows that there was no quarrel between them.
[19] Concerning the copy sent to the Prince see *Briefe*, Nos. 114, 119, 135, and Moscheles, ii. 235, 236.

Beethoven felt the neglect keenly. The work was produced at Drury Lane a year afterwards —Feb. 10, 1815—and had a great run,[1] but this was through the exertions of Sir George Smart, who himself procured the copy from Vienna.[2]

Early in Jan. 1814 a third concert was given in the great Redouten-Saal with the same programme and nearly the same performers as before, except that some numbers from the 'Ruins of Athens' were substituted for Maelzel's marches; and on Feb. 27 a fourth, with similar programme, and with the important addition of the symphony in F—placed last but one in the list. The huge programme speaks of Beethoven himself as clearly as the two first did of the more practical Maelzel. The seventh symphony was throughout a success, its allegretto being repeated three times out of the four. But the eighth symphony did not please, a fact which greatly discomposed Beethoven, and drew from him the words 'just because it is much better.'[3] On Apr. 11 Beethoven played, for the first time, his B♭ trio at a benefit concert, and in the evening a chorus of his to the words 'Germania, Germania,' was sung as the finale to an operetta of Treitschke's, apropos of the fall of Paris (Mar. 31). Moscheles was present at the concert, and gives[4] an interesting account of the style of Beethoven's playing. Spohr heard[5] the same trio, but under less favourable circumstances. A month later Beethoven again played the B♭ trio — his last public appearance in chamber music.

The spring of 1814 was remarkable for the revival of 'Fidelio.' Treitschke had been employed to revise the libretto, and in March we find Beethoven writing to him:

'I have read your revision of the opera with great satisfaction. It has decided me once more to rebuild the desolate ruins of an ancient fortress.'

This decision involved the entire rewriting and rearrangement of considerable portions; others were slightly altered, and some pieces were reintroduced from the first score of all. The first performance took place at the Kärnthnerthor Theatre on May 23.[6] On the 26th the new overture in E was first played, and other alterations were subsequently introduced. On July 18 the opera was played for Beethoven's benefit. A pianoforte score, made by Moscheles under Beethoven's own direction,[7] carefully revised by him, and dedicated to the Archduke, was published by Artaria in August. One friendly face must have been missed on all these occasions—that of the Prince Lichnowsky, who died on Apr. 15.

During the winter of 1813–14 an unfortunate misunderstanding arose between Beethoven and Maelzel. The 'Battle Symphony' was originally written at the latter's suggestion for a mechanical instrument of his called the Panharmonicon, and was afterwards orchestrated by its author for the concert, with the view to a projected tour of Maelzel in England.[8] Beethoven was at the time greatly in want of funds, and Maelzel advanced him £25, which he professed to regard as a mere loan[9] which he repaid, while the other alleged it was for the purchase of the work. Maelzel had also engaged to make ear-trumpets for Beethoven, which were delayed, and in the end proved failures.[10] The misunderstanding was aggravated by various statements of Maelzel, and by the interference of outsiders, and finally by Maelzel's departure through Germany to England, with an imperfect copy of the 'Battle Symphony' clandestinely obtained. Such a complication was quite sufficient to worry and harass a sensitive, obstinate, and unbusinesslike man like Beethoven. He entered an action against Maelzel, and his deposition on the subject, and the document[11] which he afterwards addressed to the artists of England, show how serious was his view of the harm done him, and the motives of the doer. Maelzel's case, on the other hand, is stated with evident *animus* by Beethoven's adherents,[12] and it should not be overlooked that he and Beethoven appear to have continued friends after the immediate quarrel blew over. If to the opera and the Maelzel scandal we add the Kinsky lawsuit now in progress, and which Beethoven watched intently and wrote much about, we shall hardly wonder that he was not able to get out of town till long past his usual time. When at length he writes from Baden it is to announce the completion of the sonata in E minor, which he dedicates to Count Moritz Lichnowsky. The letter[13] gives a charming statement of his ideas of the relation of a musician to his patron.

The triumphant success of the symphony in A, and of the Battle-piece, and the equally successful revival of 'Fidelio,' render 1814 the culminating period of Beethoven's life. His activity during the autumn and winter was very great; no bad health or worries or anything else external could hinder the astonishing flow of his inward energy. The E minor sonata is dated 'Vienna, August 16,' and was therefore probably completed—as far as any music of his was ever completed till it was actually printed —before he left town. He commemorated the

[1] The news of the successful production in London gratified him very much. He read it in the Vienna *Zeitung* of Mar. 2 at the tavern, and made a mem. of it in the small notebook which he carried with him to such places, *Z.B.* p. 320.

[2] See, however, *Thayer*, iii. 474. Häring's letter to Smart (*Krehbiel*, ii. 311) suggests otherwise.

[13] Sept. 21, 1814.

death (Aug. 23) of the wife of his kind friend Pasqualati in an 'Elegischer Gesang' (op. 118). On Oct. 4 he completed the overture in C ('Namensfeier,' op. 115), a work on which he had been employed more or less for six years, and which has a double interest from the fact that its themes seem to have been originally intended [1] to form part of that composition of Schiller's 'Hymn to Joy' which he first contemplated when a boy at Bonn, and which keeps coming to the surface in different forms, until finally embodied in the ninth symphony in 1823. Earlier in the year he had made some progress with a sixth piano concerto—in D—of which not only are extensive sketches in existence, but sixty pages in complete score.[2] It was composed at the same time with the violoncello sonatas (op. 102); and finally gave way to them.[3] But there was a less congenial work to do—Vienna had been selected as the scene of the Congress, and Beethoven was bound to seize the opportunity not only of performing his latest symphonies, but of composing some new music appropriate to so great an occasion.[4] He selected in September [5] a cantata by Weissenbach, entitled 'Der glorreiche Augenblick'—an unhappy choice, as it turned out—composed it more quickly [6] than was his wont, and included it with the symphony in A, and the 'Battle of Vittoria,' in a concert for his benefit on Nov. 29. The manner in which this concert was carried out gives a striking idea of the extraordinary position that Beethoven held in Vienna. The two halls of the Redouten-Saal were placed at his disposal for two evenings by the Government, and he himself sent personal invitations in his own name to the various sovereigns and other notabilities collected in Vienna. The room was crowded with an audience of 6000 persons, and Beethoven describes [7] himself as 'quite exhausted with fatigue, worry, pleasure and delight.' At a second performance on Dec. 2 the hall was less crowded. One of the fêtes provided during the Congress was a tournament in the Riding School on Nov. 23, and for this Beethoven would appear [8] to have composed music, though no trace of it has yet been found. During the continuance of the Congress he seems to have been much visited and noticed, and many droll scenes doubtless occurred between him and his exalted worshippers. The Archduke and Prince Rasoumowsky, the latter as Russian Ambassador, were conspicuous among the givers of fêtes, and it was at the house of the Archduke that Beethoven was presented to the Empress of Russia. This introduction resulted in a noble present from the Empress of 200 ducats (£100) towards the expenses of the two concerts, a generosity which Beethoven acknowledged by the dedication of the polonaise (op. 89) and of the pianoforte arrangement of the symphony in A, No. 7.[9]

In addition to the profit of the concerts Schindler implies that Beethoven received presents from the various foreign sovereigns in Vienna. The pecuniary result of the winter was therefore good. He was able for the first time to lay by money, which he invested in shares in the Bank of Austria.[10]

The news of Bonaparte's escape from Elba broke up the Congress, and threw Europe again into a state of perturbation. In Vienna the reaction after the recent extra gaiety must have been great. Beethoven was himself occupied during the year by the Kinsky lawsuit; his letters upon the subject to the advocate Kanka are many and long, and it is plain from such expressions as the following that it seriously interrupted his music:

'I am again very tired, having been forced to discuss many things with K., and such things exhaust me more than the greatest efforts in composition. It is a new field, the soil of which I ought not to be required to till, and which has cost me many tears and much sorrow,' [11]

and in another letter,

'. . . Do not forget me, poor tormented creature that I am.'

Under the circumstances it is not surprising that he composed little during 1815. The two sonatas for piano and violoncello (op. 102), dated 'July' and 'August'; the chorus 'Es ist vollbracht,' as finale to a piece of Treitschke's, produced, July 15, to celebrate the entry into Paris; the 'Meeresstille und glückliche Fahrt,' and a couple of songs, 'Sehnsucht' and 'Das Geheimniss' [12]—are all the original works that can with certainty be traced to this year. But the beautiful and passionate sonata in A (op. 101), which was inspired by and dedicated to his dear friend Baroness Ertmann—'Liebe werthe Dorothea Cecilia'—was probably composed at the end of this year, since it was played in public on Feb. 18, 1816, though not published for a year after.[13] The national airs which he had in hand since 1810 for Thomson of Edinburgh were valuable at such a time, since he could turn to these when his thoughts were too much disturbed for original composition—a parcel of Scotch Songs is dated May 1815.

The publications of 1815 are still fewer than the compositions. The polonaise in C (op. 89)—dedicated to the Empress of Russia, who had greatly distinguished Beethoven at one of Prince Rasoumowsky's receptions—appeared in March; the sonata op. 90, and a song, 'Kriegers Abschied,' in June. These are all.

On June 1 he wrote to Salomon, then resident in London, offering his works from op. 92 to 97 inclusive[1] for sale, with 'Fidelio,' the Vienna cantata, and the 'Battle Symphony.' And this is followed in October and November by letters to Birchall, sending various pieces. Salomon died on Nov. 25.

The second quarrel with Stephen Breuning must have occurred in 1815.[2] Some one had urged him to warn Beethoven against pecuniary relations with his brother Caspar, whose character in money matters was not satisfactory. Breuning conveyed the hint to Beethoven, and he, with characteristic earnestness and simplicity, and with that strange fondness for his unworthy brothers which amounted almost to a passion, at once divulged to his brother not only the warning but the name of his informant. A serious quarrel naturally ensued between Breuning and Caspar, which soon spread to Beethoven himself, and the result was that he and Breuning were again separated —this time for several years. The letter in which Beethoven at last asks pardon of his old friend can hardly be omitted from this sketch. Though undated it was written in 1826.[3] It contained his miniature painted by Hornemann in 1802, and ran as follows (the original has *Du* and *dein* throughout):

'Beneath this portrait, dear Stephen, may all that has for so long gone on between us be for ever hidden. I know how I have torn your heart. For this the emotion that you must certainly have noticed in me has been sufficient punishment. My feeling towards you was not malice. No—I should no longer be worthy of your friendship; it was passion both on your side and on mine; but I doubted you dreadfully, for people came between us who were unworthy of us both. My portrait has long been intended for you. You know I always intended it for some one. To whom could I give it with my warmest love so well as to you, true, good, noble Stephen? Forgive me for distressing you; I have suffered myself as much as you have. It was only when I had you no longer with me that I first really felt how dear you are and always will be to my heart. Come to my arms once more as you used to do.'

On Nov. 15 of this year Caspar Carl Beethoven died—a truly unfortunate event for Ludwig. Caspar had for long received pecuniary assistance from his brother, and at his death he charged him with the maintenance of his son Carl, a lad between eight and nine. This boy, whose charge Beethoven undertook with all the simplicity and fervour of his nature, though no doubt often with much want of judgment, was quite unworthy of his uncle. The charge altered Beethoven's nature, weaned him from his music, embroiled him with his friends, embittered his existence with the worry of continued contentions and reiterated disappointments, and at last, directly or indirectly, brought the life of the great composer to an end long before its natural term.

On Christmas Day, at a concert in the Redouten-Saal for the benefit of the Bürger Hospital, Beethoven produced his new overture, op. 115, and the 'Meeresstille,' and the 'Mount of Olives' was performed. As an acknowledgment for many similar services the municipal council had recently (Nov. 16) conferred upon him the freedom of the city—*Ehrenbürgerthum*. It was the first public title that the great *roturier* had received. He was not even a Kapellmeister, as both Mozart[4] and Haydn had been, and his advocate was actually forced to invent that title for him, to procure the necessary respect for his memorials in the lawsuit which occupied so many of his years after this date.[5] It is a curious evidence of the singular position he held among musicians. He was afterwards made a member of the Philharmonic Societies of Stockholm and Amsterdam, and received Orders from some of the courts in exchange for his Mass, but the one title he valued was that of *Tondichter*—'Poet in music.'[6]

The resuscitation of his oratorio is perhaps connected with a desire in Beethoven's mind to compose a fresh one. At any rate he was at this time in communication both with the Tonkünstler Societät and the Gesellschaft der Musikfreunde of Vienna on the subject. By the latter body the matter was taken up in earnest.[7] Subject and poet were left to himself, and a payment of 300 gold ducats was voted to him for the use of the oratorio for one year. The negotiation dragged on till 1824 and came to nothing, for no good libretto was forthcoming, for the same ostensible reason that he never wrote a second opera.[8]

1816 was a great year for publication. The 'Battle Symphony' in March; the violin sonata and the B♭ trio (opp. 96, 97)—both dedicated to the Archduke—in July; the seventh symphony[9] dedicated to Count Fries, with a pianoforte arrangement, to the Empress of Russia; the string quartet in F minor (op. 95)—to Zmeskall; and the beautiful 'Liederkreis' (op. 98) to Prince Lobkowitz; all three in December. These, with the eighth symphony and three detached songs, form a list rivalling, if not surpassing, that of 1809. The only compositions of this year are the 'Liederkreis' (April), a Military March in D, 'for the Grande Parade' (*Wachtparade*), June 4, 1816[10]; a couple of songs; and a trifle in the style of a birthday cantata for Prince Lobkowitz.[11] This is the

[1] Not including, however, the song 'An die Hoffnung,' op. 94.

[2] Schindler (i. 288) says 1817; but it is obvious that it happened before Caspar's death (Breuning, p. 46).

date of a strange temporary fancy for German in preference to Italian which took possession of him. Some of his earlier pieces contain German terms, as the six songs, op. 75, and the sonata 81*a*. They reappear in the 'Liederkreis' (op. 98) and 'Merkenstein' (op. 100) and come to a head in the sonata op. 101, in which all the indications are given in German, and the word 'Hammerklavier' appears for pianoforte in the title. The change is the subject of two letters to Steiner.[1] He continued to use the name 'Hammerklavier'[2] in the sonatas op. 106, 109 and 110; and there apparently this vernacular fit ceased.[3]

Beethoven had a violent dislike to his brother's widow, whom he called the 'Queen of Night,' and believed, rightly or wrongly,[4] to be a person of bad conduct. He therefore lost no time in obtaining legal authority for taking his ward out of her hands and placing him with Giannatasio del Rio, the head of an educational institution in Vienna; allowing his mother to see him only once a month. This was done in Feb. 1816, and the arrangement existed till towards the end of the year, when the widow appears to have appealed with success against the first decree. The cause had been before the *Landrecht* court, on the assumption that the 'van' in Beethoven's name indicated nobility. This the widow disputed, and on Beethoven's being examined on the point he confirmed her argument by pointing successively to his head and his heart saying, 'My nobility is *here* and *here*.' The case was then sent down to a lower court, where the magistrate was notoriously inefficient, and the result was to take the child from his uncle on the ground that his deafness unfitted him for the duties of a guardian. Carl's affairs were then put into the hands of an official, and all that Beethoven had to do was to pay for his education. Against this decree he entered an appeal which was finally decided in his favour, but not until Jan. 7, 1820. Meantime his energies were taken up with the contest and the various worries and quarrels which arose out of it, involving the writing of a large number of long and serious letters. How he struggled and suffered the following entry in his diary of the early part of 1818 will show:

'Gott, Gott, mein Hort, mein Fels, o mein Alles,[5] du siehst mein Inneres und weisst, wie wehe mir es thut Jemanden leiden machen müssen bei meinem guten Werke für meinen theuren Karl !!! O höre stets Unaussprechlicher, höre mich—deinen unglücklichen unglücklichsten aller Sterblichen.'

Between the dates just mentioned, of the beginning and ending of the lawsuits, he completed no orchestral music at all. Apart from sympathy for a great composer in distress, and annoyance at the painful and undignified figure which he so often presented, we have indeed no reason to complain of a period which produced the three gigantic pianoforte sonatas, op. 106,[6] op. 109[7] and op. 110[8]—which were the net product of the period; but such works produce no adequate remuneration, and it is not difficult to understand that during the lawsuit he must have been in very straitened circumstances, cheap as education and living were in Vienna at that date. His frequent letters to Ries and Birchall in London at this time, urging his works on them for the English market, are enough to prove the truth of this. One result[9] of these negotiations was the purchase by the Philharmonic Society, through Mr. Neate, under minute of July 11, 1815, of the MS. overtures to the 'Ruins of Athens,' 'King Stephen' and op. 115, for 75 guineas. To make matters worse, Prince Lobkowitz died on Dec. 16, 1816, and with him — notwithstanding that here too Beethoven appealed to the law—all benefit from that quarter ceased. His pension was therefore from that date diminished to about £110.

Attributable to 1817[10] are the arrangement of his early C minor trio (op. 1) as a string quintet (op. 104, with a very droll preface) and the songs 'So oder so,' and the Hymn of the Monks in 'William Tell'[11] in memory of his old friend Krumpholz, who died May 2[12]—and others. None of these can have been remunerative; in fact some of them were certainly presented to the publishers.

An incident of this date which gratified him much was the arrival of a piano from Broadwood's. Thomas Broadwood, the then head of the house, had recently made his acquaintance in Vienna, and the piano seems to have been the result of the impression produced on him by Beethoven. The Philharmonic Society is sometimes credited with the gift, but no resolution or minute to that effect exists in their records. The books of the firm, however, show that on Dec. 27, 1817, the grand piano No. 7632[13] was forwarded to Beethoven's address. (See *PLATE LIX.* No. 2.) A letter appears to have been written to him at the same time by Mr. Broadwood, which was answered by Beethoven immediately on its receipt. His

[1] *Briefe*, Nos. 167, 168.
[2] Nottebohm, *Z.B.* p. 344.
[3] The German comes out, however, when he is deeply moved, as in the 'Bitte für innern und äussern Frieden,' and the 'ängstlich' in the 'Dona' of the Mass, the 'beklemmt' in the cavatina of the B♭ quartet, etc. Schindler, ii. 328, gives a list of the curious words coined by B. and Holz: = Luftsang, Einsang = Aria; Grundsang = Bass; Kreisfluchtstück = Canon; and Launenspiel = Phantasie, etc. See also Kalischer, p. 68.
[4] From various details given by Nohl, there seems little doubt that Beethoven's opinion was a correct one. *Krehbiel*, ii. 393.
[5] The biblical terms look as if Beethoven knew his Bible.
[6] Composed 1818–19 and published Sept. 1819.
[7] Composed 1819–20, and published Nov. 1821.
[8] Dated Dec. 25, 1821, and published Aug. 1822.
[9] See, however, purchases of PF. arr. of op. 91 and op. 92, op. 96 and op. 97 by Birchall, *Thayer*, iii. 353, and Kalischer's *Neue Beethovenbriefe*, pp. 51-2.
[10] This year saw the publication of Beethoven's own metronome marks for many of his works (see *Beethoveniana*, p. 130). In addition to his law worries Beethoven was ill, and consequently in low spirits (see letters to Zmeskall; Nohl, iii. pp. 121-3.
[11] B. & H. 224, 247, 255.
[12] Pohl gives above date, but Thayer, *Verz*, No. 209, gives May 3.
[13] The compass of this instrument was 6 octaves, from C five lines below the Bass stave. A sister piano, No. 7252, of the same compass and quality, was made about the same time for the Princess Charlotte, and is now at Claremont.

letter has hitherto never been printed, and is here given exactly in his own strange French.[1]

'A Monsieur Monsieur Thomas Broadvood a Londres (en Angleterre).

Mon très cher Ami Broadvood !

jamais je n'eprouvais pas un plus grand Plaisir de ce que me causa votre Annonce de l'arrivée de cette Piano, avec qui vous m'honorez de m'en faire présent ; je regarderai comme un Autel, ou je deposerai les plus belles offrandes de mon esprit au divine Apollon. Aussitôt comme je recevrai votre Excellent instrument, je vous enverrai d'en abord les Fruits de l'inspiration des premiers moments, que j'y passerai, pour vous servir d'un souvenir de moi à vous mon très cher B., et je ne souhaits ce que, qu'ils soient dignes de votre instrument.

Mon cher Monsieur et ami recevéz ma plus grande consideration de votre ami et très humble serviteur Louis van Beethoven. Vienne le 3me du mois Février 1818.'

The instrument in course of time reached [2] its destination, was unpacked by Streicher, and first tried by Cipriani Potter, at that time studying in Vienna. What the result of Beethoven's own trial of it was is not known. At any rate no further communication from him reached the Broadwoods.[3]

A correspondence however took place through Ries with the Philharmonic Society on the subject of his visiting England. The proposal of the Society was that he should come to London for the spring of 1818, bringing two new MS. symphonies to be their property and for which they were to give the sum of 300 guineas. He demanded 400—150 to be in advance.[4] However, other causes put an end to the plan, and on the 5th of the following March he writes to say that health has prevented his coming. He was soon to be effectually nailed to Vienna.

Missa Solennis.—In the summer of 1818 the Archduke [5] had been appointed Archbishop of Olmütz. Beethoven was then in the middle of his great sonata in B♭ (op. 106), and of another work more gigantic still; but he at once set to work with all his old energy on a grand Mass for the Installation, which was fixed for Mar. 20, 1820. The score was begun in the autumn of 1818, and the composition went on during the following year, uninterrupted by any other musical work, for the B♭ sonata was completed for press by Mar. 1819, and the only other pieces attributable to that year are op. 105 and op. 107. The sonata just referred to, the greatest work yet written for the piano, and not unjustly compared with the ninth symphony, belonged in a special sense to the Archduke. The first two movements were presented to him for [6] his name-day ; the whole work when published was dedicated to him, and the sketch of a piece for solo and chorus [7] exists in which the subject of the first allegro is set to the words 'Vivat Rudolphus.' In addition the Archduke is said to have been able to play the sonata. Beethoven may have hated his 'Dienstschaft,' but there is reason to believe that he was sincerely attached [8] to his clever, sympathetic, imperial pupil.

The summer and autumn of both 1818 and 1819 were spent at Mödling. His health at this time was excellent, and his devotion to the Mass extraordinary. Never had he been known to be so entirely abstracted from external things, so immersed in the struggle of composition. Schindler [9] has well described a strange scene which occurred during the elaboration of the Credo—the house deserted by the servants, and denuded of every comfort ; the master shut up in his room, singing, shouting, stamping, as if in actual conflict of life and death over the fugue 'Et vitam venturi' ; his sudden appearance—wild, dishevelled, faint with toil and twenty-four hours' fast ! These were indeed 'drangvollen Umständen' [10]—wretched conditions—but they are the conditions which accompany the production of great works.[11] During the whole of this time the letters [12] show that his nephew occupied much of his thoughts. While at work on this sublime portion of the Mass [13] just mentioned, he was inspired to write the beautiful sonata in E major (op. 109), the first of that unequalled trio which terminate that class of his compositions.

It is hardly necessary to say that the Installation went by without Beethoven's Mass, which indeed was not completed till the beginning of 1823. He announces its termination on Feb. 27,[14] and the perfect copy of the score was delivered into his patron's hands on Mar. 19, 1823, three years after the day for which it was projected. While the vast work was proceeding his thoughts reverted to his darling pianoforte, and the dates of Dec. 25, 1821, and Jan. 13, 1822, are affixed to the two immortal and most affecting sonatas, which vie with each other in grandeur, beauty and pathos, as they close the roll of his large compositions for the instrument which he so dearly loved and so greatly ennobled.

The Ninth Symphony.—But neither Mass nor sonatas were sufficient to absorb the energy of this most energetic and painstaking of musicians. The climax of his orchestral compositions had yet to be reached. We have seen that when engaged on his last pair of symphonies in 1812, Beethoven contemplated a third, for which he had then fixed the key of D minor. To this he returned before many

[1] This interesting autograph is in the possession of Mr. M. M. Holloway, to whom I am indebted for its presence here.

years were over, and it was destined in the end to be the ninth symphony. The very characteristic theme of the scherzo actually occurs in the sketch-books as early as 1815,[1] as the subject of a 'fugued piece,' though without the rhythm which now characterises it. But the practical beginning of the symphony was made in 1817, when large portions of the first movement—headed 'Zur Sinfonie in D,' and showing a considerable approach to the work as carried out—together with a further development of the subject of the scherzo, are found in the sketch-books. There is also evidence [2] that the finale was at that time intended to be orchestral, and that the idea of connecting the 'Hymn to Joy' with his ninth symphony had not at that time occurred to Beethoven. The sketches continue in 1818, more or less mixed up with those for the sonata in B♭; and, as if not satisfied with carrying on two such prodigious works together, Beethoven has left a note giving the scheme of a companion symphony which was to be choral in both the adagio and finale. Still, however, there is no mention of the 'Ode to Joy,' and the text proposed in the last case is ecclesiastical.

We have seen how 1819, 1820 and 1821 were filled up. The summer and autumn of 1822 were spent at Baden, and were occupied with the grand overture in C (op. 124), for the opening of the Josephstadt Theatre at Vienna—whence it derives its title of 'Weihe des Hauses'—and the arrangement of some numbers [3] from the 'Ruins of Athens' with a new chorus [4] for the same occasion, and there followed a revival of 'Fidelio' at the Kärnthnerthor [5] Theatre in November. That the two symphonies were then occupying his mind—'each different from the other and from any of his former ones'—is evident from his conversation with Rochlitz in July 1822, when that earnest critic submitted to him Breitkopf's proposition for music to *Faust*.[6] After the revival of 'Fidelio' he resumed the symphony, and here for the first time Schiller's hymn appears in this connexion. Through the summer of 1823 it occupied him incessantly with the exception of a few extras—the 33 variations (op. 120) (see VATERLÄNDISCHE KÜNSTLERVEREIN) which were taken up almost as a *jeu d'esprit*, and being published in June must have been completed some time previously; the 'Bagatelles' for the piano (op. 126), which can be fixed to the end of 1822 and beginning of 1823; and a short cantata for the birthday of Prince Lobkowitz (Apr. 12) for soprano solo and chorus, the autograph of which is dated the evening previous to the birthday.[7] He began the summer at Hetzendorf, but a sudden dislike to the civilities of the landlord drove him to forfeit 400 florins which he had paid in advance, and make off to Baden. But wherever he was, while at work he was fully absorbed; insensible to sun and rain, to meals, to the discomforts of his house and the neglect of the servants, rushing in and out without his hat, and otherwise showing how completely his great symphony had taken possession of him.[8] Into the details of the composition we cannot here enter, farther than to say that the subject of the vocal portion, and its connexion with the preceding instrumental movements, were what gave him most trouble. The story may be read in Schindler and Nottebohm, and it is full of interest and instruction.

At length, on Sept. 5, 1823, writing from Baden to Ries, he announces that 'the copyist has finished the score of the symphony,' but that it is too bulky to forward by post. Ries was then in London, and it is necessary to go back a little to mention that on Nov. 10, 1822, the Philharmonic Society passed a resolution offering Beethoven £50 for a MS. symphony,[9] to be delivered in the March following. This was communicated to Beethoven by Ries, and accepted by him on Dec. 20. The money was advanced, and the MS. copy of the ninth symphony in the Philharmonic library [10] carries a statement in his autograph that it was 'written for the society.' How it came to pass notwithstanding this that the score was not received by the Philharmonic till after its performance in Vienna, and that when published it was dedicated to the King of Prussia, are facts difficult to reconcile with Beethoven's usual love of fairness and justice.

Notwithstanding the announcement to Ries the process of final polishing went on for some months longer. Shortly before he left Baden, on Oct. 5, he received a visit from Weber and his pupil, young Benedict, then in Vienna for the production of 'Euryanthe.' [11] The visit was in consequence of a kind wish for the success of the work expressed by Beethoven to Haslinger, and was in every way successful. In former times [12] he had spoken very depreciatingly of Weber, but since the perusal of 'Freischütz' had changed his mind.[13] No allusion was made to Weber's youthful censures on the fourth and seventh symphonies (see WEBER); Beethoven was cordial and even

confidential, made some interesting remarks on opera books, and they parted mutually impressed. He returned to town at the end of October to a lodging in the Ungergasse, near the Landstrasse gate, and by Feb. 1824 began to appear in the streets again and enjoy his favourite occupation of peering with his double eyeglass into the shop windows,[1] and joking with his acquaintances.

The publications of 1823 consist of the overture to the 'Ruins of Athens' (op. 114) and the 'Meeresstille' (op. 112), both in Feb.; and the sonata (op. 111) in April.

The revival of 'Fidelio' in the previous winter had inspired Beethoven with the idea of writing a new German opera, and after many propositions he accepted the 'Melusine' by Grillparzer,[2] a highly romantic piece, containing many effective situations, and a comic servant's part, which took his fancy extremely. Grillparzer had many conferences with him, and between the two the libretto was brought into practical shape. While thus engaged he received a commission from Count Brühl, intendant at the Berlin Theatre, for an opera on his own terms. Beethoven forwarded him the MS. of 'Melusine' for his opinion, but on hearing that a ballet of a somewhat similar character was then being played at Berlin,[3] he at once renounced all idea of a German opera, and broke out in abuse of the German singers for their inferiority to the Italians, who were then playing Rossini in Vienna. In fact this season of 1823 had brought the Rossini fever to its height; no operas but his were played. Beethoven had indeed heard the 'Barbiere' in 1822,[3] and had even promised to write an opera for the Italian company in the same style, a promise which it is unnecessary to say was never redeemed. Like Mendelssohn he was in earnest in pursuit of an opera book, but, like Mendelssohn, he never succeeded in obtaining one to his mind. What he wanted, he told Breuning on his death-bed, was something to interest and absorb him, but of a moral and elevating tendency, of the nature of 'Les Deux Journées' or 'Die Vestalin,' which he thoroughly approved; dissolute stories like those of Mozart's operas had no attraction for him, and he could never be brought to set them. He even went farther, for we read in Mme. d'Abrantès' *Mémoires sur la restauration*, vii. pp. 29, 30: 'Il prétendait que Mozart ne devait pas prostituer son talent (c'est son mot) sur un sujet si scandaleux.' After his death a whole bundle of libretti was found which he had read and rejected.[4]

But, opera or no, it was quite a different thing to find the public so taken up with Rossini that no one cared for either the Mass or the new symphony.[5] He had written early in 1823 to Prussia, France, Saxony, Russia proposing a subscription for the Mass of 50 ducats from the sovereigns of each of those countries—but the answers were slow and the subscriptions did not arrive, and he therefore made use of the opportunity afforded him by Count Brühl to propose the two works to him for production at Berlin. The answer was favourable, and there appeared good prospect of success. But the disgrace of driving their great composer to the northern capital for the production of his last and greatest works was too much for the music-loving aristocracy of Vienna, and an earnest memorial[6] was drawn up, dated Feb. 1824, signed by the Lichnowskys,[7] Fries, Dietrichstein, Palfy and twenty-five other persons principally concerned with music in that city, beseeching him to produce the Mass and symphony, and to write a second opera, which should vindicate the claim of classical music, and show that Germany could successfully compete with Italy. Such an address, so strongly signed, naturally gratified him extremely. The theatre 'an der Wien' was chosen, and after an amount of bargaining and delay and vacillation which is quite incredible—partly arising from the cupidity of the manager, partly from the extraordinary obstinacy and suspiciousness of Beethoven, from the regulation of the censorship, and from the difficulties of the music—but which was all in time surmounted by the tact and devotion of Lichnowsky, Schindler and Schuppanzigh, the concert took place in the Kärnthnerthor Theatre on May 7.[8]

The programme consisted of the overture in C—'Weihe des Hauses'—the Kyrie, Credo, Agnus and Dona of the Mass in D, in the form of three hymns,[9] and the ninth symphony. The house was crowded, and the music, especially the symphony, excited the greatest enthusiasm. It was on this occasion that the affecting incident occurred of the deaf composer being turned round by Frl. Unger that he might *see* the applause he and his work were evoking. But financially the concert was a failure. The use of the theatre, including band and chorus, cost 1000 florins, and the copying 800 more, but the prices remained as usual, and the sum Beethoven received only amounted to about 420 florins.[10] Well might he say that 'after six weeks of such discussion he was boiled, stewed and roasted.' He was profoundly upset by the result, would eat nothing, and passed the night in his clothes. The concert, however, was repeated on the 23rd at noon, the theatre guaranteeing Beethoven 500 florins. On the

second occasion all the Mass was suppressed but the Kyrie; the trio 'Tremate' and some Italian solos were introduced; the overture and symphony remained. The result of this was a loss to the management, and furnishes a curious trait of Beethoven's character. He could not without difficulty be induced to accept the guaranteed sum, but he invited Schindler, Schuppanzigh and Umlauf to dinner, and then accused them in the most furious manner of having combined to cheat him over the whole transaction! This broke up the party; the three faithful friends went off elsewhere, and Beethoven was left to devour the dinner with his nephew. The immediate effect of the outbreak was to put an end to a promising negotiation which he was carrying on with Neate, who in a letter of Dec. 20, 1823, had, on the part of the Philharmonic Society, offered him 300 guineas and a benefit guaranteed at £500 for a visit to London with a symphony and a concerto. The terms had been accepted, and the arrangements for the journey were in a forward state; and although it is probably true that Beethoven's attachment to his nephew was too strong to allow of his leaving him when it came to the point, yet it is equally true that the event just related was the ostensible cause. Four days after he was at his beloved Baden, and craving for music paper.[1]

The subscriptions to the Mass had come in slowly, and in nine months amounted only to 350 ducats (£175) for seven copies.[2] This was too slow to satisfy the wishes of the composer. Indeed he had for some time past been negotiating in a much more mercantile style than before for the sale of Mass, symphony and overture. He offered them to various publishers.[3] It is an unexpected trait in his character, and one for which we may thank his devotion to his nephew, to whom he was now sacrificing everything, that he might leave him well provided for. It resulted in his dealing for the first time with Schott, of Mayence, who purchased the Mass and the symphony for 1000 and 600 florins respectively on July 19, 1824.[4] He appears at this time to have taken generally a more commercial view of his position than usual, to have been occupied with plans[5] for new collected editions of his works (which, however, came to nothing), and generally to have shown an anxiety to make money very unlike anything before observable in him. In such calculations he was much assisted by a young man named Carl Holz,[6] a Government employé, a good player on the violin and violoncello, a clever caricaturist, a bon-vivant,[7] and generally a lively agreeable fellow. Holz obtained an extraordinary influence over Beethoven. He drew him into society, induced him to be godfather to his child, to appoint him his biographer,[8] and amongst other things to forsake his usual sobriety, and to do that which has been absurdly exaggerated into a devotion to drink.

The Last Quartets.—That these commercial aims—too absurd if one reflects on the simple unbusinesslike character of Beethoven—and the occasional indulgence to which we have alluded, did not impair his invention or his imagination is evident from the fact that at this time he composed his last quartets, works which, though misunderstood and naturally unappreciated at the time, are now by common consent of those who are able to judge placed at the head of Beethoven's compositions for individuality, depth of feeling and expression. The relations with Russia, which Beethoven had originally cultivated through the Count von Browne and the works dedicated to the Emperor of Russia and the Prince Rasoumowsky, and which had been deepened by the personal attention shown him in 1814 by the Empress, were now to bear their full fruit. Early in 1824 he received a letter from Prince Galitzin, a Russian nobleman living at St. Petersburg, and subsequently others, requesting him to compose three string quartets to be dedicated to the Prince and handsomely paid for. The first of these, that in E♭, sketched at Baden in the autumn of 1824, was sold to Schott[9] in advance for the sum of 50 ducats, and was completed after his return to Vienna early in Oct. It was first played on Mar. 6, 1825, and published in the following March. With the quartet Schott received the overture op. 124, the 'Opferlied' (op. 121) and 'Bundeslied' (op. 122), an air 'Der Kuss' (op. 128) and 11 Bagatelles (op. 126), for which he paid the sum of 130 ducats. The quartet was played by Schuppanzigh, Weiss, Linke and Holz, and it was a humorous idea of the master's to make each player, after so long an interval, sign a compact 'pledging his honour to do his best and vie with his comrades in zeal.'[10] The quartet was published as op. 127.

The second quartet was that which now stands fourth—in A minor, op. 132. It was first played on Nov. 6, 1825, and was published in Sept. 1827 by Schlesinger. For this he seems to have obtained 80 ducats.[11] In a letter to Peters it is mentioned as 'a quartet, and a grand one too.' The finale was originally

sketched for the 'finale instrumentale' of the ninth symphony.[1]

The third, in B flat (op. 130), which now stands second, originally ended with a fugue of immense length and still greater obscurity, which was afterwards published separately as op. 133. It was completed in 1825, and was played in its first form on Mar. 21, 1826. The new finale—so gay and full of spirit—was written (at Artaria's instance)[2] in great discomfort at his brother's house at Gneixendorf in Nov., before leaving on the journey which cost him his life. It is his last completed composition. The quartet was published by Artaria, May 7, 1827. The relations between Beethoven and Prince GALITZIN (*q.v.*) have been the subject of much controversy.[3] It will be sufficient here to say that Beethoven is not known to have received the promised payment, and that the quartets[4] were sold by him to the publishers already named.

Beethoven remained at Baden till Oct. 1824. On his return to Vienna his nephew entered the university as a student in philology. The career of this worthy may be summed up in a few lines. He went in for his degree and was plucked, abandoned literature for trade, stood for the necessary examination in the Polytechnic School, and was plucked again; in despair attempted to shoot himself, and failed even to do that. He was then, as a suicide, taken charge of by the police, and after a time ordered out of Vienna at a day's notice, and at last joined the army.[5] And through it all his old uncle clung to him with truly touching affection. He, most simple-minded of men, could not believe that any one should really not desire to do his best; and so on the least appearance of contrition or amendment he forgives and embraces him, he bathes him in tenderness and confidence, only each time to find himself again deceived. The letters which this more than father wrote to his unworthy prodigal son are most affecting—injudicious, no doubt, but full of tenderness and simplicity.[6]

The first few weeks of the winter of 1824 were occupied in scoring the E flat quartet, the composition of which had been the work of the summer, but it was hardly complete before Beethoven was taken with a severe illness in the lower part of the stomach.[7] For this he called in Staudenheim, a surgeon of eminence, who, however, was soon cashiered as too brusque and replaced by Braunhofer. The malady hung about him till his next visit to the country; and its disappearance is commemorated in the *Canzona di ringraziamento in modo lidico offerta alla divinità da un guarito*, which forms so noble a feature in the A minor quartet. His stay at Baden in 1825 was of unusual length, lasting from May 3 till Oct. 15,[8] by which date that quartet was completely finished. It had already been tried, strictly in private, as early as August at the desire of the publisher, Beethoven sitting close to the players, and perhaps profiting by the rehearsal to make many alterations; and on Nov. 6 was played, still in private but to a densely crowded room,[9] by Schuppanzigh and Linke's quartet party. Sir G. Smart visited him at Baden, Sept. 16, 1825, and dined with him. Beethoven gave him a canon.[10] Smart is said to have asked specially about the recitatives in the ninth symphony.

The B♭ quartet was his next work, and when performed by the party just mentioned in 1826, the presto and 'danza tedesca'[11] were encored, but the cavatina seems to have made no impression, and the fugue, which then served as finale, was universally condemned. In the case of the fugue, his judgment agreed with that of his critics; it was published separately (op. 133) and the finale already mentioned was written; but he did not often give way to the judgments of his contemporaries. 'Your new quartet did not please,' was one of the bits of news brought to him on his death-bed by some officious friend. 'It will please them some day,' was the answer.'[12]

Between the date last mentioned and Oct. 1826 occurred the series of disasters with young Carl already alluded to; and the latter month[13] found both uncle and nephew at Johann Beethoven's residence at Gneixendorf.[14] It is a village near Krems, on the Danube, about 50 miles west of Vienna, and here his brother had settled on the property (*Gut*) which gave occasion to Ludwig's famous joke (see p. 269). The party must have been a curiously ill-assorted one. The somewhat pompous money-loving 'Gutsbesitzer'; his wife, a common frivolous woman of questionable character,[15] to whose marriage Beethoven had given all the opposition in his power in 1812; the ne'er-do-weel nephew, intensely selfish and ready to make game of his uncle or make love to his aunt; and in the midst of them all the great composer—deaf, untidy, unpresentable, setting every household rule and household propriety at defiance, by turns entirely absorbed and pertinaciously boisterous, exploding in rough jokes and horse-laughter, or bursting into sudden fury at some absolute misconception; such a group had few

[13] The summer of 1826 was extremely hot, and Dec. was very nasty (Nohl and Thayer, *Krit. Beitrag*).
[14] The property was called Wasserhof (letter of Mrs. Schweitzer). Wisgrill bought the property from Johann v. B., Karrer from W. and Kleile from Karrer. Kleile was uncle to Frau von Schweitzer, who was living there when I visited it, Aug. 21, 1889. Kleile was the author of the article in the *Deutsche Musik-Zeitung*, or, at any rate furnished the materials for it.
[15] Schindler, in Lady Wallace's *Beethoven's Letters*, ii. 148. See *Krehbiel*, ii. 231, iii. 238.

elements of permanence in it. But nothing could stop the wonderful flow of Beethoven's thoughts. In fact, music being to him the language of his emotions, the more agitated he was the more he composed, and his very deafness, which, fortunately, must have made him insensible to much that went on around him, drove him more completely into himself and compelled him to listen to the workings of his own heart unalloyed by anything external. To his deafness we no doubt mainly owe the very individual and original style of the later quartets. Thanks to Michael Krenn,[1] who was engaged by Frau Johann to wait on him, we can see him with our own eyes:

'At half-past 5 he was up and at his table, beating time with hands and feet, singing, humming and writing. At half-past 7 was the family breakfast, and directly after it he hurried out of doors, and would saunter about the fields, calling out, waving his hands, going now very slowly, then very fast, and then suddenly standing still and writing in a kind of pocket-book. At half-past 12 he came into the house to dinner, and after dinner he went to his own room till 3 or so; then again in the fields till about sunset, for later than that he might not go. At half-past 7 was supper, and then he went to his room, wrote till 10, and so to bed.'

During the last three years he had been composing incessantly, and yet all that he had done seemed to him as nothing—as a mere prelude to what he was yet to do. As Newton before his death spoke of himself as 'a child picking up a few shells on the shore while the great ocean of truth lay undiscovered before him,' so does Beethoven in somewhat similar strain express himself at the close of his life: 'I feel as if I had written scarcely more than a few notes.'[2] And again: '*Nulla dies sine linea* . . . I hope still to bring a few great works into the world, and then, like an old child, to end my earthly course somewhere amongst good people.'[3] His wish, however, was not fulfilled; he was to die in harness. Either before leaving Vienna or immediately after it he had completed the C♯ minor quartet, and before the end of Oct. had finished another, that in F, which is dated with his own hand 'Gneixendorf[4] am Oktober 26.'[5] This is the work the finale of which embodies the strange dialogue between Beethoven and his cook, 'Muss es sein?—Es muss sein,' and shows how he could rise from the particular to the universal. A week or two later and he had written a fresh finale to replace the enormously long fugue which originally terminated the B♭ quartet, and dated it 'Nov. 1826.'[6]

And this was his last work. The book which contains the last sketches for it contains fragments of a quintet in C, and of a four-hand sonata which had been proposed by Diabelli. By that time the fine weather, of which he speaks shortly after his arrival,[7] had departed. The economical 'Gutsbesitzer' had forbidden his infirm brother a fire in his room, the food was not to his taste, and he was informed that for both food and lodging a charge would be made; so that he determined to brave the police and return with his nephew to Vienna on Dec. 2. The journey from Gneixendorf to Krems, the post town, is two German miles, but the close carriage could not be had, and Beethoven was obliged to perform it in an open chaise;[8] the weather was cold and damp, and the result was a violent cold in the stomach, which was the beginning of the end. He took to his bed on reaching the Schwarzspanierhaus. His former physicians, Braunhofer and Staudenheim, refused to attend him, and he was in the hands of a Dr. Wawruch, who had been casually called to him by a billiard-marker at the rooms frequented by young Carl Beethoven. The cold had developed into an inflammation of the lungs, and on this dropsy supervened.[9] Wawruch, who appears to have been a poor practitioner and a pompous pedant,[10] drenched his patient with herb decoctions, but the malady would probably have ended fatally whatever treatment had been adopted. What the poor patient most required was good nursing and comfort, and this he could not obtain till after the departure of his nephew for his regiment in the latter half of December. Then Schindler and Stephen Breuning came to his bedside, and from this time to the end Gerhard Breuning, the son of Stephen, a boy of fourteen, was his constant attendant. He was first tapped on Dec. 20,[11] then again on Jan. 8, and a third time on Jan. 28. It was during one of these operations that on seeing the water he made the characteristic remark, 'Better from my belly than from my pen.' The confidence both of Beethoven and his friends in Wawruch now became much shaken, and an application was made to Malfatti,[12] who had attended him years before, but like so many others had parted from him in anger. It was long before Malfatti would answer the appeal, and even then he would only act in conjunction with Wawruch. The treatment was now changed, and iced punch administered in large quantities as a restorative. Beethoven's faith in Malfatti was only equalled by his disgust at Wawruch. He would watch for the arrival of the former with eagerness, and welcome him as if he were an angel—whereas when Wawruch appeared he would immediately stop talking, turn his face to the wall with the exclamation 'Ach, der

Esel ! ' and only answer his inquiries in the most grumpy manner.[1] Under the change Beethoven's spirits greatly improved, and if permitted he would at once have begun to work. This, however, was forbidden, and reading only allowed. Walter Scott was recommended him, and he began *Kenilworth*,[2] but soon threw it down with the exclamation ' The man writes only for money ! ' He now made acquaintance with some of Schubert's songs [3] for the first time, and was delighted with them—' Truly Schubert has the divine fire,' were his words. Handel's works, in 40 volumes,[4] a present from Stumpff, arrived at this date, and were an unfailing source of interest to him [5] as he lay in bed. Artaria's print of an engraving of Haydn's birthplace gave him the liveliest satisfaction ; his delight at receiving it, his wrath at the misspelling of the name, and his curious care in paying for it, may be read in Breuning's narrative (pp. 98-100). During the four months of his last illness he wrote and dictated many letters—twenty-four are published, some of them of considerable length, and others no doubt remain in MS.

His nephew still retained his hold on his affections. A note to Dr. Bach, his old advocate, of Jan. 3,[6] declares the lad his sole heir, and commits him to Bach's special care. He was continually tormented with anxiety as to their future maintenance. Notwithstanding Prince Galitzin's promise, dated Nov. 10/22, 1826, no portion of the money due from him on the three quartets had yet been received. The seven bank shares he would not allow to be touched, regarding them as the property of his nephew. He therefore wrote to his friends [7] in London, urging the Philharmonic Society to carry out their old intention of giving a concert for his benefit. The reply to this was a letter from Moscheles,[8] dated Mar. 1, sending £100 from the Philharmonic Society on account of the proceeds of a concert shortly to be given. His delight at this response was great, and his answer, dated Mar. 18 (forwarding also the metronome marks of the ninth symphony), is full of warmth and enthusiasm.[9] In this answer, dated eight days before his death, there occur the words : ' A symphony completely sketched is lying in my desk, as well as a new overture and other things.' This therefore was the ' Tenth Symphony.' It should, however, be remarked that a large part of the letter containing the words quoted is struck through with the pen. Three days afterwards, says Schindler (ii. 142), ' he was greatly excited, desired to have the sketches for the tenth symphony again brought to him, and said much to me on the plan of the work. He intended it absolutely for the Philharmonic Society.' Some sketches—whether those alluded to or not—were printed in the 1st No. of Hirschbach's *Musikalisch-kritisches Repertorium*, for Jan. 1844, with an introduction which we translate :

' From Beethoven's sketch-books. Herr Schindler on his return from Berlin to Aix la Chapelle, not only showed many very remarkable relics of Beethoven to his friends at Leipzig, but has been good enough to allow us to publish some of them in this periodical. The following are some of the existing sketches of the tenth symphony and of an overture on the name of Bach,[10] all belonging to the summer months of the year 1824, and in the order in which they were noted down.'

From the sketches for the tenth symphony [11] :

Some further scraps of information have been kindly furnished by Thayer. ' Carl Holz told Otto Jahn that there was an Introduction to

1 Breuning, pp. 92, 90.
2 Schindler, ii. 135; but see his letter in Moscheles's *Leben*, i. 144.
3 The ' Junge Nonne,' ' Die Burgschaft,' ' Der Taucher,' ' Elysium ' and the Ossian Songs are mentioned by Schindler. But of these the only one published before Beethoven's death was the first.

8 See the account in Moscheles's *Leben*, i. 138-75.
9 Quoted *Krehbiel*, iii. 291.
10 Possibly for the overture mentioned above. These are omitted in the present reprint.
11 We have no clue as to which of the words attached to the sketches are Beethoven's, and which Schindler's.

the tenth symphony in E♭ major, a soft piece; then a powerful Allegro in C minor. These were complete in Beethoven's head, and had been played to Holz on the piano.' Considering that the date of Beethoven's death was 1827, nearly three years after the summer of 1824, and considering also Beethoven's habit of copious sketching at works which were in his head, it is almost impossible but that more sketches than the trifles quoted above exist in some of the sketch-books.[1] And though Nottebohm is unhappily no more, some successor to him will doubtless be found to decipher and place these before us.[2] Meantime a fourth tapping had taken place on Feb. 27, and a great discharge was caused by his emotion at the receipt of Moscheles's letter on Mar. 17. Rau, writing to Moscheles this very day, found him more like a skeleton than a living being.[3]

During his illness he had a few visitors besides Schindler and the two Breunings, who were his daily attendants, and Holz, who came frequently. Breuning mentions Johann Beethoven and the nephew (in the early part of the time only), Tobias and Carl Haslinger, Diabelli, worrying about his four-hand sonata,[4] Baron Eskeles, Rauch, Dolezalek, Clement. Strangers occasionally arrived, amongst whom Hummel, with his pupil Ferdinand Hiller, then a boy of fifteen, who saw him[5] on Mar. 8, are worthy of note. But the friends of his earlier days—Fries, Erdödy, Ertmann, Brunswick, Gleichenstein, Zmeskall, Seyfried, the Streichers, Czerny, Schuppanzigh, Linke—those who had been honoured by his dedications, or had reaped the glory of producing his compositions—were either dead or otherwise occupied; at any rate none appeared. The absence of all trace of the Archduke Rudolph at this time, or of any reference to him in the correspondence of the last few years, is very remarkable.

Neither Beethoven himself nor any of his friends seem to have been aware that death was near. His letter to Moscheles of Mar. 18 is full of projects, and a conversation reported by Breuning[6] shows that he contemplated, in addition to the tenth symphony, a Requiem, music to *Faust* and an instruction book for the piano—'to be something quite different from that of any one else.' To Moscheles he speaks of the symphony as lying 'in his desk fully sketched'—much as Coleridge used to talk of works as complete of which the title-pages only had been put on paper; for nothing which can be identified with the description has been found. Indeed, the time of both projects and fulfilment was over—the night was come in which no man can work. The accumulation of water increased alarmingly, the wounds inflamed, lying became painful, and it was evident that the end was near. On the 10th he wrote to Schott desiring the dedication of the C♯ minor quartet to be altered in favour of Baron von Stutterheim, in token of his obligation to him as colonel of his nephew's regiment. On the 17th were written his 'letzte Zeilen an Schindler.'[7] On the 18th, after dictating his letter to Moscheles, he settled the dedication of his last quartet (in F, op. 135) to Johann Wolfmayer,[8] a Vienna merchant for whom he had much respect. On the following day he spoke of writing to Stumpff and Smart, but was compelled to relinquish the task to Schindler. '*Plaudite amici, comoedia finita est*,' said he to his two faithful friends, with a touch of his old good-humour—the play was over, the lifelong symphony ended, and it was time to draw the curtain.[9] On the 23rd, with the help of Breuning, he added with his own hand a codicil to his will, appointing his nephew Carl his sole heir, but without power over the capital of the property bequeathed. Thus two of his latest acts were inspired by his nephew. Several people appear to have come in and out during the last few days to look once more at the departing composer. Amongst these Schubert[10] is said to have remained a long time, and to have been recognised by Beethoven, though he failed to understand the signs made by the dying man. He left the room at length deeply moved.

Beethoven spoke of the Philharmonic and the whole English nation, adding, 'God bless them.' An hour or so afterwards some wine came from Mainz. Schindler put two bottles before the bed: 'A pity, a pity, too late,' said he and these were his very last words.[11]

On the 24th Beethoven received the Sacraments of the Church, and at about one in the afternoon of the same day he sank into apparent unconsciousness, and a distressing conflict with death began which lasted the rest of that day, the whole of the next, and until a quarter to six on the evening of the 26th, the constant convulsive struggle and the hard rattle in the throat testifying at once too painfully to the strength of his constitution and the fact that he was still alive. Stephen Breuning and Schindler had gone to the Währinger Cemetery to choose the spot for the grave; the little Breuning was away at his lessons; Johann Beethoven's wife and Anselm Hüttenbrenner (the friend of Schubert) alone[12] were in the sick-room. As the evening closed in, at a quarter to six, there came a sudden storm of hail and snow, covering the ground and roofs of the Schwarzspanierplatz, and followed by a flash of lightning and an instant clap of thunder.

So great was the crash as to rouse even the dying man. He opened his eyes, clenched his fist, and shook it in the air above him. This lasted a few seconds while the hail rushed down outside, and then the hand fell, and the great composer was no more.[1]

Beethoven died on Monday, March 26, 1827. He was fifty-six years old on the 16th of the previous December.

The seven bank shares (for 1000 florins each) were discovered the next day, after long search, in a secret drawer in the writing-desk, together with the two passionate and mysterious letters so often supposed—though to all appearance inaccurately—to be addressed to the Countess Giulietta Guicciardi.[2]

The post-mortem examination was made on the evening of the 27th by Dr. Wagner in the presence of Wawruch. During the 28th the body lay in one of the rooms, and a sketch [3] of the face was made by Danhauser.

The funeral took place on the 29th at 3 P.M., and was attended by an immense mass of people,[4] including all the musicians of the city. From the house to the Church of the Minorites, in the Alsergasse on the glacis, a procession [5] was formed, in which Breuning, Johann van Beethoven and Mosel were chief mourners; the coffin was borne by eight members of the Opera, namely Eybler, Hummel, Seyfried, Kreutzer, Wiegl, Gyrowetz, Gänsbacher and Würfel, and 36 torch bearers—including Czerny, Lablache, Grillparzer, Wolfmayer and Schubert—round it. A choir of 16 men singers and 4 trombones alternately sang and played two *Equali* of Beethoven's, originally written for trombones for All Souls' Day during his stay in Linz, and arranged to the words of the 'Miserere' and 'Amplius' by Seyfried. The crowd was enormous,[6] soldiers had to be called in to force the way, and it took an hour and a half to pass the short distance from the house to the church. From the church the body was taken in a hearse drawn by four horses, and without music, to the Währinger cemetery, followed by a long string of carriages and many people.

At the gate of the cemetery an address by Grillparzer was recited by Anschütz—who being an actor was not permitted to speak on consecrated ground—and two poems by Castelli and Schlechta were read and distributed. Before the earth was filled in three laurel wreaths were placed on the coffin by Hummel. The grave was against the south wall of the cemetery, near the middle. Schubert was three places off, and Clement and Seyfried lie nearly opposite.

On Apr. 3, the furniture and clothes, with the pianos by Graf and Broadwood, were sold by auction[7] at the lodgings. The same day a solemn mass was performed in the Hofpfarrkirche of the Augustines; Mozart's Requiem was sung, Lablache not only taking the bass part but paying Barbaja a sum of 200 gulden for the cost of the singers. Two days later Cherubini's Requiem was sung at the Karlskirche.

On Nov. 5 and following days [8] the sale of his musical effects took place by auction. Thayer has reprinted the catalogue in his *Verzeichniss*, pp. 173-82. There were 50 lots of sketch- and note-books; 19 sketches, fragments, etc., and 73 autographs of published pieces; 5 MS. copies of published pieces; 40 copies of unpublished works; 10 sets of MS. parts; 17 MS. copies of music by various authors—including scores of Cherubini's 'Faniska' and Mozart's 'Zauberflöte'; 26 lots of printed music; 6 of works on music; 1 autograph symphony of Haydn's; a pianoforte; a medal; and two violins. The produce of the sale was 1193 florins, curiously little [9] when compared with the prices which such treasures would fetch now. This sum, added to the value of the bank shares and the Philharmonic £100, made in all, according to Schindler,[10] a total of 10,232 florins (in silver), or a little over £1000.

In course of time the grave fell into neglect, and in 1863 the Gesellschaft der Musikfreunde undertook to exhume and re-bury [11] the remains of both Beethoven and Schubert. This was done on Oct. 13, and Beethoven's monument now consists of a large flat stone covering the grave, surrounded by an iron railing, and headed by an obelisk in stone bearing a lyre, the usual emblem of eternity, and the simple name BEETHOVEN.[12]

BEETHOVEN'S MUSIC

Beethoven's music has been divided by von Lenz [13] into three styles, and the division has evidently some justice in it, or it would not have been so widely accepted as it is even by those who differ about its details. That the division is not chronological is evident from

[1] Within a few hours his hair was entirely cut off by visitors (Breuning, p. 113).

[2] But the question has not been allowed to rest. Thayer's identification of the immortal Beloved with the Countess Therese von Brunswick was countered by Kalischer (*Die unsterbliche Geliebte Beethovens*, 1891) and later writers brought forward other more or less tenable hypotheses. These have been concisely summarised by Ernest Newman in *Mus. T.*, June 1911, p. 370. Krehbiel devoted an important chapter (i. xxi.) to a re-examination of the evidence, including the enquiry promoted by *Le Temps* and its result. See *Krehbiel*, i. 317 *et seq.* C.

[3] Breuning, p. 113. Afterwards lithographed, but now rare owing to the stone having broken.

[4] At the back of the Schwarzspanierhaus lies the Alsergrund. It is a curious fact that his last lodging should have been close to his supposed first one (*Thayer*, ii. 103).

[5] As it rounded the Red House the Funeral March from op. 26 was played (Breuning, p. 115). [6] 20,000, says Breuning.

[7] Only the Broadwood, see Breuning, p. 124. It was bought by Spina, who sent it to Liszt at Weimar, where it remained. It was given by Liszt to the Princess Witgenstein. A. J. H.

[8] Breuning, 125. The catalogue and valuation are dated Aug. 16.

[9] Autographs of symphonies fetched 5 florins each; overtures, 2½; sonatas, 2; the Mass in D, 7; and so on.

[10] *Biographie*, ii. 147.

[11] See the *Actenmässige Darstellung der Ausgrabung und Wiederbeisetzung der irdischen Reste von Beethoven und Schubert*, Vienna, 1863.

[12] On June 21, 1888, at 4 o'clock in the afternoon, B.'s remains were once more taken up, put into a chapel, and the next day transferred to the Central Cemetery, where they were placed in a vault (*Times*, June 22, 1888). At Bonn, on Aug. 10, 1845, was inaugurated the Beethoven monument by Hähnel (see *Mus. T.*, 1901, p. 166). Mention may also be made of one by Zumbusch at Vienna (1880), and another by Max Klinger, purchased by the city of Leipzig in 1902.

[13] *Beethoven et ses trois styles*, St. Petersburg, 1852. See, however, 'Beethoven' in Fétis's *Biographie universelle des musiciens*, 1st ed.

the fact that Lenz includes the second symphony (op. 36), written in 1802, in the first period, when he places the sonatas op. 26 and 27, which were completed a year earlier, and the 3 sonatas, op. 31, which were written in company with the second symphony, in the second period. As far as the sonatas are concerned he ends the first period with op. 22.

But we may go further than that. The first movement of the sonata in E♭ (op. 7) and the finale of the quartet in F, op. 18, No. 1, contain examples of the episodes which form one of Beethoven's main characteristics, such as even the first movement of the Eroica can hardly surpass for independence and originality. The scherzo of symphony No. 1 and the scherzo and finale of symphony No. 2 contain passages which would be found original and characteristic if met with in the compositions of many years later. Some will find it hard to place the quartet in F minor, which Mendelssohn thought the most 'Beethovenish' of all Beethoven's works, in anything but the third style; while the overture in C, op. 124, written in 1822, might be classed with the works of an earlier period. And yet on the whole the division is just, as an expression of the fact that Beethoven was always in progress; and that, to an extent greater than any other musician, his style matured and altered as he grew in life. He began, as it was natural and inevitable he should, with the best style of his day—the style of Mozart and Haydn; with melodies and passages that might be almost mistaken for theirs, with compositions apparently moulded in intention [1] on them. And yet even during this Mozartian epoch we meet with works or single movements which are not Mozart, which Mozart perhaps could not have written, and which very fully reveal the future Beethoven. Such are the first two movements of the sonata in A (op. 2), the sonatas in E♭ (op. 7) and D (op. 10, No. 3) and B♭ (op. 22), the scherzos of the first and second symphonies already mentioned, and the coda of the finale to the second symphony. From this youthful period he passes by the three sonatas, op. 31—which we have seen him speaking of as a change in his style—by the Kreutzer sonata (Mar. 1803), by the pianoforte concerto in C minor,[2] and by the Eroica (1804), to his mature period, a time of extraordinary greatness, full of individuality, character and humour, but still more full of power and mastery and pregnant strong sense.

This splendid and truly astonishing period contains the opera of 'Leonora-Fidelio,' with its four overtures; the Mass in C; six symphonies, from the Eroica to No. 8 inclusive; the overture to 'Coriolan'; the 'Egmont' music; the pianoforte concertos in G and E flat; the violin concerto; the Rasoumowsky quartets and those in E♭ (op. 74) and F minor (op. 95); the three later PF. trios; the 'Liederkreis'; and last, not least, a dozen sonatas for piano solo, of which the chief are the D minor and the 'Appassionata,' though the others are closely akin and hardly inferior.

From this period of extraordinary force and mastery—though abounding also in beauty and sentiment—he passes by a second transition to his third and final style. This transition is perhaps more obvious than the former. The difference between the ninth symphony and its predecessors—not only in dimensions and in the use of the chorus, but in elevation and sentiment, and in the total impression produced—is unmistakable. The five pianoforte sonatas, op. 101 to op. 111, are perfectly distinct from any of the earlier ones, not only in individuality—for all Beethoven's works are distinct—but in a certain wistful yearning, a sort of sense of the invisible and vision of the infinite, mingled with their power. The last quartets, op. 127 to op. 135, have the same characteristics as the sonatas: but they are also longer, full of changes of time, less observant than before of the traditional forms of expression, less careful to make obvious the links of connexion, and still more full of intense personality and of a wild unimprisoned spirit. All the sentiment and earnestness of Schumann, all the grace and individuality of Schubert, are there, with an intensity, breadth and completeness which those masters might perhaps have attained if they had bestowed the time and pains on their work which Beethoven did. In this period he passes from being the greatest musician to be a great teacher, and in a manner which no one ever did before, and possibly no one will ever do again, conveys lessons which by their intense suggestiveness have almost the force of moral teaching.

The cause of this is not far to seek. As we have seen in the preceding portion of this sketch, the year 1814 was the culminating period of Beethoven's prosperity. He had produced his latest and then greatest works under such favourable circumstances as no musician had before enjoyed. He had been fêted and caressed by emperors and empresses, and others of the greatest of this world's great; he had for the first time in his life been able to put by money, and feel at all independent of daily labour. Immediately on this came an equally great and sudden reverse—and that not a material reverse so much as a blow to his spirit, and a series of misfortunes to mind and heart such as left all his former sufferings far behind. His brother's death; the charge of the nephew; the collision with the widow and with his other relatives and friends; the lawsuits; the attempts to form a home of his own, and the domestic worries and wretchedness

[1] Sonata, op. 10, No. 1; melody in working out of 1st movement of septet; adagio of op. 31, No. 1; quintet, op. 16.

[2] In the finale of this work we almost surprise the change of style in the act of being made.

consequent thereon; the last stages of his deafness; the appearance of chronic bad health; the actual want of money—all these things, which lasted for many years, formed a Valley of the Shadow of Death such as few men have been called to traverse, and which must inevitably have exercised a great influence on a nature so sensitive and in some respects so morbid. That this fiery trial did not injure his power of production is evident from the list of the great works which form the third period—from op. 101 inclusive. That it altered the tone and colour of his utterance is equally evident from the works themselves. 'He passes,' as Dannreuther has finely[1] said, 'beyond the horizon of a mere singer and poet, and touches upon the domain of the seer and the prophet; where, in unison with all genuine mystics and ethical teachers, he delivers a message of religious love and resignation, identification with the sufferings of all living creatures, deprecation of self, negation of personality, release from the world.'

Technical Methods. — Beyond the individual and peculiar character which distinguishes his works and makes them Beethovenish, as Haydn's are Haydnish and Mozart's Mozartish, though in a greater degree because of the stronger character of the man—there are definite peculiarities in Beethoven's way of working which should be specified as far as possible. That he was no wild radical, altering for the mere pleasure of alteration, or in the mere search for originality, is evident from the length of time during which he abstained from publishing or even composing works of pretension, and from the likeness which his early works possess to those of his predecessors. He began naturally with the forms which were in use in his days, and his alteration of them grew very gradually with the necessities of his expression. The form of the sonata is 'the transparent veil through which Beethoven seems to have looked at all music.'[2] And the good points of that form he retained to the last—the 'triune[3] symmetry of exposition, illustration and repetition,' which that admirable method allowed and enforced—but he permitted himself a much greater liberty than his predecessors had done in the relationship of the keys of the different movements and parts of movements, and in the proportion of the clauses and sections with which he built them up. In other words, he was less bound by the forms and musical rules, and more swayed by the thought which he had to express, and the directions which that thought took in his mind.

1. The range of keys within which the composers of sonatas and symphonies before Beethoven confined themselves was very narrow. Taking the first movement as an example of the practice, the first theme was of course given out in the tonic, and this, if major, was almost invariably answered in due course by a second theme in the dominant or fifth above; for instance, if the sonata was in C the second subject would be in G, if in D it would be in A. If the movement were in minor, the answer was in the relative major—C minor would be answered by E♭, A minor by C♮, and so on. This is the case 19 times out of 20 in the sonatas and symphonies of Haydn and Mozart. A similar restriction governed the key of the second movement. It was usually in the subdominant or fifth below—in F if the key of the piece were C, in B♭ if the key were F, and so on. If the piece were in a minor key the second movement was in the third below. A little more latitude was allowed here than in the former case; the subdominant now and then became the dominant, or, very rarely, the mediant or third above; and the relative major was occasionally exchanged for the tonic major. (See Form and Sonata.)

Beethoven, as already remarked, adopted very different relations in respect of the change of key from one movement to another. Out of 81 works in sonata form he makes the transition to the dominant only 3 times; to the subdominant 19 times; to the mediant or third above 4 times; and to the submediant or third below 30 times. From tonic major to tonic minor he changes 12, and from minor to major 8 times. His favourite change was evidently to the submediant or third below—that is to say, to a key less closely related to the tonic and more remote than the usual key. He makes it in his first work (op. 1, No. 2). In his B♭ trio (op. 97) he has it twice, and in his variations on an original theme (op. 34), each of the first 5 variations is a third below the preceding.

In the relation of his first and second subjects he is more orthodox. Out of 26 of the pianoforte sonatas the usual change to the dominant occurs 17 times, to the mediant 3, and to the submediant 3.

2. Another of his innovations had respect to the connexion of the different subjects or clauses. His predecessors were in the habit rather of separating their clauses than of connecting them; and this they did by conventional passages of entirely different character from the melodious themes themselves, stuffed in between the themes like so much hay or paper for mere packing. Any symphony of Mozart or Haydn will give examples of this, which Wagner[4] compares to the 'rattling of the dishes at a royal feast.' Mozart also has a way of drawing up and presenting arms before the appearance of the second subject, which

[1] *Macmillan's Magazine*, July 1876. In these and the following quotations, Grove paraphrased Dannreuther's words, instead of quoting them verbatim. J. S. S.

[2] Wagner.

[3] *Macmillan's Magazine*, July 1876.

[4] *Music of the Future*, translated by Dannreuther, 1873, p. 44.

tends to cut the movement up into very definite portions. Of these tiresome and provoking intermediate periods Beethoven got rid by the use of phrases which are either parts of the main theme or closely related to it; and he thus gives his movements a unity and consistency as if it were an organic growth, and not a piece of work cunningly put together by art or man's device. How he effects this, and the very tentative and gradual way in which he does it, may be seen in symphonies 1 and 2 and the Eroica, in which last all trace of the old plan has almost entirely disappeared.

3. The first movement of the Eroica supplies instances of other innovations on the established forms. Not only in the exposition (before the double bar) are other themes brought in besides the two main subjects, but in the 'illustration,' or, to use the more common term, the 'working out,' there is an unanticipated explosion which, to say the least, is entirely without precedent, followed by an entirely fresh episode as important as anything that has occurred before, and that again by a new feature (the staccato bass) which, while it accompanies and reinforces the main subject, adds materially to the interest of the music. Again, in the repetition we have not only a great departure from regular rule in the keys which the music goes through, but we have a coda of no fewer than 140 bars long, proclaiming itself by its opening as an independent member of the movement, and though made almost entirely out of previous material, yet quite differently expressed from anything before, and full of fresh meaning. Now none of these alterations and additions to the usual forms were made by Beethoven for their own sake. They were made because he had something to say on his subject which the rules did not give him time and space to say, and which he could not leave unsaid. His work is a poem in which the thoughts and emotions are the first things, and the forms of expression second and subordinate. Still, even in his innovations, how careful he is to keep as near the rules as possible! His chief episodes occur in the working out, where a certain license was always lawful; and codas were recognised, and had even, as in Mozart's 'Jupiter,' been turned to noble account. The same characteristics are found in the ninth symphony as in the third, only the mode of mind being entirely different, the mode of expression is different too, but the principle of the perfect subordination of the expression to the thought, while adhering as closely to the 'form' as was consistent with perfect expression, is the same. One or two pieces of his second period may however be named, in which both thought and mode of expression are so entirely different from anything before them, that they stand quite by themselves. Such movements as the opening adagio of the sonata in C♯ minor, or the andante con moto of the pianoforte concerto in G—in which Schumann used to see a picture of Orpheus taming brute-nature—have no prototypes; they are pure creations, founded on nothing previous, but absolutely new in style, idea and form.

In the later quartets it must be admitted that he wandered further away from the old paths; the thought there seems everything and the form almost nothing. And this fact, as much as the obscurity and individuality of the thoughts themselves and their apparent want of connexion until they have become familiar, is perhaps the cause that these noble works are so difficult to understand. The forms, depend upon it, were founded in reason and nature. They grew through long periods to be what Haydn fixed them at; and as long as the thoughts of composers did not burst their limits they were perfect. Beethoven came, and he first enlarged and modified them, adhering, however, to their fundamental principle of recurrence and recapitulation, till in the end, withdrawn more and more into himself by his deafness, he wrote down what he felt, often without thinking of the exigencies of those who were to hear him. This, however, only applies to the later quartets. The ninth symphony and the last pianoforte sonatas are as strictly in form, and as coherent and intelligible, as could be desired.

4. A striking instance of this loyalty is found in Beethoven's treatment of the 'Introduction.' This—a movement in slow time, preceding the first allegro—forms part of the original design of the overture by Lully, and is found in nine out of ten of Handel's overtures. Haydn often has one in his symphonies, usually 8 to 12 bars long, occasionally as much as 20. Mozart has prefixed similar prefaces to some of his works, such as the symphony in E flat, the quintet for piano and wind instruments, and the famous quartet in C, dedicated to Haydn. Beethoven, besides placing one before his quintet for piano and wind (op. 16), which, as already remarked, is like a challenge to Mozart, has one to the 'Sonata pathétique' and to the first symphony. In the last of these cases it is 12 bars long. In the second symphony it expands to 33 bars long, and increases largely in development. But even this is a mere preface when compared with the noble and impressive movements which usher in the allegros of the fourth and seventh symphonies—long and independent movements, the latter no less than 80 bars in length, full of important and independent ideas, and of the grandest effect.

In all the instances mentioned—the succession of keys, the episodes, the coda, the introduction—Beethoven's modifications seem to have sprung from the fact of his regarding his music less as a piece of technical performance than his predecessors had perhaps done, and more as the expression of the ideas with which

his mind was charged. The ideas were too wide and too various to be contained in the usual limits, and therefore the limits had to be enlarged. He regards first what he has to say —his thought—and how he shall convey and enforce and reiterate that thought, so as to express it to his hearer exactly as he thinks it, without being careful to find an old formula in which to couch it. Even consecutive fifths were no hindrance to him—they gave the exact sound in which he wished to convey his idea of the moment; and therefore he used them as naturally as a speaker might employ at a particular juncture, with the best effect, an expression usually quite inadmissible. No doubt other musicians had taken similar liberties; but not to the same extent, because no one before had been gifted with so independent and original a nature. But in Beethoven the fact was connected with the peculiar position he had taken in society, and with the new ideas which the general movement of freedom at the end of the 18th century, and the French Revolution in particular, had forced even into such strongholds as the Austrian courts. People who were the servants of archbishops and princes, and moved about with the rest of the establishment in the train of their master, who wore powder and pigtail and red-heeled shoes, and were forced to wait in anterooms and regulate their conduct strictly by etiquette, and habitually keep down their passions under decorous rules and forms, could not give their thoughts and emotions the free and natural vent which they would have had without the perpetual curb of such restraints and the habits they must have engendered. But Beethoven, like Mirabeau, had 'swallowed the formulas' of the day; he had thrown over etiquette, and, *roturier* as he was, lived on absolute equality with the best aristocracy of Vienna. What he felt he said, both in society and in his music, and the result is before us. The great difference is, as we have already remarked, that whereas in his ordinary intercourse he was extremely abrupt and careless of effect, in his music he was exactly the reverse: painstaking, laborious and never satisfied till he had conveyed his ideas in unmistakable language.

5. The scherzo stands perhaps in a different category from the three features already mentioned. It is less of a modification and more of a distinct new creation. The word is met with in Haydn and Mozart, but in a different sense from that in which Beethoven uses it, and apparently neither of those masters has it in a symphony. To both of them the third movement of a symphony was a minuet. All that a minuet could be made they made of it, but it was never given them to go beyond. The minuet remained a dance tune to the end of its days, and is so even in Beethoven's No. 8 symphony. In fact Haydn actually lamented that he could not make more of it than he had. When discussing a rule of Albrechtsberger's by which fourths were prohibited in strict composition, he said,[1] 'Such trifling is absurd; I wish, instead, that some one would try to compose a really new minuet.' This Beethoven did. The third movement of his first symphony is what Haydn wished to see.[2] Though labelled 'menuetto,' it is quite unlike a minuet. It is in fact a scherzo, and in its little dimensions is the pattern and model of those gigantic movements which in the Eroica, the C minor, the No. 7 and especially the No. 9 of the symphonies; in the B flat trio; in the sonata op. 106; and the first of the Rasoumowsky quartets, are so truly astonishing, and so characteristic of their great author.

6. An innovation of great importance in the finale, for which no precedent can be found, was the introduction of the chorus. In the Eroica symphony Beethoven showed how a set of orchestral variations could be employed in a finale. In the 'Choral Fantasia' again he showed with what effect a chorus could be employed in the same part of the work. But in the ninth symphony he combined the two, by using the chorus in a succession of variations. Mendelssohn has followed his example in the 'Lobgesang,' the vocal portion of which is the last movement of a symphony; but he has not adopted the variation form.

7. One of the most striking characteristics of Beethoven's music is the individual variety of each piece and each movement. In the symphonies every one of the nine first movements is entirely distinct from the other eight, and the same of the andantes, scherzos and finales. Each is based on a distinct idea, and each leaves a separate image and impression on the mind. And the same may be said of the majority of the smaller works, of the concertos and quartets and pianoforte trios—certainly of the sonatas, all but perhaps a very few. The themes and passages have no family likeness, and have not the air of having been taken out of a stock ready made, but are born for the occasion. He thus very rarely repeats himself. The theme of the slow movement of the sonata in F minor and the second theme in the first movement of the sonata in C (op. 2, Nos. 1 and 3) are adapted from his early pianoforte quartets. The minuet in the septet is developed from that in the little sonata in G (op. 49, No. 2). The Turkish March [3] in the 'Ruins of Athens' had already appeared as a theme for variations in D (op. 76). The theme of the variations in the 'Choral Fantasia' is a song of his own, 'Seufzer eines Ungeliebten (B. & H. 253), composed many years before. The melodies of two Contretänze

[1] *Griesinger*, p. 114.
[2] One would like to know if Haydn ever heard the first or any other of Beethoven's symphonies, and what his real feelings were about them. He lived on till 1809, and might thus have heard the Eroica and even the C minor.
[3] Said to be a Russian theme.

(No. 17*a*) are employed in the 'Prometheus' music, and one of them is also used in a set of variations (op. 35) and in the finale to the Eroica. In the finale to the 'Choral Fantasia' there are some slight anticipations of the finale to the choral symphony; the 'Prometheus' music contains an anticipation of the storm in the 'Pastoral' symphony, and the subject of the allegretto to the eighth symphony is found in a humorous canon—such are all the repetitions that have been detected. How far he employed Volkslieder and other tunes not invented by himself is not yet known.[1] Certain melodies in the Eroica, 'Pastoral' and No. 7 symphonies, and in the sonata op. 109, are said to have been thus adopted, but at present it is mere assertion.

This is perhaps the most convenient place for noticing a prominent fact about his own melodies, viz. that they often consist wholly or mainly of consecutive notes. This is the case with some of the very finest themes he has written, witness the scherzo and finale to the choral symphony; and that to the 'Choral Fantasia'; the slow movements of the B♭ trio and the symphony in the same key; the adagio to the quartet op. 127, and many others.[2]

8. In the former part of this sketch we have mentioned the extraordinary manner in which Beethoven wrote and rewrote until he had arrived at the exact and most apt expression of his thought. The same extraordinary care not to be mistaken is found in the *nuances*, or marks of expression, with which his works are crowded, and which he was the first to introduce in such abundance.[3] For instance, to compare the 'Jupiter' symphony—Mozart's last—with Beethoven's first, we shall find that the violin part of the first half of the opening allegro has in the former (120 bars long) 14 marks of expression, in the latter (95 bars) 42 marks. The andante to Mozart's symphony in G minor has 38 marks to 131 bars, while that to Beethoven's No. 2 has 155 marks to 276 bars. In the later works this attention to *nuance* increases. The allegro agitato of the quartet in F minor, 125 bars long, contains 95 marks; the cavatina in the quartet in B♭, 66 bars long, contains 58 marks. It is part of the system of unwearied care and attention by which this great man, whose genius was only equalled by his assiduity, brought his works to their actual perfection, and to the certainty that they would produce what he himself calls *il suo proprio proposto effetto*[4]—their own special and intended effect. How original and splendid the effect of such *nuances* can be may be seen in the vivace of the No. 7 symphony, where the sudden change from *ff* to *pp*, accompanying an equally sudden plunge in the melody and abrupt change in the harmony, produces a wild romantic effect which once to hear is never to forget.

In addition, Beethoven here and there gives indications such as the 'Bitte um innern und äussern Frieden' at the Dona in the Mass in D, the 'beklemmt' in the cavatina of the B♭ quartet, the 'Arioso dolente' of sonata op. 110, which throw a very personal colour over the piece. The word 'Cantabile' has a special meaning when he employs it.

9. Beethoven used variations to a very great extent. For the pianoforte, alone and in conjunction with other solo instruments, he has left 29 sets, some on original themes, some on airs by other composers. But, besides these, several movements in his sonatas, quartets and trios are variations, so entitled by him. Every one will remember those in the septet, in the 'Harp' quartet, in the Kreutzer sonata, in the piano sonata in A flat (op. 26), and in the two late sonatas in E and C minor (op. 109 and 111). Many other movements in the same branches of composition are variations, although not so named. The slow movements in the sonata 'Appassionata' and the op. 106 are splendid instances. In the symphonies, the slow movements of the C minor, the 'Pastoral' and the ninth are magnificent examples, the last the most splendid of all—while the colossal finales of the Eroica and the ninth symphony are also variations, though of a very different order from the rest and from each other. Of the lowest and most obvious type of variation, in which the tune remains *in statu quo* all through the piece, with mere changes of accompaniment above, below and around it—the Herz-Thalberg type—the nearest approach to be found in Beethoven's works is the fifth variation in op. 26. His favourite plan is to preserve the harmonic basis of the theme and to modify and embellish the melody. Of this type he makes use with astonishing ease and truly inexhaustible originality. It is to be found in some shape or other in nearly every work of his second and third periods. It is not his own invention, for fine instances of it exist in Mozart and Haydn, but no one practised it with such beauty and nobility as he did, unless it be Schubert, who at any rate approaches very near him in its use. Perhaps the finest instance of it is in the adagio of the ninth symphony, in which the melody is varied first in common time and then in 12–8, with a grace, beauty and strength which are quite unparalleled. There is, however, a third kind of variation which is all Beethoven's own, in which everything undergoes a change—rhythm, melody and harmony—and yet the individual theme remains clearly present.

'Perhaps one melodious step only of the subject is taken (op. 109; var. 1 and 5); perhaps the funda-

[1] The Russian theme in the 'Rasoumowsky' quartets are the most prominent instances. See RASOUMOWSKY.

[2] The practice began early. See the second subject of the finale of the trio in C minor, op. 1, No. 3.

[3] This care is found very early in his life. Mention is made in the suppl. vol. of the B. & H. edition of the 'careful exactness in the marks of expression which characterises the autograph of the flute trio (1786).'

[4] Preface to the Eroica.

mental progressions of the harmony alone are retained; perhaps some thorough rhythmical alteration is made, with an entire change of key, as in the *Poco Andante*, finale of Eroica; in the B♭ variation *alla marcia*, of the ninth symphony; and in many of the thirty-three variations. This is no mere change of dress and decoration, but an actual creation of something new out of the old germ—we see the chrysalis change into the butterfly, and we know it to be the same creature despite the change.' 'In no other form than that of the variation does Beethoven's creative power appear more wonderful, and its effect on the art more difficult to measure.' [1] (See also VARIATIONS.)

10. Of fugues Beethoven wrote but few, and those near the end of his career, but he always knew how to introduce a *fugato* or bit of contrapuntal work with the happiest effect. Witness a passage in the working out of the first movement of the Eroica symphony, and another in the finale of the same work; or in the middle portion of the allegretto of No. 7; or the lovely counterpoint for the bassoon in the opening of the finale of No. 9. Of complete fugues the only instrumental ones are the finale to the 3rd of the Rasoumowsky quartets; the finales to the violoncello sonata op. 102, No. 2, and the PF. sonatas op. 101, 106 and 110; and the enormous movement in B flat which originally formed the termination to the great string quartet in the same key. Of the last-named fugue one has no opportunity of judging, as it is never played [2]; but of the others, especially those in the PF. sonatas, it may be safely said that nothing in the whole of Beethoven's music is associated with a more distinct dramatic intention, whether it be, as has been suggested,[3] a resolution to throw off an affection which was enthralling him, or some other great mental effort.

11. Beethoven did not originate 'programme music,' for Bach left a capriccio describing the departure of his brother; and two symphonies are in existence by KNECHT (*q.v.*)—a countryman of Beethoven's, and a few years his senior—entitled 'Tableau musical de la nature' and 'La Joie des bergers interrompue par l'orage,' which are not only founded on the same idea with his 'Pastoral' symphony, but are said [4] to contain somewhat similar themes and passages. But, though he did not invent it, he raised it at once to a higher level than before, and his programme pieces have exercised a great effect on the art. 'When Beethoven had once opened the road,' said Mendelssohn, 'every one was bound to follow'; and it is probable that without his example we should not have had Mendelssohn's overtures to 'The Hebrides' or to the 'Meeresstille und glückliche Fahrt.' His works in this line,[5] omitting all which did not receive their titles from himself, are: the 'Sonata pathétique'; 'La Malinconia,' an adagio in the string quartet, No. 6; the Eroica symphony; the 'Pastoral' ditto; the 'Battle of Vittoria'; the sonata 'Les Adieux, l'absence et le retour'; the movements in the A minor quartet (op. 132), entitled *Canzona di ringraziamento in modo lidico offerta alla divinità da un guarito*, and *Sentendo nuova forza*; the movement in the F major quartet (op. 135), entitled 'Der schwergefasste Entschluss: Muss es sein?—Es muss sein'; and a 'Rondo a capriccio' for piano (op. 129), the MS. of which is entitled by the composer 'Die Wuth über den verlornen Groschen ausgetobt in einer Caprice.' Beyond these Beethoven made no acknowledged attempts to depict definite scenes or moods of mind in instrumental music. We have already (p. 277) quoted Schindler's statement that Beethoven intended the sonatas in op. 14 to be a dialogue between two lovers, and to represent the 'entreating and resisting principle'; and the sonata in E minor (op. 90) is said to have had direct reference to the difficulties attending Moritz Lichnowsky's passion for the actress whom he ultimately married. The first movement was to have been called 'Kampf zwischen Kopf und Herz' and the second 'Conversation mit der Geliebten.' But none of these titles were directly sanctioned by Beethoven himself. In the programme of the concert of Dec. 22, 1808, at which the 'Pastoral' symphony was produced, he prefixed the following words to the description of the symphony: —'Pastoral Symphonie: mehr Ausdruck der Empfindung als Malerei'—'more expression of emotions than portraiture,' a canon which should surely be taken as the guide in interpreting all similar works of his.

We have now endeavoured to give the main external characteristics of Beethoven's music; but the music itself, though it resides in them, is beyond and above them all. 'While listening,' says Dannreuther, 'to such works as the overture to Leonora, the Sinfonia Eroica or the ninth symphony, we feel that we are in the presence of something far wider and higher than the mere development of musical themes. The execution in detail of each movement and each succeeding work is modified more and more by the prevailing poetic sentiment. A religious passion and elevation are present in the utterances. The mental and moral horizon of the music grows upon us with each renewed hearing. The different movements—like the different particles of each movement—have as close a connexion with one another as the acts of a tragedy, and a characteristic significance to be understood only in relation to the whole; each work is in the full sense of the word a revelation. Beethoven speaks a language no one has spoken before, and treats of things no one has dreamt of before: yet it seems as though he were speaking of matters long familiar,

[1] Dannreuther in *Macmillan's Magazine*, July 1876.
[2] It was, however, played by the Heckmann Quartet, in Dec. 1887, at Prince's Hall, London, and has received periodic performances since. The London String Quartet now (1926) regularly include it in their complete cycles of Beethoven's quartets. G.
[3] Davison's Analysis of the Sonata, op. 106.
[4] Fétis, *Biographie*, s.v. Knecht.
[5] That is to say, those in which a 'programme' is confessed. Critical estimate of this point has altered considerably since Grove wrote (see ABSOLUTE MUSIC and PROGRAMME MUSIC). G.

in one's mother tongue; as though he touched upon emotions one had lived through in some former existence. . . . The warmth and depth of his ethical sentiment is now felt all the world over, and it will ere long be universally recognised that he has leavened and widened the sphere of men's emotions in a manner akin to that in which the conceptions of great philosophers and poets have widened the sphere of men's intellectual activity.' [1]

The Beethoven literature is very large. I shall confine myself [2] to mentioning those portions of it which appear to have real value for the investigator.

I. His own letters. Of these there are several collections. (1) *Briefe Beethovens* (Stuttgart, 1865), edited by Dr. Nohl: contains 411. (2) 83 . . . *Originale Briefe L. v. B.'s an den Erzherzog Rudolph*, edited by Köchel (Vienna, 1865). (3) *Briefe von B. an Gräfin Erdödy und Max Brauchle*, edited by Schöne (Leipzig, 1867). The last two were included with many others in a further collection of 322 *Neue Briefe Beethovens*, edited by Nohl (Stuttgart, 1867). (4) Nohl's first collection and 66 of the letters to the Archduke were translated (I wish I could say carefully translated) by Lady Wallace, and published by Longmans (2 vols. 8vo. 1866). [(5) *Neue Beethovenbriefe*, edited by Dr. A. C. Kalischer (Berlin and Leipzig, 1902).]

Other letters are given by Thayer in his *Beethovens Leben*, and by Pohl in *Die Gesellschaft der Musikfreunde* (Vienna, 1871), and many others [3] exist in MS. in collections of autographs.

II. Notices of him by friends and contemporaries. Many of these must be taken with reserve, as written long after the event and with strong bias.

(1) By Seyfried, as 'Anhang' to his edition of Beethoven's 'Studien' in Thorough-bass (Vienna, Mar. 26, 1832)—144 pages, containing biographical sketch, anecdotes and traits, letters (included in Nohl), three conversations, the sale catalogue, the music sung at the funeral, poems and addresses, a catalogue of Beethoven's works, a facsimile (Adelaide), etc.

(2) Wegeler and Ries, *Biographische Notizen*, etc. (Coblenz, 1838), with 'Nachtrag' by Wegeler alone (Coblenz, 1845). Contains biography, letters and a host of anecdotes.

(3) Schindler, *Biographie* (Münster, 1840). This is the first edition of Schindler's work, which was translated into English by Moscheles and published with many additions and modifications, and with no mention of Schindler on the title-page, in 2 vols. 8vo. (Colburn, 1841). It was followed by *Beethoven in Paris* (Münster, 1842), an account of the performance of some of the symphonies by the 'Société des Concerts,' with various documents of interest; by a second edition of the *Biographie* including the *Beethoven in Paris* (Münster, 1845); and finally by a third edition in two volumes (Münster, 1860). [4] This last has been very inaccurately translated into French by Sowinski (Paris, Garnier, 1865).

(4) Gerhard von Breuning, *Aus dem Schwarzspanierhaus* (Vienna, 1874)—the recollections of Stephen von Breuning's son, who was fourteen [4] years old when Beethoven died, and was much with him during the last years of his life.

III. Smaller and more fragmentary notices are given of him—in 1798 or 1799 by Czerny, in Pohl's *Jahresbericht des Konservatorium . . . in Wien* (Vienna, 1870); and in later years by the same in Cocks's *Musical Miscellany* (London, July and Aug. 1852, Jan. 1853); in 1809 by Reichardt in *Vertraute Briefe* (Amsterdam, 1810); in 1814 by Spohr in his *Selbstbiographie* (Cassel, 1860), and by Tomaschek in *Libussa* for 1846; in 1822 by Rochlitz in the *A.M.Z.*, 1828, p. 10, printed in *Für Freunde der Tonkunst*, vol. iv. p. 348 (Leipzig, 1832); in 1824 [by Mr. Edward Schulz] in the *Harmonicon*, Jan. 1824; and [by Mrs. Payne, Dr. Burney's niece] in the *Harmonicon*, Dec. 1825; in 1825 by Rellstab in *Aus meinem Leben*, ii. 224.

Of later biographies must be mentioned that of Fétis in his *Biographie universelle des musiciens*; of Wilhelm von Lenz, *Beethoven, eine Kunst-Studie*, a Life, with an extended critical and historical catalogue of the works; and of Ludwig Nohl, *Beethovens Leben*, of which the third and last volume was published in Sept. 1876. Nohl is said to be inaccurate, and he is certainly diffuse, but I for one owe him a debt of gratitude for his various publications, the information in which can be found nowhere else. The notes to the biography contain a mass of materials of the greatest interest. Last and best is the *Ludwig van Beethovens Leben* of A. W. Thayer (Berlin, 1866, 1872 and 1879), [5] which, through the caution, wide research and unflagging industry of its author has taken a place far higher than any of its predecessors. Amongst other sources of information Thayer inherited the memoranda collected by the late Otto Jahn, who had himself made some progress in a biography of Beethoven. The corrections which this able investigator has made in many most material points, and the light thrown by him on passages hitherto more than obscure, can only be appreciated by those who read his work. There remain to be mentioned Dr. Theodor Frimmel's *Neue Beethoveniana* (Vienna, 1888; 2nd ed. 1890) and his *Ludwig van Beethoven* in the series of 'Berühmte Musiker.' Also W. J. v.

[1] Dannreuther in *Macmillan's Magazine*, July 1876.

[2] What follows is Grove's bibliography as given in the first edition of this Dictionary and its appendix. The additions contributed by J. S. Shedlock to the 2nd edition are here placed in square brackets or in footnotes. Some are included in the ADDITIONAL BIBLIOGRAPHY at the end of the article. C.

[3] Some were translated by May Herbert in *Musical World* for 1890, Mar. 15 *et seq.*

[4] Grove said 'eleven,' but the age has been corrected by Thayer; see above.

[5] Thayer's vol. iii. (1879) only carried the biography as far as 1816 inclusive. For the several extensions and revisions of the work see the ADDITIONAL BIBLIOGRAPHY given below. C.

Wasielewski's *Ludwig van Beethoven*, two vols. (Leipzig, 1895).

IV. Of more miscellaneous works the following must be named: W. von Lenz, *Beethoven et ses trois styles* (St. Petersburg, 1852; also Paris, Lavinée, 1855) [1] a book which, if full of rhapsody, is also full of knowledge, insight and enthusiasm; Oulibicheff, *Beethoven, ses critiques et ses glossateurs*, in direct antagonism to the foregoing (Paris, 1857); Berlioz, 'Étude analytique des symphonies de Beethoven' in his *Voyage musical*, vol. i. (Paris, 1844); Otto Jahn, three papers in his *Gesammelte Aufsätze* (Leipzig, 1866), viz. 'Leonore oder Fidelio,' 'B. im Malkasten,' and 'B. und die Ausgaben seiner Werke'; R. Wagner, *Beethoven* (Leipzig, 1870); Marx, *B.'s Leben und Schaffen*, 2 pts. (1859; fifth edition, Berlin, 1901); *Actenmässige Darstellung der Ausgrabung und Wiederbeisetzung der irdischen Reste von Beethoven und Schubert* (Vienna, 1863); Nohl, *Beethovens Brevier* (Leipzig, 1870), a collection of passages in his favourite authors extracted or marked by Beethoven; *Die Beethoven Feier* (Vienna, 1871), containing amongst other things Beethoven's diary from 1812 to 1818. The analytical programmes of Beethoven's sonatas by J. W. Davison, prepared to accompany Charles Hallé's performance in 1861, are full of interest.

V. We now arrive at another class of works of more importance than any yet mentioned, except perhaps the letters, and absolutely indispensable to those who wish to investigate Beethoven's music chronologically, viz. the catalogues, and reprints of the sketch-books.

Catalogues of Beethoven's works were attempted by Artaria, Hofmeister and Cranz, but the first one worthy of the subject was issued by Breitkopf & Härtel in 1851—*Thematisches Verzeichniss*, etc., large 8vo., 167 pp. The second edition of this, edited and enriched with copious notes, remarks, appendices, indexes, etc., by G. Nottebohm (Leipzig, 1868, 220 pp.), leaves little to be desired. It is arranged in the order of the opus numbers of the pieces—where they are numbered—that is to say, in the order of publication. A catalogue from a different point of view—in the order of the production of the works, and embracing those unpublished as well as published—was issued by Thayer, as a precursor, or *mémoire pour servir*, to his *Biography*, viz. *Chronologisches Verzeichniss*, etc. (Berlin, 1865). It is difficult to overestimate the value of this unpretending list, which contains a vast amount of information not only before inaccessible, but unknown to students. It was followed by a work of equal interest—*Ein Skizzenbuch von B.*, etc. (1865), the reprint of one of Beethoven's sketch-books,[2] with such commentary as is necessary fully to elucidate it. This was edited by Nottebohm, and the amount of new and important information on Beethoven's music furnished by his *Beethoveniana* (published in 1872) no one can tell who has not studied it. A further series, including *Neue Beethoveniana*, which originally appeared as articles in the *Musikalisches Wochenblatt* and other papers, together with other articles of the highest interest also from his pen, were completed and edited by E. Mandyczewski, as *Zweite Beethoveniana* (Rieter-Biedermann, 1887, 590 pp.). Before his death Nottebohm issued a second *Skizzenbuch* (B. & H. 1880), containing sketches for the Eroica. He also published a new edition of *Beethoven's Studien* (1873), in which many mistakes in Seyfried's edition are corrected and much additional information given, such as no one who has not the peculiar knowledge which Nottebohm possessed would be competent to impart. G.

The complete works of Beethoven were published by Breitkopf & Härtel in 25 series. The last (series xxv.) was issued as a supplementary volume (1887), the works therein being numbered 264-309. The following of its contents are not included in the catalogue given on the following pages.

VOCAL

Chor zum Festspiel: 'Die Weihe des Hauses'; for Solo, Chorus, and Orch.
Opferlied; Soli, Chorus, and small Orch. Composed 1823 (cf. 121*b*).
Chorus on the Allied Princes, 4 Voices and Orch.
Two Arias: 'Prüfung des Küssens' and 'Mit Mädeln sich vertragen' (*c.* 1790). Bass with Orch.
Two Arias to Umlauf's Operetta 'Die schöne Schusterin' (*c.* 1796).
Aria, 'Primo amore'; Sop. with Orch.
Abschiedsgesang; for 3 Male Voices (1814).
Song, 'Ich, der mit flatterndem Sinn'; for Voice and PF. (1792).
Merkenstein (1814). An earlier setting than op. 100.
Der Gesang der Nachtigall (cir. 1813); for Voice and PF.
Song, 'Man strebt die Flamme' (*c.* 1792) and 'O care selve' (1794); for Voice and PF.
Song, 'An Minna' (1792).
Trinklied; Voice and PF. (*c.* 1787).
Klage; Voice and PF. (1790).
Elegie auf den Tod eines Pudels; Voice and PF. (*c.* 1787).
Five Canons:—No. 1, 'Te solo adoro' (1823); No. 2, 'Freundschaft' (1814); No. 4, 'Gedenket heute an Baden' (1822); and No. 5, 'Freu' dich des Lebens' (1825). [For No. 3, 'Glaube u. hoffe,' see No. 201.]

INSTRUMENTAL

Two Marches for Military Band (1809).
Polonaise for Military Band (1810).
Écossaise for Military Band (1810).
Six 'Ländlerische Tänze,' for 2 V. and C.
March for 2 Clar., 2 Corni, and 2 Fag.
Trio for PF., Fl., and Fag. (probably 1786).
Two Bagatelles for PF. (1797).
Allegretto for PF. (*c.* 1796).
'Lustig, Traurig,' two small pieces for PF.
Fugue for Organ (1783).
Various Waltzes, Écossaises, etc., for PF.

Further, the series was continued at a later date with

310. Concerto in E♭. PF.
311. Concerto in D (1st movement). PF. and Orch.

The two following pieces have appeared in *Die Musik*, from MSS. in the Royal Library at Berlin:

1st year, No. 12, an Adagio, possibly for a musical clock.
2nd year, No. 6, a Bolero, a solo for Voice, PF., Vln., and V'cl.

Here may also be mentioned the 'Jena' symphony published 1910. See footnote, p. 262. C.

[1] New edition, Paris, 1909.
[2] Articles on *Beethoven's Sketch-Books* by J. S. Shedlock also appeared in *The Musical Times*, 1892, 1893, and 1894. The *Monatshefte für Musik-Geschichte* for 1895 and 1896 contain a series of valuable articles by Dr. A. C. Kalischer, entitled *Die Beethoven-Autographe der Königl. Bibliothek zu Berlin.*

CATALOGUE OF BEETHOVEN'S PRINTED WORKS

Compiled[1] from Nottebohm's Catalogue (B. & H. 1868), the Letters, the Works themselves, and other sources.

Abbreviations used: PF. = Pianoforte. V. = Violin. Va. = Viola. Vo. = Violoncello. Cbass = Contrabass. Clav. = Clavecin. Clar. = Clarinet. Ob. = Oboe. Fl. = Flute. Orch. = Orchestra. *Aut.* = Autograph. ann. = announced. arrt. = arrangement.

I. WORKS WITH OPUS NUMBERS

BEFFARA, LOUIS FRANÇOIS (*b.* Nonancourt, Normandy, Aug. 23, 1751; *d.* Paris, Feb. 2, 1838), from 1792 to 1816 Commissaire de Police in Paris, renowned for his collection of documents on the Lyric theatres of France and of foreign countries, which were unfortunately consumed at the burning of the Hôtel de Ville during the Commune in 1871. The National Library and Bibliothèque de l'Opéra possess some remains of it. F. G.; addns. M. L. P.

BIBL.—*Fétis*; *Q.-L.*; *Grande Encyclopédie.*

BEFFROY DE REIGNY, LOUIS ABEL (*b.* Laon, Nov. 6, 1757; *d.* Paris, Dec. 18, 1811). Under the pseudonym of Cousin-Jacques he wrote both words and music of a number of operettas and vaudevilles, which failed on account of their bizarre and eccentric nature, except two operas, 'Nicodème dans la lune' (la révolution pacifique) (1790), and 'Nicodème aux enfers' (le Français sur le planète Jupiter) (1791), which met with sensational success, but were suppressed by the police on political grounds. A collection of his songs, 'Les Soirées chantantes ou le Chansonnier bourgeois' (3 vols.), appeared in 1803. He died in great poverty. E. v. d. S.

BEGGAR'S OPERA, a BALLAD OPERA (*q.v.*) written by John Gay, with the tunes, numbering 69, arranged by Dr. Christopher Pepusch, who also composed the overture to it. First produced by John Rich at the theatre in Lincoln's Inn Fields, Jan. 29, 1728; performed in Paris (1750) as 'L'Opéra du gueux,' and revived repeatedly in the United Kingdom during the 18th and 19th centuries (notably in 1886 with Sims Reeves as Macheath). Produced (June 5, 1920) with extraordinary success by Nigel Playfair at the Lyric Theatre, Hammersmith; with scenery and dresses by Lovat Fraser, the music arranged and supplemented by Frederic AUSTIN (*q.v.*). (See also GAY; PEPUSCH; RICH.) It ran continuously till Dec. 1923. J. M[K].

Editions of the opera are many and various. The first was published in octavo by John WATTS (*q.v.*), and is dated 1728, 'To which is added the Musick engrav'd on copper plates.' The music is very rudely engraved, and inserted at the end. Watts published a later edition in octavo, with the airs cut in wood and inserted in their places. This was reissued by J. & R. Tonson in 1765. Watts's third edition was in quarto, excellently printed, with the music beautifully engraved on copper; this is dated 1729. About 1750 an edition of the tunes was published by Walsh under the title,

'The Excellent Choice, being a Collection of the most favourite old Song tunes in the Beggars Opera, set for 3 voices in the manner of catches, or for two German Flutes and a bass,' ob. folio.

A later edition was published by Longman & Broderip:

'The Beggar's Opera as it is performed at both Theatres, with the additional alterations and new basses by Doctor Arne for the voice, harpsichord, and violin,' ob. folio, *circa* 1785.

Another edition was published by Harrison & Co. *c.* 1790, ob. folio, with a smaller one for the flute. F. K.

Austin's version is published in vocal score by Boosey. The libretto (1920) was issued by Martin Secker.

BEGNIS, (1) GIUSEPPE DE (*b.* Lugo, in the Papal States, 1793; *d.* Aug. 1849), opera singer.

He sang soprano in the chapel at Lugo till he was nearly fifteen, when his voice broke. He took lessons in acting of Mandini, and later studied music again under Saraceni the composer. He made his first operatic appearance in the carnival of 1813 as *primo buffo* in Pavesi's 'Marco Antonio' at Modena, and was most successful. In the following carnival he sang at Siena, at the opening of the new Teatro degli Accademici Rozzi, as Pazzo in Paër's 'Agnese,'

and as Selim in the 'Turco in Italia' of Rossini, and was enthusiastically applauded in both. In the carnival of 1815 he was at Cesena, and particularly brilliant in Fioravanti's 'Bello piace a tutti,' in which he imitated with his falsetto the celebrated Pacchierotti. Later at Bologna he played successfully in Paër's 'Agnese,' which had been tried twice before there without success. The piece was chosen for the benefit of Signora Ronzi, who was engaged there. Shortly after, she was married to De Begnis, who was admitted to the Philharmonic Academy of Bologna at the same time. Rossini engaged them for the opening of the new theatre at Pesaro. In 1819 they made their débuts at Paris with great success; and in 1822 appeared in London in the 'Turco in Italia,' where he was considered an excellent comic actor and singer. In 1823 he had the direction, with his wife, of the operas at Bath; and he was again engaged for the operatic season of 1824. In Sept. 1834 he brought an Italian Opera Company to Dublin where he remained till 1837.

(2) Signora Ronzi de (*b.* Paris, Jan. 11, 1800 ?; *d.* Florence, June 7, 1853), is reputed to have been the Claudina Ronzi who entered the singing class of the Paris Conservatoire, Mar. 9, 1809. If so, she was already singing at Bologna when at the age of 16 she married De Begnis. In 1819 she made her first appearance at Paris. The Parisians thought her weak, especially as Rosina; but they admitted that Donna Anna was never so well sung there by any one else before Sontag undertook it in 1828. It must be said that she received some instruction in the part from Garat, and that she profited by his lessons. In 1822 she came with her husband to London, where her voice and style steadily improved. Lord Mount-Edgecumbe wrote:

'She made her first appearance in the "Turco in Italia," and acted in it delightfully. With a pretty face and pleasing countenance, she had a voice of great sweetness and flexibility, which she managed with considerable skill and taste. She decidedly excelled in comic parts: indeed, I have rarely seen a better buffa.'

J. M.

BEGREZ, Pierre Ignace (*b.* Namur, Dec. 23, 1787; *d.* Dec. 1863), tenor opera singer.

At the age of 6 he sang in the choir of the cathedral of St. Aubin. He entered a violin class at the Paris Conservatoire (1804), and was at the same time engaged in the orchestra of the Opéra, then under the direction of Grasset. Finding, however, that he possessed a fine tenor voice, he studied singing under Garat from Oct. 1806. In 1814 he carried off the first prize at the Conservatoire, and in 1815 he made his first appearance at the opera in Gluck's 'Armide,' which he followed with the principal parts of 'Les Bayadères' and 'Anacréon.' About the end of the same year he was engaged for London and remained at the King's Theatre till 1822, when he retired and devoted himself to teaching and singing in concerts. J. M.

BÉGUE, Nicolas Antoine le (*b.* Laon, *c.* 1630; *d.* Paris, July 6, 1702), organist and composer. He became organist of the churches of St. Merry and St. Méderic in Paris; in 1678 he succeeded La Barre as organist to the king. He published 2 books of 'Pièces de clavessin,' the first in 1677 [1] (some reprinted in the 'Trésor des pianistes'), and 3 books [2] of organ pieces, 1676, etc. Two of these pieces are reprinted in Ritter's *Geschichte des Orgelspiels*, and examples of his system of ornamentation from the harpsichord pieces are given in Dannreuther's *Ornamentation*, vol. i. p. 95. A MS. *Méthode pour toucher l'orgue* is in the town library at Tours, and a Magnificat [3] and some organ pieces in the Bibliothèque Nationale, Paris (Vm. 7, 1823).

M.; rev. M. L. P.

BEHRENS, Johan Didrik (*b.* Bergen, Feb. 26, 1820; *d.* Christiania, Jan. 28, 1890) is noteworthy as the creator of the Norwegian Male Voice Choir which has been an important force in the popular music of that country. Behrens founded the first of these in Christiania in 1842, and followed up this beginning with the formation of choirs of students and workmen. He organised festivals as these societies grew and multiplied, and edited much music for them. C.

BEKLEMMT (Ger.), 'heavy at the heart,' 'oppressed,' a word which Beethoven has attached to the middle section of the Cavatina in his Quartet in B flat (op. 130), where he modulates into C flat; and where the choked and broken accents of the first violin fully bear out the expression. None of the old copies of the quartet give this interesting personal note of the composer's. It first appeared in Breitkopf & Härtel's complete edition. Correctly the word would be *beklommen*. G.

BELAIEV, Mitrophane Petrovich (*b.* St. Petersburg, Feb. 10, 1836; *d.* Jan 10, 1904), a Russian musical publisher who was a supporter of the national movement.

Soon after leaving school he succeeded to the business of his father, a wealthy timber-merchant in the district of Olonetz. As a boy he learnt the violin and piano, and, in spite of business, found time to occupy himself with chamber music. About 1880 he became intimately acquainted with the chief representatives of Balakirev's school, and soon showed himself an ardent supporter of Russian music. As a practical means of forwarding the national cause, he founded, in 1885, a publishing house in Leipzig, and brought out over 2000 compositions by members of the New School, including operatic and symphonic works by Borodin, Moussorgsky, Rimsky-Korsakov, Glazounov

[1] The second bears no date, but according to the *Mercure Galant* it was issued in 1687.
[2] Reprinted in Guilmant's *Archives des maîtres de l'orgue.*
[3] *Ibid.*

and others. With the same object in view he instituted, in 1885, the 'Russian Symphony Concerts,' the programmes of which were drawn exclusively from the works of native musicians, from 3 to 6 concerts being given each season in St. Petersburg. Belaiev organised similar concerts at the Paris Exhibition of 1889, and also initiated the 'Quartet Evenings,' started in St. Petersburg in 1891. In honour of this Russian Mæcenas, Borodin, Rimsky-Korsakov, Glazounov and Liadov composed a string quartet on the notes B-la-f. R. N.

BELAIEV, Viktor Mikhaïlovich (*b.* Uralsk, E. Russia, Jan. 24/Feb. 5, 1888), writer and teacher, studied at the Petrograd Conservatoire under Liadov, Glazounov and Wihtol. He was teacher of theory 1913; professor 1919; secretary of the Art Council of the Petrograd Conservatoire, 1917; secretary of the directorate of the Russian Musical Society, 1918–19; member of the council of the Russian State Publishing Department (music), 1922; professor at the Moscow Conservatoire, 1923. He is joint founder with Derjanovsky of the short-lived monthly *Towards New Shores*; author of a biography of A. K. Glazounov (vol. i., 1921); *Correspondence of Scriabin with M. P. Belaiev* (1922); numerous articles on Russian music in English and foreign periodicals, and in *A Dictionary of Modern Music* (Dent). He translated Prout's *Fugal Analysis* into Russian.

R. N.

BELCKE, Friedrich August (*b.* Lucka, Saxony, May 27, 1795; *d.* there, Dec. 10, 1874), a celebrated trombone-player, son of the town musician.

The boy at an early age showed a fondness for brass instruments, and was a good horn-player before he took up the trombone, on which he soon reached a pitch of excellence before unknown. He joined the Gewandhaus orchestra in Leipzig in 1815, and then obtained a permanent post in the royal band at Berlin, where he remained from 1816–58. In 1817 C. M. von Weber brought him to Dresden. In 1821 he played solos on Stölzel's newly invented tenor horn at Berlin, and later at Leipzig. Frequent tours made him widely known. In 1838 he left the Berlin band of his own accord and retired to his native place. He received the *médaille d'honneur* from the Paris Conservatoire in 1844. He was the first to use the trombone as a solo instrument, and left many compositions for it. He it is of whom Schumann pleasantly says, in his essay on *The Comic in Music* (*Ges. Schriften*, i. 185):

'There is a phrase in the finale of Beethoven's Eighth Symphony which always makes the members of a well-known orchestra laugh, because they insist upon it that in this figure they hear the name of Belcke, one of the best of their number.'

A. M.; addns. E. v. d. S.

BELDEMANDIS (Beldomandis), Prosdocimo de (*b.* Padua). In 1400 he was professor at the university in Padua. He wrote eight important treatises on music, published between 1404–13, dealing with theoretical questions (mensural chant, monochord divisions, etc.).

E. v. d. S.

BELEM, Fr. Antonio de (*b.* Evora, 1620; *d.* Belem, 1700), Portuguese composer and Jeronymite monk of Espinheiro, who became musical director of the monastery of Belem and, in 1667, Prior of his Order. His works, consisting of Masses, Psalms, Lamentations and *villancicos* for large numbers of voices were to be found formerly in the monastery of Belem. J. B. T.

BELENOI, Aimeric de (*b.* Lesparre in Bourdelois,[1] early 13th cent.; *d.* Catalonia), a troubadour who served for a number of years the Dame Gentille de Ruiz in the Gascogne. He wrote *chansons*, *sirventes*, a crusader's song, a *plainte* on the death of Nugno Sanchez, Count of Roussillon (*d.* 1241), etc. Twenty-two of his songs are still extant. His uncle Peire de Corbiac was also a 'trobador,' known particularly by his didactic poem, the *Tezaur* (treasure), and a song to the Virgin Mary.

E. v. d. S.

BELICZAY, Julius von (*b.* Komorn, Hungary, Aug. 10, 1835; *d.* Pest, Apr. 30, 1893), was at first an engineer, but transferred his affections to music, and became a pupil of J. Hoffmann and F. Krenn in Vienna.

After some years spent between Pressburg and Vienna, he was appointed professor of theory in the National Music Academy in Pest. His compositions include:

3 string quartets, a trio, op. 30, and andante for stringed orchestra; a serenade for strings, 2 symphonies, an Ave Maria for soprano solo, choir and orchestra, op. 9, PF. pieces and songs, besides a Mass in F, frequently performed.

In 1891 Beliczay published the first part of a method of composition, in the Hungarian language (*Riemann*).

BELIN, Julien (*b.* Mans, *c.* 1530), a famous lutenist, wrote a book of motets, chansons and fantasies in lute tablature (Paris, 1556).

E. v. d. S.

BELISARIO, opera in 3 acts; libretto and music by Donizetti; produced Venice, Feb. 7, 1836; London, King's Theatre, Apr. 1, 1837; Paris, Théâtre des Italiens, Oct. 24, 1843.

BELL (1). The word bell is derived from the Saxon *bellan* = to bellow, to make a noise.

Dr. Johnson's dictionary (1755) describes a bell as 'a vessel or hollow body of metal formed *to make a noise* by the action of a clapper.' Dr. Busby (1786) gets a little further and defines a bell as 'a well-known pulsative metalic machine ranked amongst *musical instruments*.'

Regarding the bell as a musical instrument, it may be defined as 'a hollow body of metal—

[1] ? Bordelais.

made of an alloy of copper and tin—sounded by percussion and so formed as to emit a musical sound of definite pitch when struck.'

The origin of the bell is lost in the mystery of bygone ages, and although found in almost every country in the world in one form or another nothing is known of its invention, which in all probability dates from the time when the sonorous properties of metals were first recognised.

In China bells have been in use for more than 4000 years, and in a larger form than in any other country. The oldest bells yet discovered in Europe are not castings but plates of metal bent into shape and riveted or brazed together where the edges meet.

Bells in their earliest forms were small, but as their use became more general for public purposes they greatly increased in size.

Church Bells

There is not the slightest doubt that bells as we now know them were invented by the Christian Church, though not at the earliest period of its existence, for then, in consequence of persecution, no loud summons was possible as a signal for assembling.

Our earliest record of large bells is of Turketyl, Abbot of Croyland (10th century), who had a great bell, called 'Guthlac,' cast, to which he added six others. (See Bell Tuning.)

The dates of our earliest bells cannot be definitely determined, as they have no marks or signs on them to show when, where, or by whom they were cast. No dated bell exists earlier than the 12th century.

The earliest dated bell in England is at St. Chad's, Claughton, Lancashire, 1296.

We possess, comparatively speaking, very few ancient bells, which may be accounted for (1) by the havoc and destruction made upon them at the time of the Reformation (Henry VIII. in the general confiscation of Church property looked upon bells as so much metal that could be realised, consequently many were sold as old metal);

(2) by the introduction of change-ringing in the 17th century, which caused old bells to be recast so as to produce the notes of the major scale in their proper order;

(3) by a common way of raising money in the 18th century to pay for the restoration of the fabric; namely, by petitioning the Bishop to grant a faculty empowering the parishioners to dispose of the bells, which were declared to be unnecessary or cracked and therefore useless.

Although the oldest bells are not dated, they have upon them interesting marks and inscriptions.

The Reformation made great changes in these. Gothic letters gave place to Roman, figures of saints and angels were discarded, English mottoes were used as much as Latin inscriptions, the founder's name, together with the date in Arabic numerals, were cast on all bells.

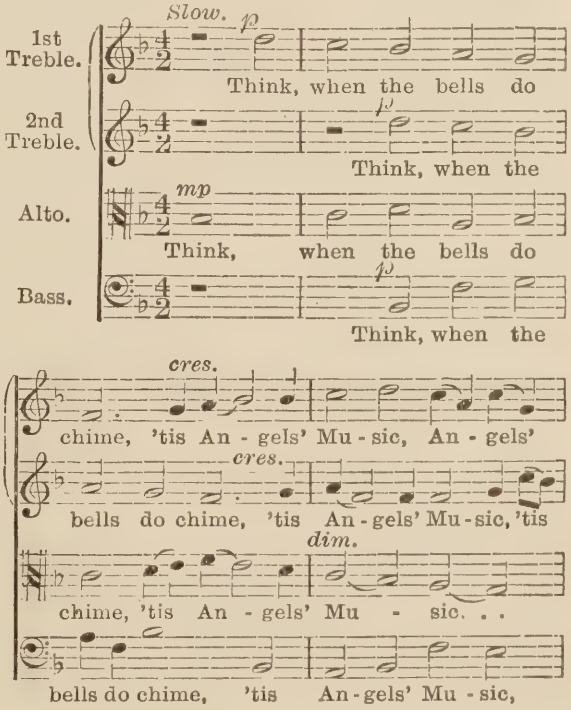
These mottoes or legends were at first appropriate, but in course of time drifted into rhyme, stupid, frivolous and out of place.

One inscription which cannot be passed by is that on the fourth bell of St. Mary the Virgin, Oxford, which is the only one of its kind in existence.

Around the crown are these words:

'Be yt knowne to all that doth me see
That Newcombe of Leicester made mee. 1612.'

Below this inscription are two lines of music on a five-line stave. The C clef is used for three sections and the F clef for one. The notes are diamond-shaped and there are no bar lines. The signature is one flat. The accidentals—flats—are placed before the notes in the usual manner, but the sharps are above the notes, and in one instance below.



At the beginning of each section of the music is a medallion encircled with one of these legends:

Keepe tyme in anye case.
The last strayne was good.
Then let us sing it againe.
Excellent well songe my harts.

Attention was first directed to this remarkable inscription in 1857 by Lukis in his *Account of Church Bells.* In 1904 Dr. Armes of Durham Cathedral transcribed and arranged the music, which was privately printed under the title of 'Angels' Music,' words selected by Canon J. T. Fowler.

ANGELS' MUSIC.

Words selected by J. T. Fowler. Music arranged by Philip Armes.

Sir John Stainer also arranged it as a string quartet, and it was played at one of the concerts given during his professorship at Oxford University.

Nothing has been discovered as to who wrote this music or why it was cast upon the bell.

Bell Metal.—Bell metal is an alloy of copper and tin and is a species of bronze. In bronze, density and hardness are increased by combining softer and lighter metals. Copper becomes more sonorous in combination with tin.

The small bells discovered by Layard in Assyria were made of copper and tin in the proportion of 10 to 1 respectively.

The analyses of old bell metal show traces of zinc and lead, but these metals were never component parts of the alloy and were most probably impurities in the metals used to form the alloy.

In days gone by when bells were cast in the churchyard, pewter was melted down, together with old copper kettles, to form the alloy—pewter containing a small quantity of lead and copper kettles zinc. This is one way small quantities of lead and zinc may have got into some of the old bell metal.

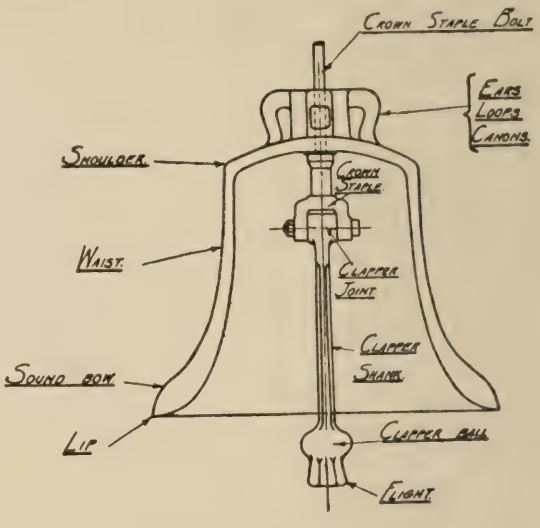
The very erroneous idea that silver and gold as component parts of the alloy improves the tone of the bells may be traced to the custom of casting gold and silver coins into the molten metal when it was blessed by the priests, who processed solemnly round the furnace, reciting a psalm.

Gold is about the same resonance as lead, and a silver bell is less sonorous than one made of cast-iron.

Bells have been made of steel. They are short in tone, noisy and defective in carrying power, and require a very heavy blow to set them in vibration. Rapid oxidisation prevents their continued use.

Bells have been made of glass, but such a substance is unable to withstand the continued use of the clapper.

Bell metal must be elastic and tough and hard so as to be durable.



The best alloy to secure the maximum resonance and durability is pure copper and tin in the proportion of 13 to 4 respectively.

Shape and Proportions.—The quality of tone produced by a bell is governed by the purity of the alloy and by its shape, height, width and thickness proportions.

The approved design of a good bell is the result of the accumulated experience of many generations of bell-founders. The scientific proof as to why this particular form should be the best is yet to be set forth.

The common rule for proportions may be broadly stated thus :

Thickness of sound-bow . . .	1
Diameter of mouth	14 to 15
Diameter of shoulder	7 „ 7½
Height	12

The approved form cannot be deviated from without injury to tone and tune. The details are intricate and the variation most delicate. These secrets the bell-founder keeps to himself, because the allowances which must be made for tuning while yet maintaining the best proportions are the result of long experience which cannot be taught.

The bell-founder's problem at all times is to produce a bell of perfect contour and proportion after it has been most accurately tuned, so that good tone and perfect tune are one and the same thing.

Mould.—The process of making this is as follows : First, the inner mould or core is built up on an iron plate and consists of hollow brickwork (or an equivalent) covered with loam and moulded to the shape of the inside of the bell by means of a ' sweep ' or ' crook.'

The ' sweep ' is a light iron frame with adjustable templates the exact shape of the inner contour of the bell.

Next, the ' cope ' or cover which forms the outside of the bell is made, and consists of an iron case lined with loam, moulded to the exact shape of the outer contour of the bell by means of the sweep and the outer template.

Both core and cope are baked hard in an oven specially built for the purpose, a number of times during the process of building up, to ensure solidity.

Core and cope having been thoroughly dried and hardened, are finished off with plumbago, which makes a fine surface to the mould and gives fineness to the surface of the casting, and in addition facilitates the casting in separating from the mould. It is obvious that both core and cope must be placed over each other in a concentric position, otherwise the result would be a bell one section of which is thicker than

the other. This variation of thickness will produce a throbbing tone, which may be explained thus :

The sound-bow vibrates in four sections.

If one of these sections is thicker than another it will vibrate more rapidly than the thinner one and produce a note of different pitch. The two sets of sound-waves thus produced will synchronise at intervals, resulting in a momentary fullness of tone, the effect to the ear being a succession of throbs more or less frequent according to the difference of the sound-waves.

The core and cope united are called the ' mould ' for the bell.

Furnace.—A reverberatory furnace is used for melting the copper and tin. The fuel used on the Continent is principally wood. In England coal is used with a little wood at times to brighten up the flames.

The copper is placed in the furnace first, as its melting-point is so much higher than tin. Probably four hours will be required thoroughly to melt the copper. The time will vary according to the amount of metal to be melted. The tin is then added, and as soon as it is properly mixed with the copper, which is never more than a few minutes, the furnace is tapped and the molten metal as it pours out falls into a large iron ladle lined with sand. To ensure this sand lining of the ladle being absolutely dry, a small charcoal fire is made inside on the bottom of the ladle before the metal is poured into it.

A handful of powdered charcoal, frequently applied, is thrown on the surface of the molten metal to form a skin and thus protect it from the rapid oxidation to which it is subject.

Casting.—The ladle is now carried by an electric crane to the mould and the metal pours out of the ladle into the receptacle communicating with the hole in the crown through which it passes, filling the space between the core and cope, thus forming the bell.

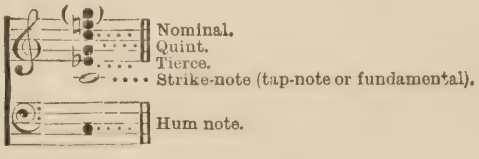
Small bells can be cast with hot metal, but large bells are cast with metal at a much lower temperature. Theoretically the lower the temperature the better the casting.

Tuning.—Long before change-ringing was practised care was taken to make bells ' tuneable and agreeable to each other,' showing that they were tuned in musical sequence. As early as 975 there are records concerning the seven bells cast for Turketyl, Abbot of Croyland, which produced ' the most exquisite harmony.' In 1251 we know that Henry III. gave to Westminster Abbey two bells (cast by Ed. Odson), ' A great bell and a smaller bell to be *in tune* with the greater bell.' In 1440 Johane Hill of London contracted to supply five new bells for ' Feversham,'[1] Kent, ' and if so be that any of the said belles be found defectiff, or be nought of accorde,' they were to be recast. The Loughborough Churchwardens' Accounts for 1586 record that John Wever was paid ' for his tow dayes chardges when he went to Nottingham for them that came to prove the tune of ye bells, xiiij d.' In nearly all the known contracts of the famous Purdue family of bell-founders (1600–1780) a special clause was inserted in such terms as these : ' to make tuneable the said bell in sound and harmony according to art and music with and unto the other bells ' (Halstock), ' concordant and agreeable in music, tune, sound, and harmony,' etc.

How the work was done is well known, for most of the existing old peals are very defective as regards tune, which is not to be wondered at when the primitive methods of tuning are taken into consideration. When a bell was unsatisfactory as to tune, the founders were requested to ' hew,' ' chip,' or ' skirt ' it. This was done by means of a chisel-headed hammer which chipped the bell in such a manner as to preclude the possibility of the finest tone or tune. Later on bells were chipped by means of a cold chisel and finished off with a file. This was certainly a less crude performance, though still most unsatisfactory, but with the advent of the present tuning machine things have altered, the possibilities are very greatly enlarged and tuning assumes a different aspect altogether. The tuning machine is nothing more nor less than a vertical lathe, capable of turning out the finest shaving of metal from any part of the inside of the bell.

Change-ringing (practised only in this country) is directly responsible for the alteration in the shape of English bells from that prevalent on the Continent. This alteration was undoubtedly made to facilitate the balance of the bell so that it might be more easily manipulated when hung in the old style for such special requirements, with the result that the series of tones in each bell has been completely upset, for until 1895 English founders tuned only one note, no notice whatever being taken of the other component tones. On the Continent the tuning of bells has received much greater attention. As early as the 13th century it was considered necessary that every good bell should produce three prominent notes. In the latter half of the 17th century Hemony maintained that a good bell must be so proportioned that its harmonic tones contain three octaves, two fifths, a minor 3rd and a major 3rd. This was undoubtedly the aim of the greatest Continental founders, and it is entirely due to the method of tuning that so many of their bells have become famous both as to tone and tune. The following analysis of the tones of the splendid Great Bell at Erfurt shows that Hemony's theory was carried out nearly two centuries before his time :

[1] Now Faversham.

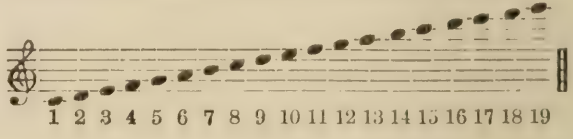


Date 1497. Diameter 8 ft. 5¾ in.
Estimated weight 10 tons. Note E.

The tones of the Erfurt bell are quoted by Helmholtz (Sensations of Tone) on the authority of Gleitz, but No. 3 is incorrectly given as G sharp. It should be G natural.

In a few words, the difference between the common method of tuning English and Continental bells is that the former had only one series of notes tuned, while in the latter both strike notes and hum notes were most carefully tuned in octaves.

It must be understood that tone and tune are very different things. Good tone means that a bell must be in tune with itself, although it may be in tune in the strictest meaning of the term and yet be of indifferent tone on account of inadequate thickness proportions. In bells as in other musical instruments producing compound tones, the quality of tone is entirely governed by the partial tones present. (See Acoustics.) In every bell there are five tones which can now be most accurately tuned. When a bell is properly struck the first note which prominently attracts the attention of the ear is what is known as the strike note, tap note or fundamental—this is *the* note of the bell. The low sound heard after the strike note has lost its intensity is known as the hum note. The octave above the strike note is called the nominal. There are also present a minor 3rd and perfect 5th immediately above the strike note, and a major 3rd and perfect 5th immediately above the nominal, thus:



From this it will be seen that (1) the hum note should be a perfect octave below the strike note; (2) the nominal should be a perfect octave above the strike note; (3) the third above the strike note should be a minor 3rd and the fifth perfect; (4) that all these notes should be in perfect tune with each other. Above the nominal the major 3rd and perfect 5th can be heard in bells of considerable size; in smaller bells they are so weak as not to be worthy of consideration.

Famous good bells, such as the Lavenham Tenor, the 5th, 7th, 8th, 9th and tenor of Exeter Cathedral, etc., in England as on the Continent have the whole of the five tones in tune, and even in the case of Continental bells if the five tones are not as they should be, the strike and hum notes are generally correct.

Since 1895 there has been a complete revolution in tuning, entirely through the enterprise of the well-known firm of Messrs. Taylor of Loughborough. Canon Simpson, in two articles in the *Pall Mall Magazine* (1895 and 1896), drew attention to some of the discrepancies of English bells, which had the effect of inducing Messrs. Taylor to make experiments with and improvements in tuning machinery, with the result that at the present time they can do all that has been previously done by English bell-tuners, together with all that has been done

Approximate Notes and Weights of Bells in Proportion to their Diameter

by the greatest Continental bell-tuners, to the accuracy of a single vibration. Their foundry is the largest and most perfectly equipped of any in Europe. Every bell now made by this firm has the five tones tuned with absolute accuracy. The musical gain is great, and there is no comparison possible between bells tuned on the five-tone and one-tone systems when heard side by side. The superiority of the former is particularly apparent in the small bells which, under ordinary conditions, are more or less unsatisfactory musically. Such fine tuning is a very delicate process, owing to the ever-varying shape and thickness of the bell and the complex relationship of the different tones. The means by which these results are obtained are of course the bell-founder's secret, but it is a matter of congratulation that the finest modern bells are being made in our own country.

HANGING.—Bells for carillon use and for chimes, played from a clavier or automatically, are hung 'dead' or 'fixed' to wooden beams or iron girders. Bells hung for change-ringing, so that they can be swung a complete circle in one direction for each blow of the clapper, must be carefully balanced and suspended in a strong framework of wood, iron, or steel. In the past wooden frames were used, but now steel or iron frames are preferred as they are stronger, truer with regard to bearings, economical as to space, and more durable as long as proper attention is paid to their upkeep. (See CHANGE-RINGING.)

For particulars of the great bells of Europe the reader is referred to *Clocks, Watches, and Bells*, Grimthorpe, pp. 388-92.

The following is a list of important bells of 3 tons and upwards cast in England:

	Date.	Diameter.		Weight.		Founder.
		Ft.	In.	Tons.	Cwts.	
Abberley Hall	1885	6	0¼	3	18½	T.

BELL (2), ORCHESTRAL (Fr. *cloches*; Ger. *Glocken*; Ital. *campane, campanella*). Although true bells do not really blend well with the precise pitch of the orchestra, owing to the prominent partial tone, the minor third,

composers have occasionally sought to use the characteristic effect, *i.e.* the combination of 'tap' and 'hum' notes, and, owing to the impossibility of introducing real bells into the orchestra on account of their size and weight, various substitutes have been employed.

A hemispherical bell of bronze is suitable for a theatre where it can be permanently mounted. In the concert-hall sets of metal tubes, 'tubular bells,' are used.

The famous bell notes in 'Parsifal' have been obtained by the employment of pianoforte wires, gongs tuned to the pitch of the four notes required, and a bass-tuba. Tubular bells and other devices have been tried.

Sets of very small bells such as Handel wrote for in 'Saul' or Mozart in 'Die Zauberflöte' were the original forms of the GLOCKENSPIEL (*q.v.*). N. C. G.

BELL (3) (Fr. *pavillon*), the curved spreading mouth in which most wind instruments terminate, especially those of brass. The gradual conical expansion of a brass instrument makes possible the resonance to the even-numbered partials which in the tone from a stopped cylindrical tube are absent. The conical form also admits of a larger mass of air being put in vibration, hence increase of power. The extent of flanging of the bell-mouth affects the tone-quality; when this is small, as on the trumpet and bugle, the crisp brilliancy due to the strength of the high partials is not damped. A wide flange as on the French horn, on the other hand, damps the high partials, and causes the tone to be more mellow. (See HORN.) D. J. B.

BELL, WILLIAM HENRY, F.R.A.M., F.R.C.M. (*b.* St. Albans, Aug. 20, 1873), composer, conductor and teacher, was educated at St. Albans Grammar School, getting his earliest musical training in the cathedral choir. He subsequently entered the R.A.M., winning the Goss Scholarship in 1889. Six months' study of modal counterpoint under Sir Charles Stanford seems to have made a lasting impression, and after obtaining the Fellowship, the post of professor of harmony at the R.A.M. was held from 1903 until 1912. During part of this time he held, in addition, a post as organist. He is also a violinist of ability.

In 1907 he conducted at the St. Albans Pageant, for which he composed the music. Later, he was in charge of affairs at the Festival of Empire in 1911. In 1912 he vacated his appointment at the R.A.M. to become Principal of the South African College of Music at Capetown. At the time of his advent there were only about 60 pupils, but under his régime these have increased in number to some six hundred. His wife, a sister of J. B. McEWEN, and a pupil of Tobias Matthay, is closely associated with him in his work at the College. In 1919 he was appointed to the newly founded Chair of Music at Capetown University, and since then the College has been taken over by the University, of which it is now an integral part, with W. H. Bell as Dean of the Faculty of Music. A short visit to this country in the winter of 1920–21, during which he conducted his 'Symphonic Variations' at a Philharmonic Concert, is the only break in his sojourn in South Africa. As a composer he has devoted himself chiefly to orchestral work, but has in addition covered much ground, though piano works are notably absent. He owes his first chance of a hearing to Sir Augustus Manns, who brought out several of his early works at the Crystal Palace. Subsequently his works were taken up by Richter, Sir Henry Wood and Sir Thomas Beecham. His most important compositions have been written in South Africa, and still await a hearing in this country They have all been produced in Cape Town by Theo. Wendt, the conductor of the Municipal Orchestra, and have passed into the regular repertory of the latter. The 'Song in the Morning' orchestral prelude was played at the Gloucester Festival, and also at Queen's Hall in 1901, and several of his works have had their first performance at the Philharmonic Concerts in London. The 'Song of Greeting,' written for the centenary of the R.A.M., was produced by Sir Henry Wood in 1922. The composer's creative ability appears to be at its height, and the reaction upon his work of life in one of the most stimulating countries of the southern hemisphere is a matter of exceptional interest. His output is already large, but an active spirit of self-criticism is very evident, and he has not hesitated entirely to recast and rewrite large works—notably the 'Symphonic Variations'—and to destroy ruthlessly earlier works which he does not consider representative. Several works have thus disappeared from the list of compositions published in an earlier edition of the Dictionary. Very few of his works are available in print, but his choral work 'Maria Assumpta' is a fortunate exception; the composer cites this as his favourite work. Bell is the composer of the 'Walt Whitman' symphony mentioned in the preface to the *Everyman* edition of Whitman's *Leaves of Grass*; and short articles, with musical illustrations, on three of his larger symphonic works were published in the *Mus. T.* for May and June 1920.

Mr. Bell's compositions, besides those already mentioned, include:

Two operas: 'Hyppolytus,' three Acts (Euripides); 'Isabeau,' one Act; for orchestra: two symphonies in A minor and F major; symphonic poems and 'tone pictures'; 'Love among the Ruins,' 1908; 'The Shepherd,' 1908; 'La Fée des sources,' 1912; 'The Portal' and 'Veldt Loneliness,' 1921; 'Mother Carey,' and Arcadian Suite, 1909; a concerto for viola and orchestra; music to Ben Jonson's Masque, 'A Vision of Delight,' 1908; ballads for chorus and orchestra; sonatas for violin and for viola and pianoforte.

M. van S.-G.

BELLA, DOMENICO DELLA, 16th/17th-century violoncellist and composer, maestro di

cappella at the cathedral of Treviso; composed 12 'Sonate da chiesa a tre' (2 violins, violoncello obbl. and bass), op. 1; sonata for violoncello and bass; masses, psalms, a Te Deum and other church music. E. v. d. S.

BELLA, Jan Levoslav (*b.* Liptovsky Sväty Mikuláš, Slovakia, 1843), a Slovak composer living in Vienna. He was sent to the Gymnasium at Levoča by Bishop Ladislav of Spiške, where he was taught music by Professor Leopold Dvořák. At 16 he wrote a mass, with orchestral accompaniments, given in the Episcopal Cathedral of Spiške. Eventually he entered the priesthood and his musical gifts were at first entirely devoted to the service of the Church. His early masses are remarkable for being based on the familiar tunes of the Slovak folk. Besides these masses he composed the choral works: 'The Prayer of St. Cyril on his Deathbed' (Olomouc, 1869), an 'Old Slovakian Paternoster' (Glöggl, Vienna, op. 3), 'Matké Sláve' (Hail, Mother!), and many lesser compositions, all strictly polyphonic and liturgical in style. Bella was caught up into the general movement for the reformation of ecclesiastical music which prevailed in mid-Europe about the sixties of last century.

With the rebirth of the spiritual and political life of the Slovaks after the Great War, renewed interest in Bella's work showed itself in the revival of his motet for double male choir, 'Tu es Petrus,' by the famous Prague Choir 'Hlahol,' at a Slovak concert, Mar. 1920. This motet and his 'Adoramus' (also for male voices) are the most characteristic examples of his sacred music. Of his secular works, two stand out prominently—the symphonic poem 'Osud a ideal' (Destiny and Ideal) and the string quartet in C minor (1876), frequently played by the Bohemian (Czech) Quartet. The symphonic poem owes much to Liszt, but, as one of the younger school of Czech critics, Dr. Emil Axman, reminds us, it required considerable courage and independence of mind in a church composer of half a century ago to embody in music a psychological programme dealing with problems of modern life. Bella has done much for the salvaging and diffusion of Slovak folk-music; sometimes in the form of paraphrases, as in his collection 'Při Prešburka,' sometimes by partsongs *a cappella*, two series of which were produced at Bratislava by the Academic Choral Society, under the Rev. Prof. Orel, Mar. 1923, and repeated in Vienna. In later life Bella became a Protestant, married, and spent some years as director of a music school at Hermannstadt. Educated in a conservative atmosphere, he was not blind to the progressive tendencies of his time, although the German neo-romantic school attracted him more than the dramatic naturalism of Smetana. A. K[E]. and R. N.

BELLAIGUE, Camille (*b.* Paris, May 24, 1858), eminent French critic, laureate of the Académie Française.

He studied for the law, but worked at music at the same time with Paladilhe. He was afterwards in the Conservatoire, in Marmontel's class, where he won a first prize for piano in 1878. His first essays in musical criticism were made in the *Correspondent* in 1884; from 1885 he was a contributor to the *Revue des Deux Mondes*, and the Académie bestowed on him the Vitet prize in 1894. Bellaigue's admirable criticisms have been collected in the following: *L'Année musicale* (1886–93), *Un Siècle de musique française*, *Psychologie musicale*, *Portraits et silhouettes de musiciens* (trans. English and German), *Études musicales et nouvelles silhouettes de musiciens* (trans. English).

Later works are: *Impressions musicales et littéraires; La Musique. Un siècle, mouvement du monde de 1800 à 1900; Mozart* (*Musiciens Célèbres*) (1906); *Mendelssohn* (*Maîtres de la musique* (1907); *Les Époques de la musique* (1909) *Notes brèves, 2me série* (1914); *Propos de musique et de guerre* (1917); *Études musicales* (2nd and 3rd series); *Souvenirs de musique et de musiciens* (1921), 1st and 2nd series.

G. F., with addns.

BELLAMY, (1) Richard, Mus.B. Cantab. (*d.* Sept. 11, 1813), a bass singer, was on Mar. 28, 1771, appointed a gentleman of the Chapel Royal, and on Jan. 1, 1773, a lay-vicar of Westminster Abbey. He was vicar-choral of St. Paul's Cathedral in 1777, and from 1793 to 1800 was almoner and master of the choristers. In 1784 he sang in the Handel Commemoration in Westminster Abbey, and in 1788 he published a volume containing a Te Deum for a full orchestra (performed at the installation of Knights of the Bath in May of that year), and a set of anthems. He gave up his appointment in 1801.

His son, (2) Thomas Ludford (*b.* Westminster, 1770; *d.* London, Jan. 3, 1843), was educated in the choir of Westminster Abbey under Dr. Cooke, and as a bass studied under Tasca, the celebrated bass singer. He sang in the Handel Commemoration of 1784, as a treble, and in London in cathedral choirs and at concerts until 1794, when he went to Ireland, probably to look after some property bequeathed to him by his maternal grandfather. In Dublin (1797) he became stage manager at the theatre. He made his début at the Dublin Theatre Royal on Feb. 9, 1798. In 1800 he became part proprietor of the Manchester, Chester, Shrewsbury and Lichfield theatres. In 1803 he sold his share and became sole proprietor of the Belfast, Londonderry and Newry theatres. This speculation proving unsuccessful, he returned to London, and sang at Covent Garden Theatre for five years. In 1812 he was engaged for five years at Drury Lane. In 1819 he was appointed choirmaster at the chapel of

the Spanish Embassy; in 1821, on the death of Bartleman, he was engaged as principal bass singer at the Concert of Ancient Music. In 1840 he edited a volume of the poetry of glees, madrigals, catches, rounds, canons and duets.

W. H. H.; addns. *D.N.B.*

BELLANDA, Ludovico of Verona, an early 17th-century composer and one of the first representatives of the monodic style. He wrote 25 songs, published at Venice, 1607; 23 songs, lib. 2, *ib.* 1610; 'Sacre laudi,' 23 songs, *ib.* 1613; 'Sacrae cantiones, 3, 4 et 5 vocibus,' *ib.* 1604; 1 book of madrigals, 5 voc. lib. I., *ib.* 1602; Canzonette a 3 v. lib. I., *ib.* 1593.

E. v. d. S.

BELLASIO, Paolo (*b.* Verona; *d. circa* 1595[1]). He lived at Rome (*c.* 1582), and in 1591–92 he calls himself 'maestro di musica nell' Accademia dell' Illustrissimi Signori Accademici Filarmonici' (Bologna?). He wrote 5 books of madrigals *a* 5 v. (the first published in 1578), 1 *a* 6 v. and 1 *a* 3 to 8 v.; 1 book of vilanelle *a* 3 v. A number of madrigals by him appear in various collective volumes; also arrangements in lute-books (*Q.-L.*; *Fétis*).

BELLAZZI (Belatius), Francesco (*b.* Vigevano, 16th/17th cent.), a Franciscan monk. Fétis calls him a pupil of Giov. Gabrieli, and a Venetian composer who abandoned the older school and adopted the style of Monteverdi. His known works, which appeared between 1618 and 1628, consist of 6 books of masses, motets, psalms, etc., the sixth book being op. 8 (*Q.-L.*; *Fétis*).

BELLE HÉLÈNE, LA, opéra-bouffe in 3 acts; words by Meilhac and Halévy; music by Offenbach; produced Paris, Théâtre des Variétés, Dec. 17, 1864; Adelphi Theatre, London, in a version by F. C. Burnand, as 'Helen; or, Taken from the Greek,' Oct. 1, 1866.

BELLERMANN, Constantin (*b.* Erfurt, 1696; *d.* Münden, Apr. 1, 1758), rector of Münden from 1742, a composer of operas and oratorios, and an extraordinary performer on the lute.

His most important work is:

Programma in quo Parnassus Musarum voce, fidibus, tibiisque resonans, sive musices divinae artis laudes diversae species singulares effectus atque primarii autores succincte enarrantur.

(Erfurt, 1743), an analysis of which is given by Mizler in his *Bibliothek*, vol. iii. F. G.

BELLERMANN, (1) Johann Joachim (*b.* Erfurt, Sept. 23, 1754; *d.* Berlin, Oct. 26, 1842), visited Russia, and returned to become director of the Gymnasium of his native town from 1804–28. He published very interesting *Bemerkungen über Russland in Rücksicht auf Wissenschaft, Kunst, Religion*, etc. (Erfurt, 1788).

His son, (2) Johann Friedrich (*b.* Erfurt, Mar. 8, 1795; *d.* Feb. 4, 1874), was a great authority on ancient Greek music. He served in the War of Independence (1813–15), studied at Berlin and Jena, in 1819 became professor, and from 1847–68 director of the Gymnasium 'zum grauen Kloster' at Berlin. He was especially known for his edition of the *De anonymis scriptis de musica* (1841), and a work on the scales and notes of the Greeks (1847).

His son, (3) J. Gottfried Heinrich (*b.* Mar. 10, 1832; *d.* Potsdam, Apr. 10, 1903), became professor in the Berlin University in 1866, and a member of the Academy of Art in 1875. He wrote a great deal of vocal music (motets, choral works, a cantata, and music to 3 Greek plays). His work on *Die Mensuralnoten* (1858) was the first modern treatise in which the system of mensural music was made clear. His treatise on counterpoint (1862) and shorter but not less valuable theoretical works, published 1867 and 1873, brought him well-deserved renown, and a biography of Ed. Grell appeared in 1899.

F. G.

BELLETTI, Giovanni (*b.* Sarzana, 1813), a great baritone singer associated with Jenny Lind.

Having an exceedingly delicate ear and a wonderful agility of voice, he soon began to repeat with his child's treble every operatic air that he heard. His father sent him to the famous school at Bologna, over which the celebrated Pilotti presided. After five years of study, Belletti received his diploma. His voice was now settled as a baritone of the most beautiful quality and evenness, with marvellous facility of execution. Advised to try the stage, he hesitated for some time, until he met at Carrara a Swedish sculptor named Byström, who proposed to take him to Stockholm, free from all risk or expense, to lodge in his house, and make his début; and, if unsuccessful, to send him back on the same terms to Italy. This generous offer he accepted, and arrived at Stockholm in 1837. Early the next year he appeared in the 'Barbiere,' and achieved his first success about a month earlier than Jenny Lind. With her he sang in 'Lucia,' in 'Robert,' and others of Donizetti's and Meyerbeer's operas, translated into Swedish. To the influence of Jenny Lind, and to the critical taste of his first audience, as well as to the fine school of singing in which he had been brought up, he owed the pure style and freedom from vulgarity which, more even than his noble voice, made him the greatest baritone of the century. When Jenny Lind came to London, Lumley, upon her urgent advice, soon persuaded Belletti to sing with her again. In 1848 he made his first appearance at Her Majesty's Theatre in 'Ernani,' with Mlle. Cruvelli, and during that season sang at both the opera-houses. After singing with no less success at Paris, he was engaged, with Lind and Benedict, by Barnum, for a tour in the

[1] As appears from his posthumous 5th book of madrigals.

United States. Returned once more to London, Belletti remained there till the end of 1862, singing not only at the Opera, but in classical concerts and oratorios, with undiminished success. He retired, in the midst of the most brilliant career, to Sarzana, his native place, where he lived a life of seclusion. J. M.

BELLEVILLE-OURY, see OURY (2).

BELL GAMBA, an organ stop of 8-foot pitch and strong tone, having a bell or inverted cone at the top of the pipe.

BELL HARP, a form of wire-strung Psaltery produced in the early part of the 18th century by John Simcock of Bath. Tans'ur (*Elements of Music*, 1767) says: 'Its form is like a bell and kept swinging whilst played on, whose strings are struck by each thumb, being armed with a split quill, whalebone, or thin horn, which, when artfully managed, affords tolerable harmony.' The instrument has from 14 to 24 triple or quadruple strings tuned to the scale of D major with an additional C♯. (*PLATE XXIII.* No. 1.) F. W. G.

BELL'HAVER, VINCENZO (*d. circa* 1588), became second organist of St. Mark's in Venice, in 1586, succeeding his master Andrea Gabrieli, and being followed two years later, Oct. 30, 1588, by Gioseffo Guami. It is therefore likely that he died in the year last mentioned. His 2nd book of madrigals was published by Scotto of Venice in 1575, and his name appears in many of the madrigal collections of the period. Three of his madrigals, and a toccata for organ, are given in Torchi's *L' arte musicale in Italia.* M.

BELLI, DOMENICO, was, according to Fétis, in the service of the Duke of Parma. From 1610–13 he was teacher of the younger clergy in church music at San Lorenzo in Florence, and was still living there in 1616, when his two extant works were printed in Venice by Amadino. They are a book of airs for 1 and 2 v. with chitarrone accompaniment (contents in Vogel, *Bibl. der gedr. weltl. Vokalmusik*), and 'Orfeo dolente,' 5 intermedii to Tasso's *Aminta* (*Q.-L.*). M.

BELLI, GIROLAMO (*b.* Argenta, near Ferrara, *c.* 1550), pupil of Luzzasco Luzzaschi, was in the band of the Duke of Mantua, and in 1582 in Rome.

His first book of 6-part madrigals was published at Ferrara in 1583, a first book of 5-part madrigals at Venice in 1584, a 2nd book of 6-part madrigals, called 'I furti,' Venice, 1584, reprinted as 'I furti amorosi' in 1587, a 2nd book of 5-part madrigals in 1586, a 3rd book for 6 v. in 1593, a book of 'canzonette a 4' at Ferrara 1596, and a 9th book of 5-part madrigals, in Venice, 1617. In addition to these, for the contents of which see Vogel's *Bibl. der gedr. weltl. Vokalmusik*, Belli wrote published masses (1585), sacrae cantiones (1585, 1586, 1589 and 1594), and 5-part psalms (1610) (*Q.-L.*).

M.

BELLI, GIULIO (*b.* Longiano, *c.* 1560), the most prolific of the many composers of his name.

He was director of the music in the cathedral of Imola in 1582, entered the Franciscan order in 1590 (S. Maria in Carpi), was in Venice at the church of the Frari in 1595 as master of the music, was successively in similar posts at Montagnana, Osimo, Forli, and again at the Frari. In 1607 he went to Padua, and finally returned in 1611 to Imola, where the last trace of him is found in 1613. A memoir by Adamo Brigidi appeared in 1865.

What appears to be his first work, the 1st book of 'canzonette a 4,' was published by Gardano of Venice in 1584, and was often reprinted; the 2nd book appeared in 1593. Books of madrigals appeared in 1589 and 1595, but after that date there seem to be no new secular works; his 1st book of masses, for 5 v., was printed at Venice in 1586, his 1st for 8 v. in 1595, his 1st for 4 v., 1599, a book of masses for 4-8 v. in 1608, and all these went through more than one edition. Psalms for 8 v. (1596), for 5 v. (1598), and for 6 v. (1604), cantiones sacrae for 4-12 v. (1600), and various collections of 'Compieta, falsi bordoni, litanie, e motetti' appeared in 1605 (*a* 8) and 1607 (3 books, for 4, 5 and 6 v.). A set of 'concerti ecclesiastici' for 2 and 3 v. with organ, appeared in 1613 and 1621, and among them is a canzona for two cornetti or violins and trombone

It is not impossible that it was this Giulio Belli who, as Giulio Cesare Belli, held a position as lutenist at the court of Mantua about 1587 (*Q.-L.*). M.

BELLINCIONI, GEMMA, (*b.* Como, Aug. 19, 1866 [1]), one of the most popular Italian singers of her day.

She was taught by her father, and afterwards, in 1880, by Corsi. In 1881 she made her début at the Fiorentini Theatre, Naples, in Pedrotti's 'Tutti in maschera.' During her career Madame Bellincioni sang at all the chief opera-houses in Italy, and toured in Germany, Austria, Portugal, France and Russia. She sang at Covent Garden in 1895, and visited South America in 1899. At the Costanzi Theatre, Rome, on May 18, 1890, she played Santuzza in the original production of 'Cavalleria Rusticana,' this being the event of her life. She also created the chief soprano parts in 'Fedora,' 'A Santa Lucia,' 'Lorenza,' 'La Cabrera,' and, in Italy, Massenet's 'Sapho.' At Covent Garden she did not make the success that had been expected. Her power as an actress was freely acknowledged, but to English ears her voice—a dramatic mezzo-soprano of wide range—lacked charm. As Carmen she suffered in following Madame Calvé in that singer's finest part. She married the tenor Roberto Stagno, with whom she sang many times in 'Cavalleria.' S. H. P.

BELLINI, VINCENZO (*b.* Catania, Sicily, Nov. 1, 1801; *d.* Puteaux, near Paris, Sept. 24, 1835), a famous operatic composer, son of an organist.

A Sicilian nobleman, struck by the child's talent, persuaded old Bellini to allow him to send his son to Naples, where he offered to pay the child's expenses at the famous Conservatorio, directed at that time by Zingarelli. Here Donizetti had preceded him by only a few years. Another of Bellini's fellow-pupils was Mercadante. Bellini's first work for the stage was produced while he was still at the academy. His 'Adelson e Salvina' (1825) had the good fortune to be played in presence of the celebrated Barbaja, manager at that time of La

[1] According to another authority, *b.* Monza, Piedmont, 1864.

Scala at Milan, of the San Carlo at Naples, and of numerous minor opera-houses. The great impresario gave the promising student a commission to write an opera for Naples; and in 1826 Bellini's 'Bianca e Fernando' was brought out at the San Carlo. 'Bianca e Fernando' pleased the Neapolitan public, while its general merit encouraged Barbaja to entrust the young musician with the composition of another work, which this time was to be brought out at La Scala. The florid music of Rossini was at that time alone in fashion; and, by way of novelty, Bellini composed for Rubini the simple expressive melodies which the illustrious tenor sang with so much effect when 'Il pirata' was at length produced in 1827. Owing in a great measure to Rubini's admirable delivery of the tenor airs, 'Il pirata' obtained a success not merely of esteem but of enthusiasm. It was represented soon afterwards in Paris, and in due time was heard in all the capitals of Europe where Italian opera was at that time cultivated. Bellini's next work was 'La straniera,' first performed at Milan in 1829 with an admirable cast, including in the chief parts Madame Tosi, Donzelli and Tamburini. 'La straniera' was less successful than its predecessor, and it scarcely can be said to have met with general favour in Europe. Like 'Il pirata' it was produced in London, where, however, it made but little impression. 'Zaira' (Parma, 1829) may be said to have failed. This at least is the only work of Bellini since the production of 'Il pirata' which was never performed out of Italy. 'I Capuletti ed i Montecchi,' composed for Venice and represented for the first time at La Fenice in 1830, was brilliantly successful throughout Italy; though in London and Paris the new musical version of *Romeo and Juliet* seems to have owed such favour as it received to Madame Pasta's performance in the character of Romeo. This part, it may be noted, was the one selected by Wagner's niece, Mlle. Johanna Wagner, for her début in London when, immediately after the so-called 'Jenny Lind mania,' that artist, so much admired in Germany, appeared without success at Her Majesty's Theatre.

In 1831 Bellini, now 29 years of age, composed for La Scala the work generally regarded as his masterpiece. Romani had prepared for him, on the basis of a vaudeville and ballet by Scribe, the 'book' of 'La sonnambula'; and the subject, so perfectly suited to Bellini's idyllic and elegiac genius, found at his hands the most felicitous musical treatment. 'La sonnambula,' originally represented at La Scala in 1831, and, warmly received wherever it was performed, hit the public taste nowhere so much as in England. Thanks to Malibran, who appeared in an English version of the work, 'La sonnambula' soon became as popular in our own as in its native Italian language. The part of Amina, the heroine of 'La sonnambula,' was for many years a favourite one with débutantes; and it was in this character that both Patti and Albani made their first appearance before an English public. Less than a year after the production of 'La sonnambula' Bellini brought out 'Norma,' Dec. 26, 1831, which, very different in character from its immediate predecessor, is equally in its way a work of genius. The first and most celebrated representative of the Druid priestess was Pasta. It afterwards became one of Giulia Grisi's greatest parts, and a later generation had an admirable Norma in Tietjens. Mme. Lilli Lehmann may be mentioned among the few singers of more recent times who have attempted it with success. Bellini's most important serious opera is founded on a French play. Romani's libretto of 'Norma' was based on Soumet's tragedy of the same name, produced at the Théâtre Français about a year before the opera of 'Norma' was brought out at the Scala Theatre of Milan. The successful opera has killed the drama from which its subject was derived.

'Norma' was succeeded by an opera performed only in private, called 'Il fù ed il sarà,' and this by 'Beatrice di Tenda,' which did but little to keep up the composer's reputation. Represented for the first time at Venice in 1833, it was performed three years afterwards, without much success, in London. In 1833 Bellini lived for some time in London (see Lady Morgan's *Memoirs*, Aug. 15, 1833, etc.). Later in the same year he went to Paris, where, by the advice of Rossini, he was engaged to write an opera for the Théâtre Italien. Rossini is said to have recommended him to devote special attention to his orchestration, and generally to cultivate dramatic effect. The result was 'I Puritani' (1835). Bellini was not well served by his librettist. On the other hand, the score is full of the most engaging melodies of the true Bellinian type. The chief part in the opera, in a musical if not in a dramatic sense, belongs to the tenor. Few tenors since the time of Rubini, for whom it was written, have had voices sufficiently high to be able to sing it from beginning to end in the original keys. Both Mario and Giuglini were frequently heard in the character of Arturo. The company for which 'I Puritani' was written comprised as leading vocalists, Grisi, Rubini, Tamburini and Lablache; and the distribution of characters when this work was first performed was the same, for a few years at least, in London as in Paris. 'I Puritani' was produced in London for the benefit of Madame Grisi in 1835; and the 'Puritani season' was remembered for years afterwards, and was cited by experienced habitués, as one of the most brilliant ever known. 'I Puritani' was Bellini's last opera. Soon after its production

he went on a visit to an English friend, Lewis, at Puteaux, at whose house he was attacked with an illness from which he never recovered. (See FLORIMO.)

Directly after Bellini's death, and on the very eve of his funeral, the Théâtre Italien opened for the season with 'I Puritani,' and not many hours after its conclusion the artists who had taken part in it were repeating Bellini's last melodies, not to the words of the Italian libretto, but to those of the Latin service for the dead. The general direction of the ceremony had been undertaken by Rossini, Cherubini, Paër and Carafa; the musical department being specially entrusted to Habeneck, the distinguished conductor of the French Opéra. In the Requiem service a deep impression was produced by a 'Lacrymosa' for four voices arranged by Panseron, and reprinted in the *Revista musicale*, vol. ix. p. 72, of which the beautiful tenor melody in the third act of 'I Puritani' formed the fitting theme. The movement was sung without accompaniment by Rubini, Ivanoff, Tamburini and Lablache. The Mass was celebrated in the Church of the Invalides, and Bellini was buried in the cemetery of Père la Chaise. In 1876 his remains were exhumed and reinterred at Catania. In 1901 the centenary of Bellini's birth was celebrated at Catania.[1]

H. S. E.

There was a time when the fame of Bellini suffered almost complete eclipse chiefly on account of the new criterion that came to be applied to musical drama. Time, however, has done justice to the unquestionable merits of a composer whose genius was all for lyrical expression. Bellini should never be measured by the standard of the pioneer. Perfectly alive to the intolerable abuses which prevailed in the opera theatre of his time he tried to remedy the situation as his librettist, Romani, once wrote, 'by dint of courage, perseverance, love.' This mild attitude was part and parcel of his temperament and of a piece with his general attitude towards music which was never that of the reformer, and aimed solely at clarity, elegance and beauty of form and expression. His ideal was that of Mozart and Haydn, whose quartets he studied well and to some purpose. Doubtless there are in his operas weak moments which justify, to some extent, adverse criticism, especially as regards the lack of dramatic force. But in 'Il pirata' as well as in 'Sonnambula,' in 'I Puritani' no less than in 'Norma,' there are many pages of great lyric charm and beauty.

F. B.

BIBL.—Among a number of biographies of Bellini that by A. POUGIN, *Bellini, sa vie et ses œuvres* (1868) is important. Others are by F. CICCONETTI (1859), PERCOLLA (1876), AMORE (2 vols.) (1892-1894) and FLORIMO, *Memorie e lettere* (1885); P. LASSERRE, *L'Esprit de la musique française de Rameau à l'invasion wagnérienne* (1917). An important essay in modern criticism is *La Musica di Vincenzo Bellini* by PIZZETTI (1916). For English readers there is *Vincenzo Bellini* by William A. C. LLOYD.

[1] See *Mus. T.*, 1901, pp. 604 and 729.

BELLINZANI, PAOLO BENEDETTO (*b.* Ferrara, 17th cent.). Fétis states that he was maestro di cappella at the college of Sta. Maria Maggiore, Udine, in 1717. From title-pages of his works it appears that he held similar positions at Pesaro in 1726 and Urbino in 1733, and he became a member of the Accademia dei Filarmonici at Bologna in 1727. He wrote masses and other church music; also duetti da camera, madrigals *a* 2-5 v. and sonatas for flute and bass (1720) (*Q.-L.*; *Riemann*).

BELLMAN, CARL MICHAEL (*b.* Feb. 4, 1740; *d.* Stockholm, Feb. 11, 1795), a very remarkable and original lyrical genius.

It is true that he was more of a poet than a musician, for he himself wrote most of his wonderful *Fredmans Epistlar* and *Sanger* (among which the splendid humorous pictures from the life of the people in Stockholm are especially noticeable); but he set them chiefly to popular French melodies, which were at that time greatly in vogue. His original melodies are inferior to those he borrowed from foreign sources.

A. H. W.

BELLOC, TERESA GIORGI (*b.* S. Benigno, Cavanese, Aug. 13, 1784; *d.* May 13, 1855), an opera singer, of French parentage, who made her first appearance in 1804 at the theatre of La Scala at Milan.

One of her first rôles was Paisiello's 'Nina,' in which she was so successful as to obtain an engagement at the same theatre for the following year. She sang next at Paris in the same opera, in Martini's 'Cosa rara,' and other pieces. At Venice in 1812 Rossini wrote for her, Raffanelli and F. Galli, 'L'inganno felice,' and at Milan, in 1817, 'La gazza ladra.' In the latter year she appeared for the first time in London, under the name of Bellocchi, and succeeded Mme. Fodor. She surprised the public, towards the close of her engagement, by a capital performance of 'Tancredi,' for which nothing could be less fitted than her figure; but the music suited her voice, and her singing of it was really good. In 1821 she returned to Milan. In 1828 she quitted the stage. A memoir by C. Boggio was published in Milan in 1895.

J. M.

BELLONI, GIOSEFFO (*b.* Lodi, late 16th cent.), church composer, wrote masses *a* 5 v., op. 1 (1603; 2nd ed. 1611); psalms and vespers *a* 5 v., op. 2 (1604); psalms and various *a* 5 v., op. 4 (1605); masses and motets *a* 6 v., op. 5 (1606); 1 motet *a* 8 v. in a collective volume and 4 motets in MS. (Augsburg).

E. v. d. S.

BELLOWS, the apparatus by which the air is collected, compressed, and propelled through the several wind trunks or channels of an organ for ultimate redistribution among the pipes. For a description of methods see ORGAN.

BELLY (1) (Fr. *table*), the upper or anterior part of the resonant box in stringed

instruments. Recently the word 'table' has been adopted by English makers in conformity with the French usage.

It is made out of a block of pine, cut straight across the grain, and forms a plate consisting of many ribbons of hard fibre parallel to each other, by their united hardness capable of affording considerable resistance to the tension of the strings, the interstices being filled up with cellular matter of softer texture. The flat bellies of the lute, mandolin, cittern and guitar require no special notice. The hollowed belly of the viol and violin should be of nearly uniform grain, and quite free from shakes or knots. A moderately wide grain, say of sixteen spaces from fibre to fibre, to the inch, or thereabouts, is to be preferred; but instruments having closer or wider grain are often found to have a fine tone. The wood should be well seasoned—*i.e.* have been kept in a dry place, cut into suitable blocks, for twenty or thirty years; but it is fatal to tone to use, as some recent makers have done, very old wood which has lost its elasticity. The blocks are usually so cut that the hard ribbons of the belly are vertical to the flat section of the instrument. Occasionally the old makers sawed their blocks in such a way as to leave the ribbons obliquely inclined to the plane of the belly, and instruments made from such blocks have been found to possess an exceptional evenness, facility and brilliancy of sound: the fact being that in proportion as the grain is inclined from the vertical standard greater breadth is left in the hard vibrating ribbons, and the volume of tone is proportionately increased. The latest instance of this practice known to the writer is an English tenor dated 1807.

The belly is left thickest in the middle under the bridge, and is thinned out to the edges of the instrument. If the thickness in the centre be too little the tone will be dull; and modern copyists often leave it too thin in order to simulate the tone of an old instrument. If it be too thin towards the edges the tone will be weak. Repairers sometimes tell the owner of an instrument that 'the thicknesses want altering'; and it may be that some restoration by way of replacing wood which has been lost, whether by the pressure of the sound-post, or by previous tampering, may be advisable. But owners of instruments made by makers of decent reputation cannot be too strongly cautioned against sanctioning any thinning of the belly on any pretence whatever.

Among the fixed as distinguished from the movable parts of the instrument (the bridge and sound-post), the belly is the only one acting in the production of tone; the blocks serving only to give strength and resonance to the resonant box, the bass-bar distributing the vibrations, and the back and sides chiefly acting as reverberators. That parallelogram of the belly which lies between the upper curve of the sound-holes on each side and the blocks at the top and bottom produces most of the tone. An instrument in which the width of this parallelogram is unusually small should be avoided as likely to have a weak tone. In the case of some high-class makers this apparent fault seems to have no bad result, having probably been compensated for in some other way; and if the instrument is otherwise a good one, the expedient, adopted by some repairers, of inserting additional strips of wood in the middle of the belly and back, should not be resorted to. For other aspects of the subject, see BRIDGE, SOUND-HOLES, SOUND-POST and VIOLIN FAMILY. Compare also BACK. E. J. P.

BELLY (2), SOUND-BOARD of pianoforte. (Fr. *table d'harmonie*; Ger. *Resonanzboden*, *Resonanztafel*; Ital. *tavola armonica*). The broad flat of wood, of deal or spruce fir, *Abies excelsa* — in America, *Abies alba* — extended under the strings of a pianoforte, and connected with them by a bridge of hard wood over which they are stretched, is technically called the belly, but is also called the sound- or sounding-board.

The strings when set in vibration, owing to their small surface in contact with the air, would be scarcely audible, were it not for the belly, an auxiliary vibrating body of large surface, to reinforce them. Thus the tone of a pianoforte essentially depends upon the movement and variable pressure of the strings at the point of contact with the bridge, by which their vibrations are conveyed to the belly to be intensified by the vibrations of the fibres of this elastic support. There is no sonorous body for which we may calculate movement under varied conditions, and then verify the calculation by trial, to compare with a stretched string. The problem is far more complicated of a resonant surface, as the belly, and appears to have offered less attraction to research. We are mainly indebted to CHLADNI (*q.v.*) for what we know of the forms of vibration of resounding substances. His determination of the nodal lines by means of fine sand placed upon vibrating surfaces has been of great importance to theory, and has been the foundation upon which the law of the practice of ribbing the belly diagonally to the direction of the grain with slender bars of pine has been finally established by SCHAFHAEUTL (*q.v.*), who has proved that this contrivance creates nodal lines of rest, and prevents the transversal vibration of the belly as a whole which would be inimical to the production of tone. But up to this time, in the construction of bellies, experiment alone has effected what has been achieved. The difference in the value of a sound-board depends very much upon variations in the proportions, direction of the grain and barring, chosen by different makers to reinforce the initial strain of the vibrating wires coercing the response of the wood. The proper

vibration of a sound-board counts but little in the analysis of tone; it is responsive, not creative. (See PIANOFORTE.) A. J. H.

BELSHAZZAR, oratorio by Handel; words by Jennens, much reduced by Handel. Produced King's Theatre, Mar. 27, 1745, announced as 'Belteshazzar'; revived by the Sacred Harmonic Society, Mar. 19, 1847. (See Macfarren's preface to Novello's octavo edition.)

Dates on autograph (B.M. Roy. Lib.)—at beginning, Aug. 23, 1744; at end of 1st part, Scored Sept. 5, ditto; end of 2nd part, Sept. 10, ditto. G.

BEMBERG, HERMAN (*b.* Buenos Ayres, Mar. 29, 1861). He was of French parentage and was educated at the Paris Conservatoire under Théodore Dubois and Jules Massenet. His principal works are:

'La Mort de Jeanne d'Arc,' a short cantata for soprano solo, chorus, and orchestra (1886); 'Le Baiser de Suzon,' a comic opera in one act which was produced at the Opéra-Comique, Paris, in 1888, and 'Elaine,' an opera in 4 acts and 6 tableaux, which was produced at Covent Garden in 1892 and in New York in 1894.

He has also written numerous songs, of which the most popular are 'Nymphes et Silvains,' 'Aime-moi' and 'Chant hindou.' 'La Ballade du désespéré,' a poem for recitation with musical accompaniment, has also won considerable favour. Bemberg's style was formed in the school of Gounod and Massenet, and his melodies often recall those of the composers whose methods he has absorbed. At the same time, his music has unfailing elegance and refinement of style, and the orchestration of 'Elaine' showed much accomplishment. The latter work owed a good deal of the success which it won in London to a remarkably strong cast, which included Mme. Melba, Mme. Deschamps, Jean and Édouard de Reszke and Plançon.

R. A. S.

BEMETZRIEDER, ANTON (*b.* Alsace,[1] 1743 or 1748[2]; *d.* London, 1817[3]), writer on music. He came to Paris in 1771 with a recommendation to Diderot, whose patronage was of great service to him, and who engaged him as teacher of music to his daughter. For this pupil he published his *Leçons de clavecin et principes d'harmonie* (Paris, 1771), of which Diderot undertook the wording and wrote a preface. It was often republished, also in English (*Music made Easy*, 1778) and in Spanish. A full list of Bemetzrieder's works is given in *Q.-L.*: they consist of didactic essays on music, theory, harmony, and even philosophy. He stayed in Paris until 1781, in which year he went to London (1782, Fétis), where he was still living in 1810. According to Mendel (*Musikalisches Konversations-Lexikon*) he died there absolutely forgotten. In the contest between the Gluckists and Piccinnists he wrote on the side of toleration (*Le Tolérantisme musical*, Paris, 1779).

[1] Fétis. [2] Guérard. [3] Date given by Mendel.

BÉMOL, the French term for FLAT. (See ACCIDENTALS.)

BENDA, JAN JIŘI (1709–86), a weaver, and wandering performer on several instruments, belonged to the village of Staré-Benatky in Bohemia, and was the head of a celebrated family of artists. His four sons, FRANTIŠEK, JAN, JIŘI and JOSEF, all devoted themselves to music.

(1) FRANTIŠEK (*b.* Staré-Benatky, Nov. 25, 1709; *d.* Potsdam, Mar. 7, 1786) was remarkable as the founder of a special violin school.

He was a chorister at Prague in 1718, and then became a good violinist and established himself in Dresden; here Quantz heard him, and he obtained a place in the service of the Crown Prince of Prussia in 1732; on the death of J. G. Graun in 1771 he became Konzertmeister to his former patron, now Frederick the Great, whose flute concertos he thereafter accompanied. In his manner of playing he especially affected the cantabile. His published works include trios, concertos, solos for the violin (Paris), 'Études de violon, ou caprices,' 2 books (posthumous), and 'Exercices progr. pour le violon,' 1 book (Leipzig, Kühnel (*Q.-L.*). František Benda's second daughter, Maria Caroline, married Kapellmeister Wolf, and his fourth, Juliane, Kapellmeister Reichardt.

His eldest son, (2) FRIEDRICH WILHELM HEINRICH (*b.* Potsdam, July 15, 1745; *d.* there, July 19, 1814), was esteemed an excellent player on the violin and clavier; he was second violin in the court band of Berlin from 1782.

A second son, (3) CARL HERMANN HEINRICH (*b.* May 1748), approached nearest to his father in the style of his violin-playing. He was teacher of music to Wilhelm III., and left a sonata for violin, and six adagios for pianoforte, with remarks on the mode of executing an adagio.

(4) JAN (*b.* 1713; *d.* 1752), the second son of Jan Jiři, and the least eminent of the brothers, a pupil of his brother František, was in the royal band from 1740, and died as Kammermusikus in Berlin.

(5) JIŘI ANTONIN (*b.* June 30, 1722; *d.* Nov. 6, 1795), was the most distinguished of the four, renowned as an able clavier-player and oboist. In 1740 he went to Berlin for instruction from his brother František; he was in the royal band as second violin from 1742; in 1748 he was appointed Kapellmeister to the Duke of Gotha, who sent him to study dramatic music in Italy; on his return he wrote his first duodrama, 'Ariadne auf Naxos' (Gotha, 1774), a work which excited much attention for its novelty and ability, and entitled him to be called the inventor of the melodrama, since Rousseau's 'Pygmalion' was not produced in Paris till 1775. Full and compressed scores of the work, with German and French words, quickly appeared, and a second melodrama, 'Medea,' had an equal success with the first.

He retired in 1778 from the special post of Kapellmeister, to which he had been promoted on his return from Italy, and took up his abode at Hamburg; he visited Paris and Vienna for the performance of his works, and at length settled in the hamlet of Köstritz in Thuringia, where he died. Besides the compositions already mentioned, he wrote—

Masses, church cantatas, many instrumental works (concertos, symphonies, sonatas for violin and harpsichord, etc.), thirteen pieces for the stage, among them the operettas 'Der Dorfjahrmarkt' (1776), 'Der Holzhauer' (1777), 'Romeo und Julie' (1778), 'Lucas und Bärbchen,' 'Philon und Theone' (1779), and 'Pygmalion,' a monodrama.

His son, (6) Friedrich Ludwig (*b.* Gotha, 1746; *d.* Königsberg, Mar. 27, 1792), lived in Hamburg 1780–82, where he married a singer named Felicita Agnesia Rietz, with whom he visited Berlin and Vienna, but from whom he very shortly separated. He was appointed director of the concerts at Königsberg in 1789.

He wrote an oratorio, 5 church cantatas, and an opera, 'Der Barbier von Sevilla' (1779), 2 other comic operas, 3 violin concertos, and a sonata for violin.

(7) Josef (*b.* Mar. 7, 1724; *d.* Berlin, 1804) the last of the four, a clever violin-player, held the post of Konzertmeister to Friedrich Wilhelm II. at Berlin.

His son Ernst Friedrich (*b.* Berlin, 1747; *d.* there, 1785) was one of the founders of the Berlin amateur concerts.

(8) Anna Františka Bendová, the only sister of the above four brothers (*b.* 1726; *d.* Gotha, 1780) was one of the best singers of her time. She married a musician of Gotha named Hattasch.

The Bendas are a striking example among many families of Bohemian artists absorbed by Germany in the 18th century. Jiři Antonin by his melodrama has founded a tradition for modern Czech composers and has obtained a lasting position in musical history.

BENDELER, (1) Johann Philipp (*b.* Riethnordhausen, near Erfurt, *c.* 1660; *d.* 1708), was cantor at Quedlinburg about 1697.

Riemann gives the names of two theoretical works, *Melopoeia practica* (1686) and *Aerarium melopoeticum* (1688), not mentioned by Eitner, who gives the titles of *Organopoeia* (about 1690, reprinted in 1739), and *Directorium musicum* (1706). A MS. treatise, *Collegium musicum de compositione*, is cited by Mattheson in his *Ehrenpforte.*

His son, (2) Salomon, see Bendler.

BENDER, Paul (*b.* Driedorf, Westerwald, July 28, 1875), distinguished German bass singer. Having for several years enjoyed a great reputation at Munich, Bender came to England in 1914, playing Amfortas at Covent Garden in the first stage performances of 'Parsifal' in this country. Though the part was rather high for his voice—a basso cantante of fine quality and volume—he made a profound impression. He was also heard as Wotan and Hans Sachs. When the German singers were welcomed back to England in 1924 Bender formed one of the company at Covent Garden, and followed Richard Mayr as the Baron in the 'Der Rosenkavalier' under Bruno Walter. He is now one of the leading artists at the Metropolitan in New York, and when 'Parsifal' is done he plays Gurnemanz in preference to Amfortas. S. H. P.

BENDIX, Victor Emanuel (*b.* Copenhagen, May 17, 1851), a pupil of Gade and Winding. He founded and conducted a choral society (1872–76), and was conductor of philharmonic concerts and the Danish Choral Union. He went to Germany in 1882 on a travelling scholarship, and from 1892–93 conducted the popular concerts (Volkskonzerte) in Berlin.

He composed 4 symphonies, serenade for orchestra, comedy overture, pianoforte concerto, the 33rd psalm with orchestra, pianoforte trio, op. 12, PF. sonata, dance improvisations for PF. duet, songs, etc.

E. v. d. S.

BENDL, Karel (*b.* Prague, Apr. 16, 1838; *d.* there, Sept. 20, 1897), a composer of eminence, began to study music very early under, first, his grandfather; next, Pietsch, the head of the local organ school, from which Bendl 'graduated' in 1858. Already he had composed a number of small choral works, one of which, his 'Poletuje holubice,' composed in 1861, won an important prize. The work immediately passed into the repertory of the majority of Czech choral societies then springing up in Bohemia, and Bendl became more or less famous. In 1864 he set out for Brussels, where for a short time he was second conductor of the opera; but after a brief stay there, and in Amsterdam and Paris, he returned to Prague where, in 1865, he was appointed conductor of the famous choral society Hlahol, of which he was one of the founders, and organist of the Russian church. In 1879 he became conductor of the private band of Baron Dervies in Milan, Lugano and Nice. While still director of Hlahol he spent much time in composition. His first opera 'Lejla' (libretto by Eliška Krasnohorska), was produced Jan. 4, 1868. In opera he fluctuated between various styles. The influence of Meyerbeer is discernible in his earlier operas, 'Lejla,' produced in Prague, Jan. 4, 1868, and 'Břetislav and Jitka,' Sept. 23, 1870. In both cases the libretti were by Eliška Krasnohorska. His third opera, 'Stary Ženich' (The Old Wives), 1873, reflects the

racy humour of Smetana's 'Bartered Bride.' These were followed by an operetta, 'Indicka Princezna' (The Indian Princess), 1877; 'Čarovny Květ' (The Magic Flower), 1875, on a romantic German text by Ruffer, and 'Gina'—both remained unperformed; 'Černohorci' (The Montenegrins), 1881, one of the prize operas of the competition organised for the opening of the Provisional Theatre, attained considerable popularity; 'Karel Skreta,' 1883, a humorous 'dialogue opera'; the tragic 'Ditě Tábora' (The Child of Tabor), 1892; and 'Máti Mila,' 1895, which is impregnated with the Italian 'veristic' tendencies of the moment.

In opera Bendl's starting-point was Meyerbeer. In vocal music he began as a disciple of Mendelssohn, but soon tended to the national style of Smetana, in which he composed most of his best choral works: 'Zlata hodinka' (The Golden Hour), 'Ciganské Melodie' (Gipsy Melody), and the fine ballad for solo, chorus and orchestra, 'Švanda Dudák' (The Merry Piper), to Vrchlicky's text. Among his numerous instrumental works the 'Jugoslav Rhapsody' and 'Festal March,' and the overture op. 115 have survived; while the Bohemian (Czech) Quartet have kept the string quartet in F, op. 119, in their repertory. All these are compositions of national tendency. His church music includes a Mass in D minor, for male voices, another for mixed choir, two Aves, etc. Perhaps Bendl's most lasting service to music was the help and encouragement he gave to the young Dvořák by lending him the scores which he could not afford to buy, and thus turning his attention to the classics of symphonic and chamber music.

R. H. L., with addns.

BENDLER, or BENDELER, Salomon (*b.* Quedlinburg, 1683; *d.* 1724), an extraordinary singer.

His father, Joh. Philipp Bendeler (*q.v.*), gave him his first instruction in music. Gifted with artistic feeling and a magnificent bass voice, young Bendler was soon a most remarkable singer. In 1712 he came to London, and sang the part of the King in 'Ambleto' by Gasparini, and of Argante in Handel's 'Rinaldo.' However, he preferred an engagement at the opera in Hamburg, where he obtained a most brilliant success, as also at Leipzig and Brunswick. J. M.

BENEDETTI, an Italian singer at the Opera in London, 1720. He is mentioned in a witty letter by Sir John Edgar in Steele's journal, *The Theatre*, from Tues. Mar. 8 to Sat. Mar 12, 1720, as an instance of the touchiness of some artists.

'He set forth in the recitative tone, the nearest approach to ordinary speech, that he had never acted anything in any other opera below the character of a sovereign, and now he was to be appointed to be captain of a guard.'

He sang in Dublin, Oct.-Nov. 1825. His portrait was engraved by Vertue, and is mentioned by Walpole, *Catalogue of Engravers*, p. 221. There is a proof impression in the British Museum. It was painted by Beluzzi. Benedetti is represented in a cloak, turned to the right, oval in a frame, 8vo. It is rare.

J. M.

BENEDICITE, or the 'Song of the three Children,' one of the canticles of the Anglican service; and it is used alternatively with the Te Deum at morning prayer. (See Service.)

BENEDICT, Sir Julius (*b.* Stuttgart, Nov. 27, 1804; *d.* London, June 5, 1885) as composer, performer and teacher of music, held an exceptionally high position in England for upwards of 40 years.

After studying with J. C. L. Abeille in early life, and subsequently under Hummel, at Weimar, he was, in his 17th year, presented by the latter to Weber, who received him into his house, and from the beginning of 1821 until the end of 1824 treated him, in Benedict's own words, 'not only as a pupil, but as a son.' During Weber's visit to Vienna for the production of 'Euryanthe,' he introduced Benedict to Beethoven, on Oct. 5, 1823. At the age of 19 Benedict was, on Weber's recommendation, appointed conductor of the Kärnthnerthor Theatre in Vienna, a post he held from 1823–1825. In the latter year he went to Italy, and obtained the appointment of chef d'orchestre at the San Carlo at Naples, where he produced his first opera, 'Giacinta ed Ernesto' (1829)—a work which seems to have been too German for the Neapolitan taste. On the other hand, 'I Portoghesi in Goa,' which Benedict composed in 1830 for Stuttgart, may have been found too Italian for the Germans; since, unsuccessful in the city for which it was specially written, it was warmly received by the operatic public of Naples. Benedict went in 1834 to Paris, at that time the headquarters of Rossini and Meyerbeer; there he made the acquaintance of Malibran, who suggested his visiting London; and from 1835 until his death, England was his home.

In 1836 Benedict was appointed to the musical direction of the Opera Buffa, started by John Mitchell at the Lyceum Theatre. Here he brought out with success a little work called 'Un anno ed un giorno,' originally given in 1836 at Naples. In 1838 he produced his first English opera, 'The Gypsy's Warning.' Benedict was engaged at Drury Lane Theatre as orchestral conductor throughout that period of Bunn's management during which Balfe's most successful operas were brought out. In 1848 he conducted 'Elijah' in Exeter Hall (Jenny Lind's first appearance in oratorio), and in 1850 he accompanied Jenny Lind to the United States, and directed most of her concerts. On his return to England in 1852 he accepted an engagement as musical conductor at Her

Majesty's Theatre, and afterwards at Drury Lane, whither Mapleson's establishment was for a time transferred. In 1852 he was appointed conductor of the HARMONIC UNION (*q.v.*). When in 1860 Mapleson was about to produce (at Her Majesty's Theatre) an Italian version of 'Oberon,' he naturally turned to Benedict to supply the recitatives wanting in the 'Oberon' composed for the English stage, but then considered necessary for the work in Italianised form. Benedict conducted every Norwich Festival from 1845–78 inclusive, the meeting properly due in 1851 being postponed till the following year and so allowing of his return from America. He conducted the Liverpool Philharmonic Society from 1876–1880. With rare interruptions he accompanied for many years at the Monday Popular Concerts. Benedict, who had previously been naturalised, received the honour of knighthood in 1871. On the occasion of his 70th birthday he was named Knight Commander of the orders of Franz Joseph (Austria), and of Frederic (Würtemberg). In the same year his numerous English friends gave a testimonial

'in appreciation of his labours during forty years for the advancement of art, and as a token of their esteem.'

The presentation of a service of silver took place in the following summer, at Dudley House. Benedict was also decorated by the sovereigns of Prussia, Italy, Belgium, Sweden, Portugal and Hanover. He died at 2 Manchester Square, and was buried in Kensal Green Cemetery. H. S. E.

Though Benedict was a prolific composer in every form, practically none of his work is ever heard at the present day except the popular opera, 'The Lily of Killarney' (libretto by John Oxenford, 1862), which is still sometimes played by travelling opera companies. The following list summarises his major productions in England:

OPERAS

The Gipsy's Warning. (1838.)
The Brides of Venice. (1843.)
The Crusaders. (1846.)
The Lily of Killarney. (1862.)
The Bride of Song. (1864.)

ORATORIOS AND CANTATAS

Undine. (Norwich, 1860.)
Richard Cœur de Lion. (Norwich, 1863.)
St. Cecilia. (Norwich, 1866.)
St. Peter. (Birmingham, 1870.)
Graziella. (Birmingham, 1882.)

INSTRUMENTAL

Two Symphonies. (Crystal Palace, 1873-74.)
Two piano concertos, etc.

BENEDICTUS (1), part of the Ordinary of the Latin Mass following immediately after the Sanctus. The words, 'Benedictus qui venit in nomine Domini,' are taken from St. Matt. xxi. 9. From its position in the Liturgy the Benedictus has afforded a text for musical treatment to composers of all schools from the era of plainsong to the present day. It was retained in the first English Liturgy (1549) and consequently was set by Merbecke (1550) to a melody adapted from the Sarum plain-song. As it was omitted from the second Prayer Book (1552) it has had no liturgical position in the Anglican Church since, though it is commonly sung at the present day in its traditional place in the Office of Holy Communion.

(2) One of the three Gospel Canticles of the Christian Church; the song of Zacharias taken from St. Luke i. It is the canticle appointed, alternatively with the Jubilate, to follow the lessons in the Morning Service of the Anglican Church. It has occupied a similar position from ancient times, being part of Lauds in the Latin office. Two chants are given for it by Merbecke, viz. the 5th tone with 1st ending, and the 8th tone with 1st ending. It is admirably adapted to more elaborate forms of composition, and was so treated by Tallis, Byrd, Gibbons and other composers of the period. (See SERVICE.)

BENEDICTUS A SAN JOSEPHO, known in France as 'Grand Carme,' (*b.* Nijmwegen, *c.* 1642; *d.* Boxmeer Monastery, near Hertogenbosch, after 1721), organist of Boxmeer Monastery. In 1666 he calls himself *Frater ordinis F.F. beatiss. Virg. Mariae de Monte Carmelo*, and in a later print he is called Subprior. He wrote masses and other church music; 'Encomia sacra musica decantanda . . .; Manuale chori'; 'Orpheus Elianus a Carmelo in orbem editus . . .' A number of his works were at one time in the church of St. Walburga at Oudenaarde (*Q.-L.*).

BENEDICTUS DUCIS, see DUCIS.

BENELLI, ANTONIO PEREGRINO (*b.* Forli, Sept. 5, 1771; *d.* Aug. 16, 1830), singer and composer. It is doubtful whether, as is said, he received instruction in counterpoint from Padre Martini, who died when Benelli was little more than 12, and was unable, for above two years before his death, to bestow much care upon his scholars. Benelli had, however, instruction from Padre Mattei, the successor of Martini. In 1790 he made his first appearance at the San Carlo, at Naples, as first tenor. Benelli accepted an engagement in London in 1798, where he was received with favour. In 1801 he repaired to Dresden, and remained until the year 1823, at which time, when 51, and after singing in public for thirty-two years, his voice failed, and he retired with a pension.

Benelli had also made himself known as a clever composer, particularly in the church style (see *Q.-L.*). He was a successful contributor to the *Allgemeine musikalische Zeitung* of Leipzig. Upon his retirement he obtained from Spontini the post of professor of singing at the Berlin Opera, which he filled till 1829. He might have remained much longer had he not attacked Spontini with violence, in 1828, in the *Allgemeine Zeitung* apropos of his opera 'Olympia.' Unfortunately he had previously written a very favourable review of the same work: Spontini printed the two accounts side

by side. Benelli had nothing to reply; he soon received his *congé* and departed, first to Dresden, where he still had his pension, then to Börnichen, in the Saxon Erzgebirge, where he died in poverty. Benelli's real title to estimation is founded on his 'Gesangslehre' (1819), which appeared first in Italian as 'Regole per il canto figurato' (1814), and on his 'Bemerkungen über die Stimme' in the *A.M.Z.*, Leipzig (1824). J. M.

BENET, John, English composer of the early 15th century who, with his contemporaries, Lionel Power and Dunstaple, introduced the Florentine *Ars Nova* into the church music. Wooldridge in *Early Engl. Harmony* gives the Sanctus and Agnus from a Mass in facsimile. Other pieces are in the Trient Codices, 87 and 92, and the pieces in these, signed Anglicus or de Anglia, are probably also by him, as well as some of the anonymous pieces in the Old Hall MS. E. v. d. S.

BENEVOLI, Orazio (*b.* Rome, 1602; *d.* June 17, 1672), a celebrated contrapuntist, reputed to be a natural son of Duke Albert of Lorraine.

He studied under Vincenzo Ugolini,[1] and was maestro di cappella in the Church of S. Luigi de' Francesi. After a brief tenure of this post he was called into the service of the Austrian court, and during his residence at Vienna, in the years 1643–45, he published several collections of motets and offertories, but his best works were produced after his return to Rome. Here he resumed his former office in S. Luigi de' Francesi, but held it only for a few weeks. On Feb. 23, 1646, he was transferred to S. Maria Maggiore, and on Nov. 7 of the same year he became maestro di cappella at the Vatican. This appointment he retained, in high repute both as a teacher and a composer, until his death. He was buried in the Church del Santo Spirito in Sassia.

Benevoli's chief merit as a composer was the skill with which he handled a large number of separate parts. Masses, psalms, motets and anthems of his for 12, 16, 24 and 48 voices, in 4, 5, 6, 8 and even 12 distinct choirs, are quoted by Baini, Santini, Burney, Fétis and others. Burney (*Hist.* ii. 474) specially praises a Mass *a sei cori* in his own possession; and Fétis cites a Mass for 48 voices in 12 choirs[2] as a feat never excelled, and only twice equalled, viz. by J. B. Giansetti and G. Ballabene. A festival Mass and a hymn in 56 parts (vocal and instrumental) are printed as vol. x. i. of the *Denkmäler der Tonkunst in Österreich*, 1903. Specimens of Benevoli's works will also be found in the contrapuntal treatises of Padre Martini, Padre Paolucci and Fétis, who are of one mind in regarding him as an admirable model to study in writing for a large number of voices. But, excepting this particular kind of skill and ingenuity, Benevoli's music has no real artistic value. His fugues are rarely developed, for after a few bars they break off, and though his harmony obviously imitates Palestrina's, it falls far short of the same level of excellence in respect of simplicity and grandeur. Many of Benevoli's works are extant, printed in the collections of Poggioli, Bianchi, Sileari, Florida, and in MSS. in the Vatican, the Lateran, Bologna, Dresden, Vienna, the State Library at Berlin, the R.C.M., the Casa Corsini alla Lungara, in Sir Frederick Ouseley's library and in the British Museum. Some will be found also in the collections published by Teschner, Wüllner, Rochlitz and Prince de la Moskowa. See list in *Q.-L.* A. H. W.

BENINCORI, Angelo Maria (*b.* Brescia, Mar. 28, 1779; *d.* Paris, Dec. 30, 1821), pupil of Ghiretti, Rolla and Cimarosa.

His opera of 'Nitteti' was produced in Italy, and well received also in Vienna about 1800 At Vienna he formed the acquaintance of Haydn, with whose quartets he was so delighted as to abandon dramatic composition for the time and write nothing but quartets. In 1803 he went to Paris and wrote two operas, which were accepted but never performed, and it was with difficulty that this excellent musician obtained sufficient pupils to secure him a subsistence. In 1815, 1818, 1819, he brought out three operas without success. The end of his life was brightened by a hope he did not live to see realised. Isouard had died leaving his opera 'Aladin' unfinished, and this Benincori was commissioned to complete. A march for the first act, and the three last acts completed the work, which was enthusiastically received on Feb. 6, 1822, just six weeks after Benincori's death. He left much music in MS., but his best compositions are probably his quartets. M. C. C.

BENINI, Signora, an Italian prima donna, singing at Naples with her husband in 1784. They came to London in 1787, and sustained the first parts in comic opera. Benini had a voice of exquisite sweetness, and finished taste and neatness, but too little power for a large theatre. Though generally confined to opera buffa, yet her appearance and style seemed much more adapted to the opera seria, for which she had sufficient feeling and expression, as she showed in her excellent performance as Jephtha's Daughter. During an illness of Mara, she filled with great sweetness, and much more appropriate figure and manner, her part in Tarchi's 'Virginia.' She had not indeed

[1] Martini, Burney, Bertini, Orloff, and others, speak of Benevoli as the pupil of Bernardino Nanini; but Liberati, doubtless writing with accurate knowledge, says in his *Lettera ad Ottav. Persapegi*, pp. 58, 59, 'the other renowned pupil and favourite of B. Nanini was Vincenzo Ugolini, a great master in the art of teaching . . . as many of his pupils have shown, especially Benevoli . . . who excelled his master and all others living in writing for four or even six choirs in four parts each . . .'

[2] This Mass was sung at Rome, in S. Maria sopra Minerva, by 150 professors, on Aug. 4, 1650; and the expense of the performance was borne by a notary, Dominique Fonthia by name.

the gaiety of countenance nor the vivacity requisite for a prima buffa, and though a singer of considerable merit, had to give way when Storace appeared. J. M.

BENNET, JOHN, English madrigal composer, who can only be dated by the publication of his works, 1599–1614. The title-page to his 'Madrigalls to Foure Voyces' (published 1599) speaks of them as 'his first works,' and the dedication lays stress on the composer's youth in such phrases as 'these firstfruits of my simple skill' and 'beseeching you favourablie to accept them, as the indeauors of a yong wit.' That dedication is

'To The Right Worshipful, Ralph Assheton Esq: one of her Majesties Justices of the Peace and Quorum: and of the Oier and Terminer in the County Palantine of Lancaster and Receiver of her highnesse Duchy revenues, in the said county: and the Countie Palantine of Chester.'

A remark contained in it, 'seeing it hath pleased God to make you, many waies a principall patron of my good,' has induced the conjecture that Bennet was a man of Lancashire. The only other landmark in his career is his contribution of five hymn tunes to Barley's Psalter (published between 1604 and 1614) which were reprinted in Ravenscroft's Psalter (1621).

Ravenscroft praised Bennet in the following terms in the preface to his *Briefe Discourse* to which Bennet contributed six compositions:

'Maister *Iohn Bennet*, a Gentleman admirable for all kindes of *Composures*, either in *Art*, or *Ayre*, *Simple or Mixt*, of what Nature soeuer. I can easily belieue he had somwhat more then *Art*, euen some *Naturall instinct* or *Better Inspiration*, by which, in all his workes, the very *life* of that *Passion*, which the *Ditty* sounded, is so truely exprest, as if he had measured it alone by his owne Soule, and inuented no other *Harmony*, then his owne sensible feeling in that *Affection* did affoord him.'

Only two of these six pieces are, strictly speaking, madrigalian, namely the very spirited 'Lure, falconers!' and the delicate little elves' dance: 'Round about in a fair ring-a.' The other four are solos or duets with chorus. The last of these, 'A borgen's a borgen,' is in West Country dialect, and belongs to a set of four, the first three of which are set to music by Ravenscroft.

The best known of Bennet's madrigals is his contribution to 'The Triumphes of Oriana.' This is a brilliant and very effective piece of writing, but it differs from almost all the rest of the Oriana madrigals in that it is very largely homophonic in style. His set of madrigals contains seventeen numbers, the most popular of which has been 'Weep, O mine eyes.' All these madrigals are designed on a small scale, but they show a high degree of finish in workmanship and a rare sense of beauty. 'Let go, why do you stay me?' is also interesting from the point of view of form. 'Come, shepherds, follow me,' and 'Thyrsis, sleepest thou?' are good examples of Bennet's capacity to produce finished work on a small canvas. As a madrigalist Bennet cannot be compared with such giants as Wilbye, Weelkes, or Morley, for he falls far short of them in enterprise and originality, as well as in style, but his work will always command popularity on account of its simple and melodious character.

His works are as follows:

1. 'Madrigalls to Foure Voyces.' 1599. (*Eng. Madr. Sch.* xxiii.)
2. 'All creatures now are merry minded.' No. 4 of 'The Triumphes of Oriana,' 1601. (*Eng. Madr. Sch.* xxiii.)
3. Six pieces among the 'examples' in Ravenscroft's *Briefe Discourse*:
   - 'The hunt is up.'
   - 'Lure, falconers lure!' (*Eng. Madr. Sch.* xxiii.)
   - 'Round about in a fair ring-a.' (*Eng. Madr. Sch.* xxiii.)
   - 'What seeks thou fool?'
   - 'My mistress is as fair as fine.'
   - 'A borgen's a borgen.'
4. 'Eliza her name give honour.' Alto solo with string accompaniment. (B.M. Add. MSS. 17,786-91.)
5. 'Venus' Birds.' For five instruments, possibly a transcription of a madrigal. (B.M. Add. MSS. 17,786-91.)
6. 'The Almighty Trinity' (pars 1); 'O God of Gods' (pars 2), Anthem for voices and instruments. (B.M. Add. MSS. 29,372-6; R.C.M. MSS. 1045-51; Ch. Ch. MSS. 56-60; Peterhouse MSS. 3, 34, 39.)
7. Five hymn tunes in Barley's Psalter (*circa* 1604-14); three reprinted in Ravenscroft's Psalter (1621).

N.B.—A fugue in D, for organ, printed by A. W. Marchant in *Transcriptions for the Organ* (1895) is not by this composer, but by an 18th-century organist of the same name. E. H. F.

BENNETT, GEORGE JOHN, Mus.D. (*b.* Andover May 5, 1863), has been organist of Lincoln Cathedral since 1895.

He was a chorister in Winchester College Choir from 1872–78. He then gained the Balfe Scholarship at the R.A.M., where he studied under G. A. Macfarren and other masters until 1884. Upon leaving the Academy he studied in Germany for three years, for a short time at the Berlin Hochschule under Kiel and Heinrich Barth (pianoforte), and afterwards for two years at Munich, his masters being Joseph Rheinberger for composition and organ, and Hans Bussmeyer for pianoforte.

He returned to London in 1887, and was elected a Fellow of the R.A.M., and appointed to a professorship of harmony and composition at that institution in the following year. From 1890–95 he held several organ appointments, including that of St. John's Church, Wilton Road, Pimlico. In 1895, on the retirement of J. M. W. Young (who had held the post for 45 years), he was appointed organist of Lincoln Cathedral. In this capacity he ably conducted the Lincoln Musical Festivals of 1896, 1899 and 1902. He is conductor of the Lincoln Musical Society (founded in 1896) and of the Lincoln Orchestral Society.

Bennett's compositions, which show refined musicianship and a gift of melody, include:

Serenade for orchestra and 'Jugendträume' overture (both played at the Crystal Palace in 1887); Festival Evening Service in A, with orchestral accompaniment (composed for the Dedication Service, St. Paul's Cathedral, 1890); Trio in E, for PF., vln. and v'cl. (London, 1893); Easter Hymn, for soli, chorus and orch. (composed for the Festival of the Sons of the Clergy, St. Paul's Cathedral, 1895); 'Cymbeline' overture (Philharmonic Society, 1895); Suite in D min., for orch. (Lincoln Festival, 1902); a Festival Te Deum, for soli, chorus and orch.; Mass in B flat min., for soli, chorus and orch.; church music, songs, partsongs, PF. pieces, etc. F. G. E.

BENNETT, JOSEPH (*b.* Berkeley, Gloucestershire, Nov. 29, 1831; *d.* Purton, June 12, 1911), critic and littérateur.

After holding various musical positions, such as precentor at Weigh House Chapel and organist at Westminster Chapel, he adopted the profession of musical critic, and was a regular contributor to the *Sunday Times*, the *Pall Mall Gazette* and the *Graphic*. It was, however, as the musical critic of the *Daily Telegraph* that Bennett exercised his strongest influence. He was the author of the librettos of the 'Good Shepherd' (J. F. Barnett), the 'Rose of Sharon,' the 'Dream of Jubal,' 'Story of Sayid' and 'Bethlehem' (Mackenzie), the 'Golden Legend' (Sullivan), 'Ruth' (Cowen), 'The Garden of Olivet' (Bottesini) and many others. Bennett furnished the analyses for the programme-books of the Philharmonic Society and the Monday and Saturday Popular Concerts from 1885 until the cessation of the original scheme in 1903. His account of the origin of the latter, *A Story of Ten Hundred Concerts*, 1859–87, was published apropos of the thousandth concert, Apr. 4, 1887. Bennett published *Letters from Bayreuth* (1877), originally contributed to the *Daily Telegraph*; his articles on *The Great Composers, sketched by themselves* began in the *Mus. T.* Sept. 1877, and were continued till Dec. 1891, while some of them were republished as *Primers of Musical Biography* (Novello). An important *History of the Leeds Festival* (with F. R. Spark) appeared in 1892. Bennett edited *Concordia* during its short existence (May 1875 to Apr. 1876), and among his valuable contributions is a *Comparison of the original and revised Scores of Elijah*, which, after the death of *Concordia*, was completed in the *Mus. T.* On his retirement from the *Daily Telegraph* he published *Forty Years of Music* (1908).

G.; rev. with addns.

BENNETT, (1) THOMAS (*b.* Fonthill, *c.* 1784; *d.* Mar. 21, 1848), a chorister of Salisbury Cathedral under Joseph Corfe, organist and master of the choristers there.

He became organist of St. John's Chapel, Chichester, and in 1803 organist at Chichester Cathedral. He published *An Introduction to the Art of Singing*, 'Sacred Melodies' (selected) and 'Cathedral Selections.'

(2) ALFRED WILLIAM, Mus.B. Oxon. (*b.* 1805; *d.* Sept. 12, 1830), eldest son of the above, succeeded William Woodcock as organist of New College, Oxford, and organist to the University. He published a volume containing a service and some anthems of his composition, and in 1829, with William Marshall, a volume of chants.

BENNETT, WILLIAM STERNDALE (*b.* Sheffield, Apr. 13, 1816; *d.* London, Feb. 1, 1875), a distinguished composer who by his teaching, by his work as Principal of the R.A.M. and as Professor of Music in the University of Cambridge, exerted an important influence on the musical life of his time.

Bennett's father and grandfather were musicians before him. The latter was a lay-clerk in the choir which served the principal college chapels of Cambridge. His third son, Robert, the father of Sterndale Bennett, had been a chorister of King's College, then a pupil assistant to Dr. Clarke-Whitfeld (see CLARKE), organist of Trinity, and at the time of Sterndale Bennett's birth was settled as organist of Sheffield parish church, where he conducted Yorkshire musical societies and was a successful teacher of the piano. Robert, however, died (Nov. 3, 1819) before his musical son was 4 years old, and the care of the child passed to the grandfather, John Bennett. Before he was 8 years old Sterndale Bennett had been entered as a chorister at King's College, Cambridge, where he remained two years, and, having been pronounced a 'prodigy,' he was sent before his tenth birthday to London to become a student at the R.A.M., an institution only just founded in Tenterden Street, Hanover Square. At that time the Academy was a boarding-school, and Bennett was accepted as a boarder and given a free education. He took the violin as his principal subject under Spagnoletti and Oury, and the piano as his second under W. H. Holmes. His beautiful boy's voice brought him to the notice of Attwood, who allowed him to sing in St. Paul's Cathedral, and it is also recorded that he sang the part of Cherubino in a students' performance of 'Figaro' at the Academy. Composition began officially under the direction of Dr. Crotch, who required him to write double chants, while privately Bennett was experimenting with a string quartet modelled on Mozart. When Cipriani Potter succeeded Crotch in 1832 Bennett's composition advanced more rapidly, and his first work under Potter's tuition, a pianoforte concerto in D minor, was played at an Academy rehearsal and proved to be his introduction to a wider world. Bennett played this concerto at a concert in Cambridge (Nov. 28, 1832), and again in London at a concert of the Academy given in the Hanover Square rooms on Mar. 30, 1833. The date was a crucial one in Bennett's career, for Mendelssohn was present, insisted on meeting the lad after the performance and proposed that he should visit Germany. It was the beginning of a friendship which lasted till Mendelssohn's death, but the proposed visit was not accomplished until 1836 when Bennett was enabled to visit Düsseldorf for the Lower Rhine Festival, at which 'St. Paul' was produced under Mendelssohn's direction. Meantime Bennett spent three further years at the Academy composing chiefly instrumental music, symphonies (five were written before he left the Academy), piano concertos (E flat, C minor and F minor) and the overture 'Parisina.' He held an appointment as organist of

St. Ann's Chapel, Wandsworth, for a year (Apr. 1834–35). In 1835 Bennett was invited to play the concerto in E flat at a Philharmonic concert, a unique honour for a student of 19, and in 1836 the invitation was repeated and accepted for the concerto in C minor. The visit to the Lower Rhine Festival (May 22-24, 1836) was made in company with J. W. Davison. It was the prelude to a more important visit to Germany in the autumn of the same year. On Oct. 29 Bennett arrived in Leipzig, where he was promptly introduced by Mendelssohn to the Gewandhaus circle, discovered for himself a new friend in Robert Schumann, and remained until June 1837. The experience was invaluable to him. He could immerse himself in the musical life of the place. He revelled in Gewandhaus concerts, chamber music and more occasionally in the opera. Schumann's public advocacy of Bennett in the columns of the *Neue Zeitschrift für Musik* has been censured for its extravagance, and the censure finds justification in Schumann's tendency to prophesy the artistic future of his friends. But the estimate of him in the famous New Year article of 1837 is true to facts appearing at the time. In his twenty-first year Bennett's abilities both as pianist and composer were outstanding and were united in a singularly charming personality. On Jan. 19 Bennett played his concerto in C minor at the Gewandhaus 'amidst the triumphant applause of the Leipzigers' (Mendelssohn letter), and on Feb. 13 he conducted there his overture, 'The Naiads,' one of the few orchestral works which has survived in occasional public performance to the present day.

Neither Schumann nor Bennett could foresee the stultifying influence which a professional life in Victorian England must exert on the sensitive musical nature of the latter. On his return to London Bennett began teaching at the R.A.M., but again the winter was spent in a second visit to Leipzig where he wrote the overture, 'The Woodnymphs,' and on Jan. 17, 1838, played at the Gewandhaus his new concerto in F minor, which included the 'Barcarolle' transferred from an earlier work in the same key. In the spring of 1839 Bennett settled down to the routine work imposed on every musician who has to make a living in London, teaching and editing the classics; his public appearances with the Philharmonic and elsewhere were only occasional; composition had to be the occupation of a restricted leisure. At the beginning of 1842, however, he escaped for a third continental journey, going first to meet Spohr at Cassel and thence travelling by Leipzig to Berlin where he found Mendelssohn. But he could not be absent long. He was already engaged to be married; it was essential that he should maintain his position and extend his resources at home. He married Mary Anne, daughter of Captain James Wood, R.N., on Apr. 9, 1844. His connexion with the Philharmonic remained a close one until 1848, when, after having served as director since 1842, played regularly at its concerts and produced new compositions, a quarrel with Costa, the conductor, led to Bennett's temporary retirement from the affairs of the society. In 1849 he founded the Bach Society (see BACH GESELLSCHAFT), precursor of all that movement which has brought the rediscovery of Bach's choral works to the English people. Growing from tentative beginnings, this society achieved the first performance in England of the 'St. Matthew Passion' under Bennett's direction on May 6, 1854. A year before, the offer of the conductorship of the Gewandhaus concerts at Leipzig had sorely tempted him, but he was too deeply committed to duties in England to accept it. After Costa's retirement from the Philharmonic and the season which Wagner conducted, Bennett was appointed, and conducted his first Philharmonic concert on Apr. 14, 1856. He held the post for ten years and resigned it when he became Principal of the R.A.M. in 1866. His election to the professorship of music at Cambridge in the same year as the Philharmonic appointment (1856) set the seal on Bennett as one of the leaders of the academic world of music in England. His career henceforward was marked by official appointments and compositions commissioned for occasions. Invited to conduct the Leeds Festival (1858), he wrote for it what long proved his most popular cantata, 'The May Queen.' An oratorio 'The Woman of Samaria,' one number of which, the quartet 'God is a Spirit,' may still be called popular, was written for the Birmingham Festival (1867). In later years the affairs of the R.A.M. made large demands on his energies, and his wise guidance carried it safely through a very critical period. He was knighted in 1871.

Bennett's more serious work as a composer is almost completely neglected now. Of the works for or with orchestra which belong to what may be called his Leipzig period only occasional revivals may be heard; his choral music maintains a precarious foothold in the repertories of provincial choral societies and church choirs. But his refined, at its best Mozart-like, writing for the piano has been obliterated by the rich romanticism of the 19th century schools led by Chopin and Schumann. Bennett, as a writer for the piano, might be summed up as the composer who evaded the influence of Chopin. Too much stress has been laid on the influence of Mendelssohn in his work. His failure to produce a lasting impression in his piano music was not the result of copying Mendelssohn so much as of his remaining untouched by the developments of style and technique characteristic of

STERNDALE BENNETT

CROTCH

From a drawing by J. Linnell in the National Portrait Gallery

his time. This was partly due, as has been suggested, to the circumstances in which his later life was passed, partly to personal limitations. He withdrew into himself; his sensitiveness became fastidiousness and a delicate genius contracted into a narrow talent. Apart from his composition, however, his educative work entitles him to a place of honour among the forerunners of modern English music. Throughout his life he stood for purity in art, and his work and life raised the position of the musical artist in the esteem of his contemporaries.

The biographical details of this article are drawn from *The Life of William Sterndale Bennett* by his son J. R. Sterndale Bennett, M.A. Cantab., Fellow of King's College, London, who has been a valued contributor to all three editions of this Dictionary. C.

The following is a list of Sterndale Bennett's published works:

Op. 1. First PF. Concerto, in D min.
,, 2. Capriccio for PF. in D min.
,, 3. Overture, 'Parisina.'
,, 4. Second PF. Concerto, in E flat.
,, 5.
,, 6.
,, 7.
,, 8. Sestet for PF. and strings, in F sharp min.
,, 9. Third PF. Concerto, in C min.
,, 10. Three Musical Sketches—'Lake,' 'Millstream' and 'Fountain' for PF.
,, 11. Six Studies—in Capriccio form, for PF.
,, 12. Three Impromptus for PF.
,, 13. Pianoforte Sonata, F min., dedicated to Mendelssohn.
,, 14. Three Romances for PF.
,, 15. Overture, 'The Naiads.'
,, 16. Fantasie for PF., in A maj., dedicated to Schumann,
,, 17. 'Three Diversions.' PF. for four hands.
,, 18. Allegro grazioso for PF.
,, 19. Fourth Concerto, in F min., for PF. and Orch.
,, 20. Overture, 'The Wood-nymphs
,, 21.
,, 22. Caprice, in E maj., PF. and orchestra.
,, 23. Six Songs (first set).
,, 24. Suite de pièces for PF.
,, 25. Rondo piacevole for PF.
,, 26. Chamber Trio in A maj. for PF., vln. and v'cl.
,, 27. Scherzo for PF.
,, 28. Introductione e pastorale, Rondino; Capriccio, in A min.—for PF.
,, 29. Two Studies—L'amabile e L'appassionata for PF.
,, 30. Four Sacred Duets for two trebles.
,, 31. Tema e variazioni for PF.
,, 32. Sonata-duo, PF. and v'cl.
,, 33. Preludes and Lessons—60 pieces in all the keys, composed for Queen's College, London.
,, 34 Rondeau—'Pas triste pas gai.'
,, 35. Six Songs (second set).
,, 36. Vocal Duet—'Cast thy bread upon the waters,' in H. J. Haycroft's 'Sacred Harmony,' 1851.
Op. 37. Rondeau à la Polonaise for PF.
,, 38. Toccata for ditto.
,, 39. 'The May Queen'—a Pastoral.
,, 40. Ode for the Opening of the International Exhibition, 1862. Words by Tennyson.
,, 41. Cambridge Installation Ode, 1862. Words by Kingsley.
,, 42. Fantasie-Overture, 'Paradise and the Peri,' 1862.
,, 43. Symphony in G min.
,, 44. Oratorio, 'Woman of Samaria.'
,, 45. Music to Sophocles' 'Ajax.'
,, 46. Pianoforte Sonata, 'The Maid of Orleans.'

Months of the Year—January, February, for PF.
Canzonet, 'In radiant loveliness,' with orch.
Waltz—album piece for PF.
Overture—'Marie du Bois.'
Organ Voluntary—Adagio a 4 voci.
Sonatina in C maj. for PF.
Romance, 'Geneviève,' for PF.
Minuetto espressivo for PF.
Praeludium for PF. in B flat.
Songs—'The Better Land'; 'In radiant loveliness'; 'The Young Highland Rover'; 'Resignation'; 'Stay, my charmer'; 'Maiden Mine'; 'Dancing lightly comes the Summer'; 'Sunset.'
The Chorale Book, 1862; and Supplement to ditto, 1864; edited in conjunction with Mr. Otto Goldschmidt.
Anthems—'Now, my God, let, I beseech Thee'; 'Remember now thy Creator'; 'O that I knew'; 'The fool hath said in his heart'; 'Great is our Lord'; 'In Thee, O Lord'; 'Lord, who shall dwell'; 'Lord, to Thee our song we raise,' for four female voices.
Psalm Tunes—'To my complaint, O Lord my God'; 'Day of Wrath.'
Ten hymn tunes.
Four-part Songs—'Sweet stream that winds'; 'Of all the Arts'; 'Come live with me.'
Vocal Trio—'To a Nightingale,' female voices.

An interesting paper on Sterndale Bennett was read before the Musical Association, by Mr. Arthur O'Leary, Apr. 3, 1882. See also *Mus. T.*, May to Aug. 1903. H. H. S.

BENOIST, François (*b.* Nantes, Sept. 10, 1794; *d.* Paris, May 6, 1878), an organist who entered the Paris Conservatoire in 1811, under Adam and Catel, and gained the Prix de Rome in 1815 for his 'Œnone.'

On his return from Italy in 1819 he was appointed first organist at the court, and professor of the organ in the Conservatoire (1819–72). In 1840 he became Chef du Chant at the Opera. His works include a 3-part Mass, the operas 'Léonore et Félix' (1821), 'L'Apparition' (1848), and several ballets, as well as a collection of organ pieces. M.

BENOÎT, Camille (*b.* Roanne, Loire, Dec. 7,[1] 1851; *d.* Paris, July 1, 1923), composer and writer. From 1872 he was a pupil of César Franck, and from 1888 belonged to the curator's department of the Louvre Museum, and became curator (*conservateur*) in 1895. His first compositions, performed at the Société Nationale de Musique about 1880, attracted attention by their highly artistic qualities. His 'Eleison' (1890), for soli, chorus and orchestra, was revived at the Schola Cantorum in 1916. He composed a symphonic poem, 'Merlin l'enchanteur,' an 'Épithalame' for the *Noces corinthiennes* of Anatole France, and 'Cléopâtre,' a lyric drama; and he left an uncompleted symphonic poem, 'La Nuit.' As a writer, Benoît is known by his *Souvenirs* (1884), which contain translations of different extracts of Wagner's literary works; *Musiciens, poètes et philosophes* (1887); and a Latin translation of Beethoven's *Elegische Gesang.*

G. F.; rev. M. L. P.

BENOÎT, Pierre Léopold Léonard (*b.* Harlebeke, Aug. 17, 1834; *d.* Antwerp, Mar. 8, 1901), a Belgian composer, and the chief promoter of the Flemish musical movement.

Having first studied music with his father and with Peter Carlier, organist of the village of Desselghem, he entered, at 17, the Conservatoire of Brussels, where Fétis took the greatest interest in him, and taught him counterpoint, fugue and composition. While still studying, he became conductor at a Flemish theatre in Brussels, where he wrote the music to several plays, and also an opera, 'Le Village dans les montagnes' (1857), which attained success. In this year he carried off the first prize for composition with 'Le Meurtre d'Abel,' and by means of a grant from Government he was able to make a tour in Germany. He visited Leipzig, Dresden, Prague, Berlin and Munich, composing songs, piano pieces, motets, etc., and sending to the Académie at Brussels an essay, *L'École flamande de musique et son avenir*, and a 'Petite Cantate de Noël.' On his return to Belgium he brought out in Brussels and Ghent a 'Messe solennelle' which was much praised by Fétis. He then went to Paris (1861)

[1] December 10, according to the 'Répertoire des catalogues au Louvre.'

in the hope of producing an opera (' Le Roi des Aulnes ') at the Théâtre Lyrique, and here he was for some time conductor at the Bouffes Parisiens. Returning to his own country, he at once took up a position by producing in Antwerp (Apr. 1864) a ' Quadrilogie religieuse,' consisting of four previous compositions, his ' Cantate de Noël ' (1860), ' Messe solennelle ' (1862), a Te Deum (1863) and a Requiem (1863). He was then seized with the desire of stirring up a musical movement in Flanders, distinct alike from the French and German schools. By dint of activity and perseverance and of exciting the *amour-propre* of his countrymen, he gathered round him a party of which he was the acknowledged head. His action resulted in the foundation of the Flemish School of Music in Antwerp in 1867, under the auspices of the town and the Government. Benoît was appointed director, and retained the post until his death. From his appointment he unceasingly promulgated the theory of a national Flemish art by means both of pamphlets and musical compositions.

The list of Benoît's compositions would be very considerable were all his productions for voice and piano to be included, especially the sacred works, which date from before the conception of his theory, and upon which he set no value in his later life. The most important works of the second part of his career, written, it is needless to say, to Flemish words, and most of them to the poems of Emmanuel Hiel, are the following :

'Lucifer,' oratorio, performed Brussels, 1866, Paris, 1883, and London (Albert Hall), Apr, 3, 1889; Flemish operas, 'Het dorp in't gebergte,' 'Ita' (1867) and 'Pompeja' (1896); 'De Schelde,' oratorio, 1869; 'Drama Christi,' Antwerp, 1871; 'La Lys,' cantata performed before the king at Courtrai, 1871; 'De Oorlog' (War), cantata, Antwerp and Brussels, 1873; a 'Children's Oratorio'; a choral symphony, 'De Maaiers' (The Mowers); 'Charlotte Corday' and 'Willem de Zwijger,' music to two Flemish dramas represented at Antwerp and Ghent in 1875 and 1876 respectively; 'Rubens-cantata,' Antwerp, 1877; 'Antwerpen,' Antwerp, 1877; 'Joncfrou Kathelijne,' scena for alto, 1879; 'Hucbald,' cantata, and 'Triomfmarsch' for the inauguration of the Brussels Exhibition in 1880; 'Muse der Geschiedenis,' chorus and orch., Antwerp, 1880; 'Hymne à la beauté,' 1882; 'Van Ryswick,' cantata, Antwerp, 1884; and 'Juich met ons,' cantata in honour of the Burgomaster Buls, Brussels, 1886; grand cantata, 'De Rhyn,' 1889. A. J.

Benoît's propagandist writings include the following (*Riemann*) :

De Vlaamsche Muziekschool van Antwerpen (1873).
L'Institution de festivals en Belgique (1874).
Verhandelung over d. nationale Toonkunde (2 vols., 1875-77).
De Muzikale Opvoeding en Opleiding in België and other works (1876), and later papers in periodicals, etc.

M. Jullien criticised trenchantly both Benoît's compositions and his theory of Flemish national art in the second edition of this Dictionary. While it must be admitted that time has not added a wide fame to Benoît's compositions outside his own country, where his memory is justly honoured, many recent events contribute to suggest the wisdom of a more reserved attitude than that of M. Jullien towards national aspirations in music wherever they appear. C.

BENOÎT-BERBIGUIER, Tranquille (*b.* Caderousse, Vaucluse, Dec. 21, 1782; *d.* Pont le Voy, Jan. 20, 1838), a famous flute-player, was intended for the law, but ran away from home and entered himself at the Conservatoire in Paris.

From 1813–15 he served in the army, and after that resided in Paris. As an adherent of the Bourbons he was driven thence by the Revolution of 1830 to take refuge at Pont le Voy, Loir-et-Cher. His contemporaries praise the softness and peculiar sweetness of his tone and the astonishing perfection of his technique. As a composer he was very fertile in music for his instrument, both solo and accompanied, but it is the work of the virtuoso rather than of the musician. A. M.

BENSER, J. D., pianist and composer who lived in London between 1780 and 1790. Fétis enumerates sonatas for pianoforte and violin, op. 1 and op. 2 ; sonatas for PF. duet, op. 3 ; lessons and a duo for PF. The British Museum has, moreover, 5 sonatas and 1 duetto for the PF. or harpsichord with a violin or German flute, op. 5 (*c.* 1790). E. v. d. S.

BENTE, Matteo, a famous 16th-century luthier of the Brescian school, who worked between 1570 and 1600, a contemporary of Giov. Paolo Maggini. A richly ornamented lute of his is in the Paris Museum. E. v. d. S.

BENUCCI, an Italian basso engaged at Vienna in 1783, who was the original Figaro in the production on May 1, 1786. (See Mozart.) He appeared in London in 1788 as first buffo ; but, notwithstanding his fine voice and acting, was not so much admired as he deserved to be. He sang one more season here, appearing as Bartolo in Paisiello's ' Barbiere,' and as Zefiro in Gazzaniga's ' Vendemmia.' J. M., with addns.

Schilling mentions two singers of the name in Vienna between 1783 and 1796. It was apparently one of these who composed an overture published at Amsterdam, 1812. The Brussels Conservatoire has a MS. cantata signed R. Benucci, 1825. E. v. d. S.

BENVENUTO CELLINI, opera in 2 acts ; words by Wailly and Barbier ; music by Berlioz ; produced Académie Royale de Musique, Sept. 3, 1838 ; Covent Garden (' grand semiseria,' in 3 acts), June 25, 1853.

BERARDI, D. Angelo (*b.* near Urbino, about middle of 17th cent.), pupil of Marco Scacchi. In 1668 he was maestro di cappella at Viterbo Cathedral and 1675 at Tivoli Cathedral; in 1681 maestro di cappella and teacher of composition at Spoleto Cathedral ; *c.* 1687 canon at St Angelo, Viterbo; and 1693 maestro di cappella at S. Maria at Trastevere. He wrote a number of important theoretical works as well as compositions. (See *Q.-L.*) E. v. d. S.

BÉRAT, Louise (*b.* France, 1882), operatic contralto. A successful début in a minor rôle

at the Théâtre-Lyrique de la Gaieté, Paris, led to her engagement for Covent Garden, where she sang for the first time, in the summer season of 1909, as the Mother in Charpentier's 'Louise.' It was with this highly artistic impersonation that her name became chiefly associated, the opera being then heard for the first time here. In subsequent seasons she appeared regularly, in *comprimaria* parts such as Marthe in 'Faust,' the Nurse in 'Roméo et Juliette,' Carmela in 'I Giojelli della Madonna,' etc., and altogether proved herself a very useful artist. At Covent Garden in 1920 she played the small part of Zita at the *première* of Puccini's 'Gianni Schicchi.'

H. K.

BERBIGUIER, TRANQUILLE BENOÎT, see BENOÎT-BERBIGUIER.

BERCEUSE (Ger. *Wiegenlied*), a cradle song, a piece for piano or other instrument consisting of a melody with a lulling rocking accompaniment. Chopin's op. 57 is a well-known example.

BERCHEM, JACHET, an eminent Flemish contrapuntist of the 16th century, formerly identified with Giachetto da Mantova, but according to the latest researches to be distinguished from that composer. As the compositions of the time were often merely inscribed with the single name JACHET (*q.v.*), it is impossible to be quite sure whether many of them should be ascribed to this Jachet or to Jachet of Mantua, Jachet de Buus or Jachet de Wert; but there is ground for the statement that Jachet Berchem was organist to the Duke of Ferrara in 1555, and his three books of capriccios are dedicated to the Duke. A very important article appeared on him in the *M.f.M.*, 1889, p. 129 ff., with a bibliography of those compositions which can safely be assigned to him. These include:

Madrigals 1546, 1556; capriccios for 4 v., 1561; a Mass, and many single madrigals in collections of the period; and a number of French chansons in MS. in the Court Library at Munich.

(See *Q.-L.*)

BERENSTADT, GAETAN. The name of this singer, of whom we have elsewhere no record, appears for the first time in the bass part of Argante in Handel's 'Rinaldo,' as revived in 1717, in which he took the place of the celebrated Boschi. After this we do not find him again in London till 1723, in which year he sang in Bononcini's 'Farnace' and Attilio's 'Coriolano,' as well as in the 'Flavio' and 'Ottone' of Handel. In the next year he performed in the 'Vespasiano' of Attilio, Bononcini's 'Calfurnia' and Handel's 'Giulio Cesare.'

J. M.

BERESOVSKY, MAXIMUS SOSNOVITCH (*b.* Gluchov, Ukraine, 1745; *d.* St. Petersburg, 1778), studied at Kiev and became an Imperial singer; went to Italy to study under Padre Martini at Bologna, returning after nine years to St. Petersburg, where he hoped to be appointed teacher of singing at the Imperial Vocal Chapel. Being disappointed in his expectations he shot himself.

His Russian songs are distinguished by correct declamation and fine polyphony. His opera 'Demofoönte' met with success at Leghorn. His 'Lord's Prayer' for chorus and solo voices was published by Breitkopf & Härtel in 1813.

E. v. d. S.

BERG, ADAM, a renowned music printer of Munich, whose publications extend from 1540 to about 1599. His great work was the *Patrocinium musices*, published under the patronage of the Dukes of Bavaria, the first volume of which appeared in 1573. After the death of Duke Albrecht V., in 1579, the publication was interrupted, and not resumed till 1589, when the second series appeared. The 12 volumes contain[1]:

Vol.	I. (1573)	O de Lasso, 12 Cantiones. (4 v.)	
,,	II. (1574)	,, 5 Masses.	
,,	III. (1574)	,, Officia.	
,,	IV. (1575)	,, Passio. (5 v.), etc.	
,,	V. (1576)	,, 10 settings of Magnificat.	(4 to 8 v.)
,,	VI. (1578)	Ludwig Daser, Passion. (4 v.)	
,,	VII. (1587)	de Lasso, 13 settings of Magnificat.	(4 to 6 v.)
,,	VIII. (1589)	,, 6 Masses.	
,,	IX. (1589)	Francesco di Sale, Officia. (5 and 6 v.)	
,,	X. (1591)	Blasius Amon., Masses. (4 v.)	
,,	XI. (1594)	Cæsar de Zachariis, Intonationes.	
,,	XII. (1598)	Francesco di Sale, Mass. (5 v.)	

F. G.

BERG, ALBAN (*b.* Vienna, Feb. 7, 1885), Austrian composer who studied with Arnold Schönberg. Up to the present his music reflects the style of his teacher, but beneath this superficial resemblance there is the expression of a personality that shows strong character. He differs from v. Webern, Schönberg's other noteworthy pupil, in that his feeling for form is so strong as to be more clearly apparent. All his compositions show this feature, and his opera 'Wozzeck' may be taken as an affirmation of his definite choice of formal construction. In this work the three acts, divided into fifteen scenes, are built on the accepted plans of suite-form (act 1, scene 1), variation-form (scene 4), symphonic-form (the five scenes of act 2) and invention (act 3). This opera is his most important composition so far. Whatever there may have been of too close imitation of Schönberg's manner in the earlier works is here overcome. Berg's preoccupation with questions of form has tended to hide the lyrical side of his nature. It is indubitable, however, that in his work the methods of the modern school of Viennese composers are logically worked out and in that respect Berg occupies a high place in Austrian music of this period.

WORKS

Op. 1. Pianoforte Sonata. 1908.
,, 2. Four Songs (voice and pianoforte). 1909.
,, 3. String Quartet. 1909–10.
,, 4. Five Songs with orchestra (unpublished). 1912.
,, 5. Four Sketches (clarinet and pianoforte). 1913.
,, 6. Three orchestral pieces. 1914.
,, 7. 'Wozzeck': opera. Libretto by Georg Büchner. (Finished 1922.)

S. G.

[1] A detailed list of the contents of each volume was published in former editions of this Dictionary.

BERG, George, a German by birth, was a pupil of Dr. Pepusch. In 1763 he gained the first prize medal awarded by the Catch Club for his glee 'On softest beds at leisure laid,' and obtained two other prizes in subsequent years.

He published some books of songs sung at Marylebone Gardens, at which place in Apr. 1765 he produced an ode called 'The Invitation.' Thirty-one of his glees and catches are included in Warren's collections. In 1771 he was organist of the church of St. Mary-at-Hill, near Billingsgate. He published several works for the organ, harpsichord, flute, horn, etc., besides those above mentioned. W. H. H.

BERG, Johann (*b.* Ghent; *d.* 1563), a music printer who set up a printing office in Nuremberg *c.* 1531 (the date of their first book), in conjunction with Ulrich Neuber. After the death of Berg the office was carried on by Neuber (*d.* 1571) and Gerlach. After 1582 traces of the firm disappear (*Q.-L.*). F. G.

BERGAMASCA — in the 'Midsummer Night's Dream,' a 'Bergomask'; an Italian dance, deriving its name from Bergamo. Specimens of the dance, with words, are found in some of the 16th-century collections, such as the third book of Filippo Azzaiolo's *Villotte* (1569). The first instrumental bergamasca, according to *Riemann*, is to be found in Uccellini's sonatas, 1642, in a long 'aria sopra la bergamasca,' from which it appears that the bergamasca was a very simple succession of four bass notes (tonic, subdominant, dominant and tonic) used as a 'ground.'

According to the late Signor Piatti, himself a native of Bergamo, the characteristic dance of that district is of the following measure, like a country-dance, but quicker, with a strong accent on the second half of the bar:

Signor Piatti himself published a Bergamasca for violoncello and pianoforte (op. 14) which partakes of this character.

Bibl.—Paul Nettl, *Die Bergamaska*, *Z.M.*, Mar. 1923, pp. 291-5.

BERGER, Francesco (*b.* London, June 10, 1834), pianist and composer, studied at Trieste and Leipzig (Moscheles) and has had a long and distinguished career as a teacher in London, notably as professor of the pianoforte at the R.A.M. and G.S.M. He was for 27 years honorary secretary to the Philharmonic Society (see Royal Philharmonic Society). His published compositions are mainly pieces for PF., songs and short vocal pieces. He has published a useful handbook, *Musical Expressions, Phrases and Sentences* (Reeves) which contains equivalents in English, French, German and Italian. He has also published a volume of *Reminiscences* (Sampson Low).

BERGER, Ludwig (*b.* Berlin, Apr. 18, 1777; *d.* there, Feb. 16, 1839), a remarkable pianoforte-player and gifted composer.

His talent showed itself early (he studied under J. A. Gürrlich), but received its great impulse from the notice taken of him at Berlin in 1804 by Clementi, who undertook his tuition, and took him to St. Petersburg. Here he met Steibelt and Field, who had much influence on his playing. In 1812 he visited Stockholm and London, and became widely known as a player and teacher. In 1815 he returned to Berlin, where he resided till his death, one of the most esteemed teachers of his time. Mendelssohn was his greatest pupil, but amongst others may be mentioned Taubert, von Herzberg, Henselt and Fanny Hensel, Mendelssohn's sister. He latterly withdrew almost entirely from active life, owing to an over-fastidious hypochondriacal temper. He left behind him a mass of good, nay even remarkable, music—pianoforte pieces, songs, cantatas and unfinished operas. Amongst his published works his 27 études are especially important; they were republished by Breitkopf, with a preface by C. Reinecke. A. M.

BERGER, Wilhelm (*b.* Boston, U.S.A., Aug. 9, 1861; *d.* Meiningen, Jan. 16, 1911), composer and piano teacher.

His parents were German and he was taken to Germany when but a year old; studied in the Hochschule of Berlin under Kiel from 1878–82; and taught in the Klindworth-Scharwenka Conservatorium, Berlin, 1888–93. He then succeeded Steinbach as conductor of the Meiningen Orchestra.

His orchestral works include a symphony in B minor, op. 80, variations and fugue for orchestra, op. 97, 3 Ballades for baritone and orchestra, 'Der Totentanz,' op. 86, for chorus and orchestra. His choral works include a setting of the 'Gesang der Geister über den Wassern,' op. 55, 'Meine Göttin,' for male choir and orchestra, op. 72, a work which obtained a prize in 1898; in the same year his string quintets were similarly honoured by the society of the Beethoven-house, and his symphony in B flat, op. 71, was played at Mainz. A choral work, 'Euphorion,' may also be mentioned, as well as a great number of pianoforte pieces, several concerted chamber compositions, and many vocal solos and partsongs. Some chamber works were played at the Popular Concert in Jan. 1904, when the composer visited England.

Bibl.—Wilhelm Altmann, *Wilhelm Berger-Katalog. Vollständige Verzeichnis sämtlicher im Druck erschiener Tonwerke und Bearbeitungen Wilhelm Bergers*, etc., p. 48, Leipzig, 1920.

BERGGREEN, Andreas Peter (*b.* Copenhagen, Mar. 2, 1801; *d.* there, Nov. 9, 1880), studied harmony and began to compose from the age of 14.

Though destined by his parents for the law, he was led by his strong predilection for music
